The abbey of Cambuskenneth, one of the richest and most magnificent in Scotland, stood on the banks of the Forth, a short way from Stirling. Its ruins are still very considerable. (*Private Information.*)

STOCKBRIDGE, a market-town and par. of England, co. Hants, hund. Thorngate, on the Test, a tributary of the Anton, and on the Andover Canal, 8 m. W.N.W. Winchester. Area of par., 1,220 acres. Pop., in 1841, 937. The town comprises only a single street, in which are numerous inns, its principal support being derived from its situation on the high road between London and Exeter. It has a town-hall, a neat edifice, erected in 1810 by the late Marquis of Westminster. From the first of Elizabeth down to the passing of the Reform Act, by which it was disfranchised, this petty place, or rather its proprietors, enjoyed the privilege of sending 2 mems. to the H. of C.

STOCKHOLM, a celebrated city of the N. of Europe, the cap. of Sweden, at the junction of the Lake Mælar with the Baltic, 440 m. W. by S. Petersburg, lat. 59° 20' 31" N., long. 17° 54' E. Pop., in 1840, 84,160.

THE UNIVERSITY OF CHICAGO PRESS

kinds of occupations. Foreigners, consisting principally of Germans and Englishmen, with about 600 Jews, are but few in number. Considering, indeed, that the king is a native of France, and the proximity of the city to Russia, the small number of Frenchmen and Russians may well excite surprise.

A few years since it was a common complaint that there were no good hotels, and that lodgings were both scarce and dear in the city. But several inns have been recently built, and, according to Bremner, the Stockholm hotels may now be considered fully equal to those of second-rate towns in other parts of the continent. They do not supply dinners, which may, however, be had at the eating-houses, where a pretty good dinner may cost about 2s. "Even at the most fashionable places in the park," says Bremner, "the charge, as compared with England, is extremely moderate. We happened to see the bill for a dinner that would not have disgraced the Star and Garter. Fish, fruit, and every delicacy of the season, were served in profusion. The wines, also, were first-rate, and included port (here a dear wine), sherry, claret, Rudesheimer, champagne, and punch, supplied to 24 guests; yet the whole charge, including attendance, was only 250 rix-dollars, or about 12s. a head."

During the summer season nearly all persons in tolerable circumstances spend the greater part of their time in the environs. At all the public places visitors are waited on by women; and a stranger is surprised to see many employments entrusted to men in other countries here undertaken by females. The ferry-boats, for instance, are almost all rowed by Dalecarlian females, in their peculiar native costume; though, if we may rely on Mr. Murray's account, their beauty is not very likely to be much injured by this masculine employment.

Stockholm is not the seat of a university, but it has several distinguished academies, including the Academy of Sciences, established about 1740, with an admirable museum of zoology; the Swedish Academy, founded by Gustavus III.; the academy of painting and sculpture, which has produced Sergel, Fogelberg, Bystrom, &c.; and that of literature, a college of medicine, schools of navigation, drawing, &c., with societies of agriculture, commerce, and philosophy. There are also several clubs and reading-rooms, on much the same plan as those of London, and various newspapers.

Stockholm appears to have been founded by Birger, regent of Sweden, in the 13th century. It became the residence of the Swedish sovereign soon after Birger's death, but was not recognised as the capital till the 17th century, previously to which, Upsala had been the seat of the court. (*Stockholm and its Environs*, Stockholm, 1839; *Bremner, Excursions in Denmark, Sweden, &c.*, ii. 340-405; *Murray's Handbook for the N. of Europe*; *Coxe, &c.*)

STOCKPORT, a parli. bor., and manufacturing town of England, co. Chester, on the borders of Lancashire, 5 m. S.E. Manchester, and 10 m. N. Macclesfield. The parli. and mun. bor. comprises the township of Stockport, with part of those of Brinnington and Hanton Norris, and the hamlets of Brinkway and Edgeley in the adjacent par. of Cheshire; and had, in 1831, a pop. of about 42,000*, and in 1841, of 50,154. The town-proper, which is supposed to occupy the site of a Roman military station, is built on an abrupt hill beside the Mersey, which, sweeping round its E. and N. boundary, is here joined by the Tame. From the bank of the river the houses rise in successive tiers round the sides of the hill, from the base to the summit, some having apartments excavated in the sandstone rock; and the numerous extensive factories elevated above each other, and spreading over the town, give it, especially when lighted up at night, a striking appearance. The most ancient part of the town surrounds the church and market-place on the top of the hill, whence various streets diverge in different directions. The principal street, called the Underbank, follows the direction of the old Roman road S. to Buxton. Three bridges across the Mersey connect the town-proper with its suburbs of Portwood and Hanton-Norris.

Portwood, in the township of Brinnington, is large, populous, and of considerable manufacturing and commercial importance. To the W. of Stockport numerous streets, houses and factories, cover the greater part of the hamlets of Brinkway and Edgeley. Hanton-Norris, which is situated in Lancashire, communicates with the better part of Stockport, by a new line of road, made within the last 15 years, and a noble bridge of 11 arches across the valley and the river. The arch over the river, built of hard white stone, has a span of above 90 ft., and an elevation of 40 ft., above the water. The arches on the Cheshire side are carried across several streets, leaving thoroughfares underneath. Stockport is well paved, and lighted with gas; and there is an ample supply of water, at a reasonable rate. The par. church, the chief public edifice, appears to have been erected in the 14th century,

* The Municipal Corporation Report says, approximately, 45,000.

buildings. About the middle of the high street is the town hall, a commodious square edifice, with court, assembly, and other public rooms; but partly occupied as an hotel; and near it is a handsome Doric column, on the place formerly occupied by an open cross. Near the S. end of the town is a handsome stone bridge, with 5 elliptical arches, erected by subscription, between 1764 and 1769, at an expense of 8,000*l*. The tolls of the ferry over the Tees were previously the property of the Bishop of Durham, to whom a considerable annuity was made payable by the shareholders; but the whole debt having been paid off, the bridge became toll free in 1820. A little further S. the Tees is crossed by a suspension-bridge, forming part of the Middleborough branch of the Darlington and Stockton Railway. The Port Clarence Railway terminates on the Tees, a little N.E. of Stockton. The town is watched by an efficient police, and well lighted with gas.

The par. church is a neat brick edifice, with a tower 80 ft. in height at its W. end. The living, a vicarage, worth 247*l*. a year nett, is in the gift of the Bishop of Durham. There are places of worship for Baptists, Friends, Independents, Methodists, Unitarians, and Rom. Catholics, several having Sunday-schools attached; a mechanics' institute and library, a subscription-library, and a neat theatre. A charity-school was founded here by subscription in 1721, and a school for girls in 1808; and Stockton, with the adjacent parish of Norton, has a scholarship at Brasenose College, Oxon. Some almshouses, established in 1682, were rebuilt in 1816, and afford accommodation to 36 poor persons. It has a dispensary, a savings' bank, and many benefit societies.

The only manufacture is that of sail-cloth; for which there were, in 1837, three considerable establishments, one employing nearly 400 hands. The two railroads which pass to the town employ a good many hands; and Stockton is said to be in a prosperous state. (*Mun. Corporation Rep.*) New coal mines of large extent have recently been discovered in the neighbourhood, and the trade of the port has increased considerably of late years. In 1849, there were shipped coastwise from Stockton, 402,225 tons coal, exclusive of 112,897 tons shipped for foreign ports. Linen and worsted yarn, and lead, &c., are also shipped in considerable quantities. There belonged to the port, on the 1st of Jan. 1850, 183 sailing vessels of the agg. burden of 25,298 tons, ex. some small steamers. Gross amount of customs' duties in 1849, 84,264*l*. The port dues belong to the Bishop of Durham, as lord of the manor, but are leased to the corporation at a nominal rent. Stockton is supposed to have been incorporated about the 13th century. The mun. bor. is divided into 2 wards, and is governed by a mayor, 5 other aldermen, and 18 councillors. Corporation revenue, in 1847-8, 1,305*l*. The bor. has, under the Mun. Reform Act, a commission of the peace; and a county court is established in it, before which 615 plaints were entered in 1848. There is, however, no gaol, but only a lock-up house in the bor. Stockton is of considerable antiquity, and was long the occasional residence of the bishops of Durham. Its castle was demolished by order of parliament in 1647. (*Mun. Corp. Rep. and Appendix*, iii. &c.)

STOKE-UPON-TRENT, a parl. bor., township, and par. of England, co. Stafford, hund. Pirehill, on the Trent, 2½ m. E. Newcastle-under-Lyne, and 15 m. N. by W. Stafford. Area of par., 10,490 acres. Pop., in 1841, 46,342. The parl. bor. comprises the most populous portion of the par., including the townships, or rather towns, of Hanley, Shelton, Lane End, Fenton, &c., with those of Burslem, Tunstall, and Ruston Grange, and the hamlet of Sneyd, in adjacent pars., being, in fact, co-extensive with the district termed the Potteries. It has an entire area of about 16,000 acres, and a pop., in 1831, of nearly 51,000, and in 1841 of 67,798. Stoke-upon-Trent is lighted with gas, and well supplied with water. The old parish church being much decayed, a new and handsome church was erected in 1826, partly by subscription among the inhabs. In it has been placed a bust of the great founder of the earthenware manufactory, the celebrated Josiah Wedgwood, who died in 1796, and who was admirable alike for the improvements he introduced into the fabric of the ware, and for the classical elegance and purity of his designs. The living, a very valuable rectory, being worth 2,717*l*. a year nett, is in the gift of J. Tomlinson, Esq. It has, also, chapels for various dissenting sects, and a large national school. The Trent and Mersey canal passes through Stoke par., and on its banks are numerous wharfs for shipping the earthenware, which is the great, and, indeed, almost the only product of this district. The contributory townships of Burslem and Hanley have been already noticed. (i. 487. 960.) The towns now included within the district called the Potteries have almost all risen to importance since about 1760, when Wedgwood commenced his career. The Reform Act erected it and the districts specified above into a parl.

bor., and gave it the privilege of sending 2 mems. to the H. of C. Registered electors, in 1849-50, 1,572. The smallness of this number, as compared with the pop., is a consequence of the low value of houses in the district. "The cheapness of building materials, and the abundance of building ground, render a house rented at somewhat below 10*l*. sufficient for the wants not only of the higher order of mechanics, but even of many other classes. This low rate of house-rent does not arise from a depression of trade and wages: no place that we have visited appears in more full employment, more prosperous, or more steadily advancing in improvement, than this important district." (*Bound. Report.*)

The towns and villages comprised in the Potteries, or in the parl. bor. of Stoke-upon-Trent, are so near each other, that their limits are not easily defined, and to a stranger the entire district has the appearance of a large straggling town. A very large proportion of the pop. is engaged in, and a still greater is dependent for support on, the manufacture. With the exception of the gold used in gilding, most of the materials employed are worth very little; so that the value of the finished articles, as well as their exquisite beauty, and adaptation to every purpose of utility and ornament, is mainly ascribable to the skill and labour expended upon them. The wives and children of the workmen are usually employed; and though they work together in factories, yet, as they reside in separate cottages, the manufacture partakes largely of the domestic character. The wages of a whole family amount to a very considerable sum. "The noxious process of glazing, so injurious to the health of those employed, has been rendered nearly free from its deleterious effects by the substitution of boracic acid for lead, which was formerly wholly used, but now only in the proportion of 8 per cent. The people employed in that branch were formerly not admissible into clubs, and were considered as degraded objects from the insalubrity of their employment; but they are now gladly received into benefit societies." (*First Factory Report*, b. ii. p. 78.) At present (1850) the Potteries are in a flourishing condition; and, speaking generally, the work-people have a healthy comfortable appearance. The Sunday-schools in the district are extremely well attended. (*Statistics of the Brit. Emp.*, i. 712, 2d ed.)

STONE, a market-town and par. of England, co. Stafford, hund. Pirehill, on the Trent, and on the high road from London to Liverpool, 20 m. N.W. Lichfield. Area of par. 20,030 acres. Pop., in 1841, 8,249. The town consists principally of two streets crossing each other, and is pretty well built. The par. church is a modern structure, with a low square tower: the living, a perpetual curacy, worth 214*l*. a year, is in the gift of the crown. Here are chapels for Independents, Wesleyans, and R. Caths.; with a free school founded in 1554, and other charitable endowments. The Trent and Mersey Canal passes through the town, the inhab. of which are principally engaged in the manufacture of shoes. Petty sessions are held here every fortnight. Stone is supposed to owe its origin to a monastery founded in 670, afterwards made subservient to that of Kenilworth. Market days, Tuesdays: 4 cattle fairs are held yearly. Meaford, in Stone par., was the birth-place of Sir John Jervis, afterwards Earl St. Vincent, from his great victory over the Spanish fleet, off Cape St. Vincent, on the 14th Feb. 1797.

STONEHAVEN, a bor. of barony, sea-port, and market-town of Scotland, co. Kincardine, of which it is the cap., on the German Ocean, at the point where two small rivers, the Carron and Cowie, fall into a small bay, flanked on both sides by lofty rocks, 14 m. S. by W. Aberdeen. Pop., in 1841, 3,012. It consists of two parts: the old town, on the S. side of the Carron, is irregularly and badly built; but the new town, on the N. bank of the river, on the estate of Mr. Barclay of Ury, which has rapidly grown up, is comparatively well built and handsome: it consists of two parallel streets and cross streets, with a large square in the centre, and is far superior, in wealth and pop., to the other. The two towns are connected by a handsome stone bridge. The parish churches of Dunottar and Fetteresso are in the immediate vicinity of the town, which has also two chapels, belonging respectively to the Episcopalians and Seceders. Exclusive of other seminaries, the town has a free school for the education of 60 poor children. The harbour, which is a natural basin, has been a good deal improved by the erection of piers, and affords a safe refuge for the smaller class of vessels.

The inhab. engage to some extent in the herring and haddock fisheries, 14,638 bar. herrings having been cured here in 1849. It has a flax and a woollen mill, but neither is of considerable size, and two branch banks. The trade of the town is inconsiderable.

Dunottar castle, about 2 m. S. from the town, stands on a lofty peninsulated rock, projecting into the sea, being separated from the mainland by a vast chasm or natural fosse. The summit of the rock, which is mostly

occupied by the ruins of the castle, comprising about 1½ acres. This castle was, for a lengthened period, the property and residence of the noble family of Kells, Earls Marischal. It was fortified and dismantled after the rebellion of 1715, on the attestation of its noble proprietor. Owing to its position, it was formerly a place of considerable strength, and has been repeatedly besieged. (*Metropolitan Boundary Report; Pennant's Scotland*, 36, 120.)

STONEHENGE, the name given to a gigantic ruin, consisting of vast stones, partly upright, and partly fallen, on Salisbury Plain, co. Wilt., England, 2 m. W. Amesbury, and 7 m. N. Salisbury. Though its present appearance be that of a confused mass, justifying, in some degree, Camden's epithet of *monstrum subversum*, it is now, on a little examination, that its original form, which may be easily traced, was circular. When perfect, it had consisted of two outer concentric circles of stones, with two inner groups of stones. The outer circle, the diameter of which is 100 ft., appears to have originally consisted of 30 upright stones, of which 17 are still standing. Their average height is about 14 ft.; and their size 7 ft. by 3 ft. Each of these upright stones has a mass on its upper end, on which were placed horizontal stones or lintels, with mortises to correspond with the sockets; and these lintels being connected together, formed a continuous circular architecture all round the fabric. The inner circle, 8 ft. 2 in. within the outer circle, consists of smaller stones, more irregularly shaped than those in the outer circle, and without lintels. Only 6 stones of this circle are now standing, but there are remains of 19 others on the ground. Within the inner circle are 3 groups of stones, having between them a large flat stone called the altar. Some of these interior stones are of vast size, and have lintels similar to those of the outer circle. According to what appears to be the most accurate calculation, Stonehenge, when entire, must have comprised, in all, 120 or 130 stones. They consist mostly of a fine, white, compact sandstone, closely resembling, or rather identical with, the grey-wethers and other detached masses of stone scattered over the surface of the downs in the vicinity of Avebury and Marlborough.

This gigantic structure is surrounded by what must originally have been a deep trench, about 30 ft. in breadth, and connected with it are an avenue and curvilinear. The former, a narrow road of raised earth, extends in a direct line from what is supposed to have been the grand entrance to the structure, a distance of 304 yards, when it divides into two branches, one leading to a row of barrows, and the other to the curvilinear, an artificially formed flat tract of ground. The latter, ½ m. N. E. from Stonehenge, is bounded by parallel banks and ditches, measuring 2,000 yards in length, by 110 yards in

depth. (Notice of Mr. James Macpherson, Bart., proprietor of the island of Lewis, to the immediate vicinity of the town. There is a parish church, town-house, and custom-house, the gross revenue collected at the latter in 1848 being 419l. There is no prison in the island. Though many of the people are Roman Catholics, there is not a single Protestant Dissenter. The means of education, which formerly were very deficient, have been increased materially of late years. Gaelic is the language generally spoken throughout the island in Stornoway, however, it is giving way to English, and divine service is now performed one part of the day in Gaelic, and the other in English.)

Small packets, supported by government, ply weekly between Stornoway and Peel, on the coast of Ross; and in summer Stornoway is sometimes visited by steamers from Glasgow.

In 1848 there were reared here and at Burre 16,000 hns. harrings, and 14,000 ewes and lambs. The latter may be worth from 12d. to 14d. a ton. The town has a wharf, and a rope manufactory.

With the exception of a small district immediately around Stornoway, the island of Lewis was, till recently, in a very backward state, and the inhabitants poor and wretched in the extreme; but a great change for the better has taken place since the island came into the possession of its present proprietor, who has expended large sums on its improvement. (*New Statistical Account of Scotland, Ross, and Cromarty*, 115, 120; *Anderson's Guide to the Highlands*, 400. See.)

STOURBRIDGE, a market-town of England, co. Worcester, bound. Hereford, par. Old Windsor, on the River, here crossed by a stone bridge, 10 m. N. E. Worcester. Pop. of township in 1841 7,481. Though irregularly built, the houses are pretty good. It has a handsome market-house, a theatre, a subscription library, &c. The episcopal chapel, created by subscription in 1743, is beyond the jurisdiction of the bishop; the living, a curacy, in the gift of the bishop, householders, is worth 1262l. a year. There are places of worship for various sects of Dissenters, and a well-endowed free school, founded by Edw. VI., in which Dr. Johnson received the rudiments of his education. Stourbridge has a national school, and a great number of benevolent and benefit associations. It is governed by a bailiff, town-clerk, &c.; and has petty sessions, and a 4th. court of requests. It has manufactories of glass and earthenware, and hardware: the iron trade of the town and neighbourhood is considerable, and most part of the iron-work used in the construction of the custom-house and new post-office London, came from Stourbridge. The town communicates, by a branch canal, with the Staffordshire and Worcestershire Canal, by which great numbers of boats are sent hence to the metropolis, and elsewhere. Markets on Fridays, Jan. 8. and Mar. 20, for horses and cattle; Sept. 2, for cattle and sheep.

STOURPORT, a market-town of England, co. Worcester, bound. Hereford, par. Kidderminster, at the confluence of the Severn and Stour, ½ m. S. E. Kidderminster, with the pop. of which town and par. its own is returned. It is wholly of modern date, owing its origin to the Staffordshire and Worcestershire Canal, which joins the Severn on its E. side. It is well built, principally of brick, and is partially paved, and lighted with gas. The Severn is here crossed by an iron bridge, the central arch of which has a span of 120 ft., rising to 40 ft. above the surface of the river. Stourport has an extensive trunk trade, being, in fact, one of the principal entrepôts between the E. and W. parts of the kingdom. Markets on Wednesdays, Thurs. Raster Monday, Sept. 14., Dec. 13., chiefly for hops and cattle; also a meeting every Thursday for hops.

STOW MARKET, a market town and par. of England, co. Suffolk, bound. Stow, on the Clipping, a tributary of the Orwell, and on the road and half way between Ipswich and Bury. Area of par., 1,200 acres. Pop. in 1841, 2,126. The town consists principally of a main street, with many good houses, and has a bustling and thriving appearance. The par. church is large and handsome, part of it being in the decorated, and part in the perpendicular style (Norman). It has a tower and spire of considerable height, a pulpit of 8 bells, &c. The living, with that of Stow-Upland, adjacent, a vicarage worth 251l. a year, is in the gift of — William Bay, (Esq. Sec. Rep.) The Baptists, Methodists, &c., have meeting-houses, and there are various schools and benevolent societies. Stow-market is connected by a navigable canal with Ipswich, and has a brisk trade in mail and barley, with manufactures of cordage and stitching. Near it is the house of industry for the hand., a handsome edifice on an eminence, erected at an expense of 15,000l. It has petty sessions, a memorial court, &c., and is a polling-place for the W. div. of the co. Markets on Thursdays, Thurs. three times a year.

STRABANE, an inland town of Ireland, W. side co. Tyrone, prov. Ulster, on the Mourne, near its confluence with the Finn or Foyle, 1 m. E. Lifford, and 14 m.

In New's Cyclopædia.

STONEHOUSE. See FLYING.

STORNOWAY, a bor. of burgh, anti-port, and market town of Scotland, on the E. side of the island of Lewis, one of the Hebrides (which see), on a fine bay, 25 m. W. by N. from the nearest point of Cromarty, on the main land, lat. 56° 18' N., long. 6° 14' W. Pop. of the town and immediately contiguous villages, about 4,000. This, which is the most considerable town in the Western islands, has grown up, within a very long period, from a petty hamlet of about a dozen houses. In consequence of its favourable situation for carrying on the herring and cod and ling fisheries, especially the latter. Though not regularly built, the houses are substantial, and slated, and there are some good shops. The harbour is formed by a pier; and the bay, which is spacious, and has deep water, is flanked by two low headlands and an island. Stornoway Lodge, the com-

S.S.W. Londonderry. Pop., in 1841, 4,704. It is built on the estate of the Marquis of Abercorn, in a fine valley enclosed by lofty mountains; and has a good linen market, an extensive retail trade, and a considerable trade in the export of grain and provisions, by way of Londonderry. The older parts of the town, along the river, are low, with narrow dirty streets and mean houses; but in the newer parts there are some comparatively good streets, shops, and houses. It has a par. church, a R. Catholic chapel, two Presbyterian and two Methodist meeting-houses, a fever hospital and dispensary, a market-house and a sessions-house, and a bridewell. It is connected by a bridge with its suburb on the left bank of the river. Under the Municipal Reform Act (3 & 4 Victoria, cap. 108.), it has a corporation entitled the sovereign, free burgesses, and commonalty. Previously to the Union it returned 2 mems. to the Irish H. of C., but was then disfranchised. It has a par. school, a Lancastrian do., and some other schools. The trade of the town is much facilitated by a canal about 4 m. in length, from it to where the Foyle becomes navigable for barges of 40 tons. (*Railway Report, &c.*)

Quarter sessions are held in April and October, petty sessions on alternate Tuesdays, and a manor court, with jurisdiction to the amount of £1., is held once a month. Adjoining the town is a valuable salmon fishery, the produce of which is mostly sent, either fresh, packed in ice, or pickled, to the British markets. Post-office revenue in 1830, 1,158*l.*; in 1836, 1,268*l.* Branches of the Provincial and Belfast banks were opened in 1835. "I saw little or nothing of rags in Strabane: there was a respectable look about the people and every thing else." (*Inglis's Ireland*, ii. 187.) Persons coming to attend the assizes for the co. Donegal, held at Lifford, usually take up their residence in Strabane.

STRALSUND, a strongly fortified town of the Prussian states, prov. Pomerania, cap. reg. and circ. of the same name, on the narrow strait separating the Isle of Rugen from the continent, lat. 54° 19' 28" N., long. 13° 7' 20" E. Pop. (1845), 16,500. It was founded in 1209. Streets narrow and dirty, houses ill-built; but it has a fine arsenal, and some good public buildings. It is encompassed on the land side by lakes and marshes, so that it can only be approached by bridges. Its fortifications, which had been dismantled, have been renovated and greatly improved since 1815, so that it is now one of the strongest places in the monarchy. It has a gymnasium, two public libraries, and an orphan asylum, with breweries, distilleries, and various manufactures; and carries on a considerable commerce, exporting corn, timber, beer, linens, &c. Its port, though small, is convenient and safe, but it labours under a deficiency of water. Close to the town the depth does not exceed 7 feet, at a little distance it increases to 10 feet, and in the offing there is 13 feet. In 1834 there belonged to Stralsund 72 ships, of the burden of 6,861 lasts.

STRANRAER, a parl. and royal bor. and sea-port of Scotland, co. Wigtown, on flat ground, on the inner or S. shore of the inlet of the sea called Loch Ryan, on the high road from Dumfries to Portpatrick, 21 m. W. by N. Wigtown. Pop. of royal bor., in 1841, 3,450; but the parl. bor., which includes some contiguous suburbs, had then a pop. of 4,878. It consists of three streets parallel to the shore, united by several cross streets. The principal streets are neat, and pretty well built; but there are a great many wretched hovels in the lanes and outskirts of the town, mostly occupied by Irish immigrants. It has a town-hall, gaol, a church belonging to the establishment, with various dissenting chapels, 1 parochial and 7 unendowed schools, 2 very good subscription libraries, and a good public reading-room. It is the centre of a considerable retail trade; but has no manufactures, except some hand-loom weaving, on account of the Glasgow manufacturers. It has three branch banks, a savings' bank, and a weekly newspaper. Loch Ryan is a fine basin. Opposite to a place called Cairn, on its E. shore, there is good anchorage, and water sufficient to float the largest ships. Stranraer harbour dries at low water; but it would not be difficult, by carrying out the pier to a greater distance into the loch, to make it accessible at all times of the tide. In 1849, 34 vessels belonged to the port, of the aggregate burden of 1,611 tons. Its customs' revenue is inconsiderable, and inadequate to defray the cost of the establishment. Steamers regularly ply between the port and Glasgow and Belfast. A large proportion of the pop. are Irish, mostly in an abject state of poverty. Stranraer was made a royal bor. in 1617. It has 18 councillors. Corporation revenue, in 1848-9, 313*l.* It unites with Wigtown, Whithorn, and New Galloway, in sending 1 mem. to the H. of C. Registered electors, in 1849-50, 192. (*New Statistical Account of Scotland*, No. XXI. 94.; *Official Returns*; and *Private Information*.)

STRASBOURG (an. *Argentoratum*), a fortified city of France, on its E. frontier, dép. Bas-Rhin, of which it is the cap., on the Ill, within a short distance of the

Rhine, to which its glacis extends, and across which it communicates with Kehl by a bridge principally of boats, about 100 m. S. S. W. Metz, and 250 m. E. by S. Paris; lat. 48° 34' 56" S., long. 7° 44' 51" E. Pop., in 1846, 52,186 (many of whom are Protestants and Jews), exc. the garrison, generally amounting to 6,000 men. The city is of a triangular form, is enclosed by a bastioned line of ramparts strengthened by numerous outworks, entered by 7 gates, and has on its E. side a strong pentagonal citadel, built by Vauban. By means of sluices constructed under Louis XV., the adjacent country may be laid under water; and several additional defences having been constructed since the peace, it is now one of the most important fortresses and arsenals in France, and has the largest dépôt of artillery. Strasbourg is agreeably situated, and generally well laid out: its streets are mostly narrow, with lofty houses; but it has several rather large and regular squares. Though for a lengthened period united to France, it still has all the outward appearance of a German town, with which the costume and language of its inhabs. correspond. The Ill and its branches intersect the city in all directions, and are crossed by numerous wooden bridges. Without the walls are several suburbs.

By far the most remarkable public edifice is the minster, or cathedral, one of the noblest structures of its kind. It is said to have been originally founded by Clovis, in 504; but Charlemagne constructed the choir, the only part that survived the destruction of the old cathedral by lightning in 1007. The modern building was begun in 1015, but not finished till the 15th century. The entire length of the interior is 378 ft.; breadth, 140 ft.; height from the pavement to the roof of the nave, 76½ ft. The W. or grand entrance has, on its N. side, a spire, of the extraordinary height of 437½ Paris, or 465½ Eng. ft. (*Schreiber*); being, if the dimensions be accurate, about 7 ft. higher than St. Peter's in Rome, and about 5 ft. higher than the great pyramid of Cheops. It is of open work, and combines with the most perfect solidity extraordinary lightness and elegance. The view from the top of this spire is one of the most extensive and finest that can be imagined: it is, however, enjoyed by few only. The ascent to the top of the tower may, indeed, be accomplished, without much difficulty, and the view from it is superb; but the ascent thence to the lantern requires very powerful nerves, and, in fact, ordinary visitors are not permitted to attempt it. The erection of this famous spire was commenced in 1276, by Erwin de Steinbach, and continued by his son, his daughter Sabina having also contributed some fine sculptures to the principal portal. It was finished in 1439, under the direction of Schulz, an architect of Cologne. Beside the grand portal are equestrian statues of Clovis, Dagobert, Rodolph of Hapsburg, and Louis XIV.; and over its centre is a marigold-shaped window of stained glass, 51 ft. in diameter. The interior has a fine stone carved pulpit, with numerous monuments, statues, &c. The famous astronomical clock, constructed by Isaac Habrecht, which indicated the days of the month, the places of the sun and moon, and other celestial phenomena, has been standing still for a considerable number of years. Napoleon is said to have contemplated the repair of this curious piece of mechanism. In the church of St. Thomas is the magnificent monument in honour of Marshal Saxe, the *chef-d'œuvre* of Pigalle. Here, also, is a monument to Koch, the historian. The *Temple Neuf*, given, in 1681, to the Protestants in exchange for the cathedral, the church of St. William, the *Château Royal*, the large public library, said to contain (though we do not place implicit confidence in the statement) 130,000 vols., the new synagogue, the theatre (with a handsome front of six Ionic columns), the prefecture and other public residences, the arsenal, barracks, cannon foundry, and other military establishments, and various public schools, are deserving of notice. There are several hospitals and asylums, civil and military prisons, an exchange, corn, fish, and other markets, various assurance companies, a royal dépôt d'étalons, a botanic garden, &c. The environs are well cultivated, and Strasbourg has many good public walks; the principal of which is the *Contades*, without the city, laid out by the marshal of that name in 1764.

Strasbourg is a bishop's see, the seat of a court of primary jurisdiction, council of *prud'hommes*, and a chamber of commerce; of a university academy, royal college, mint, boards of forest economy, roads, and bridges, and of customs; the Lutheran consistory for the S. of France, faculties of law, medicine, sciences, &c., R. Cath. and Protestant seminaries, and societies of agriculture, literature, and arts. The museum of the academy is very rich in the natural products of Alsace. The city is divided into four cantons, in each of which is a justice of the peace and a police commissary. It has an extensive royal manufactory of snuff, for which Strasbourg is famous; with considerable manufactures of woollen, linen, and cotton stuffs, sail-cloth, cutlery, steel

STRATFORD-UPON-AVON.

articles, metal buttons, cotton twist, leather, hats, paper, playing cards, earthenware, shell articles, printing types, chemical products, &c., exclusive of dyebouses, breweries, printing establishments, and sugar refineries: the *gildes de fours gras* of Strasbourg have attained to high gastronomical celebrity. The trade of Strasbourg is very extensive. Its situation on the Rhine having rendered it a great frontier emporium.

Strasbourg is very ancient, and most probably, indeed, existed previously to the Romans. It assumed the name of *Strasburgum* in the 6th century. On the first partition of the Frankish territory it was included in the kingdom of Austrasia, and on the second in Lorraine. In the 10th century it belonged to the German emperors, and subsequently became a free city of the empire, which it continued to be till 1681, when it was taken possession of by Louis XIV., and finally annexed to France. Pierre Schœffer, who contests with Gutenberg the honour of being the inventor of printing, and Generals Kellermann and Kléber, are among the distinguished natives of Strasbourg. The latter is buried in the cathedral, and a monument has been erected to his memory on the artillery parade. (*Hugo. art. Bas-Rhin; Schrœffer, Guide du Rhin; Guide du Voy. en France; Murray's Handbook, &c.*)

STRATFORD-UPON-AVON, a town, mun. bor. and parish of England, co. Warwick, bound Stratford-upon-Avon, celebrated as the birth-place of Shakespeare, 7 m. S. W. Warwick. Area of par., 8,800 acres. Pop., in 1901, 4,023. The town is finely situated on a gentle acclivity rising from the W bank of the Avon, which here expands to a breadth of about 130 yards, and is crossed by a bridge of 14 arches, built in the reign of Henry VII., but repaired and whitened in 1814. In the older parts the houses, though intermixed with others of more modern date, have an antique appearance, several new streets have, however, been constructed of late years, and the corporation has distinguished itself by the aid it has given to improvements of all sorts. (*Municipal Board. Report*.) It has a large, handsome, cruciform church, with a square embattled tower, surmounted by a lofty spire; the transepts, tower, and some parts of the nave, are early English; the rest of the building is mostly a mixture of decorated and perpendicular. (*Richman.*) It has several fine old monuments. Of these the most interesting by far is that of Shakespeare, on the N. wall of the chancel. It is constructed partly of marble, and partly of stone; consisting of a half-length bust of the poet, with a cushion before him, placed under an ornamental canopy, between two columns, supporting an entablature. Under the bust are the following lines:—

**Juditha Pytkova, genio Swetlana, arte Marianne,
Terra magis, populus maris, Olympos Solis.**

There are followed by six lines in English verse; and on a flat stone, which covers the grave, is an extremely neat tablet to the effect "evils and fears," and an inscription against such as might profane the ashes of the mighty dead.

The living of this church is in the gift of the Earl of Arundel, that once belonged to the Earl of Warwick, and was suppressed at the death of Henry VII. In the several curious fresco paintings this building is a hall for the use of the meetings of the 24 poor persons of both sex for children, natives of the building of the Tuncan or 20 ft. in length by 20 ft. in breadth at the jubilee in 1700, to be thence called the Shah with pictures, by Wilson and Garrick; and outside the building is a statue of the poet, which, with the pictures, was presented by Garrick. Here are national, Lancastrian, and other schools, 3 public libraries, a new theatre, &c. The *New Corp. Report* says that some of the charities in the town are highly spoken of. The town is governed by a mayor, 3 aldermen, and 13 councillors, but has no commission of the peace, and even its court of record has fallen into disuse. Corp. revenue, in 1847-8, £2,164. The only manufacture carried on belongs to one of the departments of button-making, and it is by no means extensive. Markets on Fridays; fairs 6 times a year, for cattle, corn, provisions, &c. The Avon is navigable by barges from the Severn to Stratford, where it unites with the Stratford Canal, which is itself connected with the Worcester and Birmingham Canal.

Lilla, unfortunately, is known of the life of the illustrious poet to whom Stratford owes all her celebrity. He first saw the light on (as is supposed) the 23d of April, 1614. Having married in 1632, he soon after went to London, where he produced the greater part of his immortal works; and having returned to Stratford to spend the evening of his days, died there in 1616, on the

VOL. II.

STUHLWEISENBURG. 129

mid of April, the anniversary of his birth. This brief notice comprises nearly all the authentic information we possess regarding the greatest of dramatic poets, notwithstanding his death occurred little more than two centuries ago! "No letter of his writing, no record of his conversation; no character of him, drawn with any fairness by a contemporary, can be produced." (*Hutton*.)

The house in which the great poet was born, in Henley Street, is still standing; and is the resort of all visitors to the town. It has, however, been converted into two houses, and otherwise much altered. The house in which Shakespeare passed the latter years of his life was, to the disgrace of those concerned, demolished in 1700; when the famous mulberry-tree he is said to have planted in its garden was also cut down. (*Walter's Stratford-on-Avon; Municipal Boundary Report, &c.*)

STRATFORD (STONY), a market town and par. of England, co. Bucks, bund. Newport, on the Ouse, which is here the boundary of the co., and is crossed by a stone bridge, $\frac{1}{2}$ m N.E. Buckingham Area of par., 70 acres. Pop. in 1841, 1,787. It is built on the line of the ancient Watling Street, and is supposed to occupy the site of the *Lododurum* of the Romans. The houses are mostly of freestone, extending for about 1 m. on either side the road. The parish church was rebuilt in the Gothic style, in 1777 the living, a perpet. curacy, worth 120*l.* a year, is in the gift of the Bishop of Lincoln. There are meeting-houses for various dissenters, national and Sunday schools, a society for apprenticing children, &c. At an inn in this town, the person of the young king Edward V was seized, and Grey and Vaughan arrested by Richard duke of Gloucester. The only manufacture is that of lace; but the inhab. have some trade in corn. Markets, which are well supplied with provisions, are held on Fridays: fairs, 21st Aug., and Friday before 16th Oct., for hiring servants, and 12th Nov. for cattle.

STROUD, a pari. bor., market-town, and par. of England, co. Gloucester, bound. Bioley, on the Stole or Stroud-water, near its junction with the Frome, 9 m. S. Gloucester. Area of par., 3,990 acres. Pop., in 1881, 8,807; in 1841, 8,680. The pari. bor., however, is not confined to the town, but includes the whole clothing district, of which it may be regarded as the centre, comprising about 14 parishes. Pop., in 1841, 37,000. The general characteristics of the district are, "the situation of the mills on streams in deep ravines, the scattered and irregular manner in which the houses are built on the hill sides; and the contrast between the high land (in many cases either wood or common, with few inhab.) and the valleys studded with houses and thickly peopled." (*Parl. Board Memoirs*.)

Stroud stands on the side of a hill, and consists chiefly of a long street, crossed by another at its base: the streets well paved and lighted. The town hall, a fine old building, has a tower with an open clock. The living, a perpetual curacy, is in the gift of the Bishop of Exeter; and several charities for the poor, of which it is the centre, cross the Stroud-water, which is not so working of machinery, but is used to the dyeing of scarlet and other trades has, in consequence, many fulling-mills, &c. in 1844, the population was about half employed in manufactures together with agriculture. (See *Stroud and District*.) The town and district depends on the clothing trade, and partakes in the progress of the latter. Power-looms and machinery have been introduced into the manufacture, but the progress has not been so rapid as in other parts of the country. The wool, which passes close to the town, is the best in the district.

The Reform Act conferred on Scrued, and its adjacent district, as specified above, the important privilege of sending 2 men to the H of C. Registered electors, in 1849-50, 1,928. Petty sessions for the hundred are held in Scrued. Markets, on Fridays. Fairs, May 15 and Aug. 31. for cattle, sheep, and horses.

STUHLWEISSENBURG, a town of Hungary, cap. co. of its own name, 18 m. N.E. Lake Balaton, and 25 m. S.W. Buda. Pop., with its two suburbs, 20,000. (*Marghau*.) "Though formerly a Roman town, and a name of frequent occurrence in Hungarian history, it contains nothing remarkable. The palace of the bishop, and some of the buildings connected with it, are handsome; but the streets are badly paved, and the whole town disagreeably placed in the centre of a huge bog." (*Payer's Hungary*, 1857.) It was, for a lengthened period, the residence of the sovereigns of Hungary, and has a royal manseion, in which 14 of them are buried. It has a gymnasium and other R. Cath. schools, a military school.

front with the country to the eastward is carried on. The head of the gulch on which it stands has always been the seat of a considerable French trade, and the ancient citadel of Armand and Kaban stood in the neighbourhood, but there is a comparatively modern as well as a very modern town. Turner says, "Take it for all in all, Sum is indubitably the most miserable place I have seen in the Levant. Its only gate is to the N.W. where cannon are mounted near it, and there are eight more on the banks of the sea. In its present state, 50 men could take it with ease. There is nothing, being on all sides surrounded by the desert. The clothes, and even the provisions, of the inhabitants are all brought from Cairo, to the last loaf. Frequent caravans come from Jeddah and Jerusalem, bringing all, tobacco, and soap. (Turner's *Levant*, II. 414, 415.) It suffered much from the French, by whom it was in great part destroyed, and it now consists merely of sun-dried brick houses and unroofed streets, with about a dozen mosques, a Greek church, custom-house, &c. the whole surrounded by a ruined wall and some approaches thrown up by the French. It is wholly destitute of water, which is brought to it by the Arabs from wells several miles distant, and besides being high- pitched, is of a numerous description. The port is accessible only by boats of from 30 to 60 tons. Steamers and other vessels belonging to the E. I. Company move outside a sand bar at a distance of 3 m. from the town. But since the establishment of what has been called the over-land route to India, Sum has become a place of considerable importance, and is now the residence of an agent for the E. I. Company, and of several commercial agents.

The Gulf of Sum, which at low water is in many parts so shallow as to be fordable, is described in *Harvard History* as the scene of the achievement of Phaulkon and his boat. The harbour of Sum, connecting Asia and Africa, is a sandy waste, between 70 and 80 m. across. Near Sum may still be seen the vestiges of the canal cut by Phaulkon and his and Frederick Philadelphia, to make the Red Sea with the Nile. (Turner's *Levant*, II. 414, 415; *Private Information*, &c.)

SUFFOLK, a mark, co. of England, having W. the sea, North, E. the German Ocean, S. Havre, and W. Cambridge. Area, 989,000 acres, of which about 650,000 are supposed to be arable, meadow and pasture. Surface generally flat. Soil various, that of the middle and most extensive district consists principally of a strong loam, on a clay-marl bottom. The district, bounded by the rivers Stour, Orwell, and Great Ouse from Bury, is a very rich loam, of extraordinary fertility. The

whole population, who cultivate their own estates. Farms generally large, but many small. They are usually let on lease for 7 or 14 years. Tenants usually restricted from encroaching 5 acres crops in a field, but, in other respects, they are left pretty much at liberty. Farm buildings in different. Cottages generally bad. Average rent of land, in 1868, 30s. 6d. an acre. Minerals of no importance. There is no wine formerly celebrated for its excellence, particularly those of wine, but they are now much damaged. Mixed soils and wooded districts are still, however, distinguished at Sudbury, Colchester, and other places. Canals are made in large quantities of bricks. There is a considerable manufacture of staves at Ipswich.

Suffolk is well watered, being intersected by the rivers Orwell, Stour, Afd, Blyth, and Lark. It is separated from Essex by the Stour. Suffolk is divided into 100 parishes and 110 parts. It returns 1 member to the H. of C.; viz. 4 for the co. 3 north for the bar of Bury St. Edmunds, Ipswich, and Sudbury; and 1 for the bar of Bury and contiguous parts. Registered electors for the co. in 1845 30,16,000, viz. 6,000 for the E. and 4,500 for the W. co. In 1861, Suffolk had 64,000 inhabitants, and 314,075 inhab. of whom 124,000 were males, and 190,075 females. Sum expended for the relief of the poor in 1864-65 148,000. Annual value of real property in 1815, 1,167,000; do. in 1863 1,717,000.

SUMATRA, the most W. island of the N. archipelago, and, next to Borneo, the largest in the E. seas, between lat. 0° W. and 0° E. and the 10th and 11th degs of N. long. separated on the N. E. from the Malay peninsula by the Straits of Malacca, and on the S. E. from Java by the Straits of Sunda, having E. the Sea of Java, and surrounded on nearly all other sides by the Indian Ocean. Its direction is from N. W. to S. E. nearly parallel to the Malay peninsula, it being divided by the equator into two nearly equal portions. It is of an oblong shape, about 1,000 m. in length and has an area variously estimated at from 120,000 to 150,000 sq. m. Its population is nearly unknown, but it has been estimated, by the best authorities, at about 1,000,000. Various mountain ranges run through the island longitudinally, sometimes in triple or four fold ranges rising under the equator to 14,000 or 16,000 ft. in height, and always much higher to the W. than to the E. coast. The E. half of the island is, in fact, almost wholly low, flat, and intersected by numerous rivers. Some of these, as the Palembang, Jatin, Indragiri, and Siah rivers, are of considerable size and they have been hitherto little explored by Europeans. The W. side of the island is also well supplied with water, and in the interior are numerous small lakes. The climate, even in the plains, is not so hot as might be expected in a country situated in the midst of the torrid zone. The thermometer at mid day generally fluctuates between 80° and 90° Fahr., though it sometimes rises to 97° or 99° at sunrise it is usually as low as 70°. Dense fogs, thunder storms, and water spouts, off the coasts, are very frequent. The soil on the W. side of the island, which is that best known to Europeans, is a stiff reddish clay and a great proportion of the surface, especially towards the S., is a impenetrable forest. Gold dust, which is very abundant, copper, iron, sulphur in the numerous volcanic districts, caliche, coal of middling quality, and naphtha, appear to be the chief mineral products. The copper ore is very rich, but, owing to the indolence of the inhabitants, the mines are little wrought, except over a very limited district. Gold dust is, however, an article of considerable trade, and is brought by merchants from the interior to the sea-coast, where it is bartered for iron, iron tools, and the plain goods of the E. Indies and Europe. Among the vegetable products, the most important is pepper, the average produce of which may amount, at present, (1868) to about 20,000,000 lbs. a year, of which about 10,000,000 are furnished by the W., and 10,000,000 by the E. coast. This supply amounts, in fact, to more than all the pepper supplied by all the other countries in the world. Nearly the whole of this extensive trade is in the hands of foreigners, especially Dutch, English, and Americans. But little Sumatra pepper goes to China.

After the capture of the *Medusa* by the British, in 1793, the nutmeg and cloves were introduced at Bencong, and, in 1808, their culture had so far succeeded, that the produce, in that year was estimated at 20,000 lbs. of nutmegs, 24,000 lbs. cloves, and 10,000 lbs. of mace, but their quality being very inferior as compared with the products of Amboyna and the Dutch Isles, the culture has made little further progress. Cam-

of the most valuable kinds of produce, and a camphor sells in China for 11 times the price of Japan. It is the concrete juice of the *Camphora*, and a tree of the order Gentianeae the Japan camphor is derived from a tree). It grows only in the N. part of Sumatra, found N. of the line, or beyond the 3d d. It is a short tree, its trunk sometimes 10 ft. in diameter. The same tree pro-

the land is, more, more, &c., is now drilled without any ploughing, being merely marked and drilled, as so in be removed from enough for the drill to work. The most valuable to the turnip lands is 1st, turnips; 2d, barley; 3d, oats; 4th, wheat on the heavy lands, 1st, fallow; 2d, wheat; 3d, oats or beans; 4th, wheat when the 3d is made, beans or oats come in 5th. Hemp has been cultivated for a long period and is rich and of the finest quality. Turnips are a good deal grown, and hops are raised in the vicinity of Bury. Suffolk is famous for its breeds of horned cattle, and pigs. The horses are called *pusheys*, and are, as the name implies, short and compact, being well suited for regular farm work. The cattle have sprung from the Galloways, many of which are followed to this day. Like their progenitors, they are polled, and rather small-sized. They are better suited than the Galloways for the dairy, being excellent milchers. The produce of butter is not, however, supposed to be in proportion to the milk, though it be also very considerable. Arthur Young supposed that about 40,000 British of butter were annually sent from Suffolk to London (Turner, 2d ed. p. 104), and, as the management of cows is now better understood, and more mended in the quantity may at present, be increased to 50,000 or 60,000 British. Much of sheep about 100,000. Warrens were formerly numerous in the early district, but they are now much diminished. Property much divided; a good deal in the hands of capital-

duces, under different circumstances, camphor, oil, or pitch, which are found in cavities of the trunk, not extending the whole length of the tree, but in small portions of 1 and 1½ ft. long at certain distances. "The method of discovering the camphor is, by making a deep incision with a Malay axe, till the camphor is seen: hundreds of trees may be thus mutilated before the sought-for tree is discovered: when attained, it is felled and cut inunks, a fathom long, which are again split, and the camphor is found in the heart, occupying a space of the thickness of a man's arm. The produce of a middling-sized tree is about 8 Chinese catties, or nearly 11 lbs.; and of a large one, double the quantity." (*Roxburgh in Asiat. Researches*, xii.) Rice is the principal species of grain. It is of very different varieties, comprised in the two great classes of upland and lowland, the former being considered the best. The land destined for its culture is chosen at the approach of the dry season; and as fresh ground is frequently cleared for the purpose, the wanton destruction of fine timber is immense. The rice is sown at the beginning of the rains, and ripens in about five months from that time. The same spot of low ground is, for the most part, used without intermission for several years, the degree of culture bestowed by turning up the soil, and the overflowing water, preserving its fertility. Fallows occur occasionally; but as occupancy in most parts of Sumatra gives the right of property in the land, they are not very frequent.

The *sawaks*, or fields adapted for rice in low and wet situations, are prepared by turning into them a number of buffaloes; or in parts where it is less permanently moist, the soil is turned up either with a wooden instrument between a hoe and a pickaxe, or with a plough. While the *sawaks* are in preparation, a small, adjacent, and convenient spot of good soil is chosen, in which the seed grain is sown as thick as it can well lie on the ground; and after having grown to the height of several inches, it is taken up, in showery weather, and transplanted to the *sawak*, where holes are made, four or five inches asunder, to receive the plants. To the minute care thus bestowed upon the latter, Marsden attributes the large proportion of produce obtained, which, he says, averages 100, and is sometimes as high even as 140 fold! (*Marsden's Sumatra*, p. 77.) A singular method is adopted for separating the grain from the ear. The bunches of paddy are spread on mats, and the Sumatrans rub out the grain under their feet, supporting themselves for the more easy performance of this labour by holding with their hands a bamboo, placed horizontally over their heads. As an article of trade, Sumatran rice seems to be of a more perishable nature than that of most countries, the upland rice not being expected to keep longer than 12 months, and the lowland showing signs of decay after 6. Sage is common in Sumatra, and is used occasionally as food, though not an article of general use. Millet is cultivated, but in no great quantity. The cocoa-nut, betel, bamboo, sugar-cane, various palms, and an abundance of tropical fruits, are indigenous. The sugar-cane is cultivated not for the manufacture of sugar, but for the sake of chewing the juicy reed; and hemp, instead of being used for the supply of materials for cordage, furnishes an intoxicating preparation. Turmeric, ginger, cassia, indigo, coffee, caoutchouc, rattans, many scented woods, and in the N. benzoin, are among the other principal kinds of produce.

Buffaloes are the most important live stock; the ox does not appear to be naturalised. The breed of horses is small, but well-made and hardy; sheep also are small. The hog and goat are both domestic and wild. Elephants, and many species of deer, abound; and tigers of a large and powerful species, the rhinoceros, hippopotamus, orang-outang, bears, &c. are met with, besides other animals in great variety. Around the shores extensive coral islands are continually forming; and coral is one of the principal articles of export, the other exports being pepper, rice, camphor, and other native products. The imports are chiefly Indian piece goods, salt, silks, and opium, from Hindostan; coarse porcelain, iron pans, gold thread, and many small articles, from China; striped cottons, spices, kris, and other weapons, from Java, Celebes, and the rest of the archipelago; metals, hardware, cutlery, and broad cloths from Europe.

According to native traditions, Sumatra and the adjacent islands have been the original seat of the Malay race; the type of which is certainly there met with in its greatest perfection. Except the Achinese, inhabiting the N. extremity of the island, and whose commixture with the Moors of Western India has distinguished them from the other tribes, the Sumatrans, according to Marsden, may generally be described as follows:—"They are rather below the middle stature; their bulk is in proportion; their limbs are for the most part slight, but well shaped, and particularly small at the wrist and ankles. Upon the whole they are gracefully formed, and I scarcely recollect ever to have seen one deformed person. The women, however, have the preposterous custom of

flattening the noses and compressing the heads of children newly born whilst the skull is yet cartilaginous. They likewise pull out the ears of infants to make them stand at an angle from the head. Their eyes are uniformly dark and clear, and among some, especially the southern women, bear a strong resemblance to those of the Chinese. Their hair is strong, and of a shining black, the improvement of both which qualities it probably owes, in a great measure, to the early and constant use of cocoa-nut oil. The men are beardless, and have chins so remarkably smooth, that, were it not for the priests displaying a little tuft, we should be apt to conclude that nature had refused them this token of manhood. But the boys, as they approach to the age of puberty, rub their chins, upper lips, &c. with quick lime, and the few hairs which afterwards appear are plucked out from time to time with tweezers, which they always carry about them for that purpose. Their complexion is properly yellow, wanting the red tinge that constitutes a tawny or copper colour. They are, in general, lighter than the half-breed of the rest of India; those of the superior class, and particularly their women of rank, approaching to a great degree of fairness." (p. 44—46.) No negro or other distinct race appears to occupy the mountainous regions, as in other parts of the archipelago; and the personal difference between the Malays of the coast and the country inhab. is so little marked, that it requires some experience to distinguish the two. (*Marsden*, p. 49.)

The original clothing of the Sumatrans is the same with that found by navigators among the inhab. of the South Sea Islands; consisting of the inner bark of a tree, beaten out to the degree of fineness required, some fabrics being nearly equal in softness to the most delicate kid-skin. The dress of the men comprises short drawers, a close waistcoat, with filigree buttons, a robe extending sometimes to the knees, a party-coloured scarf, a sash in which the *kris* or dagger is stuck, and a small turban, or umbrella-hat, while that of the women consists of a boddice, a petticoat, reaching from the bosom to the feet, a robe with sleeves, and sometimes a gauze veil, &c., with various filigree ornaments. Both sexes file, blacken, and otherwise disfigure their teeth; and the great men sometimes set theirs in gold, by casing the under row with a plate of that metal.

The villages are always on the banks of some river or lake, and consist of houses built chiefly of bamboo, and on posts, as in other countries of S.E. Asia. They are, however, much superior to those constructed among many other Ultra-Gangetic nations. Their furniture is very simple, consisting, in the best kind of houses, chiefly of mats of a fine texture, serving for beds, some low tables, coarse earthenware, brass waiters, and iron pans. In eating, neither knives, spoons, nor any substitutes for them, are used. The diet of the Sumatrans is mostly vegetable, but they eat the flesh of buffaloes, goats, fowls, &c., curried or otherwise dressed. In a few species of manufacture the Sumatrans exhibit great skill; such as in working gold and silver filigree. This art, described by Marsden (pp. 179, 180.), is conducted with the rudest tools. The wire-drawing instrument is made of a piece of iron hoop; "an old hammer head, stuck in a block, serves for an anvil; and I have seen a pair of compasses composed of two old nails tied together at one end. In general, they use no bellows, but blow the fire with their mouths, through a joint of bamboo; and, if the quantity of metal to be melted is considerable, three or four persons sit round their furnace, which is an old broken *kuali*, or iron pot, and blow together." (P. 179.) Yet the manufactured material is celebrated for its delicacy and beauty, not only throughout the E., but in Europe. They weave silk and cotton cloths for home consumption; and some of their work is very fine, and the patterns prettily fancied. Different kinds of earthenware, *kris*, and fire-arms are made; and it is said that formerly cannons were cast at Achin. Little skill is, however, commonly shown in forging iron, or in carpenters' work. The Sumatrans are wholly strangers to painting and drawing; their carvings are always grotesque; and their proficiency in the exact sciences is very limited. Medicine is in the lowest state, being entrusted to old people, who, in a great measure, depend on charms and talismans for the cure of diseases! The Sumatrans are fond of music, and have many musical instruments, though most part of these have been borrowed from the Chinese. Their poetry is by no means contemptible, and is much favoured in point of harmony by the Malay language, the smoothness and sweetness of which have gained for it the appellation of the *Italian of the East*. They write in the Arabic character.

Sumatra is divided among a number of native states, the principal being Menangkabow, in the centre of the island, Achin, Siak, Palembang, and Lampong. The European settlements, Bencoolen, Padang, &c., are on the S.W. coast, trenching on the country of the Rejangs. Among this people, the inhab. of the villages are under the jurisdiction of magistral head-men, or *dupatis*, who meet at stated periods and places, in an assembly at

which the pangrass, or feudal superior pangrass claim despotic sway; but, have, in fact, little more than a patrimonial power, they levy no tax, nor seem to other than accrues from their determination to them in appeal from the decisions. And in the immediate neighbourhood of the full states, the pangrass seem to acknowledge vassalage to the sovereigns of the latter are said to be totally without religious kind, though not destitute of a belief in beings. A large proportion of the latter are, however, Mohammedans.

Sumatra was first visited by the Dutch in 1600, and by the latter afterwards. The latter continued to send form settlements in the island century; but principally in 1685-86. were retained by the British till 1824 ceded to the Dutch in exchange for Malacca's Sumatra, 3rd ed. 1811, the most the best work on the subject.)

SUNDERLAND, a par. and mun. and par. of England, being, Newcastle the greatest port in the kingdom for coal, co. Durham, ward Easington, Wear, close to its mouth in the North Durham, with which city it is connected and 245 m. N.N.W. London; lat. 54° 55' 12" N., long. 1° 21' 16" W. A par., 120 acres. Pop. of do., in 1841 par. bor. comprises, along with Sun. ships of Bishop-Wearmouth and B. side of the Wear, and those of Monk W. Shore, and Southwick, on its N. including an area of 5,096 acres, and 22,812.

Sunderland and Bishop-Wearmouth of the river, at no distant time, were at a considerable distance from each other in Sunderland appear to be of considerable Bishop-Wearmouth the intervening gradually curtailed, and at last filled up that at present the two form only on exception of one street, in which the respectable houses and shops, Sunderland appearance of one mass of small houses with interstices of narrow lanes remains. The population in them is so dense preface of unhealthiness as well as illness. This is not the case in Bishop the new part of the town that at there are some good streets, and except it is in this part that the higher class reside. This town is increasing rapidly streets have been recently built, and of building. Bishop-Wearmouth Par. running along the bank of the river Sunderland to nearly as far as the is very dense; it contains some glass and iron works for the manufacture are required for the shipping. Monk is a large township immediately opposite and part of Bishop-Wearmouth, and with but few houses or inhabitants. Adjoining Monk-Wearmouth Shore extending for some distance along Southwick. In it are some coal pits and a part of the township, however, is agricultural very little trading population. lies to the N. of Monk-Wearmouth and come down upon the river. Its population entirely connected with the trade of carriage communication between the town on the opposite sides of the river on passing which, from the right to is taken." (*Mss. Corp. Rep.*)

The cast-iron bridge, now alluded to is the most remarkable object in this was constructed between 1793 and 1795 about 23,400*l.*, and consists of one 226 ft. in span, elevated in the centre high-water mark, so that large ships merely lowering their top-masts. It 1816, by a lottery of 6,000 tickets, at.

The parish church of Sunderland some, its E. end is particularly elegant placed in a circular recess under a chapel-of-ease, built in 1769, is a perpetual Wearmouth church has an ancient decorated E. window, but the rest is a valuable rectory, worth 3,000*l.* a year divided. Monk-Wearmouth church its ancient features obliterated by although it still possesses a rude N. There are numerous places of wor

m.* Its mean depth is estimated at 900 ft., and the height of its surface at about 640 ft. above the Atlantic. It receives upwards of 60 rivers, but none is of much importance except the St. Louis, which enters at its S.W. extremity, and the Rivière au Grand Portage. During the melting of the snow, these and the other rivers sweep into the lake vast quantities of sand, boulder stones, and drift timber. It discharges itself at its E. extremity into Lakes Huron and Michigan, by the river and falls of St. Mary. "This lake embosoms many large and well-wooded islands; the chief of which is Isle Royal. The country on the N. and E. is represented as a mountainous embankment of rock, from 200 to 1,500 ft. in height; the climate unfavourable, and the vegetation slow and scanty. Upon the S. the land is also high, generally sandy, sterile, and the coast dangerous; subject to storms and sudden transitions of temperature, and to fogs and mists. The mean heat in June and July is about 65° Fah.; but a frightful winter prevails for nine months of the year. The Chippeway Indians inhabiting the shores are poor and miserable, depending for subsistence chiefly upon the fish of the lake, and the wild rice of the adjacent savannahs." (*New York Gaz.*) But, notwithstanding these unfavourable circumstances, the harbours of Grand Isle and Chegoimagon Bay, on the S. coast, are excellent; and the lake is now navigated by steam-boats and sailing vessels equal to the craft navigating the lower lakes. (*Stevenson.*) The Hudson's Bay Company have several stations round the coasts of this lake. (See also *Encyc. of Geog.*, Amer. edit.; *Darby's Geographical Views*, &c.)

SURAT, a large town of Hindostan, cap. prov. of Gujrat, and of the British distr. of its own name, under the presid. Bombay, on the Taptee, about 20 m. above its mouth, in the Gulf of Cambay, and 128 m. N. by E. Bombay; lat. 21° 11' N., long. 73° 7' E. The pop. was loosely estimated, in 1818, at 157,000. It is about 6 m. in circ., shaped like a bow, the chord, formed by the Taptee, having, near its centre, a small castle garrisoned by a few sepoy and Europeans. On other sides the town is surrounded by a wall flanked with semi-circular towers. Without the wall are some good European houses, formerly occupied by the French, but now the residences of the English officers: the houses within the town are very inferior, consisting only of timber frames filled up with bricks, their upper stories projecting over each other. The streets, also, are narrow and irregular. Surat has an English church and an English school, with numerous Hindoo schools, a large European cemetery, containing the tomb of Sir G. Oxendon, one of the earliest governors of British India, &c.; but the most remarkable building or institution is an hospital for sick animals similar to that at Baroach. During the last century this hospital contained "horses, mules, oxen, sheep, goats, monkeys, poultry, pigeons, and a variety of birds; also an aged tortoise, which was known to have been there 75 years. The most extraordinary ward was that appropriated for rats, mice, bugs, and other noxious vermin, for whom suitable food was provided. (*Hamilton, E. I. Gaz.*)

Surat had formerly a large trade in all kinds of eastern produce; but this has greatly declined, and its exports consist at present (1842) principally of cotton wool, which is sent in large quantities to Bombay. Most part of the old manufactures of Surat, except kincobs and shawls, for which there is little demand, have been superseded by those of Great Britain, and the greater number of the native merchants have become poor. Among the traders, however, are numerous Parsees, the descendants of those expelled from Persia by the Mohammedans, who have the reputation of being wealthy. Vessels of 30 or 40 tons may come up to Surat; but those of greater size must lie about 15 m. lower down the river; and few boats larger than the ketches in the E. I. Company's service ever ascend so high as the town.

Surat is the residence of a British collector, judge, military commandant, &c., and is the seat of a board of customs, a circuit court, and of the *Sudder Adawlet* or chief tribunal for the entire presid. of Bombay. It is supposed to be one of the most ancient cities of Hindostan, being mentioned in some of the earliest records. The English factory, founded here in 1615, was the first merchantile establishment of the E. I. Company in the Mogul dominions, and continued to be the chief British station in India till Bombay became the seat of supreme authority, in 1687. (*Hamilton; Mod. Trav.*, x. 144—149, &c.)

SURINAM. See GUIANA (DUTCH).

SURREY, a co. of England, which, though inland, enjoys, from its being skirted on the N. by the Thames, most of the advantages of a maritime co. It has to the N. Middlesex, and a small part of Bucks, from both of which it is separated by the Thames; on the E. it is bounded by Kent, on the S. by Sussex, and on the W. by

* These measurements correspond with those of Stevenson (*Civil Engineering in North America*, p. 5.) and the best maps. Darby makes the area 24,000 sq. m.

Hampshire and Berks. It comprises all that portion of the metropolis to the S. of the Thames, and is thus, in fact, a metropolitan co. Area, 485,120 acres, of which about 400,000 are arable, meadow, and pasture. With the exception of the Weald, the surface consists of alternate hill and dale. Some of the hills rise to a pretty considerable height, affording highly diversified and beautiful prospects. The soil comprises every variety, from the richest loam to the poorest moor. There are three portions, the soils of which are particularly well defined; viz. 1st, the Weald, occupying all the S. part of the co. from Crowhurst to Haslemere; 2dly, the sandy loam district, lying between the Weald and the downs; and, 3dly, the downs, or chalk land, occupying the whole E. side of the co. from Croydon to Tilsey, but gradually decreasing as we advance W., till at Farnham, on the border of Hants, it is reduced to a narrow strip. To the N.E. of the downs, between them and the Thames, there is a great variety of soil, partly consisting of strong dark clay, partly of sandy loam, &c. In the N.W. and S.W. parts of the co., but especially the former, there are very extensive tracts of heath and moorish ground; and smaller tracts of the same kind are met with in various other places. On the whole, however, the co. may be said to be of an average degree of fertility. Climate good; and, owing to the variety of surface, the abundance of wood, and its contiguity to the metropolis, it is one of the most desirable co. in England for a residence. A large proportion of Surrey is in tillage; but agriculture, speaking generally, is in a decidedly backward state, and two, or even more, white crops still not unfrequently follow in succession. On the rich friable calcareous loams between Croydon and Epsom, 6 quarters of wheat an acre are not unfrequently reaped; and on the rich sandy loams near Godalming, 5 quarters is no uncommon crop; but on the poorer soils, and in the Weald, the produce seldom exceeds from 2½ to 3 quarters. The turnip culture was introduced into Surrey sooner than into any other English co.; but even at present turnips are but seldom drilled: their management is but imperfectly understood, and tares are generally preferred by the Surrey farmers to any other species of green crop. Turnwrist ploughs are used in many quarters, but the swing plough is most common. It is drawn by 3, 4, or even 5 heavy horses yoked in line! Lime is extensively used as manure; and the application of salt for that purpose is daily becoming more general. Hops are raised in considerable quantities; and those grown in the neighbourhood of Farnham are preferred to most others. Peppermint, lavender, wormwood, chamomile, &c. are raised in the physic gardens about Mitcham; and a considerable extent of land at Battersea, and other places along the banks of the Thames is appropriated to the production of asparagus and other vegetables for the London market. There is no peculiar breed of cattle in Surrey, but the short horns and the Sussex breed are the most prevalent. A considerable number of sheep are kept, principally on the down-land. Large numbers of hogs are fed; they consist principally of the Berkshire and Chinese varieties. The Dorking breed of fowls is in high estimation; they are large, handsome, perfectly white, and are distinguished by having six claws to each foot. There are no very large estates in Surrey. Farms of all sizes: the largest are on the down-lands, and the smallest in the Weald; but, at an average of the co., the size of farms is not supposed to exceed 170 acres. They are commonly held under leases for 7, 14, or 21 years; but the vicious customs that prevail as to entry defeat the advantages that might otherwise have resulted from this tenure. (See *Kennedy and Grainger, Letting of Land*, i. 321.) In the Weald the farm-houses are mean and ruinous, but they are better in other places. Cottages good, and frequently ornamented with vines and flowers. Average rent of land, in 1843, 17s. 10d. an acre. There is a great deal of valuable timber and coppice wood in Surrey, particularly in the Weald. Large quantities of fuller's earth are dug up in various places; and there are also excellent quarries of freestone and limestone. Except in so far as it is connected with the metropolis, Surrey has very few manufactures; and those of little or no importance. Besides the Thames, it is watered by the Wey, the Mole, and the Wandle; and it is traversed by the Surrey and Croydon Canals, and by the Brighton and S.W. Railways. Turnpike roads good; but cross roads, particularly in the Weald, very indifferent. It contains 13 hundreds, exc. of the bors. of Southwark and Lambeth, and the town of Guildford; and is divided into 142 pars. It returns 11 mems. to the H. of C.; viz., 4 for the co., 2 for the bor. of Guildford, 1 for the bor. of Reigate, 2 for Lambeth, and 2 for the bor. of Southwark. Registered electors for the co., in 1849-50, 10,004, of whom 6,394 were for the E., and 3,610 for the W. div. In 1841, Surrey had 95,372 inhab. houses, and 582,678 inhab.; of whom 278,203 were males, and 304,475 females. Sum expended for the relief of the poor, in 1847-48, 230,677*l.* Annual value of real property, in 1815, 1,589,702*l.*; do. in 1843, 2,939,068*l.*

country is wild, bleak, and, in many parts, the shore has a small fringe of good arable soil; the surface is rugged and mountainous, interspersed with various narrow rivers, and some considerable lakes and moors.

Like the other Highland counties, was, till recently, by native tenants, similar in all respects to them. These, however, have, for the most part, been removed either to villages on the coast or to the lands have been divided into sheep farms, furnished with excellent offices. The native breed of cattle is crossed by those of Argyle and Skye, but to any that the Highlands can produce. Other varieties, have also been introduced to the extraordinary extension of sheep farming, the stock of cattle has been diminished to a greater degree than in Ross; but sheep better suited to the country, the change has been in a public point of view, highly beneficial, having been, through its with a very extensive drainage, rendered productive, that were formerly almost useless, are found to thrive remarkably well in the Highlands. About 40,000 sheep are reared to be annually sent to the S. from Ross's *Highlands*, p. 12.) Four fifths of the Duke of Sutherland, who has exerted in the formation of roads and inns, the great, small, farm-houses, and villages, and substantial improvements. Since 1800, a great deal of road has been made in the county by private commissioners, and above 350 by local and statute labour. The fringe of arable land on the coast has been divided into moderate-sized inclosures and drained, and presenting an aspect of the improved turnip husbandry as in any part of the island. No where, indeed, have improvements been attempted on a scale so prosecuted with more zeal, skill, and success as in this remote county. Whether the change has been more gradually introduced, we are unable to say; but there cannot be a doubt, that the character and habits of the people, as well as any of the district, have been signally improved.

There are three great deer forests; and ptarmigan, chamois, alpine hares, &c., are abundant. Freestone is met with. Average rent of an acre. The herring fishery is carried on with success, both on the N. and W. coasts, from Helmsdale. Principal rivers, Oich, and Helmsdale. It contains 13 parishes; but the town, Dornoch, the largest, not having Pop. 1841, 24,782. It returns 1 mem. to registered electors, in 1849-50, 197. Dornoch, Kirkwall, Wick, Tain, Dingwall, and Thurso, returning a mem. Valued rent, 28,093*l*. Value of real property, in 1843, 86,113*l*. OLDFIELD, a market town and par. of Warwick, bound. Hemlingford, on the road from Lichfield, 6 m. N.N.E. Birmingham, 13,030 acres. Pop., in 1841, 4,200. In activity, in a bleak situation, consists of one long street. Houses good, and the supplied with water. The par. church, of the 13th century, has a statue of St. Exeter in the time of Henry VIII., great benefactor of the town. A hospital, founded by Vesey, and national uses, and several other charitable institutions at Sutton. The inhab. are principally in the manufacture of Birmingham goods. It is of great antiquity, was chartered by Edward I. a warden, 10 aldermen, and 3 jurymen had various privileges, which are void: petty sessions are, however, held. Markets on Mondays: fairs, Triennial Nov. 8., for sheep and cattle. SUTTON, a market-town and par. of England, co. South Greenhoe, 25 m. W. Norwich, 1,130 acres. Pop., in 1841, 2,858. The situated on rising ground, and is well built. Church is a spacious and handsome edifice in the perpendicular style, with a vaulted roof of which is richly adorned carved in Irish oak; it has a well-proportioned, with enriched embrasures and pinnacles, and several other monuments, and canons. The living of Swaffham with Threod rectory, worth 788*l*. a year, is in the gift of Norwich. The Friends, Baptists, have meeting-houses. The co. bridewell, market-cross, surmounted by a figure of Lord Orford, in 1783; a public assembly room, and a theatre are the other principal

public affairs. Swansea has a free grammar and a national school, and various churches, &c. Quarter sessions for the co. are held here at Llanegwallyn, beginning general courts last and before, and weekly petty sessions. Markets, principally for butter, on Mondays, Thurs. May 1st, July 1st, and Nov. 1st, for cattle, sheep, and pigs.

SWANSEA a port town, sea-port, and par. of South Wales, on Gwentynan head, Swansea, on the W bank of the Tawe, at the mouth in the Bristol Channel 34 m W N W Cardiff lat 51° 37' 12" N long. 3° 45' 30" W Area of par. 5,331 acres. The par. has however no claim also the par. of St. John Llanegwallyn and the hamlets of Morriston, The Lower &c., on both sides the river, having a total area of about 5,000 acres, with a pop. in 1851 of 10,001 in 1854 of about 15,000 and in 1861 of 25,000. The compact portion of the town is about 1 m. in length, 2 to 3 m. by somewhat more than 1 m. in average breadth, and consists of three or four parallel lines of thoroughfares crossed by numerous streets. It is generally clean, and pretty well built, and has some of some reputation as a watering place. It has an excellent market, attended by all the neighbouring districts with a large cattle court house in which the autumn quarter and petty sessions are held on ordinary assembly nights, theatre, royal institution for literary and scientific purposes, with a good library and museum, mechanics institution, 3 reading or newsrooms, savings bank, poor house, house of correction, a dispensary and lunatic asylum, a society for promoting science and a branch of the Bank of England. The town is paved, lighted with gas, and well supplied with water and has a steam police. *Steam Ship Coy.* The par. church is comparatively a modern edifice, with a square tower; the living a vicarage worth £101 a year is in the gift of a society. St. John's, a par. church, is the gift of the John Morris. It is worth £11 a year. There are also a synagogue, Roman Catholic and numerous other dissenting chapels, and on an elevated site near the centre of the town is Swansea Castle, founded in 1038, now partially converted into a barracks and stores. A free school was founded in the town in 1491. But, like many other churches formerly established in Swansea, it has become nearly extinct. *See Churches* *See* 10. There are, however, several national and Llanegwallyn, and numerous private schools. Swansea is highly prosperous and increasing. It owes its importance principally to its millstone and the extensive works for the smelting of copper and other metals, established in its neighbourhood. The latter are upon a very grand scale, and in fact by far the largest part of the copper ore produced in Ireland, Cornwall, and other parts of the C. K. as well as in China, India &c. is brought here for smelting. Swansea has also a very extensive trade in the shipping of coal, having exported 200,000 tons annually in 1855, exclusive of 25,000 tons sent to foreign ports. It has also two large piers. The Town at its mouth extends so as to form a harbour which is protected seaward by two handsome pier vessels of considerable burden, either at high water, but at all times the harbour nearly dries. But it is intended to obviate this inconvenience by constructing a floating harbour, and it is also intended to connect the town with the harbour of St. Thomas by a bridge &c. A light house is situated on the W pier and the Beacon Light is about 4 m. S W from the pier. A canal goes from Swansea to Haverford, in Brecknockshire, and two canals on the opposite bank of the river communicate one with the numerous canals and the other with the harbour of Cardiff. There is a tram road to the Humbles and Oystermouth wharves, by which goods are taken out, and lime and sandstone brought in, and train-roads also connect the different works and the canals and wharfs. Products of coal and copper ore, iron ore, limestone, clay, cotton, stone, tin, glass and timber are brought to Swansea for its own consumption, or for exportation towards or outwards. There belonged to the port, on the 1st Jan. 1855, 143 vessels of the reg. burden of 10,000 tons. Gross customs revenue in 1855, 45,130. The municipal and port dues are ex-estimated. The harbour is divided into 3 wards, and is governed by a mayor & aldermen, and 10 councillors. There was no official report within the year 1855, but it now has a commission of the peace, and a court of justice is established here before which 1,000 plaintiffs were entered in 1855. Corp. revenue in 1855 £4,400. Swansea was formerly a contributory bur. to Carr, voting having been in the burghs by or gift, having or non resident. It is Abertawe, Rhydy, Loughor and Hen Gwlad to the N of C. Rhydyfod all for the entire district 1,000. It is also for the co. Markets Wednesday and Friday following Saturdays. (Boundary & Reports and Appendix, County Reports, &c.)

SWEDEN, *Swedish*: a kingdom of Northern Europe, comprising with Norway and Lapland the whole of the Scandinavian peninsula, of which it forms the Eastern,

Eastern, and most important portion, between lat. 59° 30' and 66° 30' N., and long. 11° 10' 30' and 20° 10' E. having N. N. Russia Finland, from which it is separated by the Torne and one of its tributaries; E. and S. the Gulf of Bothnia and the Baltic S. W. the Sound, Kattegat, and Skagerrak; and W. and N. Norway from which it is for the most part divided by the great mountain chain of Scandinarvia. Length N. to S. 500 m.; average breadth about 100 m. Area about 170,700 sq. m. Sweden is divided into three principal regions, Gothland (Gothia) in the S., extending to about lat. 59° 10' N.; Sweden proper comprising the centre as far as lat. 60° 30' N.

on the coast of the Baltic Sea, and the Gulf of Bothnia. The Torne and one of its tributaries; E. and S. the Gulf of Bothnia and the Baltic S. W. the Sound, Kattegat, and Skagerrak; and W. and N. Norway from which it is for the most part divided by the great mountain chain of Scandinarvia. Length N. to S. 500 m.; average breadth about 100 m. Area about 170,700 sq. m. Sweden is divided into three principal regions, Gothland (Gothia) in the S., extending to about lat. 59° 10' N.; Sweden proper comprising the centre as far as lat. 60° 30' N.

elevated rises gradually from the W. coast of the Baltic until it reaches its greatest elevation in the great mountain range usually called the Scandinarvian Alps, or Dufurra hills, dividing Sweden and Norway. This chain extends from the Gulf of Bothnia to about 60° N. lat. and 19° E. long. to the N. Cape, in the general direction of N. N. E. and S. S. W. It differs from the Alps and Pyrenees in not being a continuous chain of mountains, but a succession of large plateaus from 20 m. to 30 m. across, from which the surrounding peaks project. The highest peak the highest point in the Swedish front is to 2,000 ft. above the level of the sea. The other principal peaks belonging to the same range are the Gullfjella 2,200 ft., and the Sanna 2,000 ft. in height. The heights, within the frontier, has an elevation of 2,000 ft.

Speaking generally, Sweden may be said to be a flat country. There are, indeed, some ranges of high ground and detached hills, but, on the whole, it is wonderfully level. This is so strikingly the case, that all the way from Gothenburg to Stockholm, by the Great road there is not a single hill or eminence (it is within a few miles of the capital). (Thomson's *Sweden*, p. 255.)

According to Forrell, 1/10th part of the surface of Sweden is 1,000 ft. more than 2,000 ft. N. and 1/10th 200 ft. above the level of the Baltic. The remainder, consisting chiefly of the coast, is of low elevation. There are, for the most part, 6 m. by numerous rocks and islets. The islands of Gothland and Öland, in the Baltic, belong to Sweden; they are situated opposite the S. E. shore of the kingdom, and Öland is separated from the main land by a narrow strait, which in one part (opposite Kalmar) is only about 4 m. across.

The S. portion consists chiefly of vast sandy plains interspersed with small lakes and hills, which are sometimes bleak and barren, but elsewhere clothed with woods. The central region contains extensive plantations of timber land covered with forests. The N. part of the kingdom is dissected with mountains, deep valleys, and glens, alternating with sandy wastes and vast forests.

Rivers—Sweden is extremely well watered throughout its N. and central parts. 9 large rivers flow into the Gulf of Bothnia. The Torne, which has the longest course, runs almost due S. for about 200 m.; but the largest S. the Angerman, 200 m. in length, so deep that ships of 600 tons load at Nyland, about 70 m. from the sea. Next to these are the L. von, with a course of 200 m., and the Vindel, 200 m. in length. The general direction of the rivers falling into the Baltic is N. W. to S. E. Few of them are of any considerable size, and notwithstanding the generally flat country through which they flow, their navigation is much impeded by rocks and numerous shoals, and is rendered perilous during the inundations occasioned by the melting of the snow. Some of them increase 10 or 20 ft. in height so rapidly as to carry away large trees, and even to smash immense banks of granite from the mountains; still, however, the population suffers little damage, owing to the number of lakes which serve as so many basins for the reception of the superfluous water. There are, in fact, upwards of 10 considerable lakes, occupying to the aggregate a very large surface. The principal of these is

the Wener, the largest lake in Europe, after that of Ladoga, between lat. $58^{\circ} 27'$ and $59^{\circ} 25'$ N., and long. $12^{\circ} 27'$ and $14^{\circ} 12'$ E., above 90 m. in length, by 34 m. in its greatest breadth, 147 ft. above the level of the sea. It receives many streams, the only outlet for its waters being a channel about 300 yards in width, immediately below which is the celebrated cataract of Troldogsta. Though in parts very deep, a great portion of this lake is so shallow as to render its navigation difficult and dangerous. The lake next in size is the Wetter, 88 m. in length, by 16 m. in its greatest breadth. It is about 25 m. S.E. the Wener, and 296 ft. above the level of the sea. In some places it is 70 fathoms deep: it is often agitated by sudden and violent storms. The Malar lake is an inlet of the sea, extending westward from Stockholm, near its entrance from the Baltic, about 70 m., with a breadth varying from 2 to 30 m. It is deep and clear, contains some hundred islands, and is regularly navigated from April to November. The Hjeltmar, a lake lying to the S.W. of the Malar, to which it is united by a canal, is 35 m. in length, varying to 13 m. in width.

Climate.—For five or six months of the year the surface of the N. parts of the country, from the summits of the mountains to the bottoms of the valleys, is covered with ice and snow. The rivers and lakes are also frozen from October to April. In the central parts, the winter seldom lasts more than three or four months; and in the S. and W. parts, the climate is very similar to that of the N. of Germany. In the N. division a great degree of heat is experienced during a short period of the year. The transition from winter to summer is there, also, very rapid, often occurring within the space of a few days.

On the whole, however, the climate of Sweden is much milder than might be expected from its high N. lat. The winter is not so cold as in countries in the same lat. further to the E., at the same time that the mean temperature of the summer is but little inferior. According to Dr. Thomson, the mean annual temperature at Petersburg is $37^{\circ} 10'$ Fah; whereas at Stockholm it is $41^{\circ} 38'$. The advantage on the side of Stockholm is chiefly in the six winter months, the mean temperature of these being in it $39^{\circ} 4'$, and

During the six summer months side of Stockholm amounts to 6 Aug. the temperature is $1^{\circ} 5'$ in Stockholm. The winter is as peculiarly pleasant. The rains the winds are seldom violent and agreeable, the traveller defied cold by warm clothing. The great occurrence of frosts in the crops are often injured. (77) Near Tornea, at midsummer, the whole night. The longest and the shortest 24 hours. At day is 184, and the shortest near

Geology and Minerals.—In whole of Sweden may, with a sidered primitive. Granite is dominant rocks; but the form diffused than the second, which shores of the Baltic, and in the S. part of the kingdom. A remarkable geological feature, which Sweden has in common with some parts of N. Germany and Denmark, is the presence of a vast number of enormous erratic blocks of granite scattered over its surface, especially in the central and S. provinces. In the S. they are collected in long spits, or tongues, resting upon the plains, which are quite unconnected with them; more to the N. they are scattered indiscriminately, and so profusely, that scarcely an acre of land is without one or more heaps of them. They seldom exceed 30 or 40 ft. in height above the surface, and form many islands in the lakes, as well as heaps on the plains. (Lasing, Sweden, p. 41, 42.) There are mountains of secondary formation in Jamtland, Nerida, E. and W. Gothia, and in the islands of Gothland and Oeland. Shelly limestone, chalk, &c., are met with in Scania. Deposits of oceanic shells are found in the country near Uddevalla; but at Stockholm, Upsala, Hernösand, and at other places on the E. side of the peninsula, the shells discovered are of the kind belonging to the Baltic, without any mixture of the oceanic. Sweden is rich in mineral products. Among these are iron, the best in Europe, copper, cobalt, zinc, lead, antimony, gold and silver, alum, nitre, sulphur, with porphyry, marble, alabaster, limestone, millstone, whetstone, asbestos, potters' earth, &c. But the only metals that occur in any considerable quantity in Sweden, and the ores of which are worth working are iron, copper, and lead, iron being the most abundant and lead the scarcest of the three. There is a remarkable deficiency of the more valuable products found in secondary formations, as coal and salt. The former, indeed, has been discovered, and wrought, near Helsingborg, in the S. of the kingdom, but it is of very inferior quality: there are no salt beds nor brine springs, and the waters of the Baltic not being largely impregnated with salt, it is wholly imported.

Vegetable Products.—The forests of Sweden are estimated to occupy about 84,000 sq. miles, or four sevenths of the whole surface of the country. Those of the N. region consist of birch, pines, firs, &c., which, in the central parts, are intermixed with ash, willow, linden, and maple; and in the S. with oak, beech, yoke-elm, &c. Few beeches are found N. of lat. 57° ; oaks are found as far N. as Sundsvall. The linden is found as far N. as lat. 61° , the hazel as 63° , the cherry and ash as 65° , and the general limit of the birch and pine woods is lat. $60^{\circ} 30'$. The small dwarf birch, aspen, mountain-ash, and dwarf gray alder, are found as far N. as 70° , but only in the valleys and sheltered situations. The walnut and mulberry are almost entirely confined to Gotland; the chestnut is very rare. The forests were formerly much neglected; and there is now in many extensive districts a great deficiency of timber. Indeed, a considerable proportion of the firewood required for the consumption of Stockholm is brought from Finland. Latterly, however, a great deal more attention has been paid to the forests. Those belonging to the state have been placed under the care of a special institution, and very extensive plantations of oaks, firs, &c., have been made. The power of private proprietors to cut down timber was formerly limited; but this restriction no longer exists. In the interior of the country, however, and in such parts as have no facilities by means of water-carriage, or otherwise, for the conveyance of timber to the sea-ports, and are distant from mines, there is but little hope that the forests will ever become an object of considerable attention. Pears, apples, and plums of all kinds, grow in the open air in the S.; but the grape, fig, apricot, and peach, do not ripen except in hot-houses. All kinds of melons are grown, currants up to lat. $68^{\circ} 30'$, and gooseberries every where, even as far N. as lat. 70° . The soil is suitable for all kinds of pulse crops. Asparagus requires hot-beds in lat. $60^{\circ} 30'$, cabbages cease to come to maturity in lat. 64° , carrots and parsnips grow to lat. $66^{\circ} 30'$ N., turnips and potatoes nearly to lat. 70° . The yellow beet-root is produced spontaneously; the red is cultivated. A close sward of

cons inhabit the cliffs; the wild swan and eider are hunted for their down; and the eggs of the latter are highly esteemed. The seas surrounding Sweden abound with fish; including sturgeon, cod, lamprey, rays, eels, turbot, pilchards, herrings, and the strummung, a small species of herring, which has been latterly very abundant on the E. Swedish coasts. Excellent mackerel, and oysters, are found in the Kattegat. The rivers and lakes are well supplied with salmon, pike, perch, trout, eels, and numerous fish of the genus *Gyprinid*. The pike, perch, barbel, and crayfish, are found in the Baltic, as well as in the lakes and rivers. Many of the fish of this sea appear to be of a mixed character, between oceanic fish, and those of fresh water.

Agriculture.—The soil of Sweden, though mostly thin and poor, has been greatly improved by the industry of the inhab. The coast land is usually bare of soil, the naked rock appearing every where. The flat alluvial lands around Lake Wener, and in the basins and valleys connected with it, consist of a harsh crystalline sand, impregnated with iron, and not very productive; but on the N. side of the lake, in the neighbourhood of Carlstad, the soil is of a superior description. In the country lying between the lake Wetter and the Baltic, there are some very fertile tracts; and round this lake, and in the district round Carlstad, especially the latter, agriculture has made great advances; the lands are well cultivated in large farms, and the country resembles some parts of the interior of England, except that the lands under cultivation are not fenced by hedges, but by wooden palings. Of the 170,716 sq. m. forming the surface of the country,

	Square Miles.
Arable lands occupy	5,400
Meadows and common pasturage	7,315
Uncultivated forest and mountain land	159,400
Lakes and marshes	32,600

The agricultural products consist chiefly of rye, barley, oats, maslin (a mixture of barley and oats), wheat, potatoes, pease, hemp, flax, and almost all the fruits and legumes common in W. Europe. In the S., rye is the most cultivated; in the N., barley, the culture of the latter increasing in proportion as we proceed farther towards the pole; but the grains of all kinds are generally less nutritious than those of the S. of Europe, and are more difficult to preserve. Wheat succeeds as far N. as 63°, but does not ripen in W. Bothnia. Oats seldom ripen N. of lat. 63° 20', but barley is grown almost to the limits of the pine woods, in lat. 69° 30'. Hops are cultivated up to 62°, tobacco to 63° 30', and flax to nearly 64°. Buckwheat, madder, and wood are grown in Scania. In some parts of the S., the produce is equal to that of the best cultivated lands in England and France. In parts of Scania a return of 7 for 1 is obtained; but generally in Sweden the proportion does not exceed 4 for 1. The uncertainty of the climate and the chances of early frosts, are the greatest obstacles with which the agriculturist has to contend; and some singular devices are resorted to, to counteract their effects. In Jemtland, for example, the people pile up large quantities of wood along the N. side of the small patches of land sown with corn, that in case the wind should blow from the N. or N.E. in the evenings of August, they may set them on fire to protect the crop from the frosts! It is usual, also, in the S. parts of the country, to prevent the crop from being injured by frost when in the ear, to draw ropes across the heads of the grain, and shake off the dew before sun-rise, which, but for this, would then be frozen.

According to the official returns for 1837, the annual produce of grain and potatoes, after deducting the seed, amounted to —

		Swed. Barrels.
Wheat	.	244,619
Rye	.	2,278,306
Barley	.	1,800,902
Oats	.	1,532,046
Maslin	.	774,678
Pease	.	299,109
Potatoes	.	4,113,442
		11,048,161, equivalent to

about 44,000,000 Eng. bushels.

In the N. potatoes supply the deficiency of corn, and are preferred to all other kinds of food. Tobacco is cultivated near Stockholm, but not to any extent. After that of Holland, the flax produced in Sweden is probably the best in Europe. Hemp is at present not much grown; but the government is endeavouring to extend its culture.

The whole arable surface of Sweden is divided into 66,441½ *hemmans* of land. The word *hemman* signifies merely an estate, or homestead, and gives no idea of the value or extent of the land, some being incomparably larger and more valuable than others. It is, in fact, a fiscal division, for the purpose of levying the land-tax according to ancient assessments. Originally, however, the *hemmans* belonged, for the most part, to single proprietors; but they are now generally divided into 3, 4, 6, 16 or more parts, and it is rare for a family to possess a *hemman* entire. Of the 66,441½ *hemmans*, 771½ belong to towns, 50,000 to private individuals, 369 to the crown, 373 to academies and universities, 201 to colleges and schools, 289 to the church, 204 to hospitals and asylums, 183 to military schools, 31 to sailors, and 4,045 to the army. According to circumstances, the lands are subject to a different amount of taxation: of the estates belonging to the nobles, 3,462 are wholly exempted from all public burdens; and 17,929 estates, partly belonging to them and partly to other privileged parties, enjoy a partial exemption from taxation.

The estates that originally belonged to the nobles, but which, since 1810, may be indifferently held by nobles or commoners, are exempted from the land-tax, and also from the obligation to furnish a soldier for the army, the nobles themselves having been originally bound to personal service in the army. This inequality in the rate of taxation is practically, however, notwithstanding the statements of Mr. Laing to the contrary, of no real importance. The land-tax was fixed at a certain amount of produce centuries ago. It can no longer, therefore, be fairly regarded as a burden on the land, the value of which really depends on its nett revenue after this fixed charge has been deducted. There is no injustice in the circumstance of certain lands in England being subject to tithe, while others are not; and it is quite as idle to talk about the injustice of the unequal distribution of the Swedish land-tax.

There is, however, in Sweden, an assessment of 5 per cent. laid on the nett annual value of *all* estates. But this, though apparently an equal, is, in fact, a very unequal and impolitic tax; inasmuch as it makes no distinction between the income derived from the rent of land properly so called, and that which is really derived from the capital laid out on the land, and as it operates

as an obstacle to improvements. The occupiers of crown-lands in Sweden have long had, and still have, leave to constitute themselves the absolute proprietors of such lands on their paying a sum equal to 6 years' value of the land-tax laid on the land. It is not, therefore, the amount of the burdens falling on the land in Sweden, which, despite the statements to the contrary, are really very moderate, but the influence of the 5 per cent. assessment in discouraging improvements, and, still more, the minute subdivision of the *hemmans*, occasioned by the continued division and subdivision of heritages, in consequence of the law of equal partition among the children of a family, that are the principal obstacles to improvement. Property is, in many instances, divided into such minute portions as to be wholly unsuited to a proper system of cultivation; and the occupiers are often in the poorest circumstances. There are parcels of land of not more than 40 yds. sq., and a Dalecarlian peasant sometimes sells his landed property for 2 or 3 rix-dollars (3s. 6d. to 5s.), the registration of the sale costing as much as the estate!

In some extensive districts there are not, at an average, above 14 acres of arable land to a farm; and in the district of Carlstad, where farms are largest, and agriculture most advanced, the average extent of arable land in each farm may be taken at about 72 acres. At an average of the entire kingdom, the arable land may be estimated at about 28 acres per farm. (*Thomson's Travels in Sweden*, p. 426.)

But, notwithstanding these disadvantages, and those that originate in its backward climate and not very fertile soil, agriculture has made a very material progress in Sweden since 1815. This is partly ascribable to the encouragement afforded by government, and to the establishment of model farms, some of which are managed by agriculturists from Great Britain. One of these, in the vicinity of Linköping, on the S. border of the lake Wener, consists of about 1500 acres, of which about 500 are under the plough. The manager of this farm had, in 1839, twenty young gentlemen boarded with him in the house, and 30 scholars of the working class. Government allows him 10,000 dollars a year towards defraying his expenses, and the establishment is said to be alike successful and advantageous. Mr. Stevens, an experienced Scotch agriculturist, who visits Sweden every summer, and assists landed proprietors in laying out their estates, and putting them under an improved system of management, says that "Of late years an enthusiasm has sprung up for the improvement of agriculture among all classes of people not to be equalled in any other continental country. This has been owing in a great measure to the exertions of the Agricultural Societies established within the provinces, and the great interest the landed proprietors now take in the improvement and management of their estates. English and German works on agriculture are studied; improved agricultural implements from Great Britain and other countries are introduced; and in many parts Scotchmen and Germans are seen directing the plough or conducting the operations of the field." (*Brenner*, ii. 218.)

The best evidence, however, of the improvement and extension of agriculture is to be found in the fact that, previously to 1820, there was generally a large importation of corn into Sweden from Danzig and other parts, whereas that importation has now, in ordinary years, wholly ceased, and there is, on the contrary, a considerable exportation. No doubt a good deal of this improvement is to be ascribed to the more extensive culture of the potato. But, independent of this, the improvement in cultivation generally has been most striking. Mr. Stevens says, "that the necessity under which the population formerly laboured, in the N. parts of the country, of having every now and then to use the bark of trees as a substitute for meal in the making of bread, has been in a great measure obviated; and that both the public and private magazines are completely filled with corn."

Houses in the country in Sweden are mostly constructed of wood; and are roofed with timber, turf, and straw. Gentlemen's houses, however, and houses in towns, are usually covered with tiles. Recently, thick coarse paper prepared with tar has been used for roofing, and is said to answer very well. Slates are very scarce; and Dr. Thomson states that he only saw *two* houses in the kingdom roofed with slate. (p. 399.)

It is estimated by Forsell, that *seven* *parts* of the whole pop. are employed in agriculture: peasants, proprietors of the soil they cultivate, have been reckoned at 147,974; those who live on land not their own at 1,688,717; husbandry labourers, holding houses and lands under proprietors, at 470,091; and servants, living in the house with their employers, at 277,466. Masters and mistresses are authorised, by an old law, to inflict summary corporal chastisement on their servants, with no other limit than that they do not kill or maim; and Mr. Laing, founding on this fact, states that servants in Sweden are little better than slaves! But it might have

ference, and leave every one at liberty to produce as much iron as he may think proper. Mines of any importance are usually held by a society of shareholders. Some of them are only worked occasionally; and, as the labour is performed by peasants, who live ostensibly by husbandry, it is impossible to form any correct estimate of the numbers engaged in mining industry.

Manufactures.—For many ages, Sweden had none of any importance; the Hanseatic towns took away its raw materials, and re-exported them manufactured to the

country; the other manufactures were then, as they still are in great part, domestic. But about the middle of the 17th century, various manufactures, including those of glass, starch, brass, pins, silk fabrics, leather, soap, steel, and iron articles, besides printing-presses and a sugar refinery, were established the workers in these establishments were mostly from Germany and the Low Countries. In 1771, there were in Sweden 686 manufactories; in 1834, 1,177; and in 1839, 1,184, employing 12,149 hands exclusive of miners. We subjoin an official

ACCOUNT of the Number of Factories, Looms and Workmen, in each Department of Manufacturing Industry in Sweden, in 1836 and 1839, and of the Value of the Produce in each.

Sweden has but few facilities for the formation of great manufacturing establishments; but, owing to the long winter nights, during which most out-of-door occupations are necessarily suspended, she has great facilities for the carrying on of domestic manufactures; and, in point of fact, the Swedish peasantry not only supply themselves with most descriptions of agricultural implements and household furniture, but with nearly all the coarse woolen, linen, and cotton goods, required for their ordinary use. No foreign or factory-made goods, however cheap, can supersede or materially interfere with this domestic manufacture, for, as the people would otherwise be idle, its products may literally be said to cost them nothing. Several factories have, however, been established in Sweden for the production of the finer descriptions of woven fabrics, some of which have had considerable success. The government of Elfsborg is the grand seat of the domestic manufactures of cotton in Sweden. A factory recently erected in this government, driven by water, has 160 power-looms employed in the production of cambrics and shirting; and it is at present (1842) in the course of being greatly enlarged. We subjoin an

Account, showing the Quantities of Cotton Goods made in Sweden during the Ten Years ending with 1840, distinguishing those manufactured in regular Factories from those made by the Peasantry, in the Government of Elfsborg:—

duced in the country; but being principally intended for domestic use, and the cultivators making most of what they require, the sale is but small. Norrköping and Stockholm are the towns in which the largest quantities are made. Foreign cloths are prohibited; but the contraband trade is extensive. The manufacture of other woollen stuffs is confined to fannels, serges and bombazines, which were formerly prohibited, are now imported in considerable quantities. Handkerchiefs, which form the usual head-dress of the women, form the principal produce of the silk manufacture, though taffetas, gros de Naples, levantines, and ribbands, are also produced. The manufacture has been a good deal improved by the introduction of Jacquard looms from France. The manufacture of sail-cloth is increasing. The principal glass factory is at Bromse, in Westergothla. Ekelsstuna is the principal seat of the hardware and cutlery business, being a sort of miniature Sheffield; fire-arms are made in it at a factory established by government. The quality of Swedish paper has latterly been much improved, and the quantity so much increased that considerable supplies are now sent to Denmark and Germany. The distillation of corn brandy has been constantly increasing since the reign of Gustavus III. In 1772, government, in order, as is supposed, effectually to suppress drunkenness, prohibited distillation; but, as might have been foreseen, the increase of smuggling and clandestine distillation rendered the prohibition useless, and made it be withdrawn. The Swedes are great consumers of ardent spirits. Every proprietor and occupier of land has a right to distill spirits; the size of the still and the amount of the duty depending on the value of the property. Mr. Stevens states that, in 1839, there were 167,744 stills going, which were calculated to make, within the year, about 20,000,000 galls. worth as many rix-dollars, and paying a duty of 434,296 dollrs., a little more than a farthing a gallon! As the distiller is not bound to use any particular kind of grain or malt, a considerable quantity of potatoes is used in distillation. We understand that, in this respect, but little change has taken place during the last ten years; but, taking the consumption at only 20,000,000 galls., it gives, taking the population at 3 millions, an average annual supply of 24 galls. to every individual, young and old, being about three times the average consumption of the people of Scotland. This is not a new habit in Sweden. "*Le Suédois est sobre, sur tous les points, à l'exception de l'eau de vie. Cette funeste habitude est une des causes de la dépopulation de la Suède.*" (*Voyage de Deux Français dans le Nord de l'Europe*, t. 421.) A porter brewery is established near Gottenburg, but the demand for its produce is very limited, not exceeding

Of the woollen manufactures, that of cloth is the principal. It is well made, chiefly of the wool pro-

8,000 hhds. a year. Excepting oak timber and hemp, Sweden possesses every material necessary for the construction of ships. Saltpetre, potash, and tar, are among the secondary articles of manufacture. There are two establishments for the instruction of persons intended for trade or manufacture, one at Stockholm, and the other at Gottenburg. A school for mining is established at Fahlun. Schools, where gratuitous instruction is given in navigation, have been established in five of the principal sea-ports; and no individual can be appointed master or mate of a merchantman without passing an examination in some of these schools, and receiving a certificate of his ability properly to discharge the duties of such situations.

Trade.—The trade of Sweden, which, from the situation of the country, must necessarily be of limited extent,

has been reduced below even its natural bounds by the policy of the government in endeavouring to bolster up manufactures. Latterly, however, this system has been relaxed; and the trade and industry of the country have both experienced the beneficial influence of the more liberal policy that has been adopted. The exports consist almost wholly of raw produce, of which iron and timber, especially the former, are by far the most important articles: next to them are copper, alum, corn, tar, cobalt, &c. The imports principally comprise sugar, coffee, and other colonial products; salt, wines, silk, and wool; cotton, cotton twist, and cotton stuffs; hemp, hides and skins, oil, &c. The foreign trade is principally carried on with Great Britain, the United States, Holland, Hamburg, Denmark, &c. Its principal centres in Stockholm and Gottenburg. We subjoin an

Account, exhibiting the Official Value of the Exports from and Imports into Sweden, and the Amount of Customs' Revenue for the Ten Years, ending with 1840.

Roads, Posting, &c.—The main roads to and from Stockholm are generally excellent and well kept; but the cross roads are comparatively neglected. A landholder is bound to keep in good repair that part of the public road which passes through his possessions; but it is needless to say that it is very difficult to enforce this regulation. The system of posting, though affording every facility for the traveller, is onerous on and injurious to the agriculturists. On all the principal routes, post-stations are established every 7 or 10 m. apart, to which the farmers and peasants of the district are compelled to furnish horses and a driver to the next post-station, at a very low rate, for any traveller who may require them. The station-master has the privilege of being the only innkeeper out of the town; but he also is obliged to keep horses to perform the same duties as those of the farmers on certain days in the week. Severe penalties, and even corporal punishment, are inflicted on the peasantry for any default in the fulfilment of this duty. The rate of hire paid for each horse is equivalent to about 1s. per Eng. mile. (*Leing*, p. 202—206., &c.)

Canals.—The formation of a system of internal navigation that should connect the Cattegat and the Baltic, has long engaged the attention, and occupied the efforts, of the people and government of Sweden. Various mo-

have been adopted at first, of cutting a lateral canal through the solid rock, about $1\frac{1}{2}$ m. from the river. This new enterprise was begun under the auspices of a company incorporated in 1794, and was successfully completed in 1800. The canal is about 3 m. in length, and has about 6½ ft. water. It has 8 sluices, and admits vessels of above 100 tons. In one part, it is cut through the solid rock to the depth of 72 ft. The expense was a good deal less than might have been expected, being only about 80,000*l*. The lake Wenner, the navigation of which was thus opened with Gottenburg, is, as already seen, very large, and is encircled by some of the richest of the Swedish provinces, which now possess the advantage of a convenient and ready outlet for their products.

As soon as the Trollhætta canal had been completed, there could be no room for doubt as to the practicability of extending the navigation to Söderköping. In furtherance of this object the lake Wenner has been joined to the lake Wetter by the Gotha canal, which admits vessels of the same size as that of Trollhætta; and the prolongation of the navigation to the Baltic from the Wetter, partly by two canals of equal magnitude with the above, and partly by lakes, is now completed. The entire undertaking is called the Gotha Navigation, and deservedly ranks among the very first of the kind in Europe. Besides the above, the canal of Arboga unites the lake Hielmar to the lake Mälmar; and, since 1819, a canal has been constructed from the latter to the Baltic at Södertelge. The canal of Strömsholm, so called from its passing near the castle of that name, has effected a navigable communication between the prov. of Dalecarlia and the lake Mälmar, &c. (For further details, see *Cove*, iv. 282—286., and v. 58—60.; *Thomson's Travels*, p. 25., &c.)

Currency, &c.—The currency consists almost wholly of paper, and though, since 1833, bank notes may be freely exchanged for paper, there is little or no demand for the latter. The *rix-dollar banco*, in which all mercantile transactions are carried on, is worth about 30*d*. sterling; the *riks-geld dollar*, used as the medium of exchange in ordinary transactions, being worth two thirds the former, or 12½*d*. *Rix-dollars banco* are exchanged for *rix-dollars specie*, at the rate of $2\frac{1}{2}$ the former for one of the latter; and all *rix-dollars* are divided into 48 skilling. The notes in circulation vary from 8 skilling to 500 dollars banco. Such is the prejudice in favour of paper money, that, in the small towns and remote districts, coins, excepting those of copper, to a small value, are often refused as payment.

Measures of Length.—The Swedish foot = 11·684 Eng. in.; the *aln* = 3 feet; the *fathom* = 3 *ells*; the *rod* = 8 *ells*.

Public Finances.—In 1840, the budget of revenue and expenditure was fixed for that and the following years, till the next meeting of the diet, at 10,742,586 *rix-dollars banco*, or 496,340*l*. sterling. The amount is derived as follows:—

	<i>Rix-dollars banco.</i>
Land-tax and other perpetual revenues	4,566,380
Customs, stamps, and other taxes, voted at every diet	6,176,500
Total	10,742,880

But the land-tax and other perpetual taxes being fixed long ago, constitute, in fact, a portion of the property of the country belonging to the state, and cannot justly be regarded as taxes. Hence it follows, that the total sum levied in the shape of taxes for public purposes, exclusive of the maintenance of the indelta soldiers (see *post*), and other local burdens, amounts to only 6,176,500 rix-dollars banco, or 514,708*l.* sterling; so that, despite the statements of Laing and others to the contrary, there cannot be a doubt that Sweden is at this moment (1842) the most lightly taxed country of Europe.

The Government is a monarchy, hereditary in the male line, with a representative diet, one of the most ancient in Europe. The king must be a Lutheran, and his person is inviolable. He is assisted by a state council, composed of 10 members, including the ministers of justice, foreign affairs, war, marine, interior, finance, and public worship, and three councillors. The army and all foreign relations are under the immediate control of the king; but he cannot decide on any matter touching any other branch of government, without the concurrence of the council. He nominates to all appointments, both military and civil; concludes foreign treaties, declares war, and makes peace; and has right to preside in the supreme court, and to grant pardons. The princes of the blood-royal are excluded from all civil employments. The different departments of justice, war, marine, mines, commerce, &c., are called *colleges*.

The diet, or representative assembly, consists of four separate chambers, consisting respectively of deputies from the nobility, clergy, burghers, and peasants or cultivators; the latter class having acquired the privilege of sending representatives towards the end of the 15th century. Since 1820, the proprietors of iron works have obtained the privilege of sending three deputies to the chamber of burghers to watch over their interests. The king nominates the presidents or speakers of the chambers of nobles, burghers, and peasants; the archbishop of Upsal being president, *ex officio*, of the chamber of clergy. The diet is convened every five years, and usually sits for three or four months, but occasionally, as in 1840-41, for a much longer period. The head of every noble family is, by law, a member of the chamber of nobles; but, notwithstanding that the nobility include in all about 13,500 individuals, it is but seldom that the chamber of nobles is attended by above 500 individuals. The clergy have 60 deputies, the burghers 85, and the peasants generally from 140 to 150, chosen by the arrondissements; the deputies for the clergy, burghers, and peasants, receive salaries during the sitting of the diet from their constituents. No new tax or impost can be established without the concurrence of the diet; nor can any modification of the constitution be legally effected without the concurrence of all the chambers composing the diet.

The four chambers deliberate and vote separately; but all questions must, previously to their decision in the chambers, be referred to standing committees chosen at the commencement of the diet, consisting of an equal number of members from each order. In constitutional questions, which cannot be decided in the same diet in which they are raised, the unanimous consent of the four orders is required, but in other matters the decision of three orders is valid. When two orders are opposed to two, the subject, according to its nature, is either dropped, or referred to the decision of a special committee, composed of 30 members of each order. Differences on minor points are adjusted by the committee, to which the matter was originally referred.

In most cases the decrees of the diet must be submitted to the king, who has an absolute veto; and it is a curious circumstance, peculiar to what M. de Pradt called the *semi-constitutional* government of Sweden, that frequently the king has refused his sanction to the resolutions of the diet, and the diet has negatived the proposals of the king, without occasioning a change of ministry, or exciting any deep feeling of animosity on either side. The king used his privilege of the veto to a great extent in negativing measures agreed to by the diet of 1840-41. This anomaly is increased by the absolute legislative power, which the constitution confers on the king in all matters of internal administration and police, in regard to which the diet merely presents addresses and petitions expressive of their views and wishes.

Previously to the diet held immediately subsequent to the revolution of 1809, the nobility enjoyed several valuable privileges and fiscal immunities. These, however, they then wisely surrendered, stipulating only for the general freedom of trade, externally and internally—a stipulation which has not hitherto been fully carried out. The division of the diet into separate chambers, representing particular orders of the state, is, therefore, less objectionable now than formerly, though it be still necessarily productive of considerable inconvenience.

The chamber of clergy, though said by Mr. Laing to be the most enlightened and independent order of the

diet, have interests to support that are in many respects peculiar, and which may sometimes, perhaps, be opposed to those of the public, at the same time that they are mostly all more or less dependent on the crown.

The chamber of burghers consists of representatives of the guilds, trades, and corporations of the different towns. These, as every body knows, are possessed of certain franchises and immunities which go to obstruct competition, and, consequently, to enhance the cost of the articles furnished by the privileged class.

The deputies of the peasants represent by far the greater number of the people, though not the greater portion of the property of the country; and are, themselves, seldom in such circumstances as to enable them to act a really independent part. And hence, in consequence partly of the constitution of the diet, which opposes the greatest obstacles to all organic changes, how expedient soever, and partly to apparent rather than real inequalities in the privileges of the different orders, a good deal of discontent prevails in Sweden. It is, indeed, hardly possible that the present complicated and vicious system should be able to maintain its ground much longer; and the best way to avoid the recurrence of another of those revolutions so frequent in Swedish history, will be to adopt measures for obviating the defects inherent in the existing political organisation of the country, and for making the diet a representation, not of class interests, but of the intelligence and property of the kingdom. Still, however, there can be no doubt, notwithstanding the defects in its constitution, that the country has made a rapid progress during the last twenty years, and that there is every prospect of this progress being continued.

Justice.—The 24 *län*s are subdivided into 117 *lögderier*, or districts, each comprising one or more *herades*, or cantons. At the head of each *län* is placed a governor, charged with the civil and military jurisdiction, and the receipt of the revenue. Every canton is under the superintendence of a *länsmän*, who is the executive officer of the administration, and subordinate to a *frensfogde*, or kind of sub-prefect, with authority over four or five cantons. There are 264 courts of original jurisdiction, or *härad* courts, with a judge presiding over each. These courts sit three times a year, and 12 peasants are elected by the peasantry of each *härade*, who serve as jurymen for two years. There are 3 royal judicial courts; viz. at Stockholm, for the upper or N. *prova*; at Jonkopping, for the middle; and at Christianstad, in Scania, for the S. *prova*. The first has, subordinate to it, 7 inferior tribunals, the second 6, and the third 3. These are the highest courts of appeal from the inferior tribunals, and have alone jurisdiction in all criminal cases affecting life or property, as well as in all affairs above the value of 4*l.* The decisions of these courts are subject to the review of the supreme court of justice, composed of 12 councillors, and presided over by the minister of justice. There are *lagmans'* courts, to which appeal is first made from the inferior tribunals, but they are generally considered superfluous establishments. Questions of divorce are brought before the ecclesiastical courts. Although the forms of justice be little complicated, the decisions of the courts are often long delayed. A new civil and criminal code is at present in course of preparation.

State of Crime, &c.—Sweden being almost wholly an agricultural country, with but few manufactures, and only one large town, and having, also, a constitutional government, and a widely diffused system of public instruction, it might be expected, *a priori*, that it would exhibit a high state of moral feeling, and a remarkable paucity of crime. Such, however, we regret to say, is far from being the case; and though there can be no doubt that the representations as to the depravity and immorality of the Swedes, given in Mr. Laing's work, are far too highly coloured, still it must be confessed that crime and immorality prevail to an extent not easily accounted for. According to the official returns published in the *State Gazette*, the number of persons prosecuted for criminal offences before all the Swedish courts, in the year 1836, was 26,275; of whom 21,262 were convicted, 4,915 acquitted, and 98 remained under examination. In 1835, the total pop. of Sweden was 2,983,144 individuals. In this year, therefore, 1 person of every 114 of the whole nation had been accused, and 1 in every 140 persons convicted, of some criminal offence. By the same official returns it appears, that in the 5 years from 1830 to 1834 inclusive, 1 person in every 49 of the inhab. of the towns, and 1 in every 176 of the rural pop., had, on an average, been punished each year for criminal offences. In 1836, the number of persons tried for criminal offences, in all the courts of the kingdom, was 26,925; of whom 22,292 were condemned, 3,688 acquitted, and 945 under trial or committal. The criminal lists of this year are stated to be unusually light; yet they give a result of 1 person in every 112½ of the whole pop. accused, and 1 in about every 134 convicted, of criminal offences; and, taking the pop. of the towns and the rural pop. sepa-

the maintenance of the militia troops, is fixed to the budget of 1846 at 4,168,110 rix.-doll. banco, equivalent to about \$48,000. a year.

Navv.—The naval force of Sweden consisted in 1846 of 10 ships of the line, 5 frigates, 5 brigs, &c., and 367 gun-boats, 5 royal yachts, and sundry steam-vessels. The permanent stations at command of the government may amount to about 5,000 men. They are maintained in the same way as the militia troops, by assignments of lands. Together with conscripts, the whole naval force may be augmented to about 24,000 men. The Swedes are excellent sailors, and especially skilful in the management of small craft. The chief naval stations are Carlscrona, Stockholm, and Gottenburg. The annual expense of the navy amounts to 1,261,480 r. doll. banco, or about 110,000*l*.

The Religion of the state, and of nearly all the inhabs., is the Lutheran; there being only about 2,000 Catholics, and under 1,000 Jews. There is one archbishopric, that of Upsala; and 11 bishoprics. The functions of public worship are attended by about 2,000 ecclesiastics. The higher order of the clergy are nominated by the king from lists presented by each diocese: the election of curates and others of the inferior orders is left to the people at large. The revenues of the clergy generally are derived from church lands, &c. the bishops receive, in addition, a tithe on corn, and one from the inhabs. of the four or five parishes surrounding the episcopal residences. The revenue of the archbishop of Upsala does not exceed 600*l*. a year. The richest bishopric, that of Linköping, is worth about 800*l*. a year. The bishop of Harnarum has scarcely 300*l*. a year. The clergy are an important body.

All sects are tolerated in Sweden, but with this important restriction, that Lutherans only can be advanced in any employment under the state. According to Lalmg, the people, generally speaking, are extremely superstitious.

The churches are generally well kept, and great attention is paid to the outward forms and ceremonials of religion. Much more liberality is shown towards Jews in Sweden than in Norway, and there are synagogues at Stockholm, Gottenburg, Norrköping, and Carlscrona. A dissenting sect called *Läro*, or readers, has lately become very numerous in Lapland and the N. parts of the country. "In Sweden, generally, all kinds of amusements begin the moment that public worship is over—in the country, dancing and drinking, in the capital and large towns, theatres, equestrian exhibitions, fairs, dancing, balls, &c. In fact, the Swedes appear to regard the sabbath as terminated with the service of the day, but to atone for shortening it so much, they compensate its observance, at least in the rural parishes, at six o'clock on the Saturday evening. As soon as that hour strikes all week-day labours cease, the whole family cleans themselves, and the devotions of the evening are begun." (*Swedish's Excursions to the North of Europe*, II. 118.)

Public Instruction.—Elementary instruction is in a very advanced state in Sweden. Every adult person

even the lower orders. In all offices of the press the same jury system both as to great and petty jury, there being no revision or appeal from the first decision of the court.

Arts, &c.—The arts and sciences have been successfully cultivated in Sweden. Antiquities formed the first objects of national research, but their study was superseded in the time of Linnaeus and Scheuch by that of natural history and chemistry. The reign of Gustavus III. was the most flourishing period of the arts and literature. The Swedes annually import from 6,000*l* to 7,000*l* worth of foreign books, mostly French, English, and German. Among distinguished authors and men of science, Sweden has produced Linnaeus Tycho-Bruno, Scheuch, Burmann, Puffendorf, Bernelius, &c. The taste of the nation Scandinavians for music appears in the present day to have degenerated to only the higher and middle classes. At Stockholm there is an opera, which, as well as the theatre at Gottenburg, is regularly open during a part of the year.

Races.—With the exception of a few Finns and Laplanders, in the more northerly parts of the kingdom, the inhabs. of Sweden are wholly of Gothic descent. The Finns, however, are supposed to have at one time occupied the whole country, and to have been driven to the forests and fastnesses of the north by an irruption of Goths some centuries before our era. And, whatever truth there may be in this theory, it is, at all events, certain that, as no irruption of any other tribe has taken place into Sweden since the supposed Gothic invasion, the blood of the Goths must be found there in a state of comparative purity. The description of the Germans given by Tacitus might, indeed, be applied to the Swedes of the central and southern parts of the kingdom, who are a tall, robust, fine race of men, with fair complexion, light hair, and blue eyes. But to the N. of 60° or 65° lat., these characteristics begin to disappear, light hair becoming uncommon, and the complexion being frequently brown, and even tawny.

During the disastrous period from 1600 to 1610 there was a progressive diminution of the pop.; but since the accession of his present majesty, a great change for the better has taken place. The pop. which amounted to 2,364,680 in 1820, had increased to 2,189,773 in 1830, being an increase of 825,000. And the produce both of corn and potatoes having increased still more rapidly, it follows that the pop. is not only increased in amount, but, which is of more importance, has acquired a proportionally greater command over necessaries and conveniences.

Historical Notice.—The early history of Sweden is obscure, and has little interest, at least to foreigners. The Swedes being discontented with their king, Albert of Mecklenburg, who had been raised to the throne, in 1594, Margaret, Queen of Denmark, styled the Empress of the North, a princess of extraordinary talents, availed herself of the opportunity to establish her authority in Sweden. In this object she was completely successful; and by the famous treaty of Calmar, concluded in 1597, the three kingdoms of Denmark, Sweden, and Norway were united under the sway of Margaret. But the Swedes speedily became dissatisfied with this union, and the cruel and tyrannical proceedings of Christian II. excited a rebellion that terminated in the emancipation of Sweden. The famous Gustavus Vasa led the Swedes in their struggle for independence. He hoisted the standard of revolt in 1569, and having entered Stockholm in triumph, in 1583, was raised by the unanimous suffrages of his fellow citizens to the throne. Gustavus, who subsequently introduced the Protestant religion, died in 1603, in the 70th year of his age, and the 60th of his reign. Equally great as a legislator, a warrior and a politician he distinguished himself in every station; whether we consider his cool intrepidity and enterprising spirit, his honest integrity, and political foresight, his talents for legislation, his attachment to letters, and encouragement of learning, his affability, and his solid and enlightened piety. These great qualities, set off by a graceful and majestic person, and heightened by the most commanding eloquence, drew general esteem and admiration, and it may be justly said of him, that the most arbitrary monarch never exercised a more unbounded sway over his vassals, than Gustavus possessed from the voluntary affection of his free-born subjects." (*Coar*, IV. 118.)

Eric, the son and immediate successor of Gustavus, manifested symptoms of that insanity, which, unhappily, has since been exhibited on more than one occasion by the princes of the house of Vasa. Gustavus Adolphus, grandson of Gustavus Vasa, succeeded the throne in 1611. Under this great prince, who was at once an enlightened ruler and the greatest general of his time, the glory and power of Sweden attained to a maximum. At the outset of his reign he was involved in hostilities with the Russians, the Poles, and the Danes, which he terminated with the most triumphant success, having acquired Ingria and Carelia from the Russians, Livonia from the Poles,

with sundry valuable territories from the Danes. These successes, and his reputation for ability and disinterestedness, naturally made him the leader of the Protestant party, in the struggle they had to wage against the power and ambition of the house of Austria. And though his glorious and successful career was prematurely terminated by his death at the battle of Lützen, in 1632, his exertions were mainly instrumental in bringing about that freedom of religious worship, and that equal distribution of power, established by the treaty of Westphalia.

The success that had attended the arms of Sweden under Gustavus, continued to attend them under his daughter Christina, who abdicated the throne in 1654, and his other successors down to Charles XII, who became king in 1697.

This extraordinary individual, celebrated alike for his successful exploits and his reverses, well nigh consummated the ruin of Sweden. Inflexible in his resolutions, which were inspired by an ambition that was closely allied to madness, the success that attended his early campaigns made him regard every thing as possible, and precipitated him into the most extravagant projects. But the battle of Poltova (which see) put an end to his career of conquest; reduced him to the condition of a fugitive; and gave Russia a lasting ascendancy over Sweden.*

Charles XI. and Charles XII. enjoyed a nearly absolute authority; but the calamities entailed on the country by the folly, or rather insanity of the latter, led, on the accession of his sister Ulrica Eleonora to the crown, to the enactment of limitations, by which the royal authority was very materially circumscribed. It was, however, again enlarged in 1772.

Gustavus the III. having been assassinated in 1792, was succeeded by Gustavus IV then a minor. As soon as this prince had been declared major he embroiled himself in hostilities with France, from which Sweden certainly had nothing to fear. He next engaged in a quixotic contest with Russia; and when the latter had overrun Finland and was threatening an attack on Stockholm, he had the unparalleled folly to reject the assistance of 10,000 English troops who had arrived at Gottenburg! Under these circumstances the dethronement of the king became indispensable to the safety of the state; and this was effected by a bloodless revolution in 1809, when his uncle, who took the title of Charles XIII., was raised to the throne, prince Christian of Holstein.

Augustenborg, being, at the same time, declared crown prince and successor. On the premature death of the latter Marshal Bernadotte, prince of Ponte Corvo, was elected successor to the crown by a Diet held at Orebro in 1810; and having accepted the honour, he soon after arrived in Sweden, of which he became king on the death of Charles XIII. in 1818.

There can be no question that the revolution which brought Marshal Bernadotte to Sweden has been of vast advantage to that kingdom. The talent of Isabella in the person of the house of Vasa, even had it been less obvious than in the cases of Charles XII and Gustavus IV, was quite sufficient to justify a change of dynasty. And if great services, a mild, equitable, and enlightened system of government, and an unblemished private character, be any title to the esteem and affection of a people, few princes had a better claim than Charles John to the esteem and regard of their subjects. (Exclusive of the works referred to in the course of this article, we have derived much valuable information from private parties in Sweden.)

SWINKMÜNDE, a town of Frisia, in Pomerania, on the E. coast of the island of Usedom, on the middle mouth of the Oder, or rather of the lagoon, or bay, which receives its previously to its fall into the sea, lat. 55° 55' N, long. 11° 15' 15" E. Pop. 5,000. It is the outpost of Stettin, all vessels destined for the latter, that draw more than 7 or 8 ft. water, being obliged to load and unload by means of lighters at Swinkmünde. Formerly there were not more than 7 ft. water over the bar at the river's mouth, but it has recently been so much improved by dredging, the construction of piers, &c., that vessels drawing from 15 to 21 ft. water, come to the quays of Swinkmünde, and its port is now the very best on the whole E. coast of the Baltic. In 1840 there arrived at the port 1,744 vessels of the aggregate burden of 170,348 tons, the value of the imports for the same year being estimated at 1,230,900*l*. (See STETTIN.)

SWITZERLAND (an. *Helvetia*, including part of *Rhaetia*), an inland and mountainous country of Central Europe, having Germany on the N and E., Italy on the S., and France on the W. It lies principally between the 46th and 49th degs. of N. lat., and the 6th and 11th of E. long. Its greatest length N. and W is 210 m.; greatest breadth N and S 160 m. It is a republic formed by the union of 22 confederated states, or cantons, the area pop., &c., of which are as follows:—

Countries.	Area in sq. m.	Pop. as at 1st of March, 1920.						Roman Catholics.	Protestants.
		Citizens of Russia.	Citizens of other nations.	Foreigners.	Total pop.	Pop. to sq. m.

Physical Geography.—Simond has not inaptly remarked, that "Some idea may be formed of the Helvetic geography by comparing the country to a large town, of which the valleys are the streets, and the mountain groups of contiguous houses." (*Travels in Switzerland*, [14]) Indeed, by far the larger portion of Switzerland consists of mountains, comprising many of the highest summits of the Alps. There is, however, a considerable extent of flat ground in the N.W., in the cantons of Friburg, Berne, and Solothurn. The general distribution of the great Alpine chains in the S. and E. parts of Switzerland has been already noticed in the article ALPS, in this *Dict.*, i. 87—89, and need be only briefly indicated here. Two great parallel chains, enclosing the Valais, extend between Mount Blanc, in Savoy, near the S.W. boundary of Switzerland, and Mount St. Gothard. To the most southerly of these chains, called the Pennine

Alps, belong Mount Rosa, 15,150 ft., and Mount Cervin, or the Mütserhorn, 14,838 ft. in height. (*Sauser*.) To the N chain, or the Bernese Alps, belong the Finsteraarhorn, 14,085 ft., the Monch, 13,497 ft., the Jungfrau, 12,717 ft. in height, &c. (*Traill*). E of Mount St. Gothard, which may be considered the central point of the Swiss Alps, the Rhaetian Alps stretch through the Grisons; while on the N., other chains cover with their ramifications most part of the four Forest cantons (Lucerne, Schwytz, Unterwalden, and Uri). Among the loftiest summits of the Rhaetian Alps are the Dödlberg, 11,785 ft.; Muechelhorn, 10,807 ft. in height. (*Traill*.) The Alps of the Forest cantons have several summits, as the Gallenstock, Suonenhorn, &c., the height of which is but little inferior. Most of the preceding chains have a general direction from S W. to N.E. But the direction of the main ranges throughout the rest of Switzerland is generally towards the N. or N W, which, also, corresponds with the general slope of the country. In the W., however, beyond the lakes of Neuchâtel and Bienné, the slope of the surface is towards the N.E. The mountains

* The life of Charles XII., by Valdeira, is one of the most interesting pieces of biography ever published. See also the admirable character of Charles XII. by Dr. Johnson, *History of Europe*, 1783, v. 142.

tain-system of this part of Switzerland is that of the Jura (see *ansé*, 95.); a system composed of several parallel ranges of mountains, inclosing very long and narrow valleys, but nowhere rising to 6,000 ft. in height. (*Bruguière, Orographie de l'Europe; Picot, Ebel, &c.*)

The great rivers Rhine, Rhone, Inn, Ticino, and Doubs (see the names), have their sources in Switzerland; after which, the chief river is the Aar. The Aar (see the article) rises at the foot of the Finsteraarhorn, and runs at first E., but afterwards N.W. through the lakes of Brienz and Thun, to about 9 m. W. Berne, when it turns N.E., and finally falls into the Rhine, near Klingensau, after a course of about 175 m. This river, which drains by far the greater part of Switzerland, receives on the right the Emmen, Wigger, Sur, Reuss, Limmat, &c.; and on the left, the Simmen, Saane, and Thiele. Unterseen, Thun, Berne, Solothurn, and Aarau are on its banks. The Thur and Birs, tributaries of the Rhine, are the only other streams that deserve notice.

Switzerland has a greater number of lakes than any other tract of country of equal extent in Europe, excepting, perhaps, the grand duchy of Finland. All these lakes are navigable, and remarkable for the depth and purity of their waters, and their great variety of fish. The following is a

STATEMENT showing the probable Area, Height of Surface above the Sea Level, and greatest ascertained Depth of the principal Swiss Lakes.

Lakes.	Area in sq. m.	Height above Sea.	Greatest Depth.
		<i>Fr.</i>	<i>Fr.</i>
Geneva, or Leman	240	1,300	1,012

Blonne	-	1,419	400
Wallenstadt	-	1,385	500
Sempach	-	1,748	-

The lakes Maggiore and Lugano are partly, also, in Switzerland. A notice of most of these lakes will be found in this work under their several heads, or those of the different cantons in which they are situated.

Switzerland is almost wholly composed of primary and sedimentary rocks: volcanic formations are rare. The geological constitution of the mountain chains has been already noticed. (ALPS, JURA, &c.) The central portion of the Alps consists of granite, gneiss, porphyry, and other primary rocks, inclosed successively by transition and secondary formations: the Jura is wholly of a remarkable limestone formation. But the region between the Alps and the Jura is occupied with a peculiar formation of green sandstone, called *molasse*, or *sageflake*, alternating occasionally with limestone and *grauwacké*, which extends throughout all the lower parts of Switzerland into S. Germany. This deposit has been classed with those of a tertiary kind, and Brongniart and other geologists suspected it to be of a date posterior to the formation of the Paris basin. For particulars respecting the complicated geology of Switzerland, the reader may consult the works of Saussure, Humboldt, Brongniart, Lyell, &c.

The mineral riches of the mountains are but little known or explored; a few iron mines in the Jura being the only ones that deserve notice. There are numerous mineral springs, many of which are resorted to medicinally; and those at Bex, and others in the canton of Basle, furnish considerable quantities of salt. A few insignificant coal beds have been met with; but the remaining mineral products of any value are mostly confined to slate, marble, gypsum, granite, and other kinds of building stone.

The climate is not only dependent on elevation, but on the influence exercised by the glaciers in cooling the atmosphere, the openings and exposure of the valleys, &c. But, on the whole, Switzerland is a much colder country than its lat. and situation in Europe would appear to warrant. At Berne, the mean annual temp. is about 45° Fah.; at Basle, 46°; and at Geneva (1,200 ft. above the sea), 46½° Fah. The climate in the Alpine regions is believed by some to have become colder in recent times; since the line of perpetual snow (which here varies from about 9,300 to 9,600 ft. above the sea) has certainly descended lower, as compared with a former period; the glaciers have increased in number; and many tracts are now bare, which were formerly covered with forests and pasture-grounds.

The vegetable products of nearly all the different zones of continental Europe are found in Switzerland. The Valais, which has the widest range of vegetation among the Swiss cantons, produces, without culture, nearly 2,000 species of plants, exclusive of 1,000 *cryptogamia*. In

respect of its vegetable products, the country may be classed into 7 distinct regions or zones, according to its elevation, as follows:—

Regions.	Productions.
Lower Region - <i>Fr.</i> — to 2,100	Limit of the vine. In lower parts of Tessin and Valais, the fig, pomegranate, &c.
Forest do. - 2,100 — 3,500	Limit of the elm. Buckwheat and maize to 2,300 ft. Chestnut ceases at 3,000 ft.
Beech do. - 3,500 — 5,300	Flax, hemp, and barley flourish at 4,000 ft., about which Italian paper, ash, and wild cherry ceases.
Pine and fir do. 5,300 — 6,800	Neither potatoes, apples, or pears grown.
Lower Alpine do. 6,800 — 8,500	Limit of trees of every kind. Includes some good pasture land.
Upper do. - 8,500 — snow line.	Only shrubs and Alpine plants.
Snow region, above line of perpetual snow.	Sarivrage oppositifolia, gentiana, chrysanthemums, &c.

There are, no doubt, various exceptions to this table, consequent on difference of lat., position, &c.; but it may be considered as applying to the country generally. (*Wahlenberg, De Veget. in Helv.; Kasthofer, Voyage, &c.; Note in Foreign Quarterly Review*, i. 210—213.)

Among the wild animals of Switzerland are the bear, wolf, lynx, wild boar, chamois, ibex, deer, and game of all kinds, the marmot, ermine, &c. The chamois is becoming scarce. The remarkable variety of the spaniel, so useful, and the breed of which is preserved with such care at the hospice of St. Bernard, is of Spanish descent, and frequently attains the height of 2 ft. and the length of 6 ft. The birds of prey comprise numerous species of eagles and vultures, one of which latter, the *lammerjager* (lamb-destroyer), is said to be the largest native bird of Europe. Salmon, trout, carp, &c. inhabit the lakes. There is only one venomous serpent, the *Coluber berus*; but the insect tribes are more numerous than we might be led to suppose from the rugged and elevated nature of the country.

Property, Agriculture, &c.—Switzerland is a country of small proprietors. An estate of 150 or 200 acres, belonging to an individual, worth perhaps from 90L to 100L a year, would be considered large every where, except in the canton of Tessin, or the Emmenthal, in Berne, and a few other districts, where local customs exist to prevent the too great division of property. Except in certain of these districts, the property of individuals is at their death divided in equal shares among their children, without respect to sex or seniority. In certain cantons, however, as Glarus, landed property cannot be left to any one not a direct descendant, and, failing such heirs, it becomes the property of the government. Indeed, several of the cantons and governments, as that of Berne, and the greater number of the towns, possess a very great extent of landed property. But this is generally apportioned in small lots to the different parties having right to it, or is depastured in common. Switzerland, in fact, is almost wholly a pastoral country: little corn is produced, and the crops are scanty and precarious. Cattle, sheep, and goats constitute the chief riches and dependence of the inhabs. There are, generally speaking, no farmers; each proprietor farming his own small portion of land, and the mountainous tracts belonging to the different communities being, as already stated, depastured in common. No foreigners can become possessors of land, nor can native Jews in several of the cantons.

Switzerland has been estimated to comprise 2,350,000 *morgen* arable land, 900,000 do. land in artificial pastures, 120,000 do. vineyards, and 2,400,000 do. forests. (*Neigebaur's Schatz, Allg. Erdkunde*, xxi. 51.) It is only in the canton of Thurgau that corn is produced in any considerable quantity, and even there the home growth does not exceed two thirds the required supply. In Uri no corn is raised; and in certain parts of the Bernese Oberland wheat is treated as an exotic, and trained carefully over twigs! Rye, oats, and barley are principally cultivated; maize, however, is grown in some parts in considerable quantities. Beans, lentils, potatoes, turnips, pumpkins, flax, hemp, woad, madder, poppies, and tobacco are also grown, but to an insignificant extent. Vines flourish in several of the cantons; as on the shores of the lake of Geneva, Vaud, the Valais, Neuchâtel, Aargau, &c. The canton of Neuchâtel has been estimated to produce, at an average, about 700,000 galls., 400,000 of which, at least, are sold in the neighbouring cantons. The manufacture of sparkling wine, in imitation of champagne, has of late years been on the increase in Neuchâtel, and from 120,000 to 140,000 bottles are now annually exported. Along the banks of the Lake of Constance, and in the cantons on the Rhine, apple, pear, and cherry orchards are numerous; and cider, perry, kirschwasser, &c. are made in large quantities.

"Vineyard husbandry," says Mr. Laing, "is altogether

a garden cultivation, in which manual labour, unassisted by animal power, scarcely even by the simplest mechanical contrivance, does every operation; and this gives the character to *all* their husbandry: hand labour is applied to all crops, such as potatoes, Indian corn, and even common grain crops, more extensively, both in digging and clearing the land, than with us. It is not uncommon to find agricultural villages without a horse; and all cultivation done by the hand, especially where the main article of husbandry is either dairy produce or that of the vineyard." (*Notes of a Traveller*, p. 355.)

Cows, goats, and sheep, as already stated, constitute the principal wealth of the Swiss, the inhabitants of the manufacturing towns excepted; or, to discriminate more accurately, the goats, in a great measure, support the poorer class, while the cows supply the cheese, from which the richer derive their limited wealth. The Swiss peasant is extremely fond of his cow; and to pass the winter without a cow to care for would be to him extremely irksome. The cantons of Glarus, the Grisons, Appenzell, Berne, Tessin, and the Valais, are those most distinguished for the extent and excellence of their pastures. With little exception, all the land not covered with forests, in the cantons of Schwytz and Uri, is used for the pasturage of cattle. The Alpine pastures are estimated, not by their extent, but by the number of cows they will maintain; in the lower Alps about 3 acres, and in the upper from 10 to 15 acres, being the usual average allowed to each. In several of the W. cantons, these pastures are mostly private property; in the E. they commonly belong to the canton, being apportioned among the different parishes, each having its *alp*, or common pasture for its cows. Each inhab. is entitled to a share of this pasture from June to October. Few individuals, however, have such a number of cows as would repay the labour of attending them in summer on the mountains, properties being in general so small as rarely to be able to maintain above five or six cows in winter, and usually, indeed, not more than half that number. The practice, therefore, is for parishes to hire herdsmen and assistants to take care of the cows in summer when on the mountains, and to make the cheese. The owners of the cows get credit daily for the quantity of milk furnished by their cows; and the produce of the sale of cheese at the end of the season, the expenses being deducted, is divided amongst them in proportion to the total quantity of milk furnished by each. (*Laing's Notes of a Traveller*, 351.) When let, the mountain pastures are rented from the middle of May to the middle of Sept., the cattle being kept in the lowlands during the remaining eight months of the year. The term of the lease on which they are let rarely exceeds a summer. Six or eight goats, or about four calves, sheep, or hogs, are deemed, as to feeding, equivalent to a cow; but a horse is reckoned equal to five or six cows, because he roots up the grass. The Swiss cows are very handsome animals, and so valuable that, even in Switzerland, they fetch about 20*l.* each. They yield more milk than those of Lombardy, where they are in great demand. In some parts of Switzerland, with 40 cows, a cheese of 45 lbs. may be made daily; and in the vicinity of Althorf, they make, in the course of 100 days, from the 20th of June, two cheeses daily of 25 lbs. each, from the milk of 18 cows. Cheese appears to have been an important article of export from Switzerland from a remote period. Many varieties are made; the most celebrated of which are those of Schabzieger (see GLARUS), and of Neuchâtel and Gruyère (which see). About 30,000 cwt. Gruyère cheese is said to be annually exported; and from the middle of July to Oct., about 300 horses are employed in transporting Swiss cheeses over Mount Grias.

The total number of cattle in Switzerland has been vaguely estimated at 800,000, of which 500,000 are cows. (*Schults*.) They are principally of two distinct breeds: one of large size, with branching horns, mostly inhabiting the lower parts of the country; and another called the *Oberlander*, a small and inferior species, confined chiefly to the Alps. The best cattle are those of the Simmenthal, the district of Saanen, and the cantons of Friburg and Solothurn; the last being especially remarkable for the excellence of its oxen. Cows, as well as oxen, are employed for the plough. The horses, though not handsome, are strong and spirited, and well adapted for cavalry and artillery service, for which they are exported to France and elsewhere. Asses and mules are bred in the S. cantons, where they are mostly used for the conveyance of passengers and merchandise. The stock of sheep is estimated at half a million, and of goats at about the same number. There are two varieties of sheep, one native covered with a coarse white wool; and the other a Flemish breed, with fine wool of a dun and yellowish colour. But sheep are not a favourite stock, and it is only in a few places that the improvement of their fleeces, by crossing with merinos, has been at all attended to. Hogs are of a large but coarse breed, and are principally kept in the Forest cantons.

The urgent necessity of collecting fodder for the sup-

port of the cattle during winter makes the collection of grass for hay a work of paramount importance. Hence, wherever it is found it is carefully collected; and the peasants, having *crampons* on their shoes, to prevent them slipping, gather hay in places inaccessible to cattle! Grass, not three inches high, is sometimes cut three times a year; and in the valleys, the fields are shaven as close as a howling-green, and all the inequalities clipped as with a pair of scissors. In Switzerland, as in Norway, the art of mowing seems to be carried to its highest perfection, and no where is so much skill and attention displayed in harvesting corn and hay. But arable and meadow cultivation are both in a backward state, owing principally to the pertinacity with which the people reject innovations, and cling to old and defective methods of husbandry. On arable lands fallows take place every 4th or 5th year, and the culture of turnips for cattle feeding is unknown. Great attention is, however, paid to the collection of both solid and liquid manure, but they are said not to be very judiciously employed; and the neglect of irrigation, which might almost every where be easily effected, and the rudeness of agricultural implements, especially ploughs, are obvious. (*Kasthofer, Voyage dans les Petits Cantons et dans les Alpes Rhélandes*.)

The wages of agricultural labour are low; but, on the whole, the rural pop. may be considered well off. Mr. Symonds says, that "it would require 30*s.* a week in England, in the neighbourhood of any country town, to put a man, his wife, and 3 children (2 of whom shall be above 15 years of age), in the same condition, and in all physical respects, on a footing with the average of Swiss artisan peasants having the same family." (*Rep. on Swiss Handloom Weavers*.) We incline, however, to think that this is a very exaggerated statement; and from all that we can learn, the agricultural labourers in most parts of England and Scotland have no reason to envy the condition of those of Switzerland. The diet of the Swiss consists more of porridge than is general in England, and much more milk and cheese is consumed. In other respects, wine and cider being substituted for beer, the catalogue of articles of food is much the same among the peasantry in both countries. The houses inhabited by the rural pop. are mostly of wood, but capacious, and furnished generally with all the articles required for daily use. The herdsmen who tend the cattle in the Alpine pastures are lodged in *châlets*, or rude log huts formed of the trunks of pines, and having rarely any furniture, except the necessary dairy utensils.

Chamois hunting, fishing in the lakes, and boat building, employ some of the inhabs. in the intervals of agricultural industry, but to no great extent. A great number of Swiss emigrate to foreign countries, where they act as valets, and embark in various trades, especially those of confectioners and bakers; always returning, however, to spend or invest their gains in their native land. The Swiss have also been for centuries the *condottieri* of Europe; and have always been ready to barter their blood and bravery, or to enter into the military service of any sovereign or republic that chose to hire their services, and to support any cause, however unprincipled or unjust! There were formerly numerous Swiss regiments in the service of France and Spain; and they are still extensively employed by the king of Naples, the Pope, and the king of Sardinia. A Swiss, in fact, will do any thing for money, and nothing without it. Hence the proverb, *point d'argent, point de Suisse*. The foreign mercenaries are extremely economical; and such of them as survive return home with all that they have been able to amass.

Manufactures.—Notwithstanding the geographical disadvantages of Switzerland, the inhabs. have carried some branches of manufacturing industry to a considerable state of advancement. Various parts of the country have indeed, been noted since the 18th century for their manufactures; and despite the competition of this and other countries, they are now more extensively carried on than ever. It is impossible, however, from their being almost wholly domestic, to estimate the number of persons employed, or the annual value of the produce of any of the Swiss manufactures. Most part of the agricultural inhab. are almost wholly occupied during winter at the loom, or in other branches of manufacturing industry; and they also engage in them during the evenings throughout the year, and when their little patch of land does not require their attention. In the districts devoted to hand-loom labour from 1 to 4 looms are usually to be found in a cottage; the weavers being furnished with the warp, wool, &c., by the manufacturers, to whom they return the woven goods. A line drawn through Switzerland in a N.N.E. direction, across the canton of Friburg, and through the Saanen, pretty accurately divides the German from the French pop., each portion of which presents in its manufactures some distinguishing characteristic of its origin. In the French cantons the manufacture of watches, musical boxes, jewellery, &c., are most extensively carried on; while

cotton and silk fabrics are the principal employment of the inhab. of the E. and N.E. cantons. In the Grisons, and the Italian cantons S. of the Swiss Alps, there are few, if any, manufactures. The principal manufacturing cantons of German Switzerland are Appenzell (outer Rhodes), St. Gall, Thurgau, Zurich, Aargau, and Basle; and in the French part of the country those of Geneva and Neuchâtel. Appenzell and St. Gall are the principal seats of the cotton trade, which Mr. Symons has roughly estimated to employ between 600,000 and 700,000 spindles. Raw cotton is imported from England, France, Holland, and Trieste; cotton twist of the higher numbers being almost wholly brought from England. Cotton printing is conducted to some extent in Neuchâtel, where the quality of the water, and perhaps other physical circumstances, conspire to produce brilliant and beautiful colours, in which, indeed, consists the whole excellence of the Swiss goods. The silk manufacture is mostly conducted in Zurich and Basle. The raw silk is drawn from various foreign states, but chiefly from Lombardy, from which country also four fifths of the organzine are brought. The watch-making trade in Geneva and Neuchâtel is of very great importance. (See the articles.) France furnishes to Switzerland about 50,000 movements (*ébauches*) annually, and receives all her fine works and watches from the Swiss manufacturers. The watch-making business in France is in reality of no great importance, most of the artisans being employed in what is called the *repassage* of the works originally produced in Switzerland. (*Bowring's Rep.*, p. 12.) Nearly 120,000 watches are made annually in the elevated regions of Neuchâtel, and many more, besides jewellery, in the canton of Geneva, a large portion being smuggled into France. Linen fabrics, damasks, &c., rivaling those of Belgium, are made in Berne, in which canton, however, there are few manufactures of consequence except those of linen. In addition to the above, woollen cloths, paper, leather, straw plait, iron goods, &c., are made in various places, but many of these have declined in favour of those above specified.

It is easy to see that the foundation of Swiss manufactures is laid in the peculiar distribution of property in the country, and the necessities of the inhab. Most families have a small patch of land; but as its cultivation does not occupy half their time, and is besides unable to afford them more than a scanty supply of the most indispensable necessities, they naturally endeavour to eke out their limited means by engaging in weaving and such like employments. And inasmuch as all they make in these employments is so much clear gain, so much added to the fund on which they must otherwise subsist, it is plain they can afford to work at the lowest possible rate of wages; and, in point of fact, their eulogists, Symons and Bowring, admit that their wages are reduced to the smallest pittance.

The Swiss, from their situation in the centre of Europe, are obliged to pay an enhanced price for their cotton and yarn; so that their whole advantage consists in their being able to reduce wages to next to nothing without being driven from the business. We believe, however, that even this resource will not be found to afford them adequate protection; and that they will be compelled, by the competition of the power-looms of this and other more favourably situated countries, to relinquish all but the finer and more difficult sorts of weaving.

The influence of the circumstances now alluded to has been increased by the wise and liberal policy followed by the government. Switzerland is a country in which the great principles of free labour at home, and free intercourse with foreigners, have been fully carried into practice. No restrictions exist upon the pursuit of any branch of trade. "Industry has been left to itself. Wealth has not been diverted, by legislative interference, from its own natural tendencies. There has been no foolish struggle encouraged by the government between the protected monopoly of the few, and the unprotected interests of the many. Two millions of men have made, under every disadvantage, the experiment of free trade as a system. The consumer has been allowed to go to the cheapest market, the producer to the dearest; and activity is every where visible alike in the trading and agricultural districts. One element only is wanting to make Switzerland the most prosperous of manufacturing nations. Capital is rapidly increasing, by the action of unrestricted, unfettered, unprotected industry." (*Bowring's Rep.*, 3-4.) The general prosperity is also favoured by other extraneous circumstances: land is, for the most part, released from tithes and taxes, and the people subjected to very trifling fiscal burthens. In many of the cantons there is no national debt; and some of them, indeed, nearly discharge the expenses of their government out of the interest of the capital accumulated from the surplus revenues of previous years. The establishment of the Prussian Customs' Union occasioned at first serious apprehensions among the Swiss; and some of the N. cantons, as Schaffhausen and Thurgau, were anxious to join

it. But a commission, appointed by the Confederation in 1833, decided that such a step was altogether unadvisable; and there seems to be no great probability that Switzerland will join the League.

Several of the cantons derive a considerable portion of their revenues from a *droit de péage*, or duty, generally less than 1d. a cwt., on goods at the turnpikes on the various cantonal frontiers. A federal duty of from 1 to 2 *batsen* per cwt. is paid at the frontier of the republic on goods imported from foreign countries; but goods exported from Switzerland pay no dues, and from the absence of *ad valorem* duties no estimate can be made of the value either of the imports or exports of the Confederation. (*See GENEVA.*) Silk, cotton goods, lace, watches and jewellery, straw plait, cattle and cheese, wine from Vaud and Neuchâtel, liqueurs, herbs, &c., constitute the chief articles of export. In 1834, according to the French accounts, the value of the wine, oil, madder, brandy, salt, fruits, colonial produce, silk, woollen, and cotton manufactures, &c., exported from France to Switzerland, amounted to nearly 30,000,000 fr.; for which Switzerland sent back horned cattle, cheese, ribands, linens, thread, and other produce, to the amount of 12,700,000 fr., the balance being, no doubt, liquidated by the clandestine exportation of watches, jewellery, &c. Wheat is brought principally from South Germany; salt (about 500,000 cwt. a year), leather, hemp, flax, chicory, tobacco, and oils, come principally from Germany, but partly from France; raw cotton, cotton twist, cotton cloths for printing, hardware, iron and other metals, fancy wares, colonial produce, drugs, dyes, &c. from England, and partly also from the Netherlands; woollen stuffs from Belgium, Swabia, and Saxony; silk from Piedmont and Lombardy, &c. Switzerland enjoys a large share of the transit trade between Germany and Italy, Austria, and France. The principal lines are from the Lake of Constance across the country to Geneva; from Schaffhausen and Basle to Geneva; but especially from Basle, through Lucerne, Mt. St. Gothard, to Milan, Genoa, &c. Another line passes from Basle to Zurich, through the Grisons, and across the Splügen, to Lombardy and Trieste. The roads, which are maintained by the cantonal governments, are every where, almost, in good order; but from the rugged nature of the country, carriage is costly as compared with that in the neighbouring states. The carriage of a ton weight of goods over a distance of 30 m. frequently costs 25s.

Hardly a country in Europe has so complicated a currency, or set of weights and measures, as Switzerland, nearly each canton having its own, which differs more or less from the rest. The Swiss franc of 10 *batsen* = 1½ French fr., and nearly 1s. 3d. Engl. German money is, however, common in the E. and N., and the coinage of Milan in the S., while French money is almost universally met with.

Government.—The 22 cantons are united on equal terms in a confederation for mutual defence; but in most other respects each has its own independent internal administration. The government is wholly republican in every canton, except Neuchâtel, in which the king of Prussia exercises the right of sovereignty. Before 1831, when important reforms took place in the Swiss constitutions, the cantons were divided into aristocratic and democratic; but at present the government is more or less democratic in all. In Uri, Schwytz, Unterwalden, Glarus, Zug, and Appenzell, the functions of legislation and sovereignty are vested in the *lands gemethe*, or general assembly of the inhab., in which every citizen of full age, without any property qualification, has a vote. In the other cantons the legislative power is delegated to the *landrath*, or council of representatives, elected in the primitive or general assembly of the inhab., the elective suffrage in which is universal, or nearly so. And in some of these cantons, as St. Gall and Basle (country), the primitive assemblies have a *veto* on the decisions of their grand council in all matters of an organic character; while in others the people at large have the right to revise their constitution in primitive assembly after a certain number of years. The grand council, where it exists, elects the petty council, or executive power, at the head of which is the burgomaster or *avoyer* of the canton; in other cantons the *landammann*, or *landshauptmann*, is chosen by the general assembly.

The form of the general government, or the federal constitution, has, also, of late years, undergone great modifications. A contest was continued for a lengthened period between those who wished to preserve for individual cantons the greatest amount of free action, and those who wished to strengthen the general government, and to render its authority paramount. It would be irksome to enter into any details with respect to this contest. Suffice it to say, that after a great deal of acrimonious discussion, which led ultimately to a civil war, the party favourable to a more intimate union of the different cantons gained a decided preponderance. In consequence a new constitution was proclaimed, on the 12th September, 1848. Under this new arrangement

the federal assembly consists of two divisions, a national assembly and a council of state or senate. The first consists of deputies (111 in all) from each canton, in the proportion of a deputy to every 30,000 inhabitants, and the second, or senate, consists of 44 members, or 2 for each canton. The federal assembly chooses from among its members a National Council of 7 individuals, which is, in fact, the executive government. But the powers conferred on this council are comparatively limited, the federal assembly reserving to itself the right to declare war or make peace, to conclude all sorts of treaties and alliances, to appoint diplomatic agents, to fix the amount of the military force and to regulate the customs and excise duties, and other things important for public purposes, the business of the post office, of internal communication, the mint, &c.

Under the old system there was no proper judicial system for the decision of disputed questions between different cantons, so that when they occurred they had always to be submitted to arbitration, the final being authorized, in the event of the arbiters not agreeing, to appoint an umpire. Under the new constitution this objectionable system has been in its stead, and that a tribunal has been constituted which determines all questions between the cantons and the Confederation, between one canton and another and between cantons and individuals, &c. But unfortunately the judges in this tribunal who are named by the assembly are not appointed for life, or during good behaviour, but for 5 years only. They are really clerical, the more members of the party which happens to have at the time a majority in the assembly, so that in political matters but little weight can be attached to their decisions.

Formerly the Diet met alternately in Bern, Zurich, and Lucerne, two years in each, but now it meets in Bern only. Religious differences had a great deal to do in bringing about the late changes, and it is a fundamental principle in the new order of things that the system of the Jewish shall be maintained, and extended to everywhere permitted. This last condition has been carried into effect, with no doubt unqualified success, that even the famous Hospital of St. Bernard no longer exists.

The revenue of the Confederation consists chiefly of a money tax levied on the different cantons proportionally to their military contingents, and of the tolls on imports collected by the frontier cantons, and granted to the Diet by them to the assembly. It amounted in 1845 to 5,200,000 Swiss fr. The revenue of each canton furnishes to the federal army troops according to its amount of pop. and resources. The total armed force of the Confederation, according to the scale adopted in 1845, amounts to 60,000 men, viz. 30,000 infantry, 5,000 artillery, 5,000 cavalry and 100 engineers. Switzerland has, however, no standing army to the strict sense of the word. It is only a militia force in which every male Swiss must serve for a certain number of years, holding himself at all times ready if called on for continental or federal service. Every two years a federal camp is held for exercise, and at them, in the canton of Bern, a school for the instruction of officers is held for two months each year.

Each canton has its own code of laws, which are, in general, similar to those prevalent in Germany. In some cantons, as Fribourg, Schaffhausen, &c. the Catholics, or partial code of Charles V. was in force down to a late period, trials were not public, and juries did not exist, but in those respects some considerable improvements have lately been effected. The prisons in most parts of the country are in a bad state. In Bern, however, and especially in the French cantons, improved and humanized systems of discipline have been adopted, and at Lucerne the penitentiary system of Quakerism has been introduced.

Religion.—Beside the Catholics and Protestants, the respective numbers of which are given in the table at the beginning of this article, there are about 6000 Jews and 1,000 Gypsies. The lower clergy is political rights. Many very important provisions are or recently were in force with regard to religion in the Protestant as well as in the Catholic cantons. The Catholics are much more numerous than the Protestants, except in the cantons of about 5,000 individuals (regular and secular), the numbers of clergy of whom are very considerable. There are four Bishops (Catholic), Basel and St. Gall, Basel, Lucerne, and then the bishops of which are members of the archbishopric of Milan. There is in the diocese of the bishop of Constance. The government of the Protestant church is considered a branch of the department of public instruction, and as such belongs to the competence of the various cantons.

The Swiss Protestant church, as every body knows, was originally Calvinistic in principle, and in Pontificality in its form. But the end by which the Swiss Protestants were formerly distinguished appears if we may depend on the statements of Mr. Lathrop and others, to have

wholly disappeared, and it is a singular and not easily explained fact, that in the Protestant cantons, religion is, as proved by many facts, and has been in fact, more than any where else in Europe. The people are not infidels, but are wholly indifferent to all, in fact, opinions about religion. Mr. Lathrop has estimated, though not on an exact basis, with any great accuracy, to amount to this, namely, to religious truths on the part of the Swiss. None of a Protestant. He thinks it is the result of a variety of causes, and is, perhaps, perhaps, to be ascribed to something defective in the system under which the clergy are appointed, and to their teaching. It is right, however, to state that notwithstanding the neglect of religion, the Swiss Protestants are eminently devoted to their habits, and though dissipated are honest and upright in their dealings.

Public education is very widely diffused in the cantons of Zurich and Aargau, for, if we may rely on a Parl. Rep. of 1837 the profits in their public schools in 1835 were in their whole pop. as 1 to 5, in Vaud and Neuchâtel the proportion was about as 1 to 5, and in Fribourg as large, in 1834, as 1 to 5, being consequently, in respect of the attendance at school, before Great Britain, the Austria empire, Belgium, and France. Parents must give their children some sort of education, from the age of 5 to that of 15 years, or their children may be punished by law, and in some cases even by imprisonment. One family a day, &c. The compulsory nature of parents to send their children to school is, however, a rare case, because no child becoming able to exercise the rights of citizenship, or to take into service of any kind, without having first received the education, which is administered to those only who have attained a certain degree of instruction, in every district there are primary schools, in which the elements of arithmetic, geography, history, &c. are taught, and secondary schools for pupils of from 10 to 15, in which instruction is given in ancient and modern languages, geometry, natural history, the fine arts, music, calligraphy, &c. In both these schools the rich and the poor are educated together, the latter being admitted gratuitously. There are normal schools in several of the cantons for the instruction of schoolmasters, who are consequently paid by the cantons, master-reading usually from 100 to 150 a year. Sunday schools exist in several cantons and Lucerne, where in Geneva and Vaud (Journal of Education vol. 10). There are expensive gymnasia in all the chief towns. Bern has a university which was formerly much frequented, and since 1835 universities have been established in Zurich and Lucerne. The ordinary expenses of a student at Bern (including living &c. may perhaps, be covered by from 100 to 150 Swiss fr. a year, the expense at Zurich is rather less. In the principal towns there are good libraries and literary associations, and between 10 and 20 newspapers, besides magazines, &c. are published in Switzerland, some of which are of some importance, though the former are said to be well directed and managed in their foreign news and general politics.

Every parish or community is obliged to support its own poor, who become chargeable on their own communities. But only those having the rights of citizenship have a right to compulsory support. The privilege of being extended to others though born in the community, in most instances, the communities have just lately admitted independence of the national government, but if there are not taxed sufficient, a poor rate is levied. This rate is always limited, being in Zurich no more than about 1/2 a year from each individual. The number of poor appears to be on the decrease, and it is only in Uri, Uri, Valais, and one or two other cantons, the

Most of the women are exempt from field work, not even in the families of very substantial peasant proprietors, whose houses are furnished as well as any country house with all. All work is regularly on the ground

The chief cities of Bern, Lucerne, and of Lucerne at Fribourg.

male individual. The land, however, being their own, they have a choice of work, and the hard work is generally done by the men. The felling and bringing home wood for fuel; the mowing grass generally, but not always; the carrying out manure on their back; the handling horses and cows, digging, and such heavy labour, is man's work: the binding the vine to the pole with a straw, which is done three times in the course of its growth; the making the hay, the pruning the vine, twitching off the superfluous leaves and tendrils,—these lighter, yet necessary jobs to be done about vineyards or orchards, form the women's work. But females, both in France and Switzerland, appear to have a far more important role in the family, among the lower and middle classes, than with us. The female, although not exempt from out-door work, and even hard work, undertakes the thinking and managing department in the family affairs, and the husband is but the executive officer. The female is, in fact, very remarkably superior in manners, habits, tact, and intelligence to the husband, in almost every family of the middle or lower classes in Switzerland. One is surprised to see the wife of such good, even genteel, manners and sound sense, and altogether such a superior person to her station, and the husband very often a mere lout. The hen is the better bird all over Switzerland." (*Laing's Notes*, p. 336.)

If we divide the people of Switzerland according to their language, nearly 1,500,000 speak a German dialect, 450,000 French, and about 125,000 a corrupt Italian: in a large part of the Grisons, the Romansch tongue, bearing a very close analogy to the ancient Latin, is spoken in several dialects. The distinctions of language are the principal among the Swiss: there are few physical differences in the inhabs. of the different parts of the country, except that the natives of the mountainous parts are the more muscular and active. The Swiss are unquestionably a brave people, devoted to their home and their freedom, for the maintenance of which they have often made great sacrifices and exertions. The situation in which they are placed, their scanty means of subsistence, the necessity of husbanding their resources, and the difficulty of increasing them, have made them sober, industrious, and economical; but also, we must say, mean and mercenary. There is nothing they will not undertake, how degrading soever, provided they think they can make money by it. To attain the rank of valet in the family of some foreign nobleman seems the summit of their ambition. Though attached to liberty themselves, 2s. 6d. or 3s. a day will make them flock to the banners of its most inveterate enemies. In this respect, indeed, they have no predilections, and the Emperor of Russia and the President of the United States may equally command their services.

"Man and steel, the soldier and his sword,"

continue to be the most marketable of Swiss products. Though attached to their country, they have no relish for its magnificent natural beauties; and though an honest, laborious, prudent, and, on the whole, respectable people, they have little that is amiable or attractive in their character.

After the conquest of Helvetia by Julius Cæsar, the Romans founded in it several flourishing cities, as Aventicum, &c., which were afterwards destroyed by the barbarians. On the decline of the Roman empire, it successively formed a part of the kingdom of Burgundy and the dominions of the Merovingian and Carolingian kings; while the E. part of Switzerland became first subject to the Allemauni, and subsequently it was wholly included in the German Empire under Conrad II. in 1037.

The house of Hapsburg had, from an early period, the supremacy over all the E. part of Switzerland; and it preserved its ascendancy till about 1307, when Uri, Schwytz, and Unterwalden, entered into a confederacy for mutual aid against Austria, which compact was confirmed after the defeat of Leopold Duke of Austria, at the battle of Morgarten, in 1315. From 1332 to 1353, Lucerne, Zurich, Glarus, Zug, and Berne, joined the Confederation. Aargau was conquered from Austria in 1415; the abbey and town of St. Gall joined the other cantons in 1451-54; Thurgau was taken in 1460; Friburg and Solothurn admitted in 1481; the Grisons in 1497; Basle and Schaffhausen in 1501, and Appenzell in 1513. About this time Tessin was conquered from the Milanese; and Vaud was taken from Savoy, by the Bernese, in 1560. The remaining cantons were not finally united to the Confederation till the time of Napoleon; and the compact, by which all were placed on a perfect equality, only dates from the peace of 1814.

The principal authorities consulted for this article have been *Picot, Statistique de la Suisse*; *Ebel, Manuel du Voyageur*, &c.; *Simon, Voyage en Suisse*; *Hoffman; Inglis's Switzerland*; *Dict. Géog.*; *Bowling and Symons's Reports*, &c., passim.

SYDNEY, a town of E. Australia, the cap.

of the British colony of New South Wales, on a cove on the S. side of the magnificent bay, or inlet of the sea, called Port Jackson, about 7 m. from its mouth; lat. 33° 55' S., long. 150° 10' E. The pop., in December, 1846, amounted to about 45,000; and is now (1850) estimated at 55,000. The British settlements in New South Wales were originally intended to serve as penal establishments, to which convicts might be transported, and employed in public and private works, and are still, to some extent, used for that purpose. The first vessel with convicts arrived in January, 1788, at Botany Bay; but it having been found quite unsuitable for a colony, the settlement was removed to Sydney. Convicts of all sorts continued to be sent to the latter till 1839; but from that period down to 1843 none were sent, except those who had been confined in Pentonville and other penitentiaries. In the last-mentioned year the system entirely ceased; and from that period no convicts have been sent to Sydney. During the period that transportation continued in force, 54,583 convicts, of whom 47,092 were males and 7,491 females, were carried to Sydney. In 1846 the convicts of all classes in N. S. Wales amounted to 10,555, of whom 6,500 were to be liberated in 1848; and the residue must all have been liberated by the end of 1850. Conviction (to borrow a colonial phrase) has, therefore, terminated in N. S. Wales; but the taint it has imparted to the population will not be easily effaced.

The town stands principally on two hilly necks of land, bounding Sydney Cove on the E. and W., and on the intervening flat ground for nearly 2 m. inland, and would appear, from the extent it covers, to contain a much larger pop. than really belongs to it; but the houses in many parts are not more than one story in height, and are generally surrounded by gardens. In the older part of Sydney, termed "the Rocks," the streets are comparatively irregular, for, owing to a want of attention at first, they were laid out, and the houses built, according to the views of individuals, without any fixed or regular plan. But latterly this defect has been to a considerable degree remedied in the old streets; and the new ones are systematically laid out. On the left side of the cove many handsome houses rise in successive terraces. The E. peninsula is almost wholly occupied by the government domain, a circumstance which is rather to be regretted, since the water, being deeper there than on the W. side of the cove, it is better adapted for the erection of warehouses, &c. It has been proposed, however, to construct a public wharf along the E. side of the cove. The new government house, an extensive structure in the Elizabethan style, is supposed to have cost in all about 50,000*l.*; but it is quite disproportioned to the means and the wants of the governor. The barracks were till lately in the centre of the town; but owing to the frequent squabbles that took place between the troops and the citizens, the barracks have been removed to the Surrey hills about 2½ m. from town. The extensive barracks, hospitals, &c., that were formerly required for the service of the convicts, have been appropriated, partly for the temporary accommodation of immigrants and partly for other purposes. Among the other public buildings are the court-house, police and commissariat offices, custom-house, new gaol, &c. Sydney has a cathedral and several English churches, a Rom. Cath. chapel, a handsome Gothic building, with chapels for Presbyterians, Wesleyans, &c. Among its educational institutions, are the Australian College and Sydney College, which furnish superior instruction in classics, mathematics, and English literature; a normal institution, with Episcopalian, Presbyterian, and Rom. Cath. schools. There are, also, numerous boarding-schools, and other private seminaries, some of which are said to be very well conducted. Several newspapers are published in the town; and many works have been published, the printing and plates in some of which would do no discredit to the London press. It has also a museum and botanical garden. "The shops in the town are frequently laid out with great taste; they are not, as in America, 'stores,' where every article may be bought under the same roof; but each trade or business has its own distinct warehouse. House rent is high at Sydney, as may be inferred from the fact that building land has been recently sold, in George Street, at the rate of 20,000*l.* an acre! Several commercial establishments are of considerable size; auction-rooms have been lately built by one individual at a cost of 5,000*l.*, and 20,000*l.* has been expended on one distillery. Large sums have been spent also in

counting steam-engines, mills, &c.; a good theatre has been built on speculation, and the hotels and taverns are numerous and excellent." (*Martin's British Colonies*, 431.) The town is partially supplied with water by means of a newly-constructed tunnel, nearly $\frac{1}{2}$ m. in length.

Sydney is admirably adapted for the capital of a great trading colony. Port Jackson is one of the finest natural basins in the world. It stretches about 16 m. into the country, and has numerous creeks and bays; the anchorage is every where excellent, and ships are protected from every wind. The entrance to this fine bay is between two gigantic cliffs, not quite 2 m. apart. On the most easterly, in lat. $35^{\circ} 51' 30''$ S., long. $151^{\circ} 16' 30''$ E., a light-house has been erected, the lantern of which is elevated 67 ft. above the ground, and about 345 ft. above the sea. It is navigable for ships of any burden to the distance of 13 m. from its entrance, or 7 m. above Sydney, up what is called the Parramatta river. Ships come close up to the wharfs and stores of the town, their cargoes being hoisted from the ship's hold into the warehouses. Sydney is consequently the emporium of all the commodities in this part of Australia, and has a very extensive trade.

In consequence of the extraordinary increase of sheep and cattle, but especially of the former (see Vol. I. p. 287.), wool is become by far the greatest article of export, the shipments of it from Sydney, in 1849, having amounted to 12,384,326 lbs., worth, when shipped, 663,968*l*. Next to wool, but at a great distance, are tallow, whale-oil, and whalebone, the produce of the Southern fishery; hides; horns, cattle, and sheep, beef, timber, &c. We subjoin (see next col.)

The colony is naturally better suited for pasturage than for tillage, and, in consequence, considerable quantities of corn and rice are imported from Van Diemen's Land, and other places. But we may remark, by the way, that the preference given to pasturage has been in no inconsiderable degree accounted for by the policy (if so we may designate a worthless compound of pedantry and quackery) that has been pursued in regard to the sale of the waste lands in the colony. We have elsewhere shown (Vol. I. p. 231) that since the minimum price charged for the waste lands in the colony, 4 or 6 acres of which are required to depasture a single sheep, has been fixed at no less than 2*l*. an acre (!) the purchase of land for agricultural purposes has comparatively ceased; and it is now either taken in large tracts for grazing by lessees, or occupied by squatters. In consequence the progress of civilization, and the settlement of the colony, are seriously interrupted by this system; while, instead of encour-

An Account of the Quantities and Values of the Principal Articles of Native Produce exported from the Port of Sydney in 1849.

traging the pop., as we were told it would do, it has led to its all but indefinite dispersion. But a *laissez-faire* policy of this sort cannot be indefinitely maintained. And when it has been abandoned, a fresh stimulus will be given to emigration, and the prosperity of this and the other Australian colonies will be materially increased.

Considering the character of a large proportion of the population, one need not be surprised at the circumstances of drunkenness being a prevalent vice, and, consequently, that spirits and wines are very largely imported. The other great articles of importation are manufactured goods and apparel of all sorts, hardware, earthenware, and dairy, books and stationery, and carriages, &c. from England; tea (2,108,916 lbs. in 1848) from China; and sugar (22,474,264 lbs. in 1848) from the Mauritius and Calcutta. In 1849 the total value of the exports from the U. K. to N. S. Wales and Port Phillip, amounted to 1,232,038*l*., whereof cotton made 222,196*l*., woollens 144,322*l*., linens 50,346*l*., apparel, cloths, and haberdashery, 263,264*l*.; beer and ale 44,786*l*., books 14,830*l*., earthenware 13,388*l*., hardware and cutlery 22,026*l*., leather and leather manufactures 27,202*l*., and silk manufactures 20,512*l*.

Return of the Value of the Imports into, and of the Exports from, N. S. Wales (inc. Port Phillip), from 1844 to 1849, both inc.

The value of the imports into Sydney exceeded for a lengthened period the value of the exports; the excess of the former being, in fact, the amount of the remittances from this country on account of the convict establishment. But since the latter was suppressed, the value of the exports has been equal to that of the imports. Occasionally there has been a great deal of over-trading at Sydney, and the revulsions consequent thereon have been quite as ruinous there as in England and elsewhere. Formerly there were 4 banks in the town, but now there are 3 only, and a savings' bank.

Sydney was incorporated in 1842. The mayor has a salary of 500*l*. a year. The shops are gay and well furnished with goods. The local revenue of the city amounted, in 1842, to 12,000*l*.

From the circumstance of the great majority of the immigrants being males, a great disproportion has always existed between the sexes in the colony. Government, and benevolent associations, have of late years endeavoured to lessen this disproportion by sending out considerable numbers of young unmarried females free of expense. And though there appears to be good grounds for thinking that the conduct of these females has in numerous instances been rather questionable, still there can be no doubt that the measure has, on the whole, been advantageous, and has tended not only

to increase the population, but to improve the morals of the colony.

SYLHET, a distr. of British India, presid. Bengal, beyond the Brahmaputra, and chiefly between the 25th and 26th degs. of lat. and the 91st and 92d of E. long., having N. the territory of the Comchoo, and Jynteah, E. Cachar, S. Tipperah, and W. the distr. of Myensing and Dacca. Area, 3,889 sq. m. Pop., in 1828, 1,082,720, it being one of the most densely peopled portions of the British dominions in the East. Its borders are mountainous, and on the E. and S. the mountains rise to the height of about 4,000 ft.; but its central part, which is flat and intersected by the Barak, and a great many other rivers tributary to the Brahmaputra, is covered with rice fields, &c. Cotton and sugar are raised in considerable quantities; and Sylhet produces the finest oranges and limes throughout British India: they are grown in extensive plantations, or rather forests, and exported to a great extent. Chusam, wax, also wood, wild silk, and elephants, are among the other chief products; and coal of a very fair quality has been somewhat recently discovered. Boat-building is pursued pretty extensively, and Sylhet shields are articles much prized by the natives of Hindostan. The land is, in general, very much divided: land revenue in 1828-29, 305,516 rupees. Muhammedans are very numerous in

this district. Syheth, its chief town, and the residence of the principal authorities, is on the Soormah, in lat. 24° 55' N., long. 91° 40' E. (*Hamilton; Pemberton, on the E. Frontier.*)

SYRA (an. *Scyros*), an island belonging to Greece, in the group called the N. Cyclades, the port of Syra, on the E. side of the island, 15 m. W. from the greater Delos, being in lat. 37° 26' 30" N., long. 24° 55' E. It is about 10 m. in length, N. and S., and 5 m. in breadth. Though rugged and not very fruitful, it is well cultivated; and the pop., which in 1825 was not supposed to exceed 4,500, is now (1850) estimated at about 30,000! It is indebted for this extraordinary increase of pop. to the convenience and excellence of its port and its central situation, which have made it a considerable commercial entrepôt. Most part of the trade that formerly centred at Scio is now carried on here; and the island has not only received numerous immigrants from that island, but also from many other parts of Greece. Great Britain and most European powers have consuls in Syra; and it also is the principal seat of the Protestant missionaries to the Levant. The town, which is in great part old, has several new streets and houses, and has an appearance of great bustle and animation. Pheryclides, one of the most celebrated of the ancient Greek philosophers, the disciple of Pittacus, and the master of Pythagoras, was a native of this island. We subjoin an

Account exhibiting the Number of Ships, their Tonnage, and the Value of their Cargoes, that arrived at Syra in 1846, specifying also the different Countries to which they respectively belonged.

SYRACUSE (an. *Syracusa*), a famous city of Sicily, cap. of an Intendency, district, and cant., on the E. coast of the island, 31 m. S.S.E. Catania; lat. 37° 2' 58" N., long. 15° 16' 10" E. Pop., in 1831, 16,805; but said to have been considerably reduced during the interval from the influence of cholera, and other causes. The modern city is wholly confined to that small portion of the site of the ancient city included in the island of Ortygia, separated from the mainland by a fosse, and projecting S. in the shape of a narrow peninsula, inclosing between it and the mainland the noble basin called the Great Harbour, which its security, and the facility of its access, render one of the best ports in the Mediterranean. (*Smyth's Sicily*, 163.) Outside the peninsula is the Little Harbour (an. *Trogilus*). Syracuse is pretty strongly fortified, being defended by a bastioned wall, and other works. The port is protected by the castle of Maniace, near the S. extremity of the peninsula. The modern city has little except its ancient renown, its noble harbour, and the extreme beauty of its situation, to recommend it. The temple of Minerva has been converted into the cathedral; but the portico and front, having been destroyed by an earthquake, are modern, and in bad taste. It has several other churches, with numerous convents, a seminary for the clergy, a college for general studies, an hospital, a lazaretto, extensive barracks, a museum, and a public library. There are some remains of the temple of Diana, but they are unimportant. The famous fountain of Arethusa (*see* ARETHUSA), the great glory of ancient Syracuse, is now defiled by the admixture of the sea, and is degraded into a sort of washing-tub for the poorer class of town's-women. The commerce of the city, the principal source of its wealth in antiquity, is also quite inconsiderable; its exports consisting only of trifling quantities of oil, corn, fruits, hemp, saltpetre, &c. "Its streets are narrow and dirty; its nobles poor; its lower orders ignorant, superstitious, idle, and addicted to festivals. Much of its fertile land is become a pestilential marsh; and that commerce which once filled the finest port in Europe with the vessels of Italy, Rhodes, Alexandria, Carthage, and every other maritime power, is now confined to a petty coasting trade. Such is modern Syracuse! Yet the sky which canopies it is still brilliant and serene; the golden grain is still ready to spring almost spontaneously from its fields; the azure waves still beat against its walls to send its navies over the main; nature is still prompt to pour

forth her bounties with a prodigal hand: but man, alas! is changed; his liberty is lost; and with that the genius of a nation rises, sinks, and is extinguished." (*Hughes's Greece*, &c., i. 55., 8vo. edit.)

The ancient Syracuse was founded by a colony from Corinth, about anno 736, B. C. Its advantageous situation, and the commercial enterprising spirit of its inhabitants, speedily raised it to the highest distinction. Cicero calls it the greatest and most beautiful of Greek cities: *Urben Syracusan maximum esse Græcorum urbium, pulcherrimam omnium, sæpe audistis.* (In Verrem, lib. iv. cap. 52.) As soon as it had outgrown the limits of the original city, which, like the modern, was confined within the island of Ortygia, it began to extend towards the N., covering, when in its zenith, a large triangular space; which, rising precipitously from the sea on the one hand, and the plains to the W. on the other, admitted of being easily fortified. This new city terminated on the N. in the hill of Epipolæ, which, however, was not included within it till the time of the elder Dionysius, who constructed at that point the fortress of Hexapylon, the vast ruins of which still attest its former strength and importance. The city was defended partly by lines of rocks, and partly by strong walls. Its circuit is estimated by Strabo at 180 stadia, or about 20 Eng. m.; and supposing that the sinuosities of the walls were followed, this statement is probably not very wide of the mark. Among the advantages of the situation chosen for the site of the new city, was its inexhaustible supplies of fine freestone; which, though soft, and easily wrought in the quarry, became, by exposure to the air, sufficiently hard.

The space included within the walls of the new or N. city comprised, 1. the quarter of Acradina, the largest and most populous of the whole, adjoining the island of Ortygia, having E. the sea; it contained the temple of Olympian Jupiter, the forum, the prytaneum, &c.: 2. the quarter called Tyche, from its temple to Fortune (*Tύχη*), lying N.W. from Acradina: and 3. the quarter called Neapolis, or the New City, from its being the last built: this, which was the most westerly portion of the city, and was bounded in part by the Great Port, contained a spacious theatre, cut in the rock, upon the slope of a hill; and two temples, one dedicated to Ceres, and one to Libera or Proserpine. (*Cicero, ubi supra.*)

Among the existing remains of Syracuse, the most extraordinary, perhaps, are the *latomies*, or prisons. These are immense excavations cut in the solid rock to a great depth, with steep overhanging sides, whence all egress is impossible. They appear originally to have been quarries (whence their name), and to have been subsequently formed into prisons. They have been forcibly and admirably described by Cicero:—*Latomies Syracusanas omnes audistis, plerique nostis; opus est ingens magnificum regum ac tyrannorum; totum est ex saxo in mirandam altitudinem depresso, et multorum operis penitus exciso. Nihil tam clausum ad exitus, nihil tam septum undique, nihil tam tutum ad custodias, acc fieri nec cogitari potest.* (In Verrem, ult. cap. 27.) In the N.W. angle of the *latomies* of the Neapolis is the famous cavern called the Ear of Dionysius. It runs into the heart of the hill, in the form of the letter S, the sides being chiseled quite smooth, and the roof gradually narrowing to a point, along which runs a groove, which collected, as is supposed, the sounds of the voices of the prisoners. It derives its name from the popular belief that Dionysius was accustomed to incarcerate in it those he supposed inimical to his authority; and that, by applying his ear to one end of the groove, and listening to their conversation, he ascertained whether his suspicions were well-founded. There appears, however, to be little or no foundation for this story; though, from the care bestowed on its construction, it must evidently have been intended for some special purpose.

The *latomies* on the hill of Epipolæ were selected as the place of confinement for the miserable remains of the vast armament fitted out by Athens for the reduction of Syracuse. About 7,000 men are said to have been shut up in this prison, exposed alternately to the heats of a vertical sun, rendered more intolerable by its reflection from the surrounding rocks, and to the chills of the evenings, with insufficient supplies of food, and without any means of preserving cleanliness, or even of escaping from the contact of the sick and dead. Every hardship was accumulated on the heads of the unhappy sufferers; till at length, after an interval of above two months, most part of those that survived were brought forth to be sold as slaves. (*Thucyd.*, lib. vii. ad finem.) The *latomies* were also used by Verres for the imprisonment, not merely of Syracusan, but of Roman citizens.

The catacombs, in the Acradina, are of vast extent, and may be truly called a city of the dead. They consist of a principal and several smaller streets, all excavated in the rock, with deep contiguous recesses on each side, containing cells for the reception of the dead. Various

theories have been formed as to the era of the formation of these vast subterranean excavations, which, no doubt, belong to a very remote antiquity.

On the whole, however, considering the great extent of the city, and the number and magnificence of its public buildings, the continental portion of Syracuse, with the exception of the *latomie* and catacombs, and some remains of the walls, and of aqueducts, has very few monuments of antiquity of which to boast. Swinburne (ii. 334.) and Hughes (l. 82.) express their astonishment at the almost total disappearance of all vestiges of the great public and other buildings, with which the city was once filled. This, however, is not inexplicable: the sea has undermined a portion of the walls of Acradina; and the perishable nature of the stone of which the city was built, added to the influence of earthquakes, the ravages of war and of barbarians, and the accumulation of rubbish, have made Syracuse, like Carthage, *non agnoscenda propriis ruinis*. Among the ruins of some baths, excavated in 1810, was found the torso of a Venus, worthy of the best age of the art, and now the pride of the museum.

Various estimates have been formed of the pop. of Syracuse when in the summit of its prosperity. These, however, are mostly all exaggerated, and entitled to but little attention. Thucydides says that it was nowise inferior to Athens (lib. vii. p. 503.); and that it was a very large and splendid city is a fact of which there can be no manner of doubt; but owing to the great extent of the open spaces and public buildings within its walls, its pop. could not be in any degree proportioned to what would be contained in a modern city of the same size. Probably it may have amounted to 200,000; or, at most, 250,000; though, if anything, we suspect that this estimate is beyond the mark.

Syracuse appears at first to have been under a republican government; but it subsequently became subject to kings, or tyrants, of whom Gelon and Hieron were among the earliest and most celebrated, the triumph of the latter in the chariot-race at the Olympic games having been the subject of one of Pindar's noble odes. But Thrasybulus, the younger brother of the latter, having been expelled the city, the republican form of government was restored.

The Syracusans having been involved, during the course of the Peloponnesian war, in contests with other cities of Sicily, the Athenians sent a fleet to the assistance of the latter; and from less to more, Athens became so much mixed up with Sicilian affairs, that she determined to bring them to a satisfactory conclusion, by undertaking the conquest of Syracuse itself. The greatest exertions were made to effect this grand object: the zeal of the public was supported by the zeal of private individuals; and the armament fitted out by Athens for the reduction of Syracuse is universally admitted to have been the greatest and most splendid ever sent forth by any Greek state. The events of this contest, which fixed the attention of all Greece, have been described by Thucydides, and form the most interesting portion (lib. vi. and vii.) of his history. It is sufficient here to state, that the failure of the expedition was as complete as the hopes of success had been sanguine. Alcibiades, who had assisted in planning the expedition, and whose genius might have conducted it to a successful issue, having been unwisely removed from the command, was succeeded by Nicias, an able general, but one who had been hostile, from the outset, to the project, and who, though brave and experienced, wanted the ability and decision required for the conduct of such an enterprise. After various vicissitudes, the besiegers and besieged changed places. The defeat of the Athenian fleet, which had been cooped up in the great harbour, in an attempt to force a passage through their enemies, may be said to have terminated the expedition, and with it the glory and empire of Athens. "*In hoc portu*, says Cicero, speaking of the great harbour, "*Atheniensium nobilitatis, imperii, gloria naufragium factum existimatur*." (In Verrem, v. cap. 37.)

A few years after the defeat of the Athenians, which occurred anno 413 B. C., the supreme direction of affairs at Syracuse was usurped by Dionysius the Elder, whose character presents a singular compound of greatness and meanness, generosity and cruelty. Dionysius the Younger, who succeeded his father, was finally expelled from Sicily by Timoleon; who, having demolished the citadel constructed by the elder Dionysius, and his magnificent tomb, restored the Syracusans to their freedom, and, having vanquished their enemies, retired into private life.

They did not, however, long preserve the liberty given them by Timoleon. In the course of a few years, Agathocles attained to the supreme authority. After his death, the city underwent various revolutions, being sometimes the ally of the Carthaginians and sometimes of the Romans. In the end it was subjugated, though not without a vigorous resistance, by the latter.

The siege of Syracuse by the Romans under Marcellus is one of the most celebrated in history. It withstood, for a lengthened period, all the efforts of the Roman

general, who had to contend, not only against the natural strength and fortifications of the place, but also against the extraordinary talents and wonderful machines of Archimedes, the greatest geometer, and one of the greatest geniuses of antiquity. At length, however, the Romans gained possession of the city, anno 200 B. C., partly by stratagem, and partly by the treachery of one of the Syracusan leaders. Archimedes unfortunately lost his life in the confusion that followed the taking of the city. (*Livius*, lib. xxv. cap. 23—31.)

Under the Romans, Syracuse continued to be a great and important city. It was taken by the Saracens in 878, and given up to military execution. But, notwithstanding this and many subsequent calamities, it continued to be of considerable importance till 1693, when it was laid in ruins, and most part of its ancient monuments destroyed, by the dreadful earthquake of that year.

In addition to Archimedes, Syracuse has to boast of having given birth to Theocritus, the first and greatest of pastoral poets, and to Moschus. (In addition to the works referred to above, see *Sir R. C. Hoare's Classical Tour*, ii. 141—175; *History of Syracuse*, in *Ancient Universal History*, vols. vii. and viii., 8vo. ed.; *Plutarch's Life of Marcellus*, &c.)

SYRIA and PALESTINE or JUDEA, two of the most celebrated regions of the E. hemisphere: the former includes the ancient Phœnicia; and the latter is sometimes called the Holy Land, from its being the theatre of most of the great events recorded in sacred history. These famous countries have, for many centuries, ceased to be independent, and have for a lengthened period formed a portion of Asiatic Turkey: they extend principally between the 31st and 37th degs. N. lat., and the 34th and 41st E. long., having N. the pachalics of Ithil and Marash, in Asia Minor; N.E. and E. the Euphrates; S.E. and S. the Arabian Desert; and W. the Mediterranean. Previously to the subjugation of the country by Mehemet Ali, it was divided into the four pachalics of Aleppo, Tripoli, Acre, and Damascus. Palestine, or the Holy Land, comprised in the two latter pachalics, forms the S. portion of the region, being about 200 m. in length by 80 m. in its extreme breadth. The entire length of Syria and Palestine may be about 450 m. N. and S.; its breadth varying from 100 to 200 m. Its area has been loosely estimated at 48,000 sq. m.; and its pop. at from 1½ to 2, and even 3 millions; but probably 1,500,000 may not be far from the mark. (*Bourring's Report on Syria*.) Colonel Campbell, a few years since, estimated it at 1,864,000; of whom 997,000 were supposed to be Mussulmans (Turks, Arabs, &c.), 22,000 Ansarians, or Bedouins, 17,000 Metualis and Yezidis, 48,000 Druses, 260,000 Maronites and Christians of the Romish church, 345,000 Christians of the Greek church, and 175,000 Jews. The practice of polygamy among several of these tribes, aided by the extensive conscriptions of Mehemet Ali, is said to have produced a great excess of females over males. (*Bourring's Physical Geog.*, pp. 4, 5.)

The W. or coast portion of Syria is mountainous, while the more inland portion, or that to the E. of the Orontes and Damascus, is mostly flat. The mountains run mostly N. and S., parallel to the Mediterranean. The principal chain, in different parts of its course, is termed Alma-Dagh, (an. *Mons Amanus*), Jeb-el-Anzeyry, and Lebanon; it runs at an average distance of about 24 m. from the sea, from the range of Taurus, in Asia Minor, as far S. as the vicinity of Tyre, where it terminates. The chain of *Anti-Libanus* detaches itself from the foregoing in about lat. 34°, and running S. parallel to, and at no great distance from the latter, encloses the famous valley anciently called *Cœle-Syria*. About where Libanus terminates, Anti-Libanus divides into two chains, enclosing the valley of the Jordan, the Dead Sea, &c., continuing subsequently to bound the valley of *El Ghôr* to the head of the Gulf of Akaba. Both Libanus and Anti-Libanus give out numerous lateral spurs, some of the former extending so as to project, like Mount Carmel, in bold headlands on the coast. These subordinate ranges, with the W. declivity of Libanus, and the E. declivity of Anti-Libanus, are by far the most fertile portions of the mountain system *Cœle-Syria*, though fertile itself, is enclosed between precipitous and barren heights. The mountains which surround the Dead Sea, and those to the W. of the Jordan, are arid, stony, and full of precipices and caverns, and have a melancholy, desolate appearance, harmonising well with that of the desert by which they are bounded on the E. For further details respecting the mountain region of Syria, see *LEBANON*, *anté*, p. 146. Palestine consists principally of rugged hills and narrow valleys. It has, however, some fertile plains of considerable size W. of the mountains; as that of Esdraclon (an. *Megiddo*), 30 m. in length, by 18 in breadth; that of Sharon, famous in antiquity for its roses (supposed to be the flower of a species of *cistus*, with which it is covered); but by far the most extensive and valuable plain is that of Haouran, E. of the Jordan and of Mount Gilead, and trenching on the 'Desert.' "By the great Syrian de-

sert, however, we are not," says Mr. Addison, "to understand, a bare wide waste of sand, like the great African desert. The term must be considered to mean destitute of settled inhabitants, towns, villages, and houses, and peopled only by roving pastoral tribes. Instead of sand, the uninhabited district beyond Damascus consists of a fine black soil, covered with long, burnt-up, rank grass and herbs, and inhabited by antelopes, wild asses, and wild boars, which search out the thinly scattered spots where water is to be found. The same description of country, we are told, continues the whole way to Palmyra. In summer the soil is parched and cracked into innumerable fissures by the burning rays of the sun, and the herbage and vegetation are all killed; but having previously come to maturity, and scattered their seed upon the ground, no sooner do the winter rains commence than the dry grass is beaten down and rotted, and the seeds, moistened by the abundant rains, sprout up with astonishing luxuriance. In summer, the Bedouins are obliged to congregate in the vicinity of pools and wells; but in winter they spread themselves over the wide surface of the desert, and make long journeys with their flocks and herds." (*Damascus and Palmyra*, ii. 216, 217.)

The principal rivers of Syria are the Euphrates, Jordan, and Orontes, severally noticed in this work. The coast line is watered by numerous small streams, falling into the Mediterranean, which contribute greatly to fertilise the land: but of these none are navigable. The largest and most remarkable lake is that of Asphaltites, or Dead Sea (which see, i. 679.) The next in size is that of Tiberias, or Gennesareth, the theatre of some most remarkable miracles. (Luke and Matt. viii.; Matt. xiv. 25.) It is about 16 m. in length, from 5 to 6 m. in breadth, and is traversed throughout its centre by the Jordan, of which, in fact, it may be regarded as an expansion. On its E. side it is confined by bold, barren, and precipitous mountains; but elsewhere its shores are generally level. According to Dr. Clarke, "It is longer and finer than any of our Cumberland or Westmoreland lakes, though it be perhaps inferior to lake Lomond, in Scotland. It does not possess the vastness of the Lake of Geneva, although it much resembles it in certain points of view. In picturesque beauty it comes nearest to the lake of Locarno in Italy, although it be destitute of any thing similar to the islands by which that majestic piece of water is adorned. It is inferior in magnitude, and perhaps in the height of its surrounding mountains, to the lake Asphaltites, but its broad and extended surface, added to the impression under which every Christian pilgrim approaches it, gives to it a character of unparalleled dignity." (*Travels*, iv. 216.) Its unbroken margin, and the total absence of wood on its shores, without a boat or vessel to be seen throughout its whole extent, give it a melancholy, monotonous appearance.

Several combats took place on this lake between the Jews and Romans, and its banks were formerly the seat of several flourishing cities. Of these, however, Tabaria, the miserable representative of the ancient Tyberias, is almost the only existing relic. The lake of Gennesareth, like all other inland seas, is subject to squalls and sudden gusts of wind, that render its navigation rather dangerous. The *Bahr-el-Margi*, near Damascus, and the lakes of Horus, and of *Agi Dengis*, near Antioch, are the only others worth notice. The coast of Syria and Palestine presents a nearly straight line, extending through six degrees of lat., being but little indented by arms or inlets of the sea, the principal being the bays of Scanderoon and Antioch; and though it was in antiquity the seat of a great maritime people, it has very few good harbours: the best are those of Scanderoon and Acre. The former, however, is inconveniently placed, quite at the N. extremity of the country, and is besides very unhealthy. The harbours of Tyre, Sidon, &c., so famous in antiquity, are now, for the most part, filled with sand, or otherwise choked up.

Geology and Minerals.—Of these we have no authentic information. The prevalent rock is limestone, abounding in fossil remains, and hollowed into numerous caverns. The higher parts of the Libanus ranges seem, however, to consist of greywacke, slate, and other transition rocks, and the rocky mountains skirting the Dead Sea, of granite, gneiss, dolomite, &c. Antioch is situated in a great tertiary basin, every where broken, however, by serpentine and diallage rocks. (*Geog. Journ.* vii. 420.) "The whole of the Haouran," says Elliott, "is covered with a species of blue stone, very hard, yet porous, and of which all the mill-stones of Syria are made." Volcanic matters cover a considerable extent of country, and the traces of extinct volcanoes are met with in many places. There are occasional indications of coal; but, except building stone, salt, with which a great part of the soil is highly impregnated, and asphaltum, from the vicinity of the Dead Sea, are almost the only mineral products of much value.

Climate.—Owing to the great differences of elevation and exposure, the greatest dissimilarity prevails with re-

spect to temperature. On the whole, however, the country may be said to have two climates; one very hot, which is that of the coast and the interior plains, such as those of Balbec, Antioch, Tripoli, Acre, Gaza, Haouran, &c.; and the other, or that of the mountains, at least at a certain height, temperate, and similar to that of France. (*Volney*, i. 314., Eng. trans.) In most parts, the occurrence of the rainy seasons, as well as the quantity of rain which falls, are very variable. The winter in the plains is so moderate, that the orange, date, banana, and other delicate trees, flourish in the open air; and it appears equally extraordinary and picturesque to the European at Tripoli to behold under his windows, in the month of January, orange-trees loaded with flowers and fruit, while the lofty summits of Lebanon are seen covered with ice and snow. But in the more northerly parts of the country, and to the E. of the mountains, the winter is more rigorous, without the summers being less hot. This is occasioned by the E. plains being high above the level of the sea, exposed to the parching blasts of the E. and N.E. winds, and screened by the mountains from the humid winds from the W. and S.W. that sweep over the Mediterranean. At Aleppo winter commences about the middle of December, and usually lasts for six weeks or two months. The frosts, however, are seldom of any considerable intensity; snow rarely lies above a day: narcissus are in flower during the whole of this season; and hyacinths and violets make their appearance before it is over. Spring commences in February, and is extremely pleasant, having no defect but its short duration. Early in May corn is nearly ripe; and by the end of that month the heats commence, and the country begins to assume a parched and barren aspect. From this period to the middle or end of September no rain ever falls; and the inhabs. sleep exposed on their terraces, without danger from damps or other noxious influences. At Aleppo an interval of between 20 and 30 days usually occurs between the first and second rains; during which period the weather is serene and extremely delightful; and if the rains have been at all heavy, though but of a few hours' duration, the country assumes a new face. After the second autumnal rains the weather becomes variable, and winter approaches by degrees. The vernal are heavier than the autumnal rains; and, like the latter, are often accompanied with thunder. The trees frequently retain their leaves till the beginning of December. The heats of summer are usually tempered by westerly breezes; but when during this season the *samsiel* occurs, that is, when the winds blow from the Arabian and Persian deserts, or from the E. inclining to the S., the heat becomes suffocating and excessive; and the inhabs. have no resource but to shut themselves closely up in their houses. Luckily, however, these winds are not of very frequent occurrence; and sometimes they do not occur once in a summer. Shocks of earthquakes are common; and, in 1822, Aleppo and several other towns were nearly destroyed by one of these visitations. (*Volney*, i. 315.; *Russel's Aleppo*, 10—14, &c.)

It is clear, therefore, as Volney has stated, that "Syria unites a great variety of climates, and collects within a narrow compass pleasures and productions which Nature has elsewhere dispersed at great distances of time and place. With us, for instance, seasons are separated by months; there, we may say, they are only separated by hours. If in Salde or Tripoli we are incommoded by the heats of July, in six hours we are in the neighbouring mountains, in the temperature of March; or, on the other hand, if chilled by the frosts of December, at Besharral, a day's journey brings us back to the coast, amid the flowers of May. The Arabian poets have therefore said, that 'the Sannin (Lebanon) bears winter upon his head, spring upon his shoulders, and autumn in his bosom, while summer lies sleeping at his feet.' I have myself experienced the truth of this figurative observation, during the eight months I resided at the monastery of Mar-Hanna, seven leagues from Beyrout. At the end of February I left at Tripoli a variety of vegetables which were in perfection, and many flowers in full bloom. On my arrival at Antoura I found the plants only beginning to shoot; and at Mar-Hanna every thing was covered with snow. It had not entirely left the Sannin till the end of April; and already, in the valley it overlooks, roses had begun to bud. The early figs were past at Beyrout, where they were first gathered with us, and the silk-worms were in cod before our mulberry-trees were half stripped.

"To this advantage, which perpetuates enjoyments by their succession, Syria adds another, that of multiplying them by the variety of her productions. Were nature assisted by art, those of the most distant countries might be produced within the space of twenty leagues. Even at present, despite the barbarism of a government inimical to all industry and improvement, we are astonished at the variety this province affords." (i. 317.)

It is true that Syria and Palestine are sometimes visited by the plague; but this is a consequence of slat-

richness, and the want of proper care and precautions. Dysenteries, leprosy, &c. are also frequent; but, on the whole, the country is highly salubrious; and has no peculiar disease, except the pimple or ulcer of Aleppo. (See ALEPPO.)

Products and Resources, &c.—The beauty, fertility, and various products of Syria made her be regarded as one of the finest and most fruitful of countries; and her superiority in these respects has been extolled by the best modern travellers. It seems unnecessary, therefore, to dwell on what is so generally admitted. But the question as to the fertility of Palestine has given rise to some conflicting statements, and as the subject possesses peculiar interest, we shall notice it at some little length.

In the sacred writings, the fertility of the Holy Land is described in the most striking manner. Moses calls it a land that floweth with milk and honey; a land of brooks and waters, of fountains and depths, that spring out of the valleys and hills; a land of wheat and barley; of vines, figs, and pomegranates; of oil, olives, and honey; a land where there is no lack or scarcity of any thing; whose stones (or rocks) are iron; and out of whose mountains brass may be dug up. (Deuteronomy, viii. 7. &c.)

It may, perhaps, be permitted to suppose, that as Moses wished to reconcile the Jews to the territory on which they were about to enter, and to extinguish any lurking desire on their part to return to the "flesh pots" of Egypt, he would represent the "promised" land under the most favourable colours. On the whole, however, it would seem, despite the statements that have been made to the contrary, that his description is substantially correct. It is strikingly confirmed by Tacitus, who says, speaking of Palestine, *Harum imbres, UBER SOLUM. Esculentum fruges, nostrum ad marem; præterque est balsamum et palmæ.* (Hist. lib. v. cap. 6.) It is true that Strabo, in his 16th book, speaks in very contemptuous terms of the country round Jerusalem; but he was by no means so well acquainted as Tacitus either with the history of the Jews or with Judea; and besides, even though the accuracy of his statement as to the country to which he has referred were admitted, that would not authorize any inference to be drawn unfavourable to the general fertility of Palestine. In antiquity Judea was very carefully cultivated; and notwithstanding the great density of its pop., it is said, when in the zenith of its prosperity, under Solomon, to have exported considerable quantities of corn. (1 Kings, v. 11.) The declivities of the hills were formed into terraces, of which the vestiges still remain (Maundrell, p. 66., ed. 1740), and were covered with plantations of figs, vines, and olives. It was, as Tacitus has stated, particularly celebrated for its palm-trees, which, in fact, were the emblem of the country; and the aromatic plants that grew in the uncultivated parts furnished the wild bees with the honey which they stored in the hollows of the rocks and trees. Indeed Maundrell, whose accuracy is unquestionable, states that he perceived in many such places "a smell of honey and wax as strong as if one had been in an aviary." (In loc. cit.) We cannot, however,

of tobacco, wheat, barley, Indian millet, melons, vines, pumpkins, and cucumbers." (Trav. iv. 438.)

These statements are more than sufficient to attest the natural riches and fertility of this famous region. As an agricultural or corn-growing country it is, indeed, far inferior to Egypt and many other states; but the variety of its surface and products, the salubrity of the climate, and the productiveness of its cultivated lands, would make it, were it possessed by an industrious, well-governed people, a most desirable country.

Recently, however, the condition of Syria and Palestine has been changed materially for the worse, as compared even with what it was at the epoch of Clarke's visit. The destructive contests of which it has been the theatre, the consequent destruction of property, the interruption of all sorts of industry, and the emigrations occasioned by the conscriptions of Mehemet Ali, have reduced Syria and Palestine to a state of depression to which they had never previously sunk, and from which there is but little hope of their recovering under their present rulers.

During the ascendancy of the Egyptians Mehemet Ali attempted to introduce the same compulsory or forcing system into Syria and Palestine that he has introduced into Egypt (which see). In this view the principal officers of the government and the army, and the more opulent inhabitants, were compelled to undertake the task of restoring ruined villages, and the culture of their lands. Government intended, by means of the increased cultivation of wheat and barley, to render Syria independent of supplies from without; and, if possible, to obtain a surplus for exportation. In good harvests, indeed, Syria, particularly its S. part, previously produced sufficient corn for its own consumption; and had the measures undertaken by the Egyptian government been persevered in, there can be little doubt that there would have been a great increase of produce. But in 1837 the influence of the new system was paralysed by a drought; and the events that speedily followed overturned at once the power and the projects of the Egyptians.

The landed property of Syria, as of the rest of the Turkish empire, is supposed to belong to the sultan, as the viceregent of God and the prophet; and the principle, that it did so, in fact, was acted upon, at the conquest of the country, by the caliph Omar, in the 7th, and by the Turks under Selim I., in the 16th century. At present, however, this assumed property of the sultan is a mere legal fiction. Soon after Selim's conquest, the ruinous effects of the general confiscation became so apparent that measures were taken for giving the occupiers a right of property in the land on paying a small quit-rent. Land may now be classed under three heads: that belonging to the sultan and government; vacant or entailed lands; and real property, belonging to the proprietors, and descending by inheritance. The lands and property belonging to the sultan and government are those excheating in different ways; such as lands abandoned in consequence of non-cultivation during three years, lands left by the extinction of families,

have only succeeded in doing one of the things it was desired to have done in the time of Solomon." (Travels, p. 386. 4to. ed.)

At a more recent period Dr. Clarke said of the Holy Land, "The delightful plain of Zebulun appeared, every where covered with spontaneous vegetation, flourishing in the wildest exuberance. The scenery is to the full as delightful as in the rich vales upon the S. of the Crimea: it reminded us of the finest parts of Kent and Surrey. The soil, although stony, is exceedingly rich. We found the valleys W. of Jerusalem covered with plentiful crops

according to their greater or less amount of pop., or more or less extent of land; and the peasants themselves apportion the payments each has to make. In the cultivation of all kinds of produce, except silk, the landed proprietor supplies the peasantry with seed, and a certain sum of money to buy oxen, cattle, and implements of husbandry; and receives 10, 15, or 20 per cent. of the produce, according as the ground is more or less taxed. The remainder is divided into two equal parts, one of which the proprietor takes, and the other is for the

peasants. These last are obliged to repay the money advanced to them, but not the seed. (*Col. Campbell's Report.*)

The old Roman plough, drawn by bullocks, is that almost universally employed. Wheat, barley, maize, millet, lentils, sesamum, &c. are grown principally in the plain of the Haouran, which has always been considered the granary of Syria. It is inhabited by Turks, Druses, and stationary Arabs, and is visited in spring and summer by several Bedouin tribes. Burckhardt computes the resident pop. at from 50,000 to 60,000. The fertility of the soil depends entirely upon the water with which it is supplied; and the harvest is, therefore, in proportion to the abundance of the winter rains, and the extent of artificial irrigation. Lands which cannot be irrigated usually lie fallow every other year; though a part is sometimes sown in spring with sesamum, cucumbers, melons, and pulse. Where an abundance of water may be obtained from neighbouring springs, the soil is sown with lentils, pease, sesamum, &c. after the grain harvest. In middling years, wheat is said to yield 25 times the seed; and the produce of barley is said sometimes to average 50 and even 80 times the seed: though these statements are usually much exaggerated, and but little to be depended on. The first harvest is that of horse-beans, at the end of April: vast tracts are sown with these, to serve as food for cows, sheep, and camels. Next comes the barley, and, towards the end of May, the wheat harvest. The wealth of a cultivator is estimated by the number of *fedhans*, or yokes of oxen, he employs. The owner of two or three is estimated rich, and he will probably possess, besides, two camels, a mare or gelding, or a couple of asses, and forty or fifty sheep. Taxes are very heavy in the Haouran. There is, first, the *miri*, paid to the pacha, and which is levied on the *fedhans*, the amount depending on the sum at which the whole village is rated in the pacha's books, and which must be paid so long as the village is inhabited, be the number of *fedhans* employed few or many. Next is the obligation to supply the troops, &c., with provender; and the third and heaviest contribution paid by the villagers is the *khone*, or tribute (identical with the *black-meal* of the Scotch) claimed by the Bedouins, in return for their protection, or rather forbearance. Each village pays *khone* to the sheikh of a tribe, who is then bound to protect the inhabs., and pays a tribute of from 30 and 40 to 400 piastres to the pacha for this privilege. Lastly come the unlimited contributions exacted by the pachas. The receipt of the *miri* of the whole pachalic, which may amount to 250,000*l.*, is in the hands of Jew bankers, who not only get about 5 per cent., but contrive to extort something further on their own account. Families in the Haouran are constantly moving from one place to another. In the first year of their new settlement the sheikh acts with moderation towards them; but his exactions becoming insupportable, they migrate to some other place, where they have heard that their brethren are better treated; they soon find, however, that the same system prevails over the whole country. (*Mod. Trav.* iii. 80—83.) In addition to all these exactions, the crops in the Haouran are sometimes destroyed by mice, though not so often as in the neighbourhood of Hama and Hamah. But the worst enemies of the agriculturist are the clouds of locusts which sometimes devastate the country, devouring every "green thing." They are not, however, an unmitigated nuisance, having been used for food time immemorial, and are said to be both wholesome and palatable.

The most careful cultivation in Syria is exhibited on the slopes of Mount Lebanon and other inaccessible districts, where the inhab. enjoy a comparative exemption from the exactions of their Turkish masters. "Stimulated by their sense of security, they have, by dint of art and labour, compelled a rocky soil to become fertile. Sometimes, to profit by the water, they conduct it, by a thousand windings, along the declivities, or stop it, by forming dams in the valleys; while, in other places, they prop up ground, ready to crumble away, by walls and terraces. Almost all these mountains, thus laboured, present the appearance of a flight of stairs, or an amphitheatre, each step of which is a row of vines or mulberry-trees. I have reckoned 120 of these gradations on the same declivity, from the bottom to the top of the mountain. So powerful is the influence of even the feeblest ray of liberty and security." (*Palmyra*, i. 300.)

The mulberry-tree flourishes on the coast and through the more fertile parts of the Lebanon range, and a little more attention to the culture of silk would render it in a few years the principal article of export. The mulberry plants are set in rows 6 or 8 ft. apart; they are cut off at a corresponding height, and suffered to retain only the fresh twigs. The arrangement generally made with the peasantry is to allow them one fourth part of the silk for taking care of the worms, and reeling it off the cocoons. The landowner provides the leaves, which are gathered by the peasants. He also erects the sheds in which the cocoons are kept, which are simple reed enclosures, without

any roof. The quantity of silk annually produced on Mount Lebanon is estimated at about 1,300 cantars, or 240,000 oke, fetching from 120 to 125 piastres the oke, of which about two-thirds are exported. About 400 cantars is considered an abundant crop in the Tripoli district. Aleppo receives about 250 cantars from Antioch, and other quarters. Its chief consumption there is in the manufacture of the cotton and silk goods used for upper garments by the wealthy inhabs.; but it is also sent into all parts of the Turkish empire; and, in 1836, 100 cantars were sent to Genoa, France, and England. The average annual produce of cotton in the vicinity of Acre, Jaffa, Nablous, and other places in the S., is estimated at from 30,000 to 35,000 cantars, worth about 350,000*l.* In the N. the crops are exposed to great vicissitudes. The quality of the cotton is sometimes good, but more commonly inferior. The export is chiefly to Smyrna, and other parts of Turkey. Not more than from 1,000 to 2,000 cantars reach W. Europe, the quantity that comes to England being very trifling. The oil harvest is very precarious. From 8,000 to 10,000 cantars may be about the average consumption in Aleppo, half of which is produced in the neighbourhood. The average produce around Damascus is estimated at from 4,800 to 5,000 cantars. The oil has of late years been considerably improved, and its quantity augmented by the introduction of oil-presses from France. Wine might become an important article both of consumption and export; and at some of the convents of Lebanon (where the vine is suffered to trail on the ground) a very good wine, called *vino d'oro*, is met with. Madder and indigo grow wild; and the former, as well as the sugar-cane, has been partially cultivated. Ibrahim Pacha introduced the cochineal insect into Syria with every prospect of success; for the cactus, on which it feeds, grows there to an immense size, and forms, in fact, most of the hedges in the country. The dates of Syria are not equal in quality to those of Egypt or Nubia; but the date palm is so abundant that, as already stated, it was anciently the symbol of Judea; and it is probable that Phœnicia was so called from the abundance of this plant (*qana*). Tobacco is grown in almost every part of Syria, its consumption being universal both by males and females. The best is found in the districts of Aleppo, Latakia, Tripoli, and Mount Lebanon, large exports taking place from Latakia and Tripoli to Egypt and elsewhere. The total produce is estimated by Col. Campbell at 10,700 cantars a year. Scammony, the juice of a species of convolvulus, which grows in N. Syria, is a valuable article of export; and that from Aleppo is esteemed the best in the markets of Europe. But it is rarely obtained pure; the collectors first adulterating it with flour or starch, to give it colour and consistency; and with myrrh, to give it a bitter, aromatic taste. It is then sold to the Jew dealers, who further adulterate it in the same manner, mixing 4 or 5 rottoli of starch with 1 rottolo of scammony, in which state it is sent to England at a price of from 250 to 300 piastres per rottolo. From 1,200 to 1,500 loads of hemp are produced in the Damascus district; but it is not an article of export. From 200 to 250 cantars of bees' wax are annually collected in the Aleppo district, nearly half of which is sent to Europe.

The forests of N. Syria have lately supplied large quantities of timber; the arsenals and dockyards of Egypt having been principally furnished from this source. From 70,000 to 80,000 trees, large and small, or about 14,000 tons of timber, principally pine, oak, and beech, were shipped in 1837 for Alexandria.

The Holy Land in antiquity was eminently distinguished for its abundance of cattle, including sheep, goats, camels, and asses; and though much diminished in numbers, these animals still constitute a principal part of the wealth of the occupiers. No very large or formidable wild animals exist at present in Palestine; the fallow deer, gazelle, wild goat, jackal, fox, and porcupine, are the principal. There are, however, numerous birds, including 2 species of vultures, great quantities of game, and wild fowl; and a great variety of reptiles is met with. (*Mod. Trav.* i. 15, 16.)

Conflicting statements have been put forth with respect to the actual condition of the peasantry. According to Mr. Consul Moore "the fellah, or peasant, in Syria, earns little more than a bare subsistence." But Dr. Bowring, on the other hand, states that "the condition of the labouring classes is, comparatively with that of those in England, easy and good. They feed on mutton at 3 piastres per oke, several times a week; bread daily; sometimes rice pillaus, and always bulgur pillaus (a preparation of wheat, husked and bruised, or half ground); their pillaus are made either with butter, olive or sesame oil; cheese, eggs, olives, various dried fruits, and an abundance of vegetables, beet roots, turnips, and radishes, preserved in brine or vinegar, for winter use. Their clothing and capsicums in vinegar, for winter use. Their clothing is not especially coarse; the fine climate permits them to wear light cotton and other similar apparel; and in the short winter they are generally well covered. Their

supposed to be equivalent to about 696,000*l.*; but the expenditure in the same year was estimated at nearly 1,200,000*l.*, the deficiency having been made up by contributions from Egypt.

The inhabitants of Syria comprise a mixture of different races, consisting partly of the posterity of those who occupied the country when it was overrun by the Arabs, that is, of the Greeks of the lower empire; partly of the posterity of the Arab conquerors of the country; and partly Turks, or Ottomans. And these, again, have been intermixed with each other, with the crusaders, who invaded and held a portion of the country for a considerable period, and with the wandering Bedouins, Kurds, &c. But, how different soever their origin, these races have, in the course of time, become equally naturalised to the country. The inhabs. are generally of a middling stature; those belonging to the southern are more swarthy than those belonging to the northern plains; and these, again, than those belonging to the mountains. On Lebanon, indeed, and in the mountainous districts generally, the complexion does not differ materially from that of the inhabs. of the S. of France. Arabic is the general language of the country; and Volney affirms, in opposition to the statements of Niebuhr, that neither Syriac nor modern Greek is any where in common use.

But notwithstanding the family or national resemblance by which the Syrians are now distinguished, they are distributed into different classes or tribes, all differing from each other in more or fewer particulars. Of these tribes, one of the most famous is that of the Druses, occupying the S. parts of Lebanon and Anti-Lebanon, parts of the Haouran, &c. They are supposed to be of Arabic origin, and to be disciples of a Mohammedan heretic of the 10th century. Their religion, notwithstanding the late researches of Mr. Jowett, Mr. Robinson, and others, still continues involved in a good deal of mystery. According to Volney, they appear to have a contempt for all that the Mohammedans hold most sacred; for, he says, they neither practise circumcision, nor prayer, nor fasting, nor observe festivals nor prohibitions; and that they drink wine, eat pork, and allow of marriage between brothers and sisters, though not between fathers and children. They have an emir of their own, and enjoy a rude independence, to which, no doubt, their "openness, sincerity, and engaging manners" (*Clarke*, iv. 306.) are mainly to be ascribed. They are divided into two great classes, the learned, or initiated (*akows*) and unlearned, uninitiated (*djahels*). The former, who enjoy various privileges, are distinguished by their white turbans. Robinson says that "the uninitiated perform no religious rite whatever, unless when circumstances oblige them to assume the appearance of mussulmen." (ii. 11.) They are eminently tolerant; and live on good terms with both Christians and Mohammedans. Mr. Elliot is not very favourable to the Druses. "Outwardly," says he, "they are moral in their deportment; but it is doubted whether similar decorum prevails behind the scenes. Though polygamy be permitted, yet few have more than one wife, who, however, may be divorced at pleasure. They are extremely hospitable; yet, where no breach of hospitality is involved, the rights of blood and friendship are unhesitatingly sacrificed to interest. They have little personal, but much public pride. The women are distinguished by an appendage as strange, unmeaning, and hideous, as female fancy ever devised. Other nations may laugh at the long trains of the ladies of England, the infantine shoes of China, or the monstrous nose-rings of India; but the *tantour* of Lebanon surpasses them all. It is a plated, silver, or gilt tube, resembling a straight horn, 18 inches long, and standing out like a unicorn's, at an angle of 45° from the centre of the forehead, or from one side of the head; it is fastened by means of a spring, balanced by 3 heavy tassels hanging down the back, and covered with a white transparent veil." (*Elliot's Trav.*, ii.)

The Maronites are a Christian sect, principally inhabiting the country about Lebanon, adjacent to the Druses. They originated in the 6th century, and profess themselves to be followers of the monk Maron, whence their name. They effected a union with the church of Rome, from which they had never differed very widely, about 1215. They are divided into the two classes of sheiks or chiefs, and common people, and have a spiritual head, with the title of Patriarch of Antioch. They are all husbandmen; property is sacred amongst them; and, on the whole, they bear a good character. Like the Druses, they have succeeded in maintaining their independence, paying merely a moderate tribute to the pachas. The Metualis, another tribe, are Syrian Mohammedans, of the Shiite, or Persian sect. The Ansarians, Yezidi, Samaritans, &c., have complicated religious systems, partly Mohammedan and partly idolatrous; but for accounts of these and the other Syrian tribes, we beg to refer the reader to *Volney*, which still continues to be the best work on this interesting region.

The ancient history of Palestine is familiar to every reader of the sacred writings. Under Solomon, it became a rich and powerful kingdom; and after undergoing various vicissitudes, it finally became tributary to the Romans. At the period of the advent of the Messiah, it was divided into 5 provs., Judea, Samaria, Galilee, Perea, and Idumea. We have already (art. JERUSALEM) noticed the conquest and destruction of that city by Titus, and the final dispersion of the Jews. In more modern times the Holy Land became the seat of a violent struggle. A singular combination of credulity and superstition gave birth to the crusades; and for some centuries the recovery of the Holy Land, and especially of the Holy Sepulchre, was sufficient to precipitate hundreds upon hundreds of thousands of blood-thirsty fanatics upon the East. At length, after oceans of blood had been spent, the victories of Saladin put an end to this deplorable phrensy. In 1516, the country was taken by the Turks.

Very recently, or in 1832, Ibrahim, son of Mehemet Ali, pacha of Egypt, undertook and speedily effected the conquest of Syria and Palestine. It is doubtful, as already seen, whether they would have gained any thing by the change; but it would be very difficult, indeed, to show that they could have lost any thing. The great European powers, however, with the exception of France, determined not to permit Syria to be disunited from the Porte; and in 1840, a British fleet, after a short but tremendous cannonade, took Acre, and Ibrahim was compelled to agree to evacuate the province. It does not, however, seem that the states by whom this revolution was effected took any step whatever to ensure the better government of the country in future; to obviate any one of the grievances by which it has been oppressed, or to make any stipulation of any kind in favour of the inhabitants.

In the art. TYRE, the reader will find some notice of the history of Phœnicia. (See *Reland's Palestina*; *Bourring*, &c., *Rep. on Syria*; *Castille*, *La Syrie sous Mehemet Ali*; *Marmont*, *Voyage*, &c., ii. iii.; *Russell's Aleppo*; *Volney*, *passim*; *Elliot*, *Wilde*, *Robinson*, *Addison*, &c.; *Mod. Trav.*, i. ii. iii., &c.)

SZEGEDIN, a royal free town of Hungary, co. Ceongrad, of which it is the cap., on the Theisa, where it is joined by the Maros, 60 m. W.N.W. Arad, and 100 m. S.E. Pesth. Pop. 32,200. (*Berghaus*.) It consists of the town-proper, tolerably well built, and chiefly inhabited by Germans; the fortress, the residence of a commandant and garrison, connected with the town by two bridges; the upper and lower suburb, and the corn market. It has a house of correction (which, according to the *Aust. Nat. Encyc.*, is the only one in Hungary), a lyceum, gymnasium, Piarist college, military school, &c.; and is the see of a Greek protopapas. *Paget* says it is one of the most disagreeable towns in Hungary: it has, however, a good deal of trade, chiefly in corn, soda, soap, and tobacco, with several soap and other factories. It also supplies some of the best river craft in the kingdom. (*Berghaus*; *Paget's Hungary*, &c., i. 1481.)

T.

TABRIZ, or TAURIS, a city of Persia, prov. Adserbijan, of which it is the cap., in a large and fine plain, on a small river which falls into Lake Urumea, 390 m. W.N.W. Teheran, lat. 38° 10' N., long. 46° 37' E. Its pop. was estimated by Chardin at upwards of half a million; but it has declined so much in the interval, that it is now probably under 30,000; and it is said by Mr. Kinneir to be one of the most wretched cities he had seen in Persia. (*Persian Empire*, p. 151.) Being surrounded by a forest of orchards, it appears from the high ground above it to be of immense extent; and a modern traveller considers the circuit of the gardens of Tabriz to measure not less than 30 m. (*Rawlinson in Geog. Journal*, x. 2.) But the town itself, which is nearly in the centre of this area, is only about 3½ m. in circuit; it is surrounded with a brick wall and towers, and is entered by seven gates. It has few public buildings of note: the principal is the citadel of Ali Shah, a part of which is now converted into an arsenal, where many European artisans are or have been employed. A considerable portion of the pop. live in the suburbs, which straggle over the area of the ancient city, and are built of its ruins. Tabriz is said by D'Anville to represent the ancient *Ganzaca*, where Cyrus deposited the treasures of Croesus, and which was afterwards taken by Heraclius; and it has been also supposed to be identical with the *Taēze* of Ptolemy. But, according to other authorities, it was built under Haroun al Raschid, of whom it was certainly a favourite residence. Its trade, which was formerly extensive, has greatly declined. Few cities have suffered so much from the ravages of war and earthquakes. Its climate is praised by the natives for its salubrity; but the changes of temperature are extremely great and sudden, and in

TAPCASTER

whether the cold is so intense, that - many trifling have

city by nothing else the gates were shut, being found
unable to stand in the morning. (Med. Times 211 185
- 1855. London: Foreign Dispensary &c.)

YADKASER is a market town and par of England. It lies on York partly in the County of St. Peter of York, and partly in Yorkshire and extends on the Wharfe, here crossed by a stone bridge 100 ft. W. of W. York. Area of par. 4,100 acres. Pop. of do. in 1901 2,176. The town is well built. The church, which is dedicated to the perpendicular style, has a fine tower (15th cent.; Gothic architecture). The living, a vicarage in the gift of Lord Alington, is worth £1,000 a year. It has chapels for Methodists and other dissenters. James Hospital for poor poor men, a free grammar school, founded in the time of Queen Elizabeth. Sunday schools, for many of which separate buildings have been erected, &c. There are no manufactures and a great deal of retail trade. Markets on Thursdays. Fairs, last Wednesday in April, May and Oct. one sheep and cattle

YAGANBOO is situated on pure sands of Russia in Europe on the N shore of the N B angle of the end of Alaska, dominated the gulf of the Bm. about 10 m. from the mouth of that river lat 67° 19' 00" N., long 156° 29' 00" W. Pop. about 14,000. The foundations of Yag. were laid by Peter the Great in 1800, but it afterwards fell into the possession of the Turks, and it was not till the reign of Catherine II that it became of any considerable importance. It has an arsenal, of which there are built of stone a gymnasium, a poor's hospital &c. It was named by the Russians brother to emperor Alex. the earliest emperor of the Bm. the port of which has become all but impassable and the whole accompanied is deprived from this circumstance, or from the lating the straits of the entrance of the vast gulfs (referred by that great river) the exports which is by far the most important. In 1867 the shipments of this grain reached the very large amount of 4,000,000 quarters, worth when shipped above 1,500,000,000. The exports of the other varieties of corn are but insignificant. In the 43 among the exports 5,210 and 1,000,000, reported in 1877 are latter with a savings, here, was with mutual participation of wife and wooden goods, spin cotton, &c. The largest carried on with Canada Turkish ports, but a good Italian and other foreign ports; and there is an extensive trading trade with China and other Russian ports.

Saying that Feghting was built to destroy the pollution that had to be counteracted by means entering the Dam, through the steps-downs of the water it might have been expected that care would be taken to place it in a position in which it should act, to as far as possible, from down the dam. This important consideration seems, however, to have been in a great measure overlooked. The gate of the Dam is within six-fifths of its entire drawing more than five to six feet and even those central gates are within less than about two-thirds of the town. They are probably loaded by cars drawn up by a single horse the expense being on very considerable that it costs from 120 to 180 cents to ship a barrel of wheat.

To obtain these time-savings it has been proposed to make Ketchikan to the E. coast of the Gulf of Tschukotka a drop-off for the produce of the can of Alaska and while the water would be much easier to access to foreign ships, the massive lift or greater being done the products of the bulk of the crop from both Ketchikan and Skagway to Yagmory would be able to bring ships direct to Ketchikan where they might be landed and shipped with much greater facility and less expense. In fact, the vessels arrived at and left before dawn, Yagmory, but owing to the shallowness of the water they were chiefly of small burden. With the assumption of a deep harbor however, the movements are usually all within limits, as of Greek origin and are not usually

[illegible]

TABLE Spas. Figs. Porting Figs. the principal and most celebrated river of the Span peninsula, through the center of which it flows from E. to W. between the heights of the Pire and Duero on the N. and the Cordillera on the S. It has its source in the Sierra Acher, vizin. to the banks of Aragon, and New Castle about lat. 42° 30' N., long. 1° 30' E. 30 m. W. Forest and only 30 m. from the Mediterranean. At first it runs N. W., but after having been joined by the Gállego, its course is generally W. by S. W., through New Castle

22

and Estremadura, to Spain; and in Portugal between Riba and Alentejo, and through Estremadura to the Atlantic which it enters after expanding into a wide estuary about 7 m below Lisbon. The river's length may be estimated at nearly 600 m, above 5-6ths of which are in Spain. Its principal tributaries are the Tagus, Alentejo, Sigevo and Beiro from the N and the Rio del Monte Santo from the S, the Oropesa Tagoira, Tagoira, Alentejo, Guadiana, Alentejo, Pombal, Estremoz and Lousa, all on its banks. At its entrance into Portugal, the Tagus is 180 yards in width, and at Pombal expands to 300 yards. Above Lousa it expands into a wide basin from 5 m. to 7 m across but opposite that city its breadth contracts to less than 5 m. The Tagus has been considered both in antiquity and in modern times, for its picturesque beauty, sailing, however can be more important than those poetical descriptions. It seems, in fact for the most part though on an ordinary type of sand, and much-used, its banks are generally steep, its course irregular and its waters turbulent and muddy. It was known in antiquity for its golden sands. Page compares some ancient

As far as the gold is concerned, the only source of information is the report of the U. S. Geological Survey, which states that the gold is found in the form of small grains in the quartz veins. The gold is not found in the form of nuggets, as it is in some other parts of the world. The gold is not found in the form of small grains in the quartz veins, as it is in some other parts of the world. The gold is not found in the form of small grains in the quartz veins, as it is in some other parts of the world.

Although the Yague above Laredo has not been of great commercial importance, though it is navigable as high as Alvarado. Although here, however, there tends to render it navigable from Toluca, and even Atlixpan, and no doubt should the present liberal government continue its policy in Spain, this will be effected. Ingle says, that in the winter of 1809, the passage downwards to the sea was successfully undertaken by a boat from Toluca. But, he adds, "we could not have gone down at any other season, because in dry weather, the water in all many places almost wholly flowed from its natural channel for the use of the mills that have been erected upon the Uruke." Town of Tain—The Corporation (Incorporated in 1887) is a village and port, but of limited commerce, on strong ground, some 8 miles to the South of Dun-
oon and near the mouth of the river Tain. It is N. E. by S. 10 miles. Pop. of port town in 1881, 1,250. Tain has improved of late years, and may be considered in a thriving condition. Many new houses have been built, and a good deal of ground has been cleared. It possesses a good academy (founded in 1808), which has attracted a number of scholars to the town for the education of their children, but it has little or no manufactures, and the trade here on the coast deprives it of any advantage it might have derived from its maritime situation. **Port.**
Harbour Report.—New county buildings were lately erected on the site of the old prison, a new gaol having been built on the S. W. angle of the town. It has a handsome new church, a Free school, a grammar school, and three branch schools. It is surrounded with Compton, Dingwall Down, and Kirkwall is within 10 miles to the N. of C. Bay street in 1885, 25. It is governed by a provost & 10 aldermen and 12 councillors. Corporation revenue in 1887, £1,000.

TALAVERA DE LA REYNA, a city of Spain, New Castile, near Toledo, on the Tago, 60 m W by N Talavera, and 25 m S Madrid. Pop. about 6,000. It stands on a large and fertile plain, and is divided into two parts by the river which is here crossed by a stone bridge of 16 arches, and 600 paces in length. The remains of old fortifications exist, but the town seemed, at present, to need to be fortified. The modern town is very irregularly built, with low houses, and narrow and ill-paved streets. It has 6 par churches, 3 monasteries, and 6 convents, where appear to have nothing almost more remarkable, (except, perhaps, the cathedral church, to which William says there is a good picture of the Assumption.) There are two hospitals, almshouses or pious institutions, which are but little frequented by the indigent, being so generally sunk in apathy and death as in the days of their greatest profusion. (Mod. Trav. viii.)

St. Ysaiahs had an important history, artists of Latin philosophy, theology, etc. and had literary and artistic activity of all kinds, and perhaps its markets are later very well supplied with provisions. It is supposed to represent the Fairness of the Nations. It was taken by the Moslems in 714, and various Moslem remains are still to be seen in the city and its neighborhood. After every destruction it was destroyed by the Moslems in 1408, but was quickly rebuilt. It afterwards became the spring of the system of Syria, where the same

In memory of a man who has been rendered famous by the criminal acts he committed in his neighborhood, on the 27th and 28th of July 1886, between the Artists and Spanish houses under the Artists' Walkway (now Duke of Wellington), and the French under Joseph Bonaparte.

sence of all complaint leads to the conclusion that the objects of municipal government have been satisfactorily attained in this borough; that the governing body has been judiciously selected, justice well administered, and the revenues carefully applied to public purposes." Tamworth has sent 2 mems. to the H. of C. since the 5th of Elizabeth. Previously to the Reform Act, the right of voting was in the inhabitants paying scot and lot. Reg. electors, in 1849-50, 396. The late Sir Robert Peel, Bart., certainly the most disinterested and truly patriotic minister that this country has had since the revolution, and, also, one of the ablest, was long representative for Tamworth, and one of its greatest benefactors. His seat of Drayton Manor is about 1 m. S. of the town; and he is interred, along with his father and mother, in the church of the adjoining par. of Basset Drayton.

TANJORE, a distr. of Hindostan, presid. Madras, and one of the most valuable in British India, ranking in point of cultivation and productiveness next to Burdwan in Bengal. It lies principally between lat. 10° and 11° 30', and the 79th and 80th degs. of E. long., having N. the distr. of Trichinopoly, W. Madura, and the ocean on the S. and E. Area, 8,625 sq. m. Pop., in 1831, 1,128,730. About half the prov. is a flat alluvial delta formed and completely irrigated by numerous branches of the Coleroon, which constitutes the N. boundary. This delta is justly considered the granary of the Madras territories; almost the whole of it is cultivated with rice, which is here produced in larger quantities and with more certainty than in any other distr. on the E. coast. The average gross produce in rice (not paddy) yearly, is estimated at 58,046 *garec*. (*Madras New Almanac*, 1839.) The rest of the distr. S. of the delta is on a considerably higher level; its surface is undulating, and it comprises many varieties of soil. Tanjore was formerly assessed under the ryot-war system, but this was afterwards abandoned for the village settlement, under which last both the revenue and cultivation have increased very considerably.

The pop. is for the most part Hindoo, and chiefly agricultural; but there are some manufactures of cotton and silk stuffs, of copper utensils at Combocoonum, Manargooda, &c. These, however, have declined greatly of late years, owing to the importation of cheaper English goods, though some manufactured articles are still exported with the agricultural produce to Bengal, Achin, Tranquebar, and the adjacent districts. The imports are iron, saltpetre, dry grain, oil, glue, wax, tamarinds, &c. from Coimbatore, Salem, Trichinopoly, &c. The trade of Tanjore is very considerable: in 1837-38 the value of the exports was estimated at 2,619,259 rup. Total public revenue in the same year, 4,738,607 rup.; expenditure, 526,677 rup.: so that in a pecuniary point of view it is a very valuable possession.

Tanjore was never permanently conquered by the Mohammedans, and Hindoo institutions and edifices have been preserved in it in much purity and perfection. In almost every village there is a pagoda, with a lofty gateway of massive though not elegant architecture, in which sundry Brahmins are maintained; and on all the great roads leading to these places are choultries for the accommodation of pilgrims. The district has been noted for the prevalence of *suttees*. In antiquity it constituted the principality of Chola, whence the whole coast afterwards acquired the name of Coromandel. It was conquered by the Mahrattas in 1675; but we came quietly into its possession in 1799, on condition of allowing the rajah a lac of star pagodas and a fifth part of its nett revenue annually.

TANJORE, a large city of Hindostan, cap. of the above distr., in a plain S. of the Coleroon, and 170 m. S. E. Madras. Lat. 10° 45' N., long. 79° 12' E. Its pop. is not stated, but is probably from 35,000 to 40,000. It is said to be nearly 6 m. in circ., and consists of two separate portions, both fortified; one comprising the palace and other public buildings; and the other a celebrated pagoda, perhaps the finest specimen in India of a pyramidal temple. Its grand tower is 199 ft. in height, and is remarkable for its simplicity. In a covered area in this temple is a bull carved in black granite, 16 ft. in length, by 12½ ft. in height, deemed one of the best works of Hindoo art. Close to the temple stands an English church. According to Hamilton, Tanjore appears to have been pretty strongly fortified; and the city is more regularly built, and has a larger proportion of solid and ornamental edifices than any other native town S. of the Krishna. In the palace is a group of the late rajah and his tutor, the Danish missionary Schwartz, executed at the desire of the rajah by Flaxman. The British residency is outside the walls to the S. Tanjore was unsuccessfully besieged by the British in 1749, and the French in 1758; but was taken by the former in 1773. (*Hamilton*; *Heber*, in *Mod. Trav.*, &c.)

TAORMINA (an. *Taurominium*, or *Tauromenium*), a town of Sicily, prov. Messina, cap. cant., on a high, craggy mountain, on the E. coast of the island, about

half-way between Messina and Catania, being 30 m. S.W. the former, and 31 m. N.E. the latter. Pop., in 1831, 3,929. Travellers speak in the highest terms of the surrounding scenery. "Were I," says Swinburne, "to name a place that possesses every grand and beautiful qualification for forming a picture—a place on which I should wish to employ the powers of a Salvator or a Poussin, Taormina should be the object of my choice. Every thing belonging to it is in a large, sublime style." It is fortified by an irregular wall and lines, constructed by the Saracens, surmounted by an old Saracenic castle and more modern works; and above all, on the summit of a tabled cliff, is the inconsiderable town and military post of Mola. Though Taormina has an immoderate proportion of convents and large buildings, it is ill built and dirty, and, notwithstanding its elevated situation, it is said to be but indifferently healthy. (*Smyth*.) On a fountain, in the main street, part of the statue of a centaur, with the addition of a copper nimbus, is held to represent St. Pancras, a native of the town, and its protector!

Taormina has some splendid remains of antiquity. Its theatre, which is most probably of Greek origin, is the object of universal admiration. It is of very ample dimensions, being capable of accommodating no fewer than 40,000 spectators (*Smyth*), and is wonderfully well preserved. It is principally excavated in the slope of the mountain, its seats being hewn out of the rock: the *proscenium* and parts connected with the stage are built of brick, and are nearly entire; the space allotted to the orchestra is also preserved, as well as the dressing-rooms of the actors. Its greatest breadth (measured on the plan in *Russell's Sicily*) is about 360 ft.; its extreme length, 300 ft.; and it is so admirably contrived that, even now, the slightest noise, as the tearing of a piece of paper on the stage, is distinctly heard in the most distant part of the theatre. The seats command the most superb views of Mount Etna, Aci Reale, Catania, and, it is said, of the country even as far as Syracuse. "The spot," says Sir R. C. Hoare, "seems to have been created for a public edifice: behind and before are steep precipices, which leave just room sufficient to place this most noble and magnificent structure. I visited it frequently, and never left it without regret." (ii. 193.) In addition to the theatre, Taormina has an entire side of a naumachia, upwards of 350 ft. in length, with the remains of the aqueduct and the reservoirs that supplied it with water; and in every direction round the town are sepulchres, cenotaphs, tessellated pavements, remains of remarkable edifices, &c., attesting its ancient wealth and magnificence. The churches have little remarkable, though that of St. Pancras appeared to Sir R. C. Hoare to be of Grecian origin, and probably, he says, the oldest building in the town. The Dominican convent has a large court, surrounded with columns of fine brown and white marble. The inhabs. have some trade in wines and hemp, the former being, it is said, of superior quality, though very inferior to what they must have been in antiquity, when they occupied a high place at the Roman banquets.

Taurominium is of uncertain origin: it was taken by Dionysius the Elder, in the 94th Olympiad, or about anno 403 B.C. A Roman colony was settled in it by Julius Cæsar. The ancient city was ruined by the Saracens in 968; since which it has never recovered any considerable portion of its ancient importance. (*Smyth's Sicily*, p. 128, 129; *Russell*, p. 241—248; *Sir R. C. Hoare*, *Class. Tour.* p. 194—200; *Swinburne*; *Brydone*.)

TARANTO (an. *Tarentum*), a famous city and seaport of S. Italy, kingd. of Naples, cap. of the prov. Otranto, anciently one of the wealthiest and most celebrated cities of Magna Græcia, near the N. extremity of the Gulph of Taranto, 42 m. W. S.W. Brindisi, and 160 m. E.S.E. Naples. Lat. 40° 28' N.; long. 17° 35' E. Pop. estimated by Burgess and others at 18,000. It stands on what was formerly an isthmus, but is now an island, separating the gulph, or outer sea, from an inner bay, called the Little Sea (*Mare Piccolo*), 15 or 16 m. in circ. At its N. extremity is the old channel, leading to the Mare Piccolo, crossed by a bridge about 160 yards in length, over which an aqueduct is brought, conveying water to the city from the mountains of Mutina, about 12 m. distant. The channel on the S. side of the town is artificial, having been originally opened by Ferdinand I., and deepened by Philip II.: it also is crossed by a bridge about 50 yards in length. In antiquity the citadel occupied the site of the modern city.

The harbour of Taranto is excellent, and might, with little difficulty, be made all but perfect. In antiquity the Mare Piccolo, or inner bay, was the principal rendezvous of the Tarentine ships, where they lay perfectly secure from hostile attacks, and as safe in other respects as if they had been in dock. The entrance to the inner bay is now, however, so choked up with rubbish, that it is accessible only to small boats; but it might be easily cleared out, and the basin rendered as useful as ever. Adjoining the town, the Mare Piccolo has from 4 to 6

fathoms water. The present, or outer harbour, is at once extensive and safe. There are 4 fathoms water close to the town; and the bay, which is capacious, is protected by the islands of St. Peter and St. Paul.

Its situation is striking and singular, and despite the change in its fortunes, Swinburne says its appearance is replete with wonderful beauties. The ancient city extended along the shores both of the gulph and the Mare Piccolo, and the walls which ran from the one to the other formed the base of the triangular space which it covered. Of its magnificent buildings, which included a temple of Neptune, the guardian deity of the city, scarcely any vestiges exist, except the outlines of an amphitheatre, some substructions of apparently a Roman work, and an immense mass composed of fragments of pottery. "The shape of the modern city has been, with some justice, assimilated to a ship, being wide in the centre, and tapering at each end. The principal street runs from one of its extremities to the other in a waving line; and narrow and tortuous communications lead to two other parallel streets; one of which extends along the waters of the outward gulph, but considerably above their level, and is defended from their fury by a parapet wall and projecting battery. Here the best houses are situated. The Marina, on the contrary, which borders the inner bay, or Mare Piccolo, is scarcely raised above its surface; and nothing can present a stronger contrast than the crowded, filthy, but lively appearance of the last, opposed to the quiet, clean, but deserted aspect of the former. The Marina is inhabited entirely by fishermen and their families, who constitute more than half the pop. of the place." (*Craven, Tour*, p. 176.) The cathedral, dedicated to San Cataldo, a native of Ireland, is richly adorned within, and has a silver statue of its patron saint, some ancient columns, inlaid work in *pietre dure*, &c. Taranto has a formidable looking castle commanding its harbour, numerous convents, a diocesan seminary, two hospitals, an orphan asylum, and manufactures of linen and cotton fabrics, velvets, &c. The great articles of commerce are oil and shell-fish. The taste for the latter is said to prevail at Taranto in a greater degree than in any other part of the kingdom; and when Craven visited the city, the governor drew a revenue from this branch of trade of about 24,000 ducats a year. Swinburne speaks of having partaken at a single meal of 15 different sorts of shell-fish. (*Trav.*, i. 237.) The neighbourhood was anciently famous for the *murex* and *purpura*, but these have been superseded by muscles, oysters, &c., which are reared in immense numbers in the Mare Piccolo.

Tarentum was either originally founded, or, as is most probable, occupied by a colony from Sparta, about anno 700 B.C. The colonists, influenced, no doubt, by the advantageous situation of their new country for a seat of commerce and commercial navigation, became in no very lengthened period distinguished for their proficiency in these departments of industry, and their city is admitted to have been the greatest emporium of S. Italy, or Magna Græcia. *Tarentus Lacedæmoniorum opus, Calabria quondam, et Apulia, totiusque Lucania caput, cum magnitudine et muris portuque nobilis, tum mirabilis situ: quippe in ipsis Adriatici maris faucibus posita, in omnes terras, Istriam, Illyricum, Epirum, Achajam, Africam, Siciliam vela dimittit.* (Florus, lib. i. cap. 18.) Polybius also has ably stated the commercial advantages enjoyed by Tarentum. (Lib. x. Frag. 1.)

The history of this great city is very imperfectly known. Her government, like that of most other Greek states, was different at different periods, being sometimes administered by kings or tyrants, and sometimes by the people. She was distinguished not only by her wealth and commerce, but by the splendour of her public buildings and works of art. She also became a favourite seat of literature and science; and the followers of Pythagoras, though proscribed in other parts of Italy, found here a safe asylum. The famous philosopher Archytas, a disciple of Pythagoras, was repeatedly placed by the suffrages of his fellow-citizens at the head of the government; and shewed, by his judicious conduct in civil affairs, and as leader of the armies of the republic, that he was no less eminent as an administrator and a general, than as a moralist, a mechanist, and a geometer. (*Bruckeri, Hist. Philosoph.*, i. 1118.; see, also, *Horace's Ode to Archytas*, lib. i. ode 28.)

The refinement produced by the accumulation of wealth and the culture of literature and the fine arts, has been supposed by most ancient writers, and by their copyists in modern times, to have had a most injurious influence over the martial virtues of the Tarentines, and to have occasioned an all but universal degeneracy and corruption of manners. There does not, however, appear to be any real ground for such imputations. When the progress of Rome towards universal dominion brought her armies and fleets into the territories and seas adjoining Tarentum, the latter did not seek to purchase a treacherous truce, by submitting to the dictates of the Roman generals. On the contrary, she made every

effort to maintain her independence; and as she knew that her own forces were inadequate for such a struggle, she wisely sought assistance from others; and it was at her instigation that Pyrrhus invaded Italy. After the departure of Pyrrhus, Tarentum attached herself to the party of Hannibal; and it was not owing to any deficiency of bravery, but to treachery, that Fabius ultimately obtained possession of the city.

The conduct of the Romans on this was consistent with their behaviour on every similar occasion. The city was delivered up to military execution; and such of the inhab., amounting to about 30,000, as had escaped the massacre, were sold for slaves. (*Livius*, lib. xxvii. caps. 13—16.; *Plutarch's Life of Fabius*, &c.)

Tarentum never fully recovered from this dreadful blow; though, notwithstanding the preference shown by the Romans for Brundisium, she had again become, in Strabo's time, a considerable city. A little to the N.E. of Tarentum, near the Galesus, were situated the fertile valley and ridge of Aulon, the beauties of which have been described in such glowing terms by Horace. (*Lib. ii. od. 6.*) In addition to the authorities referred to above, see also *Ancient Universal History*, xii. 146. and 308. 800. id.)

TARARE, a manufacturing town of the S. of France, dep. Rhone, cap. cant., in a narrow valley on the road from Paris to Lyons, 20 m. N. W. the latter. Pop., in 1846, inc. comm., 8,820. It is the centre of a manufacture of plain and figured muslins, which, within a circle of from 10 to 20 leagues of mountainous country, employs wholly or in part at least 50,000 hands, about 20,000 being adult handloom weavers, from 15,000 to 16,000 women and children employed subsidiary to these, from 4,000 to 5,000 employed as agents or otherwise by the manufacturers, the rest, chiefly females, being occupied in embroidering or figuring the plain goods. Most of the weavers, &c. work at their own homes, and the manufacturers do not generally carry on business on a large scale, or employ many hands. There is one factory, however, (that of the Messrs. Macculloch from Glasgow,) in which from 160 to 200 hands are employed, and goods are produced which are said to be fully equal to those of Glasgow, though we are not disposed to place implicit confidence in this statement. "A portion of the weavers in the country get from 75 cents. to 1½ fr. a day; those of the town from 2 fr. to 2 fr. 50 c. and sometimes 3 fr., according to their skill. The manufacturer furnishes only the reed and the upper mounting, all the rest being at the expense of the workmen. Those who are in the town weave all the year round, whereas those in the country do not weave for more than seven months a year, the remaining five months being occupied in agricultural employment." (*Handloom Weavers' Rep.* i. 124.)

The Tarare weavers are pretty well lodged, fed, and clothed; and Villermé relates, *Je ne connais aucune fabrique en France où les tisserands m'aient paru avoir des mœurs et des habitudes meilleures, aucune ville manufacturière qui m'ait offert moins d'ivrognes et moins de libertins que Tarare.* (Tableau des Ouvriers, &c. i. 188.)

TARASCON, a town of France, dep. Bouches-du-Rhone, cap. cant., on the Rhone, opposite Beaucaire, with which it communicates by a new suspension-bridge, 13 m. E. by S. Nismes. Pop., in 1846, 9,150. It is surrounded with walls flanked by towers, and is commanded by a castle on a rock overhanging the river, built in the 13th century, and formerly the residence of the Counts of Provence. The streets are wide and regular, and one of the principal is lined with arcades. The par. church, a fine Gothic edifice of the 11th century, has a richly sculptured entrance, and a subterranean chapel, in which is a marble statue of St. Martha. Tarascon has a public library, a theatre, town-hall, court of justice, two hospitals, barracks, &c.; and in the neighbourhood is a very extensive nursery called the *Pépinière de Tonnelle*. It has, also, manufactures of silk and woollen stuffs, some trade in boat-building, and in wine, brandy, and oil. (*Hugo*, art. *Bouches-du-Rhone*; *Guide du Voyageur*, &c.)

TARBES (an. *Bigorra*, post *Tarvis*), a town of France, dep. Hautes Pyrenees, of which it is the cap., in a fine plain, on the Adour, here crossed by a stone bridge of 6 arches, 24 m. E. by S. Pau. Pop., in 1846, 11,938. It is one of the best built and cleanest towns in the S. of France. Its houses, constructed chiefly of marble, stone, or brick, and roofed with slate, have usually gardens attached, of considerable size. A wide main street, containing numerous inns and cafés, runs through the centre of the town, which is also divided into three nearly equal portions, by two large open spaces; one, the *Place de Maubourguet*, being planted with trees, and forming a favourite promenade. The streets crossing the main thoroughfare are almost equally wide and regular, and nearly all lead into suburbs, of which there are 5, surrounding the town on every side. Every quarter of Tarbes is well supplied with water from

the river. There are few public edifices worth notice. The most so is the prefecture, formerly the bishop's palace, a building of different dates, but with an imposing general effect. The cathedral is on the site, and, it is said, consists of a portion of the ancient fortress of *Algarra*, it is internally adorned with some columns of Italian *breccia*. The old castle of the counts of Tarbes now serves for the prison. The college and theatre are handsome. Tarbes is a bishop's see, the seat of tribunals of primary jurisdiction and commerce, a forest board, &c. and has schools of design and architecture, a *royal dépôt d'histoire*, and some manufactures, principally of copper, iron, and other metals. It is the great commercial entrepôt for the country immediately N. of the Pyrenees, and has a large market once a fortnight, frequented by individuals from a distance of over 50 leagues round. "Here," says *Ingles*, "for the first time, one perceives a slight approximation to the usage of the country that lies beyond the majestic barrier of the Pyrenees. This is visible in the dress of the women, who no longer cover their heads with bonnets, hats, caps, or handkerchiefs, but with scarlet squares of woollen stuff, trimmed with black, which they throw over the head and shoulders, something in the form of the Spanish mantilla, &c." (*Ingles's Pyrenees*, &c., III.) Tarbes is on the direct road to Bagneres de Bigorre (which see), and to Barège, distant only about 25 m. S. (*Idem*, art. *Haute Pyrenées*, Dec. Gég., &c.)

TARU, a dep. of France, reg. S., formerly inc. in Langouder, principally between lat $48^{\circ} 30'$ and $48^{\circ} 10'$ and long $1^{\circ} 30'$ and $2^{\circ} E.$, having N and N E., Aveyron; S E. and S., Hérault and Aude, S W., Haute Garonne; and N W., Tarn-et-Garonne. Area, 678,977 hectares. Pop. in 1886, 260,079. This dep. is enclosed by mountain-ranges on the N E. and S.; it slopes to the W., in which direction its rivers, the chief of which are the Tara, Agout, and Viour, have their sources. The Tara rises in Mount Lacaune, and flows in a general S W. direction, through the dups Lacaune, Aveyron, and Tarn, in about 16 m. from Toulouse, where it turns N W., and ultimately falls into the Garonne, 23 m. above Agen. Its principal affluents are the Aveyron, on the right or N side, and the Agout on the left. *Flora* Mountainous, and Massifs are on its N. (1) (2) (3) (4) (5) (6) (7) (8) (9) (10) (11) (12) (13) (14) (15) (16) (17) (18) (19) (20) (21) (22) (23) (24) (25) (26) (27) (28) (29) (30) (31) (32) (33) (34) (35) (36) (37) (38) (39) (40) (41) (42) (43) (44) (45) (46) (47) (48) (49) (50) (51) (52) (53) (54) (55) (56) (57) (58) (59) (60) (61) (62) (63) (64) (65) (66) (67) (68) (69) (70) (71) (72) (73) (74) (75) (76) (77) (78) (79) (80) (81) (82) (83) (84) (85) (86) (87) (88) (89) (90) (91) (92) (93) (94) (95) (96) (97) (98) (99) (100) (101) (102) (103) (104) (105) (106) (107) (108) (109) (110) (111) (112) (113) (114) (115) (116) (117) (118) (119) (120) (121) (122) (123) (124) (125) (126) (127) (128) (129) (130) (131) (132) (133) (134) (135) (136) (137) (138) (139) (140) (141) (142) (143) (144) (145) (146) (147) (148) (149) (150) (151) (152) (153) (154) (155) (156) (157) (158) (159) (160) (161) (162) (163) (164) (165) (166) (167) (168) (169) (170) (171) (172) (173) (174) (175) (176) (177) (178) (179) (180) (181) (182) (183) (184) (185) (186) (187) (188) (189) (190) (191) (192) (193) (194) (195) (196) (197) (198) (199) (200) (201) (202) (203) (204) (205) (206) (207) (208) (209) (210) (211) (212) (213) (214) (215) (216) (217) (218) (219) (220) (221) (222) (223) (224) (225) (226) (227) (228) (229) (230) (231) (232) (233) (234) (235) (236) (237) (238) (239) (240) (241) (242) (243) (244) (245) (246) (247) (248) (249) (250) (251) (252) (253) (254) (255) (256) (257) (258) (259) (260) (261) (262) (263) (264) (265) (266) (267) (268) (269) (270) (271) (272) (273) (274) (275) (276) (277) (278) (279) (280) (281) (282) (283) (284) (285) (286) (287) (288) (289) (290) (291) (292) (293) (294) (295) (296) (297) (298) (299) (300) (301) (302) (303) (304) (305) (306) (307) (308) (309) (310) (311) (312) (313) (314) (315) (316) (317) (318) (319) (320) (321) (322) (323) (324) (325) (326) (327) (328) (329) (330) (331) (332) (333) (334) (335) (336) (337) (338) (339) (340) (341) (342) (343) (344) (345) (346) (347) (348) (349) (350) (351) (352) (353) (354) (355) (356) (357) (358) (359) (360) (361) (362) (363) (364) (365) (366) (367) (368) (369) (370) (371) (372) (373) (374) (375) (376) (377) (378) (379) (380) (381) (382) (383) (384) (385) (386) (387) (388) (389) (390) (391) (392) (393) (394) (395) (396) (397) (398) (399) (400) (401) (402) (403) (404) (405) (406) (407) (408) (409) (410) (411) (412) (413) (414) (415) (416) (417) (418) (419) (420) (421) (422) (423) (424) (425) (426) (427) (428) (429) (430) (431) (432) (433) (434) (435) (436) (437) (438) (439) (440) (441) (442) (443) (444) (445) (446) (447) (448) (449) (450) (451) (452) (453) (454) (455) (456) (457) (458) (459) (460) (461) (462) (463) (464) (465) (466) (467) (468) (469) (470) (471) (472) (473) (474) (475) (476) (477) (478) (479) (480) (481) (482) (483) (484) (485) (486) (487) (488) (489) (490) (491) (492) (493) (494) (495) (496) (497) (498) (499) (500) (501) (502) (503) (504) (505) (506) (507) (508) (509) (510) (511) (512) (513) (514) (515) (516) (517) (518) (519) (520) (521) (522) (523) (524) (525) (526) (527) (528) (529) (530) (531) (532) (533) (534) (535) (536) (537) (538) (539) (540) (541) (542) (543) (544) (545) (546) (547) (548) (549) (550) (551) (552) (553) (554) (555) (556) (557) (558) (559) (560) (561) (562) (563) (564) (565) (566) (567) (568) (569) (570) (571) (572) (573) (574) (575) (576) (577) (578) (579) (580) (581) (582) (583) (584) (585) (586) (587) (588) (589) (590) (591) (592) (593) (594) (595) (596) (597) (598) (599) (600) (601) (602) (603) (604) (605) (606) (607) (608) (609) (610) (611) (612) (613) (614) (615) (616) (617) (618) (619) (620) (621) (622) (623) (624) (625) (626) (627) (628) (629) (630) (631) (632) (633) (634) (635) (636) (637) (638) (639) (640) (641) (642) (643) (644) (645) (646) (647) (648) (649) (650) (651) (652) (653) (654) (655) (656) (657) (658) (659) (660) (661) (662) (663) (664) (665) (666) (667) (668) (669) (670) (671) (672) (673) (674) (675) (676) (677) (678) (679) (680) (681) (682) (683) (684) (685) (686) (687) (688) (689) (690) (691) (692) (693) (694) (695) (696) (697) (698) (699) (700) (701) (702) (703) (704) (705) (706) (707) (708) (709) (710) (711) (712) (713) (714) (715) (716) (717) (718) (719) (720) (721) (722) (723) (724) (725) (726) (727) (728) (729) (730) (731) (732) (733) (734) (735) (736) (737) (738) (739) (740) (741) (742) (743) (744) (745) (746) (747) (748) (749) (750) (751) (752) (753) (754) (755) (756) (757) (758) (759) (760) (761) (762) (763) (764) (765) (766) (767) (768) (769) (770) (771) (772) (773) (774) (775) (776) (777) (7

TARN-ET-GARONNE, a dep. of France, reg. S., to about lat. 46° and principally between the 1st and 2d degrees of E. long., having N. the dep. of Lot, E. Aveyron, S.E. and S. Tarn and Hautes Garonnes and W. Gers and Lot-et-Garonne. Area, 306,376 hectares. Pop., in 1848, 242,408. Surface generally undulating; in the S. and E. there are, however, some hill ranges of considerable height, the sources of a number of small streams. Principal rivers, Garonne, Tarn, and Aveyron, all flowing through the S. half of the dep. In 1864 arable lands were estimated to comprise 229,284 hectares, the meadows 17,245 do., vineyards 24,705 do. and woods 64,287 do. A greater proportion of wheat is

raised in this than in any other of the 8 departments of France; the estimated produce in 1885 having been 1,190,000 hectol. Rye, maize and oats are also grown; and the total produce of grain considerably exceeds the home demand. The produce of wine amounts to about 440 hectol. a year, of which about 280,000 are exported, and converted into *vin de vin*. The finest are the red wines of the arrondissement of Castel Sarrazin, the tint of which have a fine colour, the *aromatic* of an *hon. grand*. (Jaffon, 244) but the greater portion are inferior. Prunes, flax, hemp, and oil-seeds are among the other principal articles of culture. Irrigation is not well understood; and the produce of hay is small. Live stock are, in consequence, less numerous than in the adjacent departments; the quality of the wool is inferior. Hogs and poultry are extensively fattened; the former for export to Spain. In 1885, of 24,711 properties subject to the *contribution foncière* 23,712 were assessed at less than 5 fr., and only 99 at 1,000 fr. or upwards. The want of capital is a formidable obstacle to the progress of manufacturing industry. Some reserve weavers still with stockings and other fabrics of silk are made at Montauban, orgeons, linen cloths, and weaver yarn is the around of Castel-Sarrazin, and there are some considerable tanneries, paper and flour mills, &c. Tern-et-Gervais was made a *chef-lieu* by Napoleon, on account of the importance of its capital, Montauban. It is divided into 3 *arrondissements*, and sends 4 deputies to the Chamber of Deputies. Registered voters, in 1885, 9,195. Total public revenue, in 1881, 4,104,515 fr. (Huge, *art. Tern-et-Gervais*, *Official Yearbook*, &c.)

TARRAGONA (or **TARRUS**, a city and sub-port of Spain, in Catalonia, cap. prov. of its own name, at the mouth of the Francolí, in the Mediterranean, 43 m. W. N.W. Barcelona. Pop., according to Milano, 11,000. This once famous city is now constructed in a space which covers only a small portion of its ancient limits and is ill built and dirty. A large and broad street, with some handsome edifices, has, however, been laid out within the present century. Its fortifications consist, besides the town walls, of two castles, and several batteries to protect the harbor, but the height on which the city stands is surrounded by Mount Olive. The river Francolí, adjacent to the city is crossed by a narrow bridge of six arches, and the town is entered by its gates. Townsend says, "Tarragona, of all the cities in Spain would give the most agreeable employment to the antiquary. Here he would admire the remains of an amphitheatre, of a circus, of the palace of Augustus, of temples, and of an extensive aqueduct, with fortifications, which, although of a more recent date, are ancient" (*Journey*, &c., III. 311.) But, according to Inglis, in 1822, the remains of the amphitheatre were then little more than visible. Near Tarragona is the building called the tomb of the Scipios, in which the father and uncle of S. Africanus, who were killed in battle with the Carthagonians, are said, though on no good authority, to have been buried. It is about 10 ft. sq. and 25 ft. in height resembling the tomb of Thurius at Ostia. In the front, facing the sun, are statues of two warriors in a mourning posture, roughly cut out of the stem of the poplathre, and much worn by the sea air. The inscription is so much defaced that it can hardly be deciphered. The cathedral of Tarragona is worth a visit, particularly the choir and cloisters, which are surrounded with numerous pillars.

The archbishopric is one of the most ancient in Spain, having existed in the 7th century. It has several universities, an hospital, a university, academies of design and naval architecture, other superior schools, a theatre, &c. Tarragona is the chief exporting port of Catalonia. Its exports consist of nuts, almonds, wine, and brandy. The nuts sent to the English market are known by the name of *Barcelona nuts*, but they are neither grown near, nor exported from Barcelona. They are grown more to the interior of the prov., and are all exported from Tarragona. The average export of nuts to England

by the day's work the women were getting the satisfaction of being granted the Catalan. In 1706 it was captured by the English, who at first intended to retain it as a military post, but after

wards abandoned it for Gibraltar. In 1811 it was taken and sacked by the French under Suchet. Oroslus the historian is said to have been a native of Tarraco, though the fact has been disputed. (*Milano; Townsend; Ingalls; Mod. Trav.; &c.; Cellarii Geog. Antiqua*, i. 140.)

TARSUS, a celebrated city of antiquity, and still a town of some importance, in Asia Minor, pachalic of Tschil, cap. sanjak, on the Cydnus, about 12 m. from the Mediterranean, and 82 m. W.N.W. Scanderoon. Lat. $36^{\circ} 46' 30''$ N.; long. $34^{\circ} 46' 45''$ E. Its permanent pop. is estimated at about 7,000. (*Bourring's Rep.*); but during winter a great many Turkish, Greek, and Armenian families flock into the town. The modern town does not cover one fourth part of the area occupied by the city under the Romans, and few vestiges remain of its former magnificence. The remains of a theatre, and of a spacious circular building, an ancient gateway, and beyond the walls a singular and solid structure, 120 paces in length, by about 60 in breadth, are among the principal. Some traces are perceptible of the more ancient walls, but those now inclosing the town are not supposed by Kinnair to be of an earlier date than the time of Haroun Al Raschid, in the 8th or 9th century; and the castle is said to have been built by Bajazet. The houses seldom exceed one story in height; they are terrace-roofed, and the greater part are constructed with hewn stone, furnished by the more ancient edifices. There are two public baths, a number of mosques, several caravanserais, a small church, &c. The plain around Tarsus is very fertile, and cultivated by Greeks, chiefly for corn and cotton, which last is a principal article of export, the others being wool, bees' wax, gall-nuts, copper, goats' hair and skins, ox and buffalo hides, and hair sacks. The river Cydnus is now navigable only by very small boats, and the greatest part of the produce exported is shipped at Mersia, a port or roadstead about four hours' journey W., at which there is said to be good anchorage all the year round. The value of the imports and exports may amount to about 100,000*l.* a year each. (*Bourring, Rep. on Syria; Geog. Journ.*, x. 508. &c.; *Kinnair, &c.*)

Nothing is known of the origin of Tarsus; but it is abundantly certain that it was very ancient, and that it had either been originally founded by Greeks, or had subsequently received a Grecian colony. It was the metropolis of Cilicia, and was captured by both Cyrus and Alexander. It continued to flourish under the successors of the latter, and under the Romans. Strabo says it was very populous and powerful; and he farther adds, that its schools of philosophy, literature, and science were superior even to those of Athens and Alexandria (*lib. xiv.*); and though this be obviously an extravagant eulogy, there can be no question that it was a most distinguished seat of learning. St. Paul, the apostle of the Gentiles, was a native of Tarsus, where he was born in the second year of the Christian era, and where he acquired a competent knowledge of Greek literature before he went to study the law of Moses at Jerusalem. To ingratiate themselves with Julius Cæsar, the inhabs. changed the name of the city to Juliopolis; and it is plain, from the statement of St. Paul (*Acts, xxiii. 28.*), that some of them, if not all, ranked as Roman citizens. Tarsus produced several other distinguished individuals; among whom may be specified Antipater, the stoic; Athenodorus, the philosopher, and friend of Augustus, &c. (*Cellarii Geographia Antiqua*, ii. 251.; *Ancient Universal History*, vi. 131. 8vo. ed. &c.)

TARTARY, TAHTARY, or TURKESTAN, a very extensive region of Central Asia, partly comprised in the Chinese empire, and partly distributed among states of BOKHARA, BUDUKSHAN, KHIVA, KOKAN, the KIROGHS STEPPE, which see.

TATTA, a town of N.W. Hindostan, and one of the principal in Sind, near the Indus, about 130 m. above its mouth, and 55 m. S.W. Hyderabad. Lat. $24^{\circ} 44'$ N., long. $68^{\circ} 17'$ E. Pop. estimated at less than 15,000, by Burnes, who describes it as "an open town, built on rising ground in a low valley. The houses are formed of wood and wickerwork, plastered over with earth; they are lofty, with flat roofs, but very confined, and resemble square towers. Some of the better sort have a base of brickwork, but stone has been used only in the foundations of one or two mosques. A spacious brick mosque, built by Shah Jehan, still remains, but it is crumbling to decay; and there is little else in modern Tatta to remind one of its former greatness. Its commercial prosperity passed away with the empire of Delhi. Of the weavers of *loongees* (silk and cotton fabrics), for which it was once so famous, 125 families only remain; and there are not 40 merchants in the city. Such has been the decay of Tatta, so populous in the days of Nadir Shah. The country in its vicinity lies neglected, and but a small portion of it is brought under tillage." (*Bokhara, &c.*, i. 27.) Tatta has been supposed to represent the *Patala* of the ancients, and with some reason, since at this point the Indus, as stated by Arrian (*lib. vi.*), divides itself into 2 branches; but no conclusive evidence has been elicited on this point.

TAVISTOCK, a parl. bor., market-town, and par. of England, co. Devon, hund. Tavistock, on the Tavy, 13 m. N. Plymouth. Area of par., which is identical with the parl. bor., 11,660 acres. Pop., in 1841, 6,075. The town is on the N.W. bank of the river, here crossed by three bridges, and from which the ground rises, by a steep acclivity on both sides, to the height of several hundred feet. A very contracted valley from the N. is also occupied by houses closely packed together. The parts of the town built on higher ground to the N., or overlooking the more expanded valley to the W., are of more modern date. The streets, in many parts, are irregular and indifferently paved; but the houses are good, and the town generally is pleasant. Tavistock appears to have owed its origin to an abbey of black friars, founded here by an earl of Devon, in 961. At the dissolution of the monasteries, this abbey, along with the lordship of the town, was given by the king to John Lord Russell, the ancestor of the present Duke of Bedford. Some remains of the monastic edifice still exist: the former refectory is now used as an assembly-room, and near one of the bridges is a large handsome arched and pinnacled gateway, apparently of the time of Henry VI. The principal remains of Tavistock abbey are in the perpendicular style. The par. church has 4 aisles, a chancel, a tower at the W. end, and in its interior are several good monuments. The living, a vicarage, worth 298*l.* a year, is in the gift of the Duke of Bedford. There are meeting-houses for Wesleyans, Independents, Unitarians, Friends, &c., a large and convenient workhouse, a national school, chiefly supported by the Duke of Bedford, some small educational endowments, almshouses, and other public charities. Tavistock was one of the four stannary towns in the co., and is governed by a portreeve, chosen yearly at the lord's court, who is also the returning officer of the borough. It has sent 2 mems. to the H. of C. since the 23d of Edward I.; the right of voting, down to the Reform Act, having been in freeholders of inheritance in possession inhabiting within the bor. Reg. electors, in 1849-50, 336. The pop. is chiefly agricultural, though some serges and coarse linens are made, and mining and the working of iron occupy a few hands. Markets on Fridays. Fairs, Jan. 17., May 6., Sept. 9., Oct. 10., and Dec. 11., for cattle. Sir Francis Drake, the famous navigator and naval commander, belonged to the immediate vicinity of Tavistock, where he was born in or near 1545. (*Boundary Report, &c.*)

TAUNTON, a parl. bor. and market-town of England, co. Somerset, W. division, hund. Taunton Dean; on the Tone, here crossed by a stone bridge of two arches, 87 m. S. W. Bristol. Area of parl. bor., about 1,450 acres. Pop., in 1841, 12,306. Taunton is one of the principal towns in the co.; the main streets are spacious, well paved, and lighted with gas. They run mostly from E. to W. and from N. to S., the town being about 1 m. in length, and nearly as much in width. The houses are generally good, and have frequently extensive outlets and gardens; the appearance of the town indicates a prosperous, respectable community. There are, however, several lanes and courts (popularly called *colleges*) branching from the main street, which were formerly filled with inhabs. but little above the condition of paupers, who had been drawn into these close and unwholesome recesses to be within the limits of the bor., and to exercise the franchise extended to every inhabitant housekeeper. (*Bound. Report.*) The most striking public edifice is St. Mary Magdalen's church, in an open space in the heart of the town. It is 98 ft. in length by 66 ft. in greatest breadth. Its nave is divided into 5 aisles by 4 rows of clustered columns, supporting bluntly-pointed arches; and at its W. extremity is an elegant quadrilateral tower, with a pinnacle at either corner, their entire height being 150 ft. This church is richly decorated both without and within, and has numerous monuments, a fine organ, &c. Much of its decoration is said to be due to Henry VII., in return for the strenuous support of the Lancastrian cause by Taunton; but the tower and other parts of the edifice seem to have been erected somewhere about the end of the 14th century. Rickman (*Gothic Architecture*) says, that this church is a very fine example of the enriched perpendicular style. St. James's, the old conventual church of Taunton priory, is a plain but strong and well-furnished building. The living, a perpetual curacy, worth 254*l.* a year, is in the gift of Sir T. C. Lethbridge. There are chapels for Independents, Wesleyans, Baptists, Unitarians, Friends, Rom. Catholics, &c.; the last-named is a handsome building of the Ionic order. There is also a Franciscan convent, occupying what was originally intended for a general hospital. At the W. end of the town is the castle, built in the time of Henry I. on the site of another fortress, built about 700 by Ina, king of the West Saxons. This edifice comprises the hall, in which assizes for the co. are held in Lent, general quarter sessions at Michaelmas, and a court of requests weekly. The market-house is a large brick edifice, comprising the corn-market, town hall, as-

assembly-rooms, &c.; and beside it is a handsome building in the Ionic order, the lower part of which is a fish and poultry market, and the upper a library and reading-room, museum, &c. The Taunton and Somerset Institution, established in 1823, has a spacious reading and news-room, and a valuable, though not extensive, library. There is a neat theatre in the town. The numerous charities of Taunton include the grammar-school, founded in 1522, and having a small endowment; a school for 80 boys and 50 girls, supported by voluntary contribution; several almshouses; the Taunton and Somerset Hospital, with accommodation for 26 patients; an eye infirmary, a lying-in charity, &c. The town has a weekly newspaper.

Taunton was one of the first towns in England in which the woollen manufacture was established; but the woollen trade of the town has greatly declined, and the industry of the inhabs. is now chiefly exercised in manufactures of silk stuffs, as crapes, sarsenets, &c., and of lace. The town derived considerable advantage from the construction of the Taunton and Bridgewater canal, by which a good deal of Welch coal is now brought to it in return for the agricultural produce of the vicinity. The trade of Taunton has also experienced renewed activity since the opening of the Great Western railway, as far as Bridgewater. Taunton was formerly a municipal borough, but in consequence of neglect in filling up the vacancies in the corp., it lost its charter in 1792. It is a parl. bor. by prescription, and appears to have sent 2 mems. to the H. of C. as early as the 23d Edward I. Previously to the Reform Act, which confirmed its privilege of sending 2 mems., the right of voting was in potwallopers not receiving alms. Reg. electors, 1849-50, 820. The returning officers are the bailiffs, chosen at an annual court leet. Taunton, though not alluded to in the "Itinerary of Antoninus," was, in all probability, known to the Romans, as a great number of Imperial coins have been found in and near it. In the time of the Heptarchy it was a place of considerable note. In the civil war, it sided with the Parliament, and in 1645 its castle sustained, with success, a long siege against the royal forces under Lord Goring. Markets, Wed. and Sat. Fairs, June 17, and July 7 to 10, chiefly for cattle and horses. (*Parl. Rcps.*; *Priv. Inf.*)

TAURIDA, a government in the S. of European Russia, consisting partly of the peninsula of the Crimea, and partly of a tract on the mainland, lying between the Dniepr, the Black Sea, the Sea of Azoff, and the Berda. Area, 24,722 sq. m. Pop., in 1846, 572,200. The mainland part of the government, which, though the least interesting, is the most extensive, consists almost entirely of vast, and in many parts sterile plains, denominated the Steppe of the Nogais, from the Tartar tribes, by which it is principally occupied. "These," says Dr. Clarke, "are a very different people from the Tartars of the Crimea; they are distinguished by a more diminutive form, and by the dark copper colour of their complexion, which is sometimes almost black. They bear a remarkable resemblance to the Laplanders, although their dress and manner have a more savage character." (ii. p. 318., 8vo. ed.) Above 17,000 Germans are colonised to the E. of the river Molotchna. (For farther particulars see art. CRIMEA in this work.)

TAY, a river of Scotland, being the largest of the Scotch, and, in respect of the quantity of water it conveys to the sea, it is the greatest even of the British rivers. It rises in the high mountainous country a little to the N. of Loch Lomond, and, flowing N.E. by Killin, expands into the beautiful long narrow lake called Loch Tay. Issuing thence, its course is N. and E. to Logierait, S. to Dunkeld, E. to Kinclaven, S., inclining a little to the W., to Perth; N.E. to the point of Rhind; then north-easterly, past Dundee, till it falls into the sea between Tentsmoor Point and Buttonness. From Rhind Point to Dundee the channel of the river expands into an estuary called the Frith of Tay. From its source to Dunkeld the Tay flows with a rapid current; partly through a very wild, and partly through a highly picturesque, romantic country. Its subsequent course as far as Perth is through a comparatively fruitful country; and from the latter to the sea, it flows through the richest and finest valley in Scotland.

From Buttonness to Dundee the river is navigable for ships of 500 tons' burden; and at high water, vessels of above 100 tons' burden reach Perth, 20 m. above Dundee. Two lighthouses have been erected on Buttonness, to mark the entrance to the river. The bar at its mouth has 24 fathoms water over it. Dundee, the port of the Tay, has wet docks and a pier harbour: the latter dries at low ebb; but at high water springs it has a depth of 14 or 15 ft., and at neaps of 9 or 10 ft. Large ships anchor in the channel of the river. The mouth and channel of the Tay are a good deal encumbered with sand-banks; and its navigation is rather difficult, partly on that account, and partly from the strength of the tides.

Among the more remarkable of the tributaries of the Tay, may be mentioned the Lyon, which joins it near

Fortingal. The Tummel has its sources in the moor of Rannoch, and flowing through the loch of that name, is joined, near the pass of Killiecrankie, by the Gary, from the confines of Loch Ericht. The united river falls into the Tay at Logierait. Near Kinclaven the Tay receives the united waters of the Airdle, the Isla, and other rivers flowing S. from the mountains on the confines of Aberdeenshire. At Rhind Point it receives its important tributary, the Earn, flowing E. from Loch Earn. The basin of the Tay comprises a space of about 2,400 sq. m.; and Mr. Smeaton ascertained that it carries to the sea more water than even the Thames. Its course from its source to Buttonness is estimated at about 110 m. It is the finest salmon river in Great Britain; its fisheries let for a large sum; the fish being mostly conveyed, packed in ice, to London.

TCHERNIGOFF, a government of European Russia, to the E. of the Dnieper, and between the government of Smolensk on the N. and that of Poltava on the S. The estimates of the area differ very widely; perhaps it may be taken at about 19,000 sq. m. Pop., in 1846, 1,430,000. Surface flat; soil fertile; climate dry, healthy, and mild. Principal river Dniestr, which bounds it on the W., and Desna, by which it is intersected. All sorts of corn are raised, but principally rye, barley, and oats. Produce of the harvest estimated at about 4,000,000 chetwerts. Flax and hemp, tobacco, hops, &c. are also cultivated. Oxen, of a very fine breed, are raised and fattened to a great size. Horses small, hardy, and active. There are some pretty extensive forests. Free cultivators are common in this and the other governments of Little Russia. Manufacturing industry, though still very backward, has made much progress during the present century. Spirits largely consumed, and there are numerous distilleries. Commerce considerable: the exports consist principally of cattle, tallow, hides, &c., spirits, honey and wax, potash, hempseed, &c. (*Schnitzler, La Russie, &c.*, p. 459.)

TEFLIS, or TIFLIS, a city of W. Asia, the cap. of Georgia, and of all the Caucasian and Trans-Caucasian provs. of Russia; on the Kur (an. *Cyrus*), 280 m. E. by N. Trebizond. Lat. 41° 30' 30" N., long. 45° 1' 30" E. Pop. probably about 30,000, most of whom are Armenians, with some Mussulman families. "Teflis occupies the right bank of the Kur, in a contracted valley formed by irregular mountains, parallel with the stream on the side of the city, and hills coming down in a point quite to the water's edge on the other. A circular fort covers this point, and together with a small suburb is united to the city by a bridge of a single wooden arch, thrown over the river; while the ruined walls of an old citadel crown the top, and extend down the side of a part of the opposite mountain. The old and native part of the city is built upon the truly Oriental plan of irregular narrow lanes, and still more irregular and diminutive houses, thrown together in all the endless combinations of accident. Here and there European taste, aided by Russian power, has worked out a passable road for carriages, or built a decent house, overlooking and putting to shame all its mud-walled and dirty neighbours. A line of bazaars too, extending along the river, and branching out into several streets, together with much bustle and business, display some neatness and taste, and is connected with two or three tolerable caravanserais. Several old and substantial churches, displaying their belfries and cupolas in different parts, complete the prominent features of this part of the city. In the N. or Russian quarter, officers, palaces, government offices, and private houses, lining broad streets and open squares, have a decidedly European aspect, and exhibit in their pillared fronts something of that taste for showy architecture which the edifices of their capital have taught the Russians to admire. Teflis has the appearance of an excessively busy and populous place. Its streets present not only a crowded, but, unlike many Oriental cities, a lively scene. Every person seems hurried by business. Nor is the variety of costumes, representing different nations and tongues, the least noticeable feature of the scene." (*Smith and Dwight's Missionary Researches*, 121-124.)

The Armenian cathedral is a large and somewhat striking edifice; there are two mosques, and among the other places of worship is a German Protestant chapel. It has also a French and a German hotel; but they are represented as being, in most respects, the reverse of what they should be. House-rent is very high; but otherwise living is not expensive. Teflis has many remarkable sulphureous hot springs, their temp. varying from 100° to 112° Fah.; and to these, it is supposed by some, the city owes its name. Over some of these the Russian government has erected the crown-baths, a plain edifice, but which, by being kept in good order, differs widely from all the other bath establishments in the city, and realises a handsome revenue. Teflis is very favourably situated for trade, and its commerce is pretty extensive, having greatly increased during the period of Russian occupation. Almost all the trade is, however, in the hands of Armenians; in 1830, scarcely half a dozen mercantile houses existed belonging to

any other foreigners, and only one European consul (a Frenchman) resided here. In 1830, the Russians founded a school in Teflis, which has since been erected into a gymnasium; and there are some other schools. Georgia in general, and its capital in particular, has been long celebrated for the beauty of its women; and, according to the missionaries referred to above, "this has not been over-rated, for we have never seen a city so large a proportion of whose females were beautiful in form, features, or complexion, as Teflis."

Teflis does not boast a very high antiquity. It is said to have been built in 469, by Vachtang, the founder of a dynasty which ruled from the Euxine to the Caspian. It was taken by Jenghis Khan; by the Turks in 1576; sacked by Aga Mehemet Khan in 1796; and fell to the Russians in 1801. It suffered greatly from the ravages of the cholera in 1830. (*Smith and Dwight's Miss. Researches*; *Lyall's Trav. in Russia*; *Mod. Trav.*, xvii.; *Dict. Geog.*, &c.)

TEHERAN, or TEHRAUN, the modern cap. of Persia, prov. Irak-Ajemi, near the foot of Mount Elborz, which divides that prov. from Mazanderan, 211 m. N. Ispahan; lat. 35° 40' N., long. 51° 22' 50" E. Pop., during the residence of the court, estimated at from 60,000 to 70,000, or upwards. It is about 5 m. in circuit, and is enclosed by a strong earthen wall flanked with numerous towers, surrounded by a glacis, outside which is a large dry ditch. The appearance of the city from a distance is picturesque; but it has few public edifices worth notice; and notwithstanding it has many good shops and bazaars, it is said by Morier to have a "mud-like" look within, its houses, like those of other Persian towns, being constructed of sun-dried bricks, while many of its streets are wretchedly paved. The *Ark*, or citadel, comprises, besides the royal residence and harem, quarters for the guards, the record chamber, treasury, hall for receiving ambassadors, and other public offices, 10 baths, two or three gardens, reservoirs, &c. The grand saloon in the palace is said to be very magnificent: the throne is a platform of pure white marble, raised a few steps from the ground, and carpeted with shawls and cloth of gold; and the whole interior of the apartment is profusely decorated with carving, gilding, arabesque painting, and looking-glass, the last material being interwoven with all the other ornaments, from the vaulted roof to the floor. The mosques, colleges, and caravanserais, though not very numerous, are in good repair. Much less than a century ago, the present metropolis of Persia would hardly have been considered of sufficient importance for the cap. of a prov. It first became the metropolis towards the end of the last century, under Aga Mahomed Khan, who seems to have selected it for that dignity partly on account of its good position in a military point of view, and partly from its vicinity to the hereditary possessions of his family. Its greatest drawback is its unhealthiness from damp, which, with the excessive heats in summer, oblige the sovereign and his court to remove at that season, and encamp in pavilions and tents on the plains of Sultanea, or Oujan; at which period the resident pop. of Teheran is reduced to perhaps 10,000. The environs of Teheran are not unpleasant, the plain both to the E. and W. being covered with villages, and abounding in grain. To the N. of the town is a handsome palace, which its situation and the fine gardens that surround it make a delightful residence.

A short distance S. from Teheran are the ruins of the city of Rhé, generally supposed to be identical with the ancient *Rhages*, the capital of the Parthian kings, where Alexander halted for five days in his pursuit of Darius. The ruins cover a great extent of ground, having in their centre a modern village, with a noble mosque and mausoleum—an oasis in the midst of the surrounding desert. (*Kinnet's Persia*, 118.; *Fraser's Persia*, 61.; *Morier, &c. in Mod. Trav.*) It should, however, be mentioned that Major Rawlinson and others contend that the ruins now noticed are not those of Rhages, but of an Arabian city, called Rhe; and that the ruins of Rhages are to be found at Kalah-Erig, 30. m. E. Teheran. (*Geog. Journal*, x. 135., &c.)

TEIGNMOUTH, a market-town and sea-port of England, co. Devon, hund. Exminster, at the mouth of the Teign, in the English Channel, 12 m. S. Exeter. It is intersected by the Teign; the communication between its two divisions, each of which constitutes a parish, being kept up by a long wooden bridge across the river, having a drawbridge at either extremity for the accommodation of vessels. Area of both parishes, 1,280 acres. Pop., in 1841, 4,469. W. Teignmouth, or the portion on the W. side the river, is irregularly built, and ill paved; but E. Teignmouth is beautifully situated, and having been of late much improved, is now one of the most favourite watering-places in the S.W. part of England. The church of W. Teignmouth is a modern octangular structure; the living being a curacy worth 80*l.* a year, under the vicarage of Bishop's Teignton. In this part of the town there are Independent and Calvinist meeting-houses, a national school, a quay on the river, and a

dockyard, in which sloops of war and vessels of 200 ton burden have been built. E. Teignmouth church is mostly a modern edifice: the living, a perpetual curacy, worth 127*l.* a year, is in the gift of the vicar of Dawlish; and here, also, are a Baptist chapel, an endowed school for 13 poor children, some good inns, a theatre, reading-rooms, and other establishments usual in a watering-place. Teignmouth is governed by a portreeve, chosen annually at the court-leet of the lord of the manor. Many of its inhabs. are employed in the coast fishery, and others in the supply of goods to visitors: a good deal of the Haytor granite is also shipped from this port: but the bar at the mouth of the river renders the harbour accessible only to coasting vessels. Teignmouth is of high antiquity, and is said to be the place at which the Danes first landed in 787. It gives the title of baron to the Shore family.

TELLICHERY, a town of British India, presid. Madras, and one of the principal sea-ports in the district of Malabar; on the W. coast of Hindostan, 42 m. N.N.W. Calicut; lat. 11° 45' N.; long. 75° 23' E. Pop. uncertain. This was the chief trading settlement of the British on the Malabar coast previously to 1800, when the E. I. Company's warehouses were transferred to Mabé, about 6 m. to the S.E. The most wealthy natives, however, still reside at this town; which a few years since continued to be the mart for the best sandal wood from above the Ghauts, and cardamoms from Wynad. (*Hemilton's E. I. Gaz.*)

TEMESWAR, a royal, free, and fortified town of Hungary-beyond-the-Theiss, cap. co. of its own name, in a marshy plain, on the Alt Bega river, 72 m. N.N.E. Belgrade; lat. 45° 42' 27" N., long. 21° 14' 17" E. Pop., with its four suburbs, about 18,000, including numerous Germans, Greeks, Wallachs, and Jews. Mr. Paget says, "Temeswar, the capital of the Banat, and the winter residence of the rich Banatians, is one of the prettiest towns I know anywhere. It has two handsome squares, and a number of very fine buildings. The county-hall, the palace of the Bishop of Csanad, the residence of the commander, and the town-house, are all remarkable for their size and appearance." Temeswar was taken from the Turks in 1716 by Prince Eugene, who laid out and strongly fortified the modern town, which is now one of the principal fortresses of the Austrian monarchy. It has a Rom. Cath. and a Greek cathedral, a synagogue, seminary, Piarist gymnasium, arsenal, military school, some barracks, and various other military establishments, and is the seat of the principal civil establishments and authorities of the Banat. Good water is raised by machinery for the supply of the town. It has manufactures of silk and woollen stuffs, paper, tobacco, oil, &c.; and an extensive trade in these articles and in the transit of agricultural produce. Its inhabs. are said to be generally opulent. Its commerce has been considerably facilitated by the excavation of the Bega Canal, about 73 m. in length, which, passing by the town, unites it with the navigable portion of the Bega, and, consequently, with the Theiss and the Danube. This canal has also been advantageous from its assisting in drying the marshes by which the town is surrounded; though in summer it is still rather unhealthy. Temeswar is supposed by D'Anville to represent the an. *Tibiscus*, to which *Tibis* was banished. It was taken by the Turks, under Polymann, in 1551, who held it till 1716. (*Paget's Hungary*; *Berghaus*; *Austr. Nat. Encyc.*)

TEMPE, a famous valley and defile in the N.E. part of Thessaly, stretching from near Baba to the gulph of Salonica, from 6 to 8 m. in length, between Olympus on the N., and Ossa on the S. It is traversed by the Selembria (an. *Peneus*), and is, in parts, so very narrow that there is merely room for a military road along side the river. In some respects the defile bears a striking resemblance to the pass of Killiecrankie in Scotland; but the scenery is incomparably more magnificent. The appearance of the chasm, and the traditions current in antiquity, leave little doubt that the rocks had been rent asunder by some tremendous convulsion of nature, which opened a passage for the waters that must previously have deluged the greater part of Thessaly. In some parts it is grand in the extreme. The precipices consist of naked perpendicular rocks, rising to a prodigious height; so that the spectator can scarce behold them from below without giddiness. Livy's description, therefore, in addition to its intrinsic grandeur, has all the majesty of truth: *Rupes utrinque ita abscissæ sunt, ut despicere vis sine vertigine quadam simul oculorum animique possit: Terret et sonitus et altitudo per medium vallem fluentis Penei amnis.* (Lib. xlii. cap. 6.); *Clarke*, vii. 370.)

The character of this gorge or defile is evidently that of wildness and savage grandeur, and does not, therefore, harmonise with the descriptions the poets have given of the *Zephyris agitata Tempe* (Hor. Od. iii. v. 24.), and the *viridantia Tempe*. (Catullus, Carm. lxiii. v. 285.) No doubt, however, their descriptions apply not the pass itself, but to a vale at the mouth of the pass

TEMPLEMORE.

near the sea, which, in situation, extent, and beauty, amply satisfies whatever the poets have said of Tempe. (*Cramer's Ancient Greece*, i. 378.)

TEMPLEMORE, an inland town of Ireland, prov. Munster, co. Tipperary, about 14 m W from the Ruir, and near the E. foot of the Devil's Bit Mountains, 74 m. S.W. Dublin. Pop., in 1831, 3,936. This is a neat town, in a comparatively rich and improved part of the country. It has a handsome par. church, a Rom. Cath. chapel, a Methodist meeting house, a school on the foundation of Erasmus Smith, a fever hospital and dispensary, a market house, a bridewell, and large infantry barracks. Petty sessions are held on Wednesdays, fairs on Jan. 30., March 30., May 17., June 20., July 30., Sept. 2., Oct. 31., and Dec. 7. It is a constabulary station. Post-office revenue in 1830, 6771. In 1836, 7712.

TENASSERIM PROVINCES, the name given to a long and comparatively narrow strip of territory in India beyond the Ganges, belonging to Great Britain, comprised within the Bengal presidency, with which, however, it has no natural connection. It consists principally of the provs. taken from the Burmese in 1824-25, or of the W or coast districts of Siam, comprising Martaban, or Amherst, Ye, Tavoy, and Mergul, with its archipelago, extending between 11° and 19° N lat., and about 95° and 99° E long., having N. the independent Shan country, E. and S. Siam, and W. the Burmese empire and the Indian Ocean. Area loosely estimated at 32,000 sq m. The pop. being said to amount to only 84,800, though, notwithstanding its thinness, we believe that this is greatly below the mark, and that 180,000 would now be a nearer approximation. These provs. are shut off from Siam by one of the great mountain ranges, which, branching from the table-land of Yunnan, traverse the Ultra-Gangetic peninsula in a S. direction. This chain rises, in this part of its course, to the height sometimes of 8000 ft., and is every where clothed with dense forests. Immediately along the coast the country is an alluvial flat covered with mangroves, and more inland, wherever it has been cleared, is found to be very fertile. It is extremely well watered; the great river, Than-Iwong, or Thanloun, divides the prov. of Martaban from Burmah, and there are a variety of minor rivers, some of which are navigable to a considerable distance.

In the N. provs. the year may be divided into the rainy and dry seasons, each of about six months' duration; but the latter resolves itself into the cold and hot seasons. These last are not very distinctly marked; but the coldest months are December and January, when the thermometer is sometimes, in the morning, down to 55°, but in the hottest part of the day ranges between 70° and 80°. The hot season immediately succeeds the cold, and continues until the rain begins to fall in April or May. The rains then commence, and continue until September or October, and although during a part of this time the sun be in its zenith, yet the almost incessant fall of rain renders this season the most refreshing part of the year. The annual fall of rain, during these six months, is about 200 inches. (*Mason, in the Pinnang Gazette*.) In the S., where both the climate and products in many respects differ, it rains at least every fortnight throughout the year. The Tenasserim provs. are, upon the whole, much more healthy than many parts of India. As in other tropical climates, the most frequent diseases, common to both natives and foreigners, are, dysentery, with intermittent, remittent, and bilious fevers. They seldom prove fatal to the natives, and usually do so to Europeans only when the constitution has been impaired from other causes. The staple product is rice, of which a dozen different varieties are cultivated. Upland rice is grown on the hill sides by the Karen tribes, and much rice by the Burmese and other settlers. In the lowlands, in the beginning of April the farmer weeds his ground, and about the 1st of June, when the rains commence, he hires a drove of buffaloes, if he have none of his own, and drives them about in a compact body over the wet field until the whole soil has been sufficiently worked to receive the seed. The principal harvest is in December, when the grain is reaped by a sickle, somewhat like the English. The ears are trodden out by buffaloes, and the rice is husked and bruised by means of a wooden mortar, or by a handmill, formed of two grooved logs of wood, set upright and fitted into each other; a kind of machinery superior to that in use for the like purpose among other nations in a similar stage of civilisation. Indian corn is not much raised, but sweet potatoes, yams, beans, onions and cucumbers are common. Tobacco is cultivated all over Tenasserim, as every one smokes, "from the child of three years of age to the decrepid grandfathers; from the governor's wife to the rice bunter." (*Law's Hist. of Tenasserim*.) The sugar cane is also pretty general, though no marketable sugar be made. Cotton, hemp, indigo, pepper, &c., are only partially cultivated. Cardamoms, long pepper, catchu, and croce nuts, are gathered wild. Fruits are numerous, and the forests produce tash, aspen, aloes, and many other valuable woods, with banyan, rattans, and many balsamic and medicinal plants. Iron ore is found in Ye and Tavoy.

TENASSERIM PROVINCES. 709

tin is very abundant in the S. provs., but has not been seen in the N. Like gold, which is also widely diffused, it is obtained chiefly by washings. Trenches are dug, leading into the creeks, down which rapid streams run in the rainy season, and wash down the metallic particles. The workman goes into the water, with a wooden dish in the form of an inverted cone, and having filled it with sand and pebbles, whirles it round on the surface of the water, by which motion the lighter materials fly out, and leave the heavier down, in the vortex of the inverted cone, consisting of a tea-spoonful, or upwards, of tin and sand. Without farther cleaning it goes to the smelter, and produces, I am told, from 60 to 75 per cent. of pure metal. Although all persons, Burmese or Karens, are at liberty to procure the metal without any interference from government, yet few engage in the work; from which we may fairly infer that the returns are not remarkably profitable. (*Mason*.) Coal has been discovered in Mergul. Salt is made in numerous parts along the coast, and large quantities of salt-petre have been obtained from the bats' dung, collected in immense limestone caves in different parts of the country. The number of elephants inhabiting these provs. is supposed by Dr. Halfer to be proportionally greater than in any other part of India. The Burmese settlers hunt the elephants, and carve many kinds of articles from their ivory. Rhinoceros' horns are an article of trade, but the valuable skin of that animal is not met with in commerce, and indeed, the trade in all kinds of hides, which might be made very profitable, has hitherto been wholly neglected. (*See Halfer's Rep.* 73-3.) Wax, honey, tortoiseshell, and edible birds' nests, are the principal commercial products derived from the animal kingdom. The insect races are in great variety, and constitute one of the greatest pests of the country.

The manufactures are few; those of cloth and silk are the principal, but they have been, in a great degree, superseded of late years by the cotton goods imported from England and Hindostan. The weavers are almost exclusively women, and there will hardly, perhaps, be found a house throughout the provs. which has not a loom. The habits of Tenasserim and Mergul carry on a brisk petty trade with the ports between those towns and Rangoon. They also occasionally visit Pinang, the N.

cost on other landed produce, taxes on gaming, opium, arrack, betel, &c.; birds' nests, bees, capitation tax, &c. has been estimated at 337,000 rupees a year. (*Law's Hist. of Tenasserim in Asiat. Journal; Halfer's Report, &c.*)

Malcolm, the American missionary, has pointed out some of the advantages derived by these provinces from their connection with England. "English influence," says he, "in a variety of ways has improved their condition. It has abolished the border wars, which kept the people and their neighbours continually wretched. Various other improvements are perceptible. Coins are getting introduced instead of masses of lead and silver; manufactures are improving; implements of better construction are used; justice is better administered; life is secure; property is sacred; religion is free; taxes, though heavy, are more equitably imposed, and courts of justice are pure generally. Formerly men were deterred from gathering round them comforts superior to their neighbours, or building better houses, for fear of exactions. Now, being secure in their earnings, the newly-built houses are much improved in size, materials, and workmanship. The prevailing custom in each prov.

sits as magistrate on certain days every week; and before him every citizen, male or female, without the intervention of lawyers, may plead his cause, and have immediate redress. Every where, in British Birmah, the people praise English justice." (*Malcolm's S. E. Asia*, 173-4.) Indeed, notwithstanding the present thinness of the pop., emigration from Birmah into the Tenasserim provs. has been going on ever since we have held possession of the latter. Such, in truth, is the destructive influence of the Birmese government, that, during the time it possessed Tenasserim, it had all but converted it into a desert.

TENBY (Welsh, *Dynbych-y-Pysgod*), a parl. and munic. bor., market town and sea-port of Wales, co. Pembroke, hund. Narberth, on the summit of a promontory on the W. side of Carmarthen Bay, 9 m. E. Pembroke. Area of the in-liberty of the par. St. Mary, which is co-extensive with the bor., 322 acres. Pop., in 1831, 1,942. The town consists principally of one long and broad street, lined with good houses, and pretty well paved. It is partly surrounded with walls, and is further defended by some batteries on the shore; its castle, supposed to have been built by the Flemings, by whom this part of the country was formerly occupied, is in a state of decay. The church of St. Mary is a spacious structure 146 ft. in length and 83 in breadth, with an elegant spire 152 ft. in height, supposed to be the loftiest in Wales, and painted white to render it a conspicuous mark for seamen. The roof of the nave is supported by arcades, having fluted pillars, and the ceiling is formed of carved wood ornamented with several figures, armorial bearings, &c. In the interior are several monuments. The living, a rectory and vicarage, worth 317l. a year, is in the gift of the crown. (*Eccl. Rev. Rep.*) "An ancient edifice within a few ft. of the W. entrance is now used as a school. A flight of steps on the outside leads to the apartment near which is a small arch in the style of Henry VII., and two others occur in an old wall opposite. These are supposed to have formed the principal entrances to St. Mary's College, once a convent of Carmelite friars, founded in 1399. The remains of St. John's chapel are situated in a marshy spot 200 or 300 yards from the town. Those of St. Julian's stand upon the pier, near its extremity. Opposite the town are some wild masses of rock, forming the islands of St. Catherine, and more distant are those of St. Margaret and Caldy. Eastward stretch the Norton sands bounded by grand and high cliffs; here are several bathing machines. Round the S. and W. sides of the town are the white or whit-sands, presenting a romantic and agreeable walk, two m. in length, to Giltar." (*Nicholson's Cambrian Guide*, p. 606.) The town hall, court house, new market and slaughter houses, public baths, assembly rooms, theatre, reading-rooms, bowling green, several good hotels, &c., are the other most conspicuous objects at Tenby. The town was formerly a place of much commercial importance; and after the settlement of the Flemings here, it exported considerable quantities of woollen cloths. At present its trade is inconsiderable.

Tenby is a creek of the port of Milford. Nine or ten vessels from Plymouth, Brixholme, &c. make it their station during the fishing season, and supply the Bristol market. Its oysters, which are of superior quality, are sent pickled to London, Liverpool, and other places. Tenby is now principally distinguished as a watering-place, for which it is singularly well adapted, by the great beauty of its situation, and the protection from rough weather which it receives from the contiguous head-lands. It has grown rapidly, especially in good houses; most of which have been built within the last 20 years. A great many are occupied as lodging-houses during the season, and left empty for the rest of the year. Property of this sort appears likely to increase fast and steadily: houses are continually springing up in the many agreeable situations which are found unoccupied. (*Boundary Report*.) The public baths are both extensive and elegant; they comprise numerous bath and dressing rooms, warm and vapour baths, bed-rooms for invalids, a handsome promenade-room, &c.; and are approached by an excellent carriage road. The water of their large reservoirs is changed every tide. The bathing-machines are the property of the innkeepers: the terms 1s. each time, and 6d. the guide. (*Camb. Guide*, p. 604.)

Tenby is governed by a mayor, 3 other aldermen, and 12 councillors. Its earliest charters appear to have been granted about the time of Edward III., by the earls of Pembroke, but the earliest extant is of Richard III. Previously to the Municipal Reform Act, there were nearly 400 burgesses in the corporation, but their functions were merely nominal: and the whole management of the bor. rested with the common council, which consisted of about 40 members. The town has only a few small endowments for charitable purposes. Courts of petty sessions weekly, a manor court, &c. are held; but the only gaol consists of 2 large cells, formerly the old garriou dungeon. Prisoners are rarely confined here: when

the term of imprisonment exceeds a month, they are sent to the gaol at Haverfordwest. Corporation revenue, in 1840, 1,104l. The Reform Act did not alter the previous limits of the parl. bor., which now send 1 mem. to the H. of C., in conjunction with Pembroke, Wiston, and Milford. It had previously sent one with Pembroke and Weston only, the right of voting having been in the burgesses, who, acting under the influence of the common council, returned the nominee of the patron of the bor. Registered electors, in the different bors., 1839-40, 1,179. (See *Mun. Append.*, p. 407.) Markets, Wednesdays and Saturdays; fairs, May 4., Whit Tuesday, July 31., Oct. 2., and Dec. 4.

TENEDOS, a small but celebrated island of Turkey in Asia, 15 m. S.S.W. from the mouth of the Dardanelles (an. *Hellespontus*), and about 5 m. W. from the shore of the Troad, which it still serves to point out. Its highest summit, Mount St. Elias, being in lat. 39° 50' 15" N., long. 26° 3' E. Pop. 7,000. Though rugged, it is tolerably fertile, and well cultivated. The red muscadine wine of Tenedos, though not mentioned by the ancients, is, perhaps, the best of the Levant. It begins to lose its colour when about 14 or 15 years of age, but retains its flavour and strength for a much longer period. The town, on the N.E. side of the island, is defended by a small fort. On the N. the port is protected by a pier, and it has pretty good anchorage. In antiquity it was a sort of *dépot* for the produce destined for Constantinople; and Justinian erected in it a large warehouse, the ruins of which are still extant, where vessels loaded with corn from Alexandria discharged their cargoes when they happened to be prevented, as was frequently the case, by contrary winds, from making a passage through the Hellespont to the capital. (*Tournefort*, i. 397.)

Tenedos, according to Strabo (lib. xiii.), had a temple dedicated to Apollo; but it is principally known from its having been mentioned in connection with Troy by Homer—

"Thou source of light! whom Tenedos adores;"

Popo's Illad. l. lra. 53.

and by Virgil. According to the latter, it was the place to which the Grecian fleet made their feigned retreat before the sack of Troy:—

"Est in conspectu (Trois) Tenedos notissima fama
Insula, dives opum, Priami dum regna manebant."

Æneid. ii. lra. 21.

TENERIFFE, or TEYDE (PEAK OF), a famous conical and volcanic mountain in the centre of the island of Teneriffe, of which its basis occupies the greater portion (See CANARY ISLANDS), rising, according to Borda, to the height of 11,424 French, or 12,172 Eng. ft. above the level of the sea. According to Von Buch the Peak consists of an enormous dome of trachyte, covered with layers of basalt. The summit of the cone (*El Piton*, the sugar-loaf,) is terminated by a crater, surrounded, as it were, by a circular wall, or parapet. Humboldt, who descended to the bottom of the crater, found the heat was perceptible only in a few crevices, which gave vent to aqueous vapours, with a peculiar buzzing noise. (*Personal Narrative*, i. 173.; *Engl. Trans.*)

The ascent of the Peak is distinguished by a difference of vegetation somewhat similar to that which is observed on the ascent of Etna (which see). Above the lower and more fertile tracts near the sea, where date trees, plantains, sugar-canes, Indian figs, vines, and olives, flourish in profusion, rises what is called the region of laurels. These are fed by a vast number of springs, that rise up amid a turf covered with perpetual verdure. Extensive plantations of chestnuts occur in the lower part, above which rise four species of laurel, and an oak resembling that of Thibet. The underwood in the lower part consists of arborescent heath, and in the upper part of ferns. Above this commences a vast forest of fir and pine trees which characterise the colder regions of the earth. Succeeding to this is a vast plain, like a sea of sand, covered with the dust of pumice stone, which continually fills the air. It is embellished with tufts of the beautiful shrub called the *retama* (*Spartium nubigenum*, Alton), growing to the height of nine ft., and loaded with odoriferous flowers, which are said to communicate a peculiar excellence to the flesh of the goats that feed upon them. At the entrance of this plain the rich verdure of the island terminates, as well as all appearance of habitation; and the traveller ascends afterwards through a complete solitude. Above this sandy plain are the *Malpays*, a name which the Spaniards apply to grounds destitute of vegetable mould, and covered with loose and broken fragments of lava. The ascent here is steep, and extremely fatiguing, as the blocks of lava roll from beneath the feet, and often leave deep hollows. At the extremity of the Malpays is a small plain called the Rambleta, from the centre of which the Piton, or conical summit, rises to the height of about 2,350 feet. Here are found those spiracles which are called by the natives the Nostrils of the Peak, consisting of crevices whence issue

TENNIS

welary and hot regions. The amount of the film is strong, and rendered difficult by the same others with which it is covered. At the top there is a very small amount of sand, and the water is already dark, to show a very wet.

The view down the top of the Peak through clouds formed by previous heavy falls the shore of the magnificent glacier from the summit of Uman. The cultivated and wooded parts of the tundra are scattered over a large plain; and the many and varied directions of the upper parts of the mountain strings contrast with the smiling aspect of the country towards the coast. The atmosphere enables the observer to distinguish distinct regions such as heavy belts of woods and groups of trees. Beyond the eye wanders on and on over the vast expanse of the Arctic and encompasses the whole grandeur of the country. It has been alleged that the view extends as far as Cape Smyth on the coast of Africa.

[illegible]

Notwithstanding its proximity to the equator and to the heat of Africa, the Pond is found to be covered with dense floating spruce branches of the forest and also is always found in the business well exposed to the sun rays. A powerful boat is always left on the ground at the entrance of the river, and the natives maintain that the spirits of the dead and those of the party were taken down there. Some were taken by the heat of the sun on which they walked, and others were taken by the spirits of the dead. For further particulars see page 140 of the *Log Book*, Legation of the U. S. N. S.

[illegible][illegible]

The following items of expense are also paid out of the fund:

TEQUENDAMA (FALL OF) 771

(From today's New York Daily Mirror) has the right to vote in the case of which he has been so important for all students previously. The pay of ministers and representatives is four dollars a day. Massachusetts was the former capital, but Providence is now the seat of government. In 1860 there were 179 colleges and 111,000 students attended by 10,000 pupils, and 1,000 persons live in the state year attending the different academies and colleges. The school term, in 1860 amounted to 1,500,000 days.

The celebration of Tennessee's centennial about 1915, and the nation's entered warmly into the celebration, too. The nation's attention to the Centennial was in 1915. When it was held in the United States, and in 1915 it was moved to a date into the United States. It came to the House of Representatives (House of Representatives) in 1915. House of Representatives, House of Representatives, House of Representatives.

[illegible]

When August Day is the subject of Henry VI., Touchstone was incorporated and introduced in the town and part of day, but the morning evening chapter is that of Elizabeth. It is governed under the Moon (Arthur Act) by a dagger & swordman, and it continues, who find poetry sensitive study, and a course of several poetry first night (very rare in their life). March day Friday has been Monday & May the barren month, and poetry (Moon & Mars and very day appear).

THE CHOCOLATE BALL OF A celebrated scientist to the report of how Columbus, ascending to the summit of the Popocatepetl, a volcano a tributary of the Magdalena, a few miles W from Mexico. A short distance above the fall the river is 4 ft in breadth, but being forced into a narrow channel deep bed of only 4 ft in width, it is quite stagnant at two hundred down a perpendicular rock to the depth of 40 ft and even in very dry seasons it is still deep the velocity of down still presents a side view of 50 ft in motion. The current forms an approximation of every thing that is sufficient phenomenon in aqueous nature. This led to not in too long subsequently and the result in the world; but there is no more than a current which flows in only a slight phenomenon in vegetation a mass of water. *Illustrations of the River.* The study of some other is first part from the top from a broad view of glass appearance a little lower down a narrow a lower level and continuing in the progress downwards it shows how the nature of which nature means where there are such like the river. The nature where stands the fall is quite astonishing and some clouds of vapor are seen up which rise to a considerable height and drift with the atmosphere forming in their course the most beautiful strata. The comparative estimate of the stream which runs off from the top is that this proves that a large proportion of the water is lost by evaporation. And from 1860-1861 when given the fact of Popocatepetl's remarkable appearance to the great difference in the vegetation ascending to different parts. At the bottom the vegetation finds almost everywhere an easy with the great heights, and the pollen here was not only such and other plants the growth of which might be lost and the vegetation of Europe when suddenly to discover to Oron a narrow and at his last country producing the palm, the banana and the sugar cane. The great cause of the phenomenon lay not from antediluvian vegetation. The difference of altitude about 175 metres, is a wonderful influence on the remarkable in the great influence over the vegetation of the life. *(Illustrations, p 76, 80.)*

TERAMO (an. *Interamnia Præstutia*), a city of the Neapolitan dom., prov. Abruzzo Ultra, of which it is the cap., 947 ft. above the sea, in the angle formed by the Vezzola, where it joins the Tordino, 16 m. W. from the embouchure of the latter in the Adriatic, and 19 m. N.N.E. Monte Corno, the highest summit of the Appennines. Pop., in 1830, 10,231. It was formerly surrounded by strong walls, but is now quite open. With one exception, its streets are narrow and dirty, and its houses, for the most part, mean-looking. In the outskirts, however, some of the houses are in better taste. The cathedral has been modernized. There are several convents, hospitals, asylums, &c. It has but few manufactures or industrial establishments; but it is the seat of the civil and criminal tribunals of the prov., and has a royal college, a seminary, or establishment for the instruction of the clergy; and is the residence of several opulent families. Its vicinity is in general fertile, producing corn, wine, and oil in abundance: in the time of the Romans its wine was in high estimation:—

Tum qua vitiferos domitat Præstutia pobes
Læta laboris agro. *Silius Italicus*, lib. xv. v. 568.

Some buried arches, the vestiges of a theatre, baths, and some other edifices, are the principal remains of the ancient city. (*Del Ré Descrizione delle Due Sicilie*, li. 47., &c.; *Craven, Excurs. in the Abruzzi*, i. 310.)

TERCERA. See AZORES.

TERLIZZI, an inland town of S. Italy, kingd. of Naples, prov. Bari, cap. cant., on an elevated site, 18 m. W. Bari. Pop. said to amount to about 10,000. Notwithstanding its size, it seems to possess little worth beyond the usual superabundance of religious edifices, if we except a gallery of pictures, comprising works by several of the great Italian masters, in the mansion of a noble family.

TERMINI (an. *Therma Himerenses*, and simply *Therma*), a marit. town of Sicily, on the N. coast of the island, intend. of Palermo, cap. district and canton, near the mouth of the river of its own name, 24 m. E.S.E. Palermo, lat. 37° 57' 28"; N. long. 14° 42' E. Pop., in 1831, 18,942. It is finely situated on the declivity of a hill rising from the sea; and besides being surrounded by an old wall, is farther defended, towards the sea, by a castle on a high rock, commanding the town and port. The streets are, for the most part, narrow and dirty; but it has some pretty good public buildings, among which are several churches and convents, a royal college, 2 hospitals, a *montè-di-pietà*, an asylum for females, and convenient baths over the hot springs, for which the city has been celebrated from the remotest epoch, and from which she has derived her modern as well as her ancient name. The town is a *caricatore*, or shipping port, and exports (mostly coastwise to Palermo), corn, oil, shumac, dried fruits, mauna, &c. The sardine and anchovy fisheries are also actively carried on. The harbour, which is but indifferent, is open to the N. (*Smyth's Sicily*, p. 95; *Rampoldi*, &c.)

About 6 m. E. by S. from Termini, are the ruins of the ancient *Himera*, near which Gelon, tyrant of Syracuse, totally defeated and destroyed an army of Carthaginians, said to have comprised no fewer than 300,000 men, commanded by Hamilcar, grandfather of Hannibal, who lost his life in the action. The Carthaginians were the allies of Xerxes, and their defeat is said by Herodotus (lib. viii. cap. 166.), to have happened on the same day that the Greeks gained the victory of Salamis, anno 480 B.C. But though it be abundantly certain that Gelon gained a great victory over Hamilcar, it is extremely improbable that the forces of the latter amounted to half the number mentioned above. Hannibal never had 100,000 men at any one time under his command; and the probability is that 80,000 would be much nearer the number of Hamilcar's army than 300,000. The ships which had conveyed the troops to Himera, are said to have been drawn up on the beach; and Captain Smyth says that so great a fleet and army could not possibly have been accommodated in the situation where the battle is said to have been fought. In fact, very little dependence is to be placed on the statements as to numbers, in most ancient authors; they are almost invariably much exaggerated.

At a subsequent period Hannibal avenged his grandfather's disaster by taking and utterly destroying Himera. Such of its citizens as escaped the massacre which took place on this occasion, sought an asylum in *Therma*. (*Cicero in Verrem*, li. cap. 35.) Augustus raised the latter to the rank of a colony. Stesichorus, one of the most ancient and celebrated of the Greek poets, was a native of Himera.

TERNATE. See MOLUCCA ISLANDS.

TERNI (an. *Interamna*), a town of the Papal States, deleg. Spoleto, in a rich and fine valley, near the right bank of the Nera (an. *Nar*),

————— *Sulfureæ Nar æliæ aquæ.*
Æneid. lib. vii. lin. 614.

about 4 m. W. from the famous falls of the Vellino, and 49 m. N.N.R. Rome. Pop., circ. 9,000. It is surrounded by a wall and towers; but though it has wide streets, some tolerable buildings, and a charming situation, it is, on the whole, poor and mean, retaining but few traces of its ancient splendour. It has a cathedral with a superb altar, an hospital, a monte-di-pièta, and some other charitable foundations, a handsome theatre, and a building, erected in 1827, for the reception of the waters of the Vellino for the public accommodation. Among the remains of antiquity are some vaults of an amphitheatre constructed under Tiberius, portions of temples of the Sun and Cybele transformed into churches, and the remains of public baths. The surrounding country is extremely productive, *secundissimos Italiae campos* (Tacit. Annal. lib. i. cap. 79.); and on the river are flour and oil mills, tanneries, &c. (*Rampoldi*, &c.)

The historian Tacitus is said to have been a native of *Interamna*; but there is no evidence that such was really the case. The emperors Tacitus and Florianus are also said, but on no better grounds, to have belonged to it.

The falls of the Vellino, called the *Cascata del Marmore*, about 4 m. E. from Terni, are amongst the most striking objects of the kind that are any where to be met with. The total height of the fall, which is divided into three leaps, is probably (for there is the greatest discrepancy in the statements on the subject) from 650 to 750 ft. The water is conveyed to the fall in an artificial channel, more than 1 m. in length, originally dug by the consul Curius Dentatus, anno 214 B.C. (*Cicero, Epist. ad Atticum*, Epist. 15.); but the channel having been filled up by a deposition of calcareous matter, it was widened and deepened, and is part altered, in 1596, and again in 1785. Byron has appropriated some magnificent stanzas to a notice of these falls (*Childe Harold*, cant. iv. st. 69—72.); and he adds in a note, "I saw the Cascata del Marmore of Terni twice at different periods; once from the summit of the precipice, and once from the valley below. The lower view is far to be preferred, if the traveller have time for one only; but in any point of view, either from above or below, it is worth all the cascades and torrents of Switzerland put together." (See *Cellarii Geographia Antiqua*, i. 751—778.; *Eustace*, i. 327. oct. ed.; *Wood's Letters*, li. 97., &c.)

TERRACINA (an. *Ansur* and *Terracina*), a sea-port town of the Papal States, deleg. Frosinone, at the S. extremity of the Pontine Marshes, close to the Neapolitan frontier, 59 m. S.S.E. Rome; lat. 41° 18' 14" N., long. 15° 33' 37" E. Pop. about 6,000. This town, which is on the Applan Way, and adjoining the embouchure of the canal for the draining of the marshes, stands partly on low ground, and partly on the declivity of a hill. With the exception of the portion along the shore, it is ill built; and, owing to the deleterious air of the contiguous marshes, it is unhealthy, and the inhab. have a sickly appearance. On the hill is the cathedral, erected, as is supposed, on the site of the temple of Jupiter Anxurus; higher up are the ruins of the ancient Anxur—

"Impositum saxis late candentibus Anxur."
Hor. Sat., lib. i. sat. 5.

And crowning the brow of the rock which overhangs the modern town are the ruins of the palace of Galba, repaired and reoccupied by Theodoric, commanding a magnificent view of the Pontine Marshes, Monte Circeo, and of Gaeta and the Neapolitan shore, as far as Bala. Pope Pius VI. endeavoured, by improving the drainage of the marshes, and by clearing out and deepening the harbour, which had been completely filled up, to recover for Terracina some portion of its former importance. But his efforts have not had the anticipated success; and though the fishery be carried on to some extent from the port, it has little or no trade. In 1810, Napoleon suppressed the bishopric of Terracina.

Anxur, which was originally a town of the Volsci, subsequently became a Roman colony, and an important naval station. It was sacked by Alaric, and was occupied by the Arabs for about a century. It was also taken and sacked by a French force in 1798. (*Rampoldi*; *Cellarii Geographia Antiqua*, i. 812.; *Wood's Letters*, li. 176., &c.)

TERRANOVA (an. *Gela*), a sea-port town of Sicily, prov. Caletanisetta, cap. district, on the S. shore of the island, near the mouth of the river of the same name, 18 m. E. Alicata; lat. 37° 4' 30" N., long. 14° 15' E. Pop., in 1831, 9,780. It is well situated on a bank near the sea, and has a fine palace, belonging to its proprietor, the Duke de Monteleone; but the streets are irregular and dirty, and its castle, churches, and convents appear to be neglected. It has a tolerably good hospital. Water is said by Swinburne to be scarce and dear. Coarse cloth is manufactured in the town; and having a *caricatore*, or shipping station, it has some trade in the exportation of corn, wine, sulphur, soda, &c. The cloth made in the town finds a good market at the commercial fair

TERUEL.

held in August. The anchorage at Terranova is opposite to, and about 1 m. from the shore, in from 7 to 11 fathoms. It is, like other places on the same coast, open to the southerly gales, which sometimes throw in a heavy sea. In 1839, 67 ships (23 of which were British), of the burden of 4,881 tons, cleared out from the port. Smyth says that a party of strolling players has existed in this town for more than half a century, called the *Campagna degli Uniti*, from their all sharing alike in the gains of the society.

Though the question be not free from difficulty, there seems every reason to think that Terranova, and not Alicata, occupies the site of the ancient Gela. It has some remains of antiquity, consisting of the foundations and mutilated fragments of a great temple, and of a Doric column. Gela was a Rhodian colony, and early attained to considerable distinction. But it is principally memorable for having given birth to Gelon, prince or tyrant of Syracuse, famous alike for his virtues, and for his great victory over the Carthaginians, commanded by Hamilcar, grandfather of Hannibal. Gela was subsequently destroyed by Phintias, tyrant of Agrigentum, and is included by Strabo among the uninhabited towns of the island. The modern town was founded by Frederick of Arragon, towards the close of the 13th century. (Smyth, 196.; Straburne, ii. 301., &c.)

TERUEL (an. *Turdeto*), a town of Spain, cap. prov. of its own name in Aragon, on a hill, at the foot of which flows the Guadalaviar, 75 m. N.W. Valencia. Pop. about 8,000. It is walled, and tolerably well built. Being a bishop's see, it has numerous churches and convents; one of the latter, belonging to the Jesuits, being the largest edifice in the town. The cathedral, an extensive building, though its architecture be not wholly in good taste, is sumptuously adorned within, and has, or, at all events, had, many fine paintings. It has several fountains supplied with water by an ancient aqueduct. Its manufactures comprise woollen and linen fabrics, shoes, and earthenware, with fulling-mills, dyeing-houses, tanneries, &c. The vicinity is very fertile, and near it are some celebrated warm sulphur springs. Teruel is the residence of a military governor, and was a fortress of some consequence under the Moors, from whom it was taken by Alphonso II. in 1171. (Mikano, &c.)

TESCHEN, a town of Austrian Silesia, cap. circ. and duchy of same name, on the Olza, a tributary of the Oder, 36 m. E.S.E. Troppan. Pop. about 7,000. It is well built and has three suburbs, a ducal castle, several Rom. Cath. churches, a Lutheran church, and gymnasia for both persuasions, that of the former possessing, it is said, a library of 12,000 vols. (Berghaus.) There are several other superior schools, and a military asylum. Teschen is the seat of the circle tribunal and other courts, and has manufactures of woollen cloths, cassimeres, leather, fire-arms, &c. Here was signed a treaty between Austria and Prussia, in 1779.

TESSIN, or TICINO, the most S. canton of Switzerland, between lat. 45° 50' and 46° 37' N., and long. 8° 25' and 9° 12' E., being separated by the main chain of the Alps from Uri and the Grisons on the N., while on other sides it is surrounded chiefly by the Austrian and Sardinian territories, the lakes Maggiore and Lugano forming parts of its S. frontier. Area estimated at 1,034 sq. m. Pop., in 1850, 117,759, all Rom. Catholics. Most part of this canton is either mountainous, or divided into numerous valleys by alpine ramifications: in the S., however, it sinks to the level of the plain of Lombardy. The Ticino, whence this canton derives its name, has its sources in Mount St. Gothard, in the Valli Bedretto, Piura, Blegno, &c. Its course is generally southward, and after intersecting the canton near its centre, and traversing the Lago Maggiore in its entire length, it forms the boundary between Lombardy and Piedmont, falling into the Po at Pavia, after an entire course of about 100 m., about 60 of which are navigable. The climate of Tessin is mild; and though its pastures be not so good, nor so well watered as those of the cantons N. of the Alps, its soil is generally very fertile. Agriculture is, however, extremely backward, partly from the ignorance and want of industry of the inhabitants, and partly from the too great subdivision of the surface into small properties, portions of which at great distances from each other sometimes belong to the same proprietors. Wheat, rye, and maize are the principal grains raised; a good deal of tobacco is cultivated. Wine is grown in many districts; but, like the Italian wines, that of this canton will not keep for any considerable period. The silk of Tessin is of superior quality; and a supply worth from 200,000 to 300,000 Swiss francs is sent annually into other parts of Switzerland. (Picot.) Most of the fruits common to Lombardy flourish here: the chestnut woods are extensive, and chestnut flour is largely consumed by the inhabs. The canton abounds with timber, but much of it is useless from the want of roads and expense of carriage. About 3,000 quintals a year of cheese are sent into Italy, and calves, sheep, and hogs are also exported.

TETUAN.

773

The chamois is a native of this canton. It sometimes breeds with the domestic goat, and the resulting progeny is greatly prized for its skin. There are scarcely any manufactures, and the trade of Tessin is chiefly in the conveyance of goods between Switzerland and Italy. A great many of the male natives of the canton emigrate to Milan, Venice, Trieste, Turin, Marseilles, and the adjacent countries, where they serve as confectioners, chocolate manufacturers, waiters in coffee-houses, &c.; leaving the labours of the field and the care of the cattle to the women.

Tessin was merely a territory subordinate to Switzerland till 1815, when it was admitted into the Confederation, in which it holds the eighteenth rank. Its government was materially altered in 1830; when the grand council, which holds the sovereign and legislative power, was made to consist of 114 mems., chosen in the different communes by all the citizens born in the canton twenty-five years of age, and who possess immoveable property to the value of 200 Swiss francs, or the usufruct of such property to the value of 300 francs. It chooses its own president, and meets each year by rotation in Bellinzona, Locarno, and Lugano. The executive body, or lesser council, consists of 9 mems., chosen by the greater council among its mems. Equality before the laws, the freedom of the press, and the right of petition, are guaranteed. Tessin is subdivided into 8 districts and 38 circles, and the latter again into communes. In every commune there is a municipal council of from 3 to 11 mems., with whom rests the direction of the local police. A justice of the peace sits in each circle; in each district there is a court of primary jurisdiction; and for the whole canton there is a supreme tribunal of 13 mems. Criminal processes appear to be more common in this than in most other cantons of Switzerland. The public revenue, principally derived from salt and custom duties, in 1833-34, amounted to 897,390 Swiss livres: expenditure to 787,640 ditto. Public debt, in 1830, 5,041,459 ditto. Contingent to the army of the Swiss Confederation, 1,804 men.

The inhabs. of Tessin are of middle stature, and generally square and strongly built; though, on account, it is said, of their irregular mode of life, among other causes, they seldom attain a great age. In many respects they resemble their Italian neighbours, and their language is a dialect of the Italian. Among them have been several eminent painters, sculptors, and architects; the latter including Domenico Fontana, who completed the dome of St. Peter's, and executed many other great works in Rome. But the bulk of the inhab. are very backward in point of education, and some of the communal magistrates can neither read nor write. It has no council of public instruction, no literary association (except, perhaps, in Lugano), and scarcely a library. The habits of the people are dirty and depraved. According to Picot, "*L'éloge de la sobriété Italienne ne convient au canton du Tessin, ni sous le rapport de la boisson, ni sous celui du manger. Quoique doués naturellement des dispositions les plus heureuses, ils manquent d'amour du travail, d'industrie, et de ressources, en sorte qu'ils sont inférieurs aux autres peuples de la Suisse en moralité et en aisance, malgré tout ce que la nature a fait pour eux.*" (Picot, Statistique de la Suisse, p. 474-490.; Ebel, &c.)

TETBURY, a market-town and par. of England, co. Gloucester, hund. Longtree, near the source of the Avon, 16½ m. S.S.E. Gloucester. Area of par., 4,980 acres. Pop., in 1841, 2,982. The town consists of several streets, meeting in its centre, in which is a large market-house. It is well built, the houses being mostly of stone. The par. church is a handsome edifice: having, with the exception of the tower and spire, been rebuilt in 1781. It has chapels for Independents and Baptists, a grammar-school, a well-endowed Sunday school for all the poor children of the par., an almshouse for 8 poor persons, &c. The businesses of woolcombing and wool-stapling are carried on, but to no great extent. The supply of water used formerly to be very deficient; but the deficiency has been obviated by the sinking of several deep wells. Markets on Wednesdays; fairs, four times a year, for corn, cheese, cattle, lambs, and horses. A fortified camp, probably of the ancient Britons, formerly existed here; and Roman coins have been frequently dug up in and near the town.

TETUAN, a town and sea-port of Morocco, kingd. Fez, prov. Hashat, on the shore of the Mediterranean, 83 m. S.E. Tangier. Pop. said to amount to 16,000; of whom 9,000 may be Moors, 4,200 Jews, 2,000 blacks, and 800 Berbers. (Gräberg af Hemsö.) The town stands on the declivity of a hill crowned with a square castle, the residence of the governor. It is of considerable extent, and its walls are flanked in different parts with square forts, on which a few pieces of ordnance are mounted. Cannon are also placed on the castle, and on a square tower at the mouth of the river forming the port; but it could not oppose any effectual resistance to a European force. The streets are narrow and dirty, and as in Fez and other cities of Morocco, many are

nearly covered in by the upper stories of the houses. The latter are frequently of two stories, and tolerably well built and finished; and there are several good mosques. In commercial importance Tetuan ranks next to Fez, from which place it receives the goods brought by the caravans from Tunis, Algiers, Alexandria, Timbuctoo, &c. Wool, corn, and other provisions, wax, hides, cattle, leather, some manufactured stuffs, and other African produce, are exported to Spain, France, and Italy, in return chiefly for European manufactures. The port of Marteen is about 2 m. from the sea, on a small river, the mouth of which is now so choked up with sand as to admit only of the entrance of small craft. The roadstead, formed by a high point of land which runs out into the sea W. of the river, is sheltered from W. winds, but during the prevalence of those from the E. vessels must retire to some other place. Tetuan was formerly the residence of several European consuls; at present, however, no Europeans being allowed to reside in the town, their functions are performed by vice-consuls, who are mostly Jews. (*G. of Hemsö, Imp. dal Marocco; Mod. Trav.* xx.)

TEWKESBURY, a parl. and mun. bor., market-town, and par. of England, co. Gloucester, hund. Tewkesbury, on the Avon, near its confluence with the Severn, on the border of Worcestershire, 9 m. N.E. Gloucester, and 90 m. N.N.W. London. Area of the mod. parl. bor., which is identical with the par., 1,890 acres. Pop., in 1831, 5,740; in 1841, 5,721. It consists of two principal thoroughfares, meeting in the form of the letter Y, and from which many smaller streets branch out. The three principal streets are wide and respectable, but the other streets are inferior, and are principally occupied by the poor and labouring pop. (*Mun. Bound. Rep.*) The town is nearly insulated by the "Mill Avon" (an ancient cut, by which the Avon has been nearly diverted from its original channel), and its tributaries, the Carran and Swillgate brooks; and it is in consequence compactly built. Many of its houses are handsome, and it is well paved and lighted with gas. The rivers encircling the town are crossed by several bridges; and, in 1826, an elegant cast-iron bridge, having an arch 172 ft. in span, was thrown over the Severn, about $\frac{1}{2}$ m. from the town. The par. church, which formerly belonged to a flourishing Benedictine abbey, that grew out of a monastery founded here in 715, is a large and noble structure. Its length is 317 ft. within the walls, and that of the transept 122 ft.; the choir and side aisles are 70 ft. in breadth, and the W. front 100 ft.; the height from the area to the roof is 120 ft.; and the height of the tower is 152 ft. Mr. Rickman says of this church, that it "is one of the most curious and magnificent edifices in the county. The nave is Norman, the piers are round and very lofty; at the intersection of the cross is a very fine Norman tower, adorned with arches both within and without, in several stages. The choir has a multangular east end, with additional chapels and a chapter-house, all of excellent decorated character; the windows of the aisle and transepts are some decorated and some perpendicular. The W. window is perpendicular, inserted into a very lofty Norman arch of great depth, with shafts and mouldings. In the windows of the choir are considerable remains of ancient stained glass. There are some traces of the cloister remaining on the S. side of the nave; they were perpendicular and very rich. There are several portions of very good screen-work and stalls. The abbey gate is standing, though much dilapidated." (*Gothic Architect.*) It has many fine old monuments. The living of Tewkesbury, a vicarage in the gift of the crown, is said in the Ecclesiastical Report to be worth only 313*l.* nett, but it is affirmed to be worth above 500*l.* The market-house, a handsome structure, has Doric columns and pilasters, supporting a pediment in front. The town-hall, the lower part of which is used for the courts, and the upper part as a council-hall and assembly-room, was erected in 1788 by Sir William Codrington. The other public buildings include various dissenting chapels, a theatre, the borough gaol, and house of industry. Tewkesbury has a free grammar-school, founded in 1576; blue-coat, national, and Lancastrian schools, with almshouses, a dispensary, lying-in-charity, and several other benevolent establishments. The town formerly produced considerable quantities of woollen cloth and a superior kind of mustard. Its principal manufactures consist of cotton hosiery. Wages of the weavers vary from 3*s.* to 8*s.* a week, the average being about 6*s.* A few parties are also employed in the bobbinet-lace trade, and in the making of nails. The carrying trade up the Severn and the corn-market have declined since the improvements in the navigation at Gloucester and the construction of the railroad between Stratford and Moreton; but, on the whole, the town is still in a thriving state.

Tewkesbury has returned 2 mems to the H. of C. since the 7th of James I. The right of voting, down to the Reform Act, was in freemen and holders of burgage tenements, of whom there were then 500. Registered electors, in 1849-50, 378. The mun. is co-extensive with the parl. bor. The town is governed by a mayor, 4 al-

dermen and 12 councillors. It has a commission of the peace, a separate court of quarter sessions, a court of record for debts not above 50*l.*, &c. Corporation revenue, in 1847-8, 828*l.* Markets, Wednesday and Saturday, for corn, cattle, poultry, &c.

In a field in the immediate vicinity of the town, still called, from the circumstance, the "Bloody Meadow," was fought, on the 4th of May, 1471, a decisive engagement between the Yorkists, under Edward IV., and the Lancastrians, under Queen Margaret and her son. The Lancastrians were totally defeated, with the loss of a great many persons of distinction, and about 3,000 soldiers left on the field. Margaret and her son having been taken prisoners, the latter was immediately assassinated. (*Bound. and Munic. Reports and Append.; Hume's England*, cap. 22.)

TEXAS, formerly an independent republic of N. America, but since 1845 incorporated with and forming one of the U. States of N. America. Its limits formerly extended from the 26th to nearly the 39th deg. N. lat., and between the 93rd and 107th deg. W. long., being separated from Mexico on the W. and S. by the Rio Grande, or Bravo del Norte, and by the Red River and Arkansas river from the territories of the U. States. But it has been proposed by Congress, and the proposition will no doubt be agreed to, that Texas should, under certain conditions, relinquish a considerable portion of her N. W. territories, which are to be incorporated into the new state or territory of New Mexico; that her boundary on the N. should be the line of 36° 30' lat. as far W. as the 103rd deg. of long.; and that her W. and S. W. boundary should be formed by a line drawn S. from the point where the above-mentioned degs. of lat. and long. intersect each other to the 32nd deg. lat.; thence W. on that parallel to the Rio Grande; and then along that river to its embouchure. Texas will still have the Gulf of Mexico on its S. E. frontier, while on the E. the river Sabine will divide it from Louisiana. Within these limits it will probably have an area of above 200,000 sq. m. Pop., in 1850, 150,000, of whom 30,000 were slaves.

The general aspect of the country is that of a vast inclined plane, gradually sloping from the mountains on the W. eastward to the sea, and intersected by numerous rivers, all having a S. E. direction. The territory may be divided into three separate regions, differing in many respects from each other. The first or level region extends along the coast, with a breadth inland varying from 100 m. to 70 and 30 m. The soil of this region is principally a rich alluvium, with scarcely a stone, yet singularly free from stagnant swamps. Broad woodlands fringe the banks of the rivers, between which are extensive and rich pasture lands. The second division, the largest of the three, is the undulating or rolling-prairie region, which extends for 150 or 200 m. farther inland, its wide grassy tracts alternating with others that are thickly timbered. These last are especially prevalent in the E., though the bottoms and river valleys throughout the whole region are well wooded. Limestone and sandstone form the common substrata of this region: the upper soil consists of a rich friable loam, mixed indeed with sand, but seldom to such an extent as to prevent the culture of the most exhausting products. The third or mountainous region, situated principally in the S. W., includes the Sierra Guadalupe, a portion of the Mexican Alps, and a desert tract at the foot of the mountains. It has been little explored and is without settlements. The mountain sides are clothed with forests of pine, oak, cedar, and a great variety of trees and shrubs, and they inclose extensive alluvial valleys, most of which are susceptible of irrigation and culture.

After the rivers already named, the principal, proceeding from N. to S., are the Neches, Trinidad, Brazos, Colorado, and Nueces. They all fall into the Gulf of Mexico, or rather (except the Brazos) into its bays and lagoons. The latter bear a considerable resemblance to the halts along the S. shore of the Baltic, except that they are upon a much larger scale; and the coast, as Humboldt has stated, presents everywhere formidable obstacles to navigation, in the long, low, narrow belts of land by which it is fenced, and which bound the lagoons; in the want of harbours for vessels drawing more than 12½ feet water; and in the bars at the mouths of the rivers. Still, however, steam vessels have been able to enter and ascend these rivers to a considerable distance. The Colorado is obstructed by a raft about 10 m. above its mouth, but measures are in progress for removing this, when it is anticipated that it will be navigable for small steamers as high as Austin, the cap. of Texas, about 220 m. from its mouth. The Rio Grande del Norte, a noble stream, having an estimated course of 1,800 m. will most probably, though in parts broken by rapids, become hereafter an important commercial channel. Galveston Bay, into which the Trinidad flows, by far the finest on the coast, is about 35 m. in length, N. and S., and from 12 to 18 E. and W. Its average depth is from 9 to 10 feet, but in the channel there are from 18 to 30 ft. water.

The Texan year is divided into a wet and a dry season.

The first object of the farmer, after building a small and temporary log-house, is to enclose a sufficient space of the open land adjoining, by the erection of a rail fence. He then proceeds to break up the land with a light plough, which is usually drawn by oxen. A yoke of large oxen, broken, is worth from 30 to 60 dollars: a horse, for general agricultural purposes, about 20 dollars. The Texan farmers generally content themselves with one ploughing previously to planting. Manuring is altogether dispensed with. The seed-time for maize, cotton, and most other crops, is in February and March. A few hoeings to destroy weeds, to thin and to earth up the young plants, is all that is required on the part of the farmer to bring them to perfection." (*Iken's Texas*, 51, 52.)

In many parts of the rolling prairie region, coal of a superior quality, and iron ore have been found; and it has been supposed that beds of these valuable minerals extend over a great part of the country. Silver mines were wrought towards Santa Fé, in the N.W., till the works were destroyed by the Comanche Indians. Nitre abounds in the E.; salt is obtained from numerous lakes and springs; and bitumen in several places. Granite, limestone, gypsum, shale, &c. are abundant, except in the low alluvial region.

Probable Progress of Texas.—The reader will have already seen that we are disposed to entertain some considerable doubts with respect to the statements as to the extraordinary fertility of Texas. But admitting them to be true to the letter, still we should not be at all sanguine as to its future progress, and should think that European emigrants would do well to pause before they decide on establishing themselves in Texas. The soil is too fruitful, and the climate, especially in the lower and more fertile parts of the country, is decidedly too hot and relaxing to permit of any laborious employment being vigorously prosecuted by free labourers. Had the free importation of slaves into Texas been permitted, its progress might, and, most probably, would have been as rapid as that of the other Southern States of the Union. But the importation of slaves into Texas, except from these states, is prohibited; and if the supply from this quarter should fail, and the prohibition of their importation from other quarters be really enforced, its progress will, we apprehend, be comparatively slow. It is a contradiction and an absurdity to suppose, that free settlers, in such a country, should exhibit any considerable portion of the energy and industry they would exhibit if they had to cultivate a less fertile soil, or were placed under a severer climate. Mexico may be referred to in illustration of this principle: industry is in it at the lowest possible ebb (*see Mexico*); though it is needless to add that the incentives to labour are there quite as great as in Texas. And does any one suppose that the cultivation of cotton and sugar would have been carried to near its present extent in Louisiana, Alabama, and other states of the Union, but for their all but unlimited command of slave labour? We, therefore, are well convinced that the future progress of Texas will depend principally on the fact, whether it can or cannot derive ample supplies of slave labour. If it can (whether by natural increase or by importation from the other states is in this respect of no importance), the fair presumption is, that it will make a rapid progress; whereas, if it cannot, its progress will, most probably, be comparatively slow; and we should anticipate that, under such circumstances, its inhabs. will gradually fall into the same state of semi-barbarous indolence into which the Mexicans have already sunk.

The geographical position of Texas is eminently favourable to the growth and extension of commerce. Its rivers and the facilities which the country affords for the completion of railways, will enable the traders and agriculturists to forward their produce easily to the coast; whence it may be forwarded to the European markets, and to those of Cuba and the West Indies generally. In exchange for the cotton and other products sent to Great Britain, the Texans import British manufactured goods, not only for their own consumption, but partly, also, for the supply of the N. states of Mexico. Indeed, Santa Fé has been, since 1825, the great emporium of N. Mexico; and in it the traders of that country meet those of the U. States; the former purchasing the manufactures brought by the latter with peltry and bullion, so that a good deal of specie reaches the U. States by this route. The annual amount of the trade at Santa Fé was estimated, in 1834, at 2,000,000 dollars; and, in 1841, Iken estimated it at 3,000,000 dollars. Most of the articles for this trade are purchased in Philadelphia, whence they are transported overland to Pittsburgh, where they are shipped for St. Louis, being thence conveyed in waggons to Santa Fé, which they reach after a journey of at least 4,000 m. From St. Louis to Santa Fé, about 1,200 m., the road is extremely bad, running through a country so infested by hostile Indians, that the U. States government is obliged usually to send an escort of cavalry with the larger caravans. But Santa Fé is only 600 m. from the Texan coast, so that it may

not unreasonably, perhaps, be anticipated, that eventually Galveston, and other Texan ports, will be the principal routes by which European goods will reach N. Mexico. As already stated, a good deal of Texan cotton wool is exported to Europe from New Orleans, to which it is brought by way of the Red River, without its appearing to be the growth of Texas. In addition to cotton, hides, deer, otter, beaver, and other skins, cattle and other stock, and bullion from Mexico, are the principal articles of export. But the foreign trade of the state is so very limited, that the value of the exports from Texas, in the year ended 30th June, 1849, was only estimated at 82,791 doll., and that of the imports at 16,600 do. Money is very scarce in Texas: not one sale in ten is made for cash; and Mr. Iken is entitled to credit for recommending "shippers to be cautious as to the extent of their consignments, and to recollect that, however great the commercial prospects of the country may be, it is at present only a new market, whose own consumption must necessarily be limited, and the channels of whose interior or transit trade are as yet but very partially opened." (Pp. 66, 67.)

The tariff in force in Texas is, of course, that of the U. States, and the rules and regulations observed in regard to the importation of goods into the other parts of the Union are observed here. The currency weights, &c., are similarly calculated, except that land measures and a few others are identical with those of Mexico. The principal Texan ports of entry are Galveston, Matagorda Bay, and Aransas, to all which pilots are attached. Vessels of about 250 tons, or not drawing more than 10 or 11 ft. water, are those best suited to the trade. (*Iken's Texas*, &c.) The tonnage duties on merchant ships in the Texan ports are 60, and those on steamers 30 cents per ton.

The governor is elected for 2 years, and is not again eligible for a similar term. The legislative power is vested in the congress, composed of a senate, and a house of representatives. The latter body consists of 66 mems., who are biennially chosen by universal suffrage, and each of whom must be at least 25 years of age, and have resided in the co. or district which he represents for the 6 months next preceding his election. The senators, of whom there are 21, are chosen every 4 years, by districts as nearly equal in free pop. as practicable. Ministers of religion are ineligible to a seat in either house of congress. All mems. of the government are paid for their services: the governor's salary is 2,000 dollars a year, that of the deputy governor, 3 dollars a day, and that of mems. of congress 3 dollars a day, during session, and 3 dollars for every 25 m. travel. The governor and dep. gov. must each be full 35 years of age, and have been inhabs. of the state for 3 years preceding their election. The different branches of public business are conducted by committees appointed by the legislature.

Texas is subdivided into about 40 counties. It is further divided into 10 judicial districts, in each of which is a judge. There is, also, a supreme court, with a chief and two puisne judges, chosen for 6 years; their salaries are 2,000 dollars a year each, no distinction being made in favour of the chief. Sessions are held once a year at Austin, the cap. of the state, commencing on the second Monday of December. The court has appellate jurisdiction within the limits of the state; but in criminal cases, and appeals from interlocutory judgments, it is under legislative regulations. Judges are nominated by the governor, and confirmed by two-thirds of the senate; they may be removed by an address of two-thirds of both houses. The judges of the district courts are chosen for 6 years, and hold a court twice a year in each county. The district courts have original jurisdiction in all criminal cases, and in all suits in which more than 100 dolls. are at stake.

The principal towns are Austin, Galveston, Houston, Washington, Goliad, and Sabine. Houston and Galveston have each about 5,000 inhabs. Slavery is permitted; and the number of slaves, in 1850, amounted, as previously stated, to about 30,000. Most of these slaves have been brought from the contiguous states by planters who have emigrated to Texas; for, as already stated, the importation of slaves from elsewhere is declared to be piracy punishable with death. Unreasonable or cruel treatment of a slave is punishable by a heavy fine. There are several schools and colleges in Texas; and bible, temperance, &c. societies are already numerous.

The total debt of Texas, inc. the debt of the late republic and the interest due on the same, amounted, in 1849, to 11,050,201 doll. The resources of the state are said to be real and personal property of the value of 45,939,997 doll., tax thereon 91,980 doll., and poll taxes, 1 doll. each, to the amount of 18,504. It is also stated that the state has 184,386,920 acres of vacant and unappropriated land. The average annual expenses of the state amounted, in 1849, to 90,000 doll. The school fund then also amounted to 17,073 doll. In 1850, the state had 10,776 militiamen, whose services are sometimes required

against the Comanches, and other hostile Indian tribes of the N. and W.

Previously to 1690, Texas formed a remote and merely nominal part of the conquests of Cortez, inhabited almost wholly by predatory Indian tribes; but in that year the Spaniards, having driven out a colony of French who had established themselves at Matagorda, made their first permanent settlement in the country. On the consummation of Mexican independence, Texas was constituted one of the federal states of Mexico in conjunction with the adjacent state of Coahuila; a union very unpopular with the Texans, and which was productive of the first disagreement with the central government. The war of separation commenced towards the end of 1835, and on the 21st of April, 1836, the independence of Texas was finally secured by the defeat of the Mexican president, Santa Anna, at San Jacinto. After a lengthened negotiation Texas was finally admitted into the American union, 29th December, 1845. (For further particulars we beg to refer the reader to *Kennedy's Texas*, 2 vols. 8vo., and the shorter compendium of Iken; from which works we have derived most of the statements in this article.)

TEXEL (THE), an island belonging to Holland, at the entrance of the Zuyder-Zee, off the point of the Helder, at the N. extremity of the prov. of North Holland, from which it is separated by the channel, about 2½ m. across, called Mars-Diep, its most southerly point being in about lat. 53° 1' N., long. 4° 46' E. It forms a canton of the arrond. Alkmaar; length N.E. to S.W. 13 m., and where broadest nearly 6 m. in width. Pop. from 5,000 to 6,000. It is low, and in part marshy, but is defended from the irruptions of the sea, partly and principally, by a line of *dunes*, or sand-banks, which extend along its W. coast, and partly by strong dykes. The district of Eyerland (country of eggs), so called from the vast numbers of eggs deposited by the sea-fowl on its shores during the breeding season, was formerly a distinct island, having been united to the Texel by a dyke in 1630. The soil, which is extremely fertile, is mostly employed in the feeding of cattle and sheep, the latter being of a peculiarly fine long-woolled breed. The inhab., who occupy a town, Burg, in the centre of the island, and some villages, in addition to agriculture, engage in fishing, boat-building, &c., and act as pilots. There is an excellent roadstead on the E. coast of the island, which is the usual place of rendezvous for merchantmen from Amsterdam, waiting for a favourable wind to leave the Zuyder-Zee. The number of sand-banks make the approach to the island difficult; and on the W. side it is all but inaccessible.

During a tremendous storm in February, 1825, the sea broke through the dykes by which the island is defended, and laid a large portion of its surface under water, destroying great numbers of cattle and sheep, and otherwise occasioning a heavy loss of property. The breach, however, was soon after repaired, and it is now supposed to be better protected than ever.

Several naval engagements have taken place off this island. Of these, the most celebrated was that between the Dutch fleet under the famous admiral the senior Tromp, and the English fleet under Monk, afterwards Duke of Albemarle, on the 31st of July, 1653. The action was maintained with the utmost vigour on both sides, till the death of Tromp, who was shot through the heart by a musket-ball, decided it in favour of the English. (*Busching, Géographie Universelle*, xiv. 137., Fr. ed. of 1779; *Dict. Géographique*; *Campbell's Lives of the Admirals*, ii. 35., ed. 1785.)

THAME, or TAME, a market-town and par. of England, co. Oxford, hund. Thame, on the Thame, a tributary of the Thames, 12 m. E. Oxford. Area of par. 5,310 acres. Pop. in 1841, 3,060. The town consists of three principal streets, uniting in a spacious market-place. It has also a market-house, over which is the town-hall. The par. church, a large well-built cruciform structure, comprises a nave, two aisles, a N. and E. transept, a chancel, and has a fine embattled tower, supported by four meagre pillars. The interior is of noble proportions, and contains numerous monuments, but is ill laid out, and spoiled by irregular galleries, &c. The united living of Thame, Towersey, Tetsworth, and Sydenham (two vicarages and two curacies), worth 300*l.* a year, is in the gift of — Long, Esq. Near the church are some remains of the prebendal house of Thame, now occupied by offices belonging to the parsonage farm; and in Thame Park, about 1 m. S.E. the town, considerable portions of an ancient Cistercian monastery adjoin the mansion. In 1558 Lord Williams established a free school, "of noble dimensions," at Thame: it is open to all boys of the par. and in trust of the warden and fellows of New College, Oxford, who nominate the master, subject to the approbation of the Earl of Abingdon. It had a high character during the 17th century, but is now much fallen off. Another free school, an almshouse for five poor people, and various annual do-

nations to the poor, exist here. The pop. is mostly agricultural; lace-making by women and children is the only manufacture. The Thame, being navigable for barges, promotes the traffic of the town, and the market is well supplied with corn and cattle. Thame is supposed to have been a Roman station, and was of some consequence in the time of the Saxons, and during the civil wars of Charles I. The famous constitutional lawyer, Sir John Holt, Chief Justice of the King's Bench, was a native of this town, where he first saw the light in 1642. Market, on Tuesday; fairs, Easter Tues. and Old Michaelmas day, for cattle, &c. (*Beauties of England, Wales, Oxfordshire, &c.*)

THAMES, a river of England, being the largest in that part of the U. Kingdom, and, in a commercial point of view, one of the most important in the world. It rises in Gloucestershire, being formed by the junction of the Isis, Lech, Colne, and Churnet, rivulets which have their sources in the Cotswold Hills. The first, which is the most important, rises on the borders of Wiltshire, a little to the S.W. of Cirencester: it flows E. by Cricklade; and, being augmented by the other streams, the combined river takes the name of Thames, and becomes navigable for barges at Lechlade, on the confines of Gloucestershire and Berkshire. Its course is thence N.E., till, being farther augmented by the Windrush and the Evenlode, from the borders of Gloucestershire, it turns, a little to the N. of Wytham-house, to the S. After passing Oxford, it bends suddenly to the W. by Nuneham Park to Abingdon. Having again resumed its southerly direction, it is joined, a little below Dorchester, in Oxfordshire, by the Thame.

This latter river has several sources, of which the most remote are in the central parts of Buckingham, near Kreslow and Wendon Lodge. They unite at Thame in Oxfordshire, from which point, to where it joins the Thames, it is navigable.

It may here be proper to state, that, according to the common opinion, the Thames obtained its name (said to be Thame-Isis, shortened to Thames) from the junction of the Thame with the Isis, or with the river coming from Gloucestershire. Probably, however, this opinion, notwithstanding its apparent accuracy, has no good foundation. At all events, it appears to be abundantly certain that the river which passes Lechlade, formed by the junction of the rivulets already referred to, has from a very remote period been called the Thames; and that the name Isis, given to it by the literati of Oxford, is not mentioned in ancient charters or by ancient historians, and is wholly unknown to the common people in the country through which it flows. (*Camden's Britannia*, Gibson's edition, i. 100.; *Campbell's Political Survey*, i. 139.)

From Wallingford, a little below the influx of the Thame, the river flows almost due S. till, passing Basildon Park, it turns E. to Reading, where it is joined by the Kennet: it then flows N.E. to Great Marlow; thence S. to Maidenhead, and S.E. by Windsor and Staines, till it receives the Wey. Its course is then E., with many bold sweeps, to London; and flowing through the metropolis, and being augmented by the Lea from Hertfordshire, and the Darent, it continues its course E. till it unites with the sea at the Nore light, 45½ m. below London Bridge.

The distance from London Bridge to Lechlade, where the Thames becomes navigable, following the windings of the river, is 146½ m.; the total rise from low-water mark at the former to the latter being about 258 ft. This ascent is overcome by means of several locks, constructed at different periods, of which the first is at Teddington, 18½ m. above London Bridge; this, consequently, is the limit to which the tide flows. The low-water surface of the river, from Teddington Lock to London Bridge,

falls about 10 ft. 9 in., or about 100 in. a mile on an average. The high-water mark at Teddington is about 1 ft. 6 in. above the high water mark of the bridge, and the time of high water is about two hours later. The average fall in the bed of the river from Teddington to London Bridge is about 1 ft. a mile; the breadth of the river at London Bridge is 600 ft.

Though not a rapid, the Thames is by no means a sluggish river, it runs forward with an equable and steady current, and is remarkable for the purity of its waters. It has been admirably described by Dickens, in *His Copper's Life*—

"Though deep, yet clear; though gentle, yet not dull;
Strong without rage, without disturbing fall."

But it is as a navigable and commercial river on its banks, and bearing on it the ships brought with the produce of every climate, that the Thames is distinguished. Its depth of water is on an average 10 ft. London enjoys peculiar advantages; even at low tide there is from 1 to 10 ft. water to the fair way of the river above Greenwich, and the mean range of the extreme springs is about 10 ft. The river is, in fact, navigable as far as Deptford for ships of any burden; as Blackwall for those of 1,000 tons, and to the St. Katherine's Docks, adjoining the Tower, for vessels of 800 tons. As already stated, it is navigable by barges to the confines of Gloucestershire, and the navigation is thence continued by canals through Cirencester and Stroud to the Severn, but the usual water communication between London, Bath, and Bristol is by the Kennet, which unites with the Thames at Reading. The conveyance of goods by this channel usually occupies about seven days, and the navigation is hindered, particularly between Reading and London, by much interruption from droughts, floods, &c. The whole course of the river from its source to the sea, is reckoned at from 210 to 216 m.

The removal of the old London Bridge has caused a considerable change in the river above, and also, though in a less degree, below the bridge. Owing to the contracted arches through which the water had to make its way at the old bridge there was a fall of from 4 ft. 9 in. to 1 ft. at low water; this fall is now reduced to about 3 ft., so that the low water line above the bridge is nearly 1 ft. lower at spring tides than formerly. In consequence, a greatly increased body of tidal water flows up and down the river; and as it flows with an obstruction, it flows off.

The effect of this is in the river, the influence is slightly felt as far up as Putney Bridge. The shores above Putney and Moulsey are gravel, and, near low water, firm. The channels are also and there can be little doubt that, in the distant period, be left firm.

Before the removal of the old bridge, the water was further than Putney Bridge. But, under similar conditions, 4 m. further up, before using oars, and, with a little help, one may reach Richmond, and, taking horses there, may get to Teddington in a tide. The descent down the river has been equally sufficient, the mean velocities of the flow and ebb, between London Bridge and Westminster Bridge, are, flood, 3 m. an hour; ebb, 2½ m. ebb, 2½ m., ebb, 2½ m.

Of the tributaries of the Thames, the Kennet, Wey, Lea, and Great Ouse are navigable, and are, therefore, the only ones that we need notice.

"The Kennet ebb, for above all removed,"

flows on Marlborough Downs, in Wiltshire, and, pursuing an easterly course, falls into the Thames at Reading. It has been made navigable as far as Newbury, where the canal previously mentioned is opened, by Devens and Bradford, to Bath and Bristol. The Wey falls into the Thames near Oatlands; it has its source in the eastern part of Hampshire, and has been rendered navigable from Godalming to the Thames, a distance of about 30 m. The first navigation made in England are said to have been constructed on this river. The Lea rises in the chalk hills near Luton, in Bedfordshire, and, preserving a southerly course, falls into the Thames near the East India Docks. It has been made navigable by collateral cuts and otherwise, as far as Northolme. This navigation, which is of considerable importance, began to command the attention of the legislature as early as 1616, in the reign of Henry VI. It has not yet, however, received all the improvement and extension of which it is capable. Formerly an *Antient Navigation*, &c. p. 411. The Great Ouse has its source near Wetherham, in Kent; it falls into the Thames about 4 m.

"We were entitled for these details to the late John Simpson, Esq., engineer."

below Dartford, to which it is navigable. (*Statistics of British Rivers*, 180.)

THAMES (ISLE OF). See Kent.

THAXTED a market-town and par of England, co. Essex, bond Diocese, on the Chelmer near its source, 34 m. N.E. London. Area of parish, 3,500 acres. Pop. in 1861, 2,367. The town is irregularly built, and, excepting the church has no public edifice worth notice; this is a large and fine structure, in the perpendicular style, its earliest existing part probably dating from the middle of the 14th century. It is built of red brick, with a transept between the nave and chancel, its internal length is 100 ft., breadth, 27 ft.; and at the W. end is a tower, with a very rich crocheted spire, 161 ft. in height. The whole fabric is embellished and supported by strong buttresses, ornamented by sculptured eagles and pinnacles, curiously perforated. The N. porch is richly ornamented with sculpture, and the screen and upper part charged with various figures. Above the entrance are two arcades, one containing the arms of France and England, and the other those of the House of York, a part of the edifice having been constructed at the command of Edw. IV., the rest chiefly at that of the noble families of Clare and Mortimer. The nave is vaulted, being not so wide as either of the aisles. Most of the buttresses of the aisle are enriched with panelling, and have fine pinnacles. Some of the windows are square-headed, their tracery has been much mutilated. The church had, at one time, a considerable portion of fine stained glass, which has, however, long been gradually diminishing. (*Antiquary, Gough's Architecture*). The living, a vicarage, is in the gift of Lord Maynard, is worth £60 a year. Thaxted has a meeting-house for several sects, a par. school for 50 scholars, an endowment of nearly £1,000, by Lord Maynard, in 1660, for general charitable purposes, and many minor charities. It was a manor till the reign of James II., when, on the corporate officers being served with a writ to remove the privileges were dropped, and the former gift of the manor was restored. The town is of high antiquity, its church being mentioned in the time of Edw. the Confessor. Markets on Fridays: Gild, Monday before Whits. and Aug. 10, for horses, &c. (*Par. Repertory*, &c.)

THESSE, THESE, or DIOSPOLIS (the city of Jupiter), a once famous, but long ruined city of Upper Egypt, the cap. of the kingdom of the Pharaohs when in the zenith of their power and whose remains seemed to excite and magnify all that the most lively imagination could figure to itself. The ruins are situated in about lat. 26° 40' N., long 30° 30' E. in the narrow valley of the Nile, stretching about 7 m. along both banks of the river, and extending to the mountains on either side. One might suppose, seeing the vast magnitude of the public edifices, that the private buildings would be in a corresponding style of magnificence; but Diodorus tells us that the Egyptians were little concerned in respect of the latter, and, at all events, all traces of private houses have disappeared; and temples, palaces, colossal statues, obelisks and tombs, alone remain to attest the wealth and power of its inhabitants. Thesem was undoubtedly one of the most sacred, as well as one of the greatest and most splendid of cities. Its most flourishing period was probably from about 1700 to about 700 B.C. Herodotus has alluded to her in terms which, but for the ruins, might have been deemed extravagant.

"Her old ruins Thesem's towers with ample,
The world's great capital on the Egyptian plain—
That speaks her ancient era a distant scene;
And points her towers through a forest of grass;
For hundred herons and two hundred swans
From each side pour forth many a cry."

Pope's *Essay*, b. iii. 235.

Modern travellers have not been able to find any distinct traces of walls round the ruins, and the opinion has prevailed from a very remote epoch, that Thesem, in the passage now referred to, did not allude to ruins in the city walls, but to the gates of the different temples, or, in Ptolemy's Nile, to the palace of the king of Egypt (ib. i. cap. 9). Probably, however, the ruins, by this expression, merely meant to convey a faint idea of the prodigious size and power of the city.

The seat of government had been removed from Thesem to Memphis (near Cairo), previously to the invasion and conquest of Egypt by the Persians under Cambyses. This event took place about 525 B.C., when, according to Diodorus, the Persians plundered and set fire to Thesem. It appears, however, to have, in some degree, recovered from this disaster. But after the conquest of Egypt by the Greeks, their whole attention was directed to the improvement and embellishment of Alexandria, so that the cities in Upper Egypt, and especially Thesem, progressively declined in importance and power. It fell into disrepair by its having revealed against Ptolemy Philopater by whom it was ultimately reduced, and

"It has been supposed that the name Thesem is derived from Egyptian word Thesem (the city)."

given up to military execution. In Strabo's time it was only partially inhabited. In the earlier ages of the Christian era it was still of some little consequence; but for these many centuries it has been only inhabited by a few wretched Copts and Arabs, who, with bats and owls, occupy miserable hovels, mostly in the courts, and sometimes on the roofs of the ancient structures.

The principal ruins on the E. or Arabic side of the river are those of Carnac and Luxor, about $1\frac{1}{2}$ m. apart. The first of these, which there can be no doubt is the temple of Ammon, the Jupiter of the Egyptians, is described by Diodorus as a vast structure, or rather collection of structures, the principal being erected on an artificial elevation. It has various entrances, the avenues to which have been flanked on each side with rows of sphinxes. The principal front to the Nile is of enormous magnitude, being 368 ft. in length by 148 ft. in height, with a doorway in the middle 64 ft. in height. Entering this superb gateway, and passing through a large court, we pass between two colossal statues through another propylon, entering by a flight of steps to a vast hall, the roof of which, consisting of enormous slabs of stone, has been supported by 134 huge columns. This gigantic hypostyle hall is about 338 ft. in width, by $170\frac{1}{2}$ ft. in depth, so that its area comprises 57,629 sq. ft., being considerably more than $1\frac{1}{4}$ acre, or more than 5 times the area of St. Martin's church, Trafalgar Square, London; and yet this magnificent hall does not occupy one seventh part of the space included within the walls of the temple! (*Egyptian Antiquities; Library of Entertaining Knowledge*, i. 89.) The entrance to what is supposed to be the adytum of this famous temple is marked by 4 noble obelisks, each 70 ft. in height, but of which 3 only are now standing. "The adytum consists of 3 apartments, entirely of granite. The principal room, which is in the centre, is 20 ft. long, 16 wide, and 13 high. Three blocks of granite form the roof, which is painted with clusters of gilt stars on a blue ground. The walls are likewise covered with painted sculptures of a character admirably adapted to the mysterious purposes mentioned by Herodotus, on the subject of the virgins who were introduced to the Theban Jupiter. (*Herod.* i. 182.) Beyond this are other porticoes and galleries, which have been continued to another propylon at the distance of 2,000 ft. from that at the W. extremity of the temple." (*Hamilton's Egyptiaca*.)

The great temple is supposed to have had 4 grand entrances, one fronting each of the cardinal points. Deducting its porticoes or propyla, the length of this stupendous structure, measured on the plan of the French savans, is 1,215 ft., and its least breadth 321 ft.; so that its area must be rather above 9 acres! And "besides the great edifice, with its propyla, obelisks, and avenues of colossal sphinxes, it has magnificent temples to the N. and S., altogether forming an assemblage of remains such as, perhaps, no other spot on earth can offer." (*Egyptian Antiquities*, i. 94.)

Champollion says, with reference to the ruins of Carnac, "*Là m'apparut toute la magnificence Pharaonique, tout ce que les hommes ont imaginé et exécuté de plus grand. Tout ce que j'avais vu à Thèbes, tout ce que j'avais admiré avec enthousiasme sur la rive gauche, me parut misérable en comparaison des conceptions gigantesques dont j'étais entouré. Il suffira d'ajouter qu'aucun peuple, ancien ni moderne, n'a conçu l'art d'architecture sur une échelle aussi sublime, aussi large, aussi grandiose, que le firent les vieux Egyptiens: ils concevaient en hommes de 100 pieds de haut; et l'imagination qui, en Europe, s'élève bien au-dessus de nos portiques, s'arrête, et tombe impuissante au pied des 140 colonnes de la salle hypostyle de Karnac.*" (*Lettres Ecrites de l'Egypte*, &c., 98.)

The palace of Luxor (*El kusr*, the ruins) about $1\frac{1}{2}$ m. S. from Carnac, on the same side of the river, though inferior in size to the latter, is also a structure of vast dimensions. Its principal entrance facing the N. is most magnificent. On either side the doorway stood two obelisks, or monolithes, each formed out of a single block of red granite, 80 ft. in height, about 8 ft. square, and most beautifully sculptured. Recently, however, one of these obelisks has been taken down and conveyed at an immense expense to Paris, where it has been erected in the Place de la Concorde; but it is as little in unison with the objects among which it is now placed as a Pharaoh would be at the court of the Tuilleries, and it is to be regretted that it should have been separated from the venerable structure of which it formed so splendid an ornament. Between the obelisks and the propylon are two colossal statues, each measuring about 44 ft. from the ground. The entire palace is about 800 ft. in length, by about 200 ft. in breadth. It is in a very ruinous state; but though most part of the outer walls have been thrown down, the greater number of the columns in the interior are still standing. It is sadly encumbered with the hovels of the modern Copts and Arabs, and with the accumulated filth and rubbish of centuries. The victories of Sesostris are sculptured on the

E. wing of the propylon and on other parts of the palace with infinite spirit, and the greatest amplitude of detail. "It was impossible," says Mr. Hamilton, "to view and reflect upon a picture so copious and detailed, without fancying that I here saw the original of many of Homer's battles, the portrait of some of the historical narratives of Herodotus, and one of the principal groundworks of the stories of Diodorus; and to complete the gratification, we felt that, had the artist been better acquainted with the rules and use of perspective, the performance might have done credit to the genius of a Michael Angelo or a Giulio Romano. Without personally inspecting this extraordinary edifice, it is impossible to have any adequate notion of its immense size, or of the prodigious masses of which it consists. In both these respects, and, combined with them, in respect to the beauty and magnificence of its several parts, it is, I should imagine, unrivalled in the whole world." (*Egyptiaca*, 121.) This palace is supposed to have been founded by Amenophis Memnon, about anno 1650 B. C.

The ruins on the W. or Libyan side of the Nile are not less interesting than those on its E. side. About 2,500 ft. from the river are two sitting colossi, each about 50 ft. in height, and seated on a pedestal of corresponding dimensions. The probability seems to be, that the most northerly of these colossi is the statue of Memnon, which has obtained an immortality of renown, from its being believed to have emitted a sound when it was first struck by the rays of the morning sun! (See Vol. I. 751.) Champollion has, however, shown, from the hieroglyphics on its back, that this famous statue really represents the Pharaoh Amenophis II., who reigned about anno 1680 B. C. These statues are supposed, by the same distinguished authority, to have decorated the façade of the principal front of the celebrated structure, the *Ameinophon* of the Egyptians, and Memnonium of the Greeks. But if such be really the case, the destruction of this building has been incomparably more complete than that of any one else of the famous structures belonging to the city; and it is now, indeed, next to impossible to form any thing even like a ground plan of the ruins. (*Lettres d'Egypte*, 307.)

Between Medinet-Abou and Kournak are the remains of a noble building, about 530 ft. in length and 200 ft. in breadth, supposed by some to be the tomb of Osymandes, described by Diodorus, but which has been more generally supposed to be the Memnonium. Champollion, however, has shown that neither of these suppositions is correct; and that it was built by, and had in fact been the residence of Rhamses the Great, or Sesostris, the most illustrious of the Egyptian monarchs. The *Rhamesseion*, for such is its proper name, is very much dilapidated; but its immense and noble proportions, and the beauty of its sculptures, make it one of the most interesting, as well as magnificent, of Theban structures. Between the propylon and the front of the palace, a distance of about 56 paces, are the fragments of a stupendous colossal statue of Rhamses the Great. It has been broken off at the waist, and the upper part is now prostrate on the ground. This enormous statue measures 63 ft. round the shoulders, and 13 ft. from the crown of the head to the top of the shoulders. The barbarian energy exerted in its destruction has been such, that nothing of the general expression of the face can now be discerned; and, as Mr. Hamilton has truly stated, "Next to the wonder excited by the boldness of the sculptor who made it, and the extraordinary powers of those by whom it was erected, the labour and exertions that must have been used for its destruction are the most astonishing." (P. 167.)

It would be to no purpose, even did our space permit, to attempt giving any account of the innumerable hieroglyphics, pictorial tablets, and bas-reliefs on the ruins of the Rhamesseion. They principally relate to the triumphs of its illustrious founder, and his adoration of the gods of his country. The author of *Scenes and Impressions in Egypt* alludes as follows to the representation of the victories of Sesostris:—"The hero, as compared with the rest of the figures, is of great size; he stands erect in his chariot; his horses on their speed—a high, cloud-pawing gallop; his arrow drawn to the head; the reins fastened round his loins: you have the flight of the vanquished; the headlong fallings of the horse and the chariot: you have the hurrying crowd of the soldiers on foot; a river; drowning; the succouring of warriors on the opposite bank; and, in a compartment beyond, you have a walled town; a storm; the assailants climbing ladders; the defenders on the parapet; the upheld shield; the down-thrust pike; a sad but yet a stirring picture, bringing to your mind many a historic scene, alike memorable and melancholy." (P. 95.)

The following, according to Champollion, is the dedication of the great hall of the palace, sculptured in the name of the founder, in beautiful hieroglyphics, upon the architraves of the left side:—

"Haroeris, all-powerful, the friend of truth, the lord of the upper and lower regions, the defender of Egypt,

parties alternately prevailed. Owing to her proximity to Athens, from which, of course, she had everything to fear, Thebes was for a lengthened period what may be called the natural enemy of Athens, and during the Peloponnesian war was the most efficient ally of Lacedæmon. But after the failure of the expedition against Syracuse had broken the power of Athens, and Thebes had no longer any fear of her hostility, dissensions began to spring up between her and Lacedæmon, and the Thebans, under their great leaders Pelopidas and Epaminondas, acquired a decided superiority over the latter, and became for a short while the leading Greek state.

After the battle of Chæronea, in which the Thebans bore a principal part, Philip placed a garrison in the citadel of Thebes; but, on his death, the Thebans rose in arms against his son, Alexander the Great. The latter, however, having taken the city by storm, *anno* 335 B. C., razed it to the foundations, the house that had been occupied by Pindar being alone excepted from the general destruction; such of the inhab., amounting, it is said, to 30,000, as had not been killed, being at the same time sold as slaves. (See *Mitford's Greece*, vii. 339., 8vo. ed., and the authorities there quoted.)

But about twenty years after this catastrophe, the city was rebuilt by Cassander, when the Athenians, forgetting the ancient animosities that had subsisted between them and the Thebans, generously contributed towards the reconstruction of the walls. Subsequently the city underwent many vicissitudes. It appears to have suffered from the exactions of Sylla. Strabo calls it a poor village (lib. ix.); and Pausanias, who describes its temples and other remains, says, that, with the exception of the temples, the lower town was wholly destroyed. (Lib. ix. cap. 7.) The fertility of the surrounding plain, which produces corn, wine, and oil in the greatest abundance, and the excellence of the air and water, appear to have been the principal cause why Thebes has been able to survive so many disasters, and is still a considerable and increasing town.

Thebes is particularly famous in the early and heroic ages of Greek history. "*Nec cedentes Athenis claritate, que cognominantur Bœotie Thebæ, duorum numinum, Liberi atque Herculis, ut volunt, patriæ.*" (Plin. Hist. Nat. lib. iv. cap. 7.) The stories, also, of Laius, Jocasta and Œdipus, and their unfortunate progeny, and of the wars of the seven chiefs and their descendants, the Epigoni, against Thebes, have supplied topics of the deepest interest that have engaged the attention of the greatest poets of antiquity and of modern times.

The air of the Bœotian plain is less pure than that of Attica, and this circumstance was pretty generally believed in antiquity to be the cause of the dulness of the Thebans, who, speaking generally, wanted the quickness, penetration, and vivacity, that distinguished the Athenians. But this difference of character was probably owing rather to a difference in the education and institutions of the two people than to any difference of soil or climate. In respect of illustrious men, Thebes need not fear a comparison with any city of ancient or modern times. The names of Hesiod and Pindar, of Pelopidas and Epaminondas, are alone sufficient to illustrate and ennoble a nation. It was, indeed, as already stated, the extraordinary talents and virtues of the latter that raised his country to a preponderating influence in the affairs of Greece. It deserves, also, to be mentioned, to the honour of the Thebans, that the odious practice, tolerated in other Greek states, of exposing children at their birth, was forbidden in Thebes. (In addition to the authorities already referred to, see *Clarke's Travels*, vii. 61., &c., 8vo. ed.; *Dodwell's Greece*, i. cap. 9.; *Voyage d'Anacharsis*, cap. 34.; *Ancient Universal History*, vi. p. 180—200., &c.)

THEISS (an. *Tybis*), a great river of Hungary, being the most important of the tributaries of the Danube, parallel to which it flows in the lower part of its course through the great Hungarian plain. It has its sources in the Carpathian Mountains, on the confines of the Bukowine, within a short distance of the sources of the Pruth, in about lat. 48½° N., long. 24½° E., being formed by the junction of two streams, the Black and the White Theiss. Its course, which throughout is extremely tortuous, is first generally W.N.W. to Tokay, from which point it flows with innumerable windings, S.S.W. and S., till it enters the Danube, nearly opposite to Salankement, in lat. 45° 10' N., long. 20° 25' E., after a course of at least 500 m., taking only its more important windings into account, for the greater part of which it is navigable. It constitutes the line of separation between 2 of the 4 great divisions of Hungary, thence called Hungary-on-this side- (or N. and W.), and Hungary-beyond- (or S. and E.) the Theiss. Its chief tributaries are the Bodrog, Schajo, with the Hernad, and Zagyva on the right, and the Szamos, Körös, Maros, &c., with the other principal rivers of Transylvania, on the left. The area of its basin is estimated by Berghaus at upwards of 6,000 sq. m. (*All. Länder*, &c., iv. 756) The traffic on the Theiss is at present

mostly confined to the conveyance downwards of salt (from the co. Marmaros, in which it rises), and of timber in rafts. "Hitherto no steam-boat has been established on the Theiss; but from the extreme richness of the surrounding country, the size and importance of many of the places on its banks, and above all from the exceedingly bad roads in its neighbourhood, there can be little doubt that the establishment of steam navigation will be undertaken before long. The depth, width, and force of the stream of the Theiss are as favourable as could be desired; but it is objected that the windings of the river require to be cut off by canals; and in some cases 30 or 40 miles would be saved by a cut of 3 or 4. Should the canal be formed between the Danube at Pesth and the Theiss at Szoluck, as is contemplated, this river will assume an importance far greater than is at present imagined. The slow muddy waters of the Theiss seem to suit the fish better than those of any other river in Hungary. It is said that, after an overflow, they have been left in such quantities as to be used for feeding the pigs, and manuring the ground. The sturgeon of the Theiss, though smaller than that of the Danube, is remarkable for its fatness and delicate flavour." (*Page's Hungary and Transylvania*, i. 478, 479.)

THERMOPYLÆ (from *θερμός*, hot; and *πύλη*, a gate, or pass); a famous defile on the shore of the Malian Gulph, on the N.E. coast of Greece, near the mouth of the Hellada (an. *Sperchius*), between the steep precipices at the E. termination of Mount Œta and the sea, in about lat. 38° 52' N., long. 22° 39' E. The defile is about 5 m. in length, and, where narrowest, was not, anciently, more than 60 paces across. *In cuius valle ad Maliacum sinum vergente iter est non latius quam sexaginta passus. Hæc una militaris via est, qua traduci exercitus, si non prohibeantur, possunt.* (Liv. lib. xxx. cap. 15.) At present the only practicable road through the strait is by a narrow causeway, on either side of which is an impassable morass, bounded on the one side by the mountains, and on the other by the sea. This pass is now, as in antiquity, the principal, and, indeed, almost the only road by which Greece can be entered from the N. E.; and as it may be defended by a comparatively small force, its occupation is of the utmost importance for the defence of the country. At the narrowest part of the pass are hot springs, a circumstance which, as seen above, has given the defile its peculiar name. (*Clarke's Travels*, vii. 317., &c., 8vo. ed.)

It was in this pass, as every body knows, that, *anno* 480 B. C., the Spartan king Leonidas, with about 4,000 Greeks, resisted for a while the whole force of the Persian army invading Greece under Xerxes. After the Persians had succeeded in opening a passage by another route across the mountains, Leonidas, having dismissed almost all the other Greeks, devoted himself with 300 Spartans, in obedience to the laws, which forbade Spartans, under whatever disadvantage, to fly from an enemy, and, agreeably to the answer of the oracle, a sacrifice to insure the independence of his country. (*Herodotus*, lib. vii. cap. 210—228.) This event has given Thermopylæ all its interest, and will make it be held in "everlasting remembrance." After the final defeat of the Persians a magnificent monument, the ruins of which still remain, was erected in honour of Leonidas and his heroic companions. It had an inscription, said by Cicero, by whom it has been translated, to have been written by Simonides (*Tuscul.*, i. cap. 42.), and which has been rendered into English, as follows:—

"To Lacedæmon's sons, O stranger, tell
That here, obedient to their laws, we fell!"

The ground near the Sperchius, on which the army of Xerxes was encamped during the attack on Thermopylæ, could not possibly have accommodated his troops had their numbers approached to anything like those specified by Herodotus. But there cannot be so much as the shadow of a doubt that these are grossly, and, indeed, ludicrously, exaggerated. To suppose, as is stated by the venerable father of history, that the army which Xerxes led to Thermopylæ and his fleet comprised 5,283,220 troops, sailors, and male followers of all descriptions (*Herod.* lib. vii. cap. 187.), exclusive of women, eunuchs, &c., is a palpable absurdity. It may be confidently affirmed that no such force ever was brought together, and that if it were it could neither be fed nor kept together for the shortest period. If we estimate the troops, seamen, and other followers of all kinds employed by Xerxes in this expedition at 500,000 individuals, we shall certainly be not within, but far beyond, the mark. The statements of Herodotus are founded merely on rumour, which is always sure to exaggerate that which is really great; and the Greeks were particularly prone to magnify their exploits beyond all reasonable bounds.

THETFORD, a parl. and mun. bor. of England, chiefly in the co. Norfolk but partly in Suffolk; being separated by the little Ouse into 2 unequal parts, connected by an iron bridge, constructed in 1829, at the intersection of the roads from Newmarket to Norwich, and

from Rottesdale to Lynn; 26 m. S.W. by W. Norwich, and 70 m. N.E. London. Area of parl. bor., which comprises the 3 pars. of St. Cuthbert, St. Mary, and St. Peter, 8,270 acres. Pop., in 1841, 3,844. The town is straggling, and irregularly built, with little trade or manufactures; but it does not appear to be decaying, and has a clean and respectable appearance. It is not paved, lighted, nor watched. It has increased of late years very little beyond its former limits. (*Bournd. and Mun. Corp. Rep.*) St. Peter's, called the "black church," from being constructed mostly of flint, was principally rebuilt in 1789; it is provided with buttresses, battlements, &c. The living is a rectory, worth 55*l.* a year. St. Cuthbert's and St. Mary's (which last par. is in Suffolk), are both perpet. curacies, the former worth 50*l.* and the latter 83*l.* a year. All the livings are in the gift of the Duke of Norfolk. The guildhall is a fine old building, erected in the time of Charles II. The market-house, roofed with iron; the jail, a large but ill-contrived building; the bridgwell, workhouse, several dissenting chapels, and a theatre, occasionally opened, are the other principal buildings. An hospital for two poor men and two women, and a free grammar school, were established in the reign of James I.; and it has besides, almshouses founded in 1680, a national school, funds for apprenticing poor children, and many minor charities. Thetford is governed by a mayor, 3 other aldermen, and 12 councillors: its earliest extant charter is of William III. It has no commission of the peace, but petty sessions and a court of record are held weekly. The corp. revenue is principally derived from the tolls on navigation from Thetford to White House ferry, under local acts; gross amount in 1847-8, 853*l.* Thetford has sent 2 mems. to the H. of C. since the reign of Edward VI.: previously to the Reform Act the right of voting was vested in the mayor, burgesses, and commonalty. The limits of the parl. bor. were not affected by the Boundary Act. Reg. electors, in 1849-50, 210. The town is a polling place for the W. div. of Norfolk. Thetford is generally supposed to occupy the site of the *Sitomagus* of the Romans. During the Heptarchy it was the cap. of the East Anglian kingdom, and on the E. side of the town are remains of intrenchments, &c., supposed to date from that period. In the time of Canute a convent was founded in the town, some remains of which are still extant. The gateway, &c., of a priory, founded in 1104, and some traces of a monastery, established at a later period, may also be seen. In the reign of Edward III., it is said to have had 24 principal streets, 5 market-places, 20 churches, 8 monasteries, and 6 hospitals, besides other public foundations; but these statements are of doubtful authenticity, and are most probably much exaggerated. It has been occasionally visited in more modern times by some of the British sovereigns, particularly James I., who had a hunting-seat in the neighbourhood. Among the natives of Thetford who have attracted notice, the most celebrated by far was Thomas Paine, author of the once famous but now forgotten pamphlets entitled "Common Sense," "Rights of Man," "Age of Reason," &c. Paine was born on the 29th of January, 1737; his father, who was a stay-maker in Thetford, belonged to the Quakers. Markets, Sat.; fairs, May 14., Aug. 2. and 16., for sheep; Sep. 25., for cattle, cheese, and toys.

THIBET, or TIBET (native *Toup'ho*, *Bhote*, and *Puë-koachim*, "snowy region of the north"), a very extensive region of Central Asia, mostly comprised within the Chinese empire, between lat. 22° and 31° N. and long. 72° and 104° E., having N. Chinese Turkestan and the Desert of Gobi; E., the Chinese prov. of Se-tchuen; S., Yun-nan; N., Birmah, and the Great Himalaya, separating it from Assam, Bootan, Sikkim, Nepaul, and the upper British provs.; and W. the Punjab territories N. of the Himalaya, Budukh-shan, the Beeloot Tagh Mountains, &c. The W. parts of this vast tract, called Little Thibet (including Ladakh, Lé, Baltee, &c.), appear, however, to be independent of China. Its boundaries on every side but the S., being so uncertain, and our knowledge of the country so limited, it is impossible to form any thing like an accurate estimate either of its area or pop. Thibet, though it does not include the highest summits of the Himalaya, comprises a large portion of the elevated table land in the centre of the continent, with the sources of almost all the great rivers of S. Asia, including the Indus, Sutleje, Ganges, Brahmaputra, Irrawadi, Than-lweng, and Menam-kong or river of Camboja, as well as those of the great Chinese rivers, the Yang-tse-kiang, and Hoang-Ho. Its mountain-chains generally run parallel to the Great Himalaya, of which Thibet is the N. slope; but some are said to stretch in a N.E. direction to the frontiers of Koko-nor, and others extend from N. to S. between the valleys of the great rivers in the S.E. Thibet has numerous lakes; the chief are the Tengkir-nor, the largest, about 110 m. N.W. Lassa, and the lake Palte or Yamo-rouk, S. of the San-po river, which surrounds in the form of a ring a large island of a shape similar to its own. (*Chinese Reports*, &c.)

According to Mr. Turner, there is a very striking contrast in the face of the country in passing from Bootan into Thibet. "Bootan presents to the view mountains covered with perpetual verdure, and rich in forests of large and lofty trees, while not a slope or narrow slip of land between the ridges lies unimproved. Thibet, on the other hand, strikes a traveller at first sight as one of the least favoured countries under heaven, and appears to be in a great measure incapable of culture. It exhibits only low rocky hills, without any visible vegetation, or extensive arid plains, both of the most stern and stubborn aspect, promising full as little as they produce. Its climate is cold and bleak in the extreme, from the severe effects of which the inhabs. are obliged to seek refuge in sheltered valleys and hollows, or amidst the warmest aspects of the rocks. Yet the advantages that the one country possesses in fertility and in the richness of its forests and fruits, are amply counterbalanced in the other by its numerous flocks and invaluable mines. As one seems to possess the pabulum of vegetable, in the other we find the superabundance of animal life. The variety and quantity of wild-fowl, game, and beasts of prey, flocks, droves, and herds in Thibet, are astonishing. In Bootan, except domestic creatures, nothing of the sort is to be seen." (*Turner's Thibet*, &c., p. 216.)

The same division of the seasons prevails here as in Bengal. The spring, from March to May, is marked by a variable atmosphere, heat, thunder-storms, and occasionally refreshing showers. From June to Sept. is the damp season, when heavy and continued rains throughout most parts of the country swell the rivers, which bear off the surplus waters to augment the inundation of Bengal. From Oct. to March a clear and uniform sky succeeds, seldom obscured either by fogs or clouds, and for the first three months of this season a degree of cold is felt, among the lofty mountain ranges of the S., far greater, perhaps, than is known to prevail in Europe.

This region is remarkable, at all seasons, for the dryness of the winds, and meat and fish are prepared for carriage to any distance, and will keep to any season of the year, by being dried up by exposure to the frosty air. Vegetation is frequently dried to brittleness, and every plant may be rubbed between the fingers into dust. (*Turner*, p. 303.)

Gout, syphilis, and smallpox appear to be the most severe diseases in Thibet, and, unfortunately, are very prevalent. Syphilis is said, by an English surgeon, to make a more rapid progress, and rage with more violence here than in any other country. (*Saunders*, p. 410.) Catarrhs and rheumatism are more frequent than in Bengal.

Of the geology of Thibet we have only scattered notices. Moorcroft found that the hills in parts of Little Thibet consisted apparently of clay-slate, fragments of granite, quartz, &c. being strewn upon their sides. (*Moorcroft's Travels*, i. 439.) The latter rocks, with primary limestone, talc, and similar formations, seem to enter most largely into the mountain ranges, where they are often interspersed with beds of clay and sand, and occasionally of chalk. Tincal is obtained in inexhaustible quantities; rock salt is met with in many parts, and nitre effloresces abundantly on the surface of the soil. Gold is found in lumps and irregular veins, or in the form of dust in the rivers, and is frequently of great purity. There are mines of lead, silver, copper, and cinnabar, but few if any of iron, though chalybeate springs are very frequent. The difficulty of procuring fuel for smelting the less valuable ores proves an insuperable obstacle to success in mining: timber of all kinds is rare, and the dung of animals is the only substitute for fire-wood. The discovery of a coal mine would be an invaluable acquisition to Thibet.

The usual crops are, barley, coarse pease, and wheat. The first forms by far the largest proportion of the whole; wheat never enters into the food of the poorer classes, and rice is not cultivated. A brief notice of the agriculture and vegetable products of Little Thibet will be found under the article *LADAKH* (*ante*, p. 131.). Turnips and radishes are almost the only garden vegetables, and fruits are of little variety. For most vegetable products, and, indeed, medicinal plants, Thibet is dependent on Bootan, Nepaul, and the other countries S. of the Himalaya.

Among the useful animals of Thibet, sheep merit a distinguished rank. The flocks of these are numerous; and upon them the chief reliance of the inhabs. is placed. A peculiar variety, which seems indigenous to the country, is of small size, with black heads and legs, and soft wool; their mutton, which is almost the only animal food used in Thibet, being said by Mr. Turner to be the finest in the world. The sheep are occasionally employed as beasts of burden, being laden with salt, grain, &c. They are the bearers of their own coats to the best marts, where the wool is usually made into a narrow cloth resembling frieze or thick coarse blanketing. The skins of both sheep and lambs are commonly cured with the

wool on; and, in order to secure a silky softness of the fleece, the ewes are sometimes killed before their time of yearning, when their skins bear a high price in China and all over Tartary. (Turner, p. 302.) The Thibet goat (*Capra hircus*), which affords the valuable material for the shawl manufacture, feeds, like the sheep, in large numbers together. These are perhaps the most beautiful among the whole tribe of goats. Their colours are various; black, white, of a faint bluish tinge, and of a shade something lighter than a fawn. They have straight horns, and are of a lower stature than the smallest sheep in England. The material used for the manufacture of shawls is of a light fine texture, and clothes the animal next the skin. A coarse covering of long hair grows above this, and preserves the softness of the interior coat. The creature is, no doubt, indebted for the warmth and fine quality of the latter to the nature of the climate and country it inhabits. On removing some of the goats to the hot atmosphere of Bengal, Turner says they quickly lost their beautiful clothing, and a cutaneous eruptive humour soon destroyed almost all their coat. He was also unsuccessful, after repeated trials, in attempting to acclimatise the animal in England. (Turner's Thibet, p. 356.) Recently, indeed, the Thibet goat has been naturalised in France; but it is quite certain, from the great difference of the climate, that the wool will, in no long time, lose all its distinguishing and most valuable qualities. The most valuable species of cattle is the yakk, or grunting ox (*Bos grunniens*), which is also indigenous to the country. Their cows supply an abundance of rich milk: they are very useful as beasts of burden, and throughout Hindostan their bushy tails are in great request as chowries to drive away flies, &c. For agricultural labour, small cattle, like those of Bengal, are chiefly employed. Most of the native animals of Thibet, as the bare, bharal (*Ovis ammon*), dog, &c., have long furry coats. Among the wild animals, perhaps the most curious is the musk deer, which delights in excessive cold. It is about the height of a moderately-sized hog, which it closely resembles in the figure of the body. It has a small head, a thick and round hind quarter, no tail, and extremely delicate limbs. The hair with which it is covered is prodigiously copious, and grows erect all over the body, in some parts to between two and three inches in length, thin, flexible, and undulated. Its colour at the base is white, in the middle black, and brown at the points. The musk is a secretion formed in a little bag at the navel, and found only in the male. The musk deer, valuable for this product, is deemed the property of the state, and is hunted only by permission of government. (Turner, p. 206.)

At the end of the last century, the valley of Jhansu in Thibet was particularly famous for the manufacture of woollen cloth, for which there was an extensive demand. The cloths, which were confined to two colours, garnet and white, seldom exceeded half a yard in breadth, and were woven very thick and close. A good deal of cloth is also said to be made at Lassa, great quantities of a red colour being annually exported into China. Moorcroft describes the process of weaving at Piti, in Little Thibet, as follows:—"The two ends of the warp are fastened together, and it is then stretched upon two rods, one fixed to the body of the weaver (who is invariably a woman) by a cord, which admits of the work being loosened or tightened at pleasure, and the other well fastened to some stones at a distance, equal to half the length of the cloth. The whole is close to the ground, on which the workwoman sits, but the portion close to her is slightly elevated by a third rod; loops, each including a thread, and received upon a small stick like a rattan, supply the place of a heddle: of these there are three sets, which draw up parts of the warp alternately as required. A large heavy mesh, into which a thin bar of iron is inserted, is a substitute for the reed, and three or more heavy strokes are made with its armed edge upon every thread of the woof. The last instrument must be taken out after the insertion of each piece of yarn, and when placed perpendicularly, with its two edges separating the warp, abundance of room is given for the passage of the balls of worsted made use of without the covering of a shuttle. This part of the process is tedious, but the warp is prepared in a quick and simple way: several pegs are driven into the ground, so near each other that the whole may be reached without any material movement of the body; the yarn is fastened to one of them, and carried on round the others till a sufficient quantity has been wound; all are then taken out except three, which have their places supplied by rods, and the warp only requires spreading. Every woman knows how to weave, but only half their number may be considered as employed in the manufacture, for if a house contain two, one is usually busy in domestic affairs. 26,000 yards, 17 inches wide, may be fabricated annually in the Piti district, of which about half is exported." Further N. a coarse loom is in use, not very unlike that common in Europe. Several varieties of cloth are manufactured; some thick and heavy, with a long nap, others fine. All the wool used is of a

coarse kind, and in consequence the finer cloths have a hardness, something similar to that of camlet or plaid, to which they are little inferior. Very good sackings is also made of the hair and wool from the yakk. (Moorcroft, Trav., p. 71-74.)

Thibet has, from time immemorial, been a country of considerable traffic; but here, as in Bootan, foreign trade is monopolised by the government, and a few of the first officers of state. The commerce is principally with China, the Chinese trade being carried on partly at Sin-ning, a garrison town on the W. frontier of China, and partly at Lassa, by caravans, which come there in October. These consist of 500 or 600 persons, who bring goods on cattle, mules, and sometimes horses, exchanging tea, silver bullion, brocades, fruits, &c., for fine and coarse woollen cloths, gold dust, and Bengal goods. The imports from China are large. Turner was informed, that in the territory of Teshoo Loomboo tea to the value of 60,000*l.* or 70,000*l.* sterling was annually consumed, and Bootan is supplied with tea from Thibet. The other imports from China are tobacco, quicksilver, cinnabar, furs, porcelain, musical instruments, European cutlery, pearls, coral, &c. From Bootan and Bengal Thibet receives English broad-cloths, piece goods, Allahabad cloth, kim-cots, coarse sugar, tobacco, indigo, paper, rice, sandal-wood, spices, gums, and otter skins. Many of these articles come through Nepal, which receives all its Chinese imports through Thibet. The trade with Assam is very limited, but small quantities of rice, coarse silk, iron, stick lac, &c. are imported; from Turkestan come horses and camels. From Ladakh E. Thibet receives dried fruits, shawls, gamboge, saffron, &c. The general returns of Thibet are in gold dust, silver, tincal, musk, woollen cloths, goat and lamb skins, and rock salt; the goats' hair is almost all sent through Ladakh to Cashmere for the manufacture of the Cashmere shawls. (See vol. i. p. 552. of this Dict.)

Moorcroft says that in Little Thibet traffic is carried on chiefly by barter, and money is almost unknown. Salt, wool, turquoises, sheep, and goats, are imported from Chan-than, or Chinese Thibet, and are paid for with grain, woollen cloth, and horses. From Bisahar and Kulu (to Piti) come iron, cooking utensils, brass, copper, tobacco, rice, dried fruits, tea-cups, timber, amber, &c., paid for in a similar way. The iron and metal vessels of the S. are sent to L., in exchange for tea, coarse cloth, coral, and dyeing drugs. (Trav. ii. 71.) Further details respecting the trade of Little Thibet will be found in the art. LADAKH (*ante*, p. 131.).

The modes of conveyance in Thibet differ altogether from those of Bootan. In the latter all species of goods are carried on the shoulders of the people, chiefly the females: in Thibet, they are conveyed by the chowry cattle, horses, mules, and asses. The horses, which are very docile, are not natives of Thibet, but mostly brought from Turkestan, after having been carefully emasculated, to prevent their propagating their species.

China has been justly celebrated for her magnificent bridges and public works, but Thibet is far from sharing in this celebrity. Over one river, crossed by Mr. Turner, was constructed a long bridge, upon 9 piers, of very rude structure. "The piers were composed of rough stones, without cement; but to hold them together, large trees, with their roots and branches, had been inserted; and some of them were vegetating. Slight beams of timber were laid from pier to pier; and upon them large flat stones were loosely placed, that tilted and rattled when trod upon: and this, I fear, is a specimen of their best bridges. Many were extremely dangerous to pass over." (P. 229.) The boats, also, used to cross the rivers are of a very rude kind; some are made chiefly of leather, consisting of a rude skeleton of wood, with thwarts and ribs, over which a bull's hide is stretched.

The country is politically divided into Wei and Tsang, or Hither and Farther Thibet. Wei is that division bordering on China, having for its cap. Lassa, or H'lassa, the residence of the Dalai Lama. It is divided into 8 cantons, that of Lassa being the principal; and 39 feudal townships, called *tooszes*, which lie northward, contiguous to some similar townships in the country of Ko-ko-nor. Tsang, or Ulterior Thibet, is W. of the former, and extends W. from about long. 90° E. It is divided into 7 cantons, its cap. being Teshoo-Loomboo. These 2 provs. are under the direction of two ministers, sent from the imperial cabinet at Peking; and of two high priests of Thibet, called Dalai Lama and Bantchin-erdeni. The ministerial residents govern both provs. conjointly, consulting only with the Dalai Lama for the affairs of Hither, and with the Bantchin-erdeni for those of Farther Thibet. All appointments to offices of government and titles of nobility must be approved by the Chinese officers. But in minor matters the residents do not interfere, leaving such affairs to the secular deputies of the high priests, called D'heba. The government of the 39 feudal townships in Hither Thibet, and of the Tamuh or Dam Mongols inhabiting the N. frontier, is entirely in the hands of residents. (Chinese Repository, i. 174.) Two officers,

natives of the country, are sent to each canton from Lassa, and relieved every three years. The subordinate management of the communities is intrusted to two officers in each, the d'heba and vazir, the former appointed from Lassa, the latter a native of the place, who, with the chief lama of the village, form a sort of local council, dependent on the provincial authorities; who again are obliged to refer to the capital for instructions in all extraordinary cases. (*Moorcroft*, i. 365.)

Thibet is remarkable as being the central seat and headquarters of Buddhism, where the Buddhist religion is preserved in its greatest purity. The whole nation is divided into two distinct and separate classes, those who carry on the business of the world, and those who hold intercourse with heaven. No interference of the laity ever interrupts the regulated duties of the clergy, nor do the latter ever employ themselves in secular affairs. In this, and in the absence of castes, consist some of the most striking differences between the religion of Thibet and that of Hindostan, all distinction of caste being utterly repudiated by the Buddhist faith. The priests of Thibet are all called *lamas*; and the Grand, or Dalai Lama, who resides at Lassa, is believed by his adherents to be an incarnation of the Divinity in a human form. On the dissolution of this body, he is supposed to reappear in the body of some infant, who subsequently passes through the term of his mortal existence with all the honours of the Grand Lama. The mode of ascertaining the identity of the new lama is described at length in Hamilton's *E. I. Gazetteer*, art. THIBET. The Teshoo Lama, and others, are also supposed to be divine incarnations, occupying successively different bodies; and Turner (p. 333—336.) gives an amusing account of an interview with the former, who, although only 18 months old, appears to have conducted himself with astonishing dignity and decorum! The Buddhists of Thibet have convents for men and women, and their religious institutions present several striking coincidences with those of the R. Catholic church.

The written laws of Thibet, which are said to be of high antiquity, have in recent times been modified in accordance with those of China. Robbery or dacoity is usually punished by perpetual banishment; murder by death. Adultery is not classed among serious criminal offences; and strict chastity before marriage is not expected in the fair sex. In Thibet, as in Bootan and other countries of the Himalaya, the practice of *polyandria* is common; a female associating herself with all the brothers of a family, without restriction of age or numbers. The choice of the wife is the privilege of the elder brother.

The people of Thibet belong to the great Tartar family. Their physical appearance has been already noticed in this work (see *Asia*, i. 192.). They are said to be mild and humane, but their intellect is sluggish, and they have never exhibited the enterprise of their neighbours either to the N. or S. At Dras, in W. Thibet, Moorcroft found the pop. much addicted to pilfering; but he says that this is not the character of the people in general, especially of those who follow the faith of Buddha: the people of Dras are Mohammedans, and, like those of Ladakh generally, have suffered much moral detriment from contact with the Cashmerians. (*Travels*, ii. 43.) In this part of Thibet the houses are built of pebbles, cemented with earth, having terraced roofs, without chimneys. Further E. the peasants' dwellings are mean structures, resembling brick-kilns in shape and size, and built of rough stones heaped upon each other without cement. The great scarcity of timber in Thibet prevents the higher class of inhabs. from boarding the floors of their rooms, which are accordingly of stone or marble. Bedsteads appear to be wholly unknown; the general custom is to spread on the floor, by way of a bed, a thick mattress, which serves for a seat by day. Both sexes dress chiefly in woollens, in which yellow and red are predominant colours, with upper garments of sheep, goat, or jackal skins, and high and thick boots, but the upper classes partly in silks, and in cloaks lined with sable or other furs. Their food principally consists of barley, variously prepared, with tea, spirits, beer, and mutton, which last they prefer raw. Their meals are taken at no stated times, but under the impulse of hunger. The business of the day usually begins by prayer; they then follow their peculiar avocations till evening, which is always spent in recreation, music and dancing being among their principal amusements. Mr. Turner found the priests acquainted with the signs of the zodiac, the satellites of Jupiter, Saturn's ring, &c.

The art of printing has also, from a very remote age, been practised in Thibet. But no improvements appear to have been made in this country in any branch of science known to the inhabs. Their mode of printing has probably been derived from China; but they esteem the city of Benares as the traditional source of both their learning and religion. (*Turner*, p. 281.) There appears to have been from the remotest time a connexion

between Thibet and India; and the *schra* character, in which the sacred writings of this people are preserved, bears a strong resemblance to that of the Sanscrit. The *amie*, or ordinary character of business and correspondence, is distinct from the former.

Several remarkable customs prevail in Thibet. In every visit of ceremony, a silk scarf, usually white, and with the mystic sentence *Dom mane pace me oom* interwoven at both ends, is invariably exchanged at every visit of ceremony, and accompanies every letter sent, between people of every rank and station in life. "This usage," says Turner, "is observed in all the territory of the Deb Rajah (Bootan); it obtains throughout Thibet; it extends from Turkestan to the confines of the Great Desert; it is practised in China, and, I doubt not, reaches to the limits of Mantchoo Tartary." Another custom, which the people share with the Parsees, is that of exposing the bodies of the dead among the laity to be devoured by carnivorous birds. The bodies of sovereign lamas after death are dried by exposure to the air, and preserved enshrined; those of inferior lamas are usually burnt, and their ashes inclosed in little metallic idols. Other corpses are committed to the rivers; but the inhumation of the dead is totally unknown.

Thibet appears to have had relations with the Chinese empire at a very early period; but it was governed by its own princes till about 1720, when the emperor Kang-he acquired its sovereignty. Still the greater share of power was left in the hands of the Grand Lama till the invasion of the Nepaul Gorkhas in 1790; when, on their expulsion by the Chinese, the present form of government was established, and strangers, formerly permitted to enter the country, were altogether excluded. (*Note in Chinese Repository*, i. 175; *Turner's Embassy to Thibet*; *Moorcroft's Trav. in the Himalayan Prov.*, &c.)

THIELT, a town of Belgium, prov. W. Flanders, arrond. Bruges, cap. cant., a little S. of the railway between Bruges and Ghent, 13 m. S.S.E. the former. Pop., in 1836, including commune, 11,660. It has no government establishments or public buildings of any consequence; but it is a busy and flourishing town, with manufactures of leather, hats, soap, and lace, being indebted for its prosperity to its situation near a tributary of the Lys, which gives it the advantage of a considerable inland navigation. It unites with Poperingen in sending 3 mems. to the provincial states. Among the natives of Thielt was Oliver Ledaïn, the barber, and afterwards the favourite, of Louis XI. This unworthy minion, who figures as an important personage in Scott's novel of *Quentin Durward*, did not escape the fate due to his deserts, having been hanged, in 1484, after the death of Louis.

THIERS, a town of France, dep. Puy de Dôme, cap. arrond., on the Durolle, 23 m. E.N.E. Clermont. Pop., in 1836, 6,807. The appearance of the town is picturesque, being situated on the declivity of a hill, and tolerably well built; but its streets are narrow and steep, and its vicinity is so arid and bare that its inhabs. have been always obliged to depend mainly on their manufacturing industry. It has considerable fabrics of hardware and cutlery, and of woollens, paper, leather, &c. It is the seat of tribunals of primary jurisdiction and commerce, a chamber of manufactures, a council *des prud'hommes*, and a communal college. It owes its origin to a castle existing here in the earliest period of the French monarchy, and is supposed to derive its present name from Thierri, King of Metz, early in the 6th century. (*Hugo*; *Dict. Géog.*, &c.)

THIONVILLE, a fortified town of France, dep. Moselle, cap. arrond., on the Moselle, 16 m. N. Metz. Pop., in 1836, 4,201. It is, in general, well built; and, unlike most fortified towns, has broad streets. It is entered by 3 gates, and communicates with its citadel across the river by a wooden bridge. It has a handsome *place d'armes*, three sides of which are occupied by barracks, and the fourth by the cavalry stables, considered among the best in France. The new par. church, corn market, theatre, college, civil hospital, and the former mansion of the governor, now the sub-prefecture; the tribunal of primary jurisdiction, mayor's residence, and *gendarmérie*, with the botanic garden, are all deserving of notice. Hosiery, woollen cloths, candles, leather, liqueurs, and spirits, are manufactured in the town and its vicinity. The kings of France, of the first and second races, frequently resided here. After the Carlovingians, Thionville successively belonged to the counts of Luxemburg, and to Burgundy, Austria, and Spain. It was repeatedly besieged and taken in the 16th and 17th centuries, but has belonged to France ever since it surrendered to the Prince of Condé, in 1643. (*Hugo*, *Guide du Voyageur*; *Dict. Géog.*)

THIRSK, a parl. bor., market-town, and par. of England, co. York, N. Riding, wapent. Birdforth, on the Codbeck, an affluent of the Swale (here crossed by two stone bridges), by which the town is divided into Old and New Thirsk, 2½ m. N.W. York. The parl. bor. com-

THOMASTOWN

of the township of Thirsk. *Northey, Carlisle, Milnott, and Sand-Hutton*, to the par of Thirsk, with the adjacent township of S. Knebington and Bagby, including an area of 2,010 acres. Pop. in 1841 2,125. Thirsk is a country town, situated in an agricultural neighbourhood. The old town is chiefly composed of one long street of rather an unsymmetrical appearance, at the common end of which is a small open space. In the new town, also, the houses are, for the most part, of an inferior class, and inhabited by small tradesmen. About $\frac{1}{4}$ m. to the E. of Thirsk is *Northey*, an extremely good country village. Many of the houses are of a superior class, and have an air of comfort and respectability. *Northey* consists of one long and very wide street, it has been selected as a residence by many persons, who, having retired from business, live upon the produce of the estates they have purchased (*Mount Rep.*). The par church is a large and handsome edifice, in the Perpendicular style; it has a lofty W. tower and is worthy of our design, with pleasant battlements; the details are good, and the general appearance elegant (*Reveries & Gothic Architecture*). A part of this church is said to have been built out of the ruins of the castle, belonging to the Montagu family, erected in the 10th and destroyed in the 13th century on the site of which New Thirsk is partly built. The living of Thirsk, a perpetual curacy worth 1000 a year is in the gift of the Archb. of York. There are several places of worship for Dissenters, charity schools, a dispensary &c. The principal employment is the manufacture of coarse flanne and stocking. Thirsk appears to be in a stationary condition. It is governed by a bailiff chosen annually, and sworn to at the court held at the lord of the manor. The burgh has comprised only a part of the old town of Thirsk. It sent 3 members to the H. of C. in the 13th Edward I. and again from the reign of Edward VI. down to the passing of the Reform Act the right of election being in the owners of burgage tenements. The Reform Act deprived Thirsk of 1 of its members. Bagby, elsewhere, in 1832-3, had 2 Members on Montagu, Peira, 3 times a year for cattle, horses, sheep, and swine (*Part. Rev. &c.*)

THOMASTOWN an inland town of Ireland, gov. Limerick co. Wicklow, on the R.R. 10 m. W. Wexford, Pop. in 1861, 2,362. The town which contains mostly of stone houses, is principally occupied by agricultural labourers and small traders generally in very depressed circumstances. The public buildings include the par. church, a Roman Cath. chapel, a court-house, and a bridge. Lighters of from 10 to 15 tons come up to the town which has 2 large flour mills, and exports considerable quantities of flour, corn, and provisions. It has also a tannery and 2 breweries. Thomastown and 5 m. to the Irish H. of C. but was disfranchised at the Union. Quarter sessions are held in January April July, and October, and petty sessions every alternate week. It is a coast-guard station. Markets on Mondays and Saturdays. Fairs, March 17 May 10 June 10 and Sept. 15. Post-office evening, to 10 1/2 M., to 1 1/2 AM. A branch of the Agricultural Bank was opened in 1855. There are several resident landlords in the neighbourhood of Thomastown, and the agriculture and trade of the country has improved. But legals affirm that the condition of the people has, notwithstanding, vastly deteriorated of late years (p. 63), and this, we regret to say, has no remedy in view appears, is true of most country districts in Ireland.

THORN is a fortified town of the kingdom, and gives of Prussia, reg. Marienwerder, and sits on the Vistula, some crossed by a long wooden bridge, about 30 m. from its mouth, and 60 m. S E W Marienwerder. Pop., in 1841, 8,436. It consists of an old and a new town, separated by a wall and ditch. There are 3 Rom. Cath. and 3 Protestant churches, several convents and asylums, a Lutheran gymnasium, &c. It is the seat of the courts for the city, and has various manufactures, and a considerable trade. It is very strong, its fortifications having been greatly improved and enlarged since 1816. It was fortified by the great grand master of the Teutonic order, in 1281, and most part of the principal edifices are of old date. But its chief claim to notice is derived from its having been the birth place of Copernicus, the discoverer of other centers of the true theory of the world, born on the 14th February 1473. His great work, *De Revolutionibus Orbium Cœlestium*, in six books, was published at Marienwerder, in 1543, a few days before the death of its illustrious author, which took place on the 24th of May of the same year.

THORNTON, a market-town and par. of England, on Gloucester road Thornton, in the co. of Berks. 11 m N by E. Great Area of par., 11,000 acres. Pop., in 1841, 4,704. The town consists principally of three streets, arranged in the form of the letter Y. The church is a handsome cruciform structure, with a lofty tower ornamented with rich open-worked battlements and pinnacles. The living, a vicarage worth £300 a year nett, is in the gift of the dean and chapter of Christchurch, Oxford. There are two subordinate curacies in the par., at Gifford and Piddick. It has also Baptist, Independent

THERBYMENE (LAKE OF) 102

Quaker, and Wesleyan meeting-houses, a grammar-school for boys, another free school for 20 children, almshouses, &c. But it is principally remarkable for the remains of a magnificent castle, begun by Stafford Duke of Buckingham, in 1411 but left in an unfinished state, when he suffered on the scaffold, in 1455. Its site is very commanding. Rackham says its style is the late perpendicular with great details, and it is especially interesting from its affording some interesting specimens of the last gradation of castellated architecture. (Gentle's Architect.) The manor was formerly a municipal bur. governed by a mayor and 12 aldermen, but no charter is extant, and the body being found useless, the corporation was abolished by the Municipal Reform Act. The clothing trade was formerly carried on pretty extensively but it is now nearly extinct. Market-day Saturday after Easter Monday. Aug 10. Monday before St Thomas, and Dec 11, for cattle and pigs. (Mans Report, &c.)

THORNE, a market town and par of England, in York W Riding, beyond Stratforth, &c., near the Don, and on the borders of Lincolnshire, in a low flat, and mostly fertile, but marshy country 2½ m. S by E York. Area of par 10,560 acres. Pop. in 1841, 2,077. The town appears to be prosperous. It is tolerably well built, and the streets are paved. The par church is a good building, with a square tower and pinnacles. The Rectory, a parson's curacy, worth 117½ a year, is in the gift of the bish of Ely. Metherington (see New Rep.) There are several dissenting churches, two free schools, &c. At a suburb called Hagenham hill, on the Don, about 1 m. from the town, remains of considerable building are built, and a brick trade in corn and other goods is carried on at Thorne, which is greatly promoted by the Stratforth and Keadby (and Market Day Wednesday; Fair, Monday, Tuesday and Wednesday, after both June 11 and Oct. 11, for cattle, horses, and poultry.

THRASYMEUS (LAKE OF), or Lake of Perugia (an. *Lacus Thrasyneus*), a famous lake of Central Italy, Papal States, facing Perugia, 10 m. W the city of that name. It is of a circular shape, about 50 m. in circ., has several small islands, and is rather shallow, its greatest depth not exceeding 5 ft. It is well stocked with fish, and the banks are covered with olive plantations. Being surrounded by ramifications of the Apennines, it has no natural outlet for its waters, and in consequence, a low it

 valley near
 which is re-
 shut up on
 he went up very early one morning, carefully having
 entered this defile, posted his troops at the foot and on
 the slopes of the hills that bounded the valley on either
 side, and in this position waited the advance of the Ro-
 mans, by whom he was imprudently followed. The latter
 entered the valley at night-fall, and at break of day, on
 beginning their march, they were assailed on all sides
 with tremendous fury. The disaster caused by this un-
 expected attack was increased by the circumstances of a
 thick fog arising from the lake and concealing their re-
 main. But notwithstanding they were thus at a disadvantage,
 fought in a trap, the Romans displayed their accustomed
 bravery and struggled, if not for victory, at least to sell
 their lives as dearly as possible. It is mentioned, as
 attesting the fury of the contest, and its all-absorbing in-
 tensity, that a violent earthquake, which in great part
 overtook several towns of Italy and otherwise com-
 mitted great ravages, occurred during the heat of the
 fight without having noticed by any one. (Livy, lib. viii.,
 cap. 8.) In the end, however, the triumph of Hannibal
 was complete. The Romans lost 25,000 men, including
 their camp, Flaminia, whose resistance had but thrown
 into the scale, and on the field of battle, and, according
 to Polybius, they lost about the same number taken
 prisoners. The loss of the Carthaginians did not exceed
 7,000 men. (See Livy and Livy, and the excellent com-
 ment of Polybius, General History, lib. iii. cap. 8.)

In noticing the lake of Thessalonica, Byron has alluded to the legend of the earthquake as follows:—

"And with the waves of tears in this day,
 And with the Sun, whose crimson tinge
 To all our springs, that blossom the day,
 To earth-its red's continually new,
 Thus this wave flows rushing in his hand,
 And pouring forth a glow he drew out his
 From that broken in a twinkling:
 In the shining blue of water exists

THREE RIVERS, or **TROIS RIVIERES**, the third town of Lower Canada, cap. distr. of its own name, on the St. Lawrence, where it is joined by the St. Maurice, 66 m. S.W. Quebec, and 75 m. N.E. Montreal; lat. $46^{\circ} 23' N.$, long. $72^{\circ} 29' W.$ Pop., estimated by M'Gregor at between 4,000 and 5,000. It derives its name from 2 small islands at the mouth of the St. Maurice, which divide it into 3 channels, but the town is on the W. bank of that river. The situation is agreeable, though not the town itself, which is one of the oldest in Canada. It contains about 420 dwelling-houses, mostly built of wood, a handsome court-house, a strong gaol, a decent-looking Catholic, and a Protestant church, an Ursuline convent, founded in 1677, &c. The river is deep near the town, and the steamers stop to take on board passengers and fuel. Here the courts of justice for the district are held; and here, at one period, a great share of the fur trade centred. Some furs are still brought down by the Indians, and purchased by the agents of the Hudson's Bay Company; and there are a few breweries, potash factories, inns, shops, a printing-office, &c. But its general trade has been mostly absorbed by Montreal and Quebec. (*M'Gregor's British America*, &c.)

Trois Rivières was of much more importance formerly than at present, having been originally the cap. of Canada. (*Encyc. America*.) Its pop. is still principally French, and the names of its streets are all traceable to Paris. It sends 2 mems. to the H. of Assembly.

THURGAU, or **THURGOVIA**, a canton of Switzerland, in the N.E. part of the confed., between lat. $47^{\circ} 20'$ and $47^{\circ} 40' N.$, and long. $8^{\circ} 40'$ and $9^{\circ} 30' E.$; having S. St. Gall, W. Zurich and Schaffhausen, and N. and E. the Rhine and the lake of Constance. Area estimated at 268 sq. m. Pop., in 1850, 88,908; this being, with the exception of Geneva, the most densely peopled of the Swiss cantons. Thurgau, though it cannot be called mountainous, has a very uneven surface, consisting of low hills interspersed with narrow valleys. The canton derives its name from the Thur, which traverses it about its centre; next to which, the principal rivers are the Murg and Sitter. Agriculture is the principal occupation of the inhabs., and though the soil in certain parts requires a great deal of manure, Thurgau may, on the whole, be considered one of the most fertile cantons of the confed. There are extensive vineyards over nearly half the canton, and the value of the produce of wine, in average years, is estimated at 80,000*l.* sterling. The internal consumption may be about a fourth part of the whole quantity, the remaining three fourths being exported to St. Gall and Appenzell. Considerable quantities of fruit and cider are exported in the same directions, but the quantity sent to Germany has of late years greatly diminished. About 100,000 hectols. of wheat are raised annually, being about two thirds the consumption. Oats, hemp, flax, potatoes, and hops are the other articles chiefly raised; oats and brandy are among the exports to Appenzell. The breeding of cattle is unimportant; but a large proportion of the S. part of the canton consists of fine pasture-land, and lean cattle being imported and fattened, are subsequently exported to the neighbouring states. The possessors of landed property would seem to be in a very distressed state; for the president of the canton is said to have stated, in 1836, that its estates were mortgaged to neighbouring cantons to the amount of 960,000*l.* sterling, on which an annual interest of 40,000*l.* was paid. (*Bourring's Report*.) The wages of agricultural labour are from 4*d.* to 7*d.* per day, the master providing food, which consists of oat cakes, barley, and sometimes wheaten bread, potatoes, &c. Among the classes engaged in manufactures, the use of coffee is being introduced. The peasantry eat meat once or twice a week: their ordinary beverage is wine or cider, though beer is also brewed in the canton. The male peasantry generally dress in woollens, the females in light cotton stuffs.

The commercial interests of the canton are said to have been injured by the Prussian league; at all events the linen and cotton goods sent into Germany are much less now than formerly. Nearly one third part of the inhabs. are more or less engaged in manufacturing labour, principally in weaving cotton and linen fabrics, and spinning flax. The manufacture of linen is, however, declining, and its annual value is not now supposed to exceed 8,000*l.* a year. From 3,000 to 5,000 looms are employed in weaving cotton goods, the chief *dépôts* for which are St. Gall and Zurich. Weavers' wages range from about 7*d.* to 1*s.* 6*d.* a day. There are some rather extensive establishments for cotton printing, the prints being sent chiefly to the Levant. Silks are manufactured for the French markets; and a good deal of the packing canvass sold in Basle, Zurich, &c. is made in Thurgau.

The government, revised in 1831, is democratic. The great council of 100 mems., which has the sole legislative power, consists of the representatives of the 32 circles, into which the canton is divided, elected by all the citizens above 25 years of age who pay taxes on property to the value of 200 florins, and are not paupers, or otherwise disqualified. The great council assembles

twice a year, for 15 days at a time, unless its sessions be prolonged on special account; it is wholly renewed every two years, half the mems. going out yearly. The executive duties are intrusted to a council of 6 mems., who must be 30 years of age, and who hold office for 6 years. Two *landammans* are chosen annually, and preside for 6 months alternately in the great and little council. Each commune has its own council, composed of the syndic, or mayor, and 4 other mems., and its police, and petty civil tribunal. There are courts of original jurisdiction in each of the 8 districts of the canton, and a supreme court of appeal, in Frauenfeld, the cap. In 1837, about 72,000 of the inhabs. were Protestants, and 18,500 R. Catholics. Public education is very widely diffused. Public revenue, in 1834, 157,920 florins; expenditure, 107,920 do.

As early as the 5th century Thurgau was governed by its own counts. It afterwards passed to the dukes of Zaehringen, and the counts of Kyburg; and, in 1264, to the house of Hapsburg. In 1460, it was conquered from the latter by the confederated Swiss cantons, and governed by their bailiffs or prefects till 1798. It was then constituted a separate member of the confed., in which it now holds the 17th place, furnishing a contingent of 152 men to the confederate army. (*Pupikofser, Der Kant. Thurgau; Bourring's Rep. on Switzerland; Picot Statist. de la Suisse; Ebel, &c.*)

THURLES, an inland town of Ireland, prov. Munster, co. Tipperary, on the Suir, 77 m. S.W. Dublin. Pop., in 1841, 7,523. The river intersects the town, the communication between its different parts being maintained by a bridge. The public buildings comprise a fine Rom. Cath. chapel, which serves for the cathedral of the see of Cashel, a Rom. Cath. college, 2 nunneries, with chapels annexed, a market-house, a court-house and bridewell, and a barrack. Mr. Inglis speaks favourably of Thurles. "It cuts," says he, "some figure at a distance, owing to the new and very handsome Rom. Cath. chapel, and the unfinished Rom. Cath. college. The town stands on a wide, scantily wooded, uninteresting plain. It contains about 7,000 inhabs., and is tolerably prosperous; for, having no larger town nearer to it than 40 or 50 m., it supplies an extensive interior district, and is besides an important market for country produce. There are no fewer than 15 annual fairs and 2 weekly markets held at Thurles. I saw scarcely any beggars in the place, and the cabins in the outskirts were not of the worst kind. There are two nunneries; in one of which are 20 nuns and 60 boarders: there is also an excellent Rom. Cath. school belonging to the Rom. Cath. institution. I observed no shops to be let, and saw several houses in the course of being built. Land lets very high in the neighbourhood." (i. p. 107.)

General sessions are held twice a year; petty sessions on Saturdays: it is a constabulary station. Markets on Tuesdays and Saturdays. Fairs on Easter Monday, Aug. 21., Dec. 21., and first Monday of every month. Post-office revenue, in 1830, 452*l.*; in 1836, 560*l.* Branches of the National and Agricultural Banks were opened in 1835 and 1836.

THURSO, a sea-port town of Scotland, N. shore, co. Caithness, on the Pentland Frith, at the bottom of Thurso Bay, between Dwarick Head on the E., and Holburn Head on the W., at the point where Thurso river (here crossed by a handsome bridge) falls into the bay, 8½ m. S.W. Dunnett Head. Pop., in 1841, 2,510. It is irregularly built, and rather ill paved; but in the suburbs are some neat freestone houses, and the church, built, in 1832, at an expense of 6,000*l.*, is a handsome structure: it has also a meeting-house for original seceders, an independent chapel, and several schools. A short way to the E. is Thurso Castle, the seat of Sir George Sinclair, Bart., proprietor of the town. Though the most northerly post town of Great Britain, it has a daily communication by a mail coach with Inverness and the south, and it communicates by regular traders and steamers with Leith, Wick, &c. There is a harbour at the mouth of the river for the accommodation of vessels drawing 12 ft. water; and ships of any burden may anchor on the W. side of the bay, in Scrabster Roads, under cover of Holburn Head. At present (1842) about 15 vessels belong to the port. A little straw plait is manufactured in the town; and it has also a ropewalk and some tanneries. The town has 3 magistrates, appointed by the Sinclair family, the superiors of the bor. On the whole, the town may be regarded as in a nearly stationary state; and its progress has been by no means commensurate with the sanguine expectations of its late proprietor, the well known Sir John Sinclair. It is obvious, indeed, that the poor and thinly peopled country in its vicinity, and the nature of the remote and dangerous frith on which it is placed, are all but insuperable obstacles to its ever becoming of any considerable importance. (*New Statistical Account of Scotland*, art. *Thurso*.)

TIBER (an. *Tibris*, Ital. *Tevere*), the most celebrated though not the largest river of Italy, rises in the Tuscan

Tienda del Fuego

Apennines, about 6 m. N. Fluvio San Stefano, and has a general E. & S. course to within 30 m. from Rome, where it turns E. W. and enters the Mediterranean by two mouths, 17 m. below that city after a course of about 160 m. It is said to have been anciently appointed for vessels of considerable burden as far as Rome and for small boats to within a short distance of its mouth (*Deum fluv. in de. Arch. v. 316*) and it still continues to be navigable to certain extent, as far as the confluence of the Tevere 30 m. N. E. Rome, but its navigation is at all times difficult especially at low water, and to the vicinity of Rome and requires continual attention. The courses of the river from the sea and the subsequent navigation are in fact so troublesome that the harbour of Ostia, at its mouth, was relinquished in antiquity for that of Caere, whence the Tiber's course, which still continues to be the part of Rome through it, is considerably more than twice the distance of Ostia from the city, with which it is connected merely by a road. (See the greater *Cluvia* *Varia* and *Cluvia* in this work.) Its principal tributaries are the Tevere, Meta, and Tevere from the E. and the Northern, Tevere, and Nod, from the N. and W. By the Cluvia, it communicates with the Arno. Besides Rome, Borgo San Sepolcro, Civita del Castello, Frosin, Orte, Cornigli, Magliana, and Ostia, are on its banks and Perugia and Grosseto in its immediate vicinity. In antiquity the Tiber divided Picenum from Umbria, and the mouth of the Liris and Salsura at present it separates the delta of the Speone and Rion from the delta of the Viterbo and the Comana di Roma.

His notwithstanding the immortality of romance. He looks now and generally picturesque, and at first sight is generally disappointed stranger. He is usually, and during the time, to which is a very elegant, writing the description of those.

* William G. and Thelma, parents of John, were always good, in their own way.

But as other there is love with a comparatively gentle surface : —

* 2.4 square Egyptian masts, old Luffa area, last square view, last mast square 10 ft.

It was distinctly called *Alaba*, and this name, as well as the epithet *Alaba*, given it by Heron and other writers, was no doubt derived from the copiousness here of its waters, denominated by the word with which they are headed. Some travellers, mistaking its name of waters by its bulk of foam, and finding its appearance inferior to their preconceptions, have represented it as a petty and insignificant streamlet. However, though its inferior in breadth to all the great rivers, put as it is generally from a few miles above Rome to the sea, about 200 ft wide upon an average* it contains, with justice to be considered a considerable river. (Rustart. p. 210. See also And a much higher authority than Rustart. Mr. Martens says that though the Tiber is deeper he met on this as the Tyber at Cologne. "It is deeper and has certainly a larger volume of water" (Notes of a Tour 1811). Above and below the city it runs through groves and gardens, and waters the villages and suburbs of the river. Beyond the beyond Ponte Alaba it runs through a long tract of plains and hills, fertile and green but uncultivated and desolate. Yet there very bushes, now all almost and multitude, were seen, like those of the Thames covered with the gull, sky, and rural beauty bound with villages, and not unfrequently decorated with palaces. Plinius says *plena quædam arvis et omnibus arvis arborum nemorumque cæcis* (Plin. Hist. Nat. lib. 11. c. 1). Below the city where it has passed the Fifth Milestone, it falls again into a wilderness. (Rustart, who says) It terminates in a marshy multiform tract, no two arms [including the Lake above of the marshes. (See also Rustart, p. 203, Cramer's Ann. Itin. c. 210, Martens, Not. Itin. &c.)

TIERRA (Vulg. TERRA) DEL FLECO - The Land of Fire is called from its apparent volcanism by the discoverer Magellan, or Magalhães, a large island, or rather group of islands lying off the E extremity of S America, from which it is separated by the Strait of Magellan. The group which extends between the 54th and 56th degs of S lat., and the 68th and 74th of W. long., consists of King Charles South Land, Navarino, Huelmo (Larama, and some other islands, Cape Horn forming the most S point. The E part of King Charles S Land, to live with plants like those of Patagonia, but near its W side it is traversed by mountain chains nearly 4,000 ft. in height, covered with perpetual snow. Huelmo is abandoned, but nevertheless is said to be the prevailing wind here and in all the ad-

¹ Cf. *Matthews Perry, op. cit.* p. 78, copy at the Public R. Archive, in Rome, the transfer is about 110 English tons. This is the maximum weight. At the Public House, the transfer is 100 tons, and 100 tons more (about 100 tons) is used in the transfer of the cargo.

TIMOR (THE EAST) MY

found islands (*King in Gray Journal*, vol. 1.) Lard
 and other valuable products have been found. The
 country, in many parts seems well wooded, and Whit-
 more's bark (*Dryas Winteri*), introduced into medi-
 cine in 1873, was discovered here. A kind of birch
 (*Betula maritima*), with a stem from 10 to 40 inches in
 diameter, is one of the principal forest trees, and prob-
 ably other trees may be found; but the latter has
 hitherto been very little explored. Cannibals and
 slaves appear to be the most numerous wild animals.
 The Fuegians are a peculiar race of savages in nearly
 the lowest stage of barbarism. Their most striking
 physical peculiarities are a very small low forehead,
 prominent nose, small eyes, wide nostrils, large mouth,
 thick lips, long black hair and large body as compared
 with the Caucasian. They go nearly naked, but cover
 over their bodies with various substances; live in
 wigwags made of the twigs of trees and sustain
 almost wholly on fish, seals, and walrus. They are
 cannibally inclined and have, in fact, no objection to
 any kind of food. They are not wholly ignorant of
 the arts, being acquainted with the use of fire and
 fashioning themselves of bone and arrow, and in the
 use of the harpoon of the Patagonians. On the whole how-
 ever, they would appear to be decidedly below many of
 the lower animals in respect of intellect, and to be but
 little above them in energy and invention. Their
 to prevent many allusions with the
 further and numerous particulars on

Pop about 11,000. This is certainly
in the power though from lying out
of my grant road, it is little visited by travelers. It has
a church, a school, and a handsome castle, and has
very extensive fisheries of fish and various vegetable products,
cinnamon, etc. It sends a delegation to the provincial
assembly.

TILITZ, a town of the Prussian state, prov. Posen, reg. Gnesen, cap. cit. on the Niemen, at Muenst, where it is joined by the Tamm, 60 m. N. E. Konigsberg. Pop. in 1866, 11,779. It consists principally of a long and wide street, with a few good-looking houses. The Niemen, which is navigable up to the town, is here crossed by a bridge of boats 130 ft. in length. The suburbs consist of timber-camp, and provisions, and, further on, most down the river in the numerous houses for shipment at Muenst. The cutting of the canal of Ostroby has by uniting the Niemen with the Dniepr, effected a communication between the Baltic and the Black Sea. It has an old castle, several churches, a royal gymnasium, hospital, and board of taxation, with manufactures of woollen cloth, hosiery, gloves, leather, hardware, &c.

This town is famous in diplomatic history for the treaty signed here on the 9th of July 1812 by France, Russia, and Prussia. The negotiations that led to this treaty were held between Napoleon and Alexander, who met, for the first time, with great pomp and ceremony, in a raft moored in the middle of the stream, on the 22nd of June.

TIMOR THE EAST, an island of the S Archipelago, 3d division (Cassford), principally belonging to the Dutch between the 10th and 12th degrees of S lat., and the 2d and 4th degrees of E long. 100 m S E. Florida and 50 m from the N W coast of Australia. It extends obliquely from N E to S W, its length being estimated at 100 m and its average breadth of 30 m. Macassar is in its northern of three (Macassar, Ombai, the most of about 4,000 m, and the south of

The Dutch East India Company, which has been the mainstay of the Dutch Empire in the East, has been the mainstay of the Dutch Empire in the East. The Dutch East India Company, which has been the mainstay of the Dutch Empire in the East, has been the mainstay of the Dutch Empire in the East.

colonists are much less likely to be disturbed by the hostility of the natives.

About 300 m. N.E. Timor is Timor Lant, an island 70 m. in length, by about 25 m. average breadth. Little, however, is known as to the state of this island. (*Hamilton's E. I. Gazetteer*, &c.)

TIMBUCTOO, or TOMBUCTOO, a town of Central Africa, on the S. border of the great desert of Sahara, about 8 m. N. from the Ioliba, or Niger, but near one of its arms or tributaries, in about lat. $17^{\circ} 50'$ N., long. $3^{\circ} 40'$ W. Stationary pop., probably 10,000 or 12,000. The existence of this city has been long ascertained; but as till recently it was only known to Europeans by vague reports and suspicious narratives, the most conflicting and contradictory reports have been made respecting it. Certainly, however, the *ignotum pro magnifico* has seldom been more strikingly exemplified than in this instance; the most exaggerated and unfounded statements having been put forth respecting its magnitude, commerce, and pop. These, however, have now been completely dispelled, and Timbuctoo is ascertained to be a very poor town in a wretched country.

It is, in fact, situated amid burning and moving sands on the verge of a morass. It is of a triangular form, about 3 m. in circuit, and is surrounded by walls. The better sort of houses, built of bricks dried in the sun, are large, but not high, consisting entirely of a ground floor. Each house forms a square, containing two inner courts, round which are ranged the chambers, without windows or chimnies, and serving at once for magazines and bed-rooms. But within and without the town are many straw huts of a circular form, serving as lodgings for the poor and for slaves, who sell merchandise for their masters. The streets are said to be clean, and sufficiently wide to allow three horsemen to pass abreast. It has seven mosques, two of the largest of which have walls about 15 ft. in height, and are each surmounted by a tower. It is chiefly inhabited by negroes of the Kissour nation; but it is also the residence of a considerable number of Moors, who carry on the trade of the town, and who leave it as soon as they have accumulated a little property. The inhabitants are zealous Mohammedans.

The trade of Timbuctoo, though much exaggerated, is considerable, it being a station for the caravans between N. Africa and the Soudan, or Nigritia, and also a *dépôt* for their produce. Salt is, however, the staple merchandise of the place. This important article, which is wholly wanting in Soudan, is brought from the mines of Towdeyni, in the desert, about 335 m. N. from the town, being conveyed thither in the form of cakes on the backs of camels. In addition to salt, the caravans from the Barbary States bring dates, stuffs of European manufacture, with fire-arms, gunpowder, hardware, glass ware, coral, tobacco, paper, and other articles, which they exchange for slaves, gold-dust, ivory, ostrich-feathers, palm-oil, gums, &c. Owing to the sterility of the surrounding country, all the provisions required for the use of the town have to be brought from Jenné, on the Niger, about 300 m. S.S.W. Timbuctoo. These are conveyed by an arm of the river to Cabra, whence they are carried by camels, about 3 m., to the town. Jenné, according to Caillié, is a more important, richer, and more commercial town than Timbuctoo. The Touariks, a warlike and savage tribe, on the banks of the Niger, exact heavy duties on all the commodities imported into Cabra, and occasionally commit extensive outrages. Timbuctoo is governed by a negro governor or prince; who receives presents, but imposes no duties either on the inhabs. or the products brought to the town. The government is, in fact, patriarchal, and the prince is said, by Caillié, to be mild and just. The slaves, of whom there are great numbers, are well treated.

Timbuctoo is said to have been founded A. D. 1213, and to have soon after become the cap. of a great Moorish monarchy (*Walcknaer, Recherches Géographiques*, p. 14.); and since it ceased to enjoy this distinction, its trade, as well as its importance, is believed to have greatly declined. But it is not at all likely that a town in such a situation should ever have been the cap. of any considerable state; and we are inclined to think that the accounts of its ancient have but little better foundation than those of its modern prosperity. We have elsewhere endeavoured to show, that the commerce of which Timbuctoo is one of the centres depends on natural causes; and that it will, most probably, continue to be carried on in time to come in the same way in which it has been carried on from the remotest period down to the present day. (See vol. i. 31.) Ritter, who has collected and discussed the different accounts of Timbuctoo published previously to that of Caillié, has exaggerated alike its importance and its trade, and has farther indulged in some rather fanciful speculations as to the increase of the latter. (*Geography of Africa*, Fr. trans., ii. 81—112.) It would, indeed, be easy to show that the barbarism of Africa depends on natural and permanent, and not on artificial or accidental circumstances;

and though its commerce and civilisation may, no doubt, be materially increased in the course of time, the fair presumption seems to be that, owing to the nature of the country and climate, the wants of the natives and their industry will always be much too limited to admit of their ever becoming extensive demanders of European products. (See *Caillié's Travels to Timbuctoo*, ii. 48—78., Eng. trans. This is not only the most recent but by far the most authentic and best account of the town that has ever been published. See also, *Walcknaer, Recherches sur l'Afrique Septentrionale*, passim., for an account of the progress of discovery in this part of Africa in modern times.)

TINIAN, one of the Ladrone Islands, which see.

TINNEVELLY, a district of British India, presid. Madras, at the E. extremity of Hindostan, between lat. 8° and 10° N., and principally between long. 77° and 78° E., having N. the district of Madura; E. and S.E. the Gulph of Manaar, separating it from Ceylon; and S.W. and W. Travancore, from which it is divided by a chain of mountains. Area, 5,590 sq. m. Pop., in 1836-37, 807,964. "The face of the country is a little undulated, but the general appearance is that of an extensive plain interspersed with small hills. The lower parts are well supplied with tanks, and afford great quantities of rice. On the banks of the rivers are also numerous paddy fields. There are several flats that run to a great distance, on which abundance of cotton is produced; the higher grounds are well cultivated, and covered in the season with luxuriant crops of dry grain. S. of Palmacottah, towards the extremity of the peninsula, the country becomes sandy and bare, covered in general with Palmyra topes. Towards the E. coast, and all round to the S., there are several hills of red sand, with which the atmosphere is often darkened during the windy season. Close to the sea beach, all along from Tutacorin to Cape Comorin, the small villages are inhabited by fishermen, who are all Christians, and several Roman Catholic churches are situated close to the sea." (*Madras Almanac*.)

Tinnevelly is intersected by many winding rivers, which are supplied with water by both monsoons. The climate of some parts is remarkable. In the N. it is similar to that of Madura, but in the mountains on its W. side are several openings or passes, which, while the rest of the country on the E. side of India is parched up with heat, admit the cool winds prevailing at that period on the Malabar coast. The chief of these is the Arungole pass, near which is Kotallum, a place of great resort for Europeans, on account of its bracing climate.

Rice and cotton are the chief products of this district; the last, which is of the Bourbon variety, is grown of a superior quality. Many fruits, roots, and greens are cultivated, but some of the most common Carnatic products are neglected, and in unfavourable seasons rice is imported from Travancore. While Ceylon belonged to the Dutch, an attempt was made to establish spice plantations in Tinnevelly, and cinnamon, nutmegs, &c., were planted, but on our acquiring possession of Ceylon these attempts were abandoned. Tinnevelly is assessed under the village system, but for a lengthened period great irregularities attended both the assessment and collection of the revenue. (See *Rep. on E. I. Affairs*, 1832, *App. Revenue*, p. 479.; *Hamilton's E. I. Gaz.*) Great improvements have, however, been effected in these branches of late years, and in 1837-8, the total revenue of the district amounted to 24,15,106 rupees.

Tinnevelly is subdivided into 11 *talooks* or circles. Its chief towns are, Tinnevelly, the cap. and residence of the collector and judge, in about lat. $8^{\circ} 48'$ N., lon. $78^{\circ} 1'$ E.; and Palmacottah, the head military station, about 5 m. to the E., where a good many long cloths, silks, muslins, &c., are made for exportation to Madras and elsewhere. Iron is forged and saltpetre obtained in many parts of the district. The inhabs. of Tinnevelly appear to live in greater comfort than those of the neighbouring districts, and their dwellings are mostly well constructed. Mohammedans are few, and the primitive Hindoo manners and customs are scarcely anywhere seen in greater purity. (*Madras New Almanac*; *Parl. Reps.*, &c.)

TIPERAH, a district of British India, presid. Bengal, between lat. 23° and $24^{\circ} 30'$ N., and the 91st and 92d degs. of E. long., having N. Sylhet, E. the Munnepoor territories, S. Chittagong and the sea, and W. the Brahmaputra, separating it from the distr. of Dacca. Area, 6,830 sq. m. Pop., in 1832, 1,372,260. This district yields cotton, rice, and betel nut of a very superior quality. Elephants of large size are found in the forests; and in the S. salt is manufactured. The coarse cotton goods, bastees, coosacs, &c. made here are durable and substantial, and were formerly exported in large quantities by the E. I. Company and by private merchants. The inhabs. are similar in most respects to those of the adjacent districts beyond the Brahmaputra, though the upper classes have adopted many Hindoo usages. In respect of public education Tiperah appears to be extremely backward. It was acquired by the British in

which separates it from the districts of Bahar and Patna. Area, 7,732 sq. m. Pop., in 1822, 1,697,700. The surface is undulating and well watered; the climate is more healthy than that of the districts more to the S. In the N. there are extensive tracts of waste land, but Tirhoot generally is well cultivated, principally in consequence of the number of British settlers. Mr. Robertson says, — "It is impossible to look on this district without being struck with its high state of culture, and the quantity of breast land which has been brought under the plough, which would probably not have been but for the funds of the indigo planters, who raised indigo on the ground which had been previously given up to corn." (*Evidence before the Lords*, 1850.) Tirhoot is one of the principal districts in India for the growth of indigo; besides which, sugar, opium, tobacco, turmeric, ginger, rice, &c., are its chief vegetable products, and great quantities of salt-stre are procured from the soil. It also supplies great numbers of cavalry and other horses. Timber abounds in the N., but is of little utility from the absence of roads and the shallowness of the rivers. Total land-revenue, in 1820-21, 1,560,563 rupees. Tirhoot appears to have formed an independent Hindoo principality till 1237. It was annexed to the crown of Delhi in 1325, and acquired by the British in 1768. (*Hamilton's E. I. Gaz.*, &c.)

TIRLEMONT (Flemish *Tiermon*), a town of Belgium, prov. S. Brabant, arrond. Louvain, 11 m. S.E. from the city of that name. Pop., in 1842, 8,975. Its extensive, but now dismantled walls enclose a large extent of ground not built on, with a large square, in which is the ancient town hall, church, &c. It has manufactures of woollen cloths, flannel, and hosiery, oil, soap, earthenware, paper, and saddlery, with potteries, breweries, distilleries, &c. It was formerly much more populous and thriving, having been one of the most important places in Brabant; but being repeatedly taken and retaken by the Spaniards, French, and Dutch, in the 17th and 18th centuries, it suffered greatly in consequence. It sends 2 deputies to the prov. states, and 2 others are sent by its districts.

TITCHFIELD, a market-town and par. of England, co. Hants, div. Fareham, bound. Titchfield; on the Titchfield river, near the mouth of Southampton Water, 7½ m. S.E. Southampton. Area of par., 15,300 acres. Pop. in 1841, 4,080. The town is small, but well built, and is the residence of many families of respectability. A part of the church is said to have been built by William of Wykeham, in the 14th century, and other parts are still more ancient. The living, a vicarage worth 266*l.* a year, is in the gift of H. P. Delme, Esq. There is an independent meeting-house, and a charity school for 24 children. Near the town are the remains of Titchfield House, in which Charles I. took refuge after his escape from Hampton Court, in 1647, built by the first Earl of Southampton, on the site of a former Premonstratensian abbey, but the mansion is now nearly dilapidated, the entrance gateway and the stables being the only extant remains. Titchfield gives the title of marquis to the Bentinck family. Markets, on Fridays. Fairs, Mar. 9., May 14., Sep. 26., and Dec. 7.

TITICACA (LAKE OF). This lake, the largest and most elevated of the S. American continent, is partly comprised in the Bolivian republic, and partly in that of Peru: being enclosed by the Cordilleras S. of the tableland of Cuzco, and extending chiefly between lat. 15° and 17° S., and long. 69° and 71° W., about 135 m. S.E. Cuzco. Its outline is very irregular, being divided by a number of headlands into a main body, of an oblong form, and three subsidiary portions. Its area has been estimated by Mr. Pentland at 4,000 sq. m. and its height above the ocean at 12,847 ft. It is said to be in many places nearly 500 ft. in depth. It contains many small mountainous islands, and from the largest, at its S.E. extremity, the lake has received its name, which signifies "the Lenden Mountain." This island is 3 leagues in length by 1 in width, and about 1 m. from the shore. It is mostly uncultivated, but very fertile; and on it tradition places the first appearance of Manco Capac. (*Pentland, in Geog. Journ.*, v. 62.) The island was consequently held in great veneration: a temple was erected on it by the succeeding Incas, in which a great deal of wealth is said to have been accumulated; and this, it is alleged, was thrown into the lake by the Indians on the Spaniards becoming masters of the country. Mr. Pentland states that numerous Peruvian relics are still found on the island.

The Lake of Titicaca receives several rivers, its only visible outlet being the Desaguadero, which flows S., and is soon afterwards lost in the Lake of Aullagas. Its waters, though not very potable, abound with fish; and sudden squalls and storms render its navigation rather dangerous. "The low banks of the lake are lined with rushes, which are here of great utility, being employed for almost as many purposes as the bamboo in the E. The huts of the poor are made of rushes; as also mats for the floor, and bed covers. The boats used on the lake are also made of rushes twisted together; the rudder

and the mast only being of wood. These boats are frequently made with great taste and ingenuity; the larger venture to some distance from the banks of the lake, which, even in calm weather, is subject to a heavy swell." (*Meyen, Reise um die Erde; Mod. Trav., &c.*)

TIVERTON, a parl. and mun. bor., town, and par. of England, co. Devon, hund. Tiverton, on the Exe, where it is joined by the Loman, 13 m. N. by E. Exeter, and 154 m. W. S. W. London. Area of par., which is identical with the parl. bor., about 20,000 acres. Pop., in 1841, 9,838. The town is situated partly on the tongue of land between, and partly on the opposite banks of, the two rivers, each of which is crossed by a stone bridge. It is nearly 1 m. in length, N. E. to S. W., by about 5 fur. in its greatest breadth: it consists chiefly of several tolerably broad and well-paved streets, running N. and S. on both sides the Exe, and mostly joining Fore Street, the main thoroughfare, at right angles. The more narrow lanes and streets are S. of Fore Street.

Tiverton is lighted with gas, and watered by small streams from a branch of the Loman, called the Town leet. (*Bound. Rep.*) On an eminence between the rivers are the remains of the castle, a conspicuous object, occupying about an acre of ground. This fortress was erected in the reign of Stephen, and afterwards came into the possession of the Courtenays, Earls of Devon: in the civil wars it was garrisoned by the royalists, but after a short siege was taken by Fairfax. The church, on an eminence near the castle, is reckoned the finest ecclesiastical edifice in the co., after Exeter cathedral. It has a tower 116 ft. in height, and is chiefly in the perpendicular style, though there are some remains of an earlier date, and an enriched Norman doorway. A chapel, built by a merchant named Greenway, in 1517, is a good example of the gorgeous style of ornament which then prevailed. The ceiling is coved, and has tracery and rich pendants; like many works of that time, the design is better than the execution. The church has some rich screen-work. (*Rickman's Gothic Archit.*) In the nave are some curious monumental inscriptions; and the pulpit, which was probably made about the time of Charles II., is ornamented with the arms of many Devonshire families painted in separate compartments. The altar-piece is a rich painting of Peter delivered from prison.

Tiverton consists of several ecclesiastical divisions. Clare, Pitt, and Tidcome quarters, or portions, are all rectories, in the joint patronage of the Earl of Harrowby, Sir W. Carew, Sir R. Vivian, and the Rev. W. Spurway; the nett value of Clare rectory being 452*l.*, of Pitt with Cove 675*l.*, and of Tidcome 735*l.* a year. A handsome modern chapel-of-ease has been erected, at which each of the portionists officiates in turn. There are various meeting-houses, a spacious market-house built in 1830, a corn market, town-hall, bridewell, assembly and subscription reading-rooms, a neat theatre, &c.

Tiverton has numerous charities. A free grammar-school, in an ancient and venerable stone edifice, founded and endowed by a rich clothier of the town, named Blundell, in 1604, has now an income of nearly 700*l.* a year. It furnishes instruction for 150 boys, and sends 6 students to either of the universities, and 1 to Balliol college, Oxford; and it has 2 exhibitions of 30*l.* a year each, besides other scholarships. Another free school was founded by R. Chilcott in 1611, and there are several minor schools of a similar kind. The almshouses for 9 poor men, founded by Greenway in 1529, have an income of nearly 200*l.*, and the market trust money distributed to the poor by the corporation amounts to 326*l.* a year. The aggregate income of the various charities of Tiverton is estimated by the charity commissioners at 2,600*l.* a year. (*Digest of Charity Reps.*) The manufacture of lace employs from 1,200 to 1,500 people. The town was at one period famous for its balzes, serges, plain cloths, kerseys, and other woollen goods, and even as late as 1612 was regarded as the head manufacturing town in the W. of England; but its manufactures received a severe blow from a most destructive fire, which occurred on the 5th of August, 1612, from which it never fully recovered, and the introduction of Norwich stuffs, in the middle of the last century, completed its decline. At present the woollen manufacture employs only a few hands. The town supplies an extensive rural district, but its trade is not said to be increasing. In 1834, a few small houses of 5*l.* or 6*l.* rent were the only class of buildings in progress in the town; and, on the whole, it may be said to be stationary. (*Bound. Rep. and Mun. Corp. Appendix, i.*)

Tiverton is now divided into 3 wards, and is governed by a mayor, 5 other aldermen, and 18 councillors. It has a commission of the peace, and a court of record for civil actions to the amount of 100*l.* is held once a fortnight. A jail with 6 cells was built about 35 years since. The Boundary Act made no change in the limits of the parl. and mun. bor., which, as already stated, are co-extensive with the par. Tiverton was incorporated by James I. who also conferred on it the privilege of sending 2 mems. to the H. of C., the right of election, down to the Re-

form Act, being vested in the corporation, consisting of 26 individuals. Reg. electors, in 1849-50, 443. Corp. revenue, in 1847-8, 1,624*l.* Markets, Tues. and Sat. and a large cattle market on the 2d Tues. in each mo. Fairs, Tues. after Whitsuntide, and Sep. 29.

TIVOLI (an. *Tibur*), a town of the Papal States, comarca of Rome, on a steep ridge, on the Teverone (an. *Anio*), 18 m. E. by N. Rome. Pop. 6,000. In antiquity, Tibur was to Rome what Richmond is to London; but though in a magnificent and highly salubrious situation, the modern town is dirty and disagreeable, with narrow, steep, and ill-paved streets, and inferior houses. It has a cathedral and some other churches. Tibur or Tivoli, which is one of the most ancient cities of Italy, derives its entire interest from the classical associations connected with its ancient name, its scenery, and its remains of antiquity. The Teverone, coming here to the edge of the cliffs that separate its valley from the Campagna, is precipitated downwards in a series of cascades, the beauty of which has been admired from the age of Horace down to the present time.

"Me nec tam patiens Lacedæmon,
Nec tam Iarissæ percussit campus opime,
Quam domus Albunæ resonantis,
Et præceps Anio, et Tiburni lucus, et uda,
Mobilibus pomaria rivis."

Hor., lib. i. Od. vii. v. 10

In modern times, the upper or principal fall was, in a great degree, artificial, from the water having been precipitated over an embankment that had been formed to dam up the river. In 1826, however, one of those destructive floods that occasionally occurred in antiquity (*Plin. Epist., lib. viii. 17.*), as well as in our own times, swept away the whole of this embankment, along with a church and some contiguous houses, so that the upper fall was nearly destroyed; at the same time that a branch of the river which ran through the town was dried up. But new channels have been since cut, by which, we believe, the river has been again precipitated down a lofty fall.

In the court-yard of an inn in the town, overhanging one of the cascades, is the classical ruin of a temple, supposed to be either that of the *Sibylla Tiburtina* or of *Vesta*, constructed in the reign of Augustus. This beautiful structure is a rotunda, 23 ft. 11 in. in diameter, surrounded by an open portico of composite columns. Though exposed to the weather, without any roof or covering, it is better preserved than might have been expected. "It derives," says Eustace, "much intrinsic merit from its size and proportions, but it is not architectural merit alone which gives it its principal interest. Placed on the verge of a rocky bank, it is suspended over the *præceps Anio*, and the *domus resonantis* of the Naiads; Augustus and Mæcenas, Virgil and Horace, have reposed under its columns; it has survived the empire, and even the language of its founders; and after 1,800 years of storms and tempests, of revolutions and barbarism, it still exhibits its fair-proportioned form to the eye of the traveller, and claims at once his applause and admiration." (*Classical Tour, ii. 222. 8vo. ed.*)

It may be worth while mentioning that an English nobleman, the late Earl of Bristol, obtained permission from the authorities at Tivoli to take down and carry away this classical ruin, in the view of setting it up again in his park in England! Luckily the desecration was prevented by the interference of the Papal government.

Near this temple are the remains of another, now forming a portion of the church of St George, and an inn in the town is supposed to occupy the site of the temple of Hercules, whence Augustus borrowed the treasure collected by the piety of ages. But, besides these, little remains of the ancient Tibur. But though its temples and its theatres have crumbled into dust, its orchards, its gardens, and its cool recesses, bloom and flourish in unfading beauty. The declivities in its vicinity were anciently interspersed with splendid villas, the favourite residences of the refined and luxurious citizens of Rome. Among these may be enumerated the villas of Sallust, Mæcenas, Tibullus, Varus, Atticus, Cassius Brutus, &c. The existing remains of what is supposed to have been the villa of Mæcenas sufficiently attest its ancient magnificence; but probably the modern *villa d'Este*, erected in the immediate vicinity of the ruins, in the 16th century, by a Cardinal d'Esté, exceeds in extent and grandeur that of the minister and favourite of the master of the Roman world! Horace, who has over and over again expressed his admiration of Tibur, is supposed to have had a villa in its vicinity, and some ruins in a delightful situation are pointed out as those of his residence. But, notwithstanding the statement of Suetonius to the contrary, we are disposed, in this instance, to agree in opinion with Eustace, that the probabilities are, that the poet was not really master of a Tiburtine villa, and that all his allusions to the gratifications he experienced in the groves and streams of Tibur—

TOBAGO.

"circa nemus, uvidique
Tiburis ripas operosa parvas
Carmina fingo."

Hor., lib. iv. Od. ii. v. 30.

may be explained by his frequent visits to the villas of Mæcenæ and his other friends.

Such is the mutability of human affairs, that two convents, which raise their white towers above the dark green shade of the olive trees, are now the most striking structures in the neighbourhood of Tivoli; and that monks loiter away their worthless existence under the shades where Virgil and Horace elaborated their immortal works (Besides the works already referred to, see *Gell's Topography of the Country round Rome*, art. *Tiber*; *Wood's Letters*, ii. 61.; *Matthews' Diary of an Invalid*, p. 238., &c.)

TOBAGO, one of the W. I. islands belonging to Great Britain; in lat. about 11° 15' N., and long. 60° 40' W., 16 m. N.E. Trinidad, and 82 m. S.E. Grenada. Area, 57,408 acres. Pop. 14,000. "It is 32 m. in length and 12 in breadth, on the N. extremity rugged and mountainous, and from the sea appears like a mass of dark abrupt precipices. Towards the S. and W. the ground descends into a succession of conical hills and ridges of no great elevation, which, as they approach the sea, terminate in broken plains and low lands. The E. district is also mountainous. The soil in the valleys is generally a rich dark mould, and is well watered by numerous streams and rivulets. Cultivation being for the most part confined to a portion of the low lands near the sea on the S. side of the isl., the greater part of the interior is still in a state of nature, the high grounds covered with forests, the deep ravines choked up with vegetation, and the bottoms of the valleys, being very narrow and not possessing free drainage, generally of a wet marshy character. The climate and seasons here are much the same as at Trinidad, only rather more humid; but we possess no measurement of the quantity of rain which falls annually. In some of the low grounds, excluded from the influence of the breeze, the heat is described as being exceedingly oppressive, particularly at Scarborough, the cap., which lies at the foot of a hill on the S. side of the island. The troops enjoy the advantage of a more moderate temperature, being quartered in Fort King George, on the summit of the hill above Scarborough, where the heat is modified by a constant breeze, and the mean temp. of the year does not exceed 79° Fah. On the average of the 20 years ending 1836, the mortality amounted to about 153 per thousand of the white, and 34 per thousand of the black troops, annually, the former being nearly double the rate which prevails throughout the whole Windward and Leeward command. But as the climate has by no means affected the blacks in any corresponding degree, the deaths, on the whole, are considerably less than at most of the other stations." (*Tulloch's Report on the Health of the Troops in the W. Indies.*) This island is beyond the range of the hurricanes; though Grenada, at so short a distance, is as subject to them as the rest of the Antilles.

Tobago produces almost every kind of plant that grows in the Antilles, besides many common to the adjacent parts of S. America. It was formerly supposed to have given its name to the narcotic plant tobacco, now so widely diffused; but Humboldt has shown that there is no foundation whatever for this opinion, and that tobacco is a word of Mexican origin. (*Nouvelle Espagne*, iii. 50., 2d ed.) Indian and Guinea corn, pease, beans, figs, pine-apples, and all kinds of tropical fruits, are grown, as well as potatoes, yams, carrots, turnips, onions, manioc, &c. Horses, cows, asses, sheep, deer, &c., probably introduced by the Dutch, have multiplied greatly, and wild hogs are very abundant.

The principal imports into the U. Kingdom from Tobago, during the three years ending with 1839, were

Articles and Quantities.	1847.	1848.	1849.
Sugar (unrefined) - - cwt.	69,240	53,490	47,312
Rum - - - galls.	277,274	174,952	159,736
Molasses - - - do.	5,138	1,520	4,780

The total value of the articles imported into Tobago amounted, in 1847, to 51,089*l*. The exports from the U. K. to the island, in 1849, were only 14,887*l*. Revenue and expenditure about 8,000*l*. a year each.

Tobago has its governor, council of 9 mems., and ho. of assembly of 16 mems., whose powers are similar to those of Jamaica. It is divided into 7 pars. No. of pupils in the different public schools, in 1848, 1,636, of whom about 1,000 attended daily. The sum awarded by government, in 1835, for the manumission of slaves in Tobago amounted to 234,064*l*. This island, which was discovered by Columbus in 1498, was colonised first by the Dutch, and next by the Courlanders. It was ceded to Great Britain by France in 1763; but was retaken by the French in 1781, who retained possession of the island till 1793, since which it has belonged to England.

TOBOLSK.

791

TOBOLSK, a very large government of Asiatic Russia, comprising a large portion of the basin of the great river Obi, or the country between the 50th and 73d degrees of N. lat. and the 60th and 80th of E. long., having E. the gov. Yeniseisk, S. that of Tomsk and the Kirghiz territ., W. the gov. of Orenburg, Perm, and Archangel, and N. the sea of Kara, gulph of Obi, &c. The area may amount to from 900,000 to 1,000,000 sq. m.; and, in 1848, the pop. was estimated at 700,000. Except on its S. and W. frontiers, it is almost every where level, or but a slightly waving plain, though varying greatly in point of fertility. From lat. 58° or 60° to lat. 65° or 66°, the country is generally occupied by vast forests of fir and birch; from the woody region N. to the Arctic Ocean, the country, a low plain called the *Tundra*, is the most sterile imaginable, consisting of all but boundless moors and morasses, interspersed here and there with some stunted shrubs, and occupied by only a few Ostiak tribes, who subsist chiefly by fishing, and the chase of fur-bearing animals. Such is the severity of the climate, that this portion is usually covered with ice and snow for about 9 months of the year; and during the other months, ice is always found at a little distance below the surface.

Immediately to the S. of the woody region, or between about lat. 58° or 60° on the N., and 54° or 53° on the S., is the agricultural portion of the government, including extensive tracts watered by the Irtysh, a part of the Ishim, and the Tobol. Though not generally fertile, this district comprises some very productive tracts, and it has a considerable number of towns, though few of them be of any great size. Even in this part of the government, the climate is very severe; for, though the summer heats be sometimes oppressive, they are but of short duration, and the winters are long and excessively cold. Rye, oats, barley, and buckwheat are the principal crops. Between the agricultural district and the mountains separating the government from the country of the Kirghizes is the very extensive tract called the Steppe of Ishim, from its being in part traversed by that river and its affluents. Except along the river banks, it is mostly sterile; and in extensive tracts the soil is covered with a salt efflorescence.

Iron and copper are extensively raised in various parts of the Oural chain; and gold and silver are produced both there and in the Altai. At Catherineburg, Kolyvan, and Barnaoul, are extensive forges; and soap and tallow-works, tanneries, mat-manufactories, &c., are found in different parts: but the commerce of the government is of more importance than its manufacturing industry. Except the clergy, and persons in the government employment, all the inhabs. are more or less engaged in traffic, exchanging their sable and other furs, cattle, cassia, fresh and dried fish, and game, with the Russian traders for corn, flour, hardware, &c. The merchants of Tobolsk, Toumen, and the principal towns in the S. and W., send every summer boats laden with flour and other provisions, by way of the Irtysh and Obi, to Berezov, and the other small towns in the N., which return with cargoes of fish, and with valuable furs, procured from the Ostiaks and other tribes. These furs are afterwards partly sent, with soap, tallow, and hides, to the fair at Nijni Novgorod; partly to the Kirghiz, to be bartered for horses, cattle, and cotton goods, obtained through Bochara; and partly to Kiachta, on the Chinese frontier, where they are exchanged for tea, silk fabrics, and other Chinese products. The government, in common with the rest of Siberia, lies under the greatest disadvantages with respect to water communication; the frozen shores of its N. coast are inaccessible for the purposes of trade; and its rivers, though equal in magnitude to any belonging to the Asiatic continent, are covered with ice for the greater portion of the year. The chief mode of travelling, and conveying goods throughout a great portion of the government is, as in the N. part of Europe, in sledges drawn by dogs or rein-deer.

Mr. Bell and Captain Cochrane agree in representing the Tartar villages in the agricultural part of the government, as neat, clean, and comfortable. Their white plastered chimneys and ovens reminded the latter of his own country. The houses consist in general of one or two rooms. Near the hearth is an iron kettle, and at one end of the apartment a bench covered with mats or skins: on this all the family sit by day, and sleep by night. The walls are of wood and moss; a layer of moss between every 2 beams. A square hole is cut out for a window, and to supply the want of glass a piece of ice is often put in: 2 or 3 pieces will last the whole winter. They use no stoves, and have neither chairs nor stools. The furniture consists of a few earthenware utensils, and a set of tea-table appendages. The women never eat or drink till the men have done, and then seldom in their presence. (*Mod. Trav.*, xvii. 322.) Owing to the thinness of the pop., and the immense distances between the different towns, education is very little diffused, and besides the schools in the cap. (*see*

post), there are, perhaps, hardly a dozen in the rest of the government. Except Tobolsk, the cap., and Tournmen, there are no towns worth notice.

TOBOLSK, a city of Asiatic Russia, the cap. of W. Siberia, and of the gov. of its own name, and, indeed, of the whole of N. Asia; on the Irtysh, close to its junction with the Tobol, lat. $58^{\circ} 11' 49''$ N., long. $66^{\circ} 6' 18''$ E. Pop., in 1835, 15,379. The town proper is built principally on the flat summit of a hill commanding an extensive view, and is surrounded by a strong brick wall with square towers and bastions. When approached from the W. it has a remarkably fine appearance, and it really contains some good and solid buildings, most of the government offices, and the residences of the Russian and German settlers, being within the walls. Along the banks of the river are suburbs, inclosed by a ditch and palisade, and inhabited mostly by Tartars. Tobolsk had, in 1835, 18 churches, and 1,762 houses, of which only 25 were of stone. (*Journ. de St. Petersbourg.*) The streets, which cross each other at right angles, are mostly paved with wood. Among its public edifices, the most remarkable are, the cathedral, in the Byzantine style of architecture, with 5 cupolas, the archbishop's and governor's palaces, a monastery, and a large hospital. The climate in winter is very severe, so much so as sometimes to freeze mercury; and next to Yakutsk, Tobolsk is one of the coldest towns in Siberia: but the dress and houses of the inhabs. being fitted to resist its influence, it is not so disagreeable as might be supposed, and, in other respects, it is not an unpleasant residence. The rivers furnish an inexhaustible supply of fish, and provisions, fur, and game of all kinds are cheap and abundant; and shops, theatres, and places of public amusement are numerous. Being on the great road from Russia to China, it is well supplied with most European and Chinese goods; and French wines, English porter, and books of all kinds, are to be met with. Dobell says, "the society of Tobolsk may fairly stand a comparison with that of some of the best provincial towns in Russia." Among the inhabs. are many descendants of the Swedish officers, sent thither after the battle of Pultawa, to whom Tobolsk is mainly indebted for its superior civilisation. This city, which was founded in 1587, is the residence of the governor-general of W. Siberia, comprising the govts. of Tobolsk and Tomsk: it has 2 ecclesiastical, and several Lancastrian schools, and various charitable institutions. No convicts or malefactors are sent thither from European Russia, although persons banished to Siberia for political offences are sometimes permitted to reside in Tobolsk. (*Mod. Trav.*, vol. xvii.; *Erman, Reise um die Erde*; *Dobell's Trav. in Siberia*; *Journ. de St. Petersbourg.*)

TOCAT (an. *Berisa*), a town of Turkey in Asia Minor, pach. Sivas, on the Tosamli, near its confluence with the Jezil Irmak (an. *Iris*), on the military road from Samsoom to Kharpost, 85 m. S.S.E. Amasia, and 55 m. N.N.W. Sivas, lat. $40^{\circ} 7' 12''$ N., long. $36^{\circ} 30' 18''$ E. Tocat would appear to have latterly declined rapidly in pop. and importance. Tournefort, by whom it was visited in the early part of last century, says it was then much larger than Erzeroom; and he estimated its pop. at 20,000 Turkish families, with 4,000 Armenian, and 200 or 400 Greek do., which, on the most moderate hypothesis, would make an aggregate of above 120,000 inhab. We incline, however, to think, despite the high authority on which it is made, that this estimate must have been beyond the mark. At all events, the pop. was estimated by Kinnair, in 1810, at only 60,000; and according to Mr. Brant, by whom it was visited in 1830, it was then reduced to a pop. of 6,780 families (between 25,000 and 40,000 individuals), of which 5,000 were Turkish, 1,500 Armenian, 80 Rom. Cath., 50 Jewish, and 150 Greek. The position of the town is striking and singular, being built partly at the bottom, but principally on the declivities of two steep hills, on the side of the narrow valley in which it is situated. Tournefort says that the greater number of the houses, which are mostly of wood, have two stories; that the streets are pretty well paved, and that the springs rising in the hills on which the town is built are so numerous, that each house has its peculiar fountain. (*Lettres*, ii. 432.) According to the same distinguished authority, it was, at the period of his visit, famous for its copper foundries, its Turkey leather, and its dye works; and was then also the centre of the commerce of Asia Minor. (*Lettres, ubi supra.*) But Mr. Brant states that the manufactures and, still more, the trade of Tocat, have greatly diminished; that its numerous khans are empty, and that it has no symptoms of activity. Owing to its situation, the climate at certain seasons is oppressively hot; and it is then, also, apt to be unhealthy. With the exception of the mosques, Armenian churches, and khans, it does not appear to have any building of consequence. The valley, for about 3 m. above the town is occupied by gardens and vineyards. According to D'Anville, Tocat occupies the site of the ancient *Berisa*. (*Tournefort*, ii. 431—438.;

Kinnair's Asia Minor, 556.; *Geographical Journal*, vi 219., &c.)

TODMORDEN, a market-town and chapelry of England, partly in the par. of Rochdale, co. Lancaster, and partly in that of Halifax, co. York, 17 m. N.N.E. Manchester. Pop. 1841, 3,382. The inhabs. are principally employed in the manufacture of fustian, dimity, velveteen, and other cotton goods, with woollen fabrics similar to those manufactured at Halifax and Rochdale. The Rochdale Canal, which passes by Todmorden, has greatly promoted its prosperity, which appears to have increased rapidly within the last 20 years. (*Parl. Reports*, &c.)

TOKAY, a town of Hungary, co. Zemplin, at the confluence of the Bodrug with the Theiss, 113 m. N.E. by E. Pesth; lat. $48^{\circ} 7' 12''$ N., long. $21^{\circ} 24' 4''$ E. Pop., 3,500. It has a cathedral, a Lutheran, a Reformed, and a United Greek church, a convent of Piarists, and one of Capuchins, and was formerly defended by a castle demolished in 1705.

Tokay derives its whole celebrity from its being the *entrepôt* for the sale of the famous sweet wine of the same name, made in the hilly tract called the Hegallya, or submontine district, extending 25 or 30 m. N.W. from the town. The Tokay is produced by allowing the grapes to become dead-ripe; the finest quality, or essence, being that which flows from the grapes before they are trodden by the mere pressure of their own weight: the next quality (*ausbrack*) is that which is obtained by treading the grapes, with the addition of a certain quantity of *must*, or juice derived from common grapes; the third and lowest quality (*maslas*) is that which is obtained by the application of a greater degree of pressure to the grapes, and the addition of a still larger quantity of *must*. When new, Tokay wines are of a brownish yellow muddy colour, which, when very old, changes to a greenish tint. The wine made in favourable seasons will keep for almost any length of time, and continues to improve with age. The best qualities are extremely rich and luscious, but cloying; and, unless very old, too sweet for palates accustomed to austere wines. The finest and oldest varieties of Tokay fetch immense prices, as much as 7 ducats a bottle having been paid for it! The best qualities are usually bought up for the imperial cellars; small quantities being sent as most acceptable presents to foreign princes and distinguished individuals. (*Aust. Nat. Encyc.*; *Henderson on Wine*, p. 228.)

TOLEDO (an. *Toletum*), a celebrated city of Spain, formerly its metropolis, in New Castile, cap. prov. of its own name, on the Tagus, 38 m. S.S.W. Madrid, lat. $39^{\circ} 52' 24''$ N., long. $4^{\circ} 49' 18''$ W. Pop., which in the 15th century is said to have amounted, though this, no doubt, is a gross exaggeration, to 200,000, is now reduced to about 15,000. It stands on a rocky hill, nearly environed by the river, and is encompassed by a wall flanked with about 150 small towers, built by the Moors. Internally, Toledo is acknowledged to be ill built, poor, and mean; with narrow, steep, and badly-paved streets. But Inglis says that, with the exception of Granada, its situation is the most striking of any in Spain. Its fine irregular line of buildings covers the summit and upper part of the hill, behind which, as approached from Madrid, the dark range of the Toledo mountains forms a majestic background. "Besides the numerous towers of its convents, churches, and stupendous cathedral—the metropolitan church of Spain—the outline is broken by other buildings of a more grotesque or more massive form; while, here and there, the still greater irregularity of the outline points to ages too remote to have left to modern times any other legacy than their ruins." (*Spain in 1830*, i. 292.)

Down to the recent changes by which, as already seen (*ante*, 711), the Spanish ecclesiastics have been stripped of the greater portion of their enormous wealth, the revenues of the archbishop and clergy of Toledo were immense; and the pop. of the city consisted principally, in fact, of priests and friars, and their dependants. The cathedral, founded in 567, is in the same style as those of Seville, Burgos, Milan, Siena, and Bologna. Swinburne says that it is not to be compared with many we have in England; but it has attracted the admiration of most other travellers; and Inglis says that, excepting the cathedral of Seville, it is the greatest and most magnificent of Gothic temples. (*Spain, &c.*, i. 304.) According to Twiss, it is internally 384 ft. (Engl.) in length, 191 in breadth, and 107 in height. It has a tower and spire, but the latter is said by Swinburne to be in the style of the Flemish and German spires, a heap of blue turrets piled one upon another. The roof is sustained by 86 columns, which divide the church into five aisles. The columns that run along the aisles are 45 ft. in circ. There are 68 painted windows; and surrounding the choir and the high altar are 156 marble and porphyry pillars. (*Twiss's Trav.*, 183.; *Inglis*.) Its interior is elegantly, as well as most magnificently adorned. The choir is covered with carvings representing the conquest of Granada, executed by Berruguete, a pupil of Michael Angelo, and Philip de

Borgona; and among the paintings are (or at all events were) works by Rubens, Titian, Dominico Greco, Vandyke, Guido, E. Caxes, Vincente Carducho, Bassano, and other masters of the first celebrity. The ceiling of the sacristy is painted in fresco, by L. Giordano, and has a picture of the Assumption, by Carlo Maratti. The pope and the king of Spain are always canons of this cathedral; and the revenue of its archbishop once amounted, it is believed, to little less than 100,000*l.* a year! The gold, silver, and jewels, the plunder of Mexico and Peru, preserved in the church, mostly escaped falling into the hands of the French. The archbishop carried away the more valuable articles to Cadiz; those that remained in their places being redeemed for the comparatively trifling amount of 90 arrobas, or 2,250 lbs., of silver. Townsend says, that the treasures of the cathedral struck him with astonishment; and in 1830, Inglis was told that their total value amounted to upwards of 40 millions of ducats, or 10,000,000*l.* sterling! We have little doubt, however, that had the generally intelligent, but sometimes credulous traveller, inquired into the fact, he would have found that the *relics*, so precious in the estimation of the clergy, made up the far greater part of this enormous sum. We apprehend that any capitalist who should offer 1,000,000*l.* for all the gold and silver that is at present, or that ever was in the cathedral, would make a very bad speculation.

The Alcazar, once the residence of the Moorish, and afterwards of the Castilian sovereigns, is the other principal edifice in the city. It is a noble pile of 3 stories, surmounted by a balustrade, and forming a square of 266 ft., as measured by Twiss. (*Trav.*, 184.)^{*} It is built chiefly in the Corinthian and Composite orders, of the dark stone with which the Escorial is built. The N. and S. fronts were erected in the time of Charles V., the former by Covarrabias and Vergara, and the latter by Juan de Herrera. When Toledo ceased to be the metropolis of Spain, the Alcazar was converted into a work-house, and it was subsequently employed for a silk manufactory, established by the archbishop; but it is now untenanted, and so utterly neglected, that in one of its extensive vaults underground Inglis encountered a party of wandering gypsies assembled round a huge fire.

Besides the cathedral, there are, or rather were, innumerable churches, monasteries, nunneries, and other religious buildings. Few, however, of these are worth notice. The Franciscan convent is, indeed, a fine edifice, and has a church built in the time of Ferdinand and Isabella. The late archbp. Lorenzo established a lunatic hospital at Toledo; built the modern edifice for the university, which in 1830 had more than 700 students, principally in jurisprudence; and founded a college for girls, each of whom is dowried, provided they do not go into a convent afterwards. There are several other colleges, numerous hospitals and asylums, a handsome town hall, two bridges over the Tagus, one originally a Roman work, bearing a Roman inscription, and terminated on one side by an arch with Corinthian columns; a mint, supposed to date from the time of the Romans, &c. There are a few pleasant promenades around the city, but the only public lounge in Toledo is the *Plaza Real*; and there, says Inglis, "at certain hours, particularly about 2 o'clock, it seems almost like a convent-hall of recreation, and a sacristy of a cathedral united; for canons, prebendaries, and curates, and 20 different orders of friars, are seen standing in groups, strolling under the piazzas, or seated upon benches, refreshing themselves with melons or grapes." But this square is half monopolized with blacksmiths' shops; and all the others are small, mean, and principally useful as market-places. The houses are mostly floored with brick, and are consequently dusty; and the Roman aqueducts being destroyed, water is sold about the streets, carried in small barrels on asses' backs. There is no public place of diversion of any kind: formerly there was a theatre, but it was suppressed by a royal order obtained through the head of the university. "Bull fights even are forbidden in this priest-ridden city; so that unless processions of saints, &c., are to be considered an amusement, the inhabs. have positively no resource but in the *tertulia*. Nowhere are Spanish customs seen more pure than in Toledo, and nowhere is the monotony of the *tertulia* more striking. The sole amusements are talking, or playing *basto* for a very low stake; and after a glass of *agua fresca*, the party separates. In Toledo, a certain circle agrees to form a *tertulia*: one house is selected where it is to be held, and the same individuals assemble at the same house, and at the same hour, every day throughout the year! This is Toledo society. No admixture of foreign, or even of modern innovation, is to be seen in Toledo. Men of all ranks wear the cloak; and the small round high-crowned Spanish hat is worn, not only by the peasantry, but almost universally by

^{*} Townsend states, "the quadrangle is 160 ft. by 150 ft.; and with the great staircase, the gallery, and the colonnade, has an air of elegant simplicity."

persons of all classes. Among the women no colours are to be seen; black is the universal dress, and scarcely any one enters a church unveiled." (*Inglis*, i. 294, 295—303.) We must add, however, that morals are said to be more correct there than in almost any other Spanish city.

Toledo has, from a remote period, been famous for its manufacture of sword blades. The royal sword manufactory, which is of great extent, and about 2 m. from the city, is close to the river, which turns its machinery. It once employed many hundred hands; but, when visited by Inglis, in 1830, only 50 were employed, who finished about 8,000 swords a year. They work by the piece, and make usually about 100 reals (20*s.*) per week; some of the most industrious 24 reals more. The art of tempering the steel had, for some time, declined, but it has since revived. "The flexibility and temper of the blades are surprising: there are two trials which each blade must undergo before it be pronounced sound; the trial of flexibility, and the trial of temper. In the former, it is thrust against a plate on the wall and bent into an arc, at least three parts of a circle. In the second, it is struck edgewise upon a leaden table, with the whole force which can be given by a powerful man, holding it with both hands. The blades are polished upon a wheel of walnut wood." (*Inglis*, i. 313.) In addition to its sword manufactory, Toledo fabricates church ornaments, a few woollens, for hospital use, with paper, guitar strings, coarse glass, &c., and has some dyeing and fulling works. Its general trade is very insignificant; and a few years since there was no conveyance, nor even a continuous road, between it and Madrid.

The origin of Toledo is lost in obscurity. After having belonged to the Carthaginians it became a Roman colony. Few traces of Roman edifices, however, exist, except part of an amphitheatre, and some scattered remains of the Roman walls. In 467, it was taken by the Goths, and became the cap. of their kingdom in Spain, till taken by the Moors in 714. Alphonso VI. and Rodrigo Diaz expelled the latter from Toledo in 1085; and, notwithstanding three vigorous sieges in the succeeding century, it has remained in the hands of the Spaniards ever since. Its decay dates from the removal of the court to Madrid, under Philip II. The celebrated Cardinal de Ximenes, regent of Spain during the minority of Charles V., was, for a lengthened period, archbishop of Toledo. (See *Dict. Géog.*; *Milano*, *Geog. de España*; *Antillon*; *Swindburne*; *Twiss*; *Townsend*; *Inglis*; *Mod. Trav.*, xix. 50—58.; &c.)

TOLOSA (an. *Iturisa*), a town of Spain, in Biscay, prov. Guipuscoa, of which it is the cap., on the Oria and Arajes, 13 m. S. by W. St. Sebastian. Pop., according to Milano, about 5,000. It is placed in a narrow defile, surrounded by a pentagonal wall, flanked with towers, and entered by several gates. It is said to be handsome, and well built; the streets, which are furnished with footways, are clean, and lighted at night; and it is tolerably well supplied with water. Here are 2 parish churches, both fine buildings, 2 convents, an hospital, prison, post-house, a stone bridge across either river, with manufactures of arms, copper and earthen wares, woollen cloths, paper, hats, leather, &c.; three fourths of its inhabitants being artisans. (*Milano*.) A large market is held on Saturdays. Tolosa is one of the 18 indep. towns in which the provincial assembly of Guipuscoa is held, one of the 4 alternately the seat of the high judicial court of the prov., and the place in which the provincial archives and military stores are kept. (*Milano*; *Antillon*; *Inglis*, &c.)

TOMSK, a town of Asiatic Russia, cap. of the gov. of same name, on the Tom, a tributary of the Obi, 650 m. E. by S. Tobolsk. Lat. 56° 29' 6" N., long. 85° 9' 51" E. "It has nearly 2,000 houses, and from 8,000 to 10,000 inhabs. Here are workhouses for exiles; coarse cloth, leather, and soap manufactories; barracks, public magazines, military and other hospitals; an orphan house, a dispensary, &c. There are a number of handsome houses in Tomsk, but the town is irregularly built, except the part that occupies a hill overlooking the river Tom and the country round. Next to Krasnojarsk, Tomsk is the cheapest and most plentiful spot in Siberia." (*Dobell's Trav.*, ii. 110.) Its principal buildings are the cathedral and another church, the tribunals, treasury (in which are the magazines of furs collected as tribute), and two convents. The inhabs. carry on a brisk trade with the Calmucks and Ostiaks, in cattle, furs, &c.; and the town is an emporium for distilled spirits and Chinese goods. It was founded in 1604.

The government of which Tomsk is the cap. is, with that of Tobolsk, under the authority of the Governor-General of W. Siberia. Since 1838, it has comprised a portion of the former government of Omsk; and is supposed to have from 1,000,000 to 1,100,000 inhabs. In 1846, no fewer than 1,362,89 poods of gold were obtained from the different gold washings in this government. In its general features it is very similar to the more

southerly parts of the governments of Tobolsk, Yeniseisk, &c. (which see).

TONNEINS, a town of France, dep. Lot-et-Garonne, cap. cant., on the Garonne, 20 m. N.W. Agen. Pop., in 1836, ex. comm., 4,176; or inc. comm., 7,088. It is one of the best situated and most active towns in the dep., having a considerable trade in cordage, hemp, and dried fruits, and a royal tobacco factory. It is clean and well built, and communicates with the opposite bank of the river by a new suspension bridge. The esplanade, a good square, on the site of an old castle destroyed in the religious wars; the town-hall, a neat theatre, and some public baths, are worthy notice.

TOPLITZ (or *Toeplitz*), a town and watering-place of Bohemia, circ. Leitmeritz, and next to Carlsbad, the most popular place of resort of its kind in Germany. It is pleasantly situated on the Saubach, a small stream in a valley between the Erzgebirge and Mittlegebirge mountains, 47 m. N.W. Prague. Its resident pop. amounts to little more than 2,700; but in the height of the season, in July and August, it is sometimes visited by 15,000 strangers. (*Murray's Handbook for S. Germ.*) More than 1-4th part of its houses are inns, and nearly all the rest are lodging-houses. The town is neat, and has been improved of late years by the addition of foot-pavements in the streets, and it is well lighted at night; but it has no buildings worthy of notice, except such as are connected with the baths. The principal baths are distributed in 4 distinct buildings; the Steinbad, Fürstenbader, Fürstliche-Frauenzimmerbad, and the Herrnhaus, or mansion of Prince Clary, the proprietor of the town. All these are in the *Baade platz*, or bath square. The Steinbad includes 3 baths, for the gratuitous use of the public; one for the men, a second for the wives and daughters of citizens, and the third for the female peasantry, &c.: the first and last are under ground, and vaulted over, and may be compared to large inundated cellars. In the same house are some very comfortable private baths, supplied directly from the source. The Fürstenbad and Frauenzimmerbad comprise a number of superior private baths; the first for gentlemen, and the second for ladies. In the Herrnhaus, which was the usual residence of the late King of Prussia, when at Toplitz, there are many bathing apartments fitted up with great elegance; and attached to this mansion are some extensive and beautiful gardens, always open to the public, a theatre, &c. The baths in the Girdlerhaus also in the Baade-platz, the Jews' baths and others are supplied from the main springs. Without the town, and in the neighbouring hamlet of Schönau, are many baths of a lower temperature than in the town. In all there are about 90 private baths, which are in such constant requisition when Toplitz is full, that, by a strict regulation, no person is allowed the use of a bath and dressing-room for more than an hour at a time, for which from 10 to 20 kreutzers are usually paid. The springs are saline, with a dash of iron; the hottest, or *hauptideille*, has a temperature of about 122 Fahr. It emerges from a porphyry rock, and so abundantly that its supply, per hour, has been estimated at 1,189,670 cubic feet of water. The waters of Toplitz are particularly esteemed in gout, and rheumatic affections, diseases of the joints, &c., requiring tonic treatment. The invalids of the Prussian, Russian, and Austrian armies are often sent here, and lodged in appropriate buildings. Of late years a pump-room has been established in the gardens of Prince Clary.

The hotels and lodging-houses are good and cheap. Dr. Granville says, "The living at Toplitz is, beyond comparison, cheaper than in any other watering place I have visited. A dinner at a *table d'hôte* without wine will cost about 1s. 3d. Apartments may be hired at one of the best hotels, consisting of a bed-room and sitting-room, for not quite a guinea a week." (*Spas of Germany*, 336.) Bathing is the chief occupation of the morning. The dinner hour is 1 or 2 o'clock; the afternoon is commonly spent in excursions; the evening in the theatre or the salons; but "except on ball nights, and on the occasion of some great concert, the town is buried in dead silence by 10 o'clock." Public gaming is not allowed; but it is alleged that gambling is, notwithstanding, extensively carried on. Toplitz was the seat of a diplomatic congress in 1813, and again in 1835. (*Granville; Spencer; Gleig; Austrian Nat. Encyc.; &c.*)

TOPSHAM, a market town and par. of England, co. Devon, hund. Wonsford, on the Exe, where it is joined by the Clyst, 4 m. S.E. Exeter, of which it may be considered the port. Area of par., 1,740 acres. Pop. in 1841, 3,733. It consists of several good streets; the Strand, in particular, at its S. extremity, has many respectable residences, and is inhabited by some families of good fortune. The church is built on an eminence overlooking the river. The living, a perpet. curacy, worth 227l. a year., is in the gift of the dean and chapter of Exeter. The chief business of the town is ship-building, and most of the inhabs. are connected with shipping.

The quay, which was originally constructed in the 14th century, is spacious and convenient; but from the corporation of Exeter (to which it belongs), neglecting to clean the channel of the river, vessels drawing more than 9 or 9½ ft. are unable to come up to it. (*Mum. Append. Rep. on Exeter.*) An active coasting trade is, however, carried on from Topsham. Markets on Saturdays; fair, first Wednesday in August.

TORBAY, a spacious bay of the English channel on the S.E. coast of Devonshire. It is of a semicircular shape, opening to the E., and nearly 4 m. across from Torquay or Rob's Nose its N. to Berry Point its S. boundary. Its shores at its mouth are on both sides formed by ramparts of rock, but between these, in the centre, at the bottom of the bay, the ground forms a vale, gently declining to the water's edge. Ships anchor all over the bay in 6, 7, 8, and 9 fathoms water. The ground is strong clay, and holds remarkably well. This spacious basin has frequently afforded shelter to the fleets of England, and is celebrated in history as the place where our great deliverer, William III., landed on the ever-memorable 5th of November, 1688.

TORGAU, a town of Prussian Saxony, reg. Merseburg, cap. circ. Torgau; on the Elbe, here crossed by a covered bridge, 66 m. S.S.W. Berlin. Pop. about 6,500. It is pretty strongly fortified, is the seat of the principal courts, &c., for its circle; and has manufactures of woollen cloths and hosiery, leather, &c., with some trade in corn and timber. The vicinity of Torgau has been the scene of several conflicts. Of these, the most important took place on the 23d of November, 1760, when the Prussians, under Frederick the Great, forced, after a desperate resistance, the intrenched camp of the Austrian army, under Marshal Daun, and gained a decisive victory.

TORNEA, a town of the Russian dom., N.W. frontier of the Grand Duchy of Finland, on a peninsula in the river Tornea, where it falls into the Gulph of Bothnia, lat. 65° 50' 50" N., long. 24° 13' 15" E. Pop. from 500 to 700. This little town, which was built by the Swedes, in 1602, consists of two principal streets of wooden houses. It has a considerable trade in the exportation of stock-fish, rein-deer, skins, furs, iron, planks, tar, butter, pickled salmon, &c. The climate is very severe, though less so, perhaps, than might be expected from its high latitude. In June the sun is visible at midnight above the horizon.

Tornea is celebrated in the history of science for the visit made to it in 1736, by the French academicians Maupertuis, Clairaut, Monnier, and Camus, accompanied by the Swedish astronomer Celsius, with a view to the determination of the exact figure of the earth. The operations do not, however, appear to have been conducted with sufficient accuracy; and there is a discrepancy of about 200 toises between the length of the degree as determined by the academicians and that measured by the Swedish astronomer Svanberg, in 1801. This town, along with the Grand Duchy of Finland, was ceded to Russia by Sweden, by the treaty of Fredrickshausen, in 1809. (*Clarke's Travels*, ix. 342, &c., 8vo. ed.; *Schmitzler, La Russie*, &c., p. 624; *Biographie Universelle*, art. *Maupertuis*.)

TORO, a town of Spain, in Leon, prov. Zamora, cap. intend.; on a hill, at the foot of which runs the Douro, crossed by a narrow stone bridge of 22 arches, 82 m. N.N.E. Salamanca. Pop. about 10,000. (*Milano*.) It is enclosed by old and dilapidated walls, and entered by 6 gates. The streets, though broad, and on a declivity, are dirty, and the houses indifferent. It has a collegiate, and 18 par. churches. It formerly had 13 convents, with 3 hospitals, a ruined alcazar, or Moorish castle, a palace belonging to the dukes of Berwick, barracks, a prison, &c. The inhabs. are principally occupied in the growing and trading in wine, but they have also manufactures of coarse woollen and linen cloths, brandy, and leather. Toro is of great but uncertain antiquity. It is famous in history for the victory obtained in its vicinity in 1476, by Don Ferdinand of Aragon, over Alphonso V. of Portugal; and for the collection of laws framed in 1506, and inserted in the Spanish statutes under the name of *Leyes de Toro*. (*Milano; Dict. Géog.*, &c.)

TORONTO, formerly *York*, a town of Upper Canada, of which it is the cap., on the N. shore of Lake Ontario, towards its W. extremity, in lat. 43° 32' N., long. 79° 20' W. Pop., in 1845, 19,706. It was founded by Governor Simcoe in 1794, and was burnt by the Americans in 1813. In 1831 it had only about 4,000 inhabs., its subsequent progress having been more rapid than that of any other town in Canada. It is now a handsome town, with spacious streets crossing each other at right angles; many of its buildings being of brick, to which timber is gradually giving place. The public edifices are well adapted to their purposes. Among the most imposing of the latter are the new courts of law, the offices for the legislature, the R. Catholic cathedral, St. George's church, the lunatic asylum, the college, &c. The garrison is

stationed about 1 m. W. of the town, where the entrance to the harbour is guarded by a battery and two block-houses. Toronto harbour, or bay, is formed by a long and narrow peninsula, stretching out to the S.W. for about 6 m., and terminating in Gibraltar point, on which a lighthouse has been erected. The bay is nearly circular, and about $1\frac{1}{2}$ m. across; it has a considerable depth of water, and affords extensive and safe anchoring ground. (*Stevenson's Civil Engineering, &c.*)

Toronto is the seat of the superior judicial courts for the upper prov. The parliament of the latter was, also, in the habit of assembling here; and it is now, alternately with Quebec, the place of meeting of the united Canadian legislature.

Kingston, at the other extremity of Lake Ontario, on its N. shore, about 140 m. E.N.E. Toronto was the former cap. of Upper Canada, and though less central has been considered by many as more eligible than Toronto for this distinction. Pop. about 6,000. It has an excellent harbour, where ships of the line may lie close to the shore; and is also the site of the principal naval dockyard in the colony. It covers a considerable extent of ground, and many of its houses are of stone. It has the finest public building in Canada. It is of stone, and cost 90,000 doll.; it inc. a town hall, offices for the corporation, the Post office, news room, &c. Kingston is the principal entrepôt of the trade between the Upper and Lower prov.

TOROPETZ, a town of European Russia, gov. Pskof on the Toropa, 245 m. S. Petersburg. Pop. about 7,500. It is entirely surrounded by lakes and rivulets, and communicates by the Toropa with Riga, which renders it a place of some trade. It has 13 churches, including a cathedral, and 2 convents. A few of its houses are of brick or stone, but the major part are of wood, the streets also being paved with planks. On an island in the Toropa is a dilapidated fort. This town, under the name of Krivitch, is mentioned as early as the introduction of Christianity by Vladimir, about 990. It was the cap. of a republic, which lasted through the whole of the 12th century, but which in the 13th became subject to hereditary princes. Towards the end of the 15th century it belonged to the Poles, but it was retaken by the Russians in 1500. (*Schnitzler, &c.*)

TORRINGTON, a mun. bor., town, and par. of England, co. Devon, hund. Fremington, partly on the summit, and partly on the declivity of an eminence on the E. bank of the Torridge, here crossed by 2 bridges, $5\frac{1}{2}$ m. S.S.E. Bideford, and 30 m. N.W. Exeter. Area of par., 3,640 acres. Pop. in 1841, 3,419. It consists principally of two parallel lines of thoroughfares, nearly 1 m. in length, connected by several short streets. The par. church, which had been mostly blown up by an explosion of gunpowder in the civil wars, was rebuilt in 1651; and in 1830, a new tower and octagonal spire were erected. The living, a perpet. curacy, worth 162*l.* a year, is in the gift of Christchurch Coll., Oxford. It has a market place surrounded by good houses, a neat town hall, places of worship for Baptists, Independents, Wesleyans, &c.; almshouses, a charity or blue-coat school for 32 boys, and various minor charities. Near the town is Stevenston, the seat of Lord Rolle, who cut a canal in 1823, which skirts the hamlet of Taddipport, on the opposite side of the Torridge. At this hamlet is an hospital for the poor of the pars. of both Great and Little Torrington. A bowling-green now occupies the site of a castle erected on an eminence S. of the town in the 14th century. Torrington is watched during the winter months, but is not lighted; and its police is said to be very inefficient. It has a very indifferent jail. The chief occupation of the industrious classes is the manufacture of gloves, which is not confined to the town, but gives employment to many families of the surrounding district. (*Mun. Corp. Rep.*) Torrington appears to have been first chartered by Philip and Mary: it is now governed by a mayor and 3 other aldermen and 12 councillors, who hold petty sessions every 3 weeks. Other courts formerly held have gone into disuse. Corp. rev., in 1847-8, 226*l.* Torrington sent mems. to the H. of C. down to the reign of Hen. VII., when it appears to have lost or relinquished the privilege. At the restoration, the earldom of Torrington was conferred on Gen. Monk; and it now gives the title of viscount to the Byng family. Markets on Saturdays; fairs, May 4., July 3., and Oct. 10., for cattle.

TORSHEK, or Torjok, a town of European Russia, gov. Tver, cap. distr., on the Tverza, 138 m. N.W. Moscow, lat. $57^{\circ} 56' N.$; long. $57^{\circ} 55' E.$ Pop. about 12,000. (*Possart.*) It was nearly burnt down in 1767, since which it has been rebuilt with considerable regularity and with rather wide streets, and though its houses are still generally of wood, its public buildings are mostly of stone: the latter includes a cathedral and 20 other churches, 2 convents, a government house, normal school, orphan asylum, &c. It is famous for a holy spring, which attracts pilgrims from all directions. Being on the high road from Petersburg to Moscow, and having also the best inn on this road, it is a place of considerable name,

and has three large annual fairs. Its principal manufacture is that of saffron, or coloured and prepared Russia leather. A large traffic is carried on in shoes, gloves, and various articles of this material, embroidered with gold and silver; but the traveller had better be on his guard against imposition, as the dealers not only ask three times as much for any article as it is worth and they will take, but also endeavour to substitute articles made of sheepskin for the genuine leather, which is a preparation of ox hides. (*Schnitzler; Possart; Murray's Handbook, &c.*)

TORTOLA, one of the Virgin Islands, in the W. Indies, belonging to Great Britain, lat. $18^{\circ} 27' N.$, long. $64^{\circ} 34' 45'' W.$, between St. John's and Virgin Gorda. It is about 12 m. in length by 3 or 4 in its greatest breadth. Pop., in 1844, 6,700; of whom, above 4,000 were blacks. "This island consists of a range of hills rising in some places to the height of 1,600 ft., and encircling a spacious harbour, or basin; they are, for the most part, barren, rocky, and precipitous, and there is but one valley of any extent throughout the island. The town of Tortola is on the W. side of the harbour at the foot of these hills, which rise so close behind it that many of the houses are built within sea-mark, and consequently suffer from damp. The barrack and hospital for the troops are at the S.E. extremity of the town, and as they lie open to the trade winds, which blow across the harbour, they are not much incommoded by heat. But considerable sickness, particularly from fever, has been found to prevail among the troops at Tortola." (*Tullock's Report, p. 37.*) In 1831, the imports of sugar into the U. K. from Tortola amounted to 15,559 cwts., whereas, in 1849, they only amounted to 928 cwts. The value of the exports from the island sunk proportionally, or from 24,729*l.* in 1837 to 2,323*l.* in 1849!

TORTONA (an. *Dertona*), a town of N. Italy, in the Sardinian States, div. Alessandria, cap. prov. of its own name, at the foot of a hill crowned by a ruined castle, 13 m. E. by S. Alessandria. Pop., in 1838, 10,821. It was a place of considerable strength till dismantled by the French in 1796. It is the see of a bishop, the seat of a court of primary jurisdiction, and has manufactures of silks, stuffs, &c.; and some trade in corn and wine. It appears from inscriptions to have been a Roman colony, under the name of *Julia*.

TORTOSA (an. *Derdosa*), a town of Spain, in Catalonia, on the N. bank of the Ebro, about 25 m. from its mouth, and 93 m. S.W. Barcelona. Pop., according to Mifano, between 10,000 and 11,000. It is defended by several outworks, and is divided into the old and new towns, both of which are walled. It is old and ill built, and has but one public fountain. The cathedral is near the river, and under the protection of the castle. The front is Ionic, with massive pillars, some of single stones; the choir is of Corinthian architecture; but the whole edifice is void of taste, and its interior is much overloaded with ornament. Townsend observed in the cloisters a chapel bearing indications of the most remote antiquity. The see of Tortosa is a bishopric, and was very rich. There are several par. churches, nine convents, a Latin school, hospital, public granary, &c.; but, next to the cathedral, the principal edifices are the bishop's palace, and the mansion of the Vall Cabra family. Tortosa is the residence of a military governor, the seat of an ecclesiastical court, &c., and has manufactures of earthenware, paper, and leather; a considerable trade in corn and silk, and an active fishery and coasting trade. Within a league of the city are some quarries of valuable marble, known as Tortosa jasper. The *huerta*, or plain of Tortosa, says Townsend, "is most delightful. Far as the eye can reach, you look down upon a plain covered with vines, olives, figs, pomegranates, apricots, mulberries, and all kinds of grain; and through this fertile vale you trace the meanderings of the Ebro, which is here wide and navigable." (iii. 305.) This town had the privileges of a Roman *municipium* conferred on it by Scipio. On one occasion, during the wars between the Spaniards and the Moors, the women of Tortosa distinguished themselves so much, that in 1170 the military order of La Hacha, or the "Flambeau," was instituted for them. They also enjoyed several privileges, most of which are now lost; but it is said that in all matrimonial ceremonies they still maintain the right of precedence. (*Peyron in Mod. Trav. xviii.; Townsend; Mifano.*)

TOTNESS, a parl. and mun. bor., town, and par. of England, co. Devon, hund. Coleridge, on the Dart, 9 m. from its mouth, and 20 m. S. by E. Exeter. Area of parl. bor., which comprises the whole par. of Totness with the manor of Bridgetown, 1,411 acres. Pop., in 1841, 4,240. The town, which is neat and clean, consists principally of one long street, that communicates at its E. extremity, by a bridge of three arches, with the suburb of Bridgetown, on the opposite side of the river. The town is finely situated, the main street gradually rising from the water till it reaches the site of the ancient castle, now a ruin, on an immense artificial mound, commanding an extensive view of the neighbouring country. It was anciently surrounded by a wall, and some of the

gateways still remain. The houses are old fashioned, some of them having piazzas, and their upper stories frequently projecting beyond the lower. But, with the exception of a few on the Plymouth road, all the modern buildings are in the Bridgetown division; and it is here that a further extension of the town may be looked for. (*Mun. Bound. Rep.*) The church is a spacious, handsome structure, in the Perpendicular style, with a well-proportioned tower at the W. end, which has octagonal pinnacles and rich buttresses. In the chancel is a rich stone screen: it has also a stone pulpit, enriched with tracery and shields; but the altar-piece is Grecian, and does not correspond with the rest of the building. This church appears to have been rebuilt about 1432. The living, a vicarage worth 200*l.* a year, is in the gift of the crown. There are meeting-houses for Independents, Wesleyans, and Unitarians, an old guildhall and council-chamber, a small theatre, assembly-room, &c.

Judhael de Totnais, to whom the manor was given by William the Conqueror, erected the castle and also a Benedictine priory, which, at the dissolution, had a revenue of 124*l.* 10*s.* a year. It has numerous foundations, among which a grammar school, established in 1554, having an income of 70*l.* a year. Totness had formerly a thriving woollen trade; but at present it has no manufactures. Many of the inhabs. are employed in agriculture, some in fishing, and some in navigation, the Dart being navigable to the town for small vessels. Warehouses have been built at Bridgetown, on the E. bank of the river, and many houses are building in the neighbourhood. The town has some trade in the importation of coal and other articles, and may, on the whole, be said to be improving. (*Mun. Corp. Rep. Append.*) It was first incorporated by King John; and is now governed by a mayor, 3 other aldermen, and 12 councillors. It has no commission of the peace; but a court leet is held once a year, and petty sessions occasionally. Corporation revenue, in 1849, 438*l.* The bor. has sent 2 mems. to the H. of C. since the 23d of Edward I., the right of voting, down to the Reform Act, having been in the corporation and freemen. Registered electors, in 1849-50, 362.

Among other distinguished individuals, Totness has given birth to Edward Lye, the learned author of the *Dictionarium Saxonico et Gothico Latium*, 2 vols. folio, 1772, which, however, he did not live to see printed. It is, also, the birthplace of Dr. Kennicott, the Hebraist, to whom the learned world is indebted for a most elaborate and excellent edition of the Hebrew bible. In his younger days Kennicott was master of the grammar-school in the town.

TOUL, a town of France, dep. Meurthe, cap. arrond.; on the Moselle, here crossed by a handsome stone bridge of 7 arches, 13 m. W. Nancy. Pop., in 1846, inc. comm., 7,158. It is generally well built, and its streets have recently been macadamised. Its principal buildings are the cathedral, a fine Gothic structure of the 15th century; the town-hall, formerly the bishop's palace; the cavalry barracks and magazines, civil hospital, corn-hall, college, *abattoir*, &c. Its manufactures comprise calicoes, muslins, woollens, hosiery, and earthenware. This town was anciently the cap. of the *Leuci* conquered by Cæsar. It was ceded by Charles the Simple to the Emp. Henry the Fowler, and was not definitively annexed to France till 1552. Baron Louis, Admiral de Rigny, and several distinguished generals, have been among the natives of Toul. (*Hugo, &c.*)

TOULON, a famous sea-port town of France, being the 2d, or, perhaps, since the conquest of Algiers, the 1st naval port in the kingdom; dep. Var. of which, though not the cap., it is by far the largest and most important town, at the bottom of one of the finest harbours of the Mediterranean, 32 m. E. S. E. Marseilles, and 190 m. S. S. E. Lyons, lat. 43° 7' 10" N., long. 5° 55' 40" E. Pop., in 1846, ex comm., 39,243, and inc. comm. 45,484; but in 1850, the pop. was estimated at 55,000; though this, probably, includes the garrison, and the *forçats* in the *bagne*. The town, which is of an oval shape, the longer side facing the sea, "rises gracefully and majestically towards the N., extending her ramparts to the foot of a chain of high mountains, stretching from the E. to the W. The position of the place would be picturesque and beautiful, were there the least verdure; but the rocks and mountains are arid, bare, and totally destitute of covering, or umbrage of any kind. The town is strongly fortified, being surrounded by a double rampart, and a large and deep ditch, defended to the E., W., and N., by hills covered with redoubts. Among the forts that of La Malgue (on a peninsula to the S. E.) is the most remarkable, not only for its extent, but the solidity of its construction. Latterly works have been in progress for uniting the town to this fortress, and a solid rampart with fosses has been already raised." (*Ports, &c. of France*, 202—205.) Toulon is divided into the old and new town; both are tolerably well built, but the streets of the former are narrow and crowded, and all the squares, except one, are small and irregular. The new quarter, in which are

most of the naval establishments, is much superior in point of appearance. The principal street, the *rue de Lafayette*, which intersects the town in its whole extent, and is partially planted with trees, is the seat of the principal market, and is a scene of great bustle and activity. It terminates near the port in the *Place d'Armes*, a handsome square, planted with trees, one side of which is formed by the admiralty-house. The town-hall, facing the commercial port, with two colossal statues in front, by Puget, regarded as *chef d'œuvre*; the house occupied by that distinguished sculptor, the old cathedral, 3 other churches, the court-house, military arsenal, occupying an ancient convent, naval, military, civil, and foundling hospitals, and a handsome communal college, are the other chief public buildings. Though on an arid soil, Toulon is well supplied with water, by springs from the mountains; and several of its numerous public fountains are ornamented with statues, &c. (*Guide du Voyageur*; *Hugo, &c.*) The suburbs are not only increasing, but, from the rapid augmentation of the pop., and importance of the place, of late years, it has been found necessary to add additional stories to the older houses. Since 1830, two new quarters have sprung up without the walls; one on the road north-eastward to Valette, and the other on the road westward to Ollioulles. The latter is filthy, fetid, and abominable. It goes by the name of Navarin, and is chiefly occupied by the Genoese labourers, who occupy the same place in this that is occupied by the Irish labourers in most English towns. Owing to its situation at the foot of high bare hills that intercept the winds from the N., and reflect the sun's rays, the climate in summer is extremely hot. (*Ports, &c. of France.*)

Toulon is the Brest of the Mediterranean, and may be looked upon as the Plymouth of France; though, since the construction of the breakwater in Plymouth Sound, the latter is superior, perhaps, as a roadstead to the inner road of Toulon. Both the old and new harbours are artificial. The latter, formed by hollow and bomb-proof jetties, running off from the E. and W. sides of the town, is sufficiently extensive to accommodate 30 sail of the line, as many frigates, and an equal proportion of small craft. The entrance is shut by a boom, and it is never ruffled by any wind to occasion damage. The outer sides of the jetties present two large batteries, even with the water's edge. The entrance to the inner road, on which the harbour opens, is between the *Grasse tour* on the one side, and Fort Eguillette on the other, about 620 fathoms apart: the road is a good deal encumbered with banks, and the anchoring-ground is, in part, foul and rocky; but in other places this is not the case, and altogether it is a very fine basin. The outer, or great roadstead, to the E. of the latter, bounded on the S. by the narrow peninsula, terminating in Cape Cepét, has deeper water and better anchorage than the inner, but it is open to E. winds, which sometimes throw in a heavy sea. The lazaretto stands on a secure cove, La Vecche, on the S. side of the outer road, with from 4 to 8 fathoms water.

The arsenal of Toulon is one of the finest in Europe. It occupies a surface of 354,140 sq. metres (87 acres), and has dry docks, and every accommodation for the construction, repair, and outfit of ships. In general, from 3,000 to 4,000 free workmen are employed within its walls; but in 1841, when unusual activity prevailed in all the French ports, there were between 5,000 and 6,000 labourers employed, exclusive of above 3,500 criminals.

The rope house, constructed by Vauban, is 1120 feet in length and 64 in breadth. The docks, slips, sheds, mast-house, sail factory, magazines, &c., are on a grand scale, though, as a ship-building port, Toulon has hitherto been inferior to L'Orient and Rochefort. A new arsenal meant as an appendage to the old, has been recently laid out. The dépôt of oak timber is the largest in France. The *bagne*, instituted in 1682, is, from want of room on shore, established on board some hulks: it is occupied by criminals condemned to hard labour for 10 years and under. The cost of each criminal amounts to very near 1 fr. a day.

The mercantile port, which is bordered by a fine quay, is shut off from the harbour, for men-of-war, by a line of dismasted vessels. (*Hugo.*) The imports consist chiefly of corn, flour, salt provisions, timber, &c., for the use of the naval establishments; and the exports, of oil, capers, figs, raisins, almonds, oranges, and other fruits, with cloth, hosiery, soap, &c., manufactured in the town. The trade of the port has hitherto been inconsiderable, but it has materially increased since the conquest of Algiers, and will probably continue to increase. In 1841 eight steamers were continually plying between Toulon and Africa, Corsica, Italy, and the East, and two small vessels to La Seyne. Toulon is the cap. of an arrond. and 3 cantons, and is the residence of a naval prefect, a commissary-general, and of numerous other government officers and foreign consuls; it has tribunals of primary jurisdiction and commerce, a board of customs, a college, schools

of hydrography and marine artillery, museum of geology and mathematics, a society of arts, and an excellent observatory, public library, government press and casting works, a theatre, with a disciplinary company public baths, &c.

You are supposed to have existed in the time of the Romans. In more modern times it was consistently attacked by African emperors, and to defend it from them Augustus, Louis XII. strengthened the position of the Grasse tower in the entrance to the harbor road, which was fortified by Francis I. Henry IV. commenced the construction of the old port, now appropriated to merchant vessels in 1700. But it is chiefly celebrated for its modern importance as a great naval port and a strong military position to Louis XIV. who expanded and built on the fortifications, and on the ground and harbor. It was once gradually besieged by Prince Eugene in 1708. Hoping in 1793 to be delivered up by the royalists to the English and Spaniards it was retained by the royalists after a siege in which Napoleon gave the first brilliant proof of his extraordinary military talents. The overrunning have since then been thoroughly repaired and several new works constructed, so that it is stronger now than ever and if properly garrisoned would be all but impregnable. (Port and Bourne of France, Page 400 Far, Outh de France in France. But One)

TOLUCA DE ALCAZAR OR TOLUCA (on Friday, one of the principal and most ancient cities in the S. of Mexico, the State of Mexico, of which it is the cap. on the Camino, at the junction of the route of Langueasco and Orizaba with that of the R. R. Mexicano, lat. 19° 30' N. long. 98° 30' W. Pop. in 1848, 25,000. It lies on a high plain, 2,500 feet above the sea. It is a large flourishing place, situated in the center of abundance and most strong rocky basaltic hills, and remarkable for its numerous and the Pyramids, 179. Dist. according to H. J. Toulmin, before the revolution of 1821 was first made and is still the same being a fine town, notwithstanding all that has been done for its embellishment. It is very irregularly laid out, the streets which are mostly narrow crooked, (1) paved with rounded pebbles from the river and dirty from a constant infestation. Nearly all the buildings are of red brick cemented with red mortar which being touched by age gives the town a gloomy appearance the older houses and those in the lower quarters, consist of mud brick walls, in frames of wood work and are greatly dilapidated. But within the last 15 years the city authorities have under taken many improvements, an embargo on foreign imports has been put on, on the 1st of Jan. 1850, on the 1st of Jan. 1851, on the 1st of Jan. 1852, on the 1st of Jan. 1853, on the 1st of Jan. 1854, on the 1st of Jan. 1855, on the 1st of Jan. 1856, on the 1st of Jan. 1857, on the 1st of Jan. 1858, on the 1st of Jan. 1859, on the 1st of Jan. 2116, on the 1st of Jan. 2117, on the 1st of Jan.

The principal aspect of the garden is the grand (al) fountains, a admirable example of government of such a fountain. The capital, a city, has a garden on its 100 yards in length. In its ornament with the fountain of the city and a garden feature is a small lake, the great park, the theatre occupies one wing, the garden and decorated are already arranged by the other garden, are certain like the public grounds and the garden.

Several of the churches are worth a visit. The cathedral is placed on a magnificent site, but unluckily the nave which is the chief part of the building, probably dates from about the fifth century. The most attention excited that of St. Serva has been created, according to Hagen, on the site of a very celebrated temple of Apollo. It is a heavy Gothic building, part being said to date from the fifth century though the greater portion is much more modern, particularly the choir. Among its ornaments, if so we may call them, might mention a bas-relief representing Calvin, as a heretic.

a pulp growing! and that there might be no mistake to the master the words, *Crucis* is gone, problems, were inserted below. This church is rich in other paintings by several masters, and other persons. It has a chapel supporting a lofty spire. The altarpiece of La Dourade and Quilande figures standing in the former (latter leaves) is supposed to have been buried, and on the ground altar are preserved the golden flowers presented to the emperors at the burial place. Tradition is said to have had at one period, its churches, ten days have been converted to other purposes. One covers the old museum, to the picture gallery of which are some productions of the best masters of Italy with a much larger number of copies, while in the cloisters attached to a fine collection of antiquities excavated near Marone, in 1807. The best modern building after the capital, is the professors formerly the archbishop's palace.

Toulon was still recently supplied with water; but it is now amply provided with that great necessity furnished to numerous public and private hospitals from a handsome channel of sea or river water. Among the other public buildings may be specified a large hospital, the *École Navale*, or marine college over the 9 canals of their position the veterinary school, public establishments, and, now added, the royal court and tribunal of primary jurisdiction; the public libraries, containing together about 60,000 vols. almost of artillery, horsemanship, medicine, surgery, gunpowder and other large gifts the *Toulon* is the cap. of the 10th military div. of France, and an archbishop's see. Previously to the Revolution it was the seat of one of the leading French universities, and it has now a university academy with faculties of law, medicine, literature and theology. It has also a royal academy of sciences, the academy of medicine publishing acts and dissertations some of which grant prizes to successful candidates, after the example set at the great games of oiled. The parish church at Toulon is the largest and finest in France after that of Paris. (Guide des Voyageurs de

The first garden positively attested to, appears to have been laid out in the early part of the 14th century. They were originally held on the 1st of May and consisted of a oval of shut among the pinks and sweetwilleards of the virgidity those who visited the best rooms involving the prop, which consisted of golden flowers. Commonly known, the lady mentioned as the great patroness of these games, frequented, in 1460, the bath of her fortune to the city authorizing to be expended by them to (give and prize in these games to be held annually in her room on the 1st and 2d of May. These games were finally superseded by the creation of the academy of letters created in 1563, the directors of which gave prizes for the best papers.

Yokohama has manufacturing of more woollen cloth, silk goods, printed cottons (Andamono), cotton yarn, rice and clean cotton, paper, washi, artificial strength, and vermifuge with dyeing houses, distilleries, a candle factory and a soap cotton manufactory. It has also a large trade in the produce of the surrounding country, Japanese wine, and potential produce. Ingle says, "The neighbourhood of Yokohama will be found one of the richest places of commerce in Europe. Within the city, every thing is almost one fourth part cheaper than in the immediate vicinity, owing to the customs. But in the markets held in the neighbouring villages, meat is sold at 10 and 12 1/2 per lb.; fowls are not more than 10 a pair; a fine turkey costs but 20 to 30; eggs fresh, and vegetables are remarkably abundant and cheap; and when one has secured 100 per centum. The country is thickly covered with country houses, and one of these, furnished, and complete for a small family, and with an excellent garden, may be had for 200 \$, or 100, per annum."

Nothing is known of the origin of this city but that it is very ancient. It was the cap. of the Tartars, and having been taken by the Chinese, some 100 years ago they afterwards embellished it with numerous splendid edifices but owing to the continued influence of them and the attacks of the Tartars, these structures have been almost wholly destroyed so that some vestiges of the

100

filled out wounded, the French too started to retreat.

3,000 men. Unfortunately, this was a useless sacrifice, as Napoleon had already abdicated; but, though the contrary has been stated, it is certain that Marshal Soult was wholly ignorant of the circumstance. (*Napier's Peninsular War*, vi. 639, &c.)

The inhabs. of Toulouse appear, even in the estimation of their countrymen, to be endowed with a very large share of that versatility which has been said, though, perhaps, without much foundation, to be a distinguishing trait in the French character. "Comme l'exécution n'est pas précédée chez le Toulousain d'un jugement réfléchi, il se livre malheureusement, avec trop de facilité, aux excès dont ensuite il a lieu de se repentir: ainsi, on le voit massacrer, en quelque sort avec joie, les Protestans lors de la St. Barthélemy, et durant les guerres du Calvinisme; le vertueux président Durants, à l'époque de la Ligue; les royalistes pendant la Révolution, et les patriotes à la Restauration: il accueille avec transport Napoléon durant son règne, et plus tard, avec le même enthousiasme, Wellington et son armée; il assassine ensuite le général Ramel, qui veut le sauver de l'anarchie: ainsi, il est toujours le jouet de la versatilité de son caractère, et l'instrument le plus docile de toutes les scènes de barbarie auxquelles le poussent les hommes ardents qui veulent l'égarer." (*Dict. Géog.*)

Toulouse has given birth to many distinguished individuals, among whom may be specified Cujas, the greatest civilian of modern times, born here in 1520; Raymond, count of Toulouse, so celebrated in the first crusade; M. de Villele, late minister of France, &c. (*Martinière, Grand Dictionnaire*, art. *Toulouse*; *Hugo*, art. *Haute Garonne*; *Dict. Géog.*; *Guide du Voyageur*; *Inglish's Switzerland*.)

TOURNAY (Flem. *Doornik*), a town of Belgium, prov. Hainault, cap. arrond. and of two cantons, on the Scheldt, close to the French frontier, 45 m. W.S.W. Brussels; lat. 50° 36' 20" N., long. 2° 23' 17" E. Pop., in 1836, 28,919. Tournay covers nearly as much ground as Lisle, though so much less populous. Its former fortifications were demolished by the emperor Joseph II., but since 1814 it has been surrounded anew with military works, and has a good citadel. The Scheldt, crossed here by several flying bridges, divides Tournay into two parts, called the Old and New Towns: the latter is well built, and has a fine quay along the river, which forms a favourite promenade; but, excepting its historical recollections, the former has little to render it interesting.

The cathedral, a fine Gothic building, with five towers and spires, supposed to have been a bishop's see as early as the 5th century, was formerly richly adorned, but suffered greatly from the French revolutionary phrensy. The old abbey of St. Martin has been of late years levelled with the ground, to give place to the town-hall and public gardens. Few other buildings are worthy of notice; though there are several hospitals and asylums; including one for aged ecclesiastics, a court of primary jurisdiction, chamber of commerce, exchange, theatre, atheneum, academy of fine arts, episcopal seminary, many good private schools, a *mont-de-piété*, &c. Without the walls are several suburbs. Tournay is one of the most active manufacturing towns of the Netherlands, and must have been celebrated for its industry at a very early period, since it is mentioned in the *Nottia Imperii* of the 5th century as one of the fifteen towns in the empire having manufactures of woollen and linen yarn. At present, Vandermaelen states, that three-fourths of its pop. are employed in its various manufactures, and that from 12,000 to 16,000 looms are supposed to be employed in its commune. (*Dict. de Hainaut*.) Hosiery, calicoes, and linen fabrics, camlets, yarn of various kinds, waistcoats, and all kinds of articles of dress, with carpets, for which Tournay is deservedly famous, are the principal articles of trade; but large quantities of earthenware, bronze goods and hardware, curaçao, and other liqueurs, are made; and there are numerous breweries, salt-refineries, tanneries, dyeing-houses, &c. Full-aged cotton-spinners get about 1 fr. 35 c. a day, working about 12 or 14 hours; but one-fourth part of the hands employed are children. Weavers get from 1 fr. 25 c. to 1½ fr. In the royal carpet factory, the workmen obtain from 2 to 2½ fr. a day, though there also many children are employed, who enter at 5 years of age. (*Hand-loom Weavers' Report*.) Tournay has various charitable institutions for the benefit of sick workpeople, for pensioning the widows of weavers, &c., and children are not suffered to be too laboriously employed. (See *Vandermaelen's Dict.*) The Scheldt, which is navigable to the town for vessels of 160 tons, is the principal channel for the conveyance to the town of coals, spices, dyeing materials, tobacco, deals, brandy, wines, and for the export of the manufactured goods, chalk, building stone, oil, &c., produced in the town and its vicinity. Tournay has probably experienced as many vicissitudes as any town in Europe. It is the *Civitas Nervorum*, taken by Julius Cæsar, and has since belonged to an infinite number of masters, and been taken and retaken over and over again. (*Vandermaelen Dict. de Hainaut*; *Dict. Géog.*; *De Cloet*; *Parl. Repr.*)

TOURS (an. *Cæsaromagus*), a city of France, dep. Indre-et-Loire, of which it is the cap.; it is surrounded by extensive and fertile plains, and is itself placed on the narrow tongue of land between the rivers Loire and Cher, close to the point of their confluence, 127 m. S.W. Paris. Lat. 47° 23' 46" N., long. 0° 41' 38" E. Pop., in 1846, 27,120. "Tours is well known as a favourite retreat of English absentees. Great part of the town is new; and the streets, several of which are spacious, and the houses clean, substantial, and many elegant, give it an air of ease, pleasure, and abundance, possessed by few other cities in France. The beauty of Tours has arisen since the Revolution, and has, indeed, sprung out of it, for great part of it has been rebuilt upon an improved plan." (*Inglish*, p. 352.) And, in fact, the older parts of the city still consist of narrow, crooked, and dirty streets, with mean and ill-built houses. It is surrounded by planted boulevards on the site of its ancient fortifications; it has 12 different entrances, and 5 suburbs. It communicates with the opposite bank of the Loire by one of the finest bridges in Europe, constructed chiefly between 1763 and 1777: it is of stone, level on the summit, 475 yards in length by 16 in breadth, and has 15 arches, each 26½ yards in span. Over the Cher are two bridges, one of 17 and the other of 8 arches. From the bridge over the Loire a noble street, the *Rue Royale*, straight, spacious, bordered with footways, and lined with uniform buildings of freestone, intersects the town in its entire breadth, terminating on the S. in the *avenue de Grammont*, leading to the smaller bridge over the Cher. At the commencement of this street, close to the Loire, is a handsome square; in which are the town-hall and the departmental museum, new and symmetrical buildings, the latter containing upwards of 200 paintings. The cathedral is said to have been founded in the 4th century, burnt down in the 6th, rebuilt by Gregory of Tours, but again burnt down in the 12th century; after which its reconstruction proceeded so slowly that it was not completed till 1550. It has a noble front, flanked by two towers, built by Henry V. of England. Its interior, though not beautiful, is richly ornamented, and contains much stained glass, together with the mausoleum of the children of Charles VIII. A curious collection of MSS. is kept in this cathedral. The other churches are mostly small and gloomy, and possess little worth notice. The so-called Tower of Charlemagne is the only remaining portion of the abbey of St. Martin, destroyed in 1797, of which the kings of France used to be the abbés. The archbishop's palace is one of the handsomest in the kingdom: the prefecture, court-house, college, general hospital, exchange, theatre, barracks, prison, and a highly ornamented fountain in the market-place, are the other most conspicuous objects. This city is the seat of courts of primary jurisdiction and commerce, a chamber of commerce, council of prud'hommes, societies of agriculture, sciences, arts, &c.; and has courses of practical geometry, a library said to comprise 40,000 volumes, a cabinet of natural history, and botanic garden. It was here that Louis XI. established the silk manufacturers he invited out of Italy; and it was for a considerable period famous for its silks; but it has long been far surpassed in this department by Lyons, which has peculiar advantages for the prosecution of the silk manufacture. Next to that of silk, which is carried on to a considerable extent, the manufactures of Tours consist principally of woollen cloths, carpets, and woollen yarn; but they are not extensive; and the trade of the city is chiefly in the retail supply of its inhabs. and visitors.

"The promenades round Tours are charming: among these the elm-avenue is the most conspicuous; the quay is also pleasant. The environs of the city furnish the most agreeable walks; innumerable little paths lead in every direction through the fields, and among the knolls and copses. Tours, 20 years ago, was as cheap a residence as any place on the Loire; but a great advance in the prices of every thing, and particularly house-rent, has naturally followed the approbation of Tours by the English. Immediately after the war, a large house, with every convenience, and a garden of two or three acres, might have been had for 204. a year; but this sum may now be more than doubled. Provisions are still moderate in price, and wood is less expensive here than in most other parts of France." Besides the English, Tours is much resorted to by French gentry, who, though in independent circumstances, are not rich enough to afford the expense of living in the metropolis. The castle of *Pléssis les Tours*, built by Louis XI., where he principally resided, is about 1 m. from the city. It is constructed of brick; is embosomed in wood; and has a venerable appearance. In its chapel is a portrait of Louis, dressed in armour, taking off his helmet to the Virgin and Infant. (*Inglish*, p. 354.)

Among the eminent men to whom Tours has given birth, may be specified Cardinal Amboise, prime minister of Louis XII., and Rapin, the author of the much admired Latin poem, *Dr cultu Hortorum*, and of several critical publications. Rapin has not forgotten to cele-

brute the perils of his native city, and the surrounding country,—

*Adde amensurantes rivis, et fluctibus arum.
Festinus immensus tractus, et æthereæ ætæ
Fletibus, vitæque strages et mare cœdem
Quid memorem variis opulentiam mercibus urbes,
Et stadia, et sacra populi, quæ sæcula tæni
Tractantem, fluit cœli clementia blandum?
Adde umbra numerum vitæ: et æcolis semper
Gramine præteritæ, et æquæque floribus herbas.
Lib. 3. line 489, ed. de Bruch, Paris, 1780.*

Gregory, the poet, was also a native of Tours, and St. Gregory, hence called Gregory of Tours, was for a lengthened period bishop of the see.

Tours was anciently the cap. of the *Turones*, conquered by Cæsar, *anno* 85 a.d. In the 5th century, it became the cap. of the 3d *Lyonnais*. After many vicissitudes it fell into the hands of the Plantagenets; and formed a part of the English dominions, till 1204, when it was annexed to the French crown. (*Diet. Geog.*; *Hugo art. Indre-et-Loire*; *Guide du Voyageur*.)

TOUMEN, a considerable town of Asiatic Russia, gov. Tobolsk, on the Toura, 120 m. S.W. Tobolsk. Pop. in 1835, 9,212. It is situated in a fertile tract, and its inhab. are said by Cochrane to be both wealthy and hospitable; though, according to Dobell, little can be said in favour of their morals. (*Travels*, ii. 115.) In almost every house the manufacture of a coarse kind of carpeting sold all over Siberia is carried on; and its tanneries, which are more extensive than any others in the government, employ nearly 300 workmen, and produce goods to the value of more than 1,000,000 roubles a

Gallipoli, on the Maritza, 45 m. S.S.W. Adrianople, lat. 41° 7' 30" N., long. 26° 18' 15" E. It is said to have a population of 13,000 inhabitants, is the see of a Greek archbishop, and has a considerable commerce; but it lies so much out of the routes usually resorted to by travellers, that we have but little information respecting it.

TRALEE, a pari. bor. and marit. town of Ireland, prov. Munster, co. Kerry, of which it is the cap., within about 2 m. of the head of Tralee Bay, near the Ballymullen river, 55 m. N.W. Cork. Pop. of pari. bor., which includes an area of 546 acres, in 1841, 11,363. Tralee is said to be an increasing, thriving town. At the close of the late war it was little else than a congregation of cabins; but now, to use the words of Mr. Inglis, "it has streets that would not disgrace the best quarters of any city, and these not streets of business, which it also has, but streets containing gentlemen's houses, or at all events, houses which no gentleman might be ashamed to live in. I have no hesitation in pronouncing Tralee altogether the most thriving town I have seen since leaving Clonmel; and in some respects it leaves Clonmel behind it. Its retail trade is extensive and improving, and many of the dealers are wealthy. As good shops are to be found in Tralee as in Cork; and the stock in many of them is very extensive. I was at Tralee on a market day, and I do not recollect to have seen a busier place. Independently of an extensive supply of country produce, there was a very abundant exhibition of all kinds of manufactured goods and apparel, and every shop in the town was crowded to the door. House rent is high here; higher, in fact, than in any English co. town. There is a spa in the vicinity a good deal resorted to for its waters: its situation is pleasant, and a number of pretty country houses have been erected in the neighbourhood." (i. 252, 253.)

The public buildings and establishments comprise a handsome par. church, two large Rom. Cath. chapels, a nunnery, to which an excellent school for girls is attached, several meeting-houses for dissenters, a new county court-house, "which is in every way a handsome and commodious structure," (*Inglis*), a fever hospital, a lunatic asylum, a county infirmary, infantry barracks for 600 men, two breweries, a distillery, &c. The town stands on the estate of Sir Edward Denny, who has thrown open the pleasure-grounds, attached to the castle in its immediate vicinity, to the inhab. Sir E. Denny is also patron of the living of Tralee, worth above 400*l.* a year. Exclusive of the girls' school, Tralee has a Catholic free-school, and other schools, two of which are subordinate to the board of Education in Dublin. It sent 2 mems. to the Irish H. of C., and since the union it has sent 1 mem. to the Imperial H. of C. Previously to the Reform Act the right of election was nominally vested in the old corporation, dissolved by the act 3 & 4 Victoria, cap. 108.; but it was, to all intents and purposes, a nomination bor.; and it is stated by the Boundary Commissioners, "that it has generally happened that the people of the town and their parliamentary representatives have been negligent and remiss; and it is a lamentable fact, that the town has no member!"

TRAFALGAR (Cape), a promontory of the S.W.

coast of Spain, prov. Andalusia, 25 m. N.W. Tariffa, in the strait of Gibraltar, of which, indeed, it forms the N.W. extremity, lat. 36° 10' 15" N., long. 6° 1' W. This cape, which in antiquity was called the promontory of Juno (*Junonis promontorium*), is low, and terminates in two points, the most easterly of which is surmounted by a round tower.

Cape Trafalgar is famous in naval history for the great battle fought in its vicinity on the 21st of October, 1805, between the combined French and Spanish fleet, under Admirals Villeneuve and Gravina, and the English fleet under Lord Nelson. The former had 23 sail of the line and 7 large frigates, while the fleet of the latter only amounted to 27 sail of the line and 3 frigates; but the superior skill and gallantry of the British admiral, and of his officers and men, far more than compensated for the nominal inferiority of the English fleet, and secured for the country the greatest naval victory recorded in her annals. No fewer than 19 French and Spanish line of battle ships were captured, and 4 that had escaped from the action were subsequently taken by Sir Richard Strachan; the other vessels that escaped into Cadix being, at the same time, mostly rendered unserviceable. Unfortunately this great and decisive victory was not acquired without a very heavy loss. Nelson, who was mortally wounded early in the action, lived only to be made aware of the destruction of the enemy's fleet.

TRAJANOPOLI (called by the Turks *Orisköwe*), a town of European Turkey, prov. Roumelia, samj.

th. — than forty tons were, till lately, loaded and unloaded at Blinnerville, about 2 m. S.W. from the town, while vessels of greater burden were compelled to load and unload by means of lighters, at the Sapphire Islands, in the bay, about 6 m. W. from the town. In the view of obviating this inconvenience, a ship canal, 16 ft. deep, has been cut from the bay to a basin adjacent to the town, where vessels of 300 tons may now load and unload. This canal has been of great service to Tralee. The value of the exports, which principally consist of corn and provisions, amounted, in 1836, to 45,315*l.* The shipping belonging to the port is quite inconsiderable, being under 1,100 tons. Customs' revenue, in 1849, 2,352*l.* Here is a Chamber of Commerce, a news-room, and several insurance offices.

It is a singular and not easily-explained fact, that, notwithstanding all the proofs of prosperity found in Tralee and its vicinity, wages are extremely low, employment scarce, and the condition of the lower classes very much depressed.

TRANI, a sea-port town of S. Italy, kingd. Naples, prov. Terra di Bari, cap. cant. on the Adriatic, 26 m. N.W. Bari, lat. 41° 17' 6" N., long. 16° 30' 36" E. Pop. 13,000. It is surrounded by a bastioned wall,

with a fosse on the land side, and has a citadel, but is not a place of any strength. The streets, which are narrow and dirty, are flanked with ill-built houses, except round the port, where there are some private dwellings that would not disgrace the best parts of Rome. Its large cathedral, erected more than six centuries ago, is said by Swinburne to be in a very mean taste, with preposterous ornaments and clumsy pillars. Exclusive of the cathedral it has about 30 other churches, with 6 convents for monks (one of which, the monastery of St. Clare, is a magnificent structure), 2 nunneries, an orphan asylum, a large seminary, and a theatre, said to be inferior only to those of Naples. Trani is the seat of one of the great civil courts of the kingdom, of a superior criminal court, of a civil tribunal for the prov., and is the residence of many old families. It labours under a great deficiency of spring water, so that the inhabitants are obliged principally to depend on rain water collected in cisterns. It exports corn, oil, sweet wine of good quality, figs, almonds, and other products of the vicinity. Some cotton stuffs are produced in the town, of cotton raised in the cant. The ramparts command a fine view both towards the interior and the sea.

The harbour, which is nearly encircled by the town, has naturally deep water, but owing to the accumulation of sand thrown in by the sea, and of the filth from the surrounding houses, it is so much filled up as to be accessible only to the smallest boats, while in summer the stench is intolerable. Of course, were it in the hands of a vigorous enterprising people, it would be very soon cleaned out. The few vessels that carry on

mountains are generally granitic or calcareous, but the plains and valleys are often very fertile, and, notwithstanding the backwardness of agriculture, a surplus of corn over the quantity required for home demand is generally produced. Wheat, barley, oats, rye, buck wheat, and maize, most kinds of pulse, potatoes, and garden vegetables, are cultivated; wine is one of the leading products of the country; in the orchards apples, pears, plums, apricots, almonds, mulberries, chestnuts, &c., are grown; and tobacco, hemp, flax, saffron, and clover, are ordinary crops. The lands are, in general, held under a feudal tenure, as in Hungary, except in the Saxon-land, which division of the province is by far the best and most industriously cultivated.

Transylvania is divided principally among three distinct nations; the Magyar, the Szekler, and the Saxon, each of which has a share in the government of the country. They inhabit different districts: the Magyars (with the Wallachs) occupy the whole W. and centre; the Szeklers the E. and S.E.; and the Saxons the greater part of the S., with a portion of the N.E. (Payer, ii. 360. and Map.) The first occupy at least 2-5ths of the entire principality, of which Clansburg is the cap., and the Szeklers and Saxons about 1-5th each; Maros-Vasarhely being the chief town of the former, and Hermannstadt of the latter. With these races are intermixed a number of Poles, Gypsies, Jews, Armenians, &c. We subjoin a statement, which is probably not far from accurate, of the number of the different races of people inhabiting Transylvania, and of the numbers attached to the different religions:—

Race of People.			Religion.	
Magyars	-	800,000	Roman Catholics	-
Wallachs, &c.	-	1,000,000	United Greek	400,000
Szeklers	-	300,000	Greek Catholics	300,000
Saxons	-	300,000	Calvinists	400,000
Poles	-	-	Lutherans	300,000
Gypsies	-	40,000	Unitarians	50,000
Jews, Greeks, Ar- menians, &c.	-	30,000	Jews and all other sects	80,000
Total	-	2,000,000	Total	2,080,000

The Magyars and Wallachs have been already described (*ante*, p. 4, 5, &c.). The Szeklers, termed by the Latin writers of the Lower Empire *Siculi*, are probably the descendants of a barbarian horde that had settled in the province during the decline of the Roman power. The Magyars, on entering the country in the 10th century, finding the Szeklers cognate with themselves in features, language, character, &c., left them in the undisturbed possession of the lands they had inherited, on condition of their guarding the Magyar frontier on that side. They were not even rendered

Transylvania changed since the reign of St. Stephen, who reigned in Hungary in the 10th century. They live under a count, or chief, who, like their clergy, is elected by themselves; and they enjoy freedom from tolls within their district, and other important privileges. "One of the fundamental laws of the Saxons is the equality of every individual of the Saxon nation. They have no nobles; no peasants. Not but that many of the Saxons have received letters of nobility, and deck themselves out in all its plumes; yet, as every true Saxon will tell you, that is only as Hungarian nobles, not as Saxons. Their municipal government was entirely in their own hands; every village chose its own officers, and managed its own affairs, without the interference of any higher power. But a few years ago, a great and completely arbitrary change was made in this institution; the effects of which have been to deprive the Saxon communities of the free exercise of their privileges, and to deliver them into the power of a corrupt bureaucracy, over which they have little or no control. The Saxons, however, are a slow people, and, though they have long complained, they have scarcely ever ventured to demand a restitution of

* The religions of the sects thus marked are tolerated only, whereas the others are established, by government.

Carpathians. It is of a square shape: greatest length and breadth about 140 m. each. Area estimated at 20,400 sq. m. Pop., in 1889, 2,086,900. (*Berghaus, Allg. Länder, &c.*) Most part of the surface is covered with ramifications of the Carpathian mountains, which rise in Mount Bukbest, near Kronstadt, to nearly 8,700 ft. in height: these, however, give place in the N. to the valley of the Szamos, in the centre to that of the Maros, and in the S. to that of the Aluta. All these rivers, of which the Maros is the principal, rise in Transylvania, and have, more or less, a W. course, the general slope of the country being towards the W. The first two are tributaries of the Theiss, the last joins the Danube in Wallachia: the banks of all, and particularly the Maros, are densely wooded (whence the modern name of the prov.), and possess considerable picturesque beauty. It is in general well watered, and in the S. are some extensive marshes. As the country at large is rather an elevated table land, the climate is cold, though in most parts healthy. The soil is of very various qualities; the

their rights. Hitherto they have been among the most ardent adherents of the crown: they have rarely joined the liberal party. They preserve, for the most part, the dress, language, habits, &c. their ancestors brought with them from Germany. For the rest, the Saxons are undoubtedly the most industrious, steady, and frugal of all the inhabitants of Transylvania; and they are consequently the best lodged, best clothed, and best instructed. (Paget, II. 426-428, &c.)

The peasants of Transylvania are in a more depressed condition, and much more ignorant, than those of Hungary. Among the greatest evils of which the Transylvanian peasant has to complain, is the want of any well-defined code of laws to which he may refer. The peasant land, too, has never been classed, as in Hungary according to its powers of production, nor has the size of the peasant's portion, or his, been accurately determined. The amount of labour, therefore, cannot be fairly and legally proportioned to the quantity and value of the land. Nor is the amount of labour itself better regulated. In some parts of the country it is common to require two days a week; in others, and more generally, three are demanded; and in some the landlord takes as much as he can possibly extract out of the half-starved serfs settled on his estates. It is rare that the peasant's cottage has more than two rooms, sometimes only one; his furniture is scanty and rude, his crochets scarce, and these little luxuries which in the Hungarian denote something beyond the indispensable are rarely seen in Transylvania. The ignorance of the Transylvanian peasant is often intense, and he is generally superstitious and deceitful: these qualities are most conspicuous in the Wallachs, but the Magyars are by no means free from them. Schools are extremely rare. The peasants belonging to the Greek church are undoubtedly the most ignorant; those of the Unitarian and Lutheran churches the best educated.

"We had remarked," says Mr Paget, "throughout the Sackler-land generally, a better state of cultivation and greater signs of industry than in most other parts of Transylvania. But the Saxon-land, on the Alota, appeared like a garden in comparison even with the former. The whole plain seemed alive with ploughs and harrows, and on every side teams were moving about, manure was spreading, and the seed was being scattered abroad with a busy hand. The most startling feature in the picture was the very active part taken by the women. Some were sowing corn, others using the fork and spade, others holding the plough, and others driving the team." (Paget, II. 317-318-428.)

Transylvania may however rank high as a wine-growing country: it abounds with cultivation of a rugged or volcanic soil. No less than 1/5th part of its present pop. is dependent on the culture of the vine; all the gentlemen, and even superior tradesmen, grow their own wines. The mode of making them is very ill understood; but there are several superior kinds of wine produced, mostly in the valleys of the Maros and its tributaries. They are in general white, well flavoured, and full bodied. The highest price in an ordinary year of the better sorts is about 2s. the cimer (16 bottles).

The rearing of horses and other live stock is one of the most important branches of national industry. In the Sackler mountains a small wiry horse, similar to the Welsh pony, appears to be indigenous; but, for improved breeds, no less than 60 celebrated studs are said to exist in this small territory, 20 of which have probably a greater or less infusion of English blood, the English breed and modes of treatment of horses having been introduced of late years. Buckle, scarce in Hungary, are common here. The sheep, which are long-wooled and curly-haired, are sent into Wallachia to graze in the winter. The oak, beech, &c. forests, which are estimated to cover nearly 2,500,000 acres, find large quantities of logs.

Her mineral produce is a principal source of the wealth of Transylvania. There are numerous gold mines in the country, and almost every stream and river is auriferous; the annual produce of gold is estimated at from 2,000 to 3,000 marcs, and of silver 4,000 marcs (Aust. Nat. Mus.). The gold mines of Tokosha, in the basin of the Maros, are supposed to have been wrought ever since the time of the Romans; and these round Nagy Banyas are certainly of that era. From the latter, and some other mines, the ore is sent off monthly to Kremnitz, to be smelted. Gold-washing in Transylvania is almost monopolized by the gypsies. Government grants a gypsy band the privilege of washing the sands of a certain brook, on condition of their paying a yearly rent, which is never less than 3 ducats of pure gold per band for every washer. A gypsy captain settles this matter with the government, and is answerable for the rest of the tribe, from whom he collects the whole of their earnings, which he re-divides among them, after paying the tribute. (Paget, II. 384, 385.) Iron, lead, copper, antimony, granite, mercury in the form of cinabar, &c., are also found in Transylvania; and the mines of Ischerum are

the richest in tellurium of any in Europe, and those in which metal was first discovered. Marshal Marmont states that coal, of very good quality is found in some parts; but it is not made use of. Salt is much more important: rock-salt abounds at Maros and Seamos-Ujvar, &c., about 800,000 centners being annually produced, which, excepting about 30,000 centners consumed in the neighbourhood, is wholly exported to Hungary. The miners work from 8 to 11 a. m., and get about 10d. a day. The cost of salt is delivered at the pit's mouth for about the same sum, and sold in Transylvania at 2 1/2 for, or 7s. the centner. The greater part, however, is sent by the Maros to Segediu at an expense of 10d. more each centner, and sold there at 7 1/2 gulden or 18s. the centner. The E. of Transylvania is supplied from mines in the Sackler-land, where Paget (II. 385.) says he saw an entire hill of salt. This hill, in consequence of the strict monopoly enacted by the government over the article, was surrounded by guards to prevent the peasants from stealing the salt. Alum, sulphur, antimony, sulphate of soda, and many crystals and inferior kind of gems, are found in the prov.

Except those of woolen, cotton, and some other fabrics in Crumstadt, Hermannstadt, and other parts of the Saxon land, few manufactures are carried on to any great extent. Woolen and linen stuffs, cotton fabric, &c. hats, leather, shagreen, putash, earthenware, paper, and gunpowder are made in different places, the clothing of the peasants being generally of domestic manufacture. Some furze, breweries, and vinegar factories are scattered over the country, but woolen, silk, and linen fabrics, jewellery, hats, glass wares, &c., are principally imported from abroad, in return for salt, corn, cattle, horn, bags, hides, wax and honey, timber, metals, and other raw produce. The trade is chiefly in the hands of the Greeks and Armenians; and, as yet, little facility is afforded for commerce with Hungary and Wallachia. Retail tradesmen, who sometimes have large dealings with Pesth and Vienna, will give money on bills, or transmit considerable sums for a per centage; but there is not one regular banker in the whole country! (Paget, II. 377.) The Maros and Seamos are navigable, and are the chief routes for the conveyance of goods. The roads and bridges are every where in the most wretched state; and, except in a few towns, fairs are unknown.

Transylvania sends deputies to the Hungarian diet; but has also a diet of her own, composed as follows:— "Every co. and free town sends its members: the Magyars about 40, and the Sacklers and Saxons 16 each. The Catholic church sends 3 monks, representatives of abbots; the Catholic and United Greek bishops claim each a seat also. Besides these are the Argonts. Some of these are nominated by the crown for life; others, as the lords lieutenant, privy councillors, and secretaries, have seats in virtue of their office. The number of regallists is said to have been limited to 60 by Maria Theresa; but this regulation has been grossly in-

improvements. In 1814, the country reverted to its former authorities, and since then, the old order of things is said to have been in a great measure revived.

Travancore, being an integral portion of the anc. Malabar, the prevailing usages and customs are generally similar to those which prevail along the adjacent parts of the W. coast of Hindostan. The sovereignty of the country, honorary dignities, and even property, descend in the female line, as in Canara, &c. The ruling family is Hindoo, and the principal part of the pop. consists of Brahmins and Nairs; but there are also many Moplays (Mohammedans), and it is estimated that, in Travancore and Cochin, there are 100,000 Syrian Christians. In some communities, Christian churches are considerably more numerous than pagodas or mosques. The Travancore rajah, about the middle of last century, subdued most of the smaller states in his neighbourhood, and extended his dom. to their present limits, but, in 1790, these would have fallen a prey to Tippoo Saib but for our intervention. The final subsidiary treaty with the British was entered into in 1809. Travancore furnishes to the Anglo-Indian army a contingent of 3 battalions of infantry, and 8 lacs of rupees a year to the Indian treasury. Total revenue, in 1826-27, 40,42,645 rupees: expenditure, including subsidy, 37,68,392 rupees. Principal towns, Trivanderum, the cap., Anjengo and Quillon; Travancore, the former cap., is now in a state of decay. (*Parl. Reps.*, &c.)

TREBIZOND (an. *Trapexus*), a city and sea-port of Asia Minor, on the S.E. coast of the Black Sea, 120 m. N.W. Erzeroum; lat. 40° 1' N., long. 39° 44' 52" E. Pop. variously estimated at from 15,000 to 30,000. The town is built on the slope of a hill declining to the sea, and backed by steep eminences rising behind. Its central portion is surrounded by a castellated and lofty wall; on either side of the walled portion is a deep ravine, filled with trees and gardens, both ravines being crossed by bridges. Overlooking the town is a citadel; but it is dilapidated and neglected, and commanded by neighbouring heights. The walls of the city are, however, sufficiently strong to serve as a defence against troops without artillery. The space included within the walls is of great extent, but it is principally filled with gardens and plantations. The houses, which are mostly built of stone and lime, and roofed with red tiles, have in general only a ground-floor, and as each is environed by a garden, the town from the sea has the appearance of a forest, scarcely a house being visible. The walled city is solely inhabited by Mohammedans; the Christians live outside the walls (principally in the eastern suburb), where are also most of the bazaars and khans. Besides nearly 20 churches and chapels, still retained for the service of the Greeks and Armenians, almost all the mosques have formerly been Christian churches. The handsomest mosque is that of St. Sophia, 1 m. W. of the city. "It is of small dimensions, built of hewn stone, in the form of a cross, and divided into a nave and 2 aisles, lighted from a cupola supported by 4 marble pillars. The principal entrance is adorned with 4 white marble Corinthian columns: the Roman eagle is conspicuous over the gate; below it are numbers of small reliefs, and a beautiful cornice runs round the exterior of the edifice." (*Kinnear's Asia Minor*, p. 337.) Several of the other mosques and churches are in the same style; but the most curious edifice in the city is the *bezestien*, a huge square structure with two small windows in each front, probably erected by the Genoese as a powder-magazine. (*Ib.* p. 341.) A high square tower and the massy remnants of many other buildings crown the eminences near the mosque of St. Sophia; but none of these, nor any other remains at Trebizond, are of an age anterior to the Christian era, and Mr. Hamilton regards all the existing ruins, called Genoese by the Turks and Greeks, as clearly Byzantine. (*Geog. Journ.*, vii. 42.)

Trebizond has two ports; one on either side of a small peninsula projecting from the town into the sea. That on the E. is the best sheltered, and is the place of anchorage for the largest ships. It is exposed to all but S. gales; but it does not appear that with ordinary precaution any danger need be apprehended. The ground from $\frac{1}{2}$ to $\frac{1}{4}$ m. E. from the point is clean, and holds extremely well. Ships moor with open hawser to the N. and a good hawser and stream-anchor on shore as a stern-fast. At night the wind always comes off the land. After the autumnal equinox, the Turkish and European vessels resort to Platana, an open roadstead, about 7 m. to the W. of Trebizond. (*Com. Dict.*; *Brant*, in *Geog. Journ.*) In antiquity, and in more modern times previously to the conquest of Constantinople by the Turks and the exclusion of all foreign vessels from the Black Sea, Trebizond was the seat of an extensive trade. It is the natural emporium of all the countries to the S.E. of the Black Sea, from Kars on the E., round by Diarbekir to Amasia on the W. Previously to 1830, however, its trade had dwindled to the export of a few products of the country to Constantinople, the import of iron from Taganrog, and a traffic with Abassah, carried on in small craft, which

carried away salt, sulphur, lead, and Turkish manufactures; bringing in return the raw productions of the Caucasus, slaves, &c. But the treaty of Adrianople, by opening the Black Sea to European ships, restored the old channel of communication between Europe and India, Persia, &c. through Trebizond; and the Russian policy of 1831, by putting an end to the immunities enjoyed by the Russian ports S. of the Caucasus, has given Trebizond an importance it did not previously possess. Its principal articles of import are manufactured cottons, mostly from Great Britain, sugar, coffee, rum, salt, tin, wine, &c. More than half the articles imported are destined for Persia; and while, in 1830, only 5,000 bales of European merchandise passed through Trebizond on their way to that country, in 1835, nearly 20,000 proceeded by the same track to the same destination. (*Brant*.) The exports to Europe consist of silk, sheep's wool, tobacco, carpets, shawls, galls, and drugs of various sorts, box-wood, nuts, &c., with some wax, honey, and beans to Constantinople; but all in comparatively trifling quantities. Rich veins of copper and lead exist in the neighbouring mountains, but they are badly, if at all, wrought; but as the export of timber and corn is no longer prohibited by the Turks, it is not so difficult as formerly to obtain return cargoes.

This city was originally founded by a colony from Sinope, but subsequently outstripped its parent city, and all its sister ports along the coast, in wealth and importance. It was a flourishing emporium when it was reached by Xenophon, and the ten thousand at the close of their memorable retreat. It continued to be an important city of the Greek empire till the subjugation of the latter by the Crusaders; when its duke of the Comneni family assumed the dignity of emperor. His dominion extended from Sinope to the Phasis, and his family reigned for more than 250 years, till Trebizond came into the possession of the Turks in 1460. (*Smith and Dwight, Researches*, &c., 454-458.; *Geog. Journal*, vi. vii.; *Kinnear's Asia Minor*; *Com. Dict.*, &c.)

TREGONY, a market town of England, co. Cornwall, hund. Powder, par. Cuby, on the Fal, 16 m. S.W. Bodmin. Area of the par. of Cuby, 2,410 acres. Pop. in 1831, 1,382. This insignificant place would not have been worth notice in a work of this kind, but for the circumstance of its having sent 2 mems. to the H. of C. from 1589 down to the passing of the Reform Act, when it was most properly disfranchised. The right of election was in potwallopers residing within the bor. The pop. is almost exclusively agricultural.

TRENT (an. *Tridentum*), a town of the Tyrol, but within the natural limits of Italy, on the Adige, which is here crossed by a fine bridge, 14 m. N.N.E. Roveredo, lat. 46° 6' 26" N., long. 11° 2' 45" E. Pop. 13,000. It is seated in a small but beautiful valley; being, however, from its elevation, exceedingly cold in winter, and, from the reflection of the surrounding mountains, equally hot in summer. It is surrounded by a pretty high wall, is well built with houses in the Italian style, has well-paved though irregular, narrow, and dirty streets, and a square ornamented with a handsome fountain. The palace belonging to the old prince-bishops of Trent, in a corrupt Gothic style, is of large dimensions, has some good apartments, fine fresco paintings, rare marbles, and extensive gardens. It has also a cathedral and several other churches; in one of which, Santa Maria Maggiore, the famous council held its meetings. In 1805, the roof of this church fell in, and we have not learned whether the original picture representing one of the sittings of the council, with portraits of its more distinguished members, that belonged to this church, escaped being destroyed. (*Rampoldi*, iii. 1245.) It has also three convents for monks, and a nunnery, a large hospital, an orphan asylum, a lyceum with several professors, a gymnasium, &c.; with manufactures of silk and other fabrics. It is one of the seats of the transit trade between Germany and Italy; and exports wine, corn, tobacco, and iron, produced in the surrounding country.

This town, which is very ancient, became, in the middle ages, the cap. of a lordship under its bishops, by whom, in 1363, it was united to the Tyrol, in which it has since been comprised. The bishopric was secularised in 1803; but the bishop is still in the enjoyment of a handsome revenue. Under the French it was the cap. of the dep. of the Upper Adige, and is now the seat of the government of the circle of the same name. (*Marcel de Serres, Voyage de Tyrol*, ii. 362; *Eustace*, i. 102, 8vo. ed., &c.)

But the celebrity of Trent is entirely owing to its having been selected as the place of meeting for the famous general council of the church, convoked by Pope Paul III., and which, after much procrastination, met for business on Dec. 13. 1545, and continued, though with several interruptions, through 25 sessions, till 1563, under three successive pontiffs. It consisted of dignitaries of the church, representatives of the different universities, and of ambassadors from the princes and states attached to the communion of Rome. It was intended to revise, fix, and declare the doctrines of the

church, to relieve the claims that had been laid on the government, and the conduct of its functionaries.

Legion, a name common to other towns.

and, if possible, to remove peace and unity to the church. It may be said to have fully accomplished the first object, and, in some degree, also, the second. But, as might easily have been foreseen, it wholly failed in the third object, or in the attempt to remove the differences and allay the violent struggles and animosities that then divided and agitated the Christian world. The constitution of the council indeed, and the commanding position which the papal legate early assumed over its deliberations, deprived it of all promise in the character of an impartial tribunal, and fully justified the Protestants in regarding its authority and reporting its decisions. The latter were collected by 124 bishops, archbishops, bishops, and other dignitaries, and have been generally admitted to consist, along with the creed of Pope Pius IV., a complete, authoritative, and well-digested synopsis of the principles and doctrines of the Catholic religion.

The language of which this council was the theatre, have been developed with singular talent by Burpi, in his famous *History of the Council of Trent*. But as Burpi was the impassioned enemy of the court of Rome, and has repeatedly endeavored to show that its proceedings were almost always unadvised, and his opinions in the council almost always in the wrong, his conclusions, or rather the conclusions drawn by the reader from his statements, are not always to be depended on. The history of Burpi, though an able and vigorous attempt to add to the amount of trustworthy work, Trevisani's summary says of it, "he has been long at endeavoring to do it, but he has not done it, and he has not done it well." (Lombard's Bulletin, vol. 101, p. 115, Bologna, 1765.)

Trent is a river of England, being west to the Thames and Severn, by far the most important stream in that part of the U. Kingdom, not only on account of the length of its course, but of the fertile districts through which it passes, the numerous number of mills with which it is ornamented, and the considerable rivers it receives in its progress.

It has its source near the Cheshire border, in the mountains of Shropshire, about 4 m. N. from Shrewsbury. At first its course is nearly E. S. E., when it makes a sudden turn to the N. to the N. near Burton-on-Trent. It afterwards divides Lancashire from Derbyshire, and pursuing a N. E. course, by Nottingham to Newark it turns more and more to the N. After leaving Nottingham and Loughborough, and passing Oakham, it enters Leicestershire at West Leicestershire, and flowing N., with a little inclination to the E. enters with the great waters of the Humber, at a place called Trent-Falls. It may be navigated by vessels of 600 tons as far as Gainsborough, and by barges as far as Burton-on-Trent, a distance of about 117 m., having in this lengthened course a fall of two water marks of only 14 ft., or very near a foot per mile. From Burton-on-Trent to its mouth, the rise of the river is about 176 ft., at least, the greatest level of the Collier canal, which passes near the head of the Trent, is 64 ft. above the sea. (Penny's & Map of Canada, &c.)

Of the subsidiary streams that fall into the Trent, the most considerable are the Elyne, Tame, Dove, Derwent, and Ouse, but of these it is only necessary to notice the last two. The Derwent rises in that part of Derbyshire called the High Peak; after passing Matlock, Cromford, and Derby, it enters the Trent. It is navigable as far as Derby, and is a Derby canal. The Leicestershire, it flows and more than half Leicestershire. After on with a little inclination through it falls into it is navigable to a distance of 1 m.

The canals that communicate with the Trent are of the greatest importance, situated by them, it affords an easy means of export for the manufactures of a large district of Lancashire, the east of Cheshire, the produce of the Pennines of Staffordshire; the east of Derbyshire, and the agricultural products of Nottinghamshire, Leicestershire, and Lancashire. It also opens a communication with the sea by way of Lincoln and Boston, through which channels, as well as the Humber, the produce above enumerated are conveyed, and, in return, the produce of the country is supplied, either by Hull and Gainsborough or Boston and Lincoln, with such commodities as are required by an increasing population. (Penny's & Penny's on Rivers, Canals, &c. p. 101.)

TRENTON, a town or city of the U. States, state New Jersey, of which it is the cap., though not the

largest town, on Hudson; on the Delaware, on the bank of the ship-canal, 30 m. S. E. Philadelphia, lat. 39° 15' N., long. 75° 45' W. Pop. in 1840, 4,000. It is regularly laid out, and well built; the state house, prison, various churches, the bank and several cotton factories, are among the most conspicuous buildings. The river is here crossed, immediately below the falls, by a covered wooden bridge, 1,000 ft. in length. The Delaware and Raritan canal passes through the town; and Trenton communicates with New Brunswick by a railway 10 m. in length. *American Almanac*, 1841. It is famous in the history of the American revolution for the victory gained over the British and Hessians, Dec. 31, 1776, by the troops under Washington, whose decision and intrepidity on the occasion materially promoted the progress of the Revolution. (Sage's *Geog.*, Amer. edn.; *Amey's America*, 1831.)

TREVISO (see Trevis), a city of the Venetian dominions, prov. Rheno, cap. of a reg. of the same name, on the Piave, near its confluence with the Sile, and near the frontier of Lombardy, 30 m. S. W. Padova, lat. 45° 45' N., long. 12° 45' E. Pop. in 1838, 14,000. Streets broad and straight, and some of the public buildings are imposing. Among the latter may be specified the cathedral, remarkable for its altar and marble gallery; the church of St. Ursula, of great antiquity; the cloister's prison, now turned into barracks; the bridge over the Piave, 600 ft. in length, the plans of which are supposed to have been built in the 13th year of the Christian era; the gate of Mars (Ponte Marsia), of colossal dimensions and great antiquity &c. Its ancient university was suppressed in 1794, but it has a college or university for the education of Catholics, a gymnasium, a collection of medals, and a public library, both of which belonged to the university; the latter comprises about 30,000 vols., many of which are scarce and valuable; it has also several hospitals, and a theatre. It is the seat of the government, has a prov. council, a tribunal of appeal for the prov. a tribunal of commerce, &c., with manufactures of linen, woolen, and cotton stuffs. Being far the aggregation of the Rheno are built here, and it has a considerable trade in Venetian wine, &c.

Treviso is, perhaps, the most ancient, and was long the most important, of the German cities. A Roman colony was planted in it during the reign of Augustus; and thence it was called Augustus Treverorum. From that period it became a place of great importance, and was reckoned one of the metropolises of the empire on the side of Germany. Constantine the Great and several other emperors occasionally resided in Treviso. Ambrogio Marcellinus calls it *Germanicum principum forum* (lib. 15, c. 17). Ammianus, in his poem *De Clavis L. Sile*, celebrates the prison, and notices the extensive commerce it carried on by the Piave. Besides the bridge, the Ponte Marsia, &c. other remains of buildings that still exist, and many ruins and relics found in the town and the vicinity attest the power and splendor of the Roman empire. Beyond its walls are the ruins of an amphitheatre, cut in the side of a hill, where Constantine is said to have engaged some thousand Goths to be torn by wild beasts. Treviso was successively laid waste by the Huns, Goths, Vandals, and Franks, and so often rebuilt. It was for a lengthened period the cap. of the archbishopric or diocese of Clugna. Lately the pop. has increased considerably; though there is little probability that it will ever recover its ancient fame and importance. (Cotton's *North Ocean Atlas*, 1817. Schoder's *Geog.*)

TREVISO (see Trevison) a town of Austrian Italy, prov. Veneto, cap. being of the same name, on the Sile, 10 m. N. by W. Venice. Pop. in 1837, 11,000. It is regularly built, and is surrounded by old walls. Most of the streets are wide and well paved, with colonnades in front of the houses, and there are numerous public and religious structures. The old cathedral of St. Peter, a fine though unfinished structure, has in it a painting by Titian, and others by P. Bordone (a native of Treviso), Mantegna, &c. The Gothic church of St. Mark, the town house, and chapter, are good buildings, and in the main de plan is a fine picture by Giorgione. Treviso is a bishop's see, and has an episcopal academy, gymnasium, public library, botanical garden, several hospitals, a music theatre, &c. The university afterwards removed to Padua, was first established here. A large hardware factory, an extensive pottery and manufactory of silk, cotton and stuff, various cloths, paper, and calico, with some trade in wine, viticulture, &c., occupy most part of the industry. A large fair is held each year, from the 24 to the 31st of October. The town appears to have been a Roman municipality. Under the Lombards it was the cap. of one of the two marches or margraviates which they established on the eastern of their kingdom in Italy, &c. &c. having been the cap. of the other. Under the French it was the cap. of the dep. Tugliandina. Napoleon conferred the title of Duke of Treviso on Marshal Mörner. (Sampson's *Atlas*, Nov. 1840.)

TREVOUX (m. Trevis, or Trevison), a town of

France, dep. 5th, on ground, on the declivity of a hill, on the S. side, to N. E. corner. Pop. in 1831, 2,500. It was formerly surrounded by walls and towers, and on the summit of the hill on which it is built, are the ruins of the old castle, commanding a most extensive view over the surrounding plain. It has an uncompleted aqueduct with narrow streets, and many-looking houses. Having been formerly the seat of the prerogative of Domains, and the seat of a parliament, courts of justice, a town, &c. it has still to boast of many considerable public edifices, including the hall in which the parliament met, the hall of the courts of justice, an hospital founded by Anne Marie Louise D'Orleans, a quay on the S. side, &c. It has also a tribunal of original jurisdiction, a cloth manufactory, a royal establishment for the refining and assay of gold and silver, and some trade in the products of the surrounding country. It is very ancient. The emperor Severus defeated, near it, his competitor Albinus under its walls.

Provoost has striven to establish a distinction in literary history. Louis Auguste de Bourbon, prince of Duras, endeavored to make it a sort of literary capital, and in this view he established, in 1688, a considerable printing-office in the town, to which he also intended to found a college. And not long after, as in 1701 the said prince and very learned monthly publication entitled the *Journal de Provins* commenced by the Society, began to issue from the press, where it continued to be printed till 1724, when it was transferred to Paris. Here, also, appeared, in 1706, the first edition of the *Dictionnaire de Provins* in 2 vols. folio. There were several subsequent editions of this valuable work, most of which however were printed and published in Paris. Of these the last and best edition in 1771 was in which enlarged so as to comprise 8 vols. folio. (Hugb. art. lit., *Marques art. Provins*.)

TEKALA or TRICALI (in Persia), a town of European Turkey, cap. of the prov. of same name, dist. dist. over the M. Taurus on the S. side of a mountain ridge 5 m. N. from the Balyndur (in Persia), and 20 m. W. by S. Larnas. Pop. estimated at 9-m. 10,000 to 15,000, chiefly Turks. It is of considerable extent, and the houses being interspersed with gardens and trees. It appears to be built in a wadi, and the lofty mountains of its environs rising above the town give it a picturesque appearance. It has several Greek churches and mosques. At the height of 10 or 12 ft. above the pavement a wooden walk-way intersected with stone is carried over the stream, completely shading the passageway below. The shops are close and tolerably well frequented, and their passengere, who are chiefly Greeks or Jews, have a respectable appearance. (Hobbes's Trav. p. 200.) According to Strabo, this city had a magnificent temple of Bacchus, but no traces of this edifice are now known to be extant. On a hill above the town are the ruins of a castle apparently dating from the time of the Greek empire, and commanding a fine view over the plains of Taurus. There are dispersed by numerous flocks of sheep, and also produce a good deal of cotton. The manufacture of shawls, coarse woollens and cotton cloth, employing many of the labour of Tricali. No trade is also pretty extensive from its being on the principal road from Yassio to Constantinople, and commanding the only pass by which supplies of corn and other provisions are brought from Taurus into Asia. The latter circumstance renders it important as a military post. (Hughes Trav. in Affrica, &c. i. 133.) (Gibson's Asia Minor.)

TRICHINOPOLY, a dist. of British India, provd. Madras, nearly between lat. 10° 00' and 11° 30' N. and long. 76° 10' and 76° 30' E. having W. Balesar and S. Arcon, S. Tanjore, S. the latter and Madura, and W. Balesar and Coimbatore. Area, 2,100 sq. m. Pop., in 1881, 7 lacs 700. The railway runs from W. to E. through the country, bringing a considerable extent of rice land. In addition to rice, sugar cane, with tobacco and betel-leaf are grown in the tracts covered by tanks and wells in the dry lands the other usual products of the Country are extensively cultivated, and there is good pasturage for sheep and cattle which are numerous. The principal imports are given all tobacco, pepper and other bet. while the exports comprise such indigo, sugar, and cotton. The principal manufactures are cloth for domestic use, and indigo with some subsidiary articles made in the town of Trichinopoly (which see). Total land revenue, in 1881, 7 l. 43s. and custom.

There is a large artificial town of 1 pound Madras, cap of the above dist., on left in S.W. Madras. Pop., exclusive of island at 74,000 (Madras Almanac). It is about nearly 1 m. in length N to S, by a beach. Exclusive of some outworks, it is by a double wall and ditch, with a covert to list its defenses are now mostly in a ruin except the citadel tower in N. carefully situated on an elevated rock, commands operations carried on to east of the

this road also stands a large and massive pagoda, and a pillared square building, with a statue of Hanuman, occupying the highest point, while to the S. E. of the road is a small sculptured entrance to the style of some of the more temples at Bithur. The jewelry made at Trichampany had formerly much celebrity, and Trichampany claims two still in request. Cotton cloths, table linen, hosiery, &c., are made here, and the town is an emporium for a great variety of manufactures. It is well adapted for a military station, its houses being well supplied with different kinds of munition and arms. The roads along it are so good as to admit, at every season, of an easy communication with Madras, Vellore, and Mysore. Hence, also, diverge all the great roads leading to Tanjore, Madras, and Dindigul the three chief stations to the S. part of India. (Madras District, &c.)

TRIESTE (an. *Trieste*), a town and principal part of the Austrian empire, the port and city of its own name, prov. *Istria*, on the Adriatic, near its N. E. extremity 45° 10' N. by N. 10 miles. Lat. 45° 30' 30" N., long. 13° 45' 30" E. Pop. in 1856 of the city only 41,345. The pop. of the town and its district, comprising about 45 sq. m. amounted, in 1856, to 121,361 having increased in that amount from 61,500 in 1831. *Surroundings* : Bay, *Adriatic* ; *Trieste* is divided into the old town, the new town, or *Terzovenstadt*, the *Acquedotto*, and the *Prater* (cemetery) ; *Francis* (suburb) ; the old town stands at the head and on the declivity of a steep hill covered by the vineyard it has dark narrow winding, and frequently steep streets, with gaily painted houses, and is surrounded by the remains of ancient fortifications. The new town immediately N. W. of the former and built on level ground, partly taken from the sea, consists, on the contrary, of handsome streets, crossing each other at right angles, and lined with new buildings. It is particularly intersected by the canal cut by Maria Theresa, by means of which canals draining 5 or 10 ft. water may find exit and return at the doors of the warehouses. Between the new and old towns runs the Canal, the principal thoroughfare, broad but winding, furnished with good shops and coffee-houses, and opening terminally into spacious and handsome squares. The principal of these is the *Piazza Grande* with a fine public fountain, and the equestrian and statue of the Emperor Charles VI., in whose memory it is particularly indebted for its importance in modern times. In this square the great vegetable and fruit market is held, and on one side of it is the

1st, commanding a fine view, the finest building here, in which is a statue of Minerva; appear to be new; many are situated on, and public walks and a garden beyond, are estimated at 500,000 constructed.

is supposed to occupy
it is in the Byzantine

structed with masonry and many Roman inscriptions,
carvings, &c. are built up in the walls. It contains
the museum of Winkelmann, the antiquary cabinet
of the famous work, *Monumenti de l'Art des Anciens*,
reconstructed here in 1763. There are 4 other
Roman Catholic, 1 Protestant, and 1 Greek churches, 2
synagogues, and an English chapel. The town of these
alliances are the Greek churches, particularly that at the
head of the great canal with a magnificent marble altar,
and an organ suspended saving the hint to Italy. The
church of the *Annunziata* is admired by its architecture
and fine paintings, and the palace of the governor is also
an imposing structure. The handsome residence is
the house formerly belonging to a Greek merchant of
the name of Caradine who, having begun business in
Trieste almost as a pauper is said to have died worth
1,000,000 sterling (Rumors). The capital formerly
experienced the daily protection of the town and harbor,
and is still maintained in a tolerable state of defense.
The great theatre is spacious, and there are several
other theatres. Among other objects worthy of notice
are the barracks, gun-ovens, dead-end, barracks, one
of which is among the most perfect establishments of its
kind, and the service of the nation ornamented with
several castles.

Trieste is in the S. what Hamburg is in the N., the great commercial emporium of Germany a harbor, which though rather limited in size, is easy of access and navigation has been formed by the Pharosian Moles, founded on a ledge of tuffaceous rock and projecting N. W. into the sea from the S. extremity of the old town. At its termination has been thrown an irregular platform about 1 1/2 ft. in elev., on which have been erected a lighthouse and light-house, with an intermittent light 105 ft. above the sea. Another light-house, having the lantern 105 ft. above the sea, has been erected on the point of S. Maria, about 1 1/2 m. W. by S. Trieste. The

the empire, and a board of police, &c., and is a bishop's see. It has an imperial academy, a school of navigation, normal, female, Jewish, Greek, and elementary schools, many charitable institutions and learned societies, and several periodical publications. There are no public banks, but several private establishments of undoubted solidity, and various insurance offices. Trieste has manufactures of roseoglio, wax-lights, leather, soap, playing cards, musical instruments, &c., with dyeing-houses, sugar refineries, potteries, and distilleries. It communicates by *diligence* three times a week with Vienna; and by steam packets once a month with Smyrna and Constantinople, and continually with Venice and other towns on the Adriatic. It is better supplied with provisions than might have been expected from the sterility of its environs, they are supplied chiefly from Dalmatia and the country round Venice. But notwithstanding the cheapness of most articles, owing to the absence of duties, Trieste is not a desirable residence for persons not engaged in business. Water is scarce and bad; the climate is in extremes; and the E. N. E. wind, known by the name of *Bora*, is very piercing. A mixture of all nations is met with here, and all the principal merchants and traders are foreigners. German is spoken by the authorities and in the public offices, but Italian is the prevailing language of the middle classes, while the lower speak a Slavonic dialect.

Traces of an amphitheatre and other Roman remains exist at Trieste. During the middle ages it was the cap. of a small republic; but its history presents little remarkable till 1719, when Charles VI. made it a free port.

TRIM, an inland town of Ireland, prov. Leinster, co. Meath, of which it is the cap., on the Boyne, here crossed by a bridge, 26 m. N. W. by W. Dublin. Pop. in 1841, 2,369. This is a very old town, having been given by Henry II. as part of the palatinate of Meath, to Hugh De Lacy. The latter constructed the castle, which, from its extent, strength, and elevated situation on the banks of the river, was at once the largest and most important of the numerous fortifications erected by the English within the limits of the Pale. The ruins sufficiently attest its ancient grandeur. On the other side of the river are the ruins of St. Mary's Abbey, an ancient and extensive edifice; and there are some other ecclesiastical remains. The town had, also, been surrounded by walls, considerable portions of which are still entire. Indeed it was anciently the occasional seat of the lord-lieutenant; and several parliaments have been held within its walls. It was taken, without opposition, by Cromwell, in 1649.

At present, however, notwithstanding it is the co. town, Trim is of little importance. Its principal public building is the new co. gaol, an extensive structure on the radiating plan. It has, also, an ancient par. church, a Rom. Cath. chapel, a dispensary, an infantry barrack, with a co. infirmary, schools, &c. It returned 2 mem. to the Irish H. of C. till the Union, when it was disfranchised, and since then it has continued to decline. The assizes for the co. are held here, and general sessions twice a year, and petty sessions on alternate Saturdays. It is a constabulary station, and has a flour-mill, a brewery, and a tannery. Markets on Saturdays; fairs March 27., May 8., Wednesday after Trinity Sunday, Oct. 1., and Nov. 16. Post-office revenue in 1830, 894.; in 1836, 877.

About 3 m. S. from the town, on the road leading to Summerhill, is Dangan, formerly the property of the Earl of Mornington, and memorable as the birth-place of the Duke of Wellington. The house in which the great general first saw the light has, however, been wholly pulled down, but a handsome pillar, surmounted by a statue of his Grace, has been erected in the town, in commemoration of his achievements and of his connexion with the vicinity.

TRINCOMALEE, a marit. town of Ceylon, on its N. E. coast, near the entrance to one of the finest bays in the world, about 180 m. N. E. Colombo, lat. $8^{\circ} 23' N.$, long $81^{\circ} 57' E.$ The town, which is but inconsiderable, is built at the foot of a rock, on which is the fort, on the outside of a narrow peninsula or tongue of land bounding the harbour on the E. It has but few European inhab., and what is remarkable, few Singalese; the lower classes being principally Malabar E. Catholics. The fortifications form a sweep of above 1 m. in length along the shore. Fort Frederick is a station for four companies of a European regiment, a company of royal engineers and artillery, and detachments of the Ceylon rifle corps. Fort Osterberg, on the termination of a ridge of hills, about 3 m. S. W. Trincomalee, commands

the entrance of the harbour and the dockyard close beneath. It forms the head quarters of a detachment of artillery and a European company. The fortifications have been mostly constructed by the Portuguese, the Dutch and Brits or working for the improvement of the place while in their possession.

The harbour of Trinitaria was styled by Nelson "the finest harbour in the world." It is almost land-locked, and the water is so deep that it is all but possible to make plans to stop from the shore on board large vessels without danger. During the W. E. war, when all the ships on the Carriacou and in the Bay of Bengal are obliged to put to sea, Trinitaria is their principal place of refuge, and a vessel from Halifax can reach it in two days. The town, which may be considered as the military eye of Cayman, surrendered to the English in 1795. (Hamilton, *Islands of the West* p. 1.)

TRINIDAD is a market town and port of England, on the north, built on the London and Liverpool railway, and on the road from London to Kingston, 100 m. N. W. London. Area of par. 7,200 acres. Pop. in 1851 4,100. The town consists principally of two streets. The church is an uninteresting structure, with a square tower and low spire on the W. end. The tower a perfect square with 1571 a year is in the gift of the dean and chapter of Oxford. There are meeting houses for Baptists and Independents, a Lutheran school &c. The island is principally employed in the manufacture of sugar, molasses and a few other things. Markets on Fridays. Fair, Easter Monday and Oct. 11. The railway has attained a height of 400 ft. above the level of the sea, being the highest or amongst level. Trinitaria is the only town in the island of Cayman.

TRINIDAD is an island of the W. Indies, or Antilles, being the most easterly of the group united the Windward Islands, and west to Barbados, the largest and most valuable of the islands belonging to Great Britain in this part of the world. It lies immediately off the N. E. coast of Cuba, and the N. E. corner of the Carriacou, between the 10th and 11th degs of N. lat. and the 61st and 62nd of W. long. Its N. W. extremity being only about 10 m. from Pointe à Pitre, the straits of the peninsula of Pointe à Pitre, and its N. W. cape being but 5 m. from the tip of the Carriacou. On the W. Trinidad towards the Gulf of Paria, and on all other sides it is surrounded by the Atlantic. It is of a square or oblong form with considerable projections at all its angles except the S. E. Length, N. to S. 40 m. average breadth, 10 m. of its projection, about 10 m. Area estimated by the same authorities, at 1,000,000 acres, or about 2,000 sq. m. through it has also been estimated at above 1,000,000 acres. Population in 1851, 20,000, of whom about 4,000 are whites; but there are doubts as to the correctness of this count. The mountain chains run from W. to E. and may be regarded as continuations of the chains on the opposite coast of Venezuela, from which this island has most probably been detached by some convulsion of nature. Along the W. shore a bold range of mountains rises to the height of 2,000 ft. broken into the most rugged and abrupt forms, and clustered to the summit with dense forest trees. Towards the E. extends a chain of hills of less elevation, and of a more pastoral character, with the centre of the island to a flat or round capped hills, dotted with extensive valleys, which are all by a succession of hills and deep well watered by numerous streams. The principal city on the W. coast for 6 long from the coast, and on the N. E. corner, which is said to be of 100 years to a larger from its size. The city is not well fortified with any cannon, and is surrounded by the whole of the island from the four quarters of the year. But the W. coast has extensive bays and harbours, and the Gulf of Paria is an extensive inland sea, in which ships of all sizes may ride securely and anchor any where without the smallest risk, and to any considerable depth of water. (Hunt's *American Coast Pilot* p. 415.)

The greater part of the interior of this island is covered, and, indeed, is a considerable degree unimproved. The low grounds are in parts marshy, while the more elevated portions are, for the most part, covered with a dense vegetation of forest and under-wood. The mountains are covered to the summit with forest, the island being naturally extremely fertile. The soil, in general, deep and rich, and warm, and it is said that, if properly cultivated, it would alone supply sugar adequate for the consumption of England. It might be supposed that, as an island so extensive, mountainous and covered with forests, the atmosphere would be generally overladen with moisture. It does not, however, appear that the fall of rain is as great as in Cuba, the average being about 50 in. a year, and this is said to diminish with the progress of cultivation. The dry season com-

mences in Dec. and ends in May, but it is a peculiar advantage of this island that it is exempted from those destructive draughts common to all the other W. Indies islands from Barbados to Cuba. During June and July showers are frequent, and in Aug. Sept. and Oct. the rain falls in torrents, often accompanied by violent storms. The weather generally moderates, and the rains become more slight, towards the end of Oct. and there is seldom any fall after the beginning of Dec. The nights are generally cool and pleasant. The mortality during the twenty years ending with 1850, averaged about 10 per cent. of the whites, and a few cent. of the blacks except a year. Fevers and dysentery cut off most of the whites. (Papers relating to the W. Indies, 1851-2, Trinidad, *Political Rep. on the Health of the People in the W. Indies* p. 17-18.)

It has been estimated that only about 1,000 part of the surface of this island is occupied by cultivation. The cultivated portions of Trinidad are mostly confined to the N. W. and a few places along the S. W. coast. It is stated in a Report by a sub-commissioner of the plantations of Trinidad, that in 1850, 200,000 acres of land had been appropriated, of which 13,000 were in cultivation, and that 1,000,000 were then appropriated, and belonged to the crown. (Papers relating to W. Indies, Trinidad, p. 148.) Of the cultivated land, 20,000 acres are said to be under the sugar cane being divided into about 100 estates, the smallest of which is said to be estimated at 2,000,000 acres. The rest of the cultivated lands are occupied by some plantations 7,000 acres, and the (1) 100 and provisions and pasture grounds.

This island, like the other W. Indies colonies, has suffered greatly since the emancipation of the slaves from a want of labour, for from the abundance of the land and its fertility it ought, were labour to be had in reasonable terms, to make a rapid progress. To obtain its full capacity above 1,000 estates have been imported from India, with nearly as many Africans, besides a large number of immigrants from other islands. But the entire progress of advancement from this influx of foreign labour, have been only to a small degree realized. The natives have suffered much from sickness, and when improved they and the Africans are quite ignorant of their duties as labourers. In this respect, indeed, they are no better than children, and children are, with but little aptitude to learn and a great aversion from labour. The African, says Lord Harris, governor of the island, "is the most part idle and roams a savage. He frequently leaves the cultivated lands and joins his countrymen at one of the numerous villages which they have been permitted to establish. There were no law more against the proprietors and the law are null. If much to be made where in the forest, to be to be looked for? If wished to a village he is not to be found, he can always obtain the shelter, who asking asks the trustee to return for him a second time." (Lancaster Star February, 1851.)

The natives cannot even be made of any labour as of a disposition to engage with either of any manner. And if of some might have with the comparatively climate with but little as to be required that it appears that they are to be made the men to make when they are of all sorts tropical countries are, as before without a single exception, uniformly indolent. The slave for nature is their common enemy. And to suppose that such persons should be inducements to cultivation is supposing that there may be an exertion without a motive, an effort without cause. If an hour's labour a day will fully supply a man's wants, it is absurd to suppose he should continue to labour more or less hours.

Cocoa is more extensively grown in Trinidad than in any of the other British Antilles, and is of superior quality. The trees are somewhat resembling the cherry-tree, and grow to about 15 ft. in height. It sometimes rises to the top of the trunk of a tree, and is said to produce which plants in some cases are planted between every other row. The cocoa seeds are placed in small moulds, two seeds being sown together, and the weakest plant of the two afterwards destroyed; the carrier is transplanted after standing 10 or 15 inches in height. Until the age of 5 years, all the flowers are destroyed as they appear. The first grows to a post, which, as it ripens, changes to a branch red or brown colour. The crop is gathered throughout the year, but particularly in June and Dec. The ripe pods are broken or cut open, and the seeds extracted with a wooden spoon. They are afterwards spread out to dry in the sun on such mats. When quite dry and hard, the nuts are lightly packed in boxes or bags, and kept dry for exportation. Coffee, indigo, tobacco, and cotton, come to perfection, though

mostly grown only in small quantities. Here, also, are all the fruits and vegetables of the adjacent tropical climates, and the vines transplanted from France or Spain are said to equal their parent stocks. The mountains, like those of the adjacent continent, consist chiefly of argillaceous and micaceous schist; milky quartz, ferruginous sand, pyrites, arsenic, alum, sulph. copper, plumbago, sulphur, &c. are found; but the most abundant mineral is asphaltum, which may be supplied in any quantity. It is found in the greatest profusion in the lake Brea, or pitch lake; an area of about 150 acres in the N.W. side of the island, about 30 m. S. from Port Spain, and about 80 ft. above the level of the sea. Though called a lake or lagoon, this depôt of pitch is for the most part quite solid, rent, however, by chasins, varying from 3 to 30 feet in width, but of no great depth, so that they are traversed without much difficulty. Here and there, wherever there is any soil, are clumps of stunted trees. The liquid part of the lake, on the side nearest the sea, is supposed to be about 3 acres in extent, and consists of fluid pitch of unknown depth, in a state of slow ebullition, and exhaling a strong bituminous

and sulphurous odour. This vast pitchy cauldron must be approached with extreme caution. It has been attempted to apply the asphaltum brought from this lagoon to the same purposes as pitch and tar, but it is found to require so large an admixture of oil that it becomes too expensive. If it could be economically applied, Trinidad might furnish abundant supplies for the whole world. (*Trinidad Almanac for 1840*, App. c. 4.) Exclusive of the pitch lake, Trinidad has several extinct volcanic craters, active mud volcanoes, and other evidences of volcanic agency. Slight shocks of earthquakes have also been occasionally felt, but happily the island appears to be exempted from the scourge of hurricanes. Trinidad was greatly neglected by the Spaniards, and previously to 1783, when emigration to it was first actively promoted by them, no more cocoa, indigo, and other products were exported than sufficed to freight a small schooner two or three times a year to St. Eustatius. Since then the progress of cultivation has been comparatively rapid. We subjoin an

Account of the Quantities of the principal Articles imported into the U. Kingdom from Trinidad in the undermentioned Years.

Articles.		1831.	1835.	1840.	1845.	1848.	1849.

The total value of the exports amounts, in ordinary years, to about 450,000*l.* or 500,000*l.*, though occasionally, as in 1848, it is much less. The total value of the imports is about the same as that of the exports. In 1849 the declared value of the exports from the U. Kingdom to Trinidad amounted to 247,779*l.* principally cottons, linens, leather manufactures, iron and steel, soap and candles, &c. The revenue and expenditure of the island are each about 80,000*l.* a year.

Trinidad, like St. Lucia and British Guiana, is governed by a governor and council, acting under the orders of the home government. The legislative council of the island consists of 12 members, 6 of whom are styled official, holding high offices, and 6 non-official, being selected from among the inhabs.; all are removable at the pleasure of the crown. The laws of the island are a mixture of those of Spain and England, and it is said that much mischief has been occasioned from the circumstance of the judges and other functionaries sent from England being ignorant of the former. The office of coroner does not exist here, nor trial by jury in the supreme criminal court. Every person about to leave the island must first give public notice of his intention, and obtain a pass from the governor.

The settled part of Trinidad is divided into 11 districts. The cap. and seat of government, Port Spain, which in 1839 had 11,693 inhabs., is situated on the W. coast of the island, near the mouth of the river Caroni. It is one of the handsomest towns in the West Indies, being built wholly of stone or brick, with wide and well kept streets, some of which are shaded with rows of noble trees. It has Protestant and Roman Catholic churches, a Presbyterian secession church, and a Methodist chapel. The stores and magazines are crowded with valuable merchandise, which, however, is partly destined for the supply of Colombia. In the vicinity of the town are Fort George, now nearly dismantled, and St. James' barracks. The latter are said, in the *Trinidad Almanac*, "to be placed, on account of an infamous job, in one of the most pestilential spots in the island." (p. 99.) The harbour is good, and, in fact, as already stated, the entire gulph of Paria may be regarded as a magnificent harbour. Between 40 and 50 public and private schools are established in Trinidad, and are well attended. The regular military force amounts to about 500 men, including officers.

Trinidad was discovered by Columbus in 1498, and was taken possession of by the Spaniards in 1588, an event followed by the almost total extermination of the Indians. Raleigh visited it in 1595. The French took it in 1696, but soon afterwards restored it to the Spaniards, who held it till taken by the English under Abercrombie in 1797. (*Trinidad Almanac for 1840*; *Parl. Papers*.)

TRIPOLI, the most easterly of the Barbary states, the dominions of which, exclusive of Tripoli proper, comprise Barca and Fezzan, noticed in other parts of this work. Tripoli Proper lies between lat. 29° and 33° N., and long. 10° and 20° E.; having E. Barca, W. Tunis, S. Fezzan and the desert, and N. the Mediterranean. It stretches along the North African coast about 800 m. E. and W. Its breadth inland varies greatly, owing to the frequent interruption of the desert; but its area has been estimated at nearly 100,000 sq. m., and its pop. at from 1½ to 2 millions, principally Moors and Berbers, with some Turks, Negroes, Jews, and Christians.

In antiquity, Tripoli proper was called the *Regio Syrtica*, from its lying between the *Syrtis Major*, now the gulph of Sidra, on the E., and the *Syrtis Minor*, now the gulph of Cabes, on the W. The former, or *Syrtis Major*, is a very extensive bay, extending from Bengazy on the E. to Cape Mesurata on the W. about 280 m., having where greatest a breadth of 150 m. This gulph was reckoned in antiquity, next to the strait of Scylla and Charybdis, by far the most dangerous part of the Mediterranean, principally on account of the shallowness of its waters, which were said to be encumbered with quicksands, and partly also from the irregular action of its tides. "*Verum importunos atque atrox, et ob vadorum frequentium brevia, magisque etiam ob alternos motus pelagi adfluentis et refluxus infestus.*" (*Pomp. Mala*, lib. i. cap. 7.) The dangers of the Syrtis have also been frequently alluded to by the poets, who have given it the epithet of inhospitable:—

— "per inhospita Syrtis
Litora, per calidas Libyæ sitientis arenae."
Lucan, lib. i. v. 367.

See also *Virgil*, *Æneid*, i. v. 110.: *Horace*, *Od.* i. 22, &c.

But though the navigation of the greater and lesser Syrtis, especially the former, be not free from danger, this has been greatly exaggerated by the ancients. During strong N. gales a very heavy sea is certainly thrown into the gulph, and the S. shore being low and sandy, a considerable portion of it is submerged, and the waters of the entire gulph have an extremely agitated and turbid appearance; but in ordinary weather it may be navigated by middling-sized vessels with little or no difficulty. "The gulph of Sidra," says Captain Smyth, "has few or no dangers, excepting little heads of rocks scattered about different points, and the tides are insignificant. With the hand-lead going, a vessel may approach all parts; but of what utility can it be to enter here, there being but one place in the whole gulph worthy to be called a port? We could find anchorage for small vessels only at Bushaifa and Braiga, at the bottom of the gulph; and Gharra Island, Karhora, and Bengazy [which see], on the E. coast."

But it is obvious from this statement, and from the want of harbours and roadsteads, that when the vessels of the ancients, who had comparatively little skill in navigation, got embayed in this gulph during the prevalence of northerly gales, they must have been in an exceedingly perilous situation, and we need not therefore be surprised at the exaggerated terms in which they have described its terrors.

The coast-lands, except at the bottom of the gulph of Sidra, where the desert and sea are conterminous, are here, as in the rest of N. Africa, extremely fertile. These, however, seem to be the only valuable portions of the surface. The Atlas ranges approach nearer the sea here than in most other parts of Barbary, and immediately beyond them the country is a sandy arid desert. Tripoli has no river of any consequence, though a number of small rivulets descend from the mountains to the sea. Neither are there any lakes in the country, which, accordingly, depends for its irrigation and consequent fertility almost solely upon the rains. These, when they occur, fall incessantly for several days and nights; they then cease suddenly, and not a drop more descends for several months together. The most severe famines are

sometimes experienced from a continuance of drought; but when this is not the case, the country appears to have lost none of its ancient productiveness. According to Mr. Blaquiere, "A more luxuriant tract than that in the immediate neighbourhood of the capital cannot be imagined. Country-houses, extensive pleasure-gardens, groves of orange-trees, and innumerable fountains, together with the incessant progress of vegetation, form an assemblage of rural beauty here which is rarely to be met with. The fertility does not, however, reach more than 6 m inland, when nothing but an immeasurable waste of sand is presented to the eye, and forms a striking contrast with the cultivated fields, to the edges of which it approaches. It should be observed, that a want of industry, and of proper encouragement from the government, are the only reasons why cultivation is not extended beyond its present limits. There is probably no country so highly favoured by nature as this is with respect to a rapid succession of the crops. The rains generally begin after gathering the dates, towards October, in the beginning of which month the Arabs plough and sow their grounds. In December and January the weather becomes dry and extremely pleasant, like our spring in England. In the beginning of April, the market before Tripoli is abundantly stocked with cattle, poultry, and vegetables of every kind. Towards June, almonds, figs, apples, pears, plums, peaches, nectarines, grapes, and melons are in season, and incredibly abundant. Cotton has been cultivated very successfully by various individuals, but, owing to a want of encouragement, does not form an article of export. Formerly, a quantity of raw silk formed one of the exports, but its cultivation has latterly been neglected. Mulberry trees are, however, to be found near the capital in great numbers, so that silk may at any time become again a staple commodity of the country. The castor-tree (*Ricinus Palma Christi*) is found in the vicinity of Tanjourn, where a great deal of that oil is made annually, though it has not hitherto been exported in any great quantity" (*Blaquiere, in Med. Trav. x.*). The exportation of corn, which otherwise would be very considerable, is prohibited except when carried on by the pasha for his exclusive benefit. Tobacco, saffron, madder, &c. are grown in small quantities; saffron and galls are produced in the mountains, and the cassia and lotus are indigenous. But dates constitute the principal food of the inhabs. The dates of Tripoli are finer than those of any other part of Barbary, and, besides its fruit, the date-tree yields a juice called *Agdidi*, which, when drunk fresh, is a very agreeable beverage, and, when suffered to ferment, forms an intoxicating fluid, "in great request among the *Mechamiedans*, notwithstanding the prohibitions of the Koran." (*Della Cella, 16.*)

Each village is usually surrounded by plantations of date and olive trees, the surplus produce of which, with the straw mats, earthen jars, &c., made by the villagers, are partly exported, but are mostly disposed of to Bedouin traders. The vines along the coast yield grapes and raisins of the finest quality and might be made to produce excellent wine. According to Della Cella, the neglect of such an advantage is less owing to the disquisitions of the prophet than the exceeding sloth and ignorance of the people. Cattle, sheep, and poultry are reared in large numbers in some places, and, as animal food is little consumed, they are principal objects of exportation. During the war, Malta drew large supplies of cattle and other live stock from Tripoli, and still imports

beef, the is of in the antelope but to me rock salt coast, fish exception ing does. The no nation, h of palm different other an exportati principal does for caravans Dux, and Seckatoo art. Fnu chants p they run ing by a the press about 1,8 each war nation, I tries the brass, the

these articles, with provisions, colonial produce, sugar, pitch, spirits, cochineal, indigo, damask, and other silk fabrics, spirits, looking-glasses, toys, &c., constitute the principal imports from Europe. The exports from Tripoli by sea are wool of excellent quality, madder, and other articles of dress, oil, rum, and other drugs, madder, harilla, hides, goat and sheep skins dressed, dates and other fruits, cattle, ostrich feathers, truss,

is in the hands of a boy, or youth, who is chosen from among the residents in Tripoli, being confirmed a *Brass* from the Turkish sultan, and is assisted in his various

business by a *vey-commander-in-chief*, an age commanding the Turkish soldiers, the *haga*, or grand judge, who dispenses justice daily at the castle gate of the capital; the chief officers of the treasury and household; the *shirif-ahad*, or head police magistrate; the *mayor*, or *thead*; the *coet*, or judge in matters *shamshad* faith, &c. The district have powers equivalent to the *boy*, as; thus, the *age* of *Mourata*, besides his, vested in his own person all the active powers of the state, if we may so term exercised by an officer unaccountably, revenue, custom, or public ad., p. 44.) The revenues of the *boy* are tribute of the district governors, and the interior, taxes on the Jews and of 10 per cent. on all land-produce, duties, monopolies, presents, and the mitigation of punishment, considerable amount being estimated by *Blaquiere* as from 20,000 to 25,000 sterling a year; in addition to which a large portion of the necessaries for his use are procured by extortion from his subjects. His standing army is said to amount to 2,500 men; but in time of war an army of 10,000 irregular cavalry and 40,000 foot may be raised by levies from the Arab tribes. The naval force is insignificant, consisting almost wholly of a few small vessels.

The character of the natives of Tripoli appears to be very indolent. Captain Lyon says drunkenness is more common than in most towns in England. There are public wine-houses, at the doors of which the *Mouras* sit and drink without any scruple; and the greater part of the better sort of people also are great drinkers. *Blaquiere* says he was unable to discover any good qualities to be contrasted with the well known vices of revenge, avarice, treachery, and deceit, which predominate alike in the prince and the peasant. There is probably no country on earth where the inhabs. are more inclined to be vicious. (*Blaquiere, in Med. Trav. x. 80.*) And yet it is said such is the propensity with which justice is administered, that crimes in Tripoli are less frequent than in European countries, and the people are more civilized than in most parts of Barbary. Intolerance towards Christians was formerly very strongly marked; but foreigners are now treated with respect, piracy and Christian slavery having been wholly abolished.

This territory contains some Roman antiquities, but they are much less frequent than in the adjacent territory of *Baran*. In the middle ages it generally shared in the fortunes of the rest of this portion of Africa.

or Charles V., herby over it, a driven from local tributary to, over other also more than of N Africa, why tongue of n: the castle '30" E. Pap. wa, residing in it smaller than in length, by 6 irregular. It is, the original an very good; directions with n are mounted res of strength, one to the E. am, the town no whitener of line, which in t rays, is very rye cupola, to or in different a general sur- and date-tree, ty a novel and

the Crusaders, particularly some high Gothic arcades over certain streets; but there are no public buildings worth notice. Tripoli is commanded by an old castle on the heights behind, built during the crusades by the Count de Toulouse. The name *Tripoli* is, no doubt, derived from its being formerly divided into three separate towns at short distances from each other; and, in fact, El Mina, as the Marina is sometimes called, is a distinct town from Tripoli proper. Numerous granite columns and other ruins may still be seen along the shore. (*Pococke, Burckhardt, &c. in Mod. Trav.*) The port of Tripoli, to the N. of the Marina, and opposite the town, is merely a roadstead, sheltered on the W. by some rocky islets; and is safe only in fine weather. It is dangerous in winter, and particularly at the equinoxes, from the foulness of the bottom and the prevalence of strong gales. (*Purdy's Sailing Direct.*) It has, however, some trade, exporting silk, wool, cotton, and tobacco, with small quantities of oil, wax, cochineal galls, and soap, manufactured in the town. There are numerous Greeks among the inhab., and a large share of the trade is in their hands. It is, also, the see of a Greek bishop, and the residence of several European consuls. (*Bouring's Rep. on Syria; Mod. Trav.*)

Tripoli was taken by the Crusaders in 1108. It had previously been one of the most flourishing seats of oriental literature, and possessed a very large collection of Persian and Arabic works. It is said that 100 copyists were constantly kept employed copying manuscripts, and that the princes of Tripoli were in the habit of sending messengers into foreign countries to discover and purchase rare and valuable works. Unfortunately, however, this extensive and precious collection, amounting, it is said to 100,000 vols., was destroyed by the Crusaders, who displayed on this occasion the same fanatical zeal of which they have accused, though we believe unjustly, the Arabs in the case of the Alexandrian library. (See *ALEXANDRIA*.) A priest in the suite of Count Bertrand de St. Gilles, having visited an apartment of the library in which were a number of duplicate copies of the Koran, reported that it contained none but the impious works of Mohammed, and that, consequently, it should be destroyed! And, as a matter of course, it was forthwith set on fire!

Balbi, despite his pretensions to superior criticism and sagacity, states, after Quatremere de Quincy, that this library contained no fewer than 2,000,000 vols.! (*Bibliothèques de Vienne*, p. 81.) Michaud most properly rejects this statement as incredible and absurd, and adopts in preference the reasonable account given by Norairi. (*Histoire des Croisades*, ii. 43., ed. 1841.)

TRIPOLITZA, or TRIPOLITZA, a town of the kingdom of Greece, cap. dep. Mantinea, and under the Turks, the cap. of the Morea, near the centre of which it is situated, 20 m. S. by W. Argos. It stands in a plain nearly 2,000 ft. above the level of the sea, and before the late war was about 3 m. in circuit, and probably more populous than Athens, but we can form no estimate of its present population. It is of modern origin, and is supposed to owe its name to its having been principally constructed of the ruins of the three cities of Tegea, Mantinea, and Pallantium, the sites of all which are at no great distance. Previously to the Greek revolution it had some large and conspicuous buildings; but it suffered severely during its capture and sack by the Greeks in Oct. 1821, and its ruin was completed when it was retaken by Ibrahim Pacha in 1825; indeed, an arched gateway is now said to be the only existing relic of the Turkish period. (*Mure's Journal*, ii. 317.) But it is again rising from its ruins, and is the seat of one of the first class treasures in Greece and of other government establishments. It is said, however, that the government contemplates the removal of these to some other town; and if so, it is not very probable that Tripolitza should ever regain its former importance. (*Gell; Burgess' Greece, &c.*, i. 210.; *Strong; Greece as a Kingdom, &c.*)

TROAD (Tua), or site of the ancient city of Troy, and the scene of the battles described in the *Iliad*. The situation of this classical region has been pointed out with sufficient precision by Homer, and has been admitted, from the earliest antiquity, to comprise that portion of Asia Minor bounded by and immediately S. of the W. entrance to the Hellespont, opposite the island of Tenedos, having Mount Ida on the E. and the gulph of Adramyti on the S. Here, no doubt, are the camps and Troy's fall:—

"Hæc Ibat Priami; hic est Sigæa tellus;
Hic sæterat Priami regia cœli mædi;
Illic Hectoris, illic tendebat Ulysses;
Illic laeæ adituæ curruis Hector equæ."
OVID. *Epist. I. lin. 33.*

But, notwithstanding the immortality of renown that has been conferred on the "heaven-built" city, and the interest which the Troad has always excited, such and so great have been the changes brought about by the in-

of war, the ravages of barbarism, and the lapse of ages, that it is now no easy matter to reconcile the descriptions of Homer with the existing appearance of the country.

The *Trond* has been examined by several learned travellers, including Chandler, Wood, Chevalier Clarke, Hultstrom, Gull and others. But in none of them had the chance of making a proper topographical plan of the country, and in its appearance and especially the magnitude and even number of the rivers, differs at different seasons of the year we need not be surprised at their conflicting conclusions, even had they not been exactly under the influence of some preconceived theory. The opinion of Chevalier which for a while was pretty generally accepted in, was founded on the assumption that the *Mendora*, the principal river of the *Trond*, was the *Simoda*, and that the small river to the E. of the latter the *Bor* (Nahm) or *Karhi-joo*, was the *Beamander* of Hermer. This hypothesis is now, however generally abandoned, and it is indeed surprising it should ever have obtained currency.* Inasmuch, however as it would be impracticable to make minute details intelligible within the aid of a map, we shall merely observe that Major General and Mr. Marsden have all but demonstrated that the *Mendora* is identical with the *Beamander* of the *liad*, and the suggestion of Dr. Chandler that the *Thymerium*, (now the *Dumbut* and is a river to the N. E. of the *Mendora*, with which it enters before they fall into the sea, is the *Simoda* of Hermer appears to be satisfactorily established by Mr. Marsden. It is in fact the only river in the *Trond*, occupying the *Mendora*, that in any respect corresponds with the descriptions given in the *liad* of the *Simoda* and the plain between the *Mendora* and the *Thymerium* is the only one of sufficient extent to allow of the battles described by the poet being fought.

Dr Clarke has conclusively shown (U. ILL. Soc. vol.) that the ruins at Patateh Cahal are Aztec. They are situated on a rising ground about 3 m. from the sea, and about midway between the literature and Tzuculucan. Here the learned traveller found not only the ruins but the remains of an ancient canal; and at the very moment of his visit the Turks were employed in cutting vast blocks of marble from the foundations of this edifice, which exhibited the colossal and massive style of architecture peculiar to the early ages of Greek history. The ground around was covered with fragments of broken pottery, and models have been discovered among the ruins.

In the time of Strabo, New Ilium whose position is thus clearly identified, was believed by the Ilians to occupy the identical site of the ancient city, and each had been the belief uniformly maintained by them from the earliest period - Homer says Thestor, " *Ἰλίου ἐπιφανὲα γένεα πόλιν* " (Iliad, lib. iv. cap. 15) ; Strabo, however, places the old city considerably more to the R., but we agree with Mr. Marston in rejecting this statement, and in believing that the old and new city stood upon the same site. The fact is, that a city taken by an enemy and given up to military execution, is never completely destroyed, the foundations, with portions of the walls and temples, are always sure to remain, and these with the ruins afford many facilities for the construction of a new city. There is no reason to think that the destruction of Troy was in any respect more complete than that of Thebes by Alexander the Great, and yet the latter was rebuilt in the course of 10 years. And it is further to be observed that the conqueror now named called New Ilium, in the full conviction that it represented the ancient city, terrified to himself and the names of Priam, considered impious on the Ilians, and gave orders that the walls of the town should be rebuilt, which intention was carried into effect after his death by Lysimachus. It is childish to suppose that Alexander should have done this unless he had been satisfied of the identity of the old and new city, and neither Arrian, nor any one else of his historians, so much as intimated a doubt upon the subject. It would be rash and unwarrantable to set aside such evidence on the sole authority of Demetrius of Scepsis who has, in this instance been followed by Strabo, more especially as it has been shown that the site of New Ilium corresponds harmoniously better with the Ilium of Homer than any other site on the Troad.

Perhaps it may be said, that, before undertaking to point out the situation of Troy it might have been as well to inquire whether that city ever existed, and whether any such was as that of Troy was ever carried on. (But such inquiry would be wholly misplaced in a work of this kind, and though it had been otherwise, they would be wholly superfluous. It is the more wantonness of scepticism to call in question the existence of Troy. Even if there were nothing more, the *Iliad*, which speaks

ually describe real and not fictitious events, would be dominative of the question, and when we add the un-
surpassed antiquity of the most ancient and best Greek
authors, including Hesiod, Herodotus, and Thucydides,
and the traditions universally prevalent as to the events,
we should be quite as much disposed to deny the exist-
ence of Nineveh, Babylon, or even Jerusalem, as of
Troy.

Relative of Troy, the Trund situated, at a later period, some other cities, such as Sigüenza, on the one shore, at the mouth of the Hottelupont, near the promontory of the same name, and adjoining the narrow or sound called the bouch of Arctian. It was founded posterior to the days of Troy by an Aethian colony. It had, however, ceased to exist to the time of Strabo. But the town of Alexandria Trund, on the coast about 17 m. S from Sigüenza, was by far the most important of the towns in the Trund built after the destruction of Troy. It was founded by Antigonus, one of Alexander's generals, and known, under the Romans, one of the most flourishing of their Asiatic colonies. (Strabo, lib. xiii.) It is

of course, every day, in doing so, we are not only giving the general on this various questions, but the slave, with the nation of Egypt and Florida, and the subject.

TROENDEJEM (only Devanaheri). A town and municipality of Norway and part of its own name on the Nid. whereas its old name *Nidgrann* at its mouth in the deep gulph called Troendjens Ford. 57° 50' N. 14° 30' E. Pop. in 1866, 13,200. A great deal of expense has been incurred in its fortification; but, as it is surrounded by heights beyond the Nid, which surrounds it on the S and E, it is not really strong. The fortress of Mithelm, twisting with common, stands on a small island in the Ford opposite the city, but it is, perhaps, more servicable as a prison than a military work.

Trondheim is, on the whole, well built, though its houses are almost all of wood. The streets are spacious, with water-courtesy as their interruptions, and the town has a singular air of cleanliness and comfort. The most remarkable edifice is the cathedral, built originally of stone, and founded early in the 11th century, though little of the original structure remains: this, however, is enough to show that it had been originally one of the most magnificent ecclesiastical structures in Europe (Clarke's *Travels* 2 220). Part of the architecture is Saxon, the rest Gothic, and round and pointed arches are frequently intermixed. The extreme length has been 565 ft. and its breadth 80 ft., but the W end, where was the grand entrance, had a chapel at each corner making the breadth of that front 160 ft. (*Laing*, p. 69.) Only the transept and E end of the building are now ruined in and used, the W part serves for a timber yard. There are three other churches, all plain structures; an hospital for the aged and infirm, a workhouse, a public library and museum in which are collections of books, minerals, natural history and antiquities, better than might have been expected in so remote a part of Europe; a public grammar-school, Lutheran schools a theatre, and many hospitals and charitable institutions. The palace of the military commandant though constructed wholly of wood, was, in the opinion of Clarke the first edifice of its kind in Scandinavia. There are no regular lines in Trondheim, but several good boarding-houses.

The town is governed by a corporation of twelve persons, elected from among the townsmen body, and is the seat of the superior courts for all the county N. of the Dover field. The residents of Treadwell are but indifferent, being unprepared both on the N. and W., and the bottom lands ground in W. streams. The river does not admit vessels drawing more than 10 or 12 ft. water. Dried fish, tea, sugar, and sugar from Boston, are the principal articles of export.

According to Dr. Clarke, Transjama-Gard never freezes and the cold of winter though severe, is not nearly so great as at Ruman, which lies more to the S. The surrounding country is studded with merchants' villas, and immediately beyond the town is an extensive suburb, reached by a good wooden bridge across the river.

TransDigm is now connected by a continuous exchange

* Chevrolet's Chevy has been named by *Crash*, an auto club from L. A., Inc., as the auto coming to Chevrolet's attention, and does not mention to have been one of the winners of the Chevrolet Club.

road with the Swedish capital; and in 1838 a government steam-boat commenced running between Trondhjem and Hammerfest, calling off Tromsø and other intermediate ports, from spring till Sept. English is understood and spoken by many of the inhabs. Mr. Barrow says the manners and appearance of the upper classes nearly resemble our own; and most of them are, in fact, more or less connected with mercantile houses in England, many having been educated in England, and others being accustomed to visit it once a year. (*Barrow's Excursions in the N. of Europe*, pp. 345, 346.) The lower classes generally read and write; and among the opulent many are distinguished for their literary taste. (*Clarke, Preface to Scandinavia*, x. &c.; *Laing*; *Barrow*, &c., passim.)

TROIS RIVIERES. See THREE RIVERS.

TROND (ST.), Flem. *St. Truyen*, a town of Belgium, prov. Limbourg, cap. cant., on a tributary of the Demer, 20 m. W. by S. Maestricht. Pop., in 1836, 8,490. It is supposed to owe its origin to a Benedictine abbey, founded here in 657: it was formerly fortified; but its works were dismantled in 1697. It has a considerable manufacture of fire-arms; and some trade in lace, leather, &c. A sanguinary action took place between the French and Austrians, in its vicinity, in 1793.

TROON, a sea-port town of Ayrshire, on a point of land projecting into the sea, 6 m. N. by W. Ayr, and 8 m. S.W. Kilmarnock. Pop. in 1841, 2,148. It is a neat, well-built town. The par. church is at Dundonald, about 4 m. distant; but it has a chapel-of-ease and a chapel belonging to the United Secession church. Troon Harbour, on the N. side of the promontory on which the town is built, is the most accessible of any on the Ayrshire coast, has 16 ft. water at low spring ebbs, and sufficient accommodation for a great number of ships. Its advantages had, however, been wholly neglected till it came into the possession of its present noble proprietor, the Duke of Portland, who has constructed a large dry or graving dock, not surpassed by any other in Scotland, for the building or repair of vessels of large size; a smaller do.; and is now constructing a wet dock, that will accommodate 50 sail. It is also furnished with commodious warehouses, and a harbour-light. Through the exertions of his Grace, the Troon has been united, by a railway, with Kilmarnock, by which it has been made, to some extent at least, the port of the latter. Great quantities of coal are raised in the vicinity, which, being brought to this port by the railway for shipment, are exported to the amount, in ordinary years, of about 168,000 tons. Ship-building employs from 100 to 200 hands; and rope and sail-making, and the trades connected with them, are also carried on to some extent. About 4,000 tons shipping belong to the port. Branches of the Ayr Bank, and of the Glasgow Union Bank, have been opened in the town. The Glasgow, Paisley, and Ayr Railway, passes within less than a mile of Troon, with which it is about being connected by a branch railway. (*Private Information*.)

TROPEZ (ST.), a maritime town of France, dep. Var, on a bay of the Mediterranean, 38 m. E. by N. Toulon. Pop., in 1836, 3,637. The inscriptions, medals, &c., found here, prove that it occupies the site of *Hec-raclea*, an important maritime town of antiquity. It has a citadel, and towards the sea is defended by some old walls; its port is spacious and good, but is little frequented, except by fishermen, which comprise a large proportion of its inhabs. St. Tropez is the seat of a tribunal of commerce, a council of *prud'hommes*, and a school of navigation.

TROPPAU, a town of the Austrian dominions, cap. Austrian Silesia, and of the principality and circle of its own name; on the Oppa, a tributary of the Oder, 37 m. N.E. Olmütz. Pop., in 1837, including its suburbs, 12,556. It is well situated, is walled, and entered by four gates, and is well built. Its principal edifices comprise a castle, town-hall, theatre, high school, and sundry churches. It is the seat of courts for its province, circle, and duchy, a tribunal of commerce, a gymnasium, to which a flourishing museum was attached in 1814, and considerable manufactures of woollen and linen fabrics, with others of soap, leather, liqueurs, &c. Troppau was, from 20th Oct. to 20th Nov., 1820, the place of meeting of the diplomatic congress, which afterwards removed to Laybach. (*Oesterr. Nat. Encyc.*; *Berghaus*.)

TROY, a town or city of the United States, in New York, co. Rensselaer, of which it is the cap., on the Hudson River, 7 m. N.N.E. Albany. Pop., in 1830, 11,405; in 1840, 19,334. It stands on the alluvial flat on both sides the river, but principally on the E. bank, where it is backed by some eminences dignified with the names of Mounts Ida, Olympus, &c. It is regularly laid out, most of the streets crossing each other at right angles; and well built, the houses being commonly of brick, and some of stone. The thoroughfares are, in general, about 60 ft. in breadth, macadamised, shaded with trees, and well lighted. Many of the public buildings are elegant, particularly the court-house, with a Grecian front, and the episcopal church, one of the finest specimens of

modern Gothic architecture in the United States. There are many churches for other sects, 2 large female seminaries, the Rensselaer Institute, a lyceum of natural history, academy, Lancastrian school, orphan asylum, house of industry, county prison, mechanics', national, and other halls, several banks, &c. "The city is abundantly watered by subterranean iron pipes from a basin in the neighbouring town of Lansingburg, 72 ft. above the city plain. The height and volume of water are sufficient to furnish *jets d'eau* in the city, and to throw large streams, in case of fire, through hose, without the intervention of engines. The supply of water is 1,500,000 gallons per day; the cost of the works 120,000 dollars, for which a large debt remained in 1835 on the city." (*New York Gazetteer*.) Two streams join the Hudson within the city, and afford water power for many factories. Troy had, in 1835, 8 flour and 4 cotton mills, with paper and slitting mills, nail and iron works, breweries, tanneries, and leather factories, 2 carriage factories, where were built, in one year, 150 stage coaches, &c. "The trade of Troy by land is with an extensive range of country E. and N., within which there are 67 cotton factories, using annually more than 3,500,000 lbs. of cotton; and 40 woollen factories, making up annually more than 1,000,000 lbs. of wool. The merchants and millers have, in one season, purchased more than 500,000 bushels of wheat, 150,000 bush. of other grain, and 35,000 barrels of provisions, besides large quantities of lard, butter, cheese, &c." (*New York Gaz.*) The canal trade had nearly doubled between 1829 and 1835. W. Troy is on the United Champlain and Erie canal, and at present communicates with the rest of the city by 8 steam-boat ferries; though the erection of a bridge is in contemplation. Rensselaer and Saratoga railroad crosses the Hudson at Troy by a bridge 1,600 ft. in length, resting upon 8 stone piers. Troy was first incorporated in 1796, and has now become the third city in the State, in wealth and importance. (*New York Gaz.*; *Amer. Almanac*.)

TROWBRIDGE, a market town and pa. of England, co. Wilts., hund. Melksham, on a tributary of the Avon, the Were, which is here crossed by a stone bridge, 21 m. N.W. Salisbury. Area of par. 1,960 acres. Pop. in 1831, 10,863; in 1841, 11,050. The principal street is spacious, but the others are generally narrow and inconvenient, and though some of the houses are good, the greater proportion are but indifferent. Many are, however, constructed of stone, and the town is paved, and lighted with gas. Trowbridge Church, a large and striking edifice, consists of a nave, chancel, two side aisles, with attached chapels, in the windows of which is a good deal of stained glass, and lofty N. and S. porches. The two side aisles are separated from the nave by five pointed arches, springing from clustered columns, and are externally embattled and ornamented with crocketed pinnacles; at the W. extremity is a large tower with a tapering spire. The living, a rectory, worth 600*l.* a year, is in the gift of the Duke of Rutland. Trinity Church, at the W. end of the town, erected within these few years, is a fine building, with a considerable number of free sittings. It has, also, meeting-houses for General and Particular Baptists, Presbyterians, Wesleyans, Independents, &c., (dissenters being very numerous in Trowbridge); a free school and an alms-house, and most of the different sects support Sunday-schools. The manufacture of woollen cloth was established in Trowbridge at an early period. Cassimeres, fancy kerseys, tweeds, &c., and other narrow woollens, are the principal products. In 1839, 19 woollen mills were in full work in the par., employing together 1278 hands, and there may be in the town and its immediately contiguous district about 1650 looms. (*Hand-loom and Factory Rep.*) But at present (1842) the trade is very much depressed. The Kennet and Avon canal passes about 1 m. N. of the town, placing it in communication with London on the one hand and Bristol on the other. Trowbridge is under the jurisdiction of the co. magistrates, who hold petty sessions here monthly, and a court of requests, for debts not above 5*l.*, every three weeks. Markets, Tuesdays, Thursdays, and Saturdays; fairs, Aug. 5 to 7, for cattle, pedlars, millinery, &c. Crabbe, the celebrated poet, was for 18 years rector of this par., where he died Feb. 3d, 1832.

TROYES (an. *Treca* and *Augustobona Tricassium*), a town of France, dep. Aube, of which it is the cap., on the Seine, which partly surrounds it, and is partly diverted into its interior by numerous canals, for the supply of its various factories, 92 m. E.S.E. Paris. Lat. 48° 14' 5" N., long. 3° 4' 49" E. Pop., in 1846, 24,702. It is inclosed by an old wall in pretty good condition, and has several suburbs. The town is but ill-built, most of its houses being constructed of timber; though some of its new quarters are clean and sufficiently well laid out. Before the Revolution, Troyes comprised 23 pars., but their number has since been greatly diminished. The cathedral is a fine Gothic structure, chiefly constructed on the site of a previous edifice, in the 13th century, though not finished till towards the end of the 16th. Its

TRURO.

Interior length is 274 ft.; breadth, 164 ft.; height of the vault, 96 ft., and of the cupola externally, 204 ft. There is a good deal of curious stained glass in this church, the figures representing the kings of France, counts of Champagne, bishops of Troyes, and other personages of the 13th century, in the peculiar costume of that period, and of the size of life. Some of the other churches deserve being visited. The town-hall is an edifice of the 17th century, with a handsome front, and a hall in which are the marble busts of the most distinguished natives of Troyes. The museum contains collections of mineralogy, natural history, and paintings; and the public library is said by Hugo and others to comprise 55,000 printed vols., and nearly 5,000 MSS. The hall in which these works are placed is about 160 ft. in length, and 30 ft. in width; and on its panels are paintings by Gonthier, representing the principal achievements of Henry IV. The prefecture, bishop's palace, seminary, hospital, court-house, public baths, and *abattoir* are the other most remarkable buildings. The environs are particularly beautiful. It is the seat of courts of primary jurisdiction and commerce, a chamber of commerce, council of *prud'hommes*; the residence of an inspector-general of navigation, &c. It has manufactures of cotton, hosiery, calico, woollen cloths, blankets, and cotton and woollen yarn; with bleaching establishments, for which the water of the Seine is said to be most suitable; paper-mills, &c. Troyes was formerly the cap. of Champagne; and it was here that Hen. V. of England espoused Catherine of France. In 1429, it was taken from the English by the French troops, under Joan of Arc. In the campaign of 1814, it was the head quarters of Napoleon. Among the distinguished individuals, natives of Troyes, may be specified Pope Urban IV., the sculptor Girardon, and the painter Mignard. (*Hugo, art. Aube, &c.*)

TRURO, a parl. and mun. bor. and market-town of England, co. Cornwall, hund. Powder, on the Fal, 7 m. N. by E. Falmouth, and 230 m. W.S.W. London. Pop. of parl. bor., in 1841, 9,901. This is decidedly the handsomest, and, including its suburbs, the largest town in Cornwall. It owes its increase and prosperity partly to its being in the centre of an important mining district, and a principal stannary town, and partly to its situation on a river navigable thus far at high water by vessels of 100 tons. The streets are partially paved, and lighted with gas. The town and bor. are comprised in the 3 pars. of St. Mary, Kenwyn, and St. Clement's. St. Mary's church is built of Roborough stone, which, at first sight, seems like granite, in a rich and beautiful perpendicular style. The interior has, however, been modernised; and a modern steeple has been attached to the church. (*Rickman's Goth. Architect.*) The living, a rectory worth 135*l.* a year, is in the gift of Lord Mount Edgcumbe. There are meeting-houses for Independents, Wesleyans, Baptists, Unitarians, Friends, Bryanites, and various other sects; and a grammar-school, founded in 1760, which has an income of 100*l.* a year, with two exhibitions at Exeter College, Oxford. Sir H. Davy received his early education in this school. It has also an almshouse, and several minor charities, town and coinage halls, a county infirmary, barracks, theatre, workhouse, a small gaol, a subscription library, and several societies for instruction or amusement. The exports of Truro consist chiefly of tin and copper; with some paper and carpeting made in the town. Truro is of high antiquity; and had formerly a castle built in the reign of Henry II., and some other ancient edifices; but these no longer exist. It is said to be a bor. by prescription; its earliest charter appearing to have been one granted by Reginald, Earl of Cornwall, at an uncertain date, but certainly before 1280. It is now divided into 2 wards, and is governed by a mayor, 5 other aldermen, and 18 councillors. It has a commission of the peace, a weekly court of record, and some minor courts. Corp. rev., in 1847-8, 3,658*l.* It has sent 2 mems. to the H. of C. since the 23 Edward I., the right of voting, down to the Reform Act, having been in the mayor, and 26 capital burgesses. The old parl. bor. comprised only the central part of the town, and the adjacent part of Kenwyn par.; but the Boundary Act at least doubled its former extent. Registered electors, 1849-50, 553. Markets, Wednesday and Saturday, and a cattle-market the first Wednesday in every month; fairs, four times a year, principally for cattle. Foote, the comedian, was a native of Truro, where he first saw the light 27th Jan. 1721. (*Parl. Boundary and Mun. Corp. Reports; and Appendix, &c.*)

TRUXILLO, or TRUJILLO, a town of Spain, in Estremadura, prov. Caceres, cap. dep., on the Tago, a tributary of the Tagus, and on the high road between Madrid and Lisbon, 134 m. S.W. by W. the former. Pop. about 4,500 (*Milano*.) It is divided into the city, the old town, and the citadel, which successively occupy the foot, acclivity, and summit of a hill facing the S. The city is the newest portion; it is well laid out, and has a fine square, and several handsome residences, most of the wealthy inhabitants having removed thither from the old town. In the

TUAM.

618

square is a large mansion, once belonging to the family of Pizarro, a native of Truxillo; the front of which is ornamented with bas-reliefs, representing the conquest of Peru. The old town, surrounded by a wall, is ill-built and dirty; but the castle, with a mixture of ancient and Saracenic architecture, is imposing; and the appearance of Truxillo at a distance is very prepossessing. It has the usual complement of churches and convents, with several hospitals, a college, post-house, &c., and manufactures of leather and linen fabrics. The name of this town appears to be a corruption of *Turris Julia*. It is supposed to be the *Castra Julia* of Ptolemy; and several Roman antiquities have been discovered in the town and neighbourhood. (*Milano; Mod. Trav.*, xix.)

TRUXILLO, or TRUJILLO, a town of Colombia, in Venezuela, cap. prov. of its own name, in a mountainous valley, 150 m. S.E. Maracaybo. Pop. estimated at about 8,000. It is said to have been one of the finest and most opulent cities of this part of America, previously to its being pillaged by the buccaneer Gramont, in 1678, when most of its inhab. fled to Merida. The valley in which the city is built is so narrow as to admit nowhere of more than two parallel streets, and the houses are small and mean. There are Dominican and Franciscan convents, a college, several schools, &c. The climate is healthy; the adjacent lands produce sugar, cocoa, indigo, coffee, and wheat; the mutton is larger and finer than in any other part of the prov. The inhab. make superior cheese and preserves; and are famed for cleaning and carding wool. Its trade is principally northward with Carora and Maracaybo. (*Depons in Mod. Trav.* xxvii. 219.; *Codazzi, Géog. de Venezuela*.)

TSCHERKASK (NOVI or NEW), a town of European Russia, cap. of the country of the Don-Cossacks, on a hill adjoining a tributary of the Don, 290 m. S.S.E. Voroneje; lat. 47° 24' 29" N., long. 39° 38' E. Pop., according to Schnitzler, about 14,000, but, according to Possart, only 12,000. It is wholly modern, having been founded under the auspices of Platoff in 1806: its streets are regular and broad, but some years since they were neither paved nor lighted, and most of the buildings were of wood. A triumphal arch, of hewn stone, stands at either extremity of the main thoroughfare, and there is a large square in which Platoff had begun to build a residence for himself. The town is a bishop's see; and has a new cathedral, gymnasium, circle-school, hospital, arsenal, &c. It is the seat of all the government offices for the Don-Cossack country, which were removed thither, in 1807, from Staro, or Old Tscherkask on the Don, about 10 m. S. by E., in consequence of the inundations to which the latter was subject. The new cap. is favourably placed to avoid this evil, but it labours under a great drawback in being near no navigable river. Staro-Tscherkask, which formerly had 15,000 inhab., has now dwindled into insignificance. The new town has annually four large fairs; to one of which goods to the value of upwards of 2,000,000 roubles are frequently brought. (*Possart Kaiserth. Russland; Schnitzler; Lyall, Trav. in Russia*.)

TUAM, an inland city of Ireland, prov. Connaught, co. Galway, on a small river, 15 m. E. Lough Corrib, and 105 m. W. by N. Dublin. Pop. in 1841, 6,034. This town has greatly improved, and increased in pop. during the last 20 years. Several new buildings are in progress. The principal streets diverge from the market-place, in the centre of the town; and some of them have latterly been widened and much improved. Still, however, much squalid poverty is to be found in the town and its wretched outlets. It is of considerable importance in an ecclesiastical point of view, having been till recently the seat of a Protestant, as it still is of a Catholic archbishop. But, in 1839, on the demise of the late Protestant prelate, the see was reduced from an archbishopric to a bishopric, suffragan to Armagh. The Protestant cathedral is a small plain building; but the Rom. Cath. cathedral is a splendid structure, and is, indeed, by far the finest of the modern Rom. Cath. churches in Ireland. Here, also, is the Rom. Cath. college of St. Jarlath, founded in 1814, usually attended by about 140 pupils. It has also a nunnery, a diocesan school, and other public schools, a court-house and gaol, barracks, dispensary, &c. The town comprises the palace and handsome demesne of the Protestant bishop. Tuam sent 2 mems. to the Irish H. of C. down to the Union, when it was disfranchised. General sessions are held twice a year, and petty sessions on Wednesdays: it is a constabulary station. The manufacture of coarse linens and leather is carried on to some extent; and it has a brewery and flour-mills, and a weekly newspaper. Markets on Wednesdays and Saturdays; fairs, May 10., July 4., Oct. 20., and Dec. 15. Post-office revenue in 1830, 849*l.*; in 1836, 1072*l.* Branches of the agricultural and national banks were opened in 1835 and 1836.

It is worthy of remark, that, notwithstanding Tuam has been for a lengthened period the seat of a Protestant archbishop, with a large revenue at his disposal, there were, in 1834, only 428 individuals in the par. that be-

longed to the Established Church, whereas the Catholic pop. amounted to no fewer than 14,511! The country round Tuam is flat, badly cultivated, and the peasantry poor and depressed in the extreme. (*Municipal Boundary Report, Fraser's Guide to Ireland, &c.*)

TUBINGEN, a town of S. Germany, kingd. Wirtemberg, circ. Schwartzwald on the Neckar, 17 m. S.S.W. Stuttgart. Pop., in 1850, 8,000. It is old and irregularly built: its principal edifice is the castle, formerly the stronghold of the Pfalzgraves of Tubingen, but now appropriated to the university of Wirtemberg. This university was founded in 1477; and the famous reformers, Melancthon and Rauchlin, were among its earliest professors: it has both a Rom. Catholic and a Protestant theological faculty. In 1835, it had 784 students; of whom 289 attended divinity, 82 law, 166 medicine and surgery, and 181 philosophy, &c. About 100 students were subjects of other German states. (*Journ. of Educ.*, vol. ix.) In 1846 it had 863 students. This university has an observatory, botanic garden, cabinets of mineralogy, zoology, &c., and a library. The chief support of the inhabs. of Tubingen is derived from the retail supply of this and the other public schools; but they have also a few manufactures of woollens, gunpowder, &c. (*Berghaus; Memminger, Beschreibung von Würtemb.*)

TUCUMAN, the cap. of the state of the same name, in the S. American confederacy of La Plata, in a fertile plain on a tributary of the Medinas, and on the high road between Buenos Ayres and Potosi, about 315 m. N.N.W. Cordova; lat. 26° 49' S., long. 64° 55' W. Pop. estimated at 12,000. It has a cathedral, several convents, a Jesuit's college, &c.; but the inhabs. generally, from their remote inland position, appear to have made little progress in science, or the arts of civilised life. Their principal trade is in oxen and mules. Tucuman was founded in 1685. It is memorable in history as the place at which the declaration of the Independence of the Plata provs. was first promulgated, and where their first congress was held in 1816. (*Dict. Géog.*)

TUDELA (an. *Tutela*), a city of Spain, prov. Navarre, in which it holds the second rank on the Ebro, where it is joined by the Quellos, and near the commencement of the great canal of Aragon, 50 m. N.W. Saragossa. Pop. 8,150 (*Milano*). The Ebro is here crossed by a noble bridge, of uncertain origin, 400 Spanish (or nearly as many English) yards in length, and having 17 arches. Tudela was formerly fortified, but nothing remains of its ancient walls, except the gates, or of its citadel more than one tower. Its streets are narrow, crooked, and dirty; its houses lofty, and mostly of brick: there are many private and some public fountains, and the remains, in several places, of baths, constructed by the Moors. Along the river are some shaded public walks. It has a cathedral, in which Blanche, of Castile, the queen of Peter the Cruel was buried, many other churches and convents, two hospitals, an orphan asylum, workhouse, prison, society of public good, Latin and medical schools, &c. Its inhabs. manufacture coarse woollens, hair fabrics, soap, tiles, bricks, and earthenware, and trade in oil, flour, and wine, esteemed the best in the prov. Tudela has two large annual fairs; one from 1st to 21st March, and the other from 22d July to 10th Aug. It has given birth to several distinguished characters, including, amongst others, the Jewish traveller of the 12th century, the rabbi Benjamin Ben Jonah, commonly called Benjamin of Tudela. On the 23d of Nov., 1808, a French army, under Marshal Lasnes, completely defeated, in the vicinity of this town, a greatly superior Spanish force under Castaños. The latter lost about 8,000 men, killed, wounded, and prisoners, and were completely dispersed. (*Milano; Napier's Peninsular War*, l. 406.)

TVER, a gov. of European Russia, between the 56th and 59th degs. of N. lat., and the 32d and 38th of E. long.; having N. Novgorod, E. Jaroslavl and Vladimir, S. Moscow and Smolensko, and W. Pskof. Area estimated at 26,000 sq. m. Pop. in 1846, 1,327,700. The surface of this government is generally more elevated than that of other parts of European Russia; and several large rivers, as the Wolga, Tvertza, Mologa, Mednevitza, &c., rise within its limits. In its W. part are several lakes. The Wolga has its source in the lake of Selighur, and afterwards traverses the government in nearly its whole length from W. to E. The climate is severe, and the soil is but indifferently fertile. The harvests are precarious, and scarcely ever produce more than sufficient for home consumption. A good deal of hemp and flax, with beans, &c., are grown; but few kinds of fruit succeed. The forests are extensive, particularly in the N.; and about 319,000 declatines of forest land belong to the crown. Manufactures of little consequence, but increasing: those of dyeing materials and spirituous liquors are the principal; and there are others of bricks, glass ware, ropes, leather, woollen cloths, &c. This government is, however, distinguished for its commercial activity: and the capital of its merchants has been estimated at 17 million roubles. The trade centres mostly

in Tver, the cap., and is facilitated by the Vischaj-Volotschok Canal, which establishes a water communication between the Baltic and Caspian seas. The district of the government traversed by this canal is inhabited by a tribe of Carelians, and in the cap. is a German colony; but the pop. is mostly Russian, of the Greek church. This government is divided into 12 districts; chief towns, Tver, the cap., Torshok, Rjef and Bejetsk.

TVER, a town of European Russia, cap. of the above gov., on the Wolga, here crossed by a wooden bridge 550 ft. in length, where it is joined by the Tvertza and Tmaka, and on the high road between Moscow and Petersburg; 90 m. N.W. the former; lat. 56° 51' 44" N., long. 35° 57' 36" E. Pop. in 1850, about 25,000. In respect of the regularity of its streets and buildings, Tver ranks next to the two Russian capitals; but wants their bustle and animation. It is divided by the several rivers into the town proper, suburbs, and citadel. The last, surrounded by a rampart of earth, comprises the governor's residence, an imperial palace, the cathedral, and seminary; and its numerous towers and cupolas give it, at a distance, an imposing appearance. The cathedral is a square edifice, with a lofty spire, surmounted by a gilt copper dome, and surrounded, lower down, by four similar domes. The seminary, founded in 1727, for the instruction of 700 pupils in the sciences and ancient languages, is established in a convent built in the 13th century. There are numerous churches, government buildings, barracks, inns, a theatre, &c., and several public promenades, planted with trees. Tver owes its present regularity and beauty to a fire which almost totally destroyed it in 1763; after which the Empress Catherine ordered it to be rebuilt on a uniform plan. Some houses are of stone, but the greater part are of wood; and the paving is mostly of the same material. Captain Cochrane states that an impost is levied upon every horse that passes the gates, expressly to pave the streets. (*Mod. Trav.*, xvii. 114.)

Tver is a place of considerable trade, a large part of its pop. being merchants, or engaged in the navigation of the Wolga. It is an entrepôt for corn from the S. destined for Petersburg, and for goods conveyed overland to and from Riga. It is of considerable antiquity, having been the cap. of a principality as early as the middle of the 13th century. It has frequently suffered from the plague, and been taken by both the Tartars and Poles; but it has remained, with little interruption, attached to the dom. of the Russians since 1490. (*Schnitzler; Pessari; Mod. Trav.*, &c.)

TULA, a government of European Russia, principally between the 53d and 55th degs. of N. lat., and the 36th and 39th of E. long., having N. the government of Moscow, E. that of Riazan, S. Orloff, and W. Kaluga. Length, about 130 m.; average breadth, about 85 m. Area estimated at 11,200 sq. m. Pop. in 1846, 1,327,000, this being one of the most populous of the Russian governments. It slopes generally to the N. and E., in which direction the Oka flows, forming its N.W. and N. boundary. The Don rises in this government. The surface is an undulating plain, and, though not very fertile, it produces a good deal of corn, with beans, turnips, mustard, flax, hemp, tobacco, potatoes, and other vegetables. The peasants, almost everywhere, have gardens in which they grow fruit, &c.; the climate being tolerably mild and healthy. In 1820, there were estimated to be about 300,000 head of cattle, 360,000 horses, and upwards of 1,000,000 sheep in Tula. Iron is abundant, and in the neighbourhood of the cap. iron mines extend over an area of 10 sq. m.; but the metal is of inferior quality, and iron is one of the chief imports into the government. A bad sort of coal has, also, been met with; but wood and charcoal continue to be the principal fuel used in the forges and other factories. Forests cover about 1-6th part of the surface. Dr. Lyall says that, S. of Tula, there is not so profuse a waste of timber in the construction of the peasants' houses as nearer Petersburg. Indeed, some of the houses are not built in the usual way with trunks of trees morticed together at the corners, but consist of wattled wickerwork. The dwellings, or rather the huts, of the peasants, which range along both sides of the road, are more paltry in their appearance, and more simple in their structure than those between the capitals. Indeed, they gradually become more miserable as we proceed S. till we come to regions where stone abounds. (*Trav.* l. 51-2.) Except in the capital there are hardly any manufacturing establishments other than tanneries, breweries, and distilleries, the last two being on a very extensive scale. The exports consist principally of corn, hemp, and flax, with cutlery, jewellery, hardware, &c., from Tula; the latter, with Brelef, being the chief seat of commerce. In this government is the canal of Ivanof, uniting the Oka with the Don, excavated by the Swedish prisoners in Russia early in the 18th century. Tula has been a separate government since 1796: it is divided into 12 districts; chief towns, Tula the cap., Brelef, Venef, and Odölef. Its inhabs. are nearly all Russians,

sists of several different divisions, as Mounts Ephraim, Sion, and Pleasant, and the Wells, the pump and assembly-rooms, public parades, chapel of King Charles the Martyr, &c. being in the latter. The springs, which were first discovered in the reign of James I., soon attracted the notice of the fashionable world. Henrietta Maria, queen of Charles I., paid a visit to the wells; but there being at that period no houses nearer than Tunbridge, and those not particularly suitable for such a guest, her majesty and her suite lodged in tents pitched on Bishop's Down! The wells were also visited by Catherine, queen of Charles II., Queen Anne, and other distinguished personages. The water is a chalybeate, with an excess of carbonic acid gas, very similar to that of the *Pouhon* spring at Spa in Belgium. Tunbridge Wells resembles Spa in some other particulars; as in its manufactures, toys, boxes, and turned wares being made here in great variety, and also in its being much less frequented now than formerly by the leaders of the *haut ton*. The season for taking the waters continues from May to November. There are races in August, which are tolerably well attended. The chapel at Tunbridge is situated at the junction of the three parishes of Spedhurst, Tunbridge, and Frant, and is partly in each. The air of this district is pure and salubrious, and is, perhaps, little less efficacious than the waters in removing complaints.

TUNIS (an. *Zeugitania* and *Bizacium*, the E. portion of the *Africa* of P. Mela, with part of *Gætulia*), a kingdom or regency of N. Africa, a nominal dependency of the Turkish empire, principally between the 33d and 37th degs. of N. lat., and the 9th and 11th of E. long.; having S.E. the regency of Tripoli, N.W. that of Algiers, S. and W. the desert, and N. and E. the Mediterranean. Length N. to S. about 400 m. Its area has been roughly calculated at 72,000 sq. m. The pop. has been very variously estimated; but, perhaps, it may be taken at about 2 or 2½ millions, of whom probably from 7,000 to 10,000 may be Turks, about the same number Christians, 112,000 renegades, 100,000 Jews, and the remainder Arabs, Moors, and Berbers, the Arabs being the most numerous. This territory is traversed by several branches of the chain of Atlas, one of which separates it from the *Bilud-el-Jerid*, or "country of dates." The S. part of the regency is mostly a sandy waste, and some other parts are desert; but many tracts are of the highest fertility, particularly those watered by the Mejerdah. This river, the *Bagrada* of the ancients, is formed by the union of two streams, on the W. frontier of Tunis, and runs thenceforward generally N.E., entering the Mediterranean about lat. 37° N., long. 10° E., a few m. N. of the site of Carthage. According to Shaw, it is "equal to the Isis united with the Charwell." Flowing through a rich and fertile country, it becomes highly impregnated with soil:—

"Turbidus arentes lento pede sulcat arenas
Bagrada." *Silius Ital.*, l. vi. 140.

The Mejerdah receives no large tributary, nor is there any other considerable river in the regency. In the S., about 40 m. inland, is the Sibbah, a remarkable tract 70 m. in length N.E. to S.W., portions of which formed the *Palus Lybiæ*, *P. Tritonis*, &c., of antiquity. In winter, it is covered with water to the depth of 2 or 3 ft., but at other times it is a dry plain, the surface being entirely covered with a salt incrustation. Sir G. Temple, who, in the dry season, spent seven hours in crossing the Sibbah, says that, on approaching it, "the grass and bushes become gradually scarcer; then follows a tract of sand, which, some way beyond, is in parts covered with a very thin layer of salt; this, as you advance, becomes thicker and more united; then we find it in a compact or unbroken mass or sheet, which can, however, be penetrated with a sword or other sharp instrument, and here I found it to be 11 inches in depth; and finally, in the centre, it becomes so hard, deep, and concentrated, as to baffle all attempts at breaking its surface, except with a pickaxe. The salt is considerably weaker than that of the sea, and is not adapted to preserving provisions, though its flavour is very agreeable." (li. 160—163.) About the centre of the lake are the foundations of a circular tower, where caravans halt to feed their camels; and in several parts are elevated plateaus, forming islands in the rainy season, the largest of which, covered with a luxuriant vegetation of date palms, is the *Phia* of Herodotus. The Arabs have a tradition that this lake once communicated with the sea by means of a river, but no traces of such communication appear to exist at present. There are no other inland lakes of consequence, but several considerable arms of the sea, as the Gulph of Biserta (an. *Sinus Hipponensis*), the Lake of Tunis, &c. The coasts of Tunis are greatly indented by bays, those of Tunis, Hamamet, and the Gulph of Gabes, or Lesser Syrtis, being the principal. The principal promontories and headlands are the Dakhul, a long tongue of land terminating in Cape Bon (an. *Prom. Mercurii*), the scene of several events in the 5th book of the *Æneid*; Capes Serra, Ras-el-abiad, or the white promontory (an. *P. Candidum*), Ras-Zibeeb (an. *P. Apollinis*), &c. The

shores in the N. are frequently bold, but in the S. they are low and sandy.

The *geology* of this country has been little or not at all studied; nor have its mineral resources been turned to profit for many ages. Copper and lead were among the exports of the Carthaginians; and these metals, with silver, are still to be found in the mountains: there is also a quicksilver mine near Porto Farina, but mining is altogether neglected. The *climate* appears to be less hot than might have been supposed. Sir G. Temple says, the average heat in Aug. and Sept. at Tunis is 83° Fah.; and in the year of his visit the thermometer seldom rose to 96°, and never exceeded that limit. From the 19th Dec. 1832 to the 19th Jan. 1833, it averaged 56½°; the highest range during that period being 60°, and the lowest 52°. Rainy weather commences about the end of Oct., and continues, at intervals, till May. As early as Jan. the surface is covered with fresh verdure; and, on the whole, the climate may be said to be healthy as well as pleasant. It is true that the plague is not unfrequent, and that its ravages have been supposed to be a principal cause of the depopulation that is admitted to have taken place during the last half century. But this is to be ascribed far more to the sluttishness of the inhabs., and the want of precautions, than to any thing unfavourable in the climate.

The *vegetation* is, for the most part, the same as in the adjacent regency of Algiers, and on the opposite shores of Sicily and S. Italy; the olive, pistachio, carob, with dates, melons, the lotus, &c., are common products. This region was, in antiquity, deservedly celebrated for its extraordinary fertility. It exported large quantities of corn to Rome, of which it was one of the granaries. Pliny, in speaking of the extraordinary productiveness of the soil, assures us that a plant of wheat (*triticum*), sent from it to Augustus, had little short of 400 stalks; and another, sent to Nero, had 340! In antiquity, indeed, the common opinion was, that in this favoured region the labour of the husbandman was rewarded by the enormous increase of 100-fold! Hence, says Silius Italicus:—

"—scu sunt Byzacea cordi
Rura magis, centum Cereri fructuantia culmib." *Lib. ix. lin. 204.*

And it would still seem to be endowed with the same wonderful productiveness. Sir G. Temple says, that "whilst halting in a field of young barley to feed our horses with its tempting crop, I counted on one plant 97 shoots or stalks; and this was not selected by me as being the largest, but as the nearest to where I was sitting." (*Excursions*, li. 108.) In fact, there cannot be so much as the shadow of a doubt, that were Tunis subject to an intelligent government, it would, at no distant period, furnish large quantities of corn for exportation. At present, indeed, such is the undiminished fertility of the soil, that a surplus is raised for exportation notwithstanding the oppression and extortion to which the husbandman must submit. The government assessor goes into a field while the crop is in ear, and values it according to his caprice; taking care, however, to be always above, and never below the mark. The owner is then obliged to pay a tithe on this supposed value of his future crop: though, when harvest time has arrived, he finds, perhaps, that it does not exceed 1-4th part of the sum at which it was estimated! The same is the case with olives, the principal resource of the country; and these, moreover, are not allowed to be gathered till an order to that effect has been received; and in consequence of the great delay which often takes place in sending it, the fruit frequently falls and rots on the ground, the owner not being permitted to pick it up; he is also obliged to send his olives, when they have finally been collected, to mills established by the *bey*, who derives therefrom a considerable profit. (*Temple*, l. 225, 226.) We need not, therefore, be surprised that agriculture should be almost wholly neglected and abandoned, no one venturing to cultivate more ground than is sufficient to supply his immediate wants, and to furnish the taxes to government. Wheat, barley, sorgho, maize, and millet are the grains principally raised; in the S., the date tree supplies the Arabs, not only with their principal nutriment, but also, with their fuel, and the materials for most of their domestic furniture. Cotton and indigo have been introduced into culture somewhat recently; in some parts saffron, white mulberry, opium, &c., are grown; and tobacco is pretty general. The sugar cane succeeds well, but no sugar is made. All the fruits of S. Europe, as pomegranates, oranges and lemons, figs, jujubes, &c., and the vines on the N. coast yield excellent raisins, most of which are dried for exportation; but apples and pears degenerate. Among other products of importance is hennah (*Alkermah Arabum*), so much used "as a dye for ladies' hands and horses' legs," and which is a chief article of trade at Gabes. This plant, where not annually cut, and kept low, grows to 10 or 12 ft. in height, putting out clusters of small flowers, having an odour of camphor. (*Shaw*, 114.) The dye is a bright orange, or tawny saffron.

The leaves are picked twice a year, dried and powdered, and in this state sold in all the markets of the E. The powder, formed into a paste, is applied to the part required, and then bandaged round. The plant is cut level with the ground as soon as the leaves have been picked. The banana like the date palm, requires to be frequently watered, for which purpose the plantations are divided into squares, and enclosed by banks. A stream is then admitted into them, and allowed to flow for a certain time every week, generally an hour a day and two hours during the night, each square being watered in turn. The expenses of watering are defrayed by the various companies, in proportion to their number of squares. (*Scamper, Shaw.*) This system of irrigation is noticed by Pliney (l. lib. xviii. cap. III.)

Horses, mules, camels, and even are used for hard labour and, with sheep, are the principal domestic animals. The breed of horses has deteriorated, in consequence of the government taxing for its use those that are most valuable. The cattle are small, but good, and many are sent to Malta. Some of the sheep are very fine, and all have the large fat tail which characterises the African breeds. The Morino breed is said to have been originally introduced into Spain from Barbary (*Templar*, i. 27). The lion, panther, jackal, wild boar, jordan, goat, &c., are among the wild animals. Most of our Fowlers are, no doubt, aware, that the banks of the Bagrada are celebrated in history for the stubborn resistance which an enormous serpent (120 ft in length), found on its banks, is said to have opposed to the progress of the Roman army under Regulus? (*Lan. Ept.*, lib. 2. viii. *Antes Gellius*, lib. vii. cap. 3.) But it is now generally acknowledged that many apocryphal statements have been mixed up with the history and fate of Regulus, and the *grævus grævis* *serpens* *arx* with the serpent does not certainly seem to be the most authentic part of the story. At all events, this gigantic breed of reptiles has now luckily disappeared, and Mr G. Temple says that the largest of those existing never exceed 12 ft in length. The locusts, which often visit the country in clouds, eating up "every green thing," are incomparably more destructive than the reptiles. Large quantities of fine coral are found round the coasts, which are visited in consequence by Arabian and Nubian Schooners.

Manufactures are few they comprise some silk, linen, and woollen fabrics, leather, &c., but the principal are soap and the *berrett* or red caps of Tunis, so well known throughout the Mediterranean. The principal manufactory is at Sfax. The soap is of good quality and the *berrett* especially in much estimation. Little is prepared on a speculative anticipation of a demand for exportation, but any quantity may be had by contracting for it a few months beforehand. The manufacture of shell-dips is said to have employed formerly more than 60,000 persons, and 2,000 tons of Spanish wool used. (*Moorish, to Red Tree*) A price is now third of this extent, exported in Tunis caps having been made in Marsa Jura. The dye employed for the caps chiefly, the process of dyeing is such. Sfaxwan, an inland town, the water of it brilliancy and permanency to the colours, their being dyed, the caps are boiled for glass-water. The woollen cloth made plentifully at Jorin, is thin, resembling Russian leather is made in considerable quantities, and dyed skins are articles of extensive export. Though cochineal is used in dyeing, and the prickly pear grows most luxuriantly in Tunis, no attempts have yet been made to introduce the insect into the country.

Trade.—None of the Barbary States is so well situated as Tunis for an extensive commerce, particularly with Europe. Three caravans come annually from the interior of Africa, bringing slaves, negro, ostrich feathers, gold-dust, gum, ivory, &c; and take back woollen cloths, metals, linen and silk fabrics, red leather, cyprus, fire-arms, gunpowder, &c. Other caravans come from Constantinople with virgin wool, dried skins, cattle, and sheep, which they exchange for cloth, metals, Tunisian medicines, lace, raw and manufactured silk, colonial produce, &c. &c. According to a statement by the French consul, the value of the different articles of export from Tunis may be estimated as under:—

	Proces
Costs and charges	2,103,333
Operating expenses	975,437
Depreciation	87,300
Interest	1,308,265
Other	89,133
Income	530,306
Income tax	68,817
Income before income tax	461,489
Income tax	400,330
Income after income tax	1,814,151
Income tax	87,000
Income before income tax	1,901,151
Income tax	380,200
Income after income tax	1,520,951

The imports are woollen goods, from France and England; cereals and linens, from the latter and Germany; with coffee, opium, sugar, tin, lead, and iron, cloth, wool, wine, &c. The government monopolises the trade in many articles; as tobacco, wax, wool, and provisions, which it farms out to various individuals.

The Government is in the hands of a bey, who rules with despotic power: he receives the tribute, with the dignity of a pacha of three tails, from the culums, but is not otherwise in any way dependent on Turkey. The divan is composed of 37 mems, each of whom has a vote in council, but this body has only a nominal authority. The revenues of the bey have been estimated at 20,000,000 piastres, or upwards of 1,000,000*l.* a year, though at present that derived from regular sources is supposed not to exceed one fourth part of this sum. Its principal sources are the customs, which are farmed every year to the highest bidder, the tithe upon the cultivation of olives, corn, and other products; the sale of permits for the exportation of narcotics and the importation of wines and spirits, usury taxes, the bey's domains, the sale of government offices, a poll-tax on the Jews, the traffic in slaves, and private monopolistic speculations of the bey, occasional exactions from the wealthy, and the property of those who die without heirs, of which the exchequer takes fertile possession.

to the most civilized and important nation in Barbary, though in negotiations with them, as well as the neighbouring powers of N. Africa, Sir G. Temple thinks an attitude of firmness, and not of conciliation, should be adopted, the latter being always supposed to indicate fear and weakness.

This region, which in antiquity was the centre of the Carthaginian dominions, remained in the possession of the Romans from the destruction of Carthage to the beginning of the 6th century, when the Vandals settled themselves in Africa. In 698 it became subject to the caliphs, and, after belonging to several successive dynasties, was reconquered by Barbarossa in 1234. The emperor Charles V., in 1537, took Tunis, and restored the deposed Muley Hassan, but in 1570 the country was taken anew by the Turks, and it has only regained independence by the gradual decline of their empire. (See Shaw's *Travels to Barbary*; *Trumpet's Excursions in the Mediterranean*, 3 vols., Med. Trav. 21.; *Private Information*.)

TUNIS (an Tunis), a marit. city of N Africa, cap. of the above regency on the W side of the Gulf of Tunis, being separated from it by a large salt water lake or lagoon, about 4 m W from the sea, and 3 m E. W. from the ruins of the ancient Carthage, lat $36^{\circ} 47' 50''$ N., long. $10^{\circ} 11' E.$ Its pop., which is greater, perhaps, than that of any other African city save excepted, has been estimated at from 100,000 to 180,000, of whom, perhaps, 80,000 are Jews and 2,000 Christians. It stands on the edge of the lagoon, upon rising ground, backed on the W by heights, which are crowned by the *babouk*, or citadel. The town is inclosed by a wall of earth and stone, and a second wall surrounds the 3 suburbs, the outer wall being about 5 m in circ. Towards the N it is defended by 2 castles, and other heights around it on the S and E are protected by detached forts; but notwithstanding the same laid out on its defence, it is not a well fortified or strong town, and has been repeatedly taken. The houses, though of stone, are mean and poor, and the streets narrow, unpaved, and filthy; the manners, which are superior to those of Algiers, are venal overhead, and sometimes furnished with footways. There are a great number of mosques, several of which are handsome, and one was converted into a Catholic cathedral during the Spanish occupation. The palace built by the late bey, in which Queen Caroline lodged during her visit to Tunis, is a square edifice, magnificently decorated within. The rooms are paved with marble, and all open upon marble courts, with fountains in their centre. For about 10 ft from the base the walls of the rooms are lined with glazed tiles, and above this with stucco-work peculiar to the Moors; while the ceilings are traced in different-colored patterns, with much taste. The great hall of justice has never been finished. In different parts of the city are fine

large barracks, also built by the late bey; and a very extensive edifice of the same description, fitted to accommodate 4,000 men, was, a few years since, in the course of being built. (*Temple*, l. 175.) In digging the foundations of this edifice, two sarcophagi were found, and an ancient cistern of great extent, and in good preservation. The citadel, though large, is in a ruinous state, having but one efficient battery: in it is a gunpowder factory. Tunis has many gates, one of which, called the *Bab-Kartajnah*, or Carthage-gate, has in its vicinity the Protestant burial-ground. It has also a Rom. Cath. convent, church and chapel, a Greek church, an English consulate, and a theatre at which Italian operas and comedies are performed 3 or 4 times a week. About 1½ m. W. from the city is the Barde, or summer palace of the bey. It resembles a little fortified town, with its ramparts, bastions, &c., and has a pop. of at least 4,000 persons, employed in some way or other about the court.

The Gulph of Tunis opens to the N., in the form of a horseshoe; it is 16 m. deep, and has good anchorage all over in from 4 to 10 fathoms water. The N. and N.E. gales sometimes throw in a heavy sea, which, however, seldom occasions any damage. The port is at the Goletta, or channel, passing through the narrow belt of land separating the lagoon of Tunis from the sea. There is at all times about 15 ft. water in the canal, and ships may use it on paying a fee of 3 dollars a day. It is not, however, much resorted to, all vessels of considerable burden loading and unloading from their moorings in the bay, by means of lighters. The Goletta is pretty strongly fortified, though commanded by a hill to the N. A harbour light, 40 ft. in height, was erected at the entrance to the canal in 1819. A great number of boats are employed in conveying goods and passengers across the lagoon between the port and the city.

The lagoon of Tunis was formerly, as Procopius states, a deep port, with water sufficient to float large ships. But now, from its being the receptacle of the filth conveyed to it by the common sewers of the city, and other causes, its greatest depth does not exceed 6 or 7 ft.; while round the shores it is comparatively shallow. An island in its centre, opposite the city, is defended by a fort. It does not receive any rivulet, and its loss by evaporation is supplied by a current which sets into it through the Goletta.

The average annual value of the exports from the regency of Tunis from 1830 to 1837 has been estimated at 7,527,000 piastres, and that of the imports at about 18½ millions do. Subjoined is an

ACCOUNT of the Value of the Exports and Imports of Tunis in 1837, specifying the Value of those sent to each Country:—

Countries.	Exports. Value in Piastres.	Imports. Value in Piastres.
France	2,138,071	1,842,229
Algiers and Bona	437,782	86,935
Great Britain	656,174	1,529,895
Austria	21,960	120,596
Sardinia	916,271	613,418
Tuscany	703,863	4,298,010
Turkey	1,470,980	1,161,495
Barbary States	66,850	83,145
Greece	458,060	582,470
Naples and Sicily	79,994	161,865
U. S. of America	95,419	-
Spain	-	112,550
Total	7,043,426	10,592,407
Equal to	L. 239,480	L. 360,140

But this, though it be the most considerable native trade of any city on the Barbary coast, is certainly not a tenth part of what it would amount to were the country subjected to an intelligent government, and its gigantic resources properly developed. Naval and military stores imported into Tunis pay no duty; other articles pay 3 per cent *ad valorem* on a rated tariff. Accounts are kept in piastres (worth about 1s. 1d.) of 16 carobas, or 52 aspers each. The Tunis lb. of 16 oz. = 7,773 gra.: the principal commercial weight is the cantaro of 100 lb. = 111 lb. avoird. The *cafiz*, for corn, = 14½ imp. bushels; the *matlar*, for oil, = about 5 galls. The *pic* varies from 18 to 26 in.

According to Strabo, *Tunes* existed before the foundation of Carthage. The chief events in its history are its numerous sieges and captures. Louis IX. of France died before its walls in 1270; and it was taken by the Emperor Charles V., who defeated Barbarossa under its walls, in 1535. On this occasion about 20,000 Christian slaves were freed from bondage; but, unfortunately, 20,000 Moslem inhab. of the city were, at the same time, put to the sword, despite the efforts of the emperor to prevent it, by the victorious troops, while 10,000 more were carried away, and sold as slaves. (*Robertson's Charles V.*, ii. 375. 4to ed.; *Shaw's Travels*; *Temple's ditto*; *Comen. Dict.*; and private information.)

TURCOING, or TOURCOING, a town of France, dép. du Nord, cap. two cantons, immediately adjoining

the Belgian frontier, 10 m. N.E. Lille. Pop., in 1836, 8,749. It is regularly laid out, and pretty well built: the town hall in the great square, two churches, a college, a charitable asylum, and the remains of an old feudal castle, are its most conspicuous objects. The inhab. share in the manufactures common to Lisle and Roubaix, and their condition has been noticed in the article on the latter (*anté*, p. 603—604.) "Tourcoing has fewer looms than Roubaix: the articles woven are chiefly coarse cotton goods and linens. The weavers gain 9 or 10 francs gross per week; the other working classes (adult males) get from 1½ to 2½ fr. a day. The weavers are the most moral class in the town; they attend to the education of their children, and seem contented with their condition." (*Symons in Hand-Loom Weavers' Report*.)

TURIN (Ital. *Torino*, an. *Augusta Taurinorum*), a city of N. Italy, the cap. of the Sardinian dominions, prov. of same name, in Piedmont, near the Po, where it is joined by the Dora, 80 m. W.S.W. Milan. Lat. 45° 4' 5' N.; lon. 7° 40' 15' E. Civil pop. in 1838, of the city proper, 82,469; do. with suburbs included, 104,078; and including the canton, or immediately adjacent territory and the garrison, 123,892. The city is of an oval shape, and about 4 m. in circuit: it was formerly fortified, but is now an open town, standing in a rich, well watered, and well cultivated plain: it is approached by four fine roads shaded with forest trees; the surrounding hills being covered with handsome edifices, among which the church of La Superga is pre-eminent. The impressions which Turin produces on the traveller are very much governed by the circumstance of its being the *first* or the *last* city he visits in his progress through Italy. Mr. Woods, who had already seen the best productions of architecture, states that being built on a flat, Turin makes no show at a distance; the domes and towers are neither numerous nor lofty, and on looking down on the city from the neighbouring hills, the dingy red tile roofs have a disagreeable appearance. (*Lectures of an Architect*, ii. 422.) But Forsyth, a severe as well as an excellent judge, says that Turin is admired for the regularity of its plan, the cleanness of its streets, the symmetry of its squares, the splendour of its hotels, and the general elegance of its houses; and Simond adds, "Turin forms a perfect contrast with all the cities we have been accustomed to see in Italy: it is new, fresh, and regular, instead of antique and in decay; and the buildings, all alike, are collectively magnificent if not quite so in detail, the materials being only brick coated over in imitation of stone. A profusion of running water keeps the fine wide pavement clean. All round the town, ancient trees of luxuriant growth oppose their impenetrable shade to the intolerable heat of the sun, and the views of the Alps are magnificent." (*Trav.* p. 606.) On the whole it may be truly said, that, were it not for the taste for meretricious ornament which is offensively prevalent every where in Turin, it would be one of the very finest cities of Europe. It has indeed comparatively few modern works of art, and little to interest the antiquary; and there is scarcely any thing to characterise it as an Italian city: to most travellers it has appeared rather like a new and handsome French town.

Except in the old town, which forms about one sixth part of the whole, the streets, which are bordered by houses four or five stories high, are straight and cross each other at right angles; and here, as in the new town of Edinburgh, and the N.W. and other parts of London, entire rows and streets of considerable extent are of precisely similar architecture. The royal palace stands in the centre of the town, in the *Piazza Reale* or *di Castello* a very large and elegant square, surrounded by many other public buildings, and having in its centre the former palace of the Dukes of Savoy, a castellated mansion environed by a moat. The *Strada del Po*, a noble street ½ m. in length, leads to this square from the river, which is here crossed by a fine stone bridge of five arches, erected by the French; but which is said to be surpassed by a new bridge over the Dora recently completed. The *Strada di Po*, like the *Strada Nuova* and *di Dora Grande*, the *Piazza Reale*, *S. Carlo*, &c., is embellished in its whole length with arcades over the footways, which give a most agreeable and imposing appearance to these parts of the city. The royal palace is little remarkable in its architecture, but it has some spacious and richly adorned apartments, and a good collection of paintings, including many of the Flemish school, and others by Titian, Guerino, Albani, Murillo, &c. In this edifice is the equestrian statue of Amadeus I., the figure in bronze, the horse in marble. Attached to the palace are gardens open to the public, the fashionable resort during day; the *Rondo* between the city and the Po, and Valentino grounds, being the favourite resort in the evening. The old palace of the Dukes of Savoy is a singular building with four fronts of different architecture. According to Forsyth "three of these are hideous in themselves, and derive comparative ugliness from the beauty of the fourth. This last front, composed of one Corinthian peristyle

erected on a plain basement, to the richest elevation in Turin, where it holds the post of honour" (P. 416). The private palace would attract a stranger who had just crossed the Alps as very magnificent, but there are others in Italy equally large and in a more prime taste. That of Prince Carignano has a remarkable staircase by Cassini, who, along with Lazzarini, has been the architect of some of the principal edifices in Turin.

The cathedral, a Gothic structure built about the end of the 13th century, has been preserved for the richness of its appearance, particularly the W. front, which is adorned with well executed bas-reliefs, &c. In it is the chapel of the House of Savoy, in which the effulgent altar of our Saviour is preserved with all the attention due to an important and so valuable relic. This cathedral was formerly among the wealthiest churches in Italy; but its plate has been sold, and the pews applied for the most part to similar intent, but certainly with no equal purpose as those to which it had been previously appropriated. In fact, the outside of this cathedral, so long a scene of admiration, has suffered the fate of wanting the bridge across the Po in this city, and extending that river as well as of improving the Palazzo and building the Banco di Sicilia in the French capital. (Cassini's Italy, 1. 10.)

The churches of San Filippo, San Giovanni, and many others, are richly adorned, but they all yield the palm to La Sagrada, situated on a hill about 1 m. from Turin. It was so early open that the Duke of Savoy, Victor Amadeus, and Prince Eugene met to discuss their plans for the attack of the French, and the destruction of the city in 1706, and the church was constructed by the duke as a monument of his gratitude to the God of battle for having given a signal victory to his arms. The edifice is but unworthy the origin. It is of a circular form and ornamented by a dome. Cassini says, "All the altars in this building are of marble of different colours and give the edifice an appearance unusually rich and stately. Instead of pictures, the altars are decorated with bas-reliefs; the pavement is of variegated marble. In short, all the different parts of the building and even the details of execution, even to a coat of magnificence." (Cassini's Italy, 1. 10.) It must be admitted, however, that the building has some considerable defects, which have been pointed out by Mr. Owen.

The university of Turin was founded in 1563. It consists of 5 faculties, or colleges, consisting of theology, with 4 professors, law with 10 do., medicine, with 1 do., surgery with 1 do., and the arts, with 10. It is usually attended by about 1000 students, who board out in private families. James of Savoy, first French king, his library is said by Ramond to have 60,000 and by Vaters 110,000 vols. Its buildings are extensive and well arranged; the court is surrounded with a double row of porticoes, under which is a collection of ancient sculptures, bas-reliefs, &c. from the excavated Roman city of Subura, about 14 m. distant. In the museum of the Academy of Sciences is the valuable collection of Egyptian antiquities formed by Bravetti and purchased by the King of Sardinia for 60,000 l. It comprises several natural systems of Egyptian hieroglyphs, demotic and hieratic inscriptions, 1813 and paper, the famous linen table, &c. Under the same roof are cabinets of natural history, minerals and metals, and the royal library, comprising an extensive and valuable collection of historical and other works, including an extensive series of Bibles.

The climate of Turin is a regular pentagon, planned by Nature in the 18th century. It has extensive gardens, broad galleries, and is still of considerable strength. The gates of the city, which were raised with marble were demolished by the French, and the ramparts dismantled and converted into public walks. But to use the words of Ramond, "an artless distance was once the source of an aspect delicious." The Venetian palace and the other royal mansions around the city are now either deserted or appropriated to schools and museums; there, with 9 hospitals, 1 asylum, the colleges of the Jesuits and Lazarists, an arsenal, with a school of military engineering, a grand opera house, ranking as the 1st theatre in Italy, 5 smaller theatres, the conservatory of the art-museum, botanical garden, royal academy of painting, and many a pond, comprise most part of the other establishments worth notice. Turin is the residence of the King and seat of the royal council, or superior court for the kingdom and of a tribunal of primary jurisdiction, an archbishop's see, and has schools of agriculture and mathematics. Its manufactures consist chiefly of silk, cotton and wool, but it has others of greater and more kinds, hardware, arms, paper, glass, iron-ware, &c., and its printing establishment is pretty extensive. The climate and beauty of the city are good, but the supply of water is bad, and the prevalence of fogs render it rather an unpleasant residence in winter and spring. The manners, habits, language, &c., of the inhabitants are more French than Italian.

Turin was made a military station by Julius Caesar on his invasion of Gaul. In 812 Constantine gained to its vicinity a great victory over Maximian. Charlemagne annexed this city to the empire of Rome. It came into the possession of the Duke of Savoy in 1418, and became their cap. in 1563. Ramond says, "It was taken by Francis I. in 1563, and held for 20 years by the French, who again took it in 1601. But the most celebrated by far of the sieges of Turin took place in 1706, when it was invested by a powerful French army. Voltaire has described the immense preparations made for this siege. Louis de Launay, cap. of the city, and the intrepidity and disengagement of the French generals and the talents of Prince Eugene and the Duke of Savoy, secured for the latter an easy and complete victory. All the vast stores accumulated by the French fell into the hands of the conquerors, and the besieging army was wholly dispersed. Under the French domination, from 1601 to 1706 Turin was the cap. of the dup. of the Po. Ramond, *Itinerary* 10. 10. 101. *Paraph.* *French* 1. 101. 4. *Russ's Letters from the N. of Italy*, Cassini's Italy, 1. 10. 170. &c.)

TURKEY, or the OTTOMAN EMPIRE a very extensive country, partly in E. Europe, and partly in W. Asia, comprising some of the most cultivated and richest, and naturally best provinces of the continent to which they belong. The limits of the Turkish empire are not easily defined, however, as it is usually represented as including several extensive countries, that are either nominally or virtually independent. Hungary, Wallachia, and Servia, in European Turkey, are now encompassed with the Porte only by the strongest ties, though in some of these frontiers are garrisoned by Ottoman troops, and so they continue to pay tribute to the Porte, they may still, perhaps, be properly treated within the wide range of the Turkish dominions. Egypt, however, and the other African territories that formerly belonged to the Porte, may now be considered completely disconnected, and, but for the interference of England and the other European powers, Syria and Palestine would have been annexed to the dominions of the Porte of Egypt.

European Turkey including Wallachia, Moldavia, and Servia, comprises with the exception of the new kingdom of Greece, almost the whole of the most easterly of the three great provinces of E. Europe, extending from 30 to 40 deg. N. lat. and from 10 to 30 deg. E. long. It is bounded on the N. by the Austrian empire, from which it is separated by the Alps, the Danube, and the Carpathian mountains, on the W. it is separated from the Russian prov. of Bessarabia by the Pruth; on the E. it has the Black Sea, the Bosphorus, the Sea of Marmora, and the Hellespont; on the S. Greece; and on the W., the Mediterranean, the Adriatic, and the Austrian prov. of Triestina.

Very different estimates have been formed of the extent and pop. of this vast country, and neither is known with any thing approaching to precision. Perhaps, however, we shall not be far wrong if we estimate its extent at 10,000 sq. m., and its pop. at from 14,000,000 to 15,000,000.

The Turkish dominions in Asia are of still greater extent than those in Europe, but their pop. is much less considerable. They embrace the whole peninsula of Asia Minor and the adjacent islands, the greater part of Armenia and Kurdistan, with Syria and Palestine, Mesopotamia, and a portion of Arabia. In all, they may comprise an area of about 400,000 sq. m., with a pop., probably of about 10,000,000.

Physical Geography. — Anatolia includes the mountainous of Turkey in Europe in the Alpine system. But, according to other authorities, there are several different

prevails in the mountainous provs. on the Danube and Save. S. of Taurus we enter an entirely new region, where the date palm, oriental plane, Babylonian willow, banana, pistachio, sugar-cane, and indigo, betoken a close approach to the vegetation of tropical climates. (*Geog. Journ.* x. 505-508. &c.)

The forests of European Turkey are infested by bears, wolves, jackals, &c.; to which, in parts of Asia, may be added, it is said, the lion and tiger. The gazelle, and deer of various kinds, hares, and other kinds of game, are very abundant. The great bare-necked vulture inhabits the ranges of Taurus, and the ostrich wanders over the sandy deserts of the South. The camel, a native of this region, is the chief beast of burden throughout the greater part of Asiatic Turkey. The other domestic animals will be mentioned hereafter.

Population. — We have already stated that the pop., as well as the area of the Turkish empire, is very imperfectly known. Hence there is the greatest discrepancy in the estimates which have been formed of its amount, which vary from 6 or 7 to 21 or 22 millions for Turkey in Europe, and in about the same ratio for the Asiatic provinces. Latterly, however, the Turkish government has directed some portion of its attention to statistical inquiries, and the pop., though the accounts of it be still very vague, is better known now than formerly. In as far as respects Turkey in Europe, the estimates on which most reliance may be placed are those of Mr. Urquhart (*Turkey and its Resources*, p. 272.), and of M. Boué (*Turquie d'Europe*, ii. 32.). We subjoin these estimates: —

	Pop., according to Mr. Urquhart.		Pop., according to M. Boué.
Wallachians and Moldavians -	1,500,000	Wallachia, 1839 -	2,402,027
Omanlies -	700,000	Moldavia, 1838 -	1,419,105
Greeks (Hellenic race and language, all Christians) -	1,180,000	Servians -	886,000
Albanians (Sklipetar race and language, two thirds Mohammedans) -	1,600,000	Mussulmen in Servia -	10,400
Tribes of Slavonic race and language, Bosniacs, Tulemans, Pomacs, one third Mohammedans; the rest (Servians, Bulgarians) Christians of the Greek and (Myrdites, Croatsians) of the Latin church -	6,000,000	Bosniacs -	700,000
Viachi Greek church -	600,000	Herzegovinians -	300,000
Gypsies -	200,000	Croats -	200,000
Jews -	250,000	Montenegrins -	100,000
Armenians -	100,000	Bulgarians -	4,500,000
Franks, &c. -	50,000	Albanians -	1,600,000
		Greeks -	900,000
		Zinzars (Wallachians of Pin-dus) -	300,000
		Turks -	700,000
		Armenians -	100,000
		Jews -	250,000
		Gypsies -	150,000
		Franks, &c. -	60,000
		Total -	14,577,532
		Or at most -	15,570,000
Total -	12,180,000		

The Turks or Osmanlis, who have, for about four centuries, been the dominant race, were originally of Scythian or Tartar extraction. We have already noticed their general characteristics as they are found in Asia at the present day (i. 185.). But it is of importance to observe that even there the Turkish blood has been largely intermixed with the Mongolian and the Persian; and in Europe the higher class of Turks have generally furnished their harems with the finest women of Circassia and Georgia; while the inferior Turks have allied themselves with Servians, Albanians, Bulgarians, Greeks, &c. In consequence the original and distinguishing features of the race are now, in Europe at least, very much obliterated; and the Turkish, from being one of the ugliest of Asiatic nations, is become, speaking generally, one of the handsomest; though, from the peculiar mode in which the race is maintained, there is necessarily the greatest variety in their stature and appearance.

Turkish ladies have, in general, very white delicate complexions, a consequence of their se-

dentary mode of life, and of their habit of veiling themselves when they take the air. Their mode of life, and their great addiction to the bath, render them rather disposed to *embonpoint*; but it is absurd to allege that this constitutes the *ne plus ultra* of a Mussulman's idea of beauty. Had such been the case, the Circassians and Georgians would not have constituted the pride of the harem. (*Boué*, i. 58.)

The national character and dispositions of the Turks have changed as well as their physical constitution, but in a far less degree. They are now, as of old, at once excessively proud and excessively sensual. Their pride is a consequence of their ignorance, and of the recollection of their former victories and conquests; and their sensuality is a consequence of the peculiar nature of the Mohammedan paradise, and of their wish to realise in this world some portion of that felicity which is to be the portion of all true believers in the next. Other nations have affected to believe in the doctrine of predestination, but in this respect the Turks alone have given a practical effect to their speculative tenets; and their stationary state and contempt for the inventions and discoveries of other nations may be, in no small degree, ascribed to their conviction of their inutility; from their belief that every thing that occurs is determined by an overruling Providence, against whose decisions it would be alike vain and impious to contend. Speaking generally, the Turk is true to his word; he is not prone to anger, nor liable to sudden gusts of passion; but when provoked, his fury has no limits; and he becomes brutal and ferocious in the extreme, involving the innocent and the guilty in one common ruin. His religion interdicts the use of wine; and though not always respected, this precept has, on the whole, a great and salutary influence.

Though capable, on emergencies, of great and vigorous exertion, laziness and apathy are distinguishing characteristics of the Turks. There is nothing in which they take so much delight as in reclining in the shade from sunrise to sun-set, apparently in a state of total indifference, occasionally sipping coffee, and inhaling the fumes of tobacco. Whatever may be their object, they saunter through the streets with the same measured and monotonous step. They converse little, and the presumption is that their mind is as indolent as their body.

Perhaps no nation ever possessed so little talent for governing others as the Turks. They have never struck their roots, or acquired any solid footing, in the countries they have conquered. They are encamped in and occupy them; but they hold them by no tie other than the sword. They have never coalesced or associated with the original inhabs.; they look upon themselves as the nation, and the rest of the people, or those at least who have not embraced Mohammedanism, as an inferior and degraded race, which it is, if not a duty, at all events but a venial offence, to insult and trample upon. In this respect they differ widely from the Tartars who overrun China, and, indeed, from every other people; and to this more than any thing else their weakness, and the wretched state of the countries subject to their dominion, is to be ascribed.

We have elsewhere noticed, under the names of the countries which they principally inhabit, the more important features in the constitution and character of the other great races inhabiting the Turkish empire; and to these we beg to refer the reader. (*See ARABIA, ARMENIA, BUL-*

GARIA, GREECE, SERVIA, SYRIA, WALLACHIA, &c.)

Property. — There is, in many respects, a considerable similarity between the mode in which property has been distributed in Turkey, and that in which it was distributed in Europe during the middle ages. In both cases the object in view in this distribution was the establishment and support of a militia, who should be bound to repair, at their own expense, to the standard of the sovereign, and to follow him in his campaigns. *Le gouvernement militaire est devenu la constitution fondamentale de tous les états Musulmans. Chaque individu s'y reconnoît soldat : toujours il est prêt à prendre des armes et à marcher sous l'étendard du prophète. On doit enfin considérer la nation (Turque) comme un grand corps d'armée dont le souverain est le généralissime.* (D'Osson, iv. 202.) Hence when the Turkish sovereigns made any new conquest, they were in the habit of dividing a portion of the territory into estates called, from their greater or lesser size, *zaimets* and *timariots*, which they assigned to the more deserving or most favoured of their followers. The latter, however, did not succeed to the hereditary or absolute property of these estates. On the contrary, they only held them during life or good behaviour; and whenever any vacancy occurred, whether by death or forfeiture, the sultan made a new appointment to the vacant fief; and it is affirmed that instances have been known of the same lordship having been held by eight different masters in the course of a single campaign! It is further to be observed, that the rights of the peasantry (*rayahs* or cultivators) on these estates were carefully preserved; and, in point of fact, the new feudal lord, or lord of the manor (*spahis*), was merely entitled to demand from them, in full of rent, a tithe of the produce of their land and of the increase of their stock; and in consideration of this, he was not only bound to perform military service to the sultan, but also to protect the cultivators on his estate. When the Turkish institutions were in their vigour, and the exactions of the pachas and feudal lords were restrained by the vigilance of the sultan, this state of things contrasted most favourably with the rapine and anarchy that then prevailed in the greater part of Europe. 'I have seen,' says a contemporary writer, 'multitudes of Hungarian rustics set fire to their cottages, and fly with their wives and children, their cattle and instruments of labour, to the Turkish territories, where they knew that, besides the payment of the tenths, they would be subject to no imposts or vexations.'" (*Leunclavius in Turc. Imp. Statu.*)

According to the imperial survey ordered by Solymán the Magnificent, the number of *zaimets*, or estates, estimated at 500 acres of land, and upwards, amounted to 3,192, and the number of *timars*, or estates valued at from 300 to 500 acres of land, amounted to 50,160; the whole furnishing a revenue of nearly 4,000,000 rix-dollars, appropriated to the maintenance of an army of about 150,000 men. (*Present State of Turkey*, i. 220, 231.) Olivier states that in his time it was computed that there were in the European part of the empire 914 *zaimets*, and 8,356 *timars*; the number in Asia being nearly the same, and the whole furnishing a militia of above 60,000 men.

In 1818, it would appear that there were still 914 *zaimets* in Europe, and in Asia 1,479; the annual revenue from these amounting to from 25,000 to 100,000 aspers each, which, at 100 aspers to a Turkish piastre, would give a yearly income of about 50*l.* on an average from each; but more recently the numbers of both have been still farther reduced.

Latterly, too, or since the disorganisation of the empire, all sorts of abuses have crept into the management of the estates held by the *spahis*, or feudal lords. These have been oppressed by the pachas; and they, in their turn, oppress the cultivators, increasing their demand for corvees or other services, and claiming and exacting, though illegally, a much greater portion of the produce than the tenth, to which they are legally entitled. And yet, despite their pillage of the cultivators, many *spahis* have, like the zemindars in Hindostan, been forced to abandon their estates; and indeed, in many districts, especially in Asia Minor, owing partly to the illegal exactions of the lords, but still more to the arbitrary exactions of the pachas, the cultivators have wholly deserted the lands. The truth is, that, in most parts of Turkey, power makes law; there is no real security, the rights of the people being trampled on at the pleasure of those in authority.

But it would be the greatest imaginable error to suppose that all, or that even the greater portion of the lands conquered by the Turks, were distributed in the way previously stated. The revenues of extensive tracts were appropriated to mosques, the great officers of state, the mother and mistresses of the sultan, the children of the imperial family, and the sultan himself; and after these deductions, the residue, which still amounted to a very large proportion of the whole, was left, burdened

with a tithe or land-tax of one tenth part of the produce, to the ancient proprietors. These, if Mohammedans, had the privilege of going to war; others, whether Turks or Christians, that is, Infidels, who, from choice or civil disability, devoted themselves to the arts of peace, and enjoyed their estates under the protection of the law, commuted their military service by the payment of a tribute instead.

It is commonly said that Turkey is a country in which there is no security for property; and if by this be meant that it is exposed to illegal exactions of all kinds, partly by the feudal lords, and partly and principally by the pachas and their subordinate authorities, nothing can be more correct. But it is not true, speaking generally, to allege that in Turkey private property is not recognised by law, or that it may be seized at the pleasure of the sultan. This is the case, no doubt, with the property of persons in the public service, whose lives and fortunes must answer for their real or imputed misconduct. But all other sorts of property are respected in Turkey; and even a pacha, or other public functionary, who has acquired property by the most objectionable means, may, if he please, easily place it beyond the grasp of the grand seignor. To accomplish this, he has merely to settle it on his family and direct heirs, leaving the reverendary interest in it to some mosque, which, on receiving a nominal quit-rent, takes charge of the property, which can no longer be either forfeited or affected by the crimes or misconduct of the original founder of the family or his heirs. Property so left is denominated *vacouf*. But this device, though quite effectual for the object in view, necessarily tends, in the end, to accumulate much too great a quantity of property in the hands of the church; so that in obviating one abuse it occasions another.

If the Hatti-Scherifs, or imperial decrees, issued within the last three or four years, were really carried into effect, they would effect a total and most beneficial change in the conditions under which property is held in Turkey; practically, however, we believe they will have little effect, at least for many years to come.

Agriculture. — In Turkey the cultivators do not live dispersed over the country in hamlets, or in single farm-houses, but are congregated in villages, which, owing to the depopulation of most districts, are frequently at great distances from each other. These villages present a very striking picture of primeval manners, each family providing itself with most articles required for its consumption, while their municipal affairs, or those in which the community have an interest, are conducted by their elders. The village communities in certain districts, especially of European Turkey, enjoy considerable powers; and wherever this is the case, or where a tract of country happens to belong to a powerful individual, the cultivators, speaking generally, are comparatively prosperous. This, however, is the exception, oppression and a want of security being the usual consequences of Turkish ascendancy.

Turkey is not dependent upon any foreign country for the subsistence of its inhabs.; it yields, on the contrary, corn and other produce, sufficient not only for the home demand but also for exportation. Ten times the produce might, however, be raised in these fine countries were a better policy adopted, and the inhabs. protected against vexatious exactions. The native *rayahs* or peasants, by whom cultivation is carried on, have generally little or no capital; and as the tax on the crop has generally to be paid before the produce is gathered, they are in most cases obliged to borrow the money for this purpose at a ruinous rate of interest. Agriculture is accordingly in a very backward state throughout most parts of the empire. In Thrace, Boué says, the rotation of crops is tolerably well understood; but elsewhere in European Turkey cultivation is extremely depressed. Manuring is next to unknown, and in the mountainous parts, particularly in Servia and Albania, an immense waste of timber occurs, from the forests being burnt that the ground may be fertilised by their ashes. The ploughs (except perhaps in Wallachia and a few other provs.) are of the most wretched description, being seldom shod with iron, and fit only to scratch the surface of the earth: a bunch of thorns performs the functions of a harrow; and the other farming implements, if so we may call them, are in general equally bad. Thrashing is performed, as in most eastern countries, by treading out the grain with cattle; the straw being subsequently chopped by dragging over it a sort of heavy cylinder stuck with sharp flints. But the fertility of certain portions of the empire, as Thessaly, the valley of the Maritza, &c., is so great, that, despite the low state of husbandry, the average produce of corn is said to amount to from 15 to 30 times the seed.

On the whole, the cultivation of the soil appears to be better understood in Bulgaria than anywhere else. (*Boué, La Turq. d'Europe*, iii. 2.) Some notices of the agriculture of this and the other European provs. will be found under their separate heads in this Dict.

Maize is the principal species of grain cultivated in Eu-

open Turkey, in the mountain-valleys as well as the plains, except in Bosnia, &c., where the climate is too cold. Wheat, rye, barley, oats, and buckwheat are also pretty generally cultivated; and millet is grown in the more sheltered places. Rice is grown only along the banks of the Maritza and other marshy tracts in the S. provs. The quantity of this grain produced in European Turkey being insufficient for the consumption, a portion of the required supply is imported from Egypt and Asia Minor. Great quantities of haricots, beans, cabbages, onions, melons, cucumbers, tomatoes, capicums, &c., are raised as articles of food; but the potato is eaten only in Bosnia, Croatia, Herzegovina, Montenegro, and a few places in Servia and Albania: lentils, turnips, artichokes, asparagus, beet-root, and many other vegetables common amongst us, are almost unknown in Turkey. Though not usually drunk by the Mussulmans (except those of Lower Albania), wine is grown in most provs. of Turkey in Europe, but Wallachia and Moldavia (which see), Bulgaria and Servia, are the principal wine countries.

Turkish wines are mostly red; white wine is produced only in Wallachia, W. Bulgaria, and at Semendria, and a few other places. The best wines are very high coloured and somewhat similar to those of Cahors, and of Radicopani in the Papal States. These are grown chiefly in Macedonia, in the basins of Scutari and Prizren in Albania, Mostar in Herzegovina, on the hills along the Servian Morava in Thrace, and in the vicinities of Lovdscha in Bulgaria, and Meteora in Thessaly. Certain growths in the S.W. of Macedonia, deserve particular mention. The inhabs. of those places possess, in fact, a valuable source of wealth, for there is no doubt that several of their wines might be advantageously exported. (*Bosn.* ii. 261.) The want of proper cellars for storing the wines, and their rude preparation, detract greatly from their excellence. In Thessaly and Albania they are commonly spoiled, at least in the estimation of most foreigners, by the addition or absorption from the barrels, skins, &c., of resin or turpentine. In certain cantons, however, the use of such substances is not supposed to be necessary, and the wines there are accordingly very palatable. In Bosnia the vine is replaced by the pium, and the favourite beverage there is a liqueur made from its juice, called *sifovitas*. Peaches, apples, cherries, almonds, hazel nuts, &c., are grown, but grafting, and all other horticultural operations, are either unknown or much neglected. The olive flourishes in the S. provs. only, and most of the Turkish oil is grown in Asia. Flax, hemp, sesamum, saffron, cotton, tobacco, castor oil, and madder, are among the principal remaining articles of culture. The care of the forests does not seem to occupy much attention; nothing like a forest-board exists, and in many districts, formerly well wooded, wood for fuel is becoming scarce.* Live hedges are rare; where the fields are enclosed it is either with dry wood or stone walls, and where neither material is plentiful, as in E. Thrace, the fields are entirely open.

We have already given some notices of the condition of property and cultivation in Asiatic Turkey in the arts. NATOLIA, KURDISTAN, SYRIA, &c. In Armenia, Mr. Brant says, "I had scarcely in this region approach to the state of opulence enjoyed by the inhabitants of the put. An Armenian farmer there had ten oxen, and a few cows and sheep. The land was—wheat about 375 bushels, v. year; cotton to the value of perhaps 20*l*. 3,000 lbs.; which, together with millet and other sundries, made up the value of about 1*g*. The millet, and fifty bushels of wheat, the grapes and sundry produce were consumed by the farmer and his family. The cotton sold, after the lord of the soil had taken his rent, was about sufficient to pay the tax of 10 per cent. on the whole produce to the pacha. I was not informed how much land he had in cultivation; there is no measure of land; it is estimated by the quantity of seed used in sowing, or the number of oxen necessary to plough it. They do not manure much, but allow the land to lie fallow every alternate year. Such is the general system of agriculture throughout Armenia." (*Geog. Journ.* vi. 207—208.) The vine, and mulberry, tobacco, cotton, and oil, share the chief attention of the agriculturists in Asiatic Turkey, after the production of the grain, &c., necessary for food. The culture of silk is extensively carried on in several districts, but especially round Brusa in Asia Minor, where the mulberry-tree is kept cut short, and receives a good deal of careful attention.

In consequence, however, of the oppressions practised on the cultivators, vast tracts of land in Asia Minor are wholly deserted, or occupied only by the scanty population of a few wandering tribes. No where, indeed, is

the destructive influence of Turkish misgovernment so apparent as in the present state of this celebrated country, favoured alike by situation and climate, and which, in antiquity, was the seat of many noble cities, and powerful and refined nations. Industry and civilisation have all but disappeared. "No care whatever," says Mr. Kianair, "is taken to improve the land; nor can this be a matter of surprise, when we reflect that the farmer is liable to be turned out at a moment's warning, and is certain of being taxed or plundered in exact proportion to the yearly produce of his farm. It is not, indeed, uncommon, should there be a prospect of a plentiful harvest, for the crops upon the ground to be seized by the pacha at a low valuation, and then put up to the highest bidder. This system, so destructive of industry, may be traced to the ill-judged but favourite policy of the Porte in continually changing the governors of their provinces, lest by being settled for a considerable period in their governments, they should shake off their allegiance, as many have already done. The pacha, therefore, who, during the short time he remains in

and of easy construction, and their articles of furniture so trifling as to be transported with facility on the backs of the cattle, which supply them with milk during the journey, and every where find abundance of pasture. The Greeks, called *Urooni* by their Turkish lords,

horned. Oxen are every where employed in field labour. Buffaloes are common, particularly in Bulgaria and Thrace. In Bosnia and other W. provs. some tolerably good cheeses, similar to Gruyère, are made; but the cheese of most parts of Turkey is in general too insipid to suit our taste. In making cheese, the milk of ewes and goats is partially employed, but in general only in the absence of that of the cow and buffalo. Turks abhor the hog so much, that they do not generally permit its

* *See Servia, entry Bosn.* In demonstration de ces belles forêts de chênes et de hêtres et conifères arborescents. But we incline to think that this statement is somewhat incorrect, government of late years having prohibited the cutting of timber. (*See Servia, entry* p. 272.)

sale in the towns, where they form the chief proportion of the pop.; and Boué says, "that the carcasses of hogs are only suffered to be brought to Constantinople at certain periods of the year, under an especial firman." (i. 508.) Nevertheless, they are reared in vast numbers in Servia, Bosnia, and other N. and W. provs., and, in fact, constitute the chief resource of the Servians. The Turks are good horsemen, and take pride in their horses. Little of that care is, however, bestowed on them that is common in W. Europe. They are fed only twice a-day, sometimes they are not put into stables, and are not groomed and trimmed as in Europe. The horse of European Turkey is generally of middle size, or rather below it, with a short neck, strong limbs, and a bay, chestnut, reddish brown, or white, seldom a grey colour. They are usually fed on barley; oats being used for horses only in the N.W. provs. The horses of Asiatic Turkey seem to be chiefly of Arabian descent. "The Montefik are an excellent race of horses, bred by a great tribe of that name on the banks of the Euphrates. In Armenia and Koordistan a prodigious number of fine animals might be procured at a cheap rate for the cavalry: the horses of Bagdad are large, and many of them show a great deal of blood; but those bred in the desert bordering on Damascus, are upon the whole the finest. I have heard of a poor Arab at Antioch in Syria, refusing 36,000 piastres for a mare of that breed. The only blood-horse I ever met with in Asia Minor was bred near Ooscat in the plains of Cappadocia, and may be descended from that which was so much admired by the Romans." (*Kinncir's Asia Minor*, &c., p. 508.) The ass is much used in Roumelia, S. Albania, &c. Mules are scarce in those provs., but very numerous in Montenegro, and other mountainous parts of Turkey.

There are mines of copper, argentiferous lead, iron, &c. in various parts of both European and Asiatic Turkey; and it is generally believed that several of the mountain chains, which bound or intersect the Turkish provs., contain ores, not only of the useful, but of the precious, metals. The Wallachian and Moldavian gipsies collect from the beds of the rivers pellets of gold mixed with a small quantity of silver, by means of which they are enabled to pay into the treasury the annual tribute of a drachm of gold imposed upon each man. But mining industry is not profitable in Turkey from various causes. "The ignorance of the people in the art of working the mines with economy is perhaps one cause of the neglect with which the Ottomans appear to treat this source of wealth; but the chief obstacle to exploration is the rapacity of government, which would seize upon the advantages of any new discovery, and subject the provincialists to the unrecompensed labour of opening the mines and extracting the ore." (*Thornton*, ii. 31, 32.) Asphaltum, nitre, salt in Wallachia, &c., and coal in Bulgaria, are among the mineral products of the empire, but are by no means raised to the extent that they would be under a liberal political system. Between Eski-shehr and Servihissar, in Asia Minor, the substance called *meerschauum*, so much used for German pipes, is found in large quantities. A specimen, procured by Mr. Ainsworth at this place, fresh from the mines, proves it to be a hydrated silicate of magnesia. It is a porous friable stone, almost entirely composed of small-grained vitreous or transparent felspar, decomposing and passing into a variety of porcelain earth. Great quantities of pipe-bowls are manufactured from this material, and sent to Constantinople for export into Germany, &c. (*Geog. Journ.*, x. 490, 491.; *Clarke's Trav.*, &c.)

The manufactures of Turkey are more numerous, and display greater excellence, than might have been expected in a country so backward in the arts: indeed, her success in manufacturing industry is, upon the whole, greater than that of several countries ranking higher in civilisation. Thornton, who though somewhat partial to the Turks, is, on the whole, an excellent authority, says, "I know not whether Europe can equal, but certainly it cannot surpass, the Turks in several of their manufactures. The satins and silk stuffs, the velvets of Brusa and Aleppo, the serges and camlets of Angora, the crapes and gauzes of Salonica, the printed muslins of Constantinople, the carpets of Smyrna, and the silk, linen, and cotton stuffs of Calro, Scio, Magnesia, Tokat, and Costambol, establish a favourable, but not an unfair, criterion of their general skill and industry. The workmen of Constantinople, in the opinion of Spon, excelled those of France in many of the inferior trades. They still practise all that they found practised; but, from an indolence with respect to innovation, they have not introduced or encouraged several useful or elegant arts of later invention. They call in no foreign assistance to work their mines: from their own quarries their own labour extracts the marble, and more ordinary stone which is employed in their public buildings. Their marine architecture is by no means contemptible, and their barges and smaller boats are of the most graceful construction. Their foundry of brass cannon has been much admired, and their musket and pistol barrels, and

particularly their sword blades (though the sword blades of Damascus are not so famous as formerly) are held in great estimation even by foreigners." (*Pres. State of Turkey*, i. 67, 68.) Their manufactures of Morocco and other leather, and of gold and silver lace, &c. deserve also to be mentioned with praise.

But if the Turks be more successful in the practice of some of the useful arts than is commonly supposed, they have made no progress in the fine arts, and are necessarily ignorant of the higher sciences. "Their buildings are rude incoherent copies, possessing neither the simplicity nor unity of original invention. Heavy in their proportions, they are imposing only from their bulk: the parts do not harmonise, nor are they subservient to one leading principle; the details are bad both in taste and execution; the decorations have no use, no meaning, no connection with the general design; there is nothing which indicates the conceptions of genius. The energies of the latter are chilled and repressed by the monotony of Turkish habits and the austerity of their customs. Their cities are not adorned with public monuments whose object is to enliven or to embellish. The circus, the forum, the theatre, the pyramid, the obelisk, the column, the triumphal arch, are interdicted by their prejudices. The ceremonies of religion are their only public pleasures. Their temples, their baths, their fountains, and sepulchral monuments, are the only structures on which they bestow any ornament. Taste is rarely exerted in other edifices of public utility, *Adams* and *Dezobry*, bridges and aqueducts. Sculpture in wood or in stucco, and the engraving of inscriptions on monuments or seals, are performed with neatness and admirable precision; and the ceilings and wainscoting of rooms, and the carved ornaments in the interior of Turkish houses, show dexterity and even taste. But their paintings, limited to landscape or architecture, have little merit either in design or execution; proportion is ill observed, and the rules of perspective are unknown. They reckon time by lunar revolutions, so that in the space of 33 years the Turkish months pass through every season. Their knowledge of geography does not extend beyond the frontiers of their empire. Their surgery is rude, from want of science, of skill, and of instruments." (*Ibid.*, 69—77.)

The domestic manufacture of cotton stuffs in Turkey is pretty general; and Cannabich estimated the consumption of raw cotton in the Turkish empire at 20,000 bales a year, 10,000 of which are consumed in the fabrics of Thessaly alone (*Handb. der Geog.*), the best Turkish yarn being made in this prov. Urquhart says, that in the 8. provs. the poorest family requires 20 oaks of uncleaned cotton, and 10 of wool, for its yearly consumption; and the manufacture of these materials occupies a large share of the peasant's in-door labour. Handkerchiefs, shirting, long-cloths, napkins, coarse cotton stuffs, and clothing in general, are the goods principally produced by their looms; and, according to Urquhart, 24,000,000 lbs. of cotton manufactures, worth 5,000,000*l.* are made annually in European Turkey and Greece. (p. 150.) Very little dependence can, however, be placed on these statements; and there can be no doubt that the native manufacturers, who produce goods not for domestic consumption but for sale, have been involved in the greatest distress in consequence of the importation of English and other foreign goods. The manufacture of cotton yarn has been especially interfered with, and English cotton twist is now generally used for warp in such Turkish looms as are still at work, and is an article of increasing consumption.

The commerce of Turkey owes most part of its activity to the immunities and protection enjoyed by those engaged in it; which are not extended to individuals occupied in other avocations. The cultivator of the soil is ever a helpless prey to injustice and oppression, and the manufacturer has to bear his full share of the common insecurity; he is fixed to the spot, and cannot escape the grasp of the local governor. The raw material monopolized by a bey or *ayan* may be forced upon him at more than its fair value, and perhaps its quality may be inferior; fines may be imposed on him; he may be taken for forced labour, or troops may be quartered on his workshop. (*Urquhart*, p. 139.) It was not till 1837 that a firman was issued by the sultan allowing the free exportation of wheat to foreign countries. The Turkish gov. had previously been accustomed to prevent the exportation of grain from any part of the empire till Constantinople had been first abundantly supplied. In this view, the principal corn-growing provs. were obliged to furnish to the officers of the sultan a quantity of wheat equal to about a 12th part of the produce of their harvests. This contribution was called *istira*. The *istira*gi, or collectors, on receiving the corn from the proprietor, paid him 20 paras for every kilo (about 60 lbs.). The total quantity of corn thus purchased for the supply of the capital amounted to about 1,000,000 kilos a year: this was sent by sea to Constantinople, and lodged in public granaries on the

the Turkish, or ruling portion; and the rayahs, or subjugated infidels, who exist upon sufferance, and who can never arrive at any situation of power or emolument. The character of the Mohammedan religion is, in truth, an all but insuperable obstacle to any thing like real reform. Though less intolerant than many others, it inculcates on the mind of its votaries the most exalted ideas of their own importance, and the most profound contempt for all sorts of unbelievers. There may, no doubt, be an imitation of European tactics, and an attempt to introduce something like the practices and institutions that prevail in European states; but it is impossible, so long as the religion of the prophet maintains its ascendancy, that they can have any considerable influence. Submission to their power has saved the unbelieving population of the country from death; but nothing short of their embracing the religion of the conquerors can effectually protect them from insult and contempt, and consequently, also, from extortion and tyranny.

The grand seignior is assisted in the government of the empire by a cabinet-council or *divan*, consisting of the principal ministers of the empire, and of the mufti or head of the law. Until very recently the sultans were in the habit of delegating the greater portion of their authority to the grand vizier (*vizier azem*), who became, as it were, regent of the empire, being at the head of the civil government, and generalissimo of the military and naval forces. But of late years the powers of this high functionary have been very much curtailed. Indeed, the place was wholly abolished by the late, though it has been revived by the present, emperor. The functions of the other ministers correspond with those of minister for foreign affairs (*reis effendi*), of the interior, commerce, and finance (*teflerdar*), and of a commander in chief (*seraskier*), a grand admiral, &c. The court of Constantinople is generally known in other European countries by the title of the *Sublime Porte*, a designation derived from the *Bab Humayon*, or principal outer gate of the seraglio, whence the hatt-i scheriffs, or imperial edicts, are usually issued.

The *sheik-ul-islam* (mufti), or head of the clergy and chief interpreter of the Koran and the canonical laws, is a very important functionary. He nominates to all the principal offices in church and law; and takes precedence of every other subject in the empire, even of the grand vizier. On most great occasions the sultan applies to the sheik-ul-islam for a *fetva*, or legal opinion, to ascertain whether his intended course of action be in accordance with the Koran. But this is not indispensable, and has very rarely been refused. Latterly, too, the opinions of the mufti have become of less importance.

The mufti is always chosen from the *ulema*, a body comprising the clergy with the interpreters and administrators of the law. But, though they all study together, the lawyers and judges are quite distinct from the clergy; it being left to every young man brought up in one of the colleges of the order to determine for himself, when he has attained a proper age and acquired a sufficient stock of learning, whether he will become a priest, or a doctor of law, or a judge: but it is to the latter, or the lawyers, that the title of *ulema* is more peculiarly appropriated.

Throughout Turkey, the ministers of religion are all subordinate to the civil authorities, who exercise over them the powers of diocesan. Magistrates may supersede and remove clergymen who misconduct themselves, or who are unequal to the proper discharge of the duties of their office. The magistrates themselves may also, whenever they judge proper, perform all the sacerdotal functions; and it is in virtue of this prerogative, joined to the influence which they derive from their judicial power and their riches, that they have so marked a pre-eminence, and so preponderant an authority, over the ministers of public worship. (*Thornton*, i. 126.)

The members of the *ulema* constitute a sort of aristocracy. They pay no taxes or public imposts, and, by a peculiar privilege, their property is hereditary in their families, and is not liable to arbitrary confiscations. Their persons are sacred; their blood may on no account be shed; nor can they be legally punished in any way but by imprisonment and exile. It is to be observed, however, that the power and dignity of the *ulemas* are not hereditary in individuals, but in the order. Formerly they held their offices for life; but about the end of the 17th century they were made removable at pleasure, like all other public functionaries. They now are appointed only for a year. Each individual, however, enjoys all the privileges of the order, independently of his holding any office, or exercising any public employment. There have been instances of muftis declining to obey the commands of the grand seignior, and of their remonstrating with him on the impropriety or illegality of his conduct; though, as the sultan makes the mufti, and can depose and exile him at pleasure, such conduct must necessarily be very rare, except when some formidable conspiracy is on foot, and when the powers of the sultan are consequently circum-

scribed. In the reign of Mustapha, the people put to death the mufti for having, as they alleged, misled the sultan. Cantemir says, that Murad IV. commanded a mufti to be pounded in a marble mortar, saying, that heads, whose dignity exempts them from the sword, ought to be struck with the pestle! but the fact is doubtful. (*Thornton*, i. 130.) Speaking generally, the influence of the mufti and *ulema* is uniformly opposed to all measures of reform; at least, to such as might be supposed to militate in any way against the peculiar doctrines and regulations enforced by the Koran.

Besides the *ulema*, there is a privileged order, limited to the descendants of Mohammed by his daughter Fatima. These are called *owras*, or *ameers*, have *ayans* prefixed to their names, and are authorised to wear green turbans. Inasmuch, however, as they are very numerous, *owras*, like brahmins in India, are found in even the most abject ranks of life.

The government of the provinces is extremely rude, and is practically, indeed, little else than a tissue of abuses. European Turkey was formerly divided into the two great governments, or *jalets*, of Roumelia and Bosnia; the former of which was subdivided into 16 sanjacks, or great governments, or pachaliks, and the latter into 7, besides some inferior governments. The power of the pachas within their respective districts is, in many respects, unlimited. They have under them *mussekims*, or sub-pachas, to whom they delegate a portion of their authority, and who watch over a certain extent of territory. Every pacha, or governor, is supposed to represent the sovereign within the limits of his own jurisdiction, is invested with his authority, and exercises his prerogatives in all their plenitude. Nominally, however, contentious jurisdiction, or the determining differences between subjects, is left to the *cadi*, or judge, in conformity with the principles of musliman government and the practice of the sultan.

Formerly the pachaliks (or rather *beylerbeylik*s, for such was the name given to the larger governments) were much more extensive than at present; and it not unfrequently happened that a pacha, at the head of a large government, having succeeded in getting his creatures made pachas of the surrounding governments, acquired such a degree of power as to be able to cast off his allegiance, and defy the sultan. Latterly, however, it has been the policy of the government to diminish the sanjacks, and so to lessen the danger of insurrection on the part of the pachas. The latter are appointed only for a single year; and the limits of the different pachaliks are being constantly changed. (*Bowd*, iii. 181, &c.)

All muslimen, how humble soever their origin, are eligible to, and may fill, the highest offices in the state. In Turkey, birth confers no privilege, all true believers being equal in the eye of the law. But this sound principle is rendered of little or no value, or rather positively injurious, by every thing being made to depend on the pleasure of the sultan. With the exception, indeed, of the law and the church, no previous study or preparation, nothing, in short, but the favour of the prince, which is most frequently obtained by the most unworthy acts, is required to elevate individuals from the very lowest to the very highest stations! And hence it is, that though individuals be sometimes found in Turkey admirably adapted for the situations they fill, these are very rare exceptions, incapacity and unfitness for their duties being the distinguishing characteristics of Turkish functionaries.

Till this vicious system be wholly abandoned, and individuals be appointed to important situations from other motives than the mere caprice of the sultan, it is nugatory to suppose there can be any substantial improvement. In this respect, however, little or no progress has hitherto been made. When Marshal Marmont visited Constantinople, towards the close of the late sultan's reign, who had been called, and not without reason, the Turkish reformer, a black eunuch was a general of brigade; and Achmet Pacha, who was then a general of cavalry, had been bred a shoemaker, and practised at a more recent period as a waterman in the harbour! And a short while subsequent to this the same Achmet Pacha was made *capitan pacha*, or high admiral of the fleet, of the duties of which station, it is hardly necessary to add, he knew no more than he did of the Principia of Newton. This, we apprehend, may be taken as a pretty fair specimen of Turkish reform. Marshal Marmont, who is a most intelligent and unexceptionable judge, says, that *aujourd'hui, comme autrefois, le faveur et le caprice du maître sont les seuls titres pour occuper les emplois les plus importants. Les prétendus progrès en civilisation du gouvernement Turc n'ont pas encore consacré le principe qu'il faut apprendre ce que l'on veut savoir.* (ii. 58., 12mo. ed.)

But if the rapid advancement of individuals from the lowest to the highest stations be so common in Turkey as hardly to excite attention, the sudden downfall and total ruin of the most exalted functionaries is no less common. In fact, a man who takes office in Turkey loses

From that moment all feeling of security, and tacitly admits the right of the sultan to deprive him at pleasure of his office, his property, and his life. "All the officers of government owe," to use the words of Mr. Thornton, "their appointment to the sole favour of the sultan, without respect to birth, talent, services, or experience. They are deposed and punished without the liberty of complaint or remonstrance; and at their death the sultan inherits their property." (i. 162.)

Formerly the government of pachaliks and other important situations, if not bestowed by the sultan on some of his favourites, were regularly sold to the highest bidders, the leases being renewed annually, provided the pacha or other functionary remitted to Constantinople a sufficient *douceur*, or, if not, he was superseded by some less parsimonious competitor. And, when in office, the only criterion of an approved administrator was the magnitude of his *douceurs*, and the amount of tribute he remitted to the public treasury, no inquiry being ever made into the means by which this revenue was raised.—*Quocumque modo rem* was the brief and comprehensive maxim by which their conduct was regulated. "To rob those below him that he may bribe those above him, is the constant aim and sole object of each petty tyrant, through all the gradations of this baleful despotism." (*Modern Trav., Turkey*, p. 94.) The legitimate revenues of the pachas arise from the rents or produce of lands assigned for their maintenance, and from certain fixed imposts on the cities, towns, and villages of their pachalik. These, however, are in most instances the smallest portion of the revenue of the pachas. The far greater portion consists of illegal demands of all kinds, which the people have no means of resisting. M. Beaujour states that, during the time he resided in Salonica, the pacha enjoyed a revenue of about 140,000 piastres, derived from the rent of land, casualties, and other legitimate sources; and that, in addition to this, he made about 100,000 piastres more by *awans*, or extortions! And yet this pacha was regarded as a man of singular justice and humanity! (*Tableau du Commerce de la Grèce*, l. 47.) Judge, then, what must be the state of a province governed by a covetous and rapacious pacha, which is the general character of these functionaries.

The flagrant abuses consequent on such a system have brought the Turkish empire to its present state of weakness and degradation; and the necessity of making some very decided changes in the administration has been long obvious. In consequence, a *hatti scheriff*, or imperial decree, was issued 3d Nov. 1839 (see *post*), which, if it could be *bona fide* carried into effect, would go far to suppress most part of the existing abuses, and to introduce security and good order. But, unfortunately, the age of miracles is past, and nothing short of a miracle would suffice for the regeneration of the Turkish empire. Some of the grosser abuses may be suppressed; but, speaking generally, they are too deeply seated, too much interwoven with the religion of the country and the constitution of society, to allow any one to suppose that they can be extirpated otherwise than by the agency of some tremendous revolution, that should overthrow every thing that now exists. There is neither public virtue nor knowledge in Turkey sufficient to accomplish any considerable reforms. Corruption and venality are every where the order of the day; and M. Boué, who has very recently been in Turkey, and is well acquainted with the people and their institutions, affirms that now, as heretofore, the important places of pachas and cadis are sold to the highest bidder, *sans, pour ainsi dire, des enchères au plus offrant!* (iii. 224.) And he farther affirms, that the most trifling as well as the most important affairs are all settled by the intervention of *douceurs*! A sovereign, with the absolute power, sagacity, and sternness of purpose of Peter the Great, might, perhaps, effect a substantial reform of the Turkish government; but to suppose that such a sovereign should be bred in the slothful luxury of the seraglio, is a contradiction and an absurdity.

In addition to the various sources of weakness and decay originating in vicious institutions and a bad system of government, may be added the imperfect subjugation of the countries comprised within the limits of the empire. The inhabs. of several districts, both of European and of Asiatic Turkey, enjoy, some almost a total and others a sort of semi-independence; forming so many asylums to which discontented and rebellious subjects from the adjoining provinces may retreat and form new schemes, and holding out the seductive and dangerous example of successful resistance. Exclusive of Servia, which is now only nominally under the Porte, there are numerous districts in Albania and Thessaly that are all but independent. Of these, the most important is the country called Myrdita, or the mountainous country occupied by the Myrdites on both sides the Drin. They can bring 10,000 men into the field, pay no taxes, and do not even allow a single Turk to remain within their boundaries! In many parts of Epirus there

are similar independent communities. The extensive district of Montenegro, under the government of a bishop, is also substantially independent; as are several districts in other parts of the country. In Asiatic Turkey the Druses, Maronites, &c., in Syria, have succeeded in maintaining their independence; and many of the Turkman and other tribes found in Asia Minor are only nominally dependent on the Porte. (*Boud.* iii. 192–209., &c.) With such elements of disorder scattered over the whole face of the country, the only wonder is that anarchy and insubordination are not more widely diffused than we find them to be.

Mr. Urquhart devotes a large portion (caps. ii. iii. and iv.) of his work on Turkey to a description of its municipal establishments, of which he greatly overrates the importance. No doubt, however, they are the best part of the Turkish institutions. They form, as it were, so many little republics. Their authorities or elders, which are freely chosen by the inhabs., assess and collect the poll, house, and land taxes; manage the municipal funds, arbitrate in petty matters, &c. These communities are modelled upon a plan similar in almost all respects to the village system of Hindostan.

Justice.—The Ottoman empire is governed by a code of laws called *mulleka*, founded on the precepts of the Koran, the oral laws of Mohammed, his traditions, usages, and opinions, together with the sentences and decisions of the early caliphs, and the doctors of the first ages of Islamism. This code comprises a collection of laws relating to religious, civil, criminal, political, and military affairs; all equally respected as being theocratical, canonical, and immutable, though obligatory in different degrees, according to the authority which accompanies each precept. In some instances it imposes a duty of eternal obligation, as being a transcript of the Divine will revealed to the prophet: in others it invites to an imitation of the prophet in his life and conduct. And though to alight the example be blamable, it does not entail upon the delinquent the imputation or penalty of guilt; while the decisions of doctors on questions that have arisen since the death of the prophet are of still inferior authority. When a matter occurs that has not been foreseen or provided for by the early promulgators of the law, the Sultan pronounces a decision; and his authority is absolute in all matters that do not interfere with the doctrines or practical duties of religion. The code *mulleka* is, however, alone considered as paramount law: the decisions or decrees of the Sultan (*hatti scheriff*), of which a compilation was made by Solyman the Magnificent, under the name of *canon nameh*, are considered as emanations from human authority, and, as such, are susceptible of modification, or even abolition, remaining in force only during the pleasure of the Sultan or his successors. (*Thornton*, i. 107. &c.) The *adet* or provincial customs are also allowed considerable influence.

In all the districts and towns of the empire, justice is administered by judges (*cadis*), who are of five different ranks, according to the importance of the place in which they are established, each *cadi* being assisted by a deputy, or *nasib*. Nothing can be more simple and expeditious than the forms of proceeding in Turkish courts. Each party represents his case, unassisted by counsellors, advocates, or pleaders of any kind, and supports his statement by the production of evidence. The deposition of two competent witnesses is admitted as complete legal proof, in all cases whatever.

The promptitude of Turkish justice has been often praised: but though dilatoriness be, in this respect, highly blamable, we apprehend that it is a far less evil than the other extreme. In Turkey no ordinary legal authority can detain an untried man in prison more than 3 days; and in criminal cases the execution of sentences follows close upon the decision of the judge: but neither of these regulations appears to be advantageous; for, in the one case, sufficient time is not allowed to prepare either a defence or an accusation; and in the other, the immediate execution of the sentence prevents the power of appeal to a superior tribunal, and consequently takes away the only means of getting an unjust decision reversed, and, what is of more consequence, an unjust or ignorant judge exposed and degraded. In the greater number of civil cases appeals may be made from the *nasib* to the *cadi*, from the latter to the *cadi-asker*, or judge of the prov., and hence to the sultan. The latter, however, is rarely practised; and is effected only by presenting a petition for redress to his highness on his way to the mosque. Bastinado, fine, imprisonment, the galleys, and capital punishment, by hanging, drowning, beheading, or strangling, are the principal means of disposing of criminals. Death is sometimes awarded for what we should consider comparatively venial crimes, as, for instance, unfair dealing on the part of tradesmen; though a butcher or baker convicted of short weight is more frequently nailed by the ear to the door of his shop.

Speaking generally, the administration of justice is in the most disgraceful state in Turkey. According to law, all the judgments of the pachas and of their deputies

should be submitted to the cadi, and can only be legally carried into effect when approved by the latter. But, in practice, this salutary regulation is generally disregarded, and in most cases the sentences of the pacha are executed whether they be approved by the cadi or not. (*Bosé*, iii. 351.) But the grand vice of Turkish justice consists in the venality of the judges and the toleration of perjury. "The monarch's despotism is not the greatest evil in Turkey: his subjects would, perhaps, bear that without much murmuring or great distress. The radical destruction of all security lies in the iniquitous administration of their laws, which are an impending sword in the hand of corruption, ever ready to cut off their lives and properties." (*Porter*, ii. 1.) Mr. Thornton seems to think that Turks have rarely to complain of injustice, and that, speaking generally, the decisions of the judges, in cases where both parties are Mussulmen, are fair and impartial. We are assured, however, by those well acquainted with the fact, that this statement must be received with great modification, and that a rich or powerful Turk has, in most instances, little or no difficulty in obtaining a decision in his favour, however unjust his cause; and that as respects Christians and Jews, they have no chance in a litigation with a Turk, unless they succeed beforehand in securing the good offices of the judge. It is a principle of Turkish law that written testimony is of no avail when opposed to living witnesses; and hence every precaution should be taken to render the latter trustworthy. But, instead of this, the most detestable perjurers enjoy an all but total impunity, and carry on a lucrative as well as an infamous profession. False swearing is punished by leading the culprit through the streets seated on an ass, with his face turned to the animal's tail; and even this punishment, trifling as it is when imposed on such wretches, is rarely enforced. Magistrates are compelled to decide according to the evidence of notorious perjurers, unless they detect their falsehood at the moment. The subjects of foreign powers residing in Turkey are allowed, in virtue of treaties to that effect, to support their claims by written evidence. (*Thornton*, i. 196., &c.)

M. Boué, whose remarks on the administration of justice are as superficial as can well be imagined, is good enough to inform his readers that *si on ne pouvait pas citer de faux témoins, des témoins subornés à prix d'argent, et même des juges qui se laissent gagner, la justice Turque mériterait tout aussi bien ce nom que la nôtre!* (iii. 355.) True, and on the same principle we might say that if A. were not a thief, he would be as honest as B.

There is a considerable discrepancy in the accounts of the state of the police in Turkey, though most recent travellers say that it is extremely defective. No doubt, however, considering the abuses inherent in every department of the administration, it is superior to what might have been expected. This is mainly ascribable to the regulation which makes every district of the country responsible for all the murders, robberies, and other crimes of violence committed within its bounds; and which consequently makes their repression the business of all the more respectable inhabitants.

Owing to the jealousy of the Turks of the invasion of their privacy, no writ of search can at any time be executed in the interior of the house of a Turk but in the presence of the imam; nor in that of a Christian, except accompanied by a priest, nor of a Jew unless a rabbi be present. The rooms occupied by the women, which are never entered, frequently shelter criminals.

Army.—The Turkish land forces may comprise, exclusive of artillery, about 100,000 infantry, of whom about 70,000 are regulars (*niizam*), and about 100,000 cavalry, of which by far the largest proportion formerly consisted of irregular troops, partly and principally furnished by the spahis, and other holders of estates, on condition of military service; but of late years the number of this description of troops has been greatly reduced. Previously to 1826, the janizaries formed the nucleus and main strength of the Turkish armies; and, though now destroyed, a short notice of that once famous militia, long the terror and scourge of Christendom, may not be unacceptable.

The most probable opinion seems to be that the janizaries were originally established by Amurath I., in 1362, and consisted at first of about 12,000 Christian captives, who were renewed by incorporating with them a fifth part of the prisoners of war. "But when the royal fifth of the captives was diminished by conquest, an inhuman tax of the fifth child, or of every fifth year, was rigorously levied on the Christian families. At the age of 12 or 14 years, the most robust youths were torn from their parents; their names were enrolled in a book; and from that moment they were clothed, taught, and maintained for the public service. According to the promise of their appearance, they were selected for the royal schools of Brusa, Pera, and Adrianople, entrusted to the care of the pachas, or dispersed in the houses of the Anatolian peasantry. It was the first care of their masters to instruct them in the Turkish lan-

guage: their bodies were exercised by every labour that could fortify their strength; they learned to wrestle, to leap, to run, to shoot with the bow, and afterwards with the musket; till they were drafted into the chambers and companies of the janizaries, and severely trained in the military or monastic discipline of that order. The youths most conspicuous for birth, talents, and beauty, were admitted into the inferior class of the *agismoglians*, or the more liberal rank of *ichogians*, of whom the former were attached to the palace, and the latter to the person of the prince." (*Gibbon*, chap. 65.)

It is needless to add that the janizaries were taught to believe implicitly in the doctrines of Mohammedanism; and, having no relations or family ties to bind them to society, they regarded themselves not merely as the soldiers, but as the children, of the sultan. They enjoyed, partly by the voluntary and partly by the forced concessions of their sovereigns, several valuable privileges and immunities. They formed the body guard of the sultan; they were stationed in the capital, and paid, not like the rest of the army, by assignments of land, but in money; and their captain was one of the most important officers in the public service.

But though formidable at first only to the enemies of the country, they gradually became hardly less formidable to their sovereigns. According as the severe discipline by which the Turkish armies had been originally distinguished was relaxed, and the sceptre fell into feeble hands, the janizaries became unruly, insolent, and overbearing. On various occasions they insulted the majesty of the throne, and, in 1623, they even proceeded to depose Osman II. Hence it had long been a favourite object with the sultans to endeavour to weaken the force and influence of the janizaries. But their efforts in this view had, until very recently, but little success. Selim III. having endeavoured to countervail the influence of the janizaries, by creating a regular army (*niizam*), the former mutinied, and Selim lost his life in the commotions that ensued. But his successor, the late sultan, was more fortunate in his struggle with this unruly soldiery. In 1826 he issued a *hatti scheriff*, directing that the janizaries should be incorporated with the regular troops. The janizaries refused to obey this order; but the sultan having previously secured the co-operation of the mufti and of their agha, they were completely defeated; and such of them as escaped the conflict in which they were involved*, were deprived of their former insignia, and distributed among the new regiments of the line, so that there is now hardly a trace to be found of this once powerful force.

Previously to and since the destruction of the janizaries, it has been a favourite object with the last and present sultans to organise and discipline their troops after the European fashion. But it does not appear that hitherto their efforts have been attended with much success; and it seems doubtful whether the troops have gained as much by the change in their discipline and tactics, as they have certainly lost in the decline of their enthusiasm and sense of nationality. They are now fully aware that they have become the pupils and copyists of those very infidels they were so long accustomed to hold in contempt; and that circumstance has made them lose that confidence in themselves, for the want of which it is very difficult, if not impossible, to compensate.

The regular troops are raised by a conscription among the Turkish part of the pop. Inasmuch, however, as little or no attention is paid to the number of children in a family, or even to the health, size, or age of the conscripts, the conscription is found to be an intolerable hardship; and the recruits produced by it are of the most motley kind, youths of 15 and 17 being intermixed with men of 40, 50, and 60 years of age! The mortality among the conscripts is very heavy. According, however, to the *hatti scheriff* of 1839 (see *post*), the defects in the present recruiting system are to be obviated; and the period of service is to be reduced to four or five years.

The uniform of the regular troops is blue, faced with red. The household troops, or body guard of the sultan, comprises the *élite* of the army: their pay and appointments are better than those of the other troops. Marshal Marmont, whose intelligence and experience entitle his opinion on military matters to the greatest weight, makes the following statements with respect to the state of the Turkish troops:—

"The lot of the Turkish soldiers is a very happy one. They are better fed than any other troops in Europe, having an abundance of provisions of excellent quality, and partaking of meat once, and of soup twice a day. Their magazines are filled with stores, and the regiments have large reserves. The pay of each soldier is 30 piastres."

* The number of janizaries who fell in this conflict, or massacre, as it has been called, has been grossly exaggerated. Marshal Marmont says that not more than 500 lost their lives in Constantinople in the conflict, and in the punishments by which it was followed. A few were killed in other parts of the empire.

tres per month*; the whole of which he receives, as there is a prohibition against withholding from him any part of that sum. In short, every thing has been effected that could promote the welfare of the soldier.

"If no fault can be found on the score of the *matériel*, much is to be said against the *personnel* of this force. On the arrival of Achmet Pacha, we repaired to the exercising ground. Four battalions were in line; and, after inspecting them, they manœuvred before me. Nothing could be worse than this exhibition; indeed, these men ought not to be looked upon as troops, but merely as a mass of people, bearing the stamp of misery and humiliation; and they are evidently depressed by a knowledge of their own weakness. They all seem to have a willingness about them, but feel ashamed of their occupation; and, from the private to the colonel, not an individual amongst them has any conception of his duty. Moreover, the men are diminutive in stature, and wretched in appearance: many of them are too young for service; and we are led to inquire what is become of that noble Turkish people, the lofty, proud, majestic, handsome race of former days; for now we find no trace of them in the existing troops.

"I have endeavoured to discover why they have not hitherto succeeded better with the new system, and I thus account for the failure. The sultan was desirous of organising troops according to the European mode; and his ambition was to form an army on the instant. He accordingly raised at once a great number of regiments; but the instructors, being generally individuals of an inferior station of life, without capacity or talent, who had been led to Constantinople by the circumstances which attend revolutions, were unfitted to accomplish the object in view.

"The new organisation commenced simultaneously in all the corps; and the same description of persons were universally employed in endeavouring to carry it into effect. In none of the grades had any man confidence either in himself or in others; and no one, therefore, had a right to the command, which should always be derived from some superior claim. It is only as a consequence of such a principle that men are ever found disposed to yield obedience. In the troops of all the other powers of Europe, there are two admitted titles to precedence—birth and merit. The former has its basis on a higher social grade, which, by giving opportunities for better education, leads to the expansion of the mind; the latter, on the experience and information resulting from previous service. In Turkey there are no gradations in the social order, and the son of the water-carrier is on a par with the vizier's child, having often the same education. Hence, there is no admitted superiority in those invested with power; and the previous equality indisposes others to obey authority obtained through mere caprice.

"As to the right derived from merit or experience, there can be none where all are novices.

"Such were the radical defects that prevailed in the formation of the Turkish army. The remedy would be to reduce things to their elements; and to re-commence, by establishing in public opinion a respect for talent and capacity, in order to obtain that obedience and confidence in superiors, without which an army cannot exist: for it is such confidence that produces discipline and order, and creates the moral power requisite to give unity, compactness, and energy to the whole.

"If, instead of attempting to raise an army, as it were, by a mere decree, the sultan had been content with forming a single battalion, and had obtained the services of 30 or 40 really good officers, and a chief capable of comprehending the importance of his duties, it is probable that, in two years, he would have succeeded in producing a battalion to serve as a model for the rest; and, this result once obtained, the sultan would have possessed the elements required. At the end of six months, or, at the utmost, of one year, by adding to the numbers of those first enrolled, and dividing the whole into two battalions, he might have formed a complete regiment; for the men of the first levy would, in the eyes of the recruits, have appeared as old and instructed soldiers. It is obvious that in ten years he would then have obtained an army. Whereas, according to the system followed, such a result is improbable, for an union of men like the present cannot be said to merit this title." (*Translation by Smith, p. 61., &c.*)

If the opinions of so eminent a judge as Marshal Marmont of the bad quality of the Turkish troops required any confirmation, it would be found in the history of their campaigns with the Egyptians. How superior soever in point of numbers, they never were able to make any head against the latter, till supported by European troops. The irregular troops consist principally of Kurds and Albanians, who, when properly commanded, make excellent troops.

The same corruption that infects the other depart-

* Strictly speaking, this is the pay of the guards only; the others receive 15 piastres per month. (*Bowd, iii. 330.*)

ments of the Ottoman government, extends to that of the army. The pachas, commanders of regiments, and other functionaries, contrive to make large sums by keeping on their books a greater number of troops than they really have, and putting the pay and other emoluments drawn on their account into their pockets. At inspections, the place of the deficient troops is supplied by substitutes hired for the occasion, who disperse as soon as the inspecting officers have retired! (*Bowd, iii. 332.*)

The attempt to reform the Turkish army would really, therefore, appear to have been one of the most abortive that has ever been made. The nationality, fanaticism, and confidence of the troops in themselves has been destroyed, and nothing but a miserable imitation of European tactics and discipline substituted in its stead. The ignorance of the officers, and the mischievous principle, if we may so call it, on which they are selected, were the first evils that should have been corrected; and, till they have been obviated, no other improvement can be of the smallest consequence. Marshal Marmont speaks very favourably of the school established at Constantinople for the instruction of the guards; but supposing it and other schools to be kept up, a lengthened period must elapse before they can have any material influence. Unless, indeed, the sultan should be able to avail himself, which probably the prejudices of his subjects will not permit, of the services of European officers in the command and organisation of his army, we apprehend that it is not destined speedily to acquire any considerable degree of efficiency or strength.

Navy.—It is unnecessary to enter into any lengthened details with respect to the Turkish navy. At no time has Turkey been considerable as a naval power; and as the Turks have no taste for the sea, her best sailors have always been Greeks, Christian slaves, or renegades. In 1770 the Turkish fleet was destroyed by the Russians in the harbour of Tcheshmeh; and the defenceless state in which the coasts, and even the capital, were then found to be placed, awakened the attention of government to the subject. Since that period many fine line of battle ships have been built in the Turkish ports, principally under the direction of Europeans; but, owing to the unskilfulness of the crews, and the all but total ignorance of the officers, most of whom have not been bred to the sea, and when appointed to be lieutenants and captains, can hardly distinguish between a rudder and a main-mast, the money laid out on the ships has been little better than thrown away. The battle of Navarino inflicted a severe blow on the Turkish navy, and soon after the accession of the present sultan, the capitan-pacha, or high-admiral, carried off the fleet to Alexandria, and delivered it up to Mehemet Ali! The latter, however, has since been obliged to return it. The emancipation of Greece, which formerly furnished the best sailors to the Turkish fleet, has been a serious injury to the latter.

Houses and Mode of Life.—The houses of the Turks are built in contempt of all architectural rules. They are mostly only of one story, and are very rarely more than two stories in height, constructed of wood and sun-dried bricks, those of the better class being plastered and painted over on the outside. The windows when they open on a street or other exposed situation, are uniformly covered with lattice-work, which prevents the most inquisitive eyes from obtaining even a glimpse of what is going on within. But though mean and shabby on the outside, the houses of the more opulent Turks are often very sumptuously fitted up in the interior. The most convenient and magnificent apartments belong to the *harem*, or to the portion of the house appropriated to the exclusive use of the women; and this very frequently opens on a court having a fountain in the middle, and sometimes on a garden. The houses of the poorer classes are most uncomfortable, their windows being generally without glass, and their rooms without fire places. In winter they are usually heated by means of braziers, or pans of charcoal, which suffocate while they warm.

Lady Mary W. Montague has given a lively and accurate description of the houses of the higher class of Turks. "Every house," says her ladyship, "great and small, is divided into two distinct parts, which only join together by a narrow passage. The first house has a large court before it, and open galleries all round it, which is to me very agreeable. This gallery

leads to all the chambers, which are commonly large, and with two rows of windows, the first being of painted glass: they seldom build above two stories, each of which has galleries. The stairs are broad, and not often above thirty steps. This is the house belonging to the lord, and the adjoining one is called the *harem*, that is, the ladies' apartment (for the name of *seraglio* is peculiar to the grand seignior); it has also a gallery running round it towards the garden, to which all the windows are turned, and the same number of chambers as the other, but more gay and splendid, both in painting and furniture. The second row of windows is very low, with grates like those of convents; the rooms are all spread with Persian carpets, and raised at one end of them (my chambers are raised at both ends) about 2 ft. This is the sofa, which is laid with a richer sort of carpet, and all round it a sort of couch, raised half a foot, covered with rich silk, according to the fancy or magnificence of the owner; mine is of scarlet cloth, with a gold fringe; round about this are placed, standing against the wall, two rows of cushions, the first very large, and the next little ones; and here the Turks display their greatest magnificence. They are generally brocade, or embroidery of gold wire upon white satin; nothing can look more gay and splendid. These seats are also so convenient and easy, that I believe I shall never endure chairs as long as I live. The rooms are low, which I think no fault; and the ceiling is always of wood, generally inlaid or painted with flowers. They open in many places with folding doors, and serve for cabinets, I think, more conveniently than ours. Between the windows are little arches to set pots of perfume, or baskets of flowers. But what pleases me best is the fashion of having marble fountains in the lower part of the room, which throw up several spouts of water, giving at the same time an agreeable coolness, and a pleasant dashing sound, falling from one basin to another. Some of these are very magnificent. Each house has a bagnio, which consists generally in two or three little rooms, leaded on the top, paved with marble, with basins, cocks of water, and all conveniences for either hot or cold baths.

"You will, perhaps, be surprised at an account so different from what you have been entertained with by the common voyage-writers, who are very fond of speaking of what they don't know. It must be under a very particular character, or on some extraordinary occasion, that a Christian is admitted into the house of a man of quality; and their *harems* are always forbidden ground. Thus they can only speak of the outside, which makes no great appearance; and the women's apartments are always built backward, removed from sight, and have no other prospect than the gardens, which are enclosed with very high walls. They have none of our parterres in them; but they are planted with high trees, which give an agreeable shade, and, to my fancy, a pleasing view. In the midst of the garden is the *chiosk*, that is, a large room, commonly beautified with a fine fountain in the midst of it. It is raised nine or ten steps, and enclosed with gilded lattices, round which vines, jessamines, and honeysuckles, make a sort of green wall. Large trees are planted round this place, which is the scene of their greatest pleasures, and where the ladies spend most of their hours, employed by their music or embroidery. In the public gardens are public *chiosks*, where people go that are not so well accommodated at home, and drink their coffee, sherbet, &c."

Owing to the houses being mostly built of wood, fires are very frequent at Constantinople, and have sometimes been so very extensive as to threaten destruction to the entire city. The sultan generally attends in person to superintend the efforts made to suppress the fury of the flames. When rebuilt, little or no alteration is ever made in the form of the streets.

It should, however, be observed, as especially marking the character of the Turkish government, that these fires are not always accidental. Indeed, how singular soever the circumstance may appear, there can be no doubt that fires in Constantinople are made to perform the functions of petitions and public meetings in England! In fact, the city has been set on fire, over and over again, for a number of nights together, in order that the grand seignior may be made aware of the deep discontent of his subjects, and of their dissatisfaction with his measures or his favourites, or both. The frequency and continuance of the fires evince their origin; and they have seldom failed to produce a change in the measures of government, and the dismissal or execution of the unpopular favourites! (*Porter*, i. 100.; *Thornton*, i. 187., &c.)

Public baths and *khans* are varieties of public buildings, that are found in most parts of Turkey. The use of the warm bath is universal among persons of both sexes, and all classes. Many of the public baths are handsome, and a few are really magnificent structures. They are mostly built of hewn stone, and comprise several apartments. "On entering one of these establishments, the visiter is conducted into a spacious and lofty hall, lighted from above: round the sides are high and broad benches, on which mattresses and cushions are arranged: here the bather undresses, wraps a napkin about his waist, and puts on a pair of wooden sandals before going into the bathing-room. The first chamber is but moderately warm, and is preparatory to the heat of the inner room, which is vaulted, and receives light from the dome. In the middle of the room is a marble estrade, elevated a few inches: on this the bather stretches himself at full length, and an attendant moulds or kneads the body with his hand for a considerable length of time. After this operation, the bather is conducted into one of the alcoves, or recesses, where there is a basin supplied by pipes with streams of hot and cold water; the body and limbs are thoroughly cleaned by means of friction with a horse-hair bag, and washed and rubbed with a lather of perfumed soap. Here the operation ends: the bather stays a few minutes in the middle chamber, and covers himself with dry cotton napkins: thus prepared, he issues out into the hall, and lies down on his bed for about half an hour." (*Thornton*, ii. 202.)

The baths for ladies are similar, in most respects, to those for the other sex; but are more handsomely fitted up. Lady Mary W. Montague visited one of these baths at Adrianople, and has given an interesting account of it, and of the reception she met with from the Turkish ladies.

Khans are a description of public inns, or caravanseras, sometimes built by sultans and munificent individuals, for the public use and accommodation; and sometimes constructed, as in England, on speculation. They are of very various kinds. Exclusive of apartments for the use of travellers, and stables for their horses and camels, the larger *khans* have rooms in which the goods of merchants may be stored up. These

are generally quadrangular structures, consisting of a series of apartments that open upon a terrace, which surrounds an inner court, and having stables in the back part of the building. The merchants store their goods in separate apartments, or in the rooms which they occupy; the muleteers, with their horses, encamp in the open air in the court, or retire to the stables; and the gateway, by which alone the court and rooms can be entered, being shut up at night, all are as safe as if they were in a fortress. In many towns these are the only taverns. Each khan has its *khanjy* (landlord), a *kakhia* (major-domo), a *khawijy* (coffee-maker), and an *oda-basher* (waiter), who attends to the commands of all the inmates. Sometimes the rooms are furnished, and sometimes not; and frequently, especially in Asiatic Turkey, the apartments are lighted by a window, having paper for glass, opening on the terrace, so that they are, for the most part, dark and gloomy. Food is sometimes, but not generally, furnished in these establishments, the usual method being to have it cooked abroad, and sent in. Coffee, however, is generally prepared in the establishment. (*Missionary Researches*, p. 67.)

Rice is the principal food of the lower orders, but the wealthier classes have a great variety of dishes. The breakfasts of the latter consist of fried eggs, cheese, honey, liban (coagulated milk), &c. The hour of dinner is very early. At entertainments the guests sit cross-legged on sofas or cushions round a low table. In the houses of persons of distinction, handsome ivory spoons (the use of gold or silver for such purpose not being permitted), and small pointed sticks, are laid beside each plate. The dishes are served singly, and in rapid succession, sometimes to the number of 20 or 30: the guests help themselves, sometimes with their spoons, and sometimes with their fingers. Hashed lamb, poached eggs and lemons, stewed fowls, pigeons, &c.; pillaws, roasted meats, a whole lamb stuffed with rice, almonds, &c., are favourite dishes: they are all highly seasoned with salt and spices, and sometimes with onions and garlic. The dessert consists of sweetmeats, of which the Turks are exceedingly fond; with coffee, sherbet, fresh honey, grapes, figs, &c. During dinner, nothing is drunk but water or lemonade. The supper is very similar to the dinner. (*Russell's Aleppo*, p. 105, &c.)

The month of Ramadan is observed as a fast; and from dawn till sun-set, during this month, the Turks neither eat nor smoke. But the moment the sun goes down, they eat a hearty meal; and the practice is, for the richer classes to keep the fast, if we may so call it, by sleeping at this season during the day, and sitting up eating and drinking during the greater part of the night! (*Russell*, p. 108.)

The national dress of the Turks is loose and flowing; that of the women, with the exception of the turban, differing but little from that of the men. The shape and colour of the turban serves to distinguish the different orders of the people, and the functions of public officers. Latterly, however, it has become fashionable to imitate the dress and manners of the other European nations; though the former is inconvenient in consequence of the numerous ablutions, the performance of which is enjoined by the Koran.

Every body knows that when females appear in the streets their faces are carefully veiled. And such is the privacy of the harem or women's apartments, that, unless on very rare occasions,

all males are excluded from them except the master of the family. "*Les plus proches parens, tels que les frères, les oncles, les beaux-pères, n'y sont reçus qu'à certaines époques de l'année, c'est-à-dire, dans les deux fêtes de beyram, et à l'occasion des noces, des couches, et de la circoncision des enfans.*" (D'Ohsson, Tab. Générale, iv. 318.)

Polygamy is authorised by the law of the prophet; but is a privilege not often resorted to. If a man marry a woman of equal rank, the marriage of any other wife is frequently guarded against by the marriage contract. In cases of polygamy, the wives are usually either slaves or women of an inferior rank to the husband.

There is a regular slave-market in Constantinople: but slaves in the East, and especially in Turkey, are far from being in the depressed condition we might suppose. The laws of Turkey protect the slave from ill-usage; and, in this respect, the customs of the country are in complete harmony with the laws. "The most docile slave rejects with indignation any order that is not personally given him by his master; and he feels himself placed immeasurably above the level of a free or hired servant. He is as a child of the house; and it is not unusual to see a Turk entertain so strong a predilection for a slave he has purchased, as to prefer him to his own son. He often overloads him with favours, gives him his confidence, and raises his position; and, when the master is powerful, he opens to his slave the path of honour and of public employment. If we seek for any confirmation of the truth of this assertion, let us look around the sultan, and observe who are the most distinguished men within his empire. Khosrew pacha, the old seraskier, the man who has governed and ruled all things in Constantinople, was a slave from the Caucasus, purchased by a Capudan pacha, whose protection has raised him to the highest offices. Halil-pacha, the son-in-law and most distinguished servant of the sultan, and to whom the brightest prospects are open, was a slave to the seraskier." (*Marmont*, Smith's trans., p. 25.)

The Turks are excellent horsemen, and throw the *djerid* or lance with the greatest dexterity and force; but, excepting this exercise and that of wrestling, they indulge in no active exertion. "Their delight is to recline on soft verdure under the shade of trees, and to muse without fixing their attention, lulled by the trickling of a fountain or the murmuring of a rivulet, and inhaling through their pipe a gently intoxicating vapour. Such pleasures, the highest which the rich can enjoy, are equally within the reach of the artisan or the peasant." (*Thornton*, p. 203.) They never dance themselves, but enjoy public dances, the performers in which, however, are reckoned infamous.

Turkish usages are, in truth, in almost all respects, quite the opposite of ours. "Our close and short dresses, calculated for promptitude of action, appear in their eyes to be wanting both in dignity and modesty. They reverence the beard as the symbol of manhood and the token of independence, but they practise the depilation of the body from motives of cleanliness. In performing their devotions, or on entering a dwelling, they take off their shoes. In inviting a person to approach them, they use what with us is considered a repulsive motion of the hand. In writing they trace the lines from right to left. The master of a house does the honours of the table by serving himself first from the dish: he drinks without noticing the company; and they wish him health when he has finished his draught. They lie down to sleep in their clothes. They

affect a grave and sedate exterior: their amusements are all of the tranquil kind: they confound with folly the noisy expression of gaiety: their utterance is slow and deliberate; they even feel satisfaction in silence: they attach the idea of majesty to slowness of motion: they pass in repose all the moments of life which are not occupied with serious business: they retire early to rest; and they rise before the sun." (*Thornton*, ii. 186.)

Language, Literature, and Education.—The principal languages spoken in European Turkey are: 1. The *Turkish* and *Tartaric* languages, spoken by the Osmanlis, Tartars, and Yaruks (descendants of the Turcoman settlers in Macedonia). The Turkish language is very much intermixed with Arabic and Persian. It is expressive, soft, and musical, and easy to speak, but not easily written. Its construction is artificial and laboured, and its transpositions are more remote from the natural order of ideas than the Latin or German. 2. The *Arabic*, the written language, used at court and in public worship. 3. The new *Greek* or *Romaic*, which consists of a great many dialects, and differs from the Hellenic, or ancient Greek, still in some measure preserved among the inhabs. of the Epirotic mountains, and in the valleys of the Cassiodorus (Suli), though greatly intermixed with foreign words and phrases. 4. The *Slavonic*, in several dialects, spoken by the Slavonians, Bosniacs, Croatians, and Bulgarians. 5. The *Armenian*. 6. *Wallachian*, derived mainly from the Latin, but much intermixed with other languages. 7. The *Arnautic*, *Skopetarian*, or *Albanian*, is not, as was formerly supposed, a jargon formed of the admixture of a number of languages, but is a peculiar and distinct language, having regular grammatical forms and an essential character of its own. 8. The *Jewish*, i. e. Hebrew, intermixed with Spanish and Italian words. 9. The *Lingua Franca*.

The Turkish characters are, with some slight difference, the same as the Arabic and Persian, but they have a variety of handwritings. The Arabic Kufi, in later times Meschi (literally the characters used in transcribing), is only used in copying the Koran, and other sacred works. The Diwani is the handwriting used in business, letters, public documents, judicial proceedings, diplomatic affairs, official orders, passports, &c. It is written from the right to the left in an oblique direction, especially at the conclusion; all the letters are joined to each other, and twisted together, and the more they are so the more elegant is the writing considered. The Dsheri is used in patents, diplomas, inscriptions on mosques, burial-places, and other public edifices; its beauty consists in its oblique direction, upward and downward, and in the words being placed alternately above and below each other. The Talic writing was originally borrowed from the Persians, and properly signifies a flying or running hand. It is more pleasing to the eye than the other hands, and is a fine specimen of Oriental calligraphy. The Kirma, consisting of disjointed letters, is used in ledgers and registers. The Sulus (i. e. trebly thick) serves for title-pages, devices, and inscriptions upon coins, &c. There are many more varieties of handwriting, which it is needless to specify. Instead of pens the Turks write with a reed (*Calam*, *Calamus*), which is cut like our pen, but without a slit. The vowels, which, as in Arabic and Persian, are placed above and below the consonants, are generally omitted in writing (the Koran excepted), which renders the reading difficult to an unpractised eye. There are no marks of punctuation. As they are without tables, they usually write upon the left knee or hand, and instead of moving the hand, they move the paper in the process of writing.

The first printing-press introduced into Turkey was established at Constantinople, in 1576, by Jews, who were, however, prohibited from publishing any Arabic and Turkish works. About 150 years afterwards, Ibrahim, a Hungarian renegade, succeeded in establishing a Turkish press; and it is worthy of remark, that in the Hatti Scheriff authorizing its introduction, the Sultan, Achmet III., felicitates himself that Providence had reserved so great a blessing to illustrate his reign, and to draw down upon his august person the benedictions of his subjects, and of all Mussulmen, to the end of time. (*D'Osson*, *Tableau Général*, ii. 500.)

Down to 1742, 17 works in 23 volumes had issued from the press. From 1742 until 1755 it was not employed at all, and only at intervals until 1783, when it was attached to the newly-established school of engineers. In the beginning of the present century, it was transferred to Scutari, and attached to the military barracks in that place. The late sultan did much to advance its efficiency and extend its utility. The Turks, however, have a prejudice against printing, originating partly in an apprehension lest the Koran should be printed, which they would regard as the highest profanation, and partly in the oppo-

sition of the vast numbers of scribes and copyists, while the general use of the press would throw out of employment, and who, in consequence, take every opportunity to inflame the prejudices of their fellow-subjects against it; but despite these difficulties, the art has made, and is continuing to make, some progress. A few years ago, a government newspaper was established, entitled, *Table of Events*, which contains the different resolutions and orders of the divan. The *Moniteur Ottoman*, in the French language, also published at Constantinople, consists only of extracts from the former.

No sooner were the Turks converted to Islamism, than they began not only to study the Koran, but also the works of the Arabians, their superiors in civilisation. It is a vulgar prejudice to suppose that the Koran discourages learning; on the contrary, "the ink of the learned and the blood of martyrs are," according to the prophet, "of equal value in the sight of heaven." (See the curious article on *Elm* (science), in the *Bibliothèque Orientale*, i. 629.)

Their favourite studies are law and theology. In the interpretation of the Koran and of the traditions, they follow the Arabian authorities, and most Turkish divines occupy their time with biographies of the prophet, and evidences and reasonings in favour of the Mohammedan religion; these, with the innumerable commentaries on the Koran, form a mass of works which fill the greater part of their libraries. History, poetry, and philosophy, however, are by no means neglected. Hammer, in his elaborate and valuable *History of the Ottoman Empire*, has consulted an immense number of Turkish historians; and in his *History of Ottoman Poetry* (the first volume of which was published at Pesth in 1836) he gives short sketches of the lives of 212 Turkish poets, with specimens of their works. At the same time, however, Hammer acknowledges that the Turks have no genius for original poetry, and that the whole of their poetry consists of translations from, and imitations of, the Arabic and Persian poets, to whom they stand in nearly the same relation that the Roman poets did to the Greek.

Jurisprudence, a favourite pursuit of the Turks, is studied in the works and laws of the learned imams, sheiks, and sultans, the traditional law of the prophet (Sunna). The most remarkable printed collections of Fetwas (decisions) are by Mufti Dshemali, Abdubrahman, and Mustapha Kodol; the work of the latter, published at Constantinople in 1822, contains several thousand fetwas of 20 muftis in the 18th century. In 1827, there issued from the press 10,000 fetwas, by Abdubrahman, from 1645 to 1676, in 2 vols. folio; and in 1830, 5,400 by Ali Effendi, which, with the collection of Abdulkarim Effendi, forms a work of high authority.

Turkish literature is particularly rich in collections of bon-mots, puns, proverbs, tales, anecdotes, and even novels; and they possess several encyclopædias, and works upon the history of literature. The first volume of a bibliographical dictionary, in which are enumerated the titles of more than 30,000 different works in the Arabic, Persian, and Turkish languages, has been translated by Flügel, and published by the "Oriental Translation Fund." The reign of Solyman the Magnificent may be considered as the Augustan age of Ottoman literature. This great prince was a liberal patron of the arts and sciences, and of literature and learned men.

Public schools are established in most considerable Turkish towns, and *medresses*, or colleges, with public libraries, are attached to the greater number of the principal mosques. But, owing to the total want of efficient masters, and of good elementary books, the instruction afforded by these establishments is of comparatively little value. In schools the pupils are taught to read and write the first elements of the Turkish language; the class-books being the Koran, and some commentaries upon it. In the medresses, which are the colleges or schools of the ulemas, the pupils are instructed in Arabic and Persian, and learn to decypher and write the different sorts of Turkish characters; instruction in a species of philosophy, logic, rhetoric, and morals founded on the Koran; and these, with theology, Turkish law, and a few notions on history and geography, complete the course of study.

"If," says Mr. Thornton, "we call the Turks an illiterate people, it is not because learning is universally neglected by individuals: for, on the contrary, the ulema, or theological lawyers, undergo a long and laborious course of study; the Turkish gentlemen are all taught certain necessary, and even ornamental, parts of learning; and few children, at least in the capital, are left without some tincture of education. It must be acknowledged, however, that the objects of Turkish study, the rhetoric and logic, the philosophy and metaphysics of the dark ages, do in reality only remove men farther from real knowledge. The instruments without which the researches of the acutest natural philosopher would be imperfect, are either entirely unknown in

* "Geschichte des Osmanischen Reiches," 10 vol. 8vo. Pesth, 1827-34.

Turkey, or known only as childish playthings, to excite the admiration of ignorance, or to gratify a vain curiosity. The telescope, the microscope, the electrical machine and other aids to science, are unknown as to their real uses. Even the compass is not universally employed in their navy, nor are its common purposes thoroughly understood. And it may be truly said, that navigation, astronomy, geography, agriculture, chemistry, and all the arts which have been, as it were, created anew since the grand discoveries of the two last centuries, are either unknown, or practised only according to a vicious and antiquated routine." (i. 29.)

The facts and details given by M. Boué show that this statement is as applicable to the present period, as it was to that when it was written, nearly 40 years ago. At this moment (1843) the useful sciences are, without exception, in the most abject state. A school for medicine and surgery transferred, in 1839, to Galata Serai, the school for the guards already alluded to, and a naval school, are the only establishments in which any attempt is made to supply really useful information. But even these are very far behind. The great deficiency, according to Boué, consists in the want of good elementary books; and he justly thinks that it would be of the greatest importance to get the best elementary works on the different branches of science translated into Turkish, either by native Turks, or by foreigners acquainted with the language. In 1839, the late sultan appointed a commission for the establishment of useful institutions, which, among other projects, proposed to found scientific academies on an improved plan, at Constantinople, Smyrna, Adrianople, and other large towns. But nothing of the sort has hitherto been carried into effect.

It must, also, be borne in mind that Turkish schools are mostly attended by boys only. In Turkey education is not considered necessary to a girl; so that by far the greater number of women, knowing little or nothing themselves, can communicate nothing to their children.

Taxation.—The Turkish exchequer consists of two parts; the *miri*, or public, and the *hazne*, or sultan's private treasury. The former is derived from various sources, of which the principal are—1st, the *haratch*, or poll-tax, imposed, with very few exceptions, on all the males in the empire, not Mohammedans, between the ages of 7 and 60 years. Formerly the tax varied, under different circumstances, from 3 to 14 piastres per individual; but the value of money was greater then than now, and at present it varies, in different provinces and under different circumstances, from 10 to 60 piastres. Various districts compound for the poll-tax, the amount of which is then added to the land-tax. Mussulmen, though exempted from the poll-tax, pay the *avariz*, amounting to 5-8ths of the *haratch*; 2d, the land-tax, of 1-10th of the produce of the estates not subject to military service; 3d, taxes on movables, such as cattle, sheep, and goats, assessed taxes, &c.; 4th, customs' duties, and octrois; and 5th, the excise upon gunpowder, tobacco, salt, wine, &c. No authentic details have been given of the amount of the *miri*, and the estimates put forth by the best informed writers differ extremely. Probably, however, we shall not be far wrong if we estimate it at about 2,000,000*l.* sterling a year.

The *hazne*, or private revenue of the sultan is derived partly from the imperial domains, or estates belonging to the crown; partly from the sums paid by the pachas and other dignitaries, on their accession to office, from presents from the same parties, on occasion of the *bayram*, and other public festivals, and from confiscations and inheritances; and partly from the contributions paid by the tributary provinces of Servia, Wallachia, &c. The female branches of the imperial family have their own especial revenues derived from lands appropriated to their use, or from peculiar taxes.

part of their political system, and would, if not redressed, terminate in universal poverty and disaffection. So early as 1690 the inconveniences of the existing order of things had become apparent, and it was then proposed to obviate them by commuting the different taxes on the rayas, or cultivators, and their contributions of forced labour and horses, for a single tax, which it should not, in any case, be permitted to exceed. (*Hammer Osmannische Geschichte*, vi. 551.) Nothing, however, was done; and abuses of all sorts have continued to multiply according as the machine of government became relaxed down to the present day. The Hatti Scheriff previously alluded to as having been issued on the 2d of Nov., 1839, is principally directed to the obviating of these abuses. But, how indispensable soever, we apprehend it will be found to be wholly impracticable, so long as the present form of government is maintained, to remedy the abuses in question. All the agents of a despot are despots in their peculiar sphere; and though the sultan may be most anxious to suppress abuse, he is neither omnipresent nor omniscient, and it is to be feared that the same means that have hitherto maintained the pachas in power despite their oppressions, will be effectual for the same purpose in time to come. We should be happy to be able to think otherwise; but our firm conviction is that self-reform is impossible in Turkey, and that the abuses of which she is the victim, will necessarily increase in number and virulence, till foreign force or domestic violence overthrow the religion and government, of which they are the bitter but legitimate fruits. We subjoin the Hatti Scheriff, or Imperial Decree, now alluded to. It is, at all events, a most remarkable document; and the fact of its having issued from a Mohammedan government is not the least singular circumstance in the history of the present times.

the highest bidder.

Exclusive, too, of the taxes on account of the general government, and the *avaries* of the pachas, the people have to provide for their local and municipal expenses, which are so very heavy as considerably to exceed the amount of the *miri*. (*Boué*, iii. 223, &c.)

The more intelligent Turks have long been sensible that the arbitrary power of the pachas, and especially their *avaries*, or extortions, was the most objectionable

officially to all the ambassadors of friendly powers residing at Constantinople, in order that they may be witness to the granting of these institutions, which, if it may please God, are to endure for ever.

"May the Almighty God extend his protection to us all. Let those who may presume to violate the present institutions be the object of divine malediction, and be deprived of happiness here and for ever! Amen."

Historical Notice.—Othman, chief of the Oguzian Tartars, is generally accounted the founder of the Turkish empire. On his succeeding his father in 1260, his dominions were comparatively inconsiderable, being confined to the lordship of Siguta, in Bithynia, and a small tract of adjoining territory; but the talent of Othman, and the bravery and zeal of his followers, enabled him to add greatly to his paternal inheritance, and to bequeath the whole of Bithynia and Cappadocia to his son and successor. From this period the tide of Turkish conquest began to roll forward with a force that could not be checked by the feeble resistance of the Greeks. In 1336, the Ottomans first obtained a footing in Europe. In 1362, Amurath, the grandson of Othman, instituted the Janizaries—the first, and for a lengthened period the most powerful, numerous, and best-disciplined standing army established in modern times. The conquests of Timour threatened to subvert the Turkish power; but it soon recovered from the rude shocks it had sustained, and, in 1453, Mahomet II. entered Constantinople sword in hand, and established himself on the throne of Constantine and Justinian! But the undisturbed possession of all the countries from Mount Amanus to the Danube did not satisfy the restless and insatiable ambition of the Turks. Selim, the grandson of Mahomet II., added Syria and Egypt to the dominions of his ancestors; and Solymán the Magnificent, the contemporary of the Emperor Charles V., and the most accomplished of all the Ottoman princes, conquered the greater part of Hungary, and in the East extended his sway to the Euphrates. At this period, the Turkish empire was, unquestionably, the most powerful in the world. "If you consider," says the historian Knolles, who wrote about two centuries since, "its beginning, its progress, and uninterrupted success, there is nothing in the world more admirable and strange; if the greatness and lustre thereof, nothing more magnificent and glorious; if the power and strength thereof, nothing more dreadful and dangerous, which, wondering at nothing but the beauty of itself, and drunk with the pleasant wine of perpetual felicity, holdeth all the rest of the world in scorn." Nor had this mighty power even then reached its greatest height. Solymán was succeeded by other able princes, and the Ottoman arms continued to maintain their ascendancy over those of Christendom until, in 1683, the famous John Sobieski, king of Poland, totally defeated the army employed in the siege of Vienna. This event marked the era of their decline. For a while they continued to oppose the Austrians and Hungarians with doubtful fortune and various success; but the victories of Prince Eugene gave a decisive superiority to the Christians. The Crescent, instead of recovering its former lustre, has fallen like a star plucked from its place in heaven. Province after province has been dismembered from the empire: the Russians, now its most formidable enemies, have advanced to Adrianople; and, but for the mutual jealousies and animosities of the different Christian states, last century would have witnessed the final extinction of the Ottoman power.

When considered with attention, it does not seem difficult to discover the causes of these apparently anomalous results. The Turks, like their Tartar ancestors, are naturally a brave, patient, and hardy race. After their emigration from central Asia, they were long exposed to the greatest difficulties and privations. Pressed on all sides by Mongols, Turkmana, Saracens, and Greeks, they could not maintain their footing in Asia Minor without waging incessant hostilities with their neighbours: they were thus early inured to habits of pillage and blood. And, after they embraced the Mohammedan faith, they found in the law of the prophet not a licence only, but a command to desolate the earth, and to propagate their religion and empire by violence. The peculiar tenets and doctrines of the Koran made a profound impression on the ferocious, ignorant, and superstitious minds of the Turks, who early became the most zealous apostles of a religion of which implicit faith and unconquerable energy are the vital principles. Their fanaticism knew no bounds. They literally believed that the sword was the key of heaven, and that to fall fighting in defence of the true faith was the most glorious of deaths, and was followed by the largest portion of eternal felicity. Firm and unshaken believers in the doctrine of predestination, assured that no caution could avert, and no dangers accelerate, their inevitable destiny, they met their enemies without fear or apprehension. Tribute, slavery, and death to unbelievers, were the glad tidings of the Arabian prophet; and have been loudly proclaimed by his followers over half the Old World. The

Since the above Hatti Scheriff was issued, the following statement has appeared in the Turkish Gazette:—

Ottomans did not, like the Crusaders, require an impulse from pontiffs or preachers to stimulate them to engage in the great work of conquest and conversion: the precept was in their law, the principle in their hearts, and the assurance of success in their swords.

To such desperate energies, wielded by a succession of sultans distinguished for various and great ability, the Greeks had nothing to oppose but dispirited troops, and generals destitute alike of courage and capacity. From the age of Justinian the Eastern Empire had been gradually sinking. The emperors were alternately prodigal and avaricious, cruel, profligate, and imbecile: the people were a prey to all the evils of civil and ecclesiastical tyranny; their bodies were emaciated by fasting; and their intellectual powers dissipated in theological controversies, alike futile and unintelligible. The total defeat of Bajazet, the great grandson of Othman, afforded an opportunity which, had it been rightly improved, might have enabled the Greeks to expel the Turks from Europe: but the Greeks were totally incapable of profiting either by this or any other event; and the schism of the West, and the factions and wars of France, England, and Germany, deprived them of all foreign assistance, and enabled the Turks to repair their shattered fortunes, and again become the terror and the scourge of Christendom.

But the same cause to which the Turks principally owed their success—the intolerant bigotry and fanaticism of their religion, proved also the principal cause of their decline. It isolated them from the rest of Europe, and taught them to look down with contempt and aversion on the arts, sciences, and attainments of the infidel world. "There is," said they, "but one law, and that law forbids all communication with infidels." The more the surrounding nations have distinguished themselves by their advances in civilization and literature, the more determined have the mass of the Turkish people become to resist their example, to keep within the pale of their own faith, and to despise their progress. The fiery and impetuous zeal by which they were distinguished in the fourteenth and fifteenth centuries has long since subsided; but had it continued to burn with undiminished force, it could no longer have rendered them really formidable. The invention of gunpowder, and the various improvements that have been made in the art of war, have happily opposed an invincible obstacle to the success of multitudes without discipline, and of courage without skill. "*Tant qu'il ne s'agissait que de rassembler et de retenir sous les drapeaux une multitude des soldats animés par le fanatisme, l'avantage fut pour les Ottomans; mais cet avantage disparut quand la guerre appela le concours des sciences humaines, et que le génie, avec ses découvertes, devint le redoutable auxiliaire de la valeur.*" (Michaud, *Hist. des Croisades*, v. 384. Ed. 1841.) That fanatical fervour, contempt of danger, and superiority of numbers, which formerly gave so decided a superiority to the Ottoman troops failed to enable them to withstand the science, cool deliberate courage, artillery, and tactics of the troops of Austria and of Russia. The Turks have degenerated both in their civil and military institutions, but their present weakness is to be ascribed more to their not keeping pace with the progress of their neighbours, than to their positive decline. Haughty, confiding, and illiterate, they have experienced all the fatal consequences of ignorance without once suspecting the cause. Resolved to employ no other means than force, they sunk into despondency when it no longer availed; and having now almost abandoned the hope of recovery, they present, to their own astonishment and the mockery of Europe, the *umbræ magis nominis*—the mighty shadow of unreal power:—"We effected our conquests," said the mufti to the Baron de Tott, "without any aid from European tactics, and we do not now

able mineral product is borax, obtained from a collection of lagoons, unique in Europe, if not in the world, and spread over a surface of about 30 sq. m. at and near M. Cerboli, about 15 m. S. by W. Volterra. "As you approach the lagoons, the earth seems to pour out boiling water as if from volcanoes of various sizes, in a variety of soil, but principally of chalk and sand. The heat in the immediate vicinity is intolerable, and you are drenched by the vapour which impregnates the atmosphere with a strong and somewhat sulphurous smell. The ground, which burns and shakes beneath your feet, is covered with crystallizations of sulphur and other minerals. The vapours break forth violently in different parts of the mountain recesses: they only produce boracic acid, when they burst with a fierce explosion. In these spots artificial lagoons are formed by the introduction of the mountain streams. The hot vapour keeps the water perpetually boiling, and after it has received its impregnation during 24 hours at the most elevated lagoon, the contents are allowed to descend to the second lagoon, where a second impregnation takes place, and then the third, and so forth, till it reaches the lowest receptacle; and having thus passed through from six to eight lagoons it has gathered half per cent. of the boracic acid. It is then transferred to the reservoirs, and thence, after a few hours' rest, to the evaporating pans, where the hot vapour concentrates the strength of the acid, by passing under shallow leaden vessels from the boiling fountains above. There are from 10 to 20 pans, in each of which the concentration becomes greater at its descent, till it passes to the crystallizing vessel; from whence it is carried to the drying rooms, when after 2 or 3 hours it is ready to be packed for exportation. There are in all 9 establishments. The whole amount produced varies from 7,000 to 8,000 lbs. of 12 oz. a day. The borax-lagoons have been brought into their present profitable action within a very few years. In 1833, only about 650,000 Tuscan lbs. were obtained; in 1836, 2,500,000 lbs. But the produce does not appear susceptible of much extension, as the whole of the water is now turned to account." (*Report*, pp. 36-38.) The territory around Volterra is rich in salt springs, and the royal salt works employ about 90 labourers, and produce nearly 18,000,000 lbs. of salt a-year, exclusive of the produce of Elba.

Among the *manufactures*, one of the principal is that of straw plait, so large an export from Leghorn. It is made with the straw of the beardless wheat, grown on soil the poorness of which renders the reed white, and is cut before it be quite ripe. Small patches of ground are chosen for its culture, on calcareous hills, and it is never manured. The seed is sown very thick; and Chateaufieux was assured that a crop of two acres would supply straw sufficient for the whole hat manufacture of Tuscany. (*Letters*, p. 75.) This manufacture employs a vast number of hands in Florence, Prato, and in all the districts from Florence to Pistoja on one side, and to Pisa on the other. It is estimated that between Florence and Prato only there are fifty manufactories; besides which, the females of nearly all the *contadini* families in the Val d'Arno employ themselves, more or less, in making straw hats. This branch of industry has latterly diminished; but when Chateaufieux wrote, it brought "an annual return of 3,000,000 fr. to the females of the country, for the men have no concern in it. Every young woman, for a few pence, purchases the straw she has occasion for; she exerts her talent to braid it as fine as possible; and sells, for her own profit, the hats she has made; the money which she thus earns at length forming her dower. Each individual in a family can earn from 30 to 40 sous (15d. to 20d.) a day in plaiting straw, while they can hire a poor woman from the Apennines for 8 or 10 sous (4d. or 5d.) to do the domestic work." (*Id.* pp. 74, 75.) From 3,000 to 4,000 looms in Florence, 600 to 700 in Sienna, and some at Prato are engaged in the silk manufacture; and, in many parts of Tuscany, there are steam mills for the chain and tram. At Sienna, Prato, &c. are several factories for woollens, including *berretti* or red woollen caps, in imitation of those of Tunis. Pistoja has extensive iron works, hardware factories, and paper mills; Prato, many copper foundries; and at Follonica nearly all the iron of Elba is smelted and wrought; carpets at Florence; leather and rope at Leghorn; marble and alabaster goods at Volterra, &c.: glass, earthenware, hats, hempen and linen fabrics are the other articles principally manufactured. At Prato, which town may give a fair average, the wages of a working man, in most trades, may be about 2½ pauls, or 1s. a day; few earn more than 3 pauls (15d.), or less than 2 pauls (10d.) The retail prices of food are, bread about ½d. per lb.; mutton and beef, 1½d. to 2½d. per lb.; oil, 3½d. per lb.; *vin-ordinaire*, 2½d. to 5d. for about three bottles, &c. (*Bowring's Report*.)

The exports are principally oil, charcoal, borax, straw plait and hats, cork, rags, potash, tanned hides, marble, coral, woollen caps for the Levant, timber, paper, soap, tartar, &c.: the imports, colonial produce, spices and dye stuffs, manufactured goods, hardware and earthen-

ware, salted fish, &c. Leghorn (which see *Ante*, 180.) engrosses almost the whole foreign trade of the country. Accounts are kept in *lire* (= about 8d.) of 20 *soldi*, and 240 *danari* each. The paulo = 1½ lire; the pezza = 3½ lire. The Tuscan lb. = about 12 oz. troy. The *staja*, for corn, &c. = 3-4ths bushel: the *moggio* = 25 *staja*. The *barile* (of wine) = 10 imp. galls; (of oil) = 7½ galls. The *braccio* = about 2 ft.: the *seccata* of 660 *partiche* = about an acre.

The Government is an absolute monarchy, mildly exercised, being, in a practical point of view, not only the best in Italy, but one of the least exceptionable in Europe. The Grand Duke is assisted by a council of 4 ministers. Justice is usually administered by the syndics in the small towns and villages, from whose decision appeal may be made to the *vicario* of the canton. There are courts of primary jurisdiction in Florence, Leghorn, and Pistoja, from which appeal lies to the highest court, the *ruota* in Florence. Crime is rare, and is mostly confined to petty frauds and robberies. The civil legislation is far more defective than the criminal; and is often dilatory in the extreme. The total number of criminals and petty offenders convicted before the Tuscan courts in 1833 amounted to 1,320. All the inhab., except a few Jews, Protestants, Greek communicants in Leghorn, &c., are R. Catholics, being subordinate to the three archbishops of Florence, Pisa, and Sienna, and seventeen bishops. Education is almost exclusively in the hands of the ecclesiastics, but is notwithstanding better conducted than in most parts of Italy, especially the Papal States and the kingdom of Naples. There are universities in Pisa and Sienna; the former, in 1836, was attended by 545 students, and the latter by 254; and in Florence the famous schools of the Scolopi are attended by upwards of 1,000 students. Numerous other superior schools and many learned societies exist, and no better evidence can be given of the increase of knowledge than the fact that in 1814 there were but 6 printing presses in Florence, whereas in 1836 they amounted to 35. In 1835, about 21,300 children were attending the public schools. "Since 1830," says the *Journ. of Educ.* No. xvi., "much has been done to forward elementary education, though no general system be established. In the towns there are very good gratuitous schools, and Lancastrian schools have been established in various parts of the country. Holiday schools have also begun to be established." No. iii. of this *Journ.* has a very full account of the state of education, &c., in Tuscany.

Tuscany, as compared with its population and resources, has the smallest military force of any European state: it consists altogether of about 6,000 men, of whom only 4,500 are usually under arms. Military service is obligatory upon all classes, recruits being chosen by lot. The army is maintained on an economical footing, and officers are retained on duty till advanced in years, to avoid a multiplicity of pensions. The naval force is insignificant; there being only one ship of war to guard the port of Leghorn. (*Oudinot, Italie et ses Forces Milit.* pp. 290-292.)

The roads, bridges, canals, &c., of Tuscany are well kept; the roads, in particular, are so good, that the conveyance of goods by the rivers and canals is comparatively little resorted to. Between Florence and Leghorn there is a daily post; between the other towns about two posts a week. Mendicity is prohibited by law; but there are numerous and richly endowed charitable institutions. Workhouses exist at Florence, Sienna, and Arezzo, supported partly by the state, and partly by voluntary contributions and the labour of the inmates. Pisa and Sienna have deaf-and-dumb institutions; and, together with Florence, Leghorn, and Pistoja, establishments at which orphans are taught different trades. Several institutions distribute food, bedding, clothing, and working tools to persons in want, and at Prato is one which makes annual grants for study, and furnishes loans for various purposes. Government pawn-banks and savings-banks are established in the principal towns; the latter paying 3½ per cent on deposits up to a certain amount. The public revenue, derived principally from the government rents, custom dues, stamps, salt monopoly, lottery, tobacco duties, patents for carrying arms, fees, fines, &c., amounted in 1830 to 25,104,898 Tuscan lire.; and the expenditure to 23,078,029 lire. In every respect we may consider Tuscany as the most flourishing state of the Italian peninsula. At two distant epochs, in remote antiquity, and at the revival of science and commerce in the middle ages, Tuscany has been the seat of the highest degree of civilization in Europe. The Tuscans of the present day are admitted generally to excel the other inhabs. of Italy in their taste for the fine arts, and the polish of their manners; and the Italian, or, as it is sometimes called, *Lingua Toscana*, is here spoken in the greatest purity and perfection. Even within this limited territory, there are, however, no fewer than five different dialects—the Florentine, Senese, Pistojan, Pisan, and Aretine. The best Italian is said to be spoken in Sienna.

History. Etruria was finally conquered by the Romans

about *anno* 280 B.C. After the fall of the Western Empire, it successively belonged to the Goths and the Lombards, by the last of whom it was erected into a duchy. Charlemagne conquered Tuscany with the rest of the Lombard dominions; but under his feeble successors its marquises made their government hereditary and independent. The Tuscan territories were afterwards divided, in the 12th and 13th centuries, among the famous republics of Florence, Pisa, and Sienna; but these were re-united in 1531 into a duchy under Alexander de Medici, in whose family it continued till its extinction in 1737, when it fell into the hands of the Ho. of Austria. In 1801, by the treaty of Luneville, Napoleon erected it into the kingdom of Etruria for the Prince of Parma; but in 1808 it was incorporated with the French empire, and subdivided into the depts. Arno, Mediterranean, and Ombrone. Since 1814 it has reverted to Austria, and is now governed by one of the Austrian archdukes. (*Bowering's Rep. on the Statistics of Tuscany; Rompoldi; Serristori, Statist. d'Italia; Sismondi, Agriculture Toscane; Chateaufort, &c.*)

TUY (an. *Tudae ad Fines*), a fortified town of Spain, in Galicia, cap. prov., on the Minho, which separates it from the Portuguese territory, 57 m. S. by W. Saint Jago. Pop. about 7,000. (*Milano*.) It stands on a height surrounded by several small rivulets, and has always been a fortress of some strength, and a key of Spain on this side. It is regularly laid out, and has well paved and clean streets, several squares and bridges, a cathedral, several hospitals and convents, a seminary, college, and 2 barracks. Its principal manufacture is of table linen, in which its inhabitants trade with Portugal; but it also produces hats, leather, liqueurs, &c. Its climate is rendered unhealthy by adjacent marshes.

TWEED, one of the principal rivers of Scotland, forming, in the lower part of its course, the boundary between Scotland and England, has its sources on the E. side of Errickstane hill, about 6 m. from Moffat. Its course is first N.E. to Peebles; then E. with a little inclination to the S. to Melrose; it next passes Coldstream and Kelso; and, pursuing a N. easterly direction, falls into the sea at Berwick. The descent from the source of the Tweed to Peebles is 1,000 ft., and thence to Berwick about 500 ft. more. (*New Statistical Account of Scotland*, p. 2.) The waters of the Tweed are particularly pure and limpid. The first part of its course is through a fine pastoral country, especially celebrated in Scottish song, and the latter through one that is rich and well cultivated. Including windings, its length is reckoned at rather more than 100 m. Notwithstanding it conveys a large body of water to the sea, it is not navigable for any considerable distance. The salmon fisheries on the Tweed are of very considerable value and importance; being, in this respect, second only to those of the Tay. The fish is almost all conveyed, packed in ice, to London.

Among its principal tributaries is the Etterick, which, flowing from the S. parts of Selkirkshire, joins it at the Eildon Hills. A little lower down it receives the Gala, from Mid Lothian, and the Leader from the borders of East Lothian. The Teviot rises in Roxburghshire, on the confines of Dumfriesshire; and flowing N.E., and receiving several tributaries, it falls into the Tweed at Kelso. The Till rises in Northumberland, near Ingram, and, pursuing a N. westerly course, falls into the Tweed at Tilmouth. Near Berwick, the Tweed receives the Adder, a considerable river, formed by the junction of the Blackadder and Whiteadder, having their sources in the Lammermoor hills. The basin of the Tweed is estimated at about 1,870 sq. m.

TWENTY-FOUR PERGUNNAHS, a district of British India, presid. and prov. Bengal, between lat. 21° 30' and 23° N., and long. 88° and 90° E., having N. Nuddea, E. Jessore, W. the districts of Calcutta, Hooghly, and Midnapore, from which it is divided by the Hooghly river, and S. the Bay of Bengal. Area, 3690 sq. m. Pop., in 1822, 599,595. Its surface is a dead flat, intersected by arms of the Ganges, and comprising many extensive jeels or marshes, with a considerable portion of the jungly tract known as the Sunderbunds. It has long been progressively increasing in productiveness and importance; but, like the adjacent district of Bacher-gunge, has been notorious for the prevalence of dacoity or gang-robbery. The Hindoos are reckoned in proportion to the Mohammedans as 3 to 1. Total land-revenue, 1829-30, 1,129,888 rupees.

TWICKENHAM, a village and par. of England, co. Middlesex, hund. Isleworth, on the Thames, 10 m. W. by S. London, and 2 m. S.W. Richmond. Area of par., 2,440 acres. Pop. of do. in 1841, 5,208. The village consists of a street nearly parallel to the river, and of a number of detached villas. It would hardly, however, have been worth notice in a work of this kind, but for its having possessed the villa famous as the favourite residence of the most elegant, harmonious, and correct of English poets, where he composed many of his noblest works, and where he expired on the 30th of May, 1744.

But to the disgrace as well of the country as of the parties more immediately concerned, "Pope's Villa" has been levelled with the ground! The structure now lives only in his immortal verses; and even his grotto,

"Where, nobly-pensive, St. John sat and thought;
Where British sighs from dying Wyndham stole,
And the bright flame was shot through Marchmont's soul,"

has been suffered to go to ruin!

The church, a brick building, erected in 1714, contains the remains of the poet and of his parents. Pope himself raised a monument to the memory of the latter; and a monument to himself was raised, some years after his death, by his friend and literary legatee, Bishop Warburton. It is of grey marble, in the pyramidal form, and has a bust or medallion of the poet.

Among the existing villas in the vicinity of Twickenham, the most celebrated is that of Strawberry-hill, long the residence of Mr. Horace Walpole, by whom it was built, in a sort of trumpery Gothic style, and filled with a singular collection of rare, though mostly trifling articles. In the course of 1842, however, the collection was sold by auction; and the villa itself, which is a very paltry affair, has not since been occupied, and will probably soon share the fate of that of Pope. A national school, for the education of children of both sexes, was established in the village in 1809.

TYNE, an important river in the N. of England, is formed by the junction of two very considerable streams, the N. and S. Tyne. The latter rises on the borders of Durham and Cumberland, near Cross-Fell, one of the highest mountains in the great central range; and the former in the moorlands of Northumberland close to the Scottish border. They unite a short way from Hexham. After their junction, the river takes an easterly direction; and dividing Northumberland from Durham, and passing Newcastle, falls into the sea at Tynemouth, having the towns of N. and S. Shields close to its embouchure.

The Tyne is navigable for ships of from 300 to 400 tons burden, as far as Newcastle, and is navigated a few miles farther by keels, a peculiar description of craft employed to carry coal to the coal-ships. The banks of the Tyne at Newcastle are steep, and the ground rises on each side to a considerable height. Down to a comparatively late period the salmon fisheries in this river were of considerable value and importance. In 1761, no fewer than 260 fish were caught at one draught at Newburn; and in 1775, 275 were landed at one draught at the Low Lights, near the mouth of the river. The fisheries have, however, for several years past, been all but annihilated; a circumstance which has been variously accounted for, but which, perhaps, is most properly to be ascribed to the locks constructed at Bywell to improve the navigation of the river, preventing the ascent of the fish in the breeding season to the shallow streams in the upper parts of the river. For an account of the trade and shipping of this river the reader is referred to the articles NEWCASTLE, SOUTH SHIELDS, and TYNEMOUTH, in this work.

TYNEMOUTH and NORTH SHIELDS, a parl. bor., co. Northumberland, on the N. bank of the Tyne, at its mouth in the German Ocean, immediately opposite South Shields, and 7 m. E.N.E. Newcastle. The parl. bor., consisting of the townships of Tynemouth, N. Shields, Chirton, Preston, and Cullercoats, had in 1831, a pop. of 25,201, and in 1841, of 25,165. The township of Tynemouth occupies its most E. angle, and at its S.W. extremity is the town of N. Shields. The township of Chirton stretches along the whole S.W. side of the par. adjoining N. Shields. Preston adjoins both that town and the township of Tynemouth; it is of small extent, but contains some excellent houses, and a large pop. for its small area, as compared with some of the other townships. At the N. extremity of the township of Tynemouth is that of Cullercoats, which contains the fishing town of that name. This township comprises only about 5 or 6 acres of land, the greater part of which is covered with buildings. (*Bound. Rep.*) The village of Tynemouth has been much enlarged of late years; it is in general well built, and during the summer season is much resorted to for bathing. Its most remarkable edifice is the castle, originally a priory erected in the 11th century upon a previous foundation; it stands on a lofty and rocky peninsula, and is approached from the W. by a gateway flanked by towers, the whole being inclosed by a wall which runs for the most part along the edge of the cliff, at the N.E. angle of which is a light-house. Great care is taken by government to preserve the remains of the edifice, which forms a sea-mark for ships approaching the harbour or navigating the coast. The ruins of the priory within consist of a turret, now serving as a barrack, other buildings converted into military magazines, &c. Mr. Rickman says, that these exhibit very fine specimens of monastic remains, and the parts now existing, which belonged to the E. end, and some other portions of the church, are of remarkably beautiful design. The style is early English, with considerable

enrichment, and though the stone is much decayed, it shows great delicacy of execution. (*Goth. Archit.*) A monument has been erected in honour of Lord Collingwood. This church was parochial till 1657, when a new church was built near N. Shields. The living of Tynemouth, a vicarage, worth 298*l.* a year, is in the gift of the Duke of Northumberland. Two other churches have been erected; one at the W. end of the par., and the other at the village of Tynemouth, which are curacies in the appointment of the vicar.

North Shields has increased rapidly of late years in size and importance, along with the increasing trade of the Tyne. It has many good streets and squares, a good market-place, gas and water works, a public library, scientific institution, neat theatre, Lancastrian and other schools, a sailors' relief society, meeting-houses for most of the principal dissenting sects, and a weekly newspaper. The Master Mariners' Asylum, the site for which was granted by his grace the Duke of Northumberland, is a neat stone edifice, recently built on the road leading from North Shields to Tynemouth. "The condition of the town of North Shields is certainly prosperous; it is progressively increasing in importance. The manufactories in this town are merely of those articles which are required by the ship-builder. Much building is in progress; and many improvements have been both commenced and agreed upon. New roads are to be made through the par. towards the W. and N.W.; and a railroad, 6½ m. in length, now connects this town with Newcastle, passing through the township of Chirton. The town is chiefly extending itself on the W. and N.W. into Chirton and Preston townships, and in the direction of the town of Tynemouth. There is no doubt that in a few years the village of Chirton will be nearly united to North Shields by a continuous street, and that a great portion of the township of Preston will be occupied by that town. Already several buildings of a superior class have been erected in that township in its immediate neighbourhood; and the whole of a small part of that of Tynemouth, adjoining both Preston and Chirton, is either covered with new buildings, or marked out as their future site. It is stated that the town had taken the direction of Tynemouth and Preston, rather than Chirton, in consequence of the land of the latter township adjoining that town being in settlement." (*Bound. Rep.*) There is a bar at the river's mouth, but at high water it may be crossed by vessels of 500 tons, and those of 300 tons lie close to the quays. Ships, as explained in the article on SOUTH SHIELDS (which see), lie in tiers in the river, and were formerly loaded with the coal brought down the river in lighters; but of late years, staithes and drops having been erected, the intervention of lighters is in a great measure superseded. This town is included in the port of Newcastle; but there belongs to it especially about 350 ships; and some business is done in ship-building. The entrance to the Tyne is defended by Clifford's Fort, on its N.E. bank, near which is the low lighthouse; the high lighthouse being on the hill opposite Dockway Square. Its dependence on Newcastle is much complained of, as it obliges all ships to clear out from the latter. The shipping of coal is the staple business of the port.

The town is under the jurisdiction of the co. magistrates. It has a county court, before which 710 plaintiffs were entered in 1848. It is lighted and watched by commissioners under a local act. The erection of a bridge over the river was formerly contemplated; but that project has been abandoned, and the communication between the towns of North and South Shields is maintained by means of a steam ferry. The Reform Act conferred on the bor. of Tynemouth the privilege of returning 1 m. to the H. of C. Registered electors, in 1849-50, 817.

TYRE (Tyros), the principal city of Phœnicia, and the most celebrated emporium of the ancient world, on the S.E. coast of the Mediterranean, where the inconsiderable town of Tsour, with 1,500 inhabs., now stands, lat. 33° 17' N., long. 35° 14' 35" E. The harbour of the modern town is choked up; and we have introduced this article merely that we might have the opportunity of laying before the reader some statements respecting the commerce, arts, and navigation of the Tyrians, the most distinguished mercantile people of antiquity.

Tyre was founded by a colony from Sidon, the most ancient of the Phœnician cities. The date of this event is not certainly known, but Larcher supposes it to have been 1,690 years before the Christian era. (*Chronologie d'Hérodote*, cap. ii. p. 131.) It is singular that while Homer mentions Sidon, he takes no notice of Tyre, whose glory speedily eclipsed that of the mother city; but this is no conclusive proof that the latter was not then a considerable emporium. The prophets Isaiah, Jeremiah, and Ezekiel, who flourished from 700 to 600 years before Christ, represent Tyre as a city of unrivalled wealth, whose "merchants were princes, and her traffickers the honourable of the earth." Originally, the

city was built on the main land; but having been besieged for a lengthened period by the Babylonian monarch Nebuchadnezzar, the inhabitants conveyed themselves and their goods to an island at a little distance, where a new city was founded, which enjoyed an increased degree of celebrity and commercial prosperity. The old city was, on that account, entitled Palætyre, and the other simply Tyre. The new city continued to flourish, extending its colonies and its commerce on all sides, till it was attacked by Alexander the Great. The resistance made by the Tyrians to that conqueror showed that they had not been enervated by luxury, and that their martial virtues were nowise inferior to their commercial skill and enterprise. The overthrow of the Persian empire was a less difficult task than the capture of this single city, which was not effected till a mound had been carried from the main land to the island on which it was built. The victor had not magnanimity to treat the vanquished as their heroic conduct deserved. In despite, however, of the cruelties inflicted on the city, she rose again to considerable eminence. But the foundation of Alexandria, by diverting the commerce that had formerly centered at Tyre into a new channel, gave her an irreparable blow; and she gradually declined till, consistently with the denunciation of the prophet, her palaces have been levelled with the dust, and she has become "a place for the spreading of nets in the midst of the sea."

Commerce, Colonies, &c. of Tyre.—Phœnicia was one of the smallest countries of antiquity. It occupied that part of the Syrian coast which stretches from Aradus (the modern Roud) on the N., to a little below Tyre on the S., a distance of about 50 leagues. Its breadth was much less considerable, being for the most part bounded by Mount Libanus to the E., and Mount Carmel on the S. The surface of this narrow tract was generally rugged and mountainous; and the soil of the valleys, though moderately fertile, did not afford sufficient supplies of food to feed the pop. Libanus and its dependent ridges were, however, covered with timber suitable for ship building; and besides Tyre and Sidon, Phœnicia possessed the ports of Tripoli, Byblos, Berytus, &c. In this situation, occupying a country unable to supply them with sufficient quantities of corn, hemmed in by mountains, and by powerful and warlike neighbours, on the one hand, and having, on the other, the wide expanse of the Mediterranean, studded with islands, and surrounded by fertile countries, to invite the enterprise of her citizens, they were naturally led to engage in maritime and commercial adventures; and became the boldest and most experienced mariners, and the greatest discoverers, of ancient times.

From the remotest antiquity, a considerable trade seems to have been carried on between the eastern and western worlds. The spices, drugs, precious stones, and other valuable products of Arabia and India have always been highly esteemed in Europe, and have exchanged for the gold and silver, the tin, wines, &c. of the latter. At the first dawn of authentic history, we find Phœnicia the principal centre of this commerce. Her inhabs. are designated in the early sacred writings by the name of Canaanites,—a term which, in the language of the East, means merchants. The products of Arabia, India, Persia, &c. were originally conveyed to her by companies of travelling merchants, or caravans; which seem to have been constituted in the same way, and to have performed exactly the same part in the commerce of the East, in the days of Jacob, that they do at present. (*Gen.* xxxvii. 25., &c.) At a later period, however, in the reigns of David and Solomon, the Phœnicians, having formed an alliance with the Hebrews, acquired the ports of Elath and Eziongeber, at the N.E. extremity of the Red Sea. Here they fitted out fleets, which traded with the ports on that sea, and probably with those of Southern Arabia, the W. coast of India, and Ethiopia. The ships are said to have visited Ophir; and a great deal of erudition has been expended in attempting to determine the exact situation of that emporium or country. We agree, however, with Heeren in thinking that it was not the name of any particular place; but that it was a sort of general designation given to the coasts of Arabia, India, and Africa, bordering on the Indian Ocean; somewhat in the same loose way as we now use the terms East and West Indies. (See the chapter on the *Navigation and Commerce of the Phœnicians*, in the translation of Heeren's work.)

The distance of the Red Sea from Tyre being very considerable, the conveyance of goods from the one to the other by land must have been tedious and expensive. To lessen this inconvenience, the Tyrians, shortly after they got possession of Elath and Eziongeber, seized upon Rhinoculura, the port in the Mediterranean nearest to the Red Sea. The products of Arabia, India, &c., being carried thither by the most compendious route, were then put on board ships, and conveyed by a brief and easy voyage to Tyre. If we except the transit by Egypt, this was the shortest and most direct, and for that reason, no

doubt, the cheapest, channel by which the commerce between Southern Asia and Europe could then be conducted. But it is not believed that the Phœnicians possessed any permanent footing on the Red Sea after the death of Solomon. The want of it does not, however, seem to have sensibly affected their trade; and Tyre continued, till the foundation of Alexandria, to be the grand emporium for eastern products, with which it was supplied by caravans from Arabia, the bottom of the Persian Gulph, and from Babylon, by way of Palmyra.

The commerce of the Phœnicians with the countries bordering on the Mediterranean was still more extensive and valuable. At an early period they established settlements in Cyprus and Rhodes. The former was a very valuable acquisition, from its proximity, the number of its ports, its fertility, and the variety of its vegetable and mineral productions. Having passed successively into Greece, Italy, and Sardinia, they proceeded to explore the southern shores of France and Spain, and the northern shores of Africa. They afterwards adventured upon the Atlantic, and were the first people whose flag was displayed beyond the Pillars of Hercules.*

Of the colonies of Tyre, Gades, now Cadiz, was one of the most ancient and important. It is supposed by M. de St. Croix to have originally been distinguished by the name of Tartessus or Tarshish, mentioned in the sacred writings. (*De l'Etat et du Sort des Anciennes Colonies*, p. 14.) Heeren, on the other hand, contends, as in the case of Ophir, that by Tarshish is to be understood the whole southern part of Spain, which was early occupied and settled by Phœnician colonists. (See also *Hist. Commerce des Anciens*, cap. 8.) At all events, however, it is certain that Cadiz early became the centre of a commerce that extended all along the coasts of Europe as far as Britain, and perhaps the Baltic. There can be no doubt that by the Cassiterides, or Tin Islands, visited by the Phœnicians, is to be understood the Scilly Islands and Cornwall. The navigation of the Phœnicians, probably, also extended a considerable way along the western coast of Africa; of this, however, no details have reached us.

But of all the colonies founded by Tyre, Carthage has been by far the most celebrated. It was at first only a simple factory; but was materially increased by the arrival of a large body of colonists, forced by dissensions at home to leave their native land, about 883 years B.C. (*St. Croix*, p. 20.) Imbued with the enterprising mercantile spirit of their ancestors, the Carthaginians rose in no very long period to the highest eminence as a naval and commercial state. The settlements founded by the Phœnicians in Africa, Spain, Sicily, &c., gradually fell into their hands; and after the destruction of Tyre by Alexander, Carthage engrossed a large share of the commerce of which it had previously been the centre. The history, commerce, and institutions of Carthage, and the misfortunes by which she was overwhelmed, have, however, been already noticed in this work (See CARTHAGE); and we shall only, therefore, observe, that commerce, instead of being, as some shallow theorists have imagined, the cause of her decline, was the real source of her power and greatness; the means by which she was enabled to wage a lengthened, doubtful, and desperate contest with Rome herself for the empire of the world.

The commerce and navigation of Tyre probably attained their maximum from 650 to 550 years B.C. At that period the Tyrians were the factors and merchants of the civilised world; and they enjoyed an undisputed pre-eminence in maritime affairs. The prophet Ezekiel (chap. xxvii.) has described in magnificent terms the glory of Tyre; and has enumerated several of the most valuable productions found in her markets, and the countries whence they were brought. The fir trees of Senir (Hermon), the cedars of Lebanon, the oaks of Bashan (the country to the E. of Galilee), the ivory of the Indies, the fine linen of Egypt, and the purple and hyacinth of the isles of Elishah (Peloponnesus), are specified among the articles used for her ships. The inhabitants of Sidon, Arvad (Aradus), Gebel (Byblos), served her as mariners and carpenters. Gold, silver, lead, tin, iron, and vessels of brass; slaves, horses, mules, sheep, and goats; pearls, precious stones, and coral; wheat, balm, honey, oil, spices, and gums; wine, wool, and silk; are mentioned as being brought into the port of Tyre by sea, or to its markets by land, from Syria, Arabia, Damascus, Greece, Tarshish, and other places, the exact site of which it is difficult to determine.†

Such, according to the inspired writer, was Tyre, the "Queen of the waters," before she was besieged by Nebuchadnezzar. But, as has been already remarked, the result of that siege did not affect her trade, which was as

* Mons Calpe and Mons Abyla, the Gibraltar and Ceuta of modern times.

† There is, in Dr. Vincent's *Commerce and Navigation of the Ancients in the Indian Ocean* (vol. ii. pp. 624—652), an elaborate and (like the other parts of that work) prolix commentary on this chapter of Ezekiel, in which most of the names of the things and places mentioned are satisfactorily explained. (See also Heeren on the Phœnicians, cap. iv.)

successfully and advantageously carried on from the new city as from the old. Inasmuch, however, as Carthage soon after began to rival her as a maritime and mercantile state, this may, perhaps, be considered as the era of her greatest celebrity.

It would not be easy to over-rate the beneficial influence of that extensive commerce from which the Phœnicians derived such immense wealth. It inspired the people with whom they traded with new wants and desires, at the same time that it gave them the means of gratifying them. It every where gave fresh life to industry, and a new and powerful stimulus to invention. The rude uncivilised inhab. of Greece, Spain, and Northern Africa, acquired some knowledge of the arts and sciences practised by the Phœnicians; and the advantages of which they were found to be productive secured their gradual though slow advancement.

Nor were the Phœnicians celebrated only for their wealth, and the extent of their commerce and navigation. Their fame, and their right to be classed amongst those who have conferred the greatest benefits on mankind, rest on a still more unassailable foundation. Antiquity is unanimous in ascribing to them the invention and practice of all those arts, sciences, and contrivances that facilitate the prosecution of commercial undertakings. They are held to be the inventors of arithmetic, weights and measures, of money, of the art of keeping accounts, and, in short, of every thing that belongs to the business of a counting-house. They were, also, famous for the invention of ship-building and navigation; for the discovery of glass; for their manufactures of fine linen and tapestry; for their skill in architecture, and in the art of working metals and ivory; and still more for the incomparable splendour and beauty of their purple dye. (See the learned and invaluable work of the President de Goguet, *Sur l'Origine des Loix*, &c., Eng. trans. vol. i. p. 296., and vol. ii. pp. 95—100.; see also the chapter of Heeren on the *Manufactures and Land Commerce of the Phœnicians*.)

But the invention and dissemination of these highly useful arts form but a part of what the people of Europe owe to the Phœnicians. It is not possible to say in what degree the religion of the Greeks was borrowed from theirs; but that it was to a pretty large extent seems abundantly certain. Hercules, under the name of Melcarthus, was the tutelary deity of Tyre; and his expeditions along the shores of the Mediterranean, and to the straits connecting it with the ocean, seem to be merely a poetical representation of the progress of the Phœnician navigators, who introduced arts and civilisation, and established the worship of Hercules, wherever they went. The temple erected in honour of the god at Gades was long regarded with peculiar veneration.

The Greeks were, however, indebted to the Phœnicians, not merely for the rudiments of civilisation, but for the great instrument of its future progress—the gift of letters! No fact in ancient history is better established than that a knowledge of alphabetic writing was first carried to Greece by Phœnician adventurers: and it may be safely affirmed, that this was the greatest boon any people ever received at the hands of another.

Before quitting this subject, we may briefly advert to the statement of Herodotus with respect to the circumnavigation of Africa by Phœnician sailors. The venerable father of history mentions, that a fleet fitted out by Necho, King of Egypt, but manned and commanded by Phœnicians, took its departure from a port on the Red Sea, at an epoch which is believed to correspond with the year 604 before the Christian æra, and that, keeping always to the right, they doubled the southern promontory of Africa; and returned, after a voyage of 3 years, to Egypt, by the Pillars of Hercules. (*Herod.* lib. iv. § 42.) Herodotus further mentions, that they related that, in sailing round Africa, they had the sun on their right hand, or to the north—a circumstance which he frankly acknowledges seemed incredible to him, but which, as every one is now aware, must have been the case if the voyage were actually performed.

Many learned and able writers, and particularly Gosselin (*Recherches sur la Géographie Systématique et Positive des Anciens*, tome i. pp. 204—217.), have treated this account as fabulous. But the objections of Gosselin have been successfully answered in an elaborate note by Larcher (*Herodote*, tome iii. pp. 458—464, ed. 1802); and Major Rennell has sufficiently demonstrated the practicability of the voyage. (*Geography of Herodotus*, p. 682, &c.) Without entering upon this discussion, we may observe, that not one of those who question the authenticity of the account given by Herodotus presume to doubt that the Phœnicians braved the boisterous seas on the coasts of Spain, Gaul, and Britain; and that they had, partially at least, explored the Indian Ocean. But the ships and seamen that did this much, might, undoubtedly, under favourable circumstances, double the Cape of Good Hope. The relation of Herodotus has, besides, such an appearance of good faith, and the circumstance which he doubts, of the navigators having the sun on the right,

affords so strong a confirmation of its truth, that there really seems no reasonable ground for doubting that the Phœnicians preceded, by 2,000 years, Vasco de Gama in his perilous enterprise. (We have borrowed this article from the *Commercial Dict.*)

TYROL and VORARLBERG (an. *Rætia*, with part of *Noricum*), a prov. of the Austrian empire, principally between the 46th and 48th degrees of N. lat., and the 10th and 13th of E. long.; having E., the archd. of Austria (Salzburg, &c.), and Carinthia; S., the Lombardo-Venetian kingdom; W., Switzerland (the Grisons, &c.) and the princip. of Liechtenstein; and N., Bavaria. Length, E. to W., about 120 m.; average breadth somewhat less than 100 m. Area estimated at about 11,000 sq. m. Pop., in 1838, 831,298. This country may be regarded as an extension of Switzerland towards the E. It is traversed in its whole extent by the main ridge of the Alps, which has here some of its loftiest summits, including, among others, Mount Orteler 12,823 ft., and the Gross Gluckner 12,567 ft. above the level of the sea. This grand chain separates the waters that flow N. to the Rhine and the Upper Danube from those that flow S. to the Po and the Adriatic, and the Lower Danube. But, exclusive of this gigantic chain, an inferior chain from 50 to 60 m. S. of the latter divides the country into three portions: the Valley of the Inn, to the N. of the High Alps; that of the Drave, between the High Alps and the inferior chain; and the country to the S. of the latter drained by the Adige, Piave, and other rivers flowing into the Adriatic. The Vorarlberg, N.W. from the Tyrol, forms part of the basin of the Rhine, being drained by the Ill and Bregenz, and bounded on the N.W. by the Lake of Constance. There are many small lakes in the country, but none is of any consequence; the Achensee, in the S., is the principal. The climate is very various. To the N. of the High Alps, and in the intermediate district, or valley of the Drave, it is very severe. Some very extensive mountain tracts are covered with immense glaciers and the accumulated snows of ages. The medium temperature of the year at Innsbruck is about 50°; at Botzen, or Bolzano, 57° Fahr. But the narrow valleys in the S., which unite with the plain of Lombardy, are very hot in summer; and frequently, indeed, experience the sirocco. In general, the spring and summer are wet, and autumn is the most agreeable season.

The central chain of the Alps is composed chiefly of granite, flanked on either side with a zone of slate, overlapped by limestone: the accompanying ranges on both the N. and S. sides are mostly calcareous. Estimating the total extent of land in the prov. at about 7,000,000 acres, it has been distributed in *Becker's Handel's Lexicon*, Vienna, 1836, as follows: viz., cultivated or arable land, 536,520 acres; vineyards, 78,636 do.; meadows and gardens, 615,620 do.; commons, 922,593 do.; and forests, 2,767,496 do., making in all 4,920,873 acres; leaving, consequently, above 2,000,000 acres of land occupied by inaccessible mountains, glaciers, and snow-tracts. The products and husbandry in the S. are much the same as in the N. parts of Lombardy. In other parts of the Tyrol, maize, wheat, and pulse are grown in the bottoms, and scanty crops of buckwheat, rye, and oats on the mountain sides; but the produce of corn is insufficient for the consumption. The Tyrol is in fact, like the greater part of Switzerland, a pastoral country: the chief wealth of its inhabs. consisting in their cattle and other live stock. The cattle are kept in the valleys throughout the winter, but are in spring driven to the uplands, proceeding higher and higher as the lower meadows become exhausted and the upper divested of snow; and returning again in September. The meadows yielding the thickest grass are set aside for a hay crop. The hay, when cut, is carefully dried under cover, and stored up in sheds; but it is quite insufficient for the winter supply of the cattle, many of which have to be fed on maize stalks, ash leaves, &c. In the circle of Roveredo, and other parts of the country adjoining Italy, a good many silk-worms are reared; and the annual average produce of silk is estimated at 3,200 centners. The rearing of canary-birds, though apparently an insignificant branch of industry, is pretty extensively carried on at Imst, and other places in the valley of the Inn; and, in fact, the Tyrol supplies most parts of Europe with these songsters. Among the wild animals are wolves, wild boars, and bears: the clefts of the rocks afford shelter to the marmots; and the chamois finds refuge on the highest summits, or in places secure from the approach of the hunter.

The precious metals and copper are met with; but they are of little importance. Iron and salt are abundant in certain districts; and though mining industry be in a rather backward state are produced in considerable quantities. Silk is manufactured in the S.; next to which, iron wire, plates, nails, and other kinds of hardware are the principal products. Leather, linen fabrics, wooden articles (some of which are executed with great skill, and display much ingenuity), glass, paper, toys,

and (at Innsbruck, Imst, &c.) some cotton goods, are produced. But the principal exports are cattle, cheese, silk, iron, salt, wine, timber, tobacco, and other raw produce, in return for corn and most sorts of manufactured goods. The inhabs. are exceedingly industrious, ingenious, and inventive; but the poverty of the country obliges them, notwithstanding, to migrate in great numbers; and several thousands annually leave their homes for Swabia, Bavaria, Italy, and more distant countries, where they exercise various functions, and continue for a longer or shorter time till, by dint of economy, they have saved what they suppose will maintain them at home, when they immediately return. A considerable transit trade is carried on across the Tyrolean Alps, between Italy and the S. parts of Germany. The principal route for this is by the road over the Brenner pass, between Innsbruck and Brixen; and thence to Bolzano and Roveredo. At its highest point this road attains to an elevation of 4,634 ft. At the W. extremity of the Tyrol is the famous military road over Monte Stelvio, rising to the prodigious height of 8,960 ft. above the sea! being the highest elevation of any carriage road in Europe.

In the official registers of the Austrian empire, Tyrol bears only the appellation of county; but it has its own diet composed of four orders of members—the clergy, nobility, the deputies of the towns, and those of the peasantry, all of whom assemble in one chamber. No new tax can be imposed without the consent of this body; and when it is granted, the sovereign is bound to make an explicit acknowledgment that the states might have refused it had they chosen. In addition to the states, there exists a permanent deputation and tribunal, in which the peasantry are represented. The only imposts are a land tax, payable indiscriminately by all classes, and a charge on the higher classes, consisting of a per centage on pensions, tithes, and rents.

The Tyrol is divided into seven circles, their chief towns being Botzen, Schwatz, Imst, Bruneck, Trent, Roveredo, and Bregenz; in each of which is a court of justice. Innsbruck is the general cap. and the seat of the highest judicial tribunal. The pop. is almost wholly R. Catholic, under the superintendence of ten bishops subordinate to the archbishop of Salzburg.

The character of the Tyrolean is said to contrast favourably with that of the Swiss. In the N. or German portion of the country they are neither so fawning nor mercenary as the latter; and in the S. they approach the Italian standard in their manners and disposition as well as their language. Though quite as attached to personal and national liberty as the Swiss, the Tyroleans have always been steadfast adherents of Austria; and, next to the archduchy, the Tyrol may be depended upon as the prov. most likely to remain firmly attached to the House of Hapsburg in the event of any future dismemberment of the empire. But the Austrians draw little or no disposable military force from the Tyrol. Its inhabs. form an irregular militia, and act with the greatest vigour and alacrity in the defence of their country; but their natural repugnance to a disciplined military life is so great, that all attempts to extend the conscription to this prov. have hitherto proved unsuccessful. Of late, indeed, a part of the regiment of *Jägers*, raised in the Tyrol for its own defence, has been removed into another prov.; but this measure appears to have produced much dissatisfaction.

The dress of the peasantry is peculiar. The principal finery of the men consists of a straw hat ornamented with ribands and nosegays: the dress of the women consists of a thick and short gown, stockings with cross stripes, and a cap tapering in the shape of a sugar-loaf. Music and dancing, rifle-shooting and athletic exercises, are the favourite amusements of the Tyrolean; in all which they excel.

From the fall of the Roman empire, this region ceased to be permanently united under one head till 1268; not long after which period, it passed by inheritance to the dukes of Austria, to whose descendants it has ever since belonged, with the exception of the period from 1806 to 1814. From 1806 to 1809, it belonged to Bavaria. The government of the Bavarians was, however, very disturbed; and the Tyrolean under Hofer maintained a doubtful contest with them and the French till 1810; when Hofer, having been taken and shot at Mantua, the Tyrol was governed by the French till 1814, when it reverted to Austria. (*Austrian Nat. Encyc.*; *Bergkautz*; *Malle-Brum*, &c.)

TYRONE, an inland co. of Ireland, prov. Ulster having N. Londonderry, E. Lough Neagh and Armagh, S. Monaghan and Fermanagh, and W. Donegal. It contains 754,396 acres, of which 171,314 are unimproved mountain and bog, and 27,261 water, being a fraction of Lough Neagh. Surface in many places, especially on the N. and W., rough and mountainous; but there is, notwithstanding, a large extent of fertile land. Property mostly in very large estates. Farms of various sizes; those in the mountainous districts large, and seldom

much subdivided. Tillage farms small, and generally held under partnership leases; and it is almost needless to add that wherever this is the case agriculture is execrable. A great deal of work is done by the spade; and where ploughs are used, they are sometimes drawn by horses, bullocks, and milch cows, all yoked together! Potatoes and oats, the principal crops. Cattle and sheep very inferior. "Tenants may do what they will in regard to the management of their farms, if they only pay the rent." (*Poor Inquiry*, Append. F., p. 323.) Average rent of land, 14s. 6d. an acre. Habitations of the bulk of the people extremely mean: they live principally on oatmeal and potatoes, rarely tasting butchers' meat. Linen manufacture pretty generally diffused. A coal mine is wrought between Dungannon and Stewartston, but the coal is inferior. There is a good pottery near Dungannon. This is one of the counties in which illicit distillation was most prevalent. Principal rivers, Blackwater, Foyle, Bellinerry, with several others of inferior importance.

Tyrone contains 4 baronies, and 35 parishes; and returns 3 mems. to the H. of C., being 2 for the co., and 1 for the bor. of Dungannon. Registered electors for the co. in 1849-50, 1,308. In 1841, Tyrone had 84,919 inhab. houses, 87,337 families, and 312,966 inhabs., of whom 163,663 were males, and 152,493 females.

TYSDRUS or TYSDRA, an ancient and considerable, but now ruined, city of N. Africa, Reg. of Tunis, at present represented by the inconsiderable village of E. Jemma, 110 m. S. by E. Tunis, and 20 m. W. by S. the port of Mahadiah, or Africa. The walls of the ancient town may still be distinctly traced, and it comprises, besides the foundations of temples and other buildings, the mutilated fragments of columns, statues, &c. But the distinguishing feature of the place, and that which gives it all its present interest, is its superb amphitheatre. This noble ruin, the exterior of which is in a high state of preservation, is of vast size and magnificence, being 429 ft. in length, by 368 ft. in breadth, and 94 ft. in height, so that it is inferior only, in respect of magnitude, to the Colosseum and the amphitheatre of Verona. It consisted originally of 64 arches, and 4 rows of columns of the Composite order, placed above each other. At each extremity was a grand entrance; but one of these, with an arch on either side, was destroyed about a century ago, by one of the beys of Tunis, to prevent the ruin being occupied as a fortress by his rebellious subjects. The arena is nearly circular. There are no inscriptions by which we may learn the date or founders of this magnificent structure; but Dr. Shaw supposes, from its similarity to other structures of the same period, that it is of the age of the Antonines; and as the elder Gordian was proclaimed emperor in Tyndrus he concludes that he may, probably out of gratitude to the citizens, have presented them with this grand structure for the celebration of those barbarous sports then so much in fashion. (*Travels*, p. 117, 4to. ed.: see also *Temple's Excursions in Algiers and Tunis*, i. 150.)

U.

UDINE, a town of Austrian Italy, cap. deleg. Udine or Friuli, on the Roja, 60 m. N. E. Venice. Pop., in 1846, 26,700. It is fortified and well built, but, from its situation in a wide and level plain, its external appearance has nothing striking. Its streets are lined with arcades; and in the great square is a fine monument in commemoration of the treaty of Campo Formio (which village is in the immediate neighbourhood). Principal buildings, the cathedral, with some handsome marble columns and bas-reliefs, two par. churches, the chief guard-house, surmounted by a tower and two iron figures to strike the hours, the town-hall, bishop's palace, a good opera-house, &c. The old castle, on elevated ground in the middle of the town, is now a prison. The French, during their occupation, constructed several public walks, and otherwise embellished the town. Udine is the seat of the provincial assembly and superior courts, and has a lyceum, 2 gymnasias, a high school, episcopal seminary and library, a society of agriculture, several hospitals, asylums, &c. The inhabs. are principally engaged in the silk trade, but they also manufacture linen fabrics, leather, paper, and liquors. (*Aust. Nat. Encyc.*, &c.)

UIST, NORTH AND SOUTH. See HERRADS.

ULSABORG, a town and seaport of Finland, cap. län, or district of its own name, on a peninsula at the mouth of the Ulea in the Gulf of Bothnia, 68 m. S. E. Tornea. Pop. about 5,000. It is regularly built and is, after Abo, the principal commercial town of the prov. Its harbour is, unfortunately, in great part choked up with sand. The chief exports are pitch, tar, fish, and salted butter. It was founded in 1606, and has frequently suffered from fire, by which it was nearly destroyed on May 26., 1822. (*Schützler, La Russie, Finl.*)

ULM, a frontier town of Wirtemberg, cap. circ. Du

Vol. II.

nabe, on the Danube where it begins to be navigable, 45 m. S. E. Stuttgart, and 44 m. W. by N. Augsburg. Pop. about 18,000. It has an antiquated appearance, and, though it has some traffic, a garrison, &c., it is dull. The cathedral, a fine Gothic building, has an unfinished tower, 227 Germ. ft. in height. The body of the building is 418 ft. in length, 166 ft. in breadth, the nave being 122 ft. in height (Strin), so that it is larger than any other church in Germany. This edifice was erected, between 1377 and 1494, at the sole expense of the citizens of Ulm. It has some beautiful stained glass and carved work, and a tablet commemorating a showman's feat of the Emperor Maximilian, in 1492, who is said to have stood on the parapet of the tower, on one foot, balancing a coach-wheel with the other! Several other buildings are worthy of notice, as the town-hall, government and custom houses, corn-hall, and arsenal. Ulm has a gymnasium, a large and richly endowed hospital, a female orphan asylum, and the house of correction for the circle. Tobacco pipe-bowls, linen fabrics, leather, paper, vinegar, &c., are made by the inhabs., many of whom also engage in horticulture, boat-building, the transit of goods, and the rearing of snails for export to Bavaria and Austria. Large quantities of Rhenish, Swiss, and

cupied by a people of whom it would be difficult to exaggerate the intelligence and the enterprise.

Physical Geography.—The entire territory belonging to the U. States is divided into four great regions: 1st, the Atlantic slope; 2nd, the vast basin of the Mississippi and Missouri; 3rd, the country between the Rocky Mountains and the Sierra Nevada; and, 4th, the Pacific slope. These divisions are formed by three mountain ranges—the Appalachian chain towards the E., the Rocky Mountains in the centre, and the Sierra Nevada on the W. The Appalachian or Alleghany chain is more remarkable for length than height; it extends from the state of Mississippi, N. E. through the states of Alabama, Georgia, Tennessee, N. Carolina, Virginia, Pennsylvania, New York, Vermont, &c., for about 1,200 m., at a variable distance of from 70 to 300 m. from the Atlantic, and consists of several parallel ranges of an average aggregate breadth of about 100 m. The mean height of the Alleghanies is not more than from 2,000 to 3,000 ft., about half of which consists of the elevation of the mountains above the adjacent plain, and the rest of the elevation of the latter above the sea. The White Mountains, in New Hampshire, which belong to this chain, reach a height of above 7,000 ft. The Black Mountain, in N. Carolina, is said to rise 6,476 ft. above the sea; and other summits reach 6,000 ft. and upwards. The Rocky Mountains are a prolongation of the great Mexican Cordillera. Their average height may be about 8,500 ft. above the ocean, but some of their summits attain to from 12,000 to nearly 15,000 ft. About 10 or 12 deg. W. from the Rocky Mountains is the great coast chain of the Sierra Nevada, or Snowy Mountains, which extends, under different names and with different altitudes, from the Peninsula of California to Russian America. It is of still greater elevation than the Rocky Mountains; some of its passes (within the U. States) being about 9,000 ft., and some of its summits 15,500 ft. above the level of the sea. The region between these two vast mountain ranges comprises the Eastern and most extensive and sterile portion of Oregon; the great inland basin of Upper California, elevated from 4,000 to 5,000 ft. above the Pacific, and mostly a desert; and the country drained by the great river, the Colorado, and its affluents. W. of the Sierra Nevada is the Pacific slope.

The country extending from the Atlantic nearly to the E. bank of the Mississippi, was, in its native state, almost covered by a continuous forest; and the greater part of it still remains in the same primitive condition. The portion of the basin of the Mississippi and Missouri, on their right bank, is by far the most extensive. It comprises, 1st, a tract of low, flat, alluvial, and well-wooded land, lying along the rivers, and stretching inwards from 100 m. to 200 m. or more; and, 2d, the Prairie and wild region, extending from that last mentioned, by a pretty equal ascent, to the Rocky Mountains. The Prairies are of immense extent; but they are not, as is commonly supposed, level. Their surface, on the contrary, is rolling or hilly, sometimes swelling into very considerable heights. They are covered with long, rank grass; being interspersed in Texas and the S. States with clumps of magnolia, tulip, and cotton trees, and in the N. States with oak and black walnut. The Prairies gradually diminish in beauty and verdure as they stretch towards the W., and become more elevated; till at length they imperceptibly unite with and lose themselves in a desert zone or belt skirting the foot of the

Rocky Mountains. In the S. this desert belt is not less than from 400 m. to 500 m. in width; but it diminishes in breadth in the more northerly latitudes. It is, in most respects, similar to the sandy, sterile deserts of Central Asia. This sterility is, also, as already stated, characteristic of a large portion of the extensive territory between the Rocky Mountains and the Sierra Nevada. The Pacific slope, comprising the country W. of the Sierra Nevada, includes maritime California, so famous for its minerals, and the best and most fertile portion of the Oregon territory. Like the Atlantic coast it is, for the most part, heavily timbered. (*Darby's U. States*, p. 358., &c.; *Mrs. Somerville's Physical Geography*, i. 208., &c.; *Humboldt's Views of Nature*, Bohn's edit., pp. 36. 206., &c.)

Rivers.—The rivers of the U. States are of prodigious magnitude and importance. Of those flowing S. and E. the principal are the Mississippi and Missouri, which, with their tributaries, the Ohio, Arkansas, Red River, &c., give to the interior of the United States an extent of inland navigation, and a facility of communication, unequalled, perhaps, and certainly not surpassed, in any other continent. (See *ante*, p. 334.) The Alabama, Appalachicola, &c., flow, like the Mississippi, into the Gulf of Mexico; the Atlatamaha, Savannah, Roanoke, Potomac, Susquehannah, Delaware, Hudson, Connecticut, Penobscot, &c., into the Atlantic; and the Oswego, Cuyahoga, Maumee, &c., into the great lakes of the St. Laurence basin. Of the rivers which have their sources W. of the ridge of the Rocky Mountains, and their embouchure in the Pacific, or in some of its arms, the principal are the Columbia, which falls into the Pacific; the San Joaquin and Sacramento, which fall into the great bay of San Francisco; and the Colorado, which, with its tributaries, after draining a vast extent of country, falls into the Gulf of California.

Next to the great Lakes SUPERIOR, MICHIGAN, &c., in the basin of the St. Laurence, noticed in separate articles in this work, the largest lake within the limits of the U. States is the Great Salt Lake, in E. California, in the territory of Utah, in about 41° N. lat. and 113° W. long. Lake Champlain, between New York and Vermont, is also of considerable dimensions. Numerous small lakes occur in N. York, Maine, and especially in Wisconsin, and the Minnesota territory.

The coast of the Atlantic is indented by many noble bays, as those of Passamaquoddy, Massachusetts, Delaware, Chesapeake, &c.; and several extensive and sheltered inlets are formed by the islands off the coast, the principal of which are Long Island Sound, near New York, and Albemarle and Pamlico Sounds, in N. Carolina. The coast of the Gulf of Mexico has, also, many valuable inlets and back waters; and there are some, though fewer, on the shores of the great lakes. The great bay of San Francisco, in California, on the Pacific, is one of the finest basins anywhere to be met with. Altogether, the United States are furnished with some of the best harbours in the world.

Climate.—In a country extending through 24 degrees of lat., and nearly 60 of long., the climate must, of necessity, vary considerably. In the N., along the British frontier, the winter is very severe; during this season the snow is sufficiently abundant in the N. England states to admit the use of sledges, and the ice on the rivers strong enough to bear the passage of horses and waggons. In summer, on the contrary, the heat is proportionally oppressive. As far S. as New York, Pennsylvania, New Jersey, &c., the thermometer falls in winter below zero; rising, in summer, to nearly 100° Fahr. The climate of

the Atlantic coast, between the 41st and 46th degrees of lat., is colder in winter and warmer in summer, by nearly 10 degrees, than the parts of Europe under the same parallels; and even at New Orleans, where the summer heats are intense, a winter seldom passes without frost. Snow, however, rarely falls further S. than lat. 30°, nor is it often seen S. of the Potomac river, except on mountains. (*Kepp. Amer.*) According to Berghaus, the mean annual temp. of Albany is about 49° Fahr.; of Philadelphia, 51°; of New York and Cincinnati, nearly 54°; of Natchez, 55°; and of Cantonment Brooke, in Florida, 72° (*Atlg. Länder, &c.*, i. 228-230.). The prevailing winds are from the N.W., S.W., and S.E. The first is by far the driest and coldest, and predominates in winter. The second prevails throughout the basin of the Mississippi for most part of the year, except during about 3 months of the winter season. The N.E. wind brings moisture, particularly in the N. part of the Union. The rains are much heavier than in most parts of Europe, resembling, rather, the torrents of tropical countries. According to Darity, the mean annual fall of rain in the United States (E. of Mississippi) is about 37½ inches; that of N.W. Europe amounting to 31 33 inches, but evaporation is quicker, and there are more dry days in the year in the United States than in Great Britain.

The temperature in the country along the Pacific is a good deal higher than along the corresponding latitudes on the E. coast. The year is divided into two seasons; the wet, extending from April to November, and the dry. In the former, the rains, though not by any means continuous, are frequent and heavy. In the S. parts of the coast the dry season commences sooner and continues longer than in those more to the N.

Vegetable Products.—The forests of the E. section of this great territory comprise 140 different kinds of trees, of which 80 are said to attain the height of 80 ft. and upwards. Among them are numerous species of oak, ash, and pine, the hickory and tulip tree, American cypress, and plane; several magnolias, walnuts, &c. In respect to its vegetable products, the country, E. the Rocky Mountains, may be divided into the following regions:—

Regions.	Products.
Northern: N. of lat. 44°	Birch, American elm, red and white pine, numerous willows, aspen, and other maples; many herbaceous plants common to N. Europe and Siberia; few climbing or parasitic aquatic plants.
Middle: From lat. 44° to 39°	Numerous oaks, hickory, and ash trees, W. plane, white cedar, green willow, aspen, which bears, red maple, yellow birch, more climbing and herbaceous plants, and many fine flowering aquatic.
Southern: From lat. 39° to 32°	Many of the foregoing, <i>deciduous cypress</i> , <i>Catalpa</i> , <i>poplar</i> , <i>Myrica grandifolia</i> , live oak, <i>swamp hickory</i> ; very many climbing, herbaceous, and aquatic plants. S. of lat. 37° the character of N. America merges in that of tropical vegetation.

Apples, pears, cherries, plums, &c., flourish in the N.; pomgranates, melons, figs, grapes, olives, almonds, oranges, &c., in the S. section. Maize is grown from Maine to Louisiana, and wheat throughout the Union, tobacco as far N. as about lat. 40°, and in the W. States S. of Ohio. Cotton is not much raised N. of 37°, though it grows to 30°. Rice is cultivated in Carolina, Georgia, Louisiana, and as far N. as St. Louis in Missouri. The sugar-cane grows as high as 35°, but does not thoroughly succeed beyond 31° 32°. The vine and mulberry tree grow in various parts of the Union; oats, rye, and barley in all the N. and the mountainous parts of the S. states, and hemp, flax, and hops, in the W. and middle states. The cultivation of these crops, &c. will be treated of hereafter.

The *Animal Kingdom* comprises the bison (*Bos Americanus*), and the musk ox (*Bos moschatus*). The former, though its numbers have of late years been greatly reduced, is still found in the boundless prairies W. of the Mississippi in very large herds. Among the other quadrupeds are the moose, or American elk (*Cervus alces*), or to N. America; the grizzly bear, American beaver, skunk, and the white-headed & many birds common wading species resembler (*Orc. Anser*) is a common N. of the Carolina-snake is among and the arm is a native and Carolina. Cod, he shores; and shell-fish rivers of the Mississippi of the States are the ug., Amer. edit.)

Geology and Minerals.—The White Mountains consist of granite, which is also very prevalent in the greater part of New Hampshire and Maine. The Rocky Mountains and the Sierra Nevada consist principally of granite intermixed with volcanic matter. Basalts, porphyry, and greenstone occur in the N.W. part of the Appalachian chain; gneiss forms the upper regions in New York and New Jersey; most of the mountain summits S. of the Juniata river consist of fossiliferous sandstone; and talcose mica, chlorite, and other slates, with crystalline limestone and serpentine, lie along the W. side of the primary belt, in the middle and S. parts of the Union. Blue limestone, red sandstone, shale, anthracite, coal-measures, and other transition formations, flank these rocks in many places. Secondary strata occupy by far the largest portion of the U. States; but no strata corresponding in date with the new red sandstone or scabbie groups of Europe appear to be present. Tertiary formations, many of which abound with fossil remains, have been found in many parts of the Atlantic coast and in

is

wrought. It also abounds in the N.W. states, and in one part of Vermont the ore is said to yield 70 per cent. iron. A large proportion of the ore found in this part of the Union is magnetic. The produce of pig iron, in 1840, was estimated at 267,000 tons; and as the make has increased rapidly in the interval, it may now (1850) be probably estimated at 500,000 tons. Lead is next in importance; it is found in various places, especially in Missouri, Wisconsin and Illinois; and its average annual produce may be estimated at about 14,000 tons. In some parts of Wisconsin the lead ore is so very rich as to yield from 60 to 70 per cent. of lead. Copper has been found in large deposits in the state of Michigan, in the peninsula which stretches into Lake Superior. Immense sheets, or walls of native copper, occur in some of the mines in this district; and it is a curious fact that, though only recently re-discovered, they had evidently been opened and wrought at a remote period by the Indians. At present about 1,400 tons copper are annually imported into the U. States. But the probability seems to be that the re-opened mines, which are being wrought with great vigour, will speedily be able not only to supply the home demand for copper, but also to furnish a large surplus for exportation. (*Johnston's Notes, &c.*, i. 234.) Gold has been found in certain parts of Virginia, both Carolina, Georgia, and Tennessee; but its importance has been much exaggerated. The value of the quantity produced, which, in 1834, amounted to 800,000 doll., fell off in 1840 to 178,766 doll. Latterly, however, gold has been found in extraordinary quantities in the rivers and ravines at the foot of the W. slope of the Sierra Nevada, in California; and the fortunes that have been made by many of those engaged in the "diggings" have given such a stimulus to immigration that it has already led to the introduction of California as a state into the Union. Quicksilver, copper, zinc, manganese, with lime, building-stone, &c., constitute the other chief mineral products. Substances of volcanic origin appear to be rarely, if ever, found in the U. States, E. of the Rocky Mountains.

No account has yet been published, on which it would be safe to rely, of the produce of gold in California. Down to August last (1850), 34,508,454 doll. of Californian gold had been coined at the mint of the U. States and its branches. But this is only a portion of the total supply, very large quantities of bullion having been shipped for Europe and other parts; and great, though unknown, quantities having, also, been carried away by emigrants leaving California. Perhaps we may safely estimate the total produce of 1849 and 1850, at not less than 8,000,000, or 10,000,000 sterling a year! The estimates of the

future supplies from California differ very widely, and are, in fact, mere guesses. It would appear, however, that latterly the supplies are not increasing; and unless new deposits should be discovered, it is reasonable to suppose, notwithstanding their great extent, that those which are now being wrought will become less and less productive.

Population.—The progress of population in the U. States has been rapid beyond any previous example. This, however, may be easily explained, from the peculiar circumstances under which they have been placed. They have the good fortune to possess an all but boundless extent of fruitful soil, and a climate which, as it is, speaking generally, neither too hot nor too cold, is most favourable to the exercise of industry; they are, also, well situated for commerce, and enjoy an almost unequalled extent of inland navigation; and at the period of its discovery this vast country, possessing such natural advantages, was occupied only by a few thousand miserable savages. The colonists who left this country to settle in America had, therefore, after the difficulties incident to the foundation of the first settlements had been got over, unparalleled opportunities for increasing in wealth and population. They carried with them the science and the arts of the most civilised nations of the old world; and they applied them to the culture of a virgin and unoccupied soil. Each colonist got as much land as he could cultivate or occupy without being subject to any charge for lordship or rent, at the same time that his taxes were quite inconsiderable. In fact, all that the colonists had to do was to provide for their internal government, as Britain took upon herself and defrayed the cost of their defence against foreign aggression. She, also, supplied them with manufactured products at the lowest possible rates, so that they were able to apply all their energies to agriculture, which, under the circumstances, was especially profitable. In such a state of things, the demand for labour could not be otherwise than astonishingly great; for a high rate of wages, combined with a facility of procuring land, speedily changes the labourers into landlords, who, in their turn, become the employers of fresh labourers. Under such circumstances every man might enter into matrimonial engagements without being deterred, as in old settled and densely peopled countries, by the fear of not being able to provide for the children that might be expected to spring from them. In America, indeed, and in all similarly situated countries, a large family is a source of wealth; marriages, in consequence, are at once comparatively general and early. And in addition to the extraordinary stimulus thus given to the principle of population in the United States, they have been ever since their settlement a "land of promise," to which industrious and ambitious individuals in depressed circumstances have been emigrating from Europe; and they have, also, been "a city of refuge," in which the victims and the foes of political or religious intolerance have found a secure asylum.

It is true that the progress of population in the *ci-devant* Spanish colonies has been much less rapid than in the English colonies; but the differences in their situation have not been less considerable than the points of resemblance, and are quite sufficient to account for the different rate at which their population has increased. The Spanish colonies were placed under the most degrading system of civil and religious intolerance; their industry and freedom of action were interfered with in a thousand different ways; and all emigration to them from foreign

countries, and, in fact, all intercourse with the latter, was strictly prohibited. The English colonies, on the other hand, have always enjoyed a remarkably free system of government; their mental and physical energies have been allowed to expand without let or hindrance; and they have been always open to all classes and descriptions of immigrants, not from England only, but from all the world. We need not, therefore, wonder at the more rapid progress of the latter, or at the fact that they have gone on for a lengthened period doubling their population once in every 25 years!

It is, however, to be observed, that this rate of increase, though it prevails at an average of the entire Union, does not prevail in each particular state. Indeed the western are now, in respect to the eastern states, what the latter formerly were in respect to Europe,—a field to which the impoverished, enterprising, industrious, and adventurous are glad to resort. There is, in fact, a constant emigration current setting from the eastern to the western states. And hence, while population is now but slowly increasing, in the old settled parts of the country, it is advancing with unprecedented rapidity in the valley of the Mississippi, and the territory to the W. of that great river. And the fair presumption is that this progress will continue till the country be occupied westward to the Pacific, or, which is the same thing, till the existing facilities for the support and employment of additional inhabitants begin to fail; when new habits and a slower rate of increase will, no doubt, also, begin to manifest themselves. We subjoin a [see table top of p. 847.]

We borrow from the American edition of the *Encyclopædia of Geography* the following details with respect to slavery in the U. States:—

"Slavery has been abolished in the eastern states, and prospectively in New York, Pennsylvania, and New Jersey, and has never been permitted in the north-western states. By the laws of Pennsylvania, all persons born within that state since 1780 are free, but the children of a slave are subject to a limited servitude to her owner. In New Jersey, every child born in the state after July 4, 1804, is declared to be free, and the traffic in slaves between that and other states was prohibited in 1798. The revised laws of New York declare that every person born in that state is free, and that all persons brought into the state, except for a limited period, become free; and no person can sell any other person in that state. Provision is, however, made in these and the other non-slaveholding states for the delivery of runaway slaves from the other states. The ordinance for the government of the territory north-west of the River Ohio passed in 1787 prohibits for ever the introduction of slavery into that tract of country, in which four states have already been formed with this prohibition incorporated in their constitution. The introduction of slaves from abroad was prohibited by Virginia in 1798, and by Congress into the Mississippi Territory in the same year. In 1808 the importation of slaves into the U. States was forbidden; and it is believed that the number since clandestinely introduced into the country has been very small. Slavery may be said to exist in thirteen states: Delaware, Maryland, Missouri, Arkansas, and all the states S. of the Potomac and the Ohio. The slaves form rather more than one third of the whole pop. in the states in which the institution exists, but they are unequally distributed, although the white pop. generally predominates. In Missouri, Tennessee, and Kentucky, the whites are to the slaves in the proportion of about 4 to 1; in Maryland, of about 3 to 1; in North Carolina, of about 2 to 1; and in Virginia, rather less; in Georgia, Alabama, and Mississippi, the whites are little superior, and in South Carolina and Louisiana, a little inferior, in number to the slaves. Louisiana and other states have prohibited the introduction of slaves from the other states, except by an immigrant proprietor; but there is an active traffic in slaves carried on between the different states, consisting chiefly in their exportation from the worn-out tracts of more northern and eastern to the new cotton lands of the southern districts.

"In the slave-holding states slaves are chattels personal, except in Louisiana, and, with certain qualifications, may be sold to pay the debts and bequests of their master.

* Not slaves, but "indentured coloured servants."

Slavery is hereditary, and the servitude of the mother determines that of the child. When a coloured person claims to be a freeman, the burden of proof is thrown upon him, his colour being, *a priori*, a sufficient indication of slavery. The life and person of the slave are protected by law under the same penalties as those of whites, but the master or overseer may punish minor offences by flogging; for greater offences, the slaves are tried by justices of the peace and from two to five freeholders. The slave can make no contracts, nor can he legally hold any property; the instruction of slaves is prohibited by law, but they often receive some education from the members of the family, and they are generally allowed to attend public worship, which must be conducted by a white. There are in all the states restraints upon manumission, as a pop. of free blacks is felt to be dangerous to

the subordination of the slaves. Although some of the laws relating to slaves are severe, it is to be observed that many of these are not enforced, or are of very rare application. There are various laws restraining cruel punishments or tasks, and prescribing suitable food and clothing for the slaves; but their best security is in the force of custom and public opinion, and in the humanity and interest of their masters. They are in general humanely and even kindly treated, well fed, and lightly worked; they are commonly allowed a little patch of ground to cultivate for their own benefit; they may raise poultry and hogs, which, with the produce of their farm, they may sell to the family or elsewhere at their option; in this way they often acquire a little property, or expend their earnings in ornaments. It is a sufficient proof of their general ease in this country, that their numbers

have increased with amazing rapidity, and that many of them live to a great age. 'All those,' says Paulding, 'who have visited the states in which slavery prevails, whatever may have been their previous impressions of the horrors of that condition, must have been struck with the uniform hilarity and cheerfulness which prevail among the blacks.' Labouring generally in large numbers together, they partake of the influence which companionship always exercises over man, the most social of all beings. In the meadows and harvest fields they lighten their labours by songs, the measures of which accord with the strokes of the cradle and scythe; and in whatever employment they may be associated, they are always joking, quizzing, or bantering each other. The children enjoy a life of perfect ease, and are maintained by the products of the land which belongs to them and theirs. The parents, being freed from all anxiety or exertion for the present or future support of their offspring, are never beset by the gnawing cares of the free white man, whose whole life is one continued effort to provide for himself and his children. The aged and infirm are also taken care of by the master, either from the dictates of his own humanity, or the obligation imposed on him by law.

"The slaves do not work on Sundays, and they have generally several days at Christmas, Easter, and Whitsuntide, and often other holydays. The usual hours of labour are from sunrise to sunset,—with about two or three hours' intermission at breakfast and dinner, according to the season and the nature of the work; they frequently gain a day by doing the task of three days in two, and women with a certain number of children are allowed some further indulgences. Their food and clothing vary in different sections of the country, but they generally receive from nine to twelve quarts of Indian corn a week, with bacon and salt fish; instead of the corn, a bushel of sweet potatoes or two pecks of paddy are given by way of change, and on the rice plantations rice is the principal article of food. For clothing each man receives six or seven yards of woollen cloth, each woman five or six, and the children in proportion; a new blanket is given to each grown person, and one for every two children, once in two years, and in winter a handkerchief is given to the women, and a cap to the men. A suit of cotton or linen clothes is also allowed in summer. On every plantation there is a nurse, and the overseer has a chest of medicines. The marriages of the slaves are merely a connection subsisting during pleasure. Their amusements are chiefly music and dancing, many of them being able to play and sing in a rude manner."

But this, though on the whole a pretty fair statement, certainly sets the condition of the slaves in too favourable a point of view. The truth is, that the American legislators have done but little for the protection of the slave against the tyranny and caprice of his master; and that little is in a great measure defeated by the prejudices of the people, and the difficulties which the partiality of the law throws in the way of getting evidence sufficient for the legal conviction of a master of whose guilt no doubt can be entertained. We do not, however, suppose that acts of cruelty and ill treatment are more common in the U. States than in most other countries where slavery exists; but it is idle to imagine, where there is such tremendous power on the one hand, and nothing but abject submission on the other, that the former should not be sometimes abused.

But if the treatment of slaves by their masters be, on the whole, favourable, nothing can be said in favour of their treatment by the law. Whether it be that the rapidly increasing magnitude of their numbers has alarmed the legislatures of the states in which they are most numerous, or that they are resolved that slavery shall be maintained at all hazards without any relaxation, certain it is that the legal condition of the slaves has, in most of the slave-holding states, been latterly altered for the worse; and that few or no measures have been taken either for their moral or religious improvement. In 1830, the legislature of Louisiana passed certain laws in relation to slaves, in which, among other things, their instruction in reading and writing is expressly forbidden; and in which the penalty of death, or of imprisonment at hard labour for life, or, at least, for three years, is denounced against every

one who shall print, publish, or distribute anything "having a tendency" to create insubordination among the slaves, or who shall use any language in any public discourse from the bar, the bench, the stage, or the pulpit, or in private, having the above-mentioned tendency! (*Stuart's America*, ii. 208.) And laws of an equally severe character have been enacted in most of the other slave-holding states. People of colour, including all who have any taint, how slight soever, of African blood, are, also, almost everywhere treated with contempt, and are deprived of various privileges enjoyed by the whites.

It is as impossible to foresee, as it would be presumptuous to conjecture, how this state of things may terminate. It seems, however, to be reasonable to suppose, seeing the rapid growth of the black population, that it will be extremely difficult to maintain the existing constitution of society, without incurring the most imminent hazard of servile wars and of the most formidable outrages. But it is easier to point out the probable consequences of maintaining the present order of things, than to suggest the means by which they may be obviated. This is a problem that has puzzled, and will, no doubt, continue for a lengthened period to puzzle, American legislators and philosophers. But, perhaps, on the whole, the best and safest plan would be gradually to modify the severity of the laws against blacks, to hinder the separation of families, to endeavour to improve their moral and religious habits, to enable them to accumulate a little property, and to train them up for that entire or modified emancipation which sooner or later most likely awaits them. The subject, however, is one that should be approached with extreme caution. And though we do not state it in the view either of justifying the existence of slavery or of extenuating the abuses to which it has given rise, it will, we apprehend, be found to be impossible to continue the cultivation of the southern states on the same scale and with the same vigour that it is now conducted without the aid of slaves of one kind or other. The climate is too hot and the labour too severe to be voluntarily undertaken. It has, we are aware, been alleged, over and over again, that slavery has retarded the progress of Virginia, the Carolinas, and other S. states. But there is really no foundation whatever for this allegation. New York and the middle and northern states, that have so rapidly advanced without the aid of slaves, are placed under totally different circumstances. They are to Louisiana, Alabama, Mississippi, &c., what England is to Jamaica. Branches of industry suited to the one are not suited to the other; and that field labour which may, without difficulty, be carried on in the New England states, New York, and Pennsylvania, would be oppressive and all but intolerable in the states lying along the Gulf of Mexico. But, as stated above, we do not mention this in vindication of slavery, or as an apology for the cruelties of slave-masters. This probable consequence of the abolition of slavery should, however, be kept in view by those who would fairly estimate its real influence. The dangers of rebellion, anarchy, and bloodshed, are not the only contingencies American statesmen have to guard against in dealing with the blacks; they must, also, keep in view the probable influence of their acts on the productive energies and trade of the country; and should endeavour, in as far as possible, to combine with the maintenance of the latter a proper respect for the rights and interests of humanity.

be preserved as a forest for the production of new
res. The price of farms, however, varies from \$2. to
\$4. an acre, according to the quality of soil, buildings,
and situation. This part of the States has a compara-
tively abundant supply of labour, and a ready market for
all kinds of produce. Market-gardening and dairy hus-
bandry are here the most profitable branches of industry.

The soil W. of the Alleghanies is generally much su-
perior to that on their E. side; and large tracts produce,
or a while at least, Indian corn and wheat without ma-
nure. Almost all the land in the E. part of this region
belongs to private individuals, though a large proportion
is still covered with forest trees. On the W. side of the
Mississippi, the greater part by far of the country is public
property; but in either case great quantities of land are
always in the market. Labour can generally be had,
except in the extreme W. Farms produce is in constant
demand, and prices are regulated by the markets of
New Orleans, to which it is sent by the Mississippi;
hence being in part governed by the prices on the E.
coast, and in part by those of the Havannah and other
great W. Indian ports. Manures are seldom used except
near the larger towns. The price of farms of an equal
quality of soil vary according to their distance from the
means of transport, from a dollar to 12½ the acre. The
money wages of labour may be stated to be nearly the
same from the E. to the extreme W., any difference
being towards a rise in the W. But land is there so
cheap, that every prudent labourer is able to purchase a
farm for himself in a year or two, and it is only the im-
migrant who continues labourers. (Sheriff, 306—308.)

Speaking generally, agriculture is little known
as a science in any part of America, and but im-
perfectly understood as an art; and it could not
rationally be expected that it should be other-
wise. In all those countries in which, as in the
greater part of America, portions of fertile and
unoccupied land may be obtained for little more
than a nominal price, the invariable practice is,
after clearing and breaking up a piece of land,
to subject it to a course of continuous cropping;
and when it is exhausted, to resort to some other
tract of new ground, leaving that which has been
abandoned to recover itself by the aid of the *vis
medicatrix naturæ*. But in those parts of the
Eastern or Atlantic States that have been long
settled, and are fully occupied, this scourging
system can no longer be advantageously fol-
lowed; and there, consequently, a better system
of agriculture is beginning to be introduced;
and a rotation of crops, and the manuring of
land, are practised sometimes with more and
sometimes with less success. Still, however, it
is certain that even in the best farmed districts
agriculture is in a very backward state; and,
except where the land is naturally of a very su-
perior quality, the produce is scanty indeed, com-
pared what is obtained in this country. In illus-
tration of what is now stated we beg to subjoin

An Account of the average Produce per Acre of the
Corn Crops in the State of New York, as published
in a late Report by the "State Agricultural Society,"
in Contrast with what is believed to be the Produce
of similar Crops in this Country.

Produce.		New York.	England.
Wheat	bushels per acre	14	30 or 32
Barley	—	16	32
Oats	—	28	40
Indian corn	—	28	none

It results from this statement that the returns
per acre are about twice as great in this country
as in New York, which has some of the best
corn growing land in the Union. In Ohio,
which is supposed to be the most productive of
all the states, the results are similar, the pro-
duce of wheat and barley in it being respec-
tively 15½ and 24 bushels an acre. It is true,
no doubt, that these returns may be increased;
but this can only be done, if it be done at all,
by the employment of greater capital and skill
in the culture of the land. And in the mean-
time the New York farmers, and those of the

other Atlantic States, have to withstand the competition of their neighbours in the newly-formed states on the Mississippi and Missouri, where the best land is subjected to the scourging treatment already referred to. But in these states, though the land be cheap, the produce per acre is, in most cases, very small. In Michigan, for example, it appears, from a return published by the state legislature in 1849, that the average produce of wheat per acre does not exceed 10 and 1-5th bushels, being less than 9 bushels an acre when seed is deducted! It would further appear from the best attainable information on the subject, that if we take the produce of the new states generally at 12 or 13 bushels per imp. acre, we shall not be within, but beyond, the mark. And though it be very difficult and, perhaps, impossible, to anticipate with any degree of confidence what may be the ultimate result of this infertility, or in what degree it may be defeated or modified by future discoveries and improvements, we are, in the meantime, disposed to concur with Mr. Johnston* in thinking that the wheat-producing powers of the U. States have been greatly exaggerated; and that at no very distant period their exports of wheat and flour will, if they do not cease altogether, become comparatively inconsiderable.

In the course of 25 years from this date the pop. of the Union will most likely amount to or exceed 46,000,000; and what with this enormous increase in the demand for corn, and the abusive treatment to which the land is subjected, we see but little ground for the fears so generally entertained in regard to the injury to be inflicted on the agriculture of Europe, and especially on that of England, by the importation of American corn. It is not so much, indeed, in the importations of wheat and flour as in those of maize or Indian corn, that the importance of the American supply has latterly been manifested. And these have been mainly occasioned by the failure of the potato crops, and the wretched state to which the pop. dependent on them has been reduced. Very few of those who have been consumers of wheat, barley, or oats, have resorted to Indian corn. And the presumption is that it will rarely be imported in large quantities, except when the potato is deficient, or to supply those who have no means of obtaining the higher-priced varieties of corn.

"I have said," says Mr. Johnston, "that the wheat-exporting capabilities of the Union are lessening rather than increasing, though it may be 10 years or more before the falling off becomes very distinctly sensible. The main reasons for this opinion are: 1st, That the virgin soils are already, to a considerable extent, exhausted of their first freshness, and that a comparatively expensive culture, likely to make corn more costly, must be adopted, if their productiveness is to be brought back and maintained; 2nd, that the new settlers live poorly and hardly at first, and, as their wheat is the only thing that they have to sell, confine themselves for some seasons to potatoes, buckwheat, and Indian corn, and send the wheat to market; but as they become more easy in their circumstances, retain more of this grain for their own consumption, while they produce it also at a greater cost; and 3d, that as the population increases, that of wheat-consuming individuals, who do not raise their own food, increases also, and thus every year a larger proportion of wheaten food will be required and retained at home." (Notes, &c. ii. 336.)

* See his valuable and important work, *Notes on N. America, Agricultural, Economical, and Social*, i. 172., ii. 331., &c.

According to the official returns, which, however, are but little to be depended on, there were raised in the Union, in 1848, 114,475,000 bushels of potatoes. Near Philadelphia, and in many other parts of the Union, Mr. Stuart says that, in appearance at least, the farms and buildings are like those seen in England and Scotland, except that thorn hedges and other fences are often wanting. The official returns make the total produce of wheat in the Union, in 1848, 126,364,600 bush., or 15,795,575 quarters.

Maize is the great staple of American husbandry, and it grows on soil, not particularly rich, as respects other products, for a succession of years, without manure, in all the vigour and luxuriance of an indigenous plant. It has been justly called the "meal, meadow, and manure" of the farm, as it is used for both human food and the supply of the farm stock in winter; and furnishes more nourishment for man or beast on a given space, and with less labour, than any other bread-corn. But it is not successfully cultivated beyond lat. 43° N., where it begins to be superseded by the grains of Europe. The total produce of maize in the Union, in 1848, was estimated at 588,150,000 bush. Tennessee is the principal maize-growing state; and next to it are Ohio, Kentucky, Indiana, Illinois, &c.

The surface of the New England States is often hilly, and the soil rocky, or of the most inferior kind of sand. The principal crops are oats for horses, &c., and rye for distillation; the corn produce of these states being insufficient for the support of their inhabs. Boston, the largest corn and flour importing port in the Union receives nearly all her supplies of these articles from the S. states. We subjoin, [see table top of p. 852.]

The entire produce of the corn crops in the Union, in 1848, was reckoned at

Bushels of wheat	-	-	-	126,364,600
— barley	-	-	-	6,222,060
— oats	-	-	-	185,500,000
— rye	-	-	-	32,952,500
— buck-wheat	-	-	-	12,538,000
— Indian corn	-	-	-	588,150,000
Total bushels of grain				951,727,150

Tobacco is grown from lat. 39° or 40° throughout all the S., and in a part of the W. states; it is a staple product of Kentucky, Tennessee, Maryland, Virginia, and Missouri. The tobacco of the U. States is of very superior quality; but it is a crop which scourges the land, and the labour attending its cultivation is very severe. [See VIRGINIA.] Its agg. produce in 1848 was estimated at 218,909,000 lbs.

Cotton and rice are the great staples of the S. part of the Union: the former has even supplanted the culture of tobacco in some of the coa. of Virginia.

A little cotton had been raised for domestic use in the Southern states, previously to the revolutionary war; but its produce was quite inconsiderable. In 1791 it began, for the first time, to be exported; the trifling quantity of 189,316 lbs. having been shipped in the course of that year, and 138,328 lbs. in 1792. Such was the late and feeble beginning of the American cotton trade! And we are warranted in saying that there is nothing in the history of industry to compare with its subsequent progress and extension, unless it be the growth of the manufacture in this country.

American cotton, the produce of the *Gossypium herbaceum*, is of two kinds, generally known by the names of *sea island* and *upland*. The former

UNITED STATES (THE).

Total value of exports of corn, &c., in 1848-49, \$ 22,306,783.

It is seen from the above table that the U. Kingdom and the British Colonies are the great markets for the corn, flour, &c., of the Union. She also supplies us with vast quantities of provisions. (See post, p. 854.)

UNITED STATES (THE).

An Official Account of the Produce of the principal Corn Crops raised in the States in 1848, as ascertained by Mr. Burke, Commissioner of Patents.

States and Territories.	Bushels of Wheat.	Bushels of Barley.	Bushels of Oats.	Bushels of Rye.	Bushels of Buckwheat.	Bushels of Indian Corn.

grows along the low sandy islands off the shores of Carolina, Georgia, &c. It is long in the staple, has an even silky texture, a yellowish tinge, is easily separated from the seed, and is decidedly superior to every other description of cotton hitherto brought to market. Unluckily, however, it can be raised only in certain situations; so that its quantity is limited, and has not, in fact, been at all increased since 1805. At present 97 or 98 per cent. of the cotton produced in the United States consists of what is denominated upland, from its being grown on the comparatively high ground at a distance from the coast. Though of varying qualities, it is all short-stapled; and its separation from the seed and pod, if attempted by the hand, is so very difficult, that the cotton is hardly worth the trouble and expense. This, however, was the only way in which it could be made available for home use, or exportation, in 1791; and had any one then ventured to predict that 10,000,000 lbs. of upland cotton would ever be exported, he would have been looked upon as a visionary. But the genius of Mr. Eli Whitney did for the cotton planters of the United States, what Arkwright did for the manufacturers of England. He invented a machine by which the cotton wool is separated from the pod, and cleaned with the greatest

ease and expedition; and in this way may be said to have doubled the wealth and industry of his countrymen. (*Pitts's Statistics of the United States*, p. 109, ed. 1835.) Mr. Whitney's invention came into operation in 1793; and, in 1794, 1,001,700 lbs., and, in 1795, 5,276,900 lbs. of cotton were exported. The effect of the machine has been, like that of Arkwright, all but miraculous. The exports of cotton from America, during the year ending the 30th of June, 1849, reached the enormous amount of 1,096,002,969 lbs.; worth, when shipped, 66,396,976 dollars! And it is not going too far to say that, had not Whitney's or some equivalent machine been invented, there is no reason to think that the exports, during the above year, would have exceeded 50,000,000 lbs., if so much, as that the existence of the other 976,000,000 lbs., with the greater part of that retained for home consumption, may be ascribed to Mr. Whitney's machine, as to its real source and origin. American cotton is generally exported in bales, firmly packed, and containing each from 300 to 455 lbs. The quantity of cotton produced per acre varies, according to the American edition of the *Encyc. of Geog.*, on good lands, from 250 to 300 lbs., and on inferior lands from 125 to 150 lbs. We subjoin

An Account of the Export of Cotton from the U. States, in each Year, from 1831 to 1850, both inc.; showing, also, its Price per lb., and its Gross Value.

(See table top of next page.)

Rice is produced chiefly in S. Carolina. It was introduced into the States in 1694 from Madagascar, and has since succeeded so well that besides supplying the home consumption, from 100,000 to 140,000 tierces, worth from 2 to 3 million dollars, are exported yearly. "The usual

time of planting rice is from the 20th of March to the 20th of May, and the harvest begins about 1st Sept. No grain yields more abundantly. From 40 to 70 bushels an acre is an ordinary crop; but 80 and 90 bushels are often produced on strong lands, having the advantage of being overflowed by a river or reservoir. The water is not let in upon the field till after the second hoing, and is kept on frequently for 30 days." (Bart, II. 66.)

An Account of the Exports of Wine and Tobacco from the United States.

The sugar-cane grows in low and warm situations as high as lat. 23°, but the climate does not suit well N. of 21° 30'. In Louisiana, however, it is cultivated with success, and in 1848-50 there were, in that state, 1,266 sugar plantations, which produced 947,263 hhds., or about 870,000,000 lbs., inc. 12,500,000 lbs. wet sugar. But the crop is very variable. (*Hunt's Com. Mag. for Aug. 1850.*) Several varieties of the cane, as the African, Orabites, W. Indian, and Elthand, are grown. The last is the most prolific of juice, and, according to Mr. Smart, an acre of ground, properly managed, will yield a hhd. of sugar. (*ib. 136.*) In the N. part of the Union, as in Canada, maple sugar, a saccharine matter derived from maple trees, either growing wild or cultivated for the purpose, is extensively collected. "The trees are tapped two or three inches into the wood to obtain the sap, from which the sugar is extracted, some time in February or the beginning of March. The holes are made in a slanting direction, in which sprouts of alder or sumach are placed; but they are plugged up as soon as the sap is drawn. The tree does not become impoverished by repeated tappings. There are instances on the Hudson, where the process has been continued for 20 years." (*ib. i. 74, 76.*)

Indigo was formerly raised in Georgia and Carolina, but its culture has been superseded by that of cotton. Some good wine has been produced in the same states, and the vine and mulberry tree are common in many parts of the Union, without, however, having yet become objects of much attention. Fruits of most temperate and tropical climates, and European vegetables, thrive well. The apple grows in the vicinity

of New York are certainly the best variety of the fruit that is anywhere to be met with. Honey, Wax, Lemon, &c., are frequent crops in the N and W states.

Mr. Sherriff speaks disparagingly of the cattle and sheep of the Eastern states. Near New York, he says, the cattle grazing on the sandy barrens appeared more shaggy, and smaller than some of the highest cattle of Scotland. The sheep were even more miserable-looking than the cattle; pigs corresponded, and the horses alone formed an exception to the general wretchedness, some fine animals of this species being met with. The same appeared to him to be the case in the New England states, sometimes even on superior farms, and with cattle originally of a good breed. This inferiority of the cattle in the Eastern states has been explained as follows by Mr. Jefferson: "It is a thinly-pumped country, the spontaneous productions of the forests and waste fields are sufficient to support indifferently the domestic animals of the farmer, with very little aid from him, in the arduous and unvaried toils. He, therefore, feeds it more accustomed to receive them from the hands of nature in than (in different parts) than to keep up their size by a care and nourishment that would cost him much labour." (*Notes on Agriculture*, p. 30.) This, no doubt, is the cause of the large and wretched condition of the cattle in most parts of the Atlantic states, but wherever the pastures are of especial excellence the cattle are comparatively good; and, luckily, fine grass lands are not uncommon even in the old settled states. Mr. Sherriff says of the Quaker state in the state of New York, "Perhaps no gentleman's park in Britain equals them in fertility and beauty. They differ from the rest of the surface in this part of the country, in having been cleared by nature, and are chiefly in grass, affording the richest pasturage I ever saw, with the exception of some fields in the neighbourhood of Boston in Lincolnshire." (*Tour*, p. 84.) But the great cattle-breeding states are in the W., and herds of some thousands are brought up from Kentucky, &c., for sale at New York. They have some resemblance to the Hereford cattle, and when 4 or 5 years old are estimated to weigh at an average 60 stone. (*Ibid* p. 28.) The dairy is now attracting considerable attention in some states, and the exports of cheese have noticeably increased. On improved farms, the sheep are mostly crosses of the Roman and Merino, for, though the Leicester and Cotswold breeds are raised, the former, particularly if pure, is not found to answer. In 1849 the U. States are said to have possessed 19,511,374 sheep, producing 24,808,114 lbs. of wool. Illinois appears to be the state best adapted for sheep, as it is the most other species of husbandry; and as much of its surface remains to be disposed of, that, estimating the fleece of a Merino sheep at 3 lbs., and its price at 60 cents the lb., the wool of one sheep in a year will nearly purchase $\frac{1}{4}$ acre of land! Wool can be transported from Illinois to the E. states for 3 or 4 cents per lb. (*Sherriff*, p. 497.)

The stock of hogs in the U. S. States is estimated at about 40,000,000, and their breeding and fattening is a most important branch of rural industry. Except, indeed, in seasons like 1867, when there was a large export of Indian corn to supply the place of the potato, almost the entire produce of that grain is employed in distillation and in the feeding of hogs. The latter are usually allowed to run wild in the woods till 5, 6, or 7 weeks before they are to be killed, when they are turned into the fields of Indian corn to fatten and harden their flesh. Oats is the principal hog-feeding manure; the hilling and rooting departments of the Indiana hawthorn

occasion to use! And even this is not all; for the prohibition withdraws a large portion of the public capital and industry from employments in which America has an advantage, to make them be vested in employments in which the advantage is on the side of others!

The commercial policy of America is, in truth, but little creditable to her people and legislature. The prohibitions that have so long fettered the employment of industry, and the growth of commerce in Europe, grew up in a comparatively dark and unenlightened age, and have for many years been progressively declining. But America has been foolish enough to adopt the prohibitory and forcing system after its *felo de se* character had been fully demonstrated. She has not acted in ignorance, but in contempt of well-established principles and of the most comprehensive experience; and has consequently involved herself in difficulties and losses of which it is not easy to estimate the extent nor to foresee the termination.

No doubt America will gradually become more and more suitable for manufacturing industry. Her command of water-power and coal, and her facilities for internal transport and navigation, are circumstances eminently favourable to manufactures. Still, however, it is certain that her natural progress to manufacturing eminence cannot be advantageously hastened by the policy on which she has embarked. When population has become dense in America, and her unoccupied land has been generally appropriated, she will necessarily undertake, and will no doubt successfully carry on, such branches of manufacturing industry as are suitable to her peculiar capabilities; but

this natural development of her maturer growth should be waited for; and cannot be profitably forwarded by interfering with the free exercise of industry.

Cotton Manufacture.—The American cotton manufacture, though consisting principally of coarse fabrics, is, in extent and value, next to that of the U. Kingdom. It is principally located in the New England States, especially in Massachusetts which has nearly half the manufacture, Rhode Island, Connecticut, and New Hampshire. At an average of the three years ending with 1849, the consumption of raw cotton in the different manufacturing establishments of the Union is believed to have amounted to about 200,000,000 lbs. a year. The American fabrics consist principally of shirtings, sheetings, printed calicoes, yarns, sail-cloth, &c., in which the raw material forms a large portion of the value of the finished articles. And hence it is that the American manufacturers have suffered more than ours from the falling off in the supply of cotton in 1847 and 1850, and that they have had proportionally more mills standing and working short time. The value of the cottons exported from the Union is not very considerable, having been \$5,718,205 in 1848, and \$4,933,129 in 1849.

Lowell is the principal seat of the manufacture in Massachusetts; and we subjoin the following statements in regard to its condition there from 1840 to 1850. (See 2nd table below.)

But for the six months ending with March, 1851, the business in Lowell was much depressed, and the manufacturers involved in great difficulties.

The values of the imports of cotton goods into the U. States during the year ending the 30th June, 1849, was as follows, viz.,

	Dollars.
Stuffs printed, stained, or coloured	10,286,894
— white, or uncoloured	1,434,635
— tambooured or embroidered	702,631
Velvets, wholly of cotton	99,220

The manufacture of woollens has been extensively carried on from an early period in the history of the States: but it is principally conducted in private families; and it is only in recent times that woollen factories have been established on any large scale. Broad cloths, cassimeres, satinets, flannels, jeans, linseys, blankets, yarn, and carpets are the goods principally made.

The returns under the census of 1840 as to the woollen manufacture were as follows:—

Falling-mills	2,585
Woollen manufactories	1,420
Persons employed	21,342
Manufactures, value of	20,696,999 dolls.
Capital invested	15,765,124 do.

The values of the imports of woollen goods into the U. States in 1848-49 were as follows:—

	Dollars.
Cloths and cassimeres	4,995,957
Merino shawls, of wool	1,196,376
Blankets	1,161,429
Hosiery, and articles on frames	718,794
Worsted stuff goods	4,070,185
Woollen and worsted yarn	113,463
— articles embroidered, &c.,	13,910
Manufactures not specified	237,577
Flannels	52,539
Haises	51,518
Wilton, Saxony, and Ambrosian carpets	18,067
Brussels, Turkey, and treble ingrained do.	349,908
Venetian, and other ingrained do.	96,433
Not specified	28,650
Total	13,704,606

The manufactures of leather, and articles made of leather, of linen and linen yarn, iron and hardware, glass, soap, candles, &c., are all carried on pretty extensively; but we have no estimates of their amount on which it would be safe to rely. Steam-engines, and all kinds of machinery, nails, fire-grates, and stoves, chain

cables, agricultural and mechanical implements, fire-arms, &c., are extensively manufactured; but all the finer descriptions of hardware and cutlery, and a great variety of hardware articles, are imported from England. In 1840, according to the census, there were 10,306 distilleries in the United States, producing in that year 41,402,627 gallons spirits. Vast quantities of whisky are distilled in N. Carolina, Pennsylvania, New York, Massachusetts, and other states. Cincinnati, in Ohio, is, however, the grand centre of the whisky manufacture. The whole quantity produced by the distilleries in this city, and brought into it from adjacent distilleries, is said, by Mr. Johnston, to amount to about 14,500,000 galls. a year! (*Notes on N. America*, i. 276.) Of course the largest portion of this immense supply is forwarded to other parts. It is wholly made from Indian corn.

The shot, and red and white lead manufactured in the States, now nearly supply their consumption. About 6,000,000 bushels salt are estimated to be annually made from brine-springs. But, notwithstanding, about 8,000,000 bushels salt are annually imported, principally from Great Britain, but partly, also, from Spain and Portugal.

Commerce.—The trade of the U. States is very extensive. The great article of export is cotton wool, the value of the exports of which, in 1850, amounted, as already seen, to 71,984,616 dolls., being considerably more than half the value of the entire exports (of domestic growth) from the Union. Indeed, the astonishing increase in the production of cotton, and in the demand for it in foreign countries, has been the principal cause of the rapid growth and vast magnitude of American commerce. Cotton is principally shipped for the United Kingdom, France, and Germany. Next to cotton, the great articles of export are wheat flour, Indian corn and provisions; tobacco, raw and manufactured; rice;

the produce of the American fisheries; timber, lumber, &c. The flour and provisions are partly sent to Europe, and partly to Cuba, Brazil, and the W. Indies generally, which are also the great marts for lumber. Tobacco is principally sent to England and Holland.

The great articles of importation are manufactured products, including cottons, woollens, linens, hardware, and earthenware, principally from England; silks and wines, from France and Spain; tea from China; sugar and coffee from Cuba and Brazil, linens and woollens from Germany; salt from England and Portugal; with spices, dye-stuffs, and an infinite variety of other articles from all parts of the world. We subjoin some statements illustrative of the progress and present magnitude of American commerce.

Summary Statement exhibiting the Value of the Articles of Domestic and of Foreign Growth and Manufacture exported from the United States, during each Year, from 1803 down to 1849 inc.; with the Value of the Imports during the same Years.

N. B. The years down to 1843 end on the 30th of September, and since then on the 30th of June.

Value of Exports of the Growth, Produce, and Manufacture of the U. States, &c. — continued.

A very large proportion of the commerce of the U. States is carried on in native ships, and the mercantile marine of the Union is inferior only to that of the U. Kingdom. We subjoin

An Account of the total Tonnage of the American Mercantile Marine, from 1830 to 1869, both inclusive.

Year.	Tonn.	Year.	Tonn.
1830	1,191,778	1849	2,180,764
1831	1,267,348	1850	2,130,748
1832	1,439,150	1851	2,091,389
1833	1,604,150	1852	2,156,608
1834	1,738,907	1853	2,280,984
1835	1,824,360	1854	2,416,001
1836	1,941,103	1855	2,561,084
1837	1,996,898	1856	2,828,144
1838	1,935,610	1857	3,154,011
1839	2,006,479	1858	3,334,014

Internal Communications.—Nowhere in the world, a few parts of Europe excepted, have such extensive canals, and other public works, been undertaken and completed as in the U. States. The greater portion of Pennsylvania, with the adjacent parts of New Jersey, Delaware, and Maryland, is one continued net-work of canals and railroads; and similar works exist, more or less, in nearly all the States; but particularly in those of New York, Ohio, Virginia, S. Carolina, and New England. The great length of many of the U. States' canals is one of their most remarkable features, in which they far surpass any hitherto constructed in Europe. The Erie Canal, connecting Lake Ontario with the Hudson River, is 363 m. in length, being more than twice as long as the Canal of Languedoc, the longest of which Europe can boast. Generally, however, they are deficient in breadth and depth for the increased traffic conducted by their means; several of these have, however, been enlarged.

The tolls paid to the State, by the persons who have boats on these canals, are usually 1 $\frac{1}{2}$ ¢. per mile for each boat, and a small charge per mile for each passenger conveyed. The passenger-boats vary from 12 to 16 ft. in breadth, and are 80 ft. in length; the large-sized boats weigh about 30 tons, and cost about 350 $\frac{1}{2}$ ¢. each. They are usually dragged by three horses, which run 10 m. stages, and the rate of travelling is from 4 to 4 $\frac{1}{2}$ m. an hour. Except in the most S. part of the Union, the canal navigation, as well as that on the rivers and lakes in the N. States, is completely suspended for from three to five months a year during winter, and then the water is always withdrawn from the canals and feeders.

The American railway system commenced in 1827, since which its progress has been as follows:—

Year.	Miles in Opera- tion.	Cost.	Year.	Miles in Opera- tion.	Cost.
		Dollars.			Dollars.
1827	5	50,000	1845	3,559	111,840,000
1828	107	3,000,000	1846	4,144	128,760,000
1829	213	4,830,000	1847	4,549	133,160,000
1830	777	12,850,000	1848	5,258	155,480,000
1831	2,580	40,700,000			

At the close of 1849 above 7,000 m. railway were in

operation, the cost of which exceeded 900,000,000 dollars. And in January, 1851, no fewer than 8,797 m. railway had been completed at a cost of above 368,000,000 dollars, or about 60,000,000 $\frac{1}{2}$ sterling. These railways were distributed as follows:—

State.	Miles.	Cost.
		Dollars.
New York	1,404	44,809,000
New Hampshire	442	13,046,000
Rhode Island	88	2,614,184
Mass.	230	8,765,018
Vermont	448	10,038,907
Maine	1,055	48,255,897
Connecticut	513	18,645,568
New Jersey	258	3,225,000
Pennsylvania	917	64,004,033
Delaware	77	600,000
Maryland	302	15,044,171
Virginia	384	7,378,349
North Carolina	249	4,900,000
South Carolina	271	8,545,678
Georgia	716	11,972,380
Alabama	314	268,000
Florida	94	280,000
Mississippi	80	780,000
Louisiana	88	603,000
Tennessee	23	810,000
Kentucky	77	1,484,000
Indiana	219	4,600,000
Ohio	450	7,398,798
Illinois	177	6,104,000
Michigan	333	7,704,533
Wisconsin	204	680,000

And new undertakings are every day entered into, and are prosecuted with a constancy and a vigour that have nowhere been surpassed. The probability is that at no very distant period the Atlantic and Pacific states will be linked by railway. And though such an undertaking will be of the most gigantic description, it is less so, perhaps, than it may at first sight appear to be; for, owing to the gradual rise of the land from the Mississippi to the Rocky Mountains, that formidable barrier may be reached and penetrated with far less difficulty than might be anticipated.

The internal improvements of the United States are placed under the management either of the legislature of the state in which the works are situated, or of joint-stock companies. Those constructed by the states are called state-works, and are conducted by commissioners chosen from the different legislatures. The joint-stock companies, on the other hand, are composed of private individuals, who, as in Britain, receive a charter from the government empowering them to act accordingly.

At first view, a person from England is struck by the temporary and apparently unfinished state of many of the American works; in which it is in vain to look for the finish which characterises those of France, or the stability with which those of Britain are framed. The American railroads are much more cheaply constructed than the English, not only because they are in a less substantial and costly style, but because they are exempted from the heavy expenses incurred, in the construction of the English railways, by the purchase of land and compensation for damages; and because wood, the principal material used in their construction, is got at a small cost. Among the greatest public works of the Union is a rail-

way (the Alleghany, forming part of the line connecting the Ohio with the Delaware river), which, says Mr. Stevenson, "in boldness of design and difficulty of execution, I can compare to no modern works I have ever seen, excepting, perhaps, the passes of the Simplon, and Mont Cenis in Italy." (p. 185.) (Stevenson, p. 254.) Wood is the material mostly used in the construction of bridges, and wooden pavement has been adopted in parts of New York city. The making of common roads is a branch of industry that has yet been little attended to, and in many parts of the country they are mere forest tracks, or what are called "corduroy roads," formed by the trunks of felled trees laid parallel to each other, in a soft, marshy soil, and over which vehicles advance by a series of leaps and starts sufficiently unpleasant to European travellers. The best roads are in the New England States; but there is a macadamised road from Albany to Troy; and a national road 700 m. in length, and 30 ft. wide, extends, in a tolerably straight line, from Baltimore on Chesapeake Bay to the Mississippi opposite St. Louis; it was constructed at the expense of the central government.

The Americans have very successfully turned their attention to the building of steamboats; and some of the vessels navigating the Eastern waters of the U. States are unequalled in point of speed by those of any other quarter of the globe. On the Mississippi, and other W. waters, the vessels have a greater draught and less speed. The seagoing steamers of the U. States are, as is well known, luxuriously fitted up. The American canal and river travelling, on the other hand, in respect of accommodation for travellers, contrasts unfavourably with that of England, Belgium, or Holland.

Fisheries and Navigation.—Notwithstanding the extraordinary temptations to engage in agriculture afforded by the cheapness and facility of obtaining land, the Americans have always been distinguished by their skill in fisheries and navigation, and by the vigour and success with which they have pursued those branches of industry. They commenced the whale-fishery in 1690, and, for about 50 years, found an ample supply of fish on their own shores: but the whale having abandoned them, the American navigators entered with extraordinary ardour into the fisheries carried on in the Northern and Southern Oceans. From 1770 to 1775, Massachusetts employed annually 183 vessels, carrying 13,820 tons, in the former, and 121 vessels, carrying 14,026 tons, in the latter. Mr. Burke, in his famous speech on American affairs, in 1774, adverted to this wonderful display of daring enterprise as follows:—

"As to wealth," said he, "which the colonists have drawn from the sea by their fisheries, you had all that matter fully opened at your bar. You surely thought these acquisitions of value; for they seemed to excite your envy; and yet the spirit by which that enterprising employment has been exercised ought rather, in my opinion, to have raised esteem and admiration. And pray, sir, what in the world is equal to it? Pass by the other parts, and look at the manner in which the New England people carry on the whale fishery. While we follow them among the tumbling mountains of ice, and behold them penetrating into the deepest frozen recesses of Hudson's Bay and Davis's Straits; while we are looking for them beneath the Arctic circle, we find that they have pierced into the opposite region of polar cold; that they are at the antipodes, and engaged under the frozen serpent of the south. Falkland Island, which seemed too remote, and too romantic an object for the grasp of national ambition, is but a stage and resting-place for their victorious industry. Nor is the equinoctial heat more discouraging to them than the accumulated winter of both Poles. We learn that while some of them draw the line or strike the harpoon on the coast of Africa, others run the longitude and pursue their gigantic game along the coast of Brazil. No sea, but what is vexed with their fisheries: no climate that is not witness of their toils! Neither the perseverance of Holland, nor the activity of France, nor the dexterous and firm sagacity of English enterprise, ever carried this most perilous mode of hardy industry to the extent to which it has been pursued by this recent people; a people who are still in the gristle, and not hardened into manhood."

The unfortunate war that broke out soon after this speech was delivered checked for a while the progress of the fishery; but it was resumed with renewed vigour as soon as peace was restored. The American fishery has been principally carried on from Nantucket and New Bedford, in Massachusetts; and for a considerable time past the ships have mostly resorted to the southern seas. "Although," says Mr. Pitkin, "Great Britain has at various times given large bounties to her ships employed in this fishery, yet the whalers of Nantucket and New Bedford, unprotected and unsupported by anything but their own industry and enterprise, have generally been able to meet their competitors in a foreign market." (*Commerce of the U. States*, 2d. ed. p. 46.) In 1849

there arrived at the different ports of the U. States 108 ships, 9 brigs, and 14 schooners, bringing with them 99,438 barrels of sperm, and 256,183 barrels of common whale oil. During the year ended the 30th June, 1848, the Americans had 180,186 tons shipping employed in the whale fisheries.

The Americans, or rather the New Englanders, also carry on the cod-fishery, partly on the Labrador coast and partly on the coast and banks of Newfoundland, with spirit and success. Their fishermen are remarkable for activity and enterprise, sobriety and frugality; and their proximity to the fishing-grounds, and the other facilities they possess for carrying on the fishery, give them advantages with which it is very difficult to contend. During the year ending the 30th June, 1848, the Americans had 73,882 tons shipping employed in the cod, and 42,942 tons in the mackerel fishery.

The System of Banking in America has attracted a great deal of attention in this country; and it certainly deserves to be carefully studied and meditated, were it only for the incontestable evidence which it affords, that, how flourishing soever in other respects, a country with a vicious banking system may be every now and then involved in the greatest difficulties, and reduced almost to a state of bankruptcy. Considering the peculiarly favourable circumstances under which the U. States are placed, the boundless extent of their fertile and unoccupied lands, the lightness of their public burdens, and the intelligence, enterprise, and economy of the people, it might be presumed that distress and bankruptcy would be all but unknown in the Union, and that she would be exempted from those revulsions which so seriously affect less favourably situated communities. But, in so far as respects mercantile and monied fortunes, the reverse of all this is the fact: discredit and bankruptcy are incomparably more prevalent in America among the mercantile classes than in any European country; and monied fortunes are infinitely more secure in Russia, and even in Turkey, than in the U. States! This anomalous and apparently inexplicable state of things is entirely a consequence of the American banking system, which seems to combine within itself every thing that can make it an engine of evil. Had a committee of clever men been selected to devise means by which the public might be tempted to engage in all manner of absurd projects, and be most easily duped and swindled, we do not know that they could have hit upon any thing more likely to effect their object than the existing American banking system. It has no one redeeming quality about it, but is from beginning to end a compound of quackery and imposture. Our own banking system, before the change introduced by Sir Robert Peel in 1844, was bad enough certainly; but it was, notwithstanding, as superior to the American as can well be imagined. A radical reform of the latter, or, if that cannot be effected, its entire suppression, would be one of the greatest boons that can be conferred on the Union; and would be no slight advantage to every nation with which the Americans have any intercourse.

The American banks are all joint-stock associations; but instead of the partners being liable, as in England, for the whole amount of the debts of the banks, they are in general liable only for the amount of their shares, or for some fixed multiple thereof. It is needless to dwell on the temptation to commit fraud held out by this system, which has not a single countervailing advantage to recommend it. The worthlessness of the plan on which the banks are founded was evinced by the fact that, between 1811 and the 1st of May, 1830, no fewer than 165 became altogether bankrupt, many of them paying only an insignificant dividend; and this exclusive of a much greater number that stopped for a while and afterwards resumed payments. Various complicated schemes for insuring the stability and prudent management of banks have been devised; but, as they all involve regulations which it is impossible to enforce, they are practically worse than useless. In Massachusetts, for example, it is provided that no bank for the issue of notes can go into operation in any way until at least half its capital stock be paid in gold and silver into the bank, and be actually existing in its coffers, and seen in them by inspectors appointed for that purpose; and the cashier of every bank is bound to make specific returns once a year of its debts and assets, on being required to do so by the secretary of state. But our readers need hardly be told that these elaborately contrived regulations are really good for nothing, unless it be to afford an easy mode of cheating and defrauding the public. Instances have occurred of banks having borrowed an amount of dollars equal to half their capital for a single day, and of such dollars having been examined by the inspectors appointed for that purpose, and reported by them, and sworn by a majority of the directors, to be the first instalment paid by the stockholders of the bank, and intended to remain in it. (*Gough's Paper Money and Banking in the U. States*.) We do not, of course, imagine that such disgraceful instances can be of common occurrence; but what is to be

thought of a system which permits a company for the issue of paper money, founded on such an absolute fraud, to enter on business with a sort of public attestation of its respectability? The probability is to which the American banks are subject to infirmities rather than otherwise. Those who are so disposed may easily imagine such returns as they think most valuable to their share, and the more respectable banks endeavor for a month or two previously to the period when they have to make their returns, to increase the amount of bullion in their coffers by temporary loans and all manner of devices. The whole system is, in fact, founded on the most vicious principle. The facility too, with which loans may be obtained from the different banks in periods of prosperity through private individuals and associations, and even states, to engage in the wildest and most gigantic projects. But whenever a pressure for money occurs, bank supplies being no longer obtainable, those who depend on the banks are involved in the greatest difficulties, while the latter being unable to procure payments of their advances, and having, in most instances, no sufficient capital, are obliged hitherto to suspend their payments. Perhaps no instance is to be found in the history of commerce of such a wanton over issue of paper as took place in the U. States in 1836 and 1837 and the revolution to which it necessarily led, after producing a frightful extent of bankruptcy and suffering in all parts of the Union, compared to May 1837 every bank within the states, without exception, a single exception to suspended payments. In 1838, most of them to have and securely swept off resumed specie payments, and in 1839, by far the larger number of them, with the bank of the U. States at their head, again suspended payments.

The Bank of the U. States had a paid-up capital of no less than \$3,000,000 doll., the whole, or nearly the whole, of which issue was then in circulation. It would be out of place to enter into any detailed explanation of the various circumstances that have contributed to the downfall of this establishment. Some thing, no doubt, must be attributed to the hostility of General Jackson and the government, but the real cause of the catastrophe must be sought for in the mismanagement of the directors and the vice presidency from the American banking system.

Unfortunately however there seems little reason to expect that this system will be speedily amended. The only effectual cure for the evil would be the suspension of all legal tender of paper, leaving it to be wholly supplied, in exchange for bullion or other convertible securities, by a single central bank and in an absorption of the law of partnership in respect to banks of deposit. But there is not the slightest probability that any measure of this sort, if proposed, would ever be agreed to, and there can be no doubt that, in time to come, as in time past, each state will continue to pursue its own banking system, that the Union will continue to have hundreds, or rather thousands, of issuers of money, and that these partial observations of extreme prosperity and all but universal bankruptcy we have hitherto witnessed will continue, for a lengthened period, to delight and disgrace the republic.

Gold.—The American gold coin, the Eagle, contains 58 1/2 per cent gold and 41 1/2 alloy. This coin is made the equivalent of 10 dollars, so that the English sovereign is equal to 4 dollars 7 cents. The dollar is worth at par about 4s 6d. Weights and measures are same as in England.

The Government as established in 1787 is a federal democracy. The legislative power is vested in the Congress, an assembly of two separate bodies, the Senate and the H. of Representatives. The Senate consists of 36 members, 2 from each state chosen for a term of six years by the legislatures of the several states they represent. The qualifications necessary for a senator are the having attained the age of 30 years, having been a citizen of the U. States for 14 years, and being an inhabitant of the state for which he is chosen. The Senate has a concurrent vote in the ratification of treaties and executive nominations, and the sole power to try impeachments. One third of its members goes out of office every two years. The H. of Representatives is composed of members from the several states elected by the people for the term of 2 years. According to an act of Congress the number of representatives is fixed at 535. And the ratio "representative population" of the different states (3 dimes being reckoned equivalent to 3 free persons) is determined by the decennial census, being divided by 333,333 of square, the population entitled to send a member to Congress. Some of the returns given in the preceding table of the pop. for 1830 are not quite complete, but they are sufficiently accurate for most practical purposes. And it results from them that the representative pop. may be taken at about 7,100,000, which, being divided by 535, gives 13,271 for the representation unit. Hence the number of members which each state will be entitled to return during the next 10 years is, at

Vol. II.

least, ascertained by dividing its representative pop. by 13,271. Should these divisions not give, as is usually the case, the entire number of members, the deficiencies are supplied by the states who have the largest unrepresented fractional pop. Thus, Connecticut will, according to the last census, be entitled to send 3 members to Congress, and will have, in addition, an unrepresented pop. of 91,335, so that she will be all but certain to have a 4th member assigned to her. During the last 10 years the representative unit was 70,000. New York, Pennsylvania, and Ohio, will have the largest number of representatives in the new Congress.

The qualification for representation is, their having attained the age of 25 years, and been 7 years citizens of the U. States. The House of Representatives has the sole power of impeachment, and of originating money bills. Congress must assemble at least once a year on the first Monday in Dec. Each house chooses its own speaker and other officers; the president of the senate being the vice president of the U. States. Both houses are divided into a number of committees for the dispatch of business chosen by ballot. The members of both houses receive a salary of \$5,000 a year during their attendance, and travelling expenses of \$5 dollars for every day. The speakers of both houses have 15 dollars a day. The executive power is vested in the president, who is chosen by the electoral college at the second election for the term of 4 years, he must be 35 years of age, and a natural born citizen who has resided for 14 years in the U. States. The president is commander-in-chief of the land and sea forces, and has power to make treaties, and appoint to the principal civil and military offices in the states, with the consent of the senate. He has a veto on bills which may have passed both houses of Congress, though if three-fourths of each house they become law without his sanction. His salary is \$25,000 dollars a year. The president is assisted by a cabinet of six ministers, who hold office during his pleasure. The secretary of state, the secretary of the treasury war and navy, the postmaster general and the attorney general, the salaries of each being 6,000 dollars a year. Besides the General Congress each state has its own supreme senate and H. of Representatives, started by its habits. The qualifications of electors are not the same in every part of the Union, and referring them we refer the reader to the acts on the several states. The individual states are to meet separately independent as to their internal administration, but no state can enter into any treaty or alliance with any foreign power, grant letters of marque and reprisal with any nation, coin bills of credit, grant titles of nobility, &c. &c.

In order that the reader may be fully acquainted with the institutions and government of the U. States, we enclose a copy of the general constitution of the Union, as agreed upon in 1787, and of the amendments that have since been made upon it.

CONSTITUTION OF THE UNITED STATES.

We the people of the U. States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defence, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do hereby establish this Constitution for the U. States of America.

Article I.

Section 1. All legislative powers herein granted shall be vested in a Congress of the U. States, which shall consist of a Senate and House of Representatives.

Section 2. 1. The House of Representatives shall be composed of members chosen every second year by the people of the several states, and the electors in each state shall have the qualifications requisite for electors of the most numerous branch of the state legislature.

2. No person shall be a Representative who shall not have attained to the age of 25 years, seven years a citizen of the U. States, and when elected shall have been 7 years a citizen of the state in which he shall be chosen. 3. The House of Representatives shall elect their speaker and other officers, and shall have the sole power of impeachment.

Section 3. 1. The Senate of the United States shall be composed of two senators from each state, chosen by the legislature thereof, for six years; and each senator shall have the qualifications requisite for electors of the most numerous branch of the state legislature.

2. The Senate shall elect their president and other officers, and shall have the sole power of impeachment.

first election, they shall be divided as equally as may be into three classes. The seats of the senators of the 1st class shall be vacated at the expiration of the 1st year, of the 2d class at the expiration of the 2d year, and of the 3d class at the expiration of the 3d year, so that one third may be chosen every year; and if vacancies happen by resignation, or otherwise, during the recess of the legislature of any state, the executive thereof may make temporary appointments until the next meeting of the legislature, which shall then fill such vacancies.

3. No person shall be a senator who shall not have attained to the age of 30 years, and been 7 years a citizen of the U. States, and who shall not, when elected, be an inhabitant of that state for which he shall be chosen.

4. The Vice-President of the U. States shall be President of the Senate, but shall have no vote, unless they be equally divided.

5. The Senate shall choose their other officers, and also a president pro tempore, in the absence of the Vice-President, or when he shall exercise the office of President of the U. States.

6. The Senate shall have the sole power to try all impeachments: when sitting for that purpose, they shall be on oath or affirmation. When the President of the U. States is tried, the Chief Justice shall preside, and no person shall be convicted without the concurrence of two thirds of the members present.

7. Judgment in cases of impeachment shall not extend further than to removal from office, and disqualification to hold and enjoy any office of honour, trust, or profit, under the U. States; but the party convicted shall, nevertheless, be liable and subject to indictment, trial, judgment, and punishment, according to law.

SECTION IV. 1. The times, places, and manner of holding elections for senators and representatives, shall be prescribed in each state by the legislature thereof; but the Congress may at any time, by law, make or alter such regulations, except as to the places of choosing senators.

2. The Congress shall assemble at least once in every year, and such meeting shall be on the 1st Monday in Dec., unless they shall by law appoint a different day.

SECTION V. 1. Each House shall be the judge of the elections, returns, and qualifications of its own members, and a majority of each shall constitute a quorum to do business; but a smaller number may adjourn from day to day, and may be authorized to compel the attendance of absent members, in such manner and under such penalties as each House may provide.

2. Each House may determine the rules of its proceedings, punish its members for disorderly behaviour, and with the concurrence of two thirds, expel a member.

3. Each House shall keep a Journal of its proceedings, and from time to time publish the same, excepting such parts as may, in their judgment, require secrecy; and the yeas and nays of the members of either House on any question shall, at the desire of one fifth of those present, be entered on the Journal.

4. Neither House, during the session of Congress, shall, without the consent of the other, adjourn for more than three days, nor to any other place than that in which the two Houses shall be sitting.

SECTION VI. 1. The senators and representatives shall receive a compensation for their services, to be ascertained by law, and paid out of the treasury of the U. States. They shall in all cases, except treason, felony, and breach of the peace, be privileged from arrest during their attendance at the session of their respective Houses, and in going to and returning from the same, and for any speech or debate in either House, they shall not be questioned in any other place.

2. No senator or representative shall, during the time for which he was elected, be appointed to any civil office under the authority of the U. States, which shall have been created, or the emoluments whereof shall have been increased during such time; and no person holding any office under the U. States shall be a member of either House during his continuance in office.

SECTION VII. 1. The migration or importation of such persons as any of the states now existing shall think proper to admit shall not be prohibited by the Congress prior to the year 1808; but a tax or duty may be imposed on such importation, not exceeding 10 dollars for each person.

2. No money shall be drawn from the treasury, but in consequence of appropriations made by law; and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time.

3. No title of nobility shall be granted by the U. States: and no person holding any office of profit or trust under them, shall, without the consent of the Congress, accept any present, emolument, office, or title of any kind whatever, from any king, prince, or foreign state.

SECTION VIII. 1. No state shall enter into any treaty, alliance, or confederation, grant letters of marque and reprisal, coin money, emit bills of credit, make any thing but gold and silver coin a tender in payment of debts; pass any bill of attainder, ex post facto law, or law impairing the obligation of contracts; or grant any title of nobility.

2. No state shall, without the consent of the Congress, lay any imposts or duties on imports or exports, except what may be absolutely necessary for executing its inspection laws; and the net produce of all duties and imposts, laid by any state on imports or exports, shall be for the use of the treasury of the U. States: and all such laws shall be subject to the revision and control of the Congress.

3. No state shall, without the consent of the Congress, lay any duty of tonnage, keep troops or ships of war in time of peace, enter into any agreement or compact with another state, or with a foreign power, or engage in war, unless actually invaded, or in such imminent danger as will not admit of delay.

ARTICLE II.

SECTION I. 1. The executive power shall be vested in a President of the United States of America. He shall hold his office for four years, and shall be eligible for re-election only once.

2. Before he enter on the execution of his office, he shall take the following oath or affirmation:—“I do solemnly swear (or affirm) that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect, and defend the Constitution of the United States.”

SECTION II. 1. The President shall be commander-in-chief of the army and navy of the United States, and of the militia of the several states when called into the actual service of the United States; he may require the opinion, in writing, of the principal officer in each of the executive departments, upon any subject relating to the duties of their respective offices, and he shall have power to grant reprieves and pardons for offences against the United States, except in cases of impeachment.

2. He shall have power, by and with the advice and consent of the Senate, to make treaties, provided two thirds of the senators present concur; and he shall nominate, and by and with the advice and consent of the Senate, shall appoint ambassadors, other public ministers, and consuls, judges of the supreme court, and all other officers of the United States, whose appointments are not herein otherwise provided for, and which shall be established by law; but the Congress may by law vest the appointment of such inferior officers, as they think proper, in the President alone, in the courts of law, or in the heads of departments.

3. The President shall have power to fill up all vacancies that may happen during the recess of the Senate, by granting commissions which shall expire at the end of their next session.

4. The President shall have the power to declare war, but no declaration of war shall be valid unless voted by a majority of both Houses of Congress.

5. The President shall have the power to receive ambassadors and other public ministers.

6. The President shall have the power to grant pardons, and to commute fines and penalties except in cases of impeachment.

7. The President shall have the power to nominate and to appoint, and shall have the power to remove and to discontinue, any officer or officer of the United States, who may be appointed by him, except in cases of impeachment.

8. The President shall have the power to receive and to send ambassadors and other public ministers, and to receive and to send consuls, judges of the supreme court, and all other officers of the United States, whose appointments are not herein otherwise provided for, and which shall be established by law; but the Congress may by law vest the appointment of such inferior officers, as they think proper, in the President alone, in the courts of law, or in the heads of departments.

9. The President shall have the power to fill up all vacancies that may happen during the recess of the Senate, by granting commissions which shall expire at the end of their next session.

10. The President shall have the power to declare war, but no declaration of war shall be valid unless voted by a majority of both Houses of Congress.

11. The President shall have the power to receive ambassadors and other public ministers.

Section III. He shall, from time to time, give to the Congress in Session of the State of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient; in way, on extraordinary occasions, convene both Houses, or either of them, and in case of disagreement between them, with respect to the time of adjournment, he may adjourn them to such time as he shall think proper; he shall receive ambassadors and other public ministers; he shall take care that the laws be faithfully executed, and shall commission all the officers of the United States.

Section IV. The President, Vice-President, and all civil officers of the United States, shall be removed from office on impeachment for, and conviction of, treason, bribery, or other high crimes and misdemeanors.

ARTICLE III.

Section 1. The judicial power of the United States shall be vested in one supreme court, and in such inferior courts as the Congress may from time to time ordain and establish. The judges both of the supreme and inferior courts, shall hold their offices during good behavior, and shall, at stated times, receive for their services a compensation, which shall not be diminished during their continuance in office.

Section 2. 1. The judicial power shall extend to all cases, in law and equity, arising under this Constitution, the laws of the United States, and treaties made, or which shall be made, under their authority; — to all cases affecting ambassadors, other public ministers and consuls; — to all cases of admiralty and maritime jurisdiction; — to controversies to which the United States shall be a party; — to controversies between two or more states; — between a state and citizens of another state; — between citizens of different states; — between citizens of the same state claiming lands under grants of different states, and between a state or the citizens thereof, and foreign states, citizens, or subjects.

2. In all cases affecting ambassadors, other public ministers, and consuls, and those in which a state shall be party, the supreme court shall have original jurisdiction. In all the other cases before mentioned, the supreme court shall have appellate jurisdiction, both as to law and fact, with such exceptions, and under such regulations, as the Congress shall make.

3. The trial of all crimes, except in cases of impeachment, shall be by jury, and such trial shall be held in the state where the said crimes shall have been committed; but when not committed within any state, the trial shall be at such place or places as the Congress may by law have directed.

Section 3. 1. Treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort.

2. No person shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court.

3. The Congress shall have power to declare the punishment of treason, but no attainder of treason shall work corruption of blood, or forfeiture, except during the life of the person attainted.

ARTICLE IV.

Section 1. Full faith and credit shall be given in each state to the public acts, records, and judicial proceedings of every other state. And the Congress may, by general laws, prescribe the manner in which such acts, records, and proceedings shall be proved, and the effect thereof.

Section 2. 1. The citizens of each state shall be entitled to all privileges and immunities of citizens in the several states.

2. A person charged in any state with treason, felony, or other crime, who shall flee from justice, and be found in another state, shall, on demand of the executive authority of the state from which he fled, be delivered up, to be removed to the state having jurisdiction of the crime.

3. No person held to service or labour in one state, under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labour, but shall be delivered up on claim of the party to whom such service or labour may be due.

Section 3. 1. New states may be admitted by the Congress into this Union; but no new state shall be formed or erected within the jurisdiction of any other state; nor any state be formed by the junction of two or more states, or parts of states, without the consent of the legislatures of the states concerned, as well as of the Congress.

2. The Congress shall have power to dispose of and make needful rules and regulations respecting the territory or other property belonging to the United States; and nothing in this Constitution shall be so construed as to prejudice any claims of the United States, or of any particular state.

Section 4. The United States shall guarantee to every state in this Union a republican form of government, and shall protect each of them against invasion, and on application of the legislature, or of the executive (when the legislature cannot be convened), against domestic violence.

ARTICLE VI.

1. All debts contracted, and engagements entered into, before the adoption of this Constitution, shall be as valid against the United States under this Constitution as under the Confederation.

2. This Constitution, and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges in every state shall be bound thereby, any thing in the constitution or laws of any state to the contrary notwithstanding.

3. The senators and representatives before mentioned, and the members of the several state legislatures, and all executive and judicial officers, both of the United States and of the several states, shall be bound by oath or affirmation to support this Constitution; but no religious test shall ever be required as a qualification to any office or public trust under the United States.

ARTICLE VII.

The ratification of the conventions of 9 states shall be sufficient for

extended system of election, constitutes the distinguishing characteristic of the American constitution. Any lengthened inquiry into the advantages and disadvantages of such a form of government would, perhaps, be foreign to our subject; and would, at all events, be incompatible with our limits. It is sufficient to observe that, as the suffrage in the greater number of the states is now nearly or completely universal, the legislature and officers of government, as well of separate states as of the Union, are chosen rather by the numerical majority than by the intelligence of the country. It has, it is true, been contended in an able, though partial article on the U. States, in the new edition of the Encyclopædia Britannica, that, "when the people have a free choice, they will always prefer merit to demerit." And no doubt this would be the case provided they could readily distinguish between the merit and demerit of the parties soliciting their suffrages. But how are they to do this? how are they to discriminate between the tares and the corn? between protestations and realities? between a simulated zeal for the public interests and a secret determination to prostitute them to selfish ends? Every one knows that the most popular individuals are not always, nor even frequently, the most deserving; but those who can best contrive to recommend themselves, whether by worthy or unworthy means, to the favour of the public. This, no doubt, is an evil that is, partially at least, inherent in all elective systems; but it becomes more obvious the lower the suffrage is extended, and the greater the number of the electors. The bulk of the latter can then know but little of the private history, connections, and real character of the candidates for their favour; and having, in the great majority of instances, nothing better to trust to than protestations and promises, are often deceived in the estimate they form of those whom they choose for representatives. In the election to the highest offices, such as those of president and vice-president, which are chosen by the whole Union, the inconvenience now stated is not so much felt; for, before a man can aspire to such offices, he must have been for a lengthened period before the public, and have, consequently, afforded them the means of making a pretty fair appreciation of his public principles and conduct. But in the case of the representatives sent to the legislature of the different states, and those selected to fill local offices, the principle now noticed does not apply. In these the electors always have been, and, it may safely be affirmed, always will be caught by the same baits; declamatory harangues, violent party demonstrations, and specious, though hollow, promises, will too frequently succeed where talents, knowledge, good sense, and integrity are disregarded.

The universality of the franchise in the U. States, and the frequency of elections, have the advantage of keeping the public attention alive to political matters; but this, on the other hand, keeps up the most violent party contentions; and too frequently tempts one or other party, in difficult exigencies, to resort to unjustifiable proceedings. The tyranny of a majority may be quite as oppressive as that of a despot. And where the government is so entirely dependent on the democracy, it dares not take any course, how just soever or expedient, that might clash in any way with popular prejudices. In its results, at least, the *vox populi* is here the *vox Dei*; and as it is very apt to be influenced by sudden impulses, injustice is apt to be committed before

time is given for reflection, or a fair estimate can be formed of the consequences of measures. In proof of what is now stated we may refer to the recklessness which the greater number of the separate states evinced of late years in the contraction of debts; and the shameless effrontery with which several of them have refused, notwithstanding their undoubted ability, to make good the engagements into which they had so recently entered. The mere populace has, in fact, far too much influence in America; and the government will never be secure, nor able to act consistently on just and sound principles, till this influence be diminished.

The division of the Union into separate states, each of which is, as it were, a semi-independent republic, with its local government and legislature, has some advantages, but many more defects. It enables the private and peculiar affairs of the different states to receive that proper attention that could hardly be expected from a general government, and in so far is beneficial: on the other hand, however, it weakens, and indeed goes far to nullify, the authority of the central government, in the transacting of the public business of the Union. The fact of all its local and private business being transacted at home makes each state regard itself rather as an independent community than as a portion of one great empire. Owing, also, to the vast extent of the Union, the inhab. of its different states have but little intercourse with each other; and their interests as regards foreign countries may not unfrequently have little in common, and be even opposed to those of their fellow-citizens in some other quarter. What interest, for example, could the Southern States take in the question as to the boundary of Maine? And supposing the negotiations respecting it had unhappily terminated in war, is it to be supposed that Louisiana, Alabama, and other states along the Gulf of Mexico, would have submitted to the burdens and privations it would have brought along with it, for a matter in which they really had very little, if any, interest? Again, in the case of the imprisonment of black sailors in Charleston, which is of importance only to the slave-holding states, is it to be supposed that their pretensions will be abetted by those who repudiate slavery?

But, though the States E. of the Rocky Mountains should hold together, we apprehend it will be quite another thing with the States on the Pacific. Their interests are not identical with, but are in various respects opposed to those of the Eastern States. And we hardly think that the miners and cultivators of California and Oregon will continue, for any very lengthened period, to pay high duties on their clothes, hardware, &c., for the sake of the weavers of Lowell and the iron founders of Pittsburgh.

Apart, however, from these prominent causes of dissension, it seems pretty clear, in the event of the central government getting, on whatever grounds, into a dispute with a foreign power, that their opponents would gain a majority in the legislatures of some of the states, and it is impossible to say to what lengths faction and party spirit might carry them. The general opinion is, and we believe that it rests on a solid foundation, that had the last war with this country been protracted for a year or two longer, and been conducted with proper vigour on our part, it would have occasioned a disruption of the Union. In fact, the latter could not exist for any length of time were the country surrounded, like the European states, by other independent and formidable nations; and even as it is, the dif-

ferent interests of the different states, and the necessity of obviating, in as far as possible, the causes of disagreement, obliged the central government to adopt a timid and tentative policy, and deprives it of the greater portion of the weight and influence it would certainly enjoy were its action at home less impeded.

Even if a purely democratic government had been more successful in America than it appears to have been, that would be but a slender recommendation in its favour. There are so many important circumstances of a special and peculiar character in the condition of America, that it would be rash in the extreme to infer that institutions suitable for her would answer equally well in other countries. The extraordinary facilities for obtaining wealth and the means of subsistence in the U. States render universal suffrage incomparably less dangerous there than in old settled, and densely-peopled countries. The people in the former are not exposed to those severe distresses and privations which they frequently suffer in the latter; and that incomparably larger proportion of their number who are dependent on the land are always sure to obtain a pretty ample share of, at least, the necessities of life. They have, therefore, but little motive to interfere with the rights of property, or to adopt any violent means for improving their own condition at the expense of their neighbours. Certainly, however, the conduct of some of the states in repudiating their debts shows what might be expected from them, had they any very conspicuous objects of attack, were distress at all prevalent. We do not, however, think that in this respect the Americans are at all worse than others; and our conviction is, that if we had the same sort of ultra-democratical government in England that exists in the U. States our national debt would be very speedily wiped off, and our large estates parcelled out into more convenient portions. The American institutions are not very unsuitable, for a country where property is generally diffused; and where, owing to the abundance of fertile and unoccupied land, every industrious man may become independent: but they are wholly unsuitable for countries in the condition of most of those in Europe. Can any one doubt that if those who have nothing were permitted to legislate for those who have, as would be the case were we subject to a system of universal suffrage, a division of property would, sooner or later, be the inevitable consequence?

The *judiciary power* of the U. States resides in a supreme court at Washington, and 43 district courts, one or more in each separate state, and the district of Columbia. The supreme court consists of a chief justice, with a salary of 5,000 doll., and at present (1850) eight associate judges, who each receive 4,500 doll. a year. The U. States are divided into 9 circuits, which are travelled separately twice a year by the judges of the supreme court; and the circuit courts have jurisdiction in all criminal cases, and in civil causes to the amount of more than 500 doll., and, in some cases, exercise a jurisdiction of appeal from the inferior courts. The laws of the U. States are bottomed upon the common and statute law of England; but capital punishments are less frequently resorted to than they used to be in this country.

On the whole, however, we apprehend it cannot be denied that the administration of justice in the U. States labours under several, and those probably incurable, defects. Party-spirit, which is the bane of all free countries, runs very high in America, and in cases involving political considerations jurors are very apt to be biased, and the most obvious principles of justice are too often sacrificed to the most unworthy feelings and prejudices. In the Southern and Western States the existence of slavery, the weakness of the government, and the turbulent unruly character of many of the settlers, oppose the most formidable obstacles to the due administration of the laws; and the fact is, that the most barbarous actions,

and crimes of the utmost atrocity, are there frequently perpetrated with impunity. This weakness of the law keeps alive, and, in some degree, excuses the practice of *Lynch law*, or the execution of summary justice by the populace upon individuals whose offences the law might not be able to reach. It is not easy, however, to say whether the toleration of such a practice, or the negation of all law, be preferable. Numerous instances may, no doubt, be specified, in which notorious offenders, who would otherwise have escaped all punishment, have, through the intervention of Lynch law, suffered the penalty due to their crimes; but, on the other hand, it exposes all individuals who have, how undeservedly soever, become objects of popular aversion and dislike, to the most serious danger; and instances have not been wanting, especially in the Southern States, in which individuals have met with the most savage treatment, and even been put to death, for manifesting some little interest in the fate of the blacks, and some wish to meliorate their condition!

The truth is, where so much power is conceded to the lower classes as in the U. States, the administration of justice must always be liable to great abuse. Juries chosen from among the people must necessarily be influenced to a greater or less extent by the feelings and prejudices prevalent amongst the class from which they are taken. In Great Britain jurors are selected from among the middle classes, and are not, therefore, so apt to be swayed by popular enthusiasm, at the same time that the station, authority, and learning of the judges give them an influence over juries which it were idle to suppose should be enjoyed by such functionaries in the U. States. Many of the latter, indeed, are chosen for short terms only by popular election, and carry to the judgment seat all those narrow party views that recommended them, in the first instance, to the support of their friends. It is true there have been, and still are, numerous judges in the U. States, whose learning and judicial talent would do honour to any country; but this is not, and cannot be, the general character of this class of functionaries when chosen under such a system as prevails in America.

Public Instruction is nowhere more extensively diffused than in the N. part of the Union; and the education in the common schools is of the best description. Their attention to the education of the people, and the liberal provision made to insure that grand object, are most creditable to the American legislators. Everywhere in New England, except in Connecticut, the primary schools are supported by a property tax; and some of the states have school funds in addition, the income of which is distributed among the towns in proportion to the number of pupils educated. The common or public free schools are managed in each district by 12 directors, chosen by the people; and the children are taught gratuitously, the only expense being for books. Each town has one of these schools, and one is generally established in every rural district of 5 or 6 sq. m. The instruction which is thus brought as it were within reach of every body, embraces the rudiments of English education, including arithmetic and geography; and in the larger towns Latin and Greek.

The principles of this system, its adaptation to the peculiar circumstances of the country, and its probable influence over the character and condition of the people, were set in the most striking point of view in a speech delivered by Mr. Webster, in an assembly held in Massachusetts in 1821:—"For the purpose of public instruction," said he, "we hold every man subject to taxation in proportion to his property, and we look not to the question whether he himself have or have not children to be benefited by the education for which he pays; we regard it as a wise and liberal system of policy, by which property, and life, and the peace of society, are secured. We seek to prevent, in some measure, the extension of the penal code, by inspiring a salutary and conservative principle of virtue and of knowledge in an early age. We hope to excite a feeling of respectability and a sense of character, by enlarging the capacities and increasing the sphere of intellectual enjoyment. By general instruction we seek, so far as possible, to purify the moral atmosphere; to keep good sentiments uppermost; and to turn the strong current of feeling and opinion, as well as the censures of the law, and the denunciations of religion, against immorality and crime. We hope for a security beyond the law and above the law, in the prevalence of enlightened and well principled moral sentiment. We hope to continue and to prolong the time, when, in the villages and farm-houses of New England, there may be undisturbed sleep within unharmed doors. Knowing that our government rests directly upon the public will, that we may preserve it we endeavour to give a safe and proper direction to that public will. We do not, indeed, expect all men to be philosophers, or statesmen; but we confidently trust, and our expectation of the duration of our system of government rests upon the trust, that by the diffusion of general knowledge, and good and virtuous sentiments, the political fabric may

be secured, as well against open violence and overthrow, as against the slow but more undermining of Slavery. We reject that every man in this community may call all property his own, so far as he has occasion for it to furnish for himself and his children the blessings of religious instruction and the elements of knowledge. This celestial and this earthly light he is entitled to by the fundamental laws. It is every man's duty to defend this inheritance. It is the great blessing which this constitution has secured to him. It is his estate in life, and it may well be his inheritance to death, that his country stands pledged, by the oath which it has pledged to all its citizens, to protect his children from ignorance, barbarism and vice.

Out of New England an adequate provision for public education exists in all the populous States, as Pennsylvania, New Jersey, Maryland, Virginia, &c.; and whilst many everywhere provide free education. In the newly settled States the provision for the support of common schools has been secured by Congress, and every township is divided into 36 sections of a sq. m. each, one of which is appropriated to the support of schools. We have previously said, that the blacks are not permitted to share in the advantages of education, and if it be determined, ever get ready to retain them in their present abject state of slavery this repulsive system, perhaps, be fairly objected to. But its maintenance or repeal should certainly provide any attempts to improve their condition, or to invest them with any portion of the rights and privileges enjoyed by the whites.

Superior instruction is, also, provided for in the most illustrious manner, partly by the central and local governments, and partly by private individuals and associations. Academies of various degrees of excellence are found in every part of the Union. In these the modern and modern languages, grammar, history, logic, rhetoric, natural and moral philosophy, &c., are taught. There are, besides, about 150 colleges and universities, supported by different religious denominations or by the State, and, in the more populous parts of the country there are but few instances of any considerable system without one or more of these institutions. The principal are Harvard University in Massachusetts, Yale College in Connecticut, Dartmouth College, Bowdoin College, &c. There are about 60 theological, 25 medical, and 15 law schools, the last of which are the least frequented.

A vast number of newspapers and journals issue from the American press. But, with some few exceptions, the newspapers and political journals are more distinguished by the evidence of their party spirit and outrageous abuse than by ability or information. The best European works are mostly republished in America, and the Americans have themselves made some valuable contributions to the literature they have inherited from their forefathers. Numerous scientific societies are established and active and the fine arts have made considerable progress in the Union. A vast number of hospitals and charities of all kinds, religious, Sunday schools, prison reformatory, savings banks and other benevolent institutions, have also been established.

The standing army in 1860 amounted to 10,000 men, including 2 regiments of infantry, 4 of artillery, 3 of dragoons, 1 of staff officers and medical officers. The whole territory of the U. States is subdivided into 39 Territories, and 8 grand divisions, the 8 of which are at Troy, New York, at New Orleans, and those of the Pacific Ocean, California. The army before organized in the course of this year (1861). The pay of a major general is \$20 dollars a month, of a colonel, 15 do., of a captain, 10 do., and of lieutenant, from 10 to 15 do., with proportionate rates. Sergeants-major receive 17 dollars, corporals, 9 do., and privates, 7 do. a month, without rations. No half pay is given. The army is not a lucrative service, which considering the demand for labour and the difficulty of raising to all ordinary employments, is not to be considered as. The entire Armies are all enrolled in the militia, which, in 1860, comprised 1,214,000 men.

The Naval Force comprised, in 1860, —

In Commission—Ships of the line, 5, ruses, 1, frigates, 7, ships of war 14, brigs, 4, schooners, 4, steamers, 7, store ships, 6, total, 41.

In Ordinary—Ships of the line, 4, frigates, 6, ships of war, 6, schooners, 1, steamers, 1, total, 18.

Repairing and Equipping—Ships of war, 1, steamers, 5, store ships 5, total, 11.

On the stocks and Constructing—Ships of the line, 4, frigates, 1, steamers, 1, total, 7.

Marines, &c. "It is impossible not to be struck with the beautiful architecture of most of these vessels. The Ohio is so far as I am a judge, the perfection of a ship of the line." (Dairy II & 16). The navy is a favourite service, and the pay is much higher proportionally than in the army. Captains receive from 2,500 to 3,500 dollars a year, lieutenants, from 1,500 to 2,500 do.; surgeons, from 1,000 to 2,000 do.; assistant surgeons, from 800 to 1,100 do.; midshipmen, from 400 to 700

do.; masters, from 700 to 1,100 do.; and instructors, and others, &c., from 300 to 700 dollars. The rate is much higher than that in the English navy; but, according to Captain Murray, the officers of the American navy have not one cent more than they actually require; all things being much cheaper in America than in England to a person not growing or otherwise producing his own necessaries, but living upon his wages. London which is a country like the U. States, when any one in a few years, to personal industry, may become independent, it would be impossible for the government to secure officers if they were not tolerably well paid. (Dairy II 16).

The Americans are justly proud of their navy, and its glorious exploits during the last war with England. But it should be remembered, that the American ships were mostly of much greater size and weight of metal than the British ships which they captured, and that, in some such as the contest between the Shannon and Chesapeake, where the ships on both sides were of nearly equal force, the result was different. No doubt, however, the Americans are excellent seamen, and the skill, courage and discipline of their ships of war do them infinite credit. Sooner for the American navy are not deterred by improvements, but by voluntary enlistment and union we give up the practice of improvement is not but certain in the event of another war, as we are, that it will drive our numbers of British vessels into the American service. This, in fact, it has already done. At the end of last war it was estimated that about 10,000 English vessels were in the American service; and that it may easily be said that the retention of the American over English ships were in great part ascribed to English sailors. It is to be hoped that we may not, by constantly clinging to a positive freight with injustice and oppression, so greatly lessen our own and increase the number of foreign seamen.

There are 7 navy yards in the U. States; three at Portsmouth, in New Hampshire, Charleston, near Sumter, New York, Philadelphia, Washington (where all the anchors, sailing blocks, &c. required are made), Portsmouth in Virginia, and Pensacola, in Florida.

Revenue and Expenditure. The revenue of the Union is almost wholly derived from the customs' duties, the produce of the sales of public lands, and the post-office from 1860, the customs duties have been as follows:—

Year	1860	1861	1862	1863	1864	1865
Value	\$2,200,000	\$2,300,000	\$2,400,000	\$2,500,000	\$2,600,000	\$2,700,000

The revenue derived from the sale of public land amounts to a still more extraordinary degree than the customs' duties, as is obvious from the following

Statement of the Quantity of Public Land sold in the U. States, and Amount paid for the same in each Year from 1860 to the end of the Third Quarter of 1865.

Year	Acres	Value
1860	10	\$2,200,000
1861	15	\$2,300,000
1862	20	\$2,400,000
1863	25	\$2,500,000
1864	30	\$2,600,000
1865	35	\$2,700,000
1866	40	\$2,800,000
1867	45	\$2,900,000
1868	50	\$3,000,000
1869	55	\$3,100,000
1870	60	\$3,200,000
Total	75	\$2,200,000

We may remark, by the way, that this table will be the influence of the excessive increase of bank paper in 1860 in the current price of wheat as well as the depression under which the Union was labouring in 1861 and 1862. The post-office revenue barely suffices to defray the expenses of the establishment, and the other sources of revenue are quite insignificant.

The total Revenue and Expenditure of the U. States in 1860 and 1865, was as follows, viz:—

Revenue	Customs	Land	Post-office	Total
1860	\$2,200,000	\$2,300,000	\$2,400,000	\$6,900,000
1865	\$2,700,000	\$2,800,000	\$2,900,000	\$8,400,000

Expenditure	Civil	War	Naval	Internal	Total
1860	\$1,500,000	\$1,600,000	\$1,700,000	\$1,800,000	\$6,600,000
1865	\$1,600,000	\$1,700,000	\$1,800,000	\$1,900,000	\$6,900,000

The public debt of the Union, which amounted to the end of last war with Great Britain, to 100,712,000 dollars.

was entirely paid off in 1835. The surplus revenue which accrued in that and the years immediately following was distributed, pursuant to the act of Congress, among the several states of the Union, on condition that it should be repaid at certain intervals by quarterly instalments. But, owing to the pecuniary difficulties in which they have since been involved, the payment of the last instalment has been indefinitely postponed. Small, indeed, as is the expenditure of the Union, the government has sometimes, owing to the embarrassments arising out of the vicious banking system with which the country is afflicted, found the greatest difficulty in meeting its engagements. The cost of the late war with Mexico, inc. the sum which it was agreed to pay to that republic, is said to have amounted to above 217,000,000 doll. To meet this heavy expense several loans became necessary, and hence, in 1849, the Union owed a debt of 64,704,698 doll.; which, compared with its revenue and resources, is a mere trifle.

Most of the separate states, and some of the principal cities of the Union, have contracted a greater or less amount of debt, principally for the construction of canals, railways, or other local improvements, the erection of public buildings, the establishment of banks, and other institutions, &c. Subjoined is a

Statement of the Debts of the several Indebted States of the Union, at the close of 1850:—

States, &c.	Debts in Dollars.	States, &c.	Debts in Dollars.
Maine -	854,750	Tennessee -	3,337,856
Massachusetts -	6,135,064	Kentucky -	4,497,652
New York -	24,038,122	Ohio -	19,026,200
New Jersey -	67,595	Indiana -	6,531,737
Pennsylvania -	40,511,175	Illinois -	16,612,795
Maryland -	15,909,981	Missouri -	956,261
Virginia -	15,497,455	Michigan -	2,812,717
S. Carolina -	2,510,896	Arkansas -	3,862,172
Georgia -	1,828,472	Texas -	11,055,694
Alabama -	8,539,110	Iowa -	55,000
Mississippi -	7,271,707	California -	390,000
Louisiana -	16,238,151		

Some of the funds so borrowed have been profitably laid out; but a large proportion was, we believe, expended on projects, some of which will, most probably, be a total loss, while others yielded little or no revenue for years after the outlay. But their injudicious expenditure did not afford so much as the shadow of an excuse for the conduct of Michigan, Mississippi, Louisiana, and other states who proceeded to repudiate their debts. Nothing, in fact, was ever heard of in the public conduct of nations more audaciously profligate than this repudiation. Necessity may compel a state, as well as an individual, to become bankrupt; but the repudiating American states had no such excuse; they were all but entirely free from the burden of taxes; and the smallest sacrifice on their part, such as the imposition of a small internal duty on spirits, tobacco, or some such articles, consumed within their limits, would have enabled them to face all their engagements. The truth is, that their dishonesty was so glaring and barefaced, as to admit neither of palliation nor excuse. The pretences they put forward in extenuation of their roguery served only to set it in a still more striking point of view. What was it to the capitalists who made them loans, whether they expended them judiciously or employed honest agents? That was their own private affair; and to decline paying their just debts on such flimsy grounds was the climax of knavery. Our countrymen were large creditors of the states who repudiated their debts; and we would fain hope that this experience will make them more cautious how they embark in such like transactions on future occasions.

At the same time, however, it would be unjust not to mention that several of the leading states of the Union have treated the doctrine of repudiation with contempt, and have honourably distinguished themselves by their adherence to their engagements. Some, also, of the repudiating states have recommenced paying their debts, with the arrears accumulated upon them; and we have little doubt that at no very distant period this will be done by them all.

Local Taxation.—Notwithstanding the economy that pervades every department of the public service in the U. States, their civil government costs a great deal more than it is generally supposed to do, at least in this country. The entire cost of the government of the U. Kingdom is brought into one aggregate sum; but such is not the case in the U. States. In the latter the different states, though, in some respects, subordinate to the central government at Washington, are each, in so far as respects their own local and internal affairs, quite in-

dependent, and have separate administrations, legislative bodies, judicial establishments, and so forth. Hence, in estimating the cost of the government of the U. States, we must include, in addition to the cost of the central government, the cost of the different (at present 31) state governments, some of which have large revenues. In 1849, for example, the revenue of the state of N. York, raised for local purposes, amounted to 5,548,981 doll.; that of Pennsylvania to 4,433,689 doll.; and that of Ohio, in 1850, to 3,092,994 doll. The revenues of some of the other states, such as Virginia, Illinois, Louisiana, Maryland, &c., are also very large.

A portion of the revenues of some of the states is derived from investments in public works, such as canals and railways, and in banking companies, &c. But the largest portion by far is derived from taxes; and these are sometimes imposed in a mode, and collected with a severity, that would be little relished in this country. Thus, in Ohio, to borrow the words of the State Auditor:—

"All personal property is annually assessed by township assessors, elected by the people of the townships. Forms and instructions are prepared by the Auditor of State, and forwarded to the county auditors annually, for the use of the township assessors. A blank form is delivered to each individual, who is required to return the value of his own property, under oath, to the assessor. If any person refuses to return a statement of his personal property under oath, as required, the assessor ascertains the value from such evidence as he can obtain, or from his own knowledge, and in such case he returns the party 'refuse to swear,' and the county auditor adds 50 per cent. to the sum returned by the assessor as a penalty."

"Merchandise and the stock, or raw material, of manufacturers are taxed in the city, town, or township in which they are located. No matter where the owner resides, his real property, stock in merchandise, and manufactures, are placed on the list and taxed where they are situated when the assessment is made. Thus, the store, manufactory, and merchandise in the city and town are subject to the local and corporation taxes, without regard to the place where the owner resides."

Nothing, therefore, can be a greater mistake than to suppose, as many do, that the Americans enjoy an all but total immunity from taxation! In some of the states it is very heavy, quite as much so as in G. Britain, and much more so than in Ireland. Taking the general revenue of the U. States, exclusive of the portion raised by the sale of public lands, at 90,000,000 doll., we may add to it 35,000,000 doll. more for the sums raised by taxes to defray the local expenditure of the different states. Here then we have a total revenue of 65,000,000 doll., or about 14,000,000*l.* stg., a sum which would more than defray the entire cost of the government of this country, ex the interest of the debt and the expenditure on account of colonies.

Religion.—No particular form of religion is established by law in the U. States. Each sect supports its own ministers, and provides for its own religious instruction. Subjoined is an (see top next page)

Historical Notice.—The first English settlement in America was made in Virginia, by a private company, in 1607; and during the civil wars of the subsequent period, the pop. of the states was successively augmented by numbers of Puritans from the mother country, who settled in New England, R. Catholics in Maryland, defeated Royalists in Virginia, &c., with numbers of Swedes, Germans, and others. The settlement of the several colonies, down to 1776, when the revolutionary war broke out, took place as follows:—

Colonies.	Settled.	Colonies.	Settled.
1. Virginia -	1607	8. Providence -	1636
2. New Hampshire -	1623	Rhode Island -	1633
3. New Jersey -	1624	9. North Carolina -	1650
4. Delaware -	1637	10. New York (previously Dutch)	1664
5. Massachusetts -	1636	11. South Carolina -	1670
6. Maryland -	1633	12. Pennsylvania -	1682
7. Connecticut -	1635	13. Georgia -	1733

Account of the Churches or Congregations, Ministers, Communicants, &c., belonging to the principal Religious Bodies, according to Returns made 1864-65, and by Returns.

Denominations.	Churches or Congregations.	Ministers.	Members or Communicants.
Roman Catholics	1,073	1,061	1,263,500
Presbyterian Episcopalians	1,331	1,000	67,500
Presbyterian, Old School	2,512	1,000	370,000
Presbyterian, New School	1,531	1,000	155,000
Churchland Presbyterians	480	500	20,000
Other classes of Presbyterians	200	200	65,000
Swedish Lutheran	200	200	20,000
German Lutheran	200	200	20,000
Evangelical Lutheran	1,000	200	160,000
Methodist	20	20	2,000
Methodist Episcopal	20	20	2,000
Methodist Protestant Ch.	20	20	2,000
Reformed Methodist	20	20	2,000
Wesleyan Methodist	20	20	2,000
German Methodist (United Brethren)	1,000	200	10,000
Anglican Methodist (Episcopalians, American)	200	200	10,000
Episcopalians	200	200	10,000
Orthodox Congregationalists	1,011	1,000	107,100
Orth. Congregationalists	200	200	20,000
Unitarian	1,100	200	20,000
Unitarianism	20	20	2,000
Regular Baptists	2,400	2,100	200,000
Free-Will Baptists	20	20	2,000
Swedish-Deist Baptists	20	20	2,000
Free-Will Baptists	1,200	1,200	20,000
Church of God Baptists	20	20	2,000
Reformed Baptists (Campbellites)	1,000	200	10,000
Christian Baptists (Unit.)	200	200	2,000
Anti-Slavery Baptists	2,000	200	20,000

The delegates of the above colonies, afterwards called states, signed the memorable Declaration of Independence on the 4th of July, 1776, since which the following states have been added to the Union:—

State.	Added.	State.	Added.
14. Vermont	1791	23. Maine	1800
15. Tennessee	1796	24. Missouri	1820
16. Kentucky	1792	25. Michigan	1836
17. Ohio	1803	26. Arkansas	1836
18. Louisiana	1812	27. Florida	1845
19. Indiana	1816	28. Texas	1845
20. Mississippi	1817	29. Iowa	1846
21. Illinois	1818	30. Wisconsin	1848
22. Alabama	1819	31. California	1850

It would be useless to attempt giving in this place any exposition of the causes which led to the revolutionary war, or any account of its progress. The attempts of the English minister to impose duties on certain articles imported into America, were, as every one knows, the immediate cause of the contest. But though these attempts had not been made, we are not of the number of those who suppose that the struggle could have been much longer delayed. It is idle to suppose that a powerful and rapidly growing country, on the other side of the Atlantic, should have continued to submit to have her governors appointed, and her intercourse with other countries regulated by England. At a certain stage of their progress, all great colonies must separate from their mother countries; and the only thing to be regretted in the American revolution is, that it was not allowed to take place without opposition on our part. We derive quite as much advantage from America, now that she is independent, as we should have done had she continued to be a colony; and we do this without being obliged to keep up expensive armaments for her defence and protection.

It will always be one of the chief glories of England, that she was the magna mater, that she bred and sent forth the men who established this mighty empire in the wilderness. But it would be invidious to attempt to institute any comparison between the English and Americans of the present day. That their characters have diverged considerably is certain. Nor is this to be wondered at, seeing the extremely different circumstances under which the mother people and their descendants have been placed. The merits and the faults of the latter both stand prominently forward; and may be

equally and satisfactorily accounted for by those who fairly appreciate the nature of the country they inhabit, and the institutions under which they live.

It may be further observed, that the bankruptcy and mischief occasioned by her worthless banking system, and the disorder it occasionally introduces into all the commercial dealings of the country, only affect her property in a very slight degree. The latter is essentially based on agriculture, or rather on the facility with which all classes may acquire tracts of fertile and uncultivated land. The great mass of the American citizen may, like Astor, on the occurrence of any difficulty, fall back upon the land, and gather new vigour from its embrace. The merchants and ship-owners in the great towns, the speculators in banks, railway and canal shares, &c., may be ruined, the local governments may be reduced to a state of bankruptcy, and even the federal government be involved in difficulties, without affecting the elements of the national property, or having any material influence over the condition of the great bulk of the people. In this respect America differs from most other countries; but it is to be observed that this difference depends wholly on natural circumstances, & is not occasioned by any foresight on the part of the American people, or any peculiar excellence in their government or institutions, but is merely a consequence of the physical circumstances of the country they have the good fortune to inhabit.

UNST (See OSNEY and SUTLAND Isles.)
UNTERWALDEN, one of the Four Forest Cantons of Switzerland, near the centre of the confederacy, in which it holds the 6th rank; between lat. 46° 00' and 47° N., and long. 8° and 10° E., having W., Lucerne; N., the Swiss cant., and the Lake of Lucerne; E., Uri, and S. the Bernese Oberland. Area, estimated at 223 sq. m. Pop. in 1850, 28,120, all R. Catholics; and of whom 12,700 belonged to Upper, and 11,227 to Lower, Unterwalden. The territory consists principally of 4 valleys, inclosed by mountains of various heights, the highest of which, the Tödi, rises to nearly 11,000 ft. above the sea. Two streams called Aa, hardly deserving the name of rivers, flow into the Lake of Lucerne, and there are several small lakes, and numerous cascades. The climate is temperate, particularly in the E., where various kinds of fruit are grown. The valleys and lower hills afford fine pasturage, which makes cattle-breeding the chief occupation of the inhabs. The cattle are small, but a good cow is estimated to yield a profit of from 20 to 100 forins a year to the owner, and about 10,000 head of cattle are annually depastured in the nation. The cheese of Unterwalden is reckoned inferior only to that of the Emmenthal; and a good deal is sent into Italy. In good years the value of the cheese exported from the valley of Engelberg amounts to about 60,000 forins. Agriculture is comparatively neglected; and the value of at least 120,000 forins, but 10 from Lucerne. The wine does not succeed; and of wine is supplied by liquors made from it. The forests are a chief source of wealth; of timber and fuel being exported. Pine after these, beech, oak, and elm, are the most common; the extensive forest of Kerswald has been of separation between the republics of Lucerne and Upper or S., Unterwalden, ever since the 13th century. Mining and manufactures are insignificant; some linen thread is, however, spun in the valley of Engelberg.

UPPÅL, or UPPÅLA, a city of Sweden, cap. prov. of Upsala.

same name, on the Sala, by which it is divided into two parts, 37 m. N. by W. Stockholm. Pop., 4,500. It is a fine, old-fashioned city. Only a few of the inhabs. are engaged in manufactures, or in the little trade carried on by the river, on which a steam navigation is kept up with Stockholm. The greater number depend for support on the University, the principal in the kingdom. This establishment was founded by Steno Sture in 1478, and modelled on the university of Paris. It was warmly patronised by Gustavus Vasa, who was partly educated in it. At a subsequent period, however, it was transferred to Stockholm, but was again restored to Upsal by Charles IX. It has long enjoyed a very extensive celebrity, and is at present attended by from 1,350 to 1,450 pupils, though of these only from 800 to 900 may be resident at any one time. Thus in the winter session of 1837, the University had in all 1,376 students, of whom 874 were resident. Of the entire number, 269 attended the theological, 305 the legal, 142 the medical, and 408 the philosophical classes. The students, like those of Scotland and Germany, lodge in the town. Their average expenditure may be estimated at about 30*l.* for the session. As many as 180 students are maintained free of expense from endowments left by Gustavus Adolphus. The public lectures are all gratuitous, and but few private lectures are attended. Most of the professors lecture in their own houses. None have a salary of more than 300*l.* a year, and many have much less. The new University is a handsome and spacious edifice, built of freestone, in the Florentine style of architecture. Most part of it has been devoted to two splendid halls, one on the first story of the principal library, and another on the second for oratorios, the conferring of academic degrees, &c. The ground floor is occupied by rooms appropriated to MSS.; but, until very lately, the library, comprising 100,000 volumes, remained in the old university building. The greatest curiosity in this collection is a manuscript of the four gospels, called, from its silver letters, the *Codex Argenteus*, supposed to be a copy of the Gothic translation made by Ulphilas, the apostle of the Goths, in the 4th century. Much controversy has existed among the learned as to the characters in which this famous codex is written; especially whether it be in those used by the Goths of Mœsia, ancestors of the present Swedes, or in the Frankish idiom. At all events, however, there can be no doubt of its high antiquity; it is admitted on all hands not to be later than the 6th century, and may be of the 4th or 5th, while it certainly has the further advantage of having been translated from the original Greek. The codex was found in 1597, in the library of the Benedictine abbey of Werden, in Westphalia; and having found its way (whether honestly is doubtful) into the library of Isaac Vossius, was, on his death, purchased for the comparatively trifling sum of 250*l.* by the Count de la Gardie, who presented it to the university. (*Coxe*, iv., 173, &c. 8vo. ed.)

In the same edifice are preserved a beautiful cabinet, presented to Gustavus Adolphus by the city of Augsburg in 1632, and the large chest, sealed and left by Gustavus III., with instructions that it should not be opened till 50 years from the day of his death. The prescribed period expired in 1842; but we have not learnt whether the chest has been opened. Here, also, is a botanic garden, and a museum, in which is a fine statue of Linnæus by Bystrom. This university has had many celebrated individuals among its professors, especially in the department of Natural History; among others may be specified Linnæus, Bergman, Afzelius, &c.

The cathedral is an imposing edifice, though built only of brick: in some respects its appearance is similar to that of Notre Dame at Paris. It is 350 feet in extreme length, with a lofty nave and a magnificent altar. The Swedish monarchs were formerly crowned in this cathedral, and here, also, they are mostly interred. Among the numerous tombs, the most interesting is that of Gustavus Vasa; distinguished in every station of life, and equally great as a legislator, a warrior, and a politician. Linnæus, also, is entombed in this cathedral, and the house is still shown which he occupied in the town.

Upsal has some public walks, on one of which a fine obelisk has been erected to the memory of Gustavus Adolphus. It is the metropolitan see of Sweden, and possesses an ecclesiastical school, a cosmographic, and other scientific societies. (*Coxe*, iv.; *Bremner's Excursions*, ii.; *Dict. Glog.*; *Voyage de deus Français*, &c.)

UPTON ON SEVERN, a market-town and par. of England, co. Worcester, hund. Pershore, on the Severn, here crossed by a stone bridge of 6 arches, 9 m. S. Worcester. Area of par., 3,110 acres. Pop. of do., in 1841, 2,696. The town is neatly built with well-paved streets. The church, rebuilt in 1758, is a handsome structure. The Baptists, and other sects, have also places of worship. A charity school for 16 girls, founded and endowed in 1718, to which a boys' school was attached in 1797, has been incorporated with 2 national schools, supported by voluntary contribution. A subscription library has been founded. The river, which is navigable

thus far for vessels of 100 tons, has a commodious wharf, and a good harbour for barges. It has no manufacture of any importance; but a considerable trade is carried on in corn, malt, coals, &c.; and a good deal of cyder is brought here for shipment from Hereford and other parts.

URBINO (an. *Urbemum Hortense*), a fortified town of Central Italy, in the Papal States, cap. leg. and formerly of the duchy of its own name, on a mountain near the Metauro, 20 m. S.W. Pesaro. Pop. of the town only about 7,000, but, including the suburbs, 12,000 (*Rampoldi*.) Its fortifications are a good specimen of the military works of the 14th century. Its old castle now forms part of a Carmelite convent, in which and in the churches are several fine works by Raphael and other distinguished artists. Urbino has an ancient ducal palace, which, like the *Palazzo Albani*, is a large and fine building; a newly built cathedral, with a rich chapter and archbishopric; a university, with about 200 students; a college, hospital, seminary, an association called by the singular title of *Academia Assurditorum*, and a court of primary jurisdiction. But the legate and other chief authorities of the legs. of Urbino and Pesaro reside at the latter town. Urbino is celebrated for its brass, manufactured to the value of about 14,000 crowns a year (*Bowering's Rep.*)

Among other illustrious individuals, Urbino has to boast of having given birth to Raphael, hence called by the Italians *Raffaello d'Urbino*, unquestionably the greatest painter of modern times. He was born on Good Friday, 1483, and died at Rome in 1520, on the anniversary of his birth, at the early age of 37 — a wonderfully brief space in which to have attained to such matchless proficiency, and to have completed so many great works. This was also the birthplace of Bramante, one of the greatest modern architects, a relative of Raphael; of the machinist Zabaglia, and other distinguished personages. (*Rampoldi*; *Conder's Italy*, &c.)

URI, a canton of Switzerland, in the S.E. part of the Confed., between the 46th and 47th degs. of N. lat., and 8° 30' and 9° E. long., having N. Schwytz and the Lake of Lucerne, E. Glarus and the Grisons, S. Tessin, and W. the Valais, the Bernese Oberland, and Unterwalden. Area estimated at 338 sq. m. Pop. in 1850, 14,505, all Rom. Caths. The canton consists mostly of one principal valley, that of the Reuss, into which several others open laterally; and the whole are shut in, except at the N. and S. extremities of the canton, by lofty and generally impassable mountains. Among the mountains comprised in this canton is the celebrated St. Gothard, the passage across which is the principal route from Italy into E. Switzerland. The transit trade by this road was, and perhaps still is, the most profitable occupation of the inhabs. of Uri. Various other lofty and remarkable summits are included in the ranges surrounding the canton. The principal river is the Reuss, which rises in Mount St. Gothard, and after a course usually N., through Uri, in its whole length, falls into the Lake of Lucerne, near Altorf. Besides the Lake of Uri (the S. extremity of that of Lucerne) there are numerous small alpine lakes; and the canton is a good deal visited by strangers, both on account of its sublime scenery and the historical interest attached to it as the land of Tell, said to have been a native of Bürglen, near Altorf.

The pastures of this canton are very superior, and these and their cattle constitute the entire wealth of the inhabs. A good many cattle, tended by Bergamesque cowherds, are sent thither from Italy to feed during summer. The cheese of the canton is in high repute; but it is not extensively produced; and the stock of sheep, goats, hogs, &c., is not more than sufficient for the wants of the pop. Agriculture is entirely neglected. "Throughout the whole of the upper part of the valley of the Reuss and in the vale of Ursern, not one stalk of any kind of grain, nor one cultivated vegetable of any kind, is to be seen. There is no doubt, however, that these might be successfully cultivated. The vale of Ursern is better sheltered than almost any part of the Engadine, and is less elevated than many other parts where rye is grown abundantly, where other grain, even wheat, is not a failure, and where all the hardier vegetables are plentiful. About 2 leagues lower down than Andermat, the valley widens. Cottages are sprinkled here and there, and now and then a hamlet; still, however, grass only was to be seen. I saw many warm stripes, and even little plains, along the river side, where wheat and vegetables could have been successfully cultivated; but I still continued to meet carts laden with flour and potatoes. As I descended still lower in the valley, the scenery became more varied and more beautiful. Charming meadows lay by the river side, prettily diversified by clumps of walnut and pear trees; and cottages and hamlets thickly dotted the slopes. Altorf is surrounded by gardens and orchards; yet even here, where the climate is mild, and where the ordinary fruits come to great perfection, scarcely an ear of corn is to be seen." (*Inglis*, p. 1045.) This, however, does not originate in any want of industry, but in what is most probably a well-founded conviction on the part of the inhab., that it is most advantageous for

them to confine their attention to the breeding and depasturing of cattle, and to import their corn, flour, and other provisions, and such manufactured goods as they do not produce in their cottages. The devastations of the late war, and the construction by Napoleon of the route over the Simplon, by diverting a considerable portion of the travelling and transit trade carried on through this canton into a new channel, have been especially hostile to its interests. Several metallic ores are met with, and Picot (p. 237.) enumerates a long list of valuable minerals found on Mount St. Gothard; but mining industry is quite insignificant.

Uri is subdivided into two districts, Uri and Ursern: Altorf is the cap. The constitution is strictly democratic. The legislative power resides in the General Assembly, composed of all the male pop. above 20 years of age, which assembles every year on the first Sunday in May, to choose the cantonal council of 44 mems., to which is confided the direct executive power. There are several inferior councils for separate departments of service. Each district has its own assembly and tribunals; and in the cap. is a tribunal of appeal, composed of 15 mems., and presided over by the *landammann*. The communes are generally too poor to support public schools all the year round, and education is very backward; no libraries or literary societies worthy of notice exist in the canton. The inhabs. are under the ecclesiastical jurisdiction of the Bishop of Chur: they are mostly of the German stock, though in the S. an Italian dialect is spoken. Contingent to the Swiss army, 236 men; do. of money to the federal treasury, 1,184 fr. a year. This canton is supposed to have derived its name from the *ur*, or wild bull, which formerly inhabited its valleys in great numbers. Uri was one of the three cantons which revolted from the German empire in 1307, and formed the nucleus of the Swiss Confed. It was a principal theatre of war between the French and Austrians, in 1799—1800. (*Picot, Statist. de la Suisse, &c.*)

URUGUAY, or BANDA ORIENTAL, a republic of South America, between lat. 30° and 35° S. and long. 52° and 59° W.; having N. Brazil, E. and S. the Atlantic Ocean and the estuary of the La Plata, and W. the Uruguay river (see *ante*, p. 517.), by which it is separated from the Argentine or La Plata territories. It is of nearly circular form, and is supposed to embrace an area of above 200,000 sq. m., while its pop. is not supposed, Indians included, to exceed 150,000, or at most 200,000. It is but very little known. The coast presents the aspect of a low flat plain, without wood of any kind, and as far as the eye can reach quite level in appearance with the water. Inland, however, and particularly in the N., the country is intersected by many hill-ranges alternating with valleys traversed by considerable affluents of the Uruguay. In this territory, the humidity of the soil, which is watered by numerous rivers, is corrected by the Pampero, a remarkably dry wind. The climate of Uruguay is proverbially healthy, and it is evident that the thinness of the pop. must arise from the mode of life followed by the settlers, or from political causes, and not from any deficient fertility of the soil, or other natural or necessary cause. It is divided into 9 depts., and possesses 3 principal towns, Monte Video, La Colonia, and Maldonado, 15 small towns, and 8 hamlets, without including estancias or farms, and ranchos or cottages. Monte Video, having a better port and as good a government, bids fair to become a city of greater trade and wealth than its opposite rival, Buenos Ayres. (For its trade and that of the republic generally, see the art. MONTE VIDEO.) Uruguay is an integral, not a federal, republic: it formed a prov., under the gov. of Buenos Ayres, till 1821, when it was taken by the Brazilians, and incorporated with Brazil under the title of Prov. Cisplatina. In 1825, however, it declared itself independent; and its independence was recognised in 1828 by a treaty between Brazil and La Plata. (See *Mr. Scarlett's S. America*, 52—56.)

URUMEA, OORMIAH, or SHAHEE, a town and considerable lake of Persia, prov. Azerbijan. The town stands in a fine plain, watered by the Shar, 8 m. W. the lake, and 65 m. S.W. Tabriz. Its pop. has been roughly estimated at 12,000. It is fortified with a strong wall and deep ditch, which may be filled with water from the river. Though supposed to be the *Thebarmas* of Strabo, it is said to possess no remains of antiquity worth notice: it has, however, been rarely, if at all, visited by recent European travellers.

The lake of Urumea or Shahee was visited by Major Rawlinson so late as 1838. "It extends above a degree of lat. in length, and is about 1-3d of that distance in extreme breadth. The greatest depth of water that is found in any part is four fathoms, the average is about two fathoms, but the shores shelve so gradually that this depth is rarely attained within 2 m. of the land. The specific gravity of the water, from the quantity of salt which it retains in solution, is so great, that a vessel of 100 tons' burden has a draught of no more than 3 or 4 feet. This heaviness of the water prevents the lake from being much affected by storms, which, from its extreme shal-

lowness, would otherwise render its navigation dangerous. A gale of wind raises the waves but a few feet; and as soon as the storm has passed, they subside. It is an old opinion that the waters of this lake are too salt to support animal life. No fish, certainly, are found in it, but the smaller class of zoophytes are met with in considerable numbers. The islands in the lake, until lately, were barren and uninhabited; but the largest has been recently colonized, and settlements on the rest have been proposed." (*Geog. Journ.* x. 7. &c.)

On the E. side of the lake is the village of Shishewaa, the residence of a Persian prince, Melik Kasim Mirza, brother of the late shah, who has adopted in every particular European habits and pursuits. He has built a palace in the European style, near which he has established mulberry gardens for the culture of silk, a farm yard, a glass work, a pottery, looms for weaving cotton, silk, and worsted goods, and various other kinds of manufactures. He has also built a vessel of 100 tons, which he employs in trading on the lake; on which also, he contemplated the introduction of steam navigation. (For further particulars, see *Rawlinson in Geog. Journ.* x. 5—9, &c.)

USHANT (Fr. *Ouessant*), the most W. of the islands off the coast of France, forming a portion of a group near the W. coast of Brittany, dep. Finisterre, in lat. 48° 37' 8" N., long. 5° 3' W., 26 m. W.N.W. Brest. Its area is about 2 sq. leagues, and its pop. rather exceeds 2,000. It is difficult of access, but is tolerably fertile, affording pasture to a good many sheep and horses. It has a village, several hamlets, an old castle, and a small harbour frequented by fishing boats. Sir Edward Hawke totally defeated a French fleet, under Admiral Conflans, off the coast of this island, in 1759. Owing to the violence of the weather, two of the British ships accidentally got ashore, and were lost. At a later period, on the 27th July, 1778, an indecisive action took place off the island between the English fleet under Admiral Keppel, who had been secured in command in the former action, and that of the French under Count d'Orvilliers.

USK, a parl. and mun. bor., market-town, and par. of England, hund. Usk, co. Monmouth, on the Usk; here crossed by a stone bridge of 5 arches, nearly in the centre of the co., 12 m. S.W. Monmouth. The modern bor., which is more extensive than the ancient, has an area of 410 acres, with a pop., in 1841, of 1,503. The town is neatly, but irregularly built, the houses being mostly detached and interspersed with gardens and orchards. It is indifferently paved; and down to a recent period was not lighted. The church, which belonged to an ancient priory, appears to have been erected in the Norman period. It was originally cruciform, but has been very much altered; the square embattled tower now at its E. end, seems to have been formerly in its centre; its interior contains little worth notice, except an inscription on a brass plate, which has not yet been satisfactorily explained. The living, a vicarage, worth 250*l.* a year, is in the gift of — Williams, Esq. Here, also, are chapels for Independents, Wesleyans, and R. Catholics. Over the market-place is the town-hall, a handsome building, erected at the expense of the late Duke of Beaufort; attached to which is a lock-up house for the custody of prisoners till they can be conveyed to the co. gaol. The educational establishments comprise a free grammar-school, founded and endowed in 1624, to which a writing school has since been attached; a national school for both sexes, supported by voluntary contributions; and almshouses for 24 inmates. Near to the latter are the remains of the ancient priory previously alluded to.

"Usk is increasing not only from natural increase of pop., but also from the beauty of its situation, attracting persons of independent property to build cottage villas in its vicinity. It has a small manufacture of Pont-y-pool japan ware, which employs 4 or 5 hands, and is the only one remaining in this part of the country, the trade having removed to Birmingham. It has no other trade peculiar to it, and very little of any kind." (*Parl. Bound. Report.*) Most part of the inhabs. are engaged in husbandry and salmon-fishing. The earliest charter of the bor. dates from 1398; but it has not been governed for a long period by this or any other charter. The local authority is vested in a portreeve, chosen annually; a recorder, 2 bailiffs, 4 constables, and an indefinite number of burgesses. It is associated with Newport and Monmouth, in returning 1 mem. to the H. of C. Total electors for the three bors., in 1849-50, 1,569. Quarter sessions for the co. are held here, as well as a county court, before which 243 plaints were entered in 1848.

Usk is a place of remote antiquity, and appears to have formerly been of much more importance than at present. On an eminence adjoining the town are the extensive remains of its ancient castle, formerly one of the most considerable structures of its kind in the country. It came through the Mortimers, earls of March, into the possession of the crown, and was the favourite residence of Richard duke of York, nephew of Henry VI., whose

sons, Edward IV. and Richard III., were born within its walls. At a subsequent period it belonged to the Earls of Pembroke; and is now the property of the Duke of Beaufort.

Market-day, Thursday; fairs, four times a year, for wool, horses, cattle, and pedlary; and once a month for cattle only. (*Beauties of England and Wales; Parl. and Mun. Bound. Repts.*)

USKUP or SCOPIA (an. *Scopi*), a considerable town of European Turkey, prov. Macedonia, cap. Sandjack, on the river of its own name, a tributary of the Vardar, 110 m. N.W. Salonica. Its pop. is estimated at about 10,000. It has a good many handsome mosques, Greek churches, &c.; but its streets, though wide, are filthy in the extreme. It is the see of a Greek archbishop, and has some manufactures of leather. A Turkish garrison is stationed in its old dilapidated castle.

USTIUG (VELIKI, or 'the Great'), a town of Russia, gov. Vologda, at the confluence of the Joug and Souchonia, tributaries of the Dwina, about 400 m. from the White Sea, and 550 m. E. by N. Petersburg. This town, though in so remote and desolate a region, has 8,000 inhab., and is the seat of a considerable trade between Europe and Asia. It has, according to Possart, 3 cathedrals and 28 par. churches, many of which are built of stone; and several private buildings, and a large exchange, are of the same material. It has numerous tallow, soap, candle, leather, and tile factories, with saw-mills, and some jewellery and silver works: but its trade is chiefly in corn, lard, linen, ship timber, and sail cloth. Its merchants, who trade with the Siberian towns generally, as far as Kiachta, were estimated, in 1830, to possess an aggregate capital of 298,000 roubles; and the town revenues are estimated at 20,000 do. a year. A large annual fair is held here on the 8th July. (*Possart, Kaiserth; Russland.*)

UTICA, a town or city of the U. States, nearly in the centre of the state of New York, on sloping ground, gently rising from the Mohawk river, and on the line of the Erie canal, 82 m. N.W. Albany, and 180 m. N. by W. New York. Pop., in 1840, 12,872. It is regularly laid out; the streets, which generally cross each other at right angles, are, in some instances, shaded by rows of trees; and the houses are, for the most part, handsome and substantially built. The Erie Canal, which intersects the town, is crossed within its limits by several bridges, and here unites with the Chenango canal, which opens a communication with the Susquehannah. Utica has above a dozen churches for different religious bodies, some of which are large and costly edifices. It has also a lyceum, and various superior public and private academies; a mechanics' association for the promotion of manufactures, &c.; a young man's association, with a library and reading-room open to the public; an apprentices' library, a theatre, and numerous religious and charitable institutions. Its situation, at the junction of the Erie and Chenango canals, has made Utica the seat of an extensive and rapidly increasing commerce; and it has numerous banks, insurance companies, and other joint-stock associations. Its manufactures are also extensive and various; and it is in the centre of a district which is well supplied with water-power, and in which there are manufactories, with power-looms, for the weaving of cotton and other cloths, the spinning of cotton yarn, &c.; with saw-mills, grist and flour-mills, &c. In 1835, six weekly and two monthly periodical publications were issued in the town. It also derives considerable advantage from its being at the W. terminus of the Utica and Schenectady railroad, 77 m. in length, opened in 1830, and from another railroad, 53 m. in length, by which it is connected with Syracuse. In 1794, Utica was an inconsiderable village; and so late as 1820, its pop. amounted to only 2,972; but the Erie canal having been opened, in 1823, its subsequent increase has been astonishingly great. It was incorporated as a town in 1817, and as a city in 1832; and it is worthy of remark, that in the charter by which it is erected into a city, the licensing of shops and houses for the retailing of ardent spirits is expressly prohibited! We are unable, however, to say whether this prohibition has been practically carried into effect. In the list of businesses in the town, in 1835, we observe 21 inns. (*Encyc. Americana; New York Gazetteer; American Almanac, 1841-42, &c.*)

UTRECHT (an. *Ultra-Trajctum*), a city of Holland, cap. prov. of its own name, on the Old Rhine, by which it is divided into two parts, 20 m. S. by E. Amsterdam. Pop. 44,000. It is oval-shaped, and is one of the best situated towns in the kingdom, being built on an undulating tract of land, more elevated than the surrounding territory, and having, in consequence, a drier and purer atmosphere. The country immediately around is finely wooded, and well sprinkled with farm-houses and cottages. Fields of wheat and other grain are seen instead of unvarying green pastures; and the novel spectacle presents itself of rivers and canals flowing below the general level of the country, and not above it on the tops of mounds, as elsewhere in Holland. The approach to

Utrecht, from Amsterdam, is very fine, being through a long avenue of lime trees, which forms a favourite public walk. The city was formerly defended by lofty brick walls; but these are now broken and dismantled, and the old ramparts have been converted into *boulevards*. Since the separation of Holland and Belgium, however, some outworks have been thrown up.

Utrecht has an antique appearance, many of the houses being built in the Gothic style: as in other Dutch towns, the material for building is mostly brick. Mr. Jacob says, "The streets are more regular, the houses more modernised, and the squares more spacious, than in other towns of Holland. In some of the streets there are canals, or rather branches of the Rhine, for though they soon terminate in stagnant canals, they have here some motion. The water is so far below the level of the thoroughfares, that the wharfs on its sides have doors opening to a kind of caverns under the streets, in which many of the poorer classes find habitations." (*Tour in Germany, &c. p. 45.*)

The fine public walk called the Mall, on the E. side of the town, about 2,000 yards in length, is divided into alleys by rows of linden trees. The cathedral, formerly a fine edifice, has been so much dilapidated that only the choir, transept, and tower remain: the last is wholly detached from the other parts, leaving room for a wide street on the place formerly occupied by the nave. It must have been originally larger than York Minster, but less elegant, being mostly constructed of brick. The transepts are shut up, and the only portion at present in use is the choir, fitted up in a plain manner for the Presbyterian service, though it has some fine monuments. The tower is a huge square structure, 368 ft. in height; and from its summit the view extends over a wide extent of country, comprising many cities, towns, and villages.

Utrecht has a celebrated university, founded in 1636 at the expense of the city, which ranks next to that of Leyden: it has 5 faculties and 19 professors, and is attended by about 600 students. The university buildings have no outward show, but they comprise a valuable library, a pretty good museum of natural history, and extensive collections in anatomy, pathology, &c.; especially one of beautifully-executed models in coloured wax. This city has also acquired distinction from the number and excellence of its superior schools. It has a museum of national agricultural implements, established in a fine building, once the residence of Louis Bonaparte, but this, according to Mr. Chambers, is an inferior collection. It has also a tribunal of commerce, an academy, founded in 1778, which gives prizes for the best memoirs on scientific subjects, a branch of the Society of Public Good, a mint, the machinery of which is partly wrought by air-pressure, &c.

Utrecht, being in the centre of a populous agricultural district, is more bustling than the small Dutch cities in general. It has considerable manufactures of cloth and other woollen stuffs, velvets, linen fabrics, silk twist, fowling-pieces, pins, &c., with bleaching-grounds, sugar and salt refineries, brick and tile works, &c. It sends 6 deputies to the provincial states. The famous act, called the Union of Utrecht, declaring the independence of the seven United Provinces, was signed here on the 29th of Jan. 1579; and the treaties of Utrecht, which terminated the war of the Spanish Succession and gave peace to Europe, were concluded here, in 1713 and 1714. Among other distinguished individuals, Pope Adrian VI., the preceptor of Charles V., was a native of this city. (*Schreiber, Guide du Rhin; Chambers' Tour in Holland; Dict. Géog., &c.*)

UTRERA (an. *Iliturge Vericulum*), a town of Spain, in Andalusia, prov. Seville, cap. distr. on the road from Madrid to Cadiz, 14 m. S.E. Seville. Pop., according to Mifano, 11,050, but, according to Capt. Scott, 15,000, mostly agriculturists. "Utrera stands in the midst of a vast plain, that may be considered the first step from the marshes of the Guadalquivir towards the Ronda Mountains, 12 m. distant to the E. A slight mound, that rises in the centre of the town, and is embraced by an extensive circuit of dilapidated walls, doubtless offered the inducement to build a town here; and these walls, some parts of which are very lofty, and in a tolerably perfect state, appear to be Roman, though the castle and its immediate outworks are Moorish. The town is large, and not walled in; the streets are wide and clean, and a plentiful stream, remarkable as being the only running water within several miles, rises near, and traverses, the place." (*Scott's Ronda and Granada, li. 141, 142.*)

It has a spacious square, 2 par. churches (one of singular architecture), various convents and hospitals, a good town-hall, prison, cavalry barracks, &c.; and near it is a convent, resorted to by a great concourse of devotees during a festival which lasts eight days from the 8th of September. The bulls bred in the vicinity are the most ferocious of any in Andalusia; and a considerable trade is carried on here in cattle and horses; it has, also, some manufactures of hats, soap, starch, wax, and leather. In

its vicinity are some productive salt springs. Utrera is an important military post, being at the divergence of several cross roads. The French, when advancing upon Cadiz in 1810, made strenuous efforts to reach it before the Spanish troops under the Duke of Albuquerque; but, being anticipated by the latter, Cadiz was prevented from falling into their hands. (*Scott's Roma, &c.*, ii.; *Milano*.)

UTTOXETER, a market town and par. of England, co. Stafford, hund. Totmonslow, near the Dove, which is here crossed by a fine stone bridge of six arches, connecting the cos. of Stafford and Derby. Area of par. 8,920 acres. Pop. of do. in 1831, 4,864. The town, 17 m. W. by S. Derby, stands on a hill sloping towards the river, and consists principally of three streets, diverging from the market-place in its centre. With the exception of the tower and lofty spire, which are ancient, the church has been recently rebuilt: the living, a rectory, worth 136*l.* a year, is in the gift of the dean and canons of Windsor. Here, also, are several dissenting chapels. It has a free school for 14 boys, founded in 1588 by Mr. Thomas Allen, a native of the town, celebrated by Selden, Camden, and others for the extent of his mathematical and antiquarian learning; a national school supported by subscription; almshouses for 12 inmates; a fund for the apprenticeship of poor children, &c. Petty sessions are held weekly by the co. magistrates. The hardware manufacture is carried on to some extent, and there are numerous iron forges in the vicinity. Owing to the fertility of the surrounding country, especially the excellence of the pastures along the Dove, the market held here for agricultural produce, cattle, sheep, &c., is one of the best in the county. Its trade is facilitated by the Caldon canal, which joins the Trent and Mersey canal, coming within a short distance of the town. Market day, Wed. Fairs 10 times a year, chiefly for cattle, horses, and sheep.

UXBRIDGE, a market town and chapelry of England, par. of Hillingdon, co. Middlesex, hund. Elthorne, border of Buckinghamshire, on the Colne and Grand Junction canal, over each of which it has a bridge, and on the high road from London to Oxford, 15 m. N. by W. the former. Pop. in 1831, 3,043. It is situated on a slight eminence sloping to the river, and consists mostly of one long street, with a smaller one on the road branching off to Windsor. The main street is paved and lighted with gas; and many of the modern houses are handsome and substantially built. The market-house, erected in 1789, is a brick building 140 feet in length by 49 in width, supported on about 50 wooden columns. St. Margaret's chapel, built in 1447, is an irregular edifice of flint and brick in the Pointed style, with a low square tower: the living, a perpet. curacy, worth 111*l.* a year, is in private patronage. The Baptists, Friends, Independents, and Methodists have each places of worship. Two free schools, on the Lancastrian system, are held over the market-place, and are supported partly by voluntary contributions, and partly by annual subscription from the manor-funds, market-tolls, &c. A school of industry was founded in 1809, and there are several other charitable institutions for education and the relief of the poor. A reading room and public library has been established.

Uxbridge has the largest country corn-markets in the kingdom. A great deal of excellent flour is made at the flour-mills in the town and its immediate vicinity, and its millers and mealmen are in general as opulent as they are respectable. Large quantities of malt are, also, produced in the town, the trade of which is greatly facilitated by the Grand Junction canal. It has also an extensive manufactory of implements of husbandry, garden-chairs, &c.; and a brick-field to the S.E. of the town furnishes employment for numerous hands. The municipal government is vested in the hands of 2 constables, 4 headboroughs, and other officers elected annually. Petty sessions for the town and several adjoining pars. are held every fortnight, and a court of requests for debts under 40*s.* once a month. The unsuccessful negotiation between Charles I. and the parliament in 1644 took place in an old brick building called the "Treaty House," which has latterly been converted into an inn. Markets, Thursday and Saturday; fairs, 4 times a year. (*Beauties of England and Wales*; *Priv. Inf.*)

UZÈS, a town of France, dep. Gard, cap. arrond., on the Auzon, 12 m. N. by E. Nîmes. Pop. in 1836, ex. comm., 5,986. It is built on the declivity of a hill, at the foot of which rises the stream which was anciently conducted to Nîmes by the *Pont du Gard*. It is old, ill built, and ill laid out. It was a bishopric in the time of the Visigoths, and the old episcopal palace, and the former residence of the dukes of Uzès, are the principal edifices: the last is a huge castle, inclosed by high walls flanked with round towers, and bearing a good deal of resemblance to the Bastille in Paris, destroyed in 1789. Uzès suffered much in the religious wars, when its bishop, chapter, and most part of its inhabs., embraced Protestantism, and destroyed their cathedral. It has a court of

primary jurisdiction, communal college, &c., and manufactures of silk hosiery, coarse woollens, pasteboard, &c. (*Hugo. Art. Gard*; *Guide du Voyageur en France*.)

V.

VAL-DE-PENAS, a town of Spain, in New Castile, prov. La Mancha, part. Ciudad-Real, in a tolerably fertile plain, 112 m. S. by E. Madrid. Pop., according to *Milano*, 10,248. It is well built; the mansion of the Marquis of Santa Cruz, and the warehouse of the royal tithes, being conspicuous among many other good edifices. This town would appear to be less overstocked with religious edifices than most others in Spain, for it is said to have only one par. church and one convent. It is, however, best known by the dry red wine produced in its neighbourhood, and hence called Val-de-Penas, which is in much request in Madrid, and approaches in quality to some of the stronger Bordeaux wines. The bread here is also of peculiar excellence. Some linens and soap are also manufactured, and woollen stuffs are sent to the town to be dyed. It has a large fair on the 7th of Aug. (*Milano*.)

VALAIS (Germ. *Wallis*), a canton of Switzerland, in the S.E. part of the Confed., between lat. 45° 50' and 46° 40' N., and long. 7° and 8° 25' E., having N. the Bernese Oberland, N.E. Uri and Tessin, E. and S. Piedmont, and W. Savoy and the canton of Vaud. Area estimated at 1,660 sq. m. Pop., in 1837, 75,798, all Roman Catholics. This canton consists of the valley of the Upper Rhone, and may be described as "an immense trough," 70 m. in length, 1½ m. in depth, and 2 m. wide at the bottom. The mountains on each side are the highest in Europe; they form two walls of rock, rising from 10,000 to 14,000 ft. above the Rhone: this valley may therefore be considered as the deepest in the known world. On the N. side are the Alps, to which belong the Finsteraarhorn, Jungfrau, Breithorn, and other enormous peaks; while the S. boundary is formed by the great chain from Mount Blanc to St. Gothard, including the Cervin and M. Rosa. At the upper end of the valley these two ranges unite. Sixteen lateral valleys, some of considerable extent, open into the main valley of the Rhone; and where they join it, the width of the flat part of the valley is increased. Thirteen of these lateral valleys are inhabited. That part of the valley below Sion, formerly distinguished as the *Bas-Valais*, is a flat plain, swampy, and unhealthy, where the heat of summer is intense, and millions of mosquitoes, with intermittent fevers, cutaneous diseases, and cretinism in its worst forms, abound. Above Sion, in the *Haut-Valais*, the marshes disappear, and fine pasturage and vineyards indicate a more favoured region." (*Conder's Italy*, &c. i. 286.) The Valais is remarkable as presenting within the smallest known area all the different climates and kinds of vegetable products met with between Italy and Iceland. At the foot of the Bernese Alps the vine succeeds remarkably well, and very good wine is produced, though in its management the inhabs. be both unskilful and slovenly. Indian figs, almonds, chestnuts, pomegranates grow with little or no culture along the banks of the Rhone, and corn of all kinds is produced at different elevations. The cattle of the Valais are inferior to those of most of the other Swiss cantons; but the rearing of stock is the principal branch of rural industry; the surplus produce in cattle, cheese, &c. being exported chiefly across the Simplon into Lombardy. The pop. is much poorer than that of the Bernese Oberland; which Mr. Bakewell attributes, though, perhaps, with less justice than he supposes, to two causes: first, that the land belongs to a few great proprietors, and the peasantry, being merely tenants, feel but little interest in its improvement; and next, the prevalence of the Rom. Cath. religion, with which there is usually found combined, in Switzerland at least, much ignorance and indolence. Iron, copper, lead, silver, cobalt, and small quantities of gold, &c. are met with: but mining industry is altogether neglected. Hempen cloths, woollen yarn, and woollen cloths, with a few other articles, are made; but these are almost the only manufactures. Next to cattle breeding, the transport of goods across the Simplon is the principal occupation of the inhabs., for which purpose many mules are bred. The mineral waters of Brieg and Louèche are of some advantage to the canton, being resorted to by a good many invalids.

This canton is divided into 13 districts, called *dixains*; Sion (Germ. *Sitten*), on the Rhone, a town of 2,500 inhabs., a bishop's see, is the cap. The supreme power is in a diet, composed of four deputies from each *dixain*, chosen for two years by the *dixains* councils, which are elected by all the citizens above the age of 16 years. The presidents of the *dixains* are members of the diet by virtue of office, and the bishop of Sion has a vote in the diet equivalent to four votes. The diet meets annually on the first Mondays in May and Nov. The ex-

entive power is in a state council of five mems. elected by the diet, and who are all re-eligible, except the *grand-bailli* or president, who is eligible only after an interval of two years. Each commune has a court of primary jurisdiction; from which, appeal lies to the district tribunals: the supreme court for the canton consists of 13 judges, nominated by the diet for two years, but always re-eligible. In respect of education, the Valais is behind most other parts of Switzerland. The public revenue, derived chiefly from salt and transit duties, is estimated at about 200,000 Sw. livres.

The inhabitants of the *Bas-Valais* are chiefly of the French, and those of the *Haut-Valais*, of German descent. The Valais formed a part of the Burgundian, and afterwards the Frankish, dominions; it next became subject to its own count-bishops; but in 1033, it was annexed to the Germanic empire. It was allied, not associated, with the cantons that formed the Swiss Confed. in the 14th century. In 1798 it entered the Confed. as a canton; but in 1802 was detached from it to form a separate republic under the protection of France. In 1810, it was incorporated with the French empire as the dep. of the Simplon; and in 1815 it again became a canton of the Confed., in which it holds the 20th rank, contributing 1,240 men to its army, and 9,600 to its treasury. (*Picot, Statist. de la Suisse; Ebel; Bakewell; Conder's Italy, &c.*)

VALDIVIA, a town and harbour of Chili, prov. of same name, of which it is the cap. The town, on the river Calacutta or Valdivia, about 16 m. from its mouth, is an insignificant village of wooden huts, and was, for the most part, ruined by the earthquake of Nov. 7. 1837; but the harbour is probably the finest, as it is one of the most strongly fortified, in the Pacific. It is in lat. 39° 53' 20" S., long. 77° 33' 24" W., and consists of an estuary, formed by the Valdivia and several smaller rivers, entered by a narrow strait, the shores of which are lined by numerous batteries, mounting, in all, nearly 130 pieces of cannon. Ships of the line ride here in perfect safety; the depth of water, in the centre of the bay, being from 6 to 7 fathoms, and close to the shore 5 fathoms. During their struggle for independence, this valuable station was captured, with a very inferior Chilian force, by Lord Cochrane, on the 3d of Feb. 1820. (*Miers's Chili; Voyage of the Adventure and Beagle.*)

VALENCE, (an. *Julia Valentia*), a city of France, cap. of the dep. Drôme, on the Rhone, here crossed by a handsome suspension bridge, 59 m. S. Lyons. Pop., in 1836, 9,390, or, inc. comm., 10,967. "Valence lies pleasantly on the left bank of the river, surrounded by a fertile country, abounding in mulberry, almond, and other fruit trees. Opposite the town, a conical hill rises close to the Rhone; and about a mile beyond, a long range of vine-covered hills runs parallel with the river, producing the different species of St. Peray." (*Inglis's Switzerland, &c.*) The wine now alluded to, and which is not so much known in England as it deserves to be, is a dry white wine, characterised by great delicacy and sprightliness, and a flavour that partakes of the odour of the violet. When bottled in the spring following the vintage, St. Peray effervesces like Champagne. (*Henderson on Wines, p. 176.*) The town is enclosed by an old wall flanked with towers, and entered by several gates. It is irregularly laid out; but is pretty well built, and has latterly been much improved, both in its houses, a large proportion of which are of stone from the quarries of St. Peray, and in respect of cleanness. It has several public squares and promenades, as the *Champ de Mars*, planted with trees, the *places d'Orléans, aux Clercs, &c.* The cathedral or church of St. Apollinarius is a building said, by Mr. Wood, to be in a degraded Roman style. (*Letters, i. 166.*) It has a large square tower of four stories, and in the interior is the tomb of Pope Pius VI., who died, at Valence, in 1799, with a bust of that pontiff by Canova, and some fine paintings by A. Caracci and other artists. Near this church is a private mausoleum, worth notice for its architecture. The barracks and citadel, the old residence of the governor, the court-house, prison, public library with 15,000 vols., and theatre, are among the principal buildings. Near the town is the polygon, a ground for the artillery-school practice.

Valence is a bishop's see, the seat of a court of primary jurisdiction, a communal college, ch. of manufactures, societies of agriculture, commerce, and arts, &c. It has two seminaries, a school of design, several asylums, a convent, a Lutheran church, a yard for building boats for the navigation of the river, manufactures of cotton goods, silk organzine, gloves, hosiery, leather, and earthenware, with marble works, lime and brick kilns, and sawing yards. It is a depôt for the wines, silk, and other produce of the S. of France, and has six fairs a year. It was anciently the cap. of the Segalauni, and became a Roman colony under Vespasian; but it possesses no Roman antiquities. It formed successively part of the kingdoms of Burgundy and Arles, and of the dominions of the counts of Provence and Toulouse:

it subsequently became the cap. of the Valentinois, and was governed by its own feudal nobles till ceded to Louis XI., in 1449. From the 4th to the 13th century 8 church councils were held in Valence. (*Hugo, Art. Drôme; Guide du Voyageur, &c.; Inglis; Woods; Dict. Geog.*)

VALENCIA, a kingdom or grand division of Spain, in the E. part of the peninsula, principally between the 38th and 41st deg. of N. lat., and 0° 35' E. and 1° 35' W. long., consisting of a long and comparatively narrow strip of country, extending along the Mediterranean, which bounds it on its whole length on the E.; and having inland from the N. round to the S. Catalonia, Aragon, New Castile, and Murcia. Area, 7,683 sq. m. Pop., about 969,000. This is, upon the whole, one of the finest and most productive parts of the peninsula. A great proportion of the surface, particularly in the N. and W., is mountainous and rude; but the plain country, which stretches along the coast, and is watered by the Guadalquivir, Xucar, Mogra, Segura, &c., is a species of garden. All travellers coincide as to its extreme beauty, and superior cultivation, compared with the rest of Spain. Inglis, who has travelled over many of the finest parts of Europe, says, "The view of the plain is superb. Though not greener or more beautiful than the vale of Murcia, its immense extent and great populousness produce a more striking effect. The plain is probably little less than 30 m. long, and 20 wide; on three sides it is bounded by the mountains, and on the 4th by the sea; and throughout the whole of this vast extent, there is not an acre that does not produce its crop of grain, vegetables, or rice. The olive, mulberry, ilex, algarrob, orange tree, and palm, with all of which the plain is thickly dotted, give it the appearance of a union of garden and orchard; but the populousness of the plain is even more striking than its beauty and fertility. It forms altogether a prospect that, in richness and animation, cannot be equalled in any other country."

"The plain of Valencia produces every kind of crop congenial to the climate: two and three crops in the year are taken from it, and the greater part of the land returns 8 per cent. The rice crops are among the most valuable; they are chiefly produced in the territory of Albufera, surrounding the lake of the same name. This was the property first proposed to be granted to the Duke of Wellington, but the Cortes of Valencia objected to it, and the estates near Granada were substituted. The rice grounds produce only one crop in the year, but the return is from 8 to 10 per cent. The rice is put into the ground in June, and cut in September; water is then let in upon the ground, and when the stubble rots, the land is ploughed up, and no other manure is required. In Valencia and its neighbourhood, rice is in universal use by all classes, but the produce is much greater than the consumption of the plain; and the surplus is exported to the different parts of Andalusia. The whole produce is estimated at 12,000,000 arrobas, one half of which at least is exported; and the average price may be taken at about 3s. the arroba, or nearly 1½d. per lb. The other chief product is the white mulberry, once the source of great riches, through the silk factories of Valencia. The produce of silk from the plain is now computed at about 1,000,000 lbs. a year; by far the greater part is exported in its raw state, at an average price of from 8s. to 10s. per lb. The export of fruit from Valencia is large, particularly of raisins; these are of two kinds, the muscatel and an inferior raisin; but neither is equal to the raisins of Malaga. In 1829, 47,000 quintals of the best, and 42,000 of the inferior sort, were exported exclusively for the English market. The export of figs, oil, and wine from the prov. and different parts of Valencia, is also considerable; particularly the latter, called *Beni Carlo*, exported from the town of the same name. This wine is sent chiefly to Certe, from whence much of it finds its way, by the canal of Languedoc, to Bordeaux, to give body and colour to the clarets." (*Inglis, ii. 258-262.*) Barilla, sugar-cane, saffron, aniseed, &c., are also grown.

But, despite the abundance of the prov., the peasantry, as is frequently the case in the most productive parts of the Continent, appear to be in a very depressed condition. The *Ayeria* of Valencia, says Inglis, belongs, for the most part, to great proprietors. The Duke of Medina Celi has a revenue of 75,000 dollars a year from his estate there, and the families of Villa Hermosa and Benevento have almost as much; and, in fact, there are very few persons who cultivate their own land. And, though state taxes do not weigh down industry in this prov., the Valencians are subject to heavy feudal services and seigniorial demands, levied in kind on the produce of the soil, amounting to 1-7th, 1-6th, and, in some places, 1-4th, of the crop! (*Mod. Trav.*) But these circumstances do not sufficiently account for the depressed condition of the peasantry; which is rather to be explained by the fewness of their wants, originating in the mildness of the climate, and their want of all desire to improve their situation.

No great number of cattle or horses are kept; and the

sheep, though pretty numerous, yield wool of only a mediocre quality. A good many tunnies are taken on some parts of the coast by a method similar to that practised in the Neapolitan dom. Mercury, copper, sulphur, arsenic, argentiferous lead, iron, coal, &c., exist in many places; but are procured only in small quantities. Salt from springs, marble, and potters' clay are the principal mineral products. Manufactures are unimportant: woollen and linen fabrics are indeed made in most of the towns, and silk goods in Valencia, Gandia, &c., but, at present at least, in very inconsiderable quantities. Cordage is made from the fibre of the esparto (*stipa tenacissima*), aloe, *juncus*, &c.; and tiles, similar to the Delft manufacture, soap, glass, paper, &c., are made in small quantities. An active internal traffic is kept up, the N. supplying the S. districts with timber, earthenware, linen and woollen stuffs, esparto, brandy, cattle, &c.; while the latter send to the former corn, fish, Levant produce, silk, algarrobs, &c.; Valencia sends rice, silk, fruit, and fish to Aragon and Castile, for corn, wool, and cattle; and flax, hemp, silk, oil, rice, soap, &c., to Murcia and Granada. Its foreign commerce is chiefly with Italy, England, France, Holland, and S. America; from which countries, corn, salt fish, ship-timber, pitch, tar, iron, fine linens, and other manufactured goods, are imported. Alicante, Valencia, Vinaroz, Murviedro, Benicarlo, and Guardamar, are the principal ports. (*Fischer's Picture of Valencia*.)

Very different opinions respecting the character of the pop. have been entertained by different travellers. Upon the whole, the Valencians would appear to be an airy, lively, active, but effeminate people, very different in manner from the Castilians; while their character forms apparently a still stronger contrast to the savage heroism of the Catalonians and Aragonese. Their dialect, though much akin to the Catalanian, is said to differ from it in retaining more of the provençal. (*Mod. Trav.*, xviii. 167.) This prov. was successively subject to the Carthaginians, Romans, and Visigoths, from whom it was taken by the Moors in 713. They held possession of it till 1238, when it was conquered by the Spaniards and annexed to Aragon. It afterwards formed a component part of the Spanish monarchy, but continued to preserve its representative body and its privileges, till the early part of the 18th century, when having, in the War of the Succession, taken part against the Bourbon dynasty, it was, on their establishment on the throne, deprived of its old constitution, and obliged to conform to the laws of Castile. (*Milano*; *Antillon*; *Inglis's Spain*; *Swimburne*; *Townsend*, *Twiss*, &c.)

VALENCIA (an. *Valentia Edetanorum*), a city of Spain, cap. of the above kingdom, on the Guadalaviar, about 4 m. from its mouth, and 188 m. E.S.E. Madrid. Lat. 39° 28' 55" N.; long. 0° 24' 50" W. Pop. 65,840. (*Milano*.) It stands in a wide plain on the bank of the river which washes its walls, and separates it from its suburbs, with which it communicates by 5 bridges, of from 10 to 13 arches. The city is nearly circular, and about 2½ m. round, enclosed by massive walls, with towers, and 4 gates. The old streets are crooked, narrow, unpaved, and frequently destitute of thoroughfare; but some new quarters have been laid out, with broad streets and squares, which are said to be well paved and well kept. Valencia is well lighted, and guarded by a patrol of watchmen, termed *serenos*. It is furnished with public sewers of great solidity, which some affirm were constructed by the Romans; and it has many private wells, though only one public fountain. Good quays faced with stone, and planted with trees, line the river in the whole length of the city. A fine view is obtained from any one of the bridges; the line of irregular buildings following the curve of the river, and the bridges, one beyond another, with the great Moorish gates, give it an air of much grandeur. Few cities, even in Spain, have, or rather had, so many religious edifices as Valencia: among these were reckoned no fewer than 27 convents for men and 22 for women, 16 churches and 24 chapels and hermitages, amounting altogether 86; so that we need not wonder that the streets abounded with friars and priests, and that the influence of the religious bodies was predominant! (*Inglis*, li. 251.) The cathedral is of intermixed Greek and Gothic architecture, surmounted by a dome. It has numerous altars, a good deal of fine marble, some bas-reliefs, and paintings by some of the first Spanish masters. It is very rich in plate and relics. Some of the churches have domes, but the greater part tall, slender turrets, with all sorts of pilasters and whimsical devices. In the multitude of sacred edifices, some may be found that excel in particular parts, or strike by the richness of their decorations; but all are overloaded with ornaments. (*Swimburne's Trav.*, i. 153.) In most, however, are fine paintings by Juanes, Espinosa, Ribalta, Ramirez, Victoria, a pupil of Carlo Maratti, and many other artists, all natives of Valencia. The famous Supper of Ribalta is in the Corpus Christi College; and the same subject by Juanes, a work reckoned among

the finest pictures of Valencia, is in the church of St. Nicholas, which also possesses sundry other fine pictures.

The exchange, custom-house, the temple, a palace built for a military order, by Charles III., the archbishop's palace, college of Pius V., and several noble residences are worthy of notice; there are 5 hospitals, one of which is a large establishment for medical treatment of all kinds, several asylums, prisons, barracks, a theatre, &c. Inglis says, "Valencia is one of those cities, in which traces of Moorish dominion are the most visible; not in any splendid Alhambra or Alcazar, but in every day sights and common objects. Gateways are occasionally seen sculptured in marble upon Moorish designs; stones over the doors, or underneath the windows, show by their chiselled marks their ancient fashioners. All the Moorish tokens also distinguishing the pop. of Seville, Malaga, and San Felipe, are found in even greater distinctness in Valencia." (*Spain*, li. 253.)

The university, founded in 1411, was formerly considered the best in Spain, particularly for the study of medicine. In 1830, it had nearly 2,500 students, who were principally divided between law and philosophy. The professors, of whom there are about 70, are friars, except those who instruct in law: their salaries are from 50*l.* to 120*l.* a year. Lectures are delivered from Oct. 11. to May 31. Education in the university is nearly gratuitous, and many of the students were in the habit of receiving portions of the food distributed daily from the convents. The university library has not more than 15,000 vols., but its deficiencies are compensated by a good library in the archbishop's palace, with attached cabinets of antiques, medals, &c., open for 6 hours daily. There are 6 other colleges, and many inferior academies: the royal academy of Saint Charles, for the instruction of students in the fine arts, is the only institution in the city not under the superintendence of the priests.

The manufactures of velvets, taffetas, flowered damasks, and other silk stuffs, are said, at the end of last century, to have employed upwards of 3,000 looms; but if so, they have greatly declined in the interval. The existing manufactures comprise woollen fabrics, camlets, hats, table and other linen, gauzes, artificial flowers, leather, glass, paper, &c., with the "Valencia tiles," used for the flooring of houses in all the cities of the S. of Spain. These tiles are at once cool, and highly ornamental; but they are far from cheap, those of the best quality being much more expensive than an equal extent of the most sumptuous carpeting. A good workman employed in painting the tiles earns about a dollar a-day.

The port of Valencia is at Grao, about 2 m. distant. It is connected with the city by a broad planted avenue, forming the favourite public promenade around the city. The harbour is suitable only for boats, and the roadstead is exposed to the S. and S.W. gales. The climate, though hot, is agreeable and healthy; and the city is a good deal resorted to by invalids. Society in Valencia appears to differ little from that in other S. Spanish towns. Many persons of rank and wealth reside here, but without any display. Travellers bear testimony to the agreeable vivacity, ready wit, freedom from affectation, and obliging disposition of the inhabs. But Inglis says, that in Valencia, more than in any other city, he was struck with the absence of mental cultivation. But we apprehend the traveller must have been unlucky in his acquaintance. Mental culture may and most probably is at a low level; but the city which is the seat of perhaps the most flourishing university in the country, which has also produced many distinguished natives, and in which the first printing-press introduced into Spain was established, is not likely to be the zero of the intellectual scale.

Valencia was held by the Moors from 1715; but taken from them, in 1094, by the celebrated Cid, Ruiz de Diaz de Bivar. After his death it was governed by his widow Ximene, under whom it sustained successfully one siege against the Moors of Cordova, but ultimately capitulated to them in 1101. It was retaken by James I. of Aragon, in 1238, and peopled afterwards with Catalans and French settlers. It was taken by the French under Suchet, in 1812, and held by them till June, 1813. (*Milano*, &c., *supra*.)

VALENCIA (NUEVA), a city of Colombia, repub. Venezuela, prov. Carabobo, in a plain about 3 m. W. of the Lake of Valencia, and 16 m. S. by E. Puerto Cabello. Pop. estimated at 16,000. It covers a large extent of ground, most part of the houses having only a ground-floor. The streets are very broad, and the market-place is of great size. The entrance to the town from the N. is by a good bridge of three arches built of stone and brick; near which is the *glorieta*, a large circular space where the inhabs. meet in the evening for dancing and festivity. Humboldt says, "It is regretted, and perhaps justly, that Valencia has not become the capital of the country." Its situation near Puerto Cabello, with which it is said to communicate by a good road, gives it many advantages, and it is a place

VALENCIENNES

of hotel traffic. But it has the great disadvantage of being infested with white rats, whose excavations underground at certain seasons become very dangerous to the footlings of the city.

The Lake of Valmala or Taurinara is larger than the Lake of Maggiore in Switzerland, but in its general form it has a deeper resemblance to that of Geneva, which is about the same height above the sea. The upper lands of the lake also offer a similar view. There on the E we depart and almost immediately and a stream of high mountains gives them a grand and imposing appearance. The N shore up the valley is almost pastoral and we off with sugar cane and cotton plantations. There are extensive islands in this lake, the waters of which are gradually diminishing. In 1840 the depth is from 1 to 1 1/2 fathoms where deepest, it is not more than 20 fathoms. It abounds with fish and is used for the purpose of salmoning, but it is a singular fact that for more than two centuries none of its subjects ever thought of eating a cod. An English traveller of no very distant period says that a native of Buzay, settled in Valmala, had often been told the expression, "and the voraciousness formed an small part of the conversation of those who were assembled at the palaces of La Laveuse." *Mag. Trav.* April 179. *Monthly Paris Narrative* is at vol. 1, Column, *Org. de Valenciennes*. &c.

VALLÉE CHENUES (on Falmouth), a town of France des du Nord cap around , on the Atlantic where it is joined by the Gironde. On R.R. Life-Land 10 mi N. long 11 mi W. Pop. in 1961, 10,700. It is a secondary station and has airport authorized by Vichy. It is entirely well built, but its land was a part of a war zone damaged by the severe bombardment it received in 1943 the marks of which are still visible. The French transferred the town from N to S during it the two German parts. There are several public buildings. The town hall built in 1811 is of mixed architecture, highly decorated and contains some fine apartments. The covered quay is approached by a picture gallery in which are some works by Rubens. Attached to it is a battery constructed in the 18th century. It is high. The lower part of a bastion stands above the sea wall. The general hospital founded in 1761 is one of the largest establishments of the kind. The public library has 40,000 vols and the museum of natural history is rich in collections. There are railway and travelling bus-stops, workshops, cinemas, etc., a college, an academy of the fine arts founded in 1761. Bastide Valençayenne has a great deal of fine carved work, iron, bronze and marble, from plate and table metal sculpture, painted oil, ivory carvings, and toys, are made in the town, which has also various printing works, tapestries, distilleries, and coal refineries and a considerable trade in wine largely off camp, cider and champagne.

Universities has sustained several stages. The third millennium of French went down to 1789 when it was created by an Anglo-American army under the blue flag of York to whom it surrendered at the end of its work during which the language marked great loss. It was spoken by the French from the Austrians in the ending year. Among the many distinguished authors of this time have been - Flaubert the beginning of literary Western the painter and D'Aragon the Minister of Arts, and René Guénon de l'Esprit de

VALLEY ST., money called in Valley on Cash & here and out part of France, dep. Seine Inférieure dep. road on the British Channel, City on W W by St. James Pop. in 1881, 4,000. Its past, described before, here still is small and out fit for the modernization of volume of neighborhood garden. In Valley has multiple groups of small and other thread, with some water in the department of French history, and is the transportation of British dried fish, etc. Many of its details are engaged in the coal mining and sugar and tobacco, and they enjoy the reputation of being good amount. The railway road is mostly in pasture.

It is very dry because it grows on a dry hill, on the W. crest of Pyramid, San Antonio, 11 mi. N. W. of El Paso. Pop. in 1910 2,500. Its port is much larger than that belonging to the above town, and admits vessels of from 500 to 1,000 tons. It has large oil magazines, with magazines of cartridges and small-arms, and a total general traffic of (see page, an intermediate by steam line from Austin, kept up between this town and London, Chicago, New York, Baltimore and Boston, New York City, etc.)

VALSTYS (LA) NY Memo

VALLADOLID (an *Provincia*), a city of Spain, capital and dep. of its own name, to Old Castile on the Pisuerga, some 20 miles by a stone bridge of 10 arches, where it is joined by the tributary the Esgueva, over which many small bridges are thrown, 70 mi. S.W. Burgos, and 100 mi. N.W. Madrid. Lat. 41° 45' N., lon. 4° 45' W. Pop. 30,000 (1870). It stands in a plain bounded by mountain hills, and is surrounded by an old

VALLADOLID

well which contains a large extent of ground. Buchanan says - Valladolid is a very large bustling city full of soldiers, who during the reign of Philip III. who made it his constant residence were the palaces of his great officers and nobility. Being abandoned by their owners, who have followed the court to all its different migrations, they are fallen to decay and exhibit a picture of the utmost desolation. The private houses are ill-built and ugly. The great squares, some streets built upon portions, and many colleges and convents are still grand, and denote the wealth of former magnificence, but in general, Valladolid has the appearance of having been put up in a hurry to receive the court, and as it is said have come to resemble afterwards, a colony of more despotic despots than had lived and died, the composition of most of the present houses. (Page 11 *ibid.*, *ibid.*) Upon passing the first gate from the Madrid road, the traveller crosses the bridge forming a spacious deep surrounded by 17 convents, the scene of repeated wars de Juss. signified by the burning of all a few houses.

Valladolid has no university, but it has an observatory upwards of 60 churches, 9 colleges, 8 convents, 3 hospitals, several asylums, barracks, &c. though except some of the religious buildings there deserve much notice. The cathedral as independent of the city built by Juan de Herrera, at the request of Philip II. was intended to have been one of the most sumptuous in Spain; but according to Torrionada and others, it is heavy and inelegant. The cloisters and convents of St. Francis are handsome, but the church of St. Paul is probably even worth attention from its general elegance and its front of its fine reliefs and ornaments which after a lapse of 300 years seem to have suffered little by their exposure to the weather. Torrionada, who labours speaks of few sculptured by Leary or Hernandez he is this and several other observers of Valladolid, but observe they have been removed to make them so can undertake to say. The royal chamber is a large and fine apartment in the Tordesillas. The old palace, to which Philip II. and III. were born, is no other relic when I was visiting the city its bare walls are very grand.

Valdipolia has a university founded by Abbot E1 in 1261. It was formerly distinguished for the school of jurisprudence and continued to flourish till the end of last century. And it appears, even now to be more distinguished than before. Among the colleges of the city were one for the French and one for the English both of which were well endowed. The school of the first one is privileged as an academy and has a superior collection of models in sculpture, architecture, and painting.

Valued at \$100,000,000, the country is a rich source of minerals, and the country is a rich source of minerals, and the country is a rich source of minerals.

Validated to the use of a bishop, under the authority of Bergen, the constitution of a captain general military intendancy, corresponding to it was incorporated as a city and made a bishop's see by Philip II and was the residence of the court from his time till that of Philip IV, who removed to Madrid. Columbus, the discoverer of the New World, expired in this city on the 12th May 1498. *Alfonso, Ferdinand, Ferdinand, Philip, and*

Valledupar is Maricao, a city of Mexico, instead of a city of Mexico, in a low valley, 120 m. W. of Mexico. Its pop. early in the present century was estimated at 4,000, and apparently about the same at present. Mr. Ward says, "I have two places the approach to which (over the M.) is as tedious as that to Valledupar. For more than two hours you see the city apparently before you, while the rapid currents of wind blowing to surrounding hills at length a rapid descent conducts you to the plain, where a long narrow, built-upon marsh forms the entrance to the town. The suburbs are poor and insignificant, but the high street is firm and the buildings, standing about and open, has a very interesting effect. The view of the town from the Mexican side is beautiful. Gardens and orchards form the foreground, while the lofty aqueduct, covered toward the end of the last century, the principal churches, and a cold range of mountains faded far up the mountain range. Early in the present century, and immediately connected with the government, are five to the south-west of the Mexican town of whom have been named to work at where the town. The churches, hospitals, and aqueduct are all the works of the Church. The last is a magnificent building, and worthy though despised of much of its treasure during the revolution." (Ward's Mexico, II. 376-377.) Valledupar has a handsome cathedral.

promenade; and its climate is temperate, as it stands nearly 6,400 ft. above the level of the sea. Iturbide, the short-lived Emperor of Mexico, was a native of this city.

Valladolid is the name of another Mexican town in Yucatan; but it is of no great importance.

VALOGNES, a town of France, dep. Manche, cap. arrond., on the Merderet, 12 m. S.E. Cherbourg. Pop. in 1836, ex. comm., 6,034. It is a well built town, and has a handsome communal college, and public library, with 15,000 printed volumes; manufactures, on a small scale, of earthenware, lace, gloves, and leather; and some trade in provisions and shell fish for the Paris market. The ancient Roman town *Alaxna* was situated in its vicinity. In the middle ages it had a strong castle, which, however, has been totally destroyed. Tourneur, the translator of Shakspeare, and the celebrated anatomist Vicq-d'Azyr, were natives of Valognes. (*Hugo, art. Manche, &c.*)

VALPARAISO, the principal sea-port town of Chili, prov. Santiago, on the Pacific, 60 m. N.N.W. Santiago. Lat. 33° 11' 55" S., long. 71° 31' 8" W. Pop. probably about 10,000. It is inconvenient and ill-built, but its appearance from the sea is imposing, being built, somewhat like Hastings, at the foot of a precipitous range of hills. It consists chiefly of a straggling, long street, or rather terrace, for it is built only on one side, with some narrow and inconvenient thoroughfares leading out of it up the several ravines. In one of these is the *plaza*, a small triangular space, where the market is held; and near it are the principal church, the Dominican and Franciscan chapels, &c. A little to the N. is the castle of Antonio, mounting about a dozen guns; and between it and the plaza are a number of low buildings and sheds, termed the arsenal. In the N. quarter of the town, in a recess larger than the other ravines, is a collection of narrow lanes and mean houses; and many isolated dwellings are scattered about among the hills, the only access to which is by winding foot-paths. The suburb Almendral, on the sandy shore to the S., is more regularly laid out: the houses here, where there has been more room to build, consist mostly of a ground floor only; but in the town of Valparaiso all have stories above the ground floor. They are in general painted of lively colours. About the middle of the Almendral are the ruins of the church and convent of La Merced, which, like many other buildings in Valparaiso, was destroyed by the earthquake of 1822.

The bay of Valparaiso is open to the N., but sheltered by heights on all other sides; and the holding ground, being mostly a stiff clay, offers a secure anchorage, except during N. gales. Opposite the custom-house, 100 yards from the shore, there are 5 fathoms water, which suddenly deepens to 10 and 20 fathoms, at the distance of 300 yards, and in the centre of the bay are from 26 to 30 fathoms. (*Miers, l. 444.*) The harbour is defended by the castle, and 2 forts at the N. end of the Almendral, and another fort inland. There is no mole, nor any facility for landing goods, except by launches, which are moored to the shore, and across which all packages are brought on men's shoulders; or by boats, which, however, can land in all weathers, in the Fisherman's Bay, between the castle and Fort St. Antonio. There are generally a considerable number of vessels in the bay, the greater part British and American; and Valparaiso continues to be the central depôt for the trade of Chili. Large quantities of corn are shipped here for Callao and Panama, especially the former. Wheat, tallow, hides, copper, the precious metals, indigo, wool, and sarsaparilla, are among the principal exports. The market of Valparaiso is well supplied with meat, poultry, fish, bread, fruit and vegetables, at very moderate prices and of good quality; and its climate is generally agreeable. (*Stevenson's S. America, ill. 161.*) Unless, however, it have materially altered of late years, it would appear, from Mr. Miers' report, to be subject to many drawbacks as a place of residence. "Independent of the want of society, there exists no public amusement, no theatre, commercial reading or news-room, no parade, not even a single spot to walk upon, nor any retirement or exit from the town, but over the barren steep hills, which renders the exercise more a toil than a pleasure. In short, in spite of its matchless and beautiful climate, I do not know in all Chili a spot presenting a more uncomfortable and cheerless place of residence than Valparaiso." (*Miers' Trav. in Chili, l. 449.; Commercial Dict., &c.*)

VAN, a city and considerable lake of Asiatic Turkey, pash. of same name: the city being on the E. bank of the lake, 140 m. N. by E. Mosul, and 145 m. S.E. Erzeroum. Pop., according to Col. Shiel, 12,000; but this is most probably much under the mark, seeing that it had been previously estimated by Kinneir at 50,000, and has since been estimated by Mr. Brant at 7,000 families, which would amount to at least 40,000. The inhabs. consist of Turks, Kurds, and Armenians. It is situated in a fine plain, covered with gardens, nearly 5,500 feet above the sea, at the S.W. foot of an isolated rock, on which is its

citadel. It is inclosed with double walls of mud and stone, having large round and small square bastions, and is farther defended, though not on all sides, by a ditch. "The streets are narrow, dirty, and ill paved; the exterior appearance of the houses in general mean: there was, however, to be seen occasionally a residence, which showed that it had once belonged to a man of consequence; but the general aspect of the city indicated decay. The bazaars were confined, and the shops ill-furnished; and I scarcely saw an article of European manufacture: there was, however, an abundance of Venetian glass beads, with which the Kurd females ornament their persons. The supply of fruit was superabundant." (*Brant, in Geog. Journ. x. 384.*) The account of the city given by Kinneir is less unfavourable; but Brant's, being the later, is perhaps also the more accurate.

It has 2 large Armenian churches, 4 large mosques, several baths, caravanserais, &c. The great boast and dependence of Van is its gardens, which cover an extensive area between the city and the mountains. They comprise vineyards, orchards, melon-grounds, fields, &c. In summer the inhabs. of the town mostly reside in the gardens, the roads in which being lined with houses, the whole appears like an extensive village. Streams, bordered with willows, run through the main avenues. (*Brant, in Geog. Journ. x. 391-3.*)

The castle on the N.E. side of the town is built on a high and abrupt limestone rock, and, if the works were in proper repair and efficiently manned, would be all but impregnable. There are some very extensive excavations in this rock.

The trade of Van is at present inconsiderable. About 500 looms are employed in manufacturing coarse calicoes from cotton imported from Persia, mostly for home consumption: though some are sent to Bitlis to be dyed and exported. Almost the only other articles of export from Van, are fruits, wine, and grain, the produce of the surrounding gardens and fields. Every person of respectability has a house in town, with a country house, an orchard and vineyard, and perhaps a few fields. Most of his wants are supplied from his garden, or from the profits of a petty trade carried on with a capital of from 20*l.* to 100*l.*

There can be no doubt that Van is very ancient. The walls of the castle are in part Cyclopean, and many inscriptions in the cuneiform character have been discovered in the town and its environs. It is even affirmed that the castle was originally founded by Semiramis; but it is almost needless to say that there is no evidence by which to support this very improbable statement. Timour Bec, or Tamerlane, who took Van towards the close of the 14th century, is said, by the Persian writers, to have endeavoured, though ineffectually, to destroy its ancient monuments.

The Lake Van, the *Arasis* of Ptolemy, is of a very irregular shape; greatest length N.E. to S.W. 70 m.; greatest breadth about 28 m. Area estimated at 1,000 geogr. sq. m. (*Geog. Journ. x.*) It seldom freezes to any distance from the shore, except at its N.E. end, where, being shallow, in severe winters, it may be crossed on the ice. It has several islands, on one of which is an Armenian monastery. It is navigated by 5 or 6 crazy boats, which are sometimes employed to convey cotton cloths to Tadvan on their way to Bitlis, bringing back grain and timber. From the many wild fowl that frequent it, there is no doubt that fish abound in the lake; the fishery, however, occupies very few hands. (*Geog. Journ.; Kinneir's Pers. Emp.; Smith and Dwight's Missionary Researches, Introd., &c.*)

VANCOUVER'S ISLAND, see SUPPLEMENT.

VAN-DIEMEN'S LAND, or TASMANIA, an island belonging to Great Britain, in the S. Pacific and Eastern Oceans, off the S. extremity of Australia, from which it is separated by Bass's Straits, between lat. 41° 20' and 43° 40' S., and long. 144° 40' and 148° 20' E. It is shaped like a heart. Area estimated at about 27,000 sq. m. Pop., in 1847, 70,104; of whom 43,916 were free, and 24,188 convicts: the number of aboriginal inhabitants is quite trifling. The country is in general hilly or mountainous. Captain Fitzroy says, "The change of scene from Sydney to Hobart Town was as striking as a view of Gibraltar or Madeira after leaving the Downs. Comparatively speaking, near Sydney all was light-coloured and level, while in Van-Diemen's Land we almost thought ourselves in another Tierra del Fuego." (*Voyage of the Adventure, &c., li. 624.*) The mountains rise to 3,500 or 4,000 ft., not forming continuous ranges, as in the adjacent continent, but generally isolated peaks. The surface consists alternately of elevated table lands and fertile valleys, most part of it being fit either for cultivation or pasturage. Several considerable rivers water the colony. The principal are the Derwent, and Tamar, formed by the union of the N. and S. Esk, all which rise towards the centre of the island, in about lat. 43°; the first running to the S.E., and the rest Northward. There are several large lakes in the interior, one of which is said to be 60 m. in circ.

The coasts are very much indented, and abound with excellent harbours. The climate is comparatively healthy, being apparently more congenial to European constitutions than that of Sydney. The winters are colder; but the country seldom suffers from those long-continued droughts which are the bane of New S. Wales, nor from too much rain. Sandstone, limestone, and basalt, are among the principal geological rocks. Indications of coal have been met with, and iron ore has been dug up, some of which is said to yield as much as 80 per cent. of metal. Copper, lead, zinc, and manganese exist, but no mines have been hitherto wrought. The upper soil is usually sandy or argillaceous; or else consists of a rich vegetable mould. There appears to be comparatively a much larger proportion of good soil than in Australia: fine tracts of land are found quite down to the borders of the sea, a circumstance unusual in the last-named continent; and extensive tracts covered with luxuriant herbage, and free from timber or underwood, and which, consequently, require no clearing on the part of settlers previously to being ploughed, are met with in all parts of the interior. Timber, however, is by no means scarce; and besides the quantities used in ship-building, the value of the exports of timber in 1848 amounted to 20,464*l*. The Huon and Adventure bay pines, and the black wood, are peculiar to the country: in most other respects the vegetable products, as well as the animals, are similar to those of Australia. A species of panther, which commits much havoc among the flocks, and kangaroos, is found in great numbers; there is, however, no native dog. Poisonous reptiles are less numerous than in the adjacent continent. The aboriginal inhabitants appear to belong to the negro race of the E. Archipelago: they seem to be sunk in the lowest depths of barbarism; and are said to be ignorant even of the most useful and obvious arts, as fishing, and the construction of the rudest canoes. Their numbers have rapidly decreased since the establishment of the whites, and a few years since the greater part of those remaining in the colony were removed to Flinders' Island in Bass's Straits.

The settled portions of Van-Diemen's Land stretch across the interior from the N. to the S. E. coast along the courses of the Derwent, Tamar, and other rivers. All the W. and N. E. parts of the island are not merely unsettled, but hardly even explored.

From the settlement of the colony down to the 31st December, 1848, the extent of land granted and sold to settlers amounted to 2,721,446 acres, 1,363,427 acres being at the same time held under depasturing licenses. The plan of selling the unappropriated land by auction is now adopted in this colony, as in most others belonging to England. And little could be objected to this plan, provided the upset price were sufficiently low, and the quantities exposed to sale suited to the wants of the different purchasers. But here, as elsewhere, the interests of the colony have been sacrificed to the quackish scheme of concentrating the pop. by charging an exorbitant price for the land. It is true that Van-Diemen's Land has been excepted from the act (5 & 6 Vict. c. 36.) regulating the sales of land in Australia, which has fixed the *minimum* upset price, even of the worst land, at 20*s*. an acre! Practically, however, this *scio de se* policy is acted upon in this colony; and in consequence the sales of country lands in 1848 amounted to only 1,544 acres, sold at 24*s*. an acre. And trifling as the quantity sold may appear, it is surprising it is so large; or that any person should be found to pay 24*s*. an acre for inferior land at the antipodes when the best land in the valley of the Mississippi is sold for 6*s*. 6*d*. an acre or less.

In 1848 about 171,500 acres were said to be under crop, including about 64,700 in wheat, 14,042 do. in barley, 29,463 in oats, 3,916 in potatoes, 8,836 in turnips, and 49,000 or upwards in grasses. The returns of the produce for the same year are, also, given, and provided they may be depended upon, they show that the yield of wheat is 17½ bush. to the acre, of barley 21 do., and of oats 25 do., being not much more than half the produce of the same crops in England. This lamentable deficiency of produce may be ascribed partly, we believe, to the backward state of agriculture, and the want of care in the preparing of the land, and partly to the inferior fertility of the latter. In fact, Van-Diemen's Land, though superior as a corn-growing country to New S. Wales, is notwithstanding better fitted for grazing than cropping. Wool, indeed, is here, as well as in Australia, the staple produce of the colony; and the increase in the breed of sheep has been so very great that the stock, which, in 1828, amounted to 553,698 head, had, in 1848, increased to 1,800,000 head. And while the imports of wool from Van-Diemen's Land into the U. Kingdom, in 1820, did not exceed 993,979 lbs., they amounted, in 1848, to 4,955,968 lbs. Maize is not raised in the colony, the climate being too cold. Apples, currants, gooseberries, &c., attain perfection, but the orange, citron, and pomegranate are not raised, and the grape and peach attain only an inferior degree of maturity.

VOL. II.

In 1848, the stock of cattle was estimated at 85,000 head; of horses, at 17,196; and goats, at 2,900. All kinds of stock attain a much greater size than in the neighbourhood of Sydney. During the half dozen years previous to 1836, there was a great deal of over-trading in the colony, the revulsion consequent on which was productive of a great deal of suffering. But the continued importation of convicts has been the great drawback on the colony; and, besides preventing the influx of free settlers, has filled the island with vice and crime. And supposing the future importation of convicts to be prevented, it will require a lengthened period to efface the deep taint it has already impressed on the population. In 1848, 209 vessels of the aggregate burden of 18,412 tons, belonged to Van-Diemen's Land: of these 29, of about 6,000 tons burden, employed in the whale fishery, imported oil, &c., to the gross value of 104,000*l*. We subjoin an

Account of the Import and Export Trade of the Colony in 1848.

Countries from and to which Imports and Exports were made.	Value of Imports.	Value of Exports.
	<i>£</i>	<i>£</i>
Great Britain -	460,244	255,027
British Colonies -	109,990	232,718
Foreign States -	23,920	2,586
Totals -	594,154	490,331
	Ships.	Tons.
Ships:—Inwards -	648	91,843
Outwards -	677	95,983

The great articles of export are wool, whale oil, and whalobone, and bark. The imports comprise every description of manufactured goods, colonial products, wines, farming utensils, &c. The value of the exports from the U. Kingdom to Van-Diemen's Land, in 1849, amounted to 315,021*l*.

The government is subordinate to that of New South Wales; but the lieutenant-governor, with the aid of the executive and legislative council, administers the local government independent of the parent-colony. The executive council consists of 5 mems., including, with the lieutenant-governor, the chief justice, colonial secretary, and treasurer, and the officer in command of the troops. The legislative council is composed of from 10 to 15 mems., appointed by warrant of the sovereign; and all the above functionaries are *ex officio* mems. The laws of England, and acts of the British parliament, are generally administered in the colony, but special acts may be passed by the governor and council. The initiatory proceedings in the passing of all acts belong to the governor; and two-thirds of the council must be present at their passing, and the majority vote with the governor, or no proposition can become law. Civil causes are tried before a judge and two assessors, and criminal cases by a jury of seven naval or military officers. In most other respects this colony is administered in a manner similar to New South Wales. But a legislative council, partly elected by the colonists, and partly named by the crown, is to be formed under the act 13 & 14 Vict. c. 59. Public revenue in 1848, 129,545*l*.; expenditure, 126,193*l*. Of this expenditure 5,623*l*. was for day schools.

The settled part of Van-Diemen's Land is divided into 15 districts. Hobart Town, or Hobarton, the cap., is in the district of same name, on the Derwent, about 20 m. from its mouth, lat. 42° 54' S., long. 147° 34' E. Pop. of the town and district, in 1848, 21,467; of whom 5,265 were convicts. The town covers about one sq. m.; it stands upon the declivities of two gentle hills, and is intersected by a fine stream from the heights of the Table Mountain, which tower above the town on the W. to the height of 3,936 feet. The streets are wide, and intersect each other at right angles; and, having been from the first laid out on a uniform plan, it is built with much greater regularity than Sydney. Its houses are substantial, and 2 stories high: it has some good public buildings, including a church constructed of brick, a gaol, and a quay, close to which vessels of the largest burden load and unload. Hobarton possesses one of the finest harbours in the world. The Derwent, which here forms a fine sheet of water, is navigable for ships for 8 m. above the town, and continues to afford a safe passage for vessels of 50 tons as far as New Norfolk, 20 m. higher up, where a ridge of rocks abruptly puts an end to the navigation. In 1848, 162 ships, of the aggregate burden of 14,640 tons, belonged to this port. The suburbs of Hobarton are increasing and receiving much embellishment; villas, enclosures, &c., are said to be springing up in every direction. The principal settlement on the N. side of the colony is Launceston, on the Tamar, about 40 m. from its mouth, and 105 m. N. by W. Hobart Town. The river is navigable to it for vessels of 200 tons. The other towns are insignificant.

This island was originally discovered by the navigator Tasman in 1642, and subsequently received its name in honour of a governor of the Dutch E. Indies. It was

3 M

afterwards visited and partially explored by Cook, Furneaux, D'Entrecasteaux, &c.; but it was not ascertained to be an island till Bass sailed through the Straits which bear his name in 1798. The first English penal settlement was established here in 1803, and down to 1813 it continued to be merely a place of transportation from New South Wales. The settlement continued to suffer from the depredations of escaped convicts, termed bush-rangers, till 1817, when these were finally put down; voluntary emigration began to take place to a considerable extent in 1831, and has since progressively increased. (*Parl. Rep. on Van Diemen's Land, &c.*)

VANNES, a town and sea-port of France, dep. Morbihan, of which it is the cap., at the bottom of the Gulph of Morbihan; 63 m. W.N.W. Nantes. Lat. $47^{\circ} 39' 26''$ N., long. $9^{\circ} 45' 4''$ W. Pop., in 1846, inc. comm., 11,356. It was formerly fortified, and entered by six gates, five of which, with some towers, still remain. It is clustered around its cathedral, and except one or two tolerable streets is irregularly and badly built, badly paved, and dirty. The cathedral, rebuilt in the 15th century, is a massive, but heavy edifice; in its interior, however, are some good monuments and paintings. It has another church, and several chapels, one of which, attached to the communal college, is of good architecture. The prefecture is an ancient castle; and a convent has been converted into the residence of the bishop. There were formerly many monastic establishments at Vannes; but their buildings have now mostly received other destinations, and one is appropriated to the *Institution du Pere Eternel*, which, besides boarding and educating 60 poor girls, has a great many out-scholars receiving primary instruction. The edifice, now the theatre, has served at different periods for the meetings of the states of Brittany, and the parliament of Rennes. Vannes has 3 hospitals, a communal college, school of navigation, a Polytechnic society, established in 1826, for the culture of the arts and sciences, a public library of 8,000 vols., and manufactures of coarse cloths, linen and cotton yarn, and lace. Its port is small, and the entrance being shallow, it is fit only for vessels of small burden; on one of its sides is a planted promenade, and on the other are slips for building boats and small craft. It has been supposed that Vannes occupies the site of *Dariorigum*, the cap. of the Veneti; but the better opinion seems to be that the latter was about 5 m. N. by W. Vannes, at Locmariaker, where the remains of a circus and Roman road are still extant. (*Hugo, art. Morbihan; D'Anville, Notice de L'Ancienne Gaule, p. 262.; Martiniere, &c.*)

VAR, a maritime dep. of France, reg. S.E., between lat. 43° and 44° N., and long. $5^{\circ} 40'$ and $7^{\circ} 15'$ E.; having W. the dep. Bouches-du-Rhone, N. the Basses-Alpes, N.E. the Sardinian States (co. Nice), from which it is separated by the river Var, and E. and S. the Mediterranean. Area, 726,866 hectares. Pop., in 1846, 349,859. The surface, particularly in the N. and E., is mostly covered with ramifications of the Alps, consisting of primitive or calcareous formations covered with a gravelly and arid soil. The dep. is, however, well watered, and on the banks of some of the rivers, as the Var and Argens, are some very fertile tracts. The Var, whence the dep. derives its name, rises in the dep. of the Basses-Alpes, about 6 m. S.E. Colmar, and, after running generally southward, falls into the Mediterranean at St. Laurent, $3\frac{1}{2}$ m. S.W. Nice, after a course of 68 m., for about half of which it is navigable for rafts. The Esteron and Vesoubia are its chief tributaries; no towns of much consideration are on its banks. Numerous lagoons and marshes border the coast of this dep., which is generally abrupt, rocky, and indented with numerous inlets. In 1834, the arable lands were estimated to comprise 118,052 hectares; vineyards, 67,657 do.; woods, 230,700 do.; and wastes, about 187,800 do. Agriculture is very backward, and the supply of corn is inadequate for the consumption of half the pop.: the produce in wine, olives, and fruits of various kinds is, however, considerable; and 115,494 kilogs. of silk were gathered in 1835. Capers, oranges, lemons, chestnuts, and perfumery are among the principal exports. Grasse is especially famous for its essences and liqueurs; and roses, jasmines, &c., are grown there and elsewhere in large quantities for their manufacture. The forests comprise many cork-trees, and bottle corks are made in several places. Kermes and a little tobacco are among the other products. Few horses or cattle, but a good many mules, are bred. In 1830, there were estimated to be upwards of 270,000 sheep, and 18,000 goats, in the dep., and the woods afford nourishment for numerous hogs. In 1835, of 109,560 properties subject to the *contrib. foncière*, 42,012 were assessed at less than 5 fr., and 21,790 at from 5 to 10 fr., only 37 were assessed at 1,000 fr. and upwards. Lead, coal, copper, iron, manganese, &c., are met with, though very few mines are wrought. The tunny and anchovy fisheries are of considerable importance, and coral of good quality is fished up on the coast. Manufactures of no great consequence; but silk twist, perfumery, soap, paper, and leather are produced to some

extent: the dep. has, however, a considerable trade with the Sardinian States, &c. It is divided into 4 arrond.: chief towns, Draguignan, the cap., Toulon, Brignoles, and Grasse.

VARINAS, a town of Colombia, repub. Venezuela, cap. prov., on a tributary of the Apure, 300 m. S.W. Caracas. Pop. uncertain, being variously estimated at from 6,000 to 12,000. It is the principal mart for the excellent tobacco grown in its prov.; but has also a considerable trade in sugar, coffee, cotton, indigo, and cattle, which are mostly exported by way of the Apure and Orinoco. (*Codazzi; Geog. de Venezuela, &c.*)

VARNA, a fortified town and seaport of European Turkey, prov. Bulgaria, on the Black Sea, at the mouth of the Pravadi, 47 m. E. Schumla; lat. $43^{\circ} 12'$ N., long. $27^{\circ} 54'$ E. Pop. estimated at about 16,000. The fortifications have been considerably enlarged and strengthened since it was occupied by the Russians in 1829. Though the residence of a pacha, it is but indifferently built, and has only an open roadstead. The latter, however, being sheltered from N.W. winds, which are the most to be feared in this sea, and having good holding ground, presents but little danger. Varna has always been a principal port for the shipment of wheat and other Bulgarian produce to Constantinople; and latterly her importance in this respect has been greatly increased, and she now supplies corn to all parts of the Levant, and sometimes even to England. In 1847 the exports of wheat from Varna amounted to 377,500 qrs.; and she, also, exports considerable quantities of tallow, with hides, cheese, dried beef, wool, &c. The imports consist principally of manufactured goods, especially cottons and cotton twist, colonial produce, spirits, oil, &c. The badness of the communications with the interior is the principal drawback on the trade of Varna. Were these improved, her exports would be largely increased.

A great battle was fought near Varna on the 10th of Nov. 1444, between the Hungarians and their allies, under their king Ladislaus, assisted by the famous John Hunniades, and the Turks, under their sultan, Amurath II. The Christians, who had broken a truce which they had a short while before solemnly sworn to observe, suffered severely for their perfidy; their king having been killed in the battle, Hunniades taken prisoner, and their army totally defeated with a prodigious slaughter. (*L'Art de Vérifier les Dates, 2e partie, v. 250. 8vo. ed.*)

VASTO (an. *Histonium*), a town and sea-port of the Neapolitan Dom., prov. Abruzzo-Citra, on the Adriatic, 31 m. S.E. Chieti. Pop., in 1830, 9,016. It is walled, and has two collegiate churches, one of which is said to occupy the site of a temple of Ceres, several convents, hospitals, &c., with many good private buildings. Its inhabs. are mostly occupied in the manufacture of earthenware, in fishing, and the cultivation of olives and vines. On the 1st of April, 1816, this town was the theatre of an extraordinary catastrophe, by which it was partially destroyed by a sudden falling in and sliding of the soil, supposed to have been occasioned by the escape of subterranean water. (*Del Ris, Descrizione delle Due Sicilie, II. 410.*)

VAUCLUSE, a dep. of France, reg. S.E., between lat. $43^{\circ} 40'$ and $44^{\circ} 25'$ N., and long. $4^{\circ} 40'$ and $5^{\circ} 45'$ E., having N. the dep. Drome, E. Basses-Alpes, S. Bouches-du-Rhone, from which it is separated by the Durance, and W. the Rhone, separating it from Gard. Area, 347,377 hectares. Pop., in 1846, 259,154. The general slope of this dep. is to the W., in which direction it is traversed by many small tributaries of the Rhone. Soil, mostly calcareous, but it is only in the neighbourhood of the larger rivers that it possesses much fertility. In 1834, the arable lands were estimated to comprise 157,738 hectares; vineyards, 28,594 do.; woods, 62,141 do.; willow plantations, &c., 2,717 do.; and heaths, wastes, &c., 67,760 do. In 1835, of 81,140 properties subject to the *contrib. foncière*, 38,304 were assessed at less than 5 fr., and only 22 at 1,000 fr. and upwards. Agriculture, though still very backward, is said, of late years, to have made considerable progress. Oxen, horses, or mules are used indifferently for the plough; but the last are principally employed. The scarcity of other manure obliges the farmers to cut the wild box on the hills, which, being macerated and suffered to rot, is used for the purpose, and found peculiarly suitable for manuring vines. Wine and silk are among the most important products of the dep.: the produce of wine may, perhaps, be estimated at about 500,000 hectolitres, of which a considerable portion is exported. The best wines are those of *Coteau-brulé*, near Avignon, and of *Châteauneuf*, $4\frac{1}{2}$ leag. from Orange. Speaking generally, however, too little attention is paid to the culture and care of the vine. "*On en compterait*," says Jullien, "*beaucoup plus de bons vins, si les propriétaires apportaient plus de soin dans le choix des plantes et dans la culture.*" (p. 266.) In 1835, upwards of 1,600,000 kilogr. of raw silk were gathered. The produce of wheat is insufficient for home consumption, but a good deal of rye, and some maize, barley, buckwheat, potatoes, &c. are grown, besides saffron, madder, and cori-

quartz and talc sands. Almonds and other fruits, and quinces of Valencia are among the exports. Artificial grasses are grown, but the pasture lands are not extensive, and the quantity of stock is less than in any other of the 5 departments. There are pretty numerous the honey bee of good quality and about 50,000 hives of bees are supposed to be exported annually. This department appears to be rich in minerals but but very small quantities of iron ore are now produced with carbon are made at Aragon and Orange and the town of Apt is famous, to the S. of France, for the manufacture and distribution of a system for the printing establishments, and manufacturing of printing types, bells, and other smaller goods. Carpenters, iron, and brass plates, glass and marble workmen make leather, paper, cordage, brass thread, glass beads and tiles are made in this department which has also many distilleries and dyeing houses. Vanadium is extracted here from certain local limestones. Arles, the cap. Apt, Carpentras and Orange.

crossing a narrow tributary in the above map, since by the small village of the same name 4 in W. side, and 30 in W. by 31 ft. The town also has its source in a vast cavern at the foot of a very high but in length, at the bottom of a narrow gorge in the mountains. When this cavern is a deep basin of the parent water the surface of which appears to be perfectly smooth and glassy, but which, nevertheless, emits so great a quantity of water as to give birth to the small river Sogomun, an affluent of the Rhine. Also the gushing of water, at the emergence of long continued rains, the flow of water is greatly increased but even in the driest season it is astonishingly copious. In ordinary state of the season, the water emerges by percolating through the rocks, stones and gravel that form the eastern side of the cliffs, whereas during floods it overflows its banks. It is possible, taking proper precautions, to descend when the water is low to the edge. Owing to its great depth it appears as if it were jet black, though, as already stated, it is lit up in the entrance.

This cemetery is celebrated in the history of Putnam. An old man in the village, which belonged to his friend the State of Connecticut, was frequently visited by Putnam, and he always called his estate "The good, honest, good in the village." He has frequently been known, who is generally supposed to have been the wife of the latter, to be in the village, the lord of the village. But who is doubtful as well as the Platanus of his town. (Hays, art. Putnam, p. 1)

Val de Pr Page de Paule, Germ
of Switzerland, holding the 19th of
January at 10⁰⁰ and 4⁰⁰ W and the
having 11 the east and lake of the
and the German Channel, 11 the
the lake and territory of Geneva, 11
Lake to France Area about 1,11
1111, 111111, all Protestant, except
Catholic. Both the 11 and 11 W
church are Protestant, the latter was a
by construction of the Alps, one of which, the
Stations, runs to 1, 1111 W above the level of the sea
the lake region is traversed by ranges of the Jura. The
middle of the nation, between the Jura mountains and
the lakes of Geneva and Neuchâtel, is a rich cultivating
country and is celebrated for its agriculture character
and picturesque scenery that it has long been reported
to by visitors from every part of Europe. In 1111,
11,111 of its vineyards were situated on other estates, and
nearly 1,111 vineyards. The raising of wine and wine
is the chief occupation of the pop. The vineyards,
occupied the best in Switzerland, are supposed to com-
prise about 11,111 acres, and to employ 11,111 vine-
cultivators, independently of women and children. The
vines of La Vaux and La Côte, both grown on the
slopes of Lake Lemane, are the best the first is pro-
duced near Vevey where the Romans, who created a
temple to Bacchus atully are supposed to have ori-
ginally planted the vine. A number of high authorities
that have conducted a survey of the vineyards in the dis-
trict, and considered a remarkable fine movement by a
great number of vineyards, every inch of 1111 feet.
The number of vines in each lot of late increased very
much in 1111, it was supposed to have about 71,111
bush of vines, 11,111 acres, and 71,111 vines, and the
improvement in the branch is said to have kept pace
with the increase of population. Above the only salt
springs in Switzerland exist at this in this case. They
were discovered in the 1111 and bought by the govern-
ment of Bern in the following century, in 1111 they
produced a revenue of 11,111 11 francs. Marble and
crystal surface pavements and a few smaller products,
are not with, though not raised in any large quantities.
Manufactures are very insignificant, and mostly confined
to those of leather and silk. The transit trade from
France into Switzerland and Germany is of more con-
siderable to the tribute.

▼ You can calculate type 1B directly and (2) directly, or

The weight of more than 5,000 letters, covering a corporate strike by unionists in more extensively than that of any of the other Delta chapters.

The legislative power is vested in a grand council of the chiefs elected for 5 years, which meets yearly in May at Louisa. The council holds a certain portion of those among the citizens who are taxed to the highest amount; the number of such chiefs are allowed to give upwards of 500000 francs; and great to collect domestic and foreign contributions of justice, relief, and other under public administration. Each chief sends a deputy to the grand council, who meet in an island of the river, 50 years of age, and possessing property to the extent of the value of 50000 francs or more equivalent thereto; the town of Louisa sends a deputy; 5 candidates are also nominated by each of the chiefs and from among the general but the town already chosen elect 25 other names. Finally an electoral commission composed of the chiefs of the executive body of the court of appeal, and 40 members of the legislative council choose the regulating bodies, starting 25 from among the electoral citizens 40 years of age and possessors of landed property to the value of 10000 francs, and 15 elect 25 years of age without property qualification. *France.* The legislative chamber (the executive council) which consists of 5 members, and has the initiative in all propositions of laws and taxation. Each district has a court of primary jurisdiction, and each elects a justice of the peace. The tribunals understand and speak French, but their common power is a district commercial similar to the *conservatoire*. Verdicts are rarely general, and in 1866 it was estimated that 1 in 4 of the pop. was receiving public instruction. Public revenue, in 1866, 1,070,871 francs; expenditures, 1,215,000 francs.

This territory nearly corresponds to the Pagus Colognensis of Caesar. It nominally belonged to the Burgundians and Frankish kingdoms, the Counts of Flanders, and the dukes of Brabant. From 1079 to 1288 it was possessed by Henry, and by the gov. of Barons from the latter year till 1793, when it was annexed into the nation of France. It retained its present name in 1806. It furnished little aid to the army and \$2,500 fr. a year to the treasury of the Dutch Confederacy (Pays, Pays de la Dyle, Sambre, Meuse, Rhur, Rhodan; Rhin, Rhodan; Rhur, Rhodan; Rhur, Rhodan).

VIZUZA MALAGA (an Alpujola town of Spain, in Andalusia) prov Malaga, cap dist on the Volcan some 10 m north and 16 m WNW Malaga Prov, with its altitude according to Wilson about 1400'. The town is slightly elevated above sea on the left bank of the stream, and is surrounded by the neighbouring hills. The climate is cold, damp, and well suited for the thriving commerce, and abundant market especially looked for in a place once so noted for the production of its orchards and extent of its export trade, are no longer to be seen. - *Scott's Spanish and German*, 1879. Under the name Vizna was a place of considerable strength and had a castle, very in ruins. It has two parishes; the convents, several earthworks, a prison, public granary, &c. and since the peace pronounced. It used to be perfectly well situated. Its climate is not apparently bad, the town being sheltered by the neighbouring heights; and its neighbourhood is very fertile, producing sugar, coffee, cotton, cornmeal, large quantities of wine, all various fruits, the sweet potato &c. It has some sugar mills and manufacturing of hats, soap, brandy &c. It was taken from the Moors in 1571 the place having been considered by Ferdinand II correct. - *Wilson*, *Pamplona*, *Spain*, &c.

VILLIUM is a village a town of 8 Italy, Papal States, Province of Rome, near the Appian Way, 10 m. S.E. Rome. Pop. about 10,000. It stands on a commanding eminence at the foot of Monte Aventino, and enjoys an extensive view of the Pontine Marshes, as far as Monte Citorio and of the sea, with the ruins of the monuments of Rome, Capa, and Sagal, and even those beyond Palmaria. It is surrounded by ruined walls, with decayed towers, and ruinous curtains, and is but indifferently built. It has a town-hall by Bramante, and some fine palaces. The principal square has a fine fountain, and a terrace since of Pope Clement VIII. The Borgian Museum, now in Naples, was originally established in the Borgian palace, in this town. The inmates are mostly peasants, who work in the vine-growing fields and vineyards, and at night retire to the town, the air of which is extremely good. According to Strabo, the inmates are not quite so rugged as their neighbours, although the place is full of dirt and the soil is miserable. *Falco's* square is here been one of the most remarkable sites of the planet and is said by Diogenes to have been fortified by Carthage. It was the residence of the Cornelia family, before they settled in Rome, and is celebrated as the birth place of Augustus, who was born here on the 13th Sept. anno D. 62, in the captivity of Cato. (Angebot, *Griff's* *Topography of Rome* &c., G. B. 10. 80.)

VELLORE, a town and fortress of British India, presid. Madras, distr. Arcot, 80 m. W. by S. Madras. The fortress, which is of considerable extent, comprises spacious barracks and the other necessary accommodations for a garrison, with various handsome buildings round a square, on one side of which is a curious pagoda, now used as a magazine. The native town, which is also large and populous, is situated to the S. of the fort, with which it is connected by additional battlements. In 1677 it was taken by Sevajee; and, during the war of 1782, was relieved by Sir Eyre Coote, in the face of Hyder's army. After the capture of Seringapatam, Tippoo's family was removed thither. In 1806 a formidable revolt of the native troops, followed by a massacre of the Europeans, took place here, of which Tippoo's family were supposed to have been the instigators. This occasioned the removal of the latter to Calcutta. (*Hamilton's E. I. Gazetteer*.)

VENDÉE (LA), a maritime dep. of France, reg. W.; formerly included in the prov. of Poitou, and, exclusive of the islands Dieu and Noirmoutiers, extending between the 46th and 47th degrees of N. lat., long. 0° 35' and 2° 10' W.; having N., Loire-Inférieure and Maine-et-Loire; E., Deux-Sèvres; S., Charente-Inférieure; and S.W. and W., the Atlantic. Area, 781,700 hectares. Pop., in 1846, 376,184. No portion of the surface is much elevated; the E. part of the dep. is undulating, though nowhere rising to the height of 500 ft. The principal rivers are the Sèvre-Nantaise and Niortaise, Antise, Vendée, Lay, Yon, and Vic. The Vendée rises in the dép. Deux-Sèvres, runs generally in a S.W. direction, and joins the Sèvre-Niortaise, after a course of about 16 leagues, only a small portion of which is navigable. Fontenay is the only town of consequence on its banks. The dep. is subdivided into 3 districts; the marshes, the plain country, and the bocage. The marshes extend principally along the coast; the bocage, so called from the wood sprinkled over it, occupies the centre and upper parts of La Vendée; and the plain country, a great part of which is very fertile, comprises the rest of the surface. In 1834, the arable lands were estimated to comprise 408,565 hectares; pastures, 109,896 do.; vineyards, 17,700 do.; and woods, 29,600 do. Agriculture is conducted in much the same way as in the adjacent dep. of Loire-Inférieure (which see). Leases run from 3 to 7 years. Few of the farms are let for money; but the rent, paid in produce, may be equivalent for corn land to 26 fr.; for vineyards, 24 fr.; and for meadow lands, 40 fr. an acre. In the plains the ground is left idle the second year, as in Loire-Inférieure.

"The whole of this dep., as well as that of the Loire-Inférieure is, with a very few exceptions, most miserably farmed. The farmers are without capital, and badly provided with implements, and have not half the number of labourers required for the land; the fields are always full of weeds, for the roots are left entire by the bad ploughs in use, and from the want of hands to pluck them out." (*Parl. Rep. on Agriculture*, 1834.) A greater quantity of wheat is grown than in any other of the W. deps.; and, next to it, barley is the grain principally cultivated. Flax and hemp are grown to a considerable extent in the marshy tracts. A large quantity of wine, principally white, is produced; but, according to Jullien, it is *d'une qualité très-médiocre, et en général vert, plat et sujet à tourner à la graisse dès la première année*. (P. 147.) This inferiority is ascribed to the circumstance of the cultivators being more anxious to increase the quantity than to improve the quality of their wines. Throughout a great part of the dep., estates are usually divided into farms of from 45 to 90 acres; and in the plain country few farms of this size have fewer than 60 or 80 sheep. The annual produce of wool is estimated by Hugo at 600,000 kilogr. Oxen are sold from the plain to the bocage farmers, who fatten a good deal of stock. In some places mules are used for ploughing: they are brought from Deux-Sèvres when young, and after having been worked lightly for 4 or 5 years, are sold to merchants for the Spanish market. (*Rep. on Agric.*) In 1835, of 124,113 properties subject to the *contrib. foncière*, 69,644 were assessed at less than 5 fr., and 17,027 at from 5 to 10 fr. (*Official Tables*.) A little lead and antimony, with some iron and coal, are obtained; but the dep. is not rich in mineral products. Pilchards are taken on the coast, and the inhabs. of Sables d'Olonne are interested in the Newfoundland fishery. Manufactures few; being principally of hats and woollen stuffs, for home consumption. La Vendée is divided into 3 arronds.; chief towns, Bourbon Vendée, Fontenay, and Sables d'Olonne. It sends 5 mems. to the Ch. of Dep. Reg. electors in 1838-39, 1,477. Total public revenue, in 1831, 6,671,303 fr. This dep. is distinguished for the chivalrous and obstinate stand made by its inhabitants during the progress of the French revolution, in favour of the rights or pretensions of the Bourbons. In this, no doubt, they were a good deal assisted by the nature of the country; but their gallantry and their sacrifices were alike remarkable, and were worthy of a better cause.

(Hugo, art. *La Vendée*; *Dict. Géog.*; *French Official Tables*.)

VENDÔME, a town of France, dép. Loir-et-Cher, cap. arrond.; on the Loir, 20 m. N.W. Blois. Pop., in 1836, ex. comm., 7,030. It is well built, clean, and handsome. The remains of an ancient castle, the communal college, cavalry barracks, theatre, and public library, are the objects most worthy notice. It has manufactures of kid gloves, cotton cloths, hosiery, yarn, paper, and leather.

VENEZUELA, see COLOMBIA.

VENICE (Ital. *Venezia*), a famous maritime city of Austrian Italy, formerly the cap. of the republic of the same name, and now of E. Lombardy, on a cluster of numerous small islands, in a shallow, but extensive lagoon, about 4 m. from the mainland, in the N.W. portion of the Adriatic, 75 m. W. by S. Trieste; lat. 45° 25' 32" N., long. 12° 20' 31" E. Pop., in 1842, 110,000. The appearance of Venice, from whatever side she may be approached, is striking and singular in the extreme. Owing to the lowness of the islands on which she is built, she seems to float upon the sea,

— "from out the wave her structures rise,
As from the stroke of the enchanter's wand."

She is divided into two principal portions, of nearly equal size, by the Grand Canal (*Il Canal Maggiore*), a serpentine channel, varying from about 100 to 180 ft. in width, crossed by the principal bridge of the city, the celebrated *Rialto*. The various islands, which form the foundations of these two grand divisions, are connected by numerous bridges, which, being very steep, and intended only for foot-passengers, are cut into steps on either side. The canals, or *ris*, crossed by these bridges, intersect every part of the town, and form the "water-streets" of Venice; by far the greater part of the intercourse of the city being carried on by their means in gondolas or barges.

But, besides the canals, Venice is everywhere traversed by streets, or rather passages (*calle*), bearing a striking resemblance to Cranbourn Alley; and so very narrow, as to be in general only 4, and seldom more than 5 or 6, ft. in width! The only exception is the *Merceria*, a street in the centre of the city, lined on each side with handsome shops: but even this, which may be regarded as the Portland Place, or Regent Street of Venice, is only from 12 to 20 ft. across! To ride in a carriage, or on horseback, is here wholly out of the question. The streets, or lanes, are consequently not paved with round stones, or blocks, but with flags, or marble slabs, having small sewers for carrying off the filth. Almost all the principal houses have on one side a canal, and on the other a lane, or *calle*. The former, however, is the grand thoroughfare; and gondolas, or canal-boats, are here the universal substitute for carriages and horses. They are generally long, narrow, light vessels, and, though rowed only by a single gondolier with one oar, cut their way through the water with extraordinary velocity. A sumptuary law of the old regime directed that the gondolas should all be painted black. In the middle is an apartment fitted with glass windows, blinds, cushions, &c., for the accommodation of 4 persons. Some of the gondolas, belonging to private families, are magnificently fitted up. The charge for a gondola is about 10d. an hour; and with it you may soon visit every part of the city.

In many parts there are small squares, or *campi*, in which are usually cisterns, for the careful preservation of rain water; but the only open space of any magnitude is the piazza of St. Mark, with the piazzette leading to it, and forming the state entrance to Venice from the sea. "The piazzetta is at right angles with the great square, branching off in a line with the church of St. Mark. On one side, and turning a side front to the port, is the old palace of the doges; on the other side are the *seccs* or mint, and the library of St. Mark, the regular architecture, and fresh and modern appearance of which seem to mock the fallen majesty of their antique neighbour. On the sea shore, which forms the 4th side of the piazzetta, stand two magnificent granite columns, each of a single block; one crowned with the winged lion of St. Mark, in bronze, and the other bearing the statue of St. Theodore. Between these two columns, in former times, public executions took place." (*Conder's Italy*.) The piazza of St. Mark is an oblong area, about 800 ft. by 350, flagged over. Two of its sides consist of regular buildings with deep arcades. Each side is itself uniform, though not similar to the other. On the N. is the *Procuratie Vecchie*; on the S., the *Procuratie Nuove*. The W. side was formerly occupied by the church of St. Geminiani; but this was taken down by the French, who erected in its stead the staircase of the new Imperial palace. At the opposite end are the cathedral of St. Mark, the Orologio, and the Campanile; and in front of the cathedral are 3 tall poles, supported on handsome bases of bronze, whence the flags of the Morea, Crete, and Cyprus were formerly displayed. From being the

only place of open ground in Venice of any consequence, this square is almost constantly thronged with company, and it is the scene of all the public manifestations, *fiestas*, &c. that take place in the city.

Venice has a vast number of fine private palaces by Sansovino, Palladio &c. but many of its public buildings are more remarkable for grandeur and display, than for purity and taste. They present generally a heterogeneous intermixture of Byzantine, or other Eastern, with Greek, Roman, and Gothic architecture. The celebrated church of St. Mark is not Gothic, Saracenic, or Roman, but a mixture of all these styles, neither a church nor a mosque, but something between the two, too low for grandeur too heavy for beauty, no just proportion being preserved among the different parts. Yet it has the effect of grandeur, and a sort of beauty, from the richness of the materials, and the profusion of ornament. The original church was founded in 828, but the present edifice was finished in 1077, under the direction of architects from Constantinople. The nave is 245 ft. in length, the transept 80 ft., the middle dome is internally 90 ft. in height, and the 4 other domes 50 ft. each. The front is 170 ft. in width, and 72 ft. in height without the surmounting figures. In its lower part are 5 rounded doorways, each adorned with 3 stories of little columns, though these are mostly ill proportioned, and their capitals nearly all different. Over these arches is a gallery or balcony of marble, in the centre of which are the famous bronze horses, most probably of Chinese origin, and carried to Constantinople by Theodosius, whence they were conveyed away by the Venetians, when they took and plundered the capital of the eastern empire, in 1204. For 16 years, or from 1701 to 1816, they adorned the triumphal arch in the *Piazza de Carrousel* in Paris; but, though restored, we may well inquire,

— "Is not Paris's name come to pass?

Am they not better?"

(*Chas. Smith, Esq. in N. & A. Rev.*)

Immediately behind the horses is a large circular octadon, an oblong side of which is opened doorway opens upon the balcony. The front terminates in pointed arches, surmounted by a crowd of spires, pinnacles, statues, crenels, &c. The finishings are in the style of the Italian Gothic of the 15th century but overcharged and heavy. Fourth, speaking of this edifice says, "We where have I seen so many columns crowded into so small a space. Nearly 500 are stuck on the pillars of the front, and 200 more on the balustrade above. A like profusion prevails in the interior, which is heavy dark, and barbarous." But, from Mr. Wood's account, it would appear that the same barbarous taste that prevails in the exterior, is not so obvious within. "The vaulting and great part of the walls are covered with mosaics, and the rest with rich marbles. The columns of porphyry, verd-antique, &c.; the pavement of white pieces of white and coloured marble, jasper, agate, lapis lazuli, &c., variously and for the most part, beautifully disposed; the bold ornaments, and gilded capitals, produce a degree of astonishment and admiration in the mind of the spectator." (*Lectures of an Architect*, 1831.) The *Orologio*, or clock tower on the N. side of the octadon, has little to recommend it, and the campanile is merely a large square tower upwards of 300 ft. in height, surmounted by a pyramid. In it, however, Galileo made many of his astronomical observations. The *Loggia* around its base, now converted into a lottery-office, is a beautiful building of the Corinthian order, from the designs of Sansovino. The *Procuratie Nuove*, now the royal palace, is a rich fine of building, fronted with all the different Greek orders.

The *Scal* palace was originally founded in the 6th century, but the present edifice dates only from the middle of the 15th, when it was erected by the doge Marino Faliero. Externally, it presents a double range of arches, supporting a great wall of brickwork, pierced with a few windows. The corners are cut to admit thin spiral columns. Notwithstanding its many defects this structure derives an imposing effect from its grandeur of dimensions, and unity of design. The palace is entered by 5 gates, the principal leading into the *merito* which is surrounded on 3 sides by 3 stories of arcades. One side is richly ornamented, though the whole to be in bad taste. A noble flight of steps, called, from the colonial statues of Mars and Neptune, by Sansovino, the *Giande* staircase, leads up from the *merito* to the open arcade, where, under the *Rapallo*, the *Stato* mosaic paved to receive communications or survivors of peace against the state. From this exterior corridor the state apartments are entered. The walls of the *Salon de Quatre Ports* are covered with paintings by Titian, Veronese, Veronese, and Tintin. The hall of the Great Council, *Salon del Gran Consiglio*, 168 ft. in length is now principally appropriated to the library, of which Petrarch was one of the founders; but it is also rich in frescoes, by Bassano, &c., and contains a fine collection of ancient sculpture, the portraits of the Venetian doges, &c. The *Salon del Pri-*

or, and numerous other apartments, are richly gilt, and exhibit all the glories of the Venetian school of painting, "which spreads over the walls and covers the ceiling, as if it had only cost a few shillings the yard." In the hall of the Council of Ten, converted by Napoleon into the chamber of a court of magistrates, the ceilings have been painted by Paul Veronese; and on every side the eye rests on pictorial representations of the achievements and glories of the Republic. In the lower parts of the palace are the former tribunals and dungeons of the state inquisition, from which a passage leads across the *Ponte de Rialto* or Bridge of Sighs, to a dark narrow walled up, but which formerly opened into a chamber where prisoners were dispatched.

Next to the buildings in the neighbourhood of St. Mark's, those bordering the harbour and the canal of *Giudecca* appear to be the finest, including the *Dogana* or custom-house, the church of *La Salute*, and those of *San Giorgio* and *Il Redemptore*, both designed by Palladio. These last were on the point of being pulled down by the French, and only saved by being redeemed for a large sum of money. The *Redemptore*, Fourth says, is admirable both in plan and elevation, and its interior is perhaps perfect in its proportions, simple, grand, and harmonious. It is, in fact, one of Palladio's *chef d'œuvre*, and is perhaps the finest church in Italy, though inferior to a great many in costliness and magnitude. Besides a Greek church and 7 synagogues, Venice has altogether about 100 Roman Catholic churches, which are, on the whole, among its best buildings. There were formerly many more; but the French pulled them down, with a number of convents, in pursuance of their plans for the improvement of the city. Several of the churches date from the middle ages, though few of them are worth especial notice. One, however, is interesting, from its containing the remains of one of the greatest painters and of one of the greatest sculptors that Italy has produced—Titian and Canova: the grave of the former is marked by a short inscription on a plate stone set into the pavement. Canova has a fine pyramidal monument, from one of his own designs, the expense of which was defrayed by contributions collected in all parts of Europe. The famous painter, Paul Veronese, is buried in the church of St. Sebastian, where he has a monument. The busts of all the churches are detached, and appear to be built on the model of St. Mark's.

The general cemetery or burying place for the city is on the island of *San Cristoforo di Murano*. Here, rich and poor, the noble and the beggar, are all interred, the expense of the burial of the latter being defrayed by government. This cemetery was formed, and the plan of conveying all dead bodies to it from the city ordered, by the French; and, happily, it has since been confirmed. A *gimnasio*, secured to the island, is appropriated to the transportation of corpses. The Jews have their burying-ground at *Malmo*.

For a lengthened period after the foundation of the city, the communication between its E. and W. divisions, across the second canal, was effected by a simple bridge.

Thus, we find, on inspection of the city, that, though such as have been built by Palladio, Sansovino, Bramante, Longhena, Bruni, and a few other architects of eminence, they are mostly deficient in good taste. They in general exhibit too many orders in front. Venice, in truth, is more attractive from its singularity than its architectural elegance. Yet it is still highly interesting to the student of architecture, who may here trace the gradation from the solid masses and round arches, the only remains of the ancient grand style in the 6th, 7th, 8th, and 9th centuries, through the fanciful forms and grotesque embellishments of the middle ages, to its revival and re-establishment in later times. (*Encyclopædia Classical*, 1847.) Many, however, of the old pictures and monuments are destroyed, and not a few of them have been pulled down. Recently, too, has to many instances, obliged their owners to part with the fine works of art, with which they were formerly embellished. Still, however, some of the palaces have yet to boast of good collections of pictures, statues, &c. The *Manfrin* palace has a splendid gallery of pictures, and

the Palazzo Dandolo has some fine works by Titian. The Arsenal palace contains the only extant statue of Marco Agrippa, a fine bust of Camilla, &c., and in the Procuratie is Leonardo's *St. John* on his arm, the best group executed by Leonardo.

But, notwithstanding their magnitude and imposing external appearance, the houses inhabited by the family of the greater number of the patricians which are still occupied, are also small, or forsaken, and uncomfortable. Personal convenience and the enjoyment of good air have been sacrificed that space might be found for the exhibition of various pictures and other works of art. All the larger houses, or palaces, are from three to four stories in height, being generally of a square form, with all kinds of most unnecessary additions, in which the architect is carefully followed. As already stated, they have, for the most part, two entrances—the principal opening on a canal, and the other on a narrow alley. Some of the finest palaces are built wholly of marble. The grand canal has on each side many such buildings.

The houses occupied by the middle and lower classes are built of brick, and are in general covered with wood. Few of them have gardens, but they are usually provided with basements. From the extreme narrowness of the streets, the houses are usually gloomy, and are intelligibly deficient in the appropriate distribution of their different parts, and in all those conveniences and adaptations to comfort that distinguish houses in this country.

The Arsenal, which opens upon the great canal from the Mark's square with the dock port, occupies an island between two and three miles in circuit, and is defended by lofty rampart walls. The entrance is guarded by two towers flanking a gateway over which the winged lion still bears defiance, and in front of this entrance are four long, straight basins, the first two being of very fine proportions, and probably of Venetian marble. The magazines and docks are kept in good order, and ship-building is one of the chief branches of industry at Venice. Besides the ordinary magazines, forges, foundries, and other necessary establishments, there is a rope house, 1,100 ft. in length. One of the walls of the arsenal has a statue of Philip Strozzi for his conduct with the Genoese, and a beautiful monument by Canova, representing Paolo reverting the Venetian admiral Angelo Emo.

During the term of the republic, the Doge was the great lord of the Arsenal. This was the only place in which the dogs accompanied by a splendid carriage, proceeded to inspect the Arsenal. The Arsenal was not formed by the dogs dropping a ring of no great value into the sea, proceeding at the same time the words, *Be spensato*—there, in response were *perpetuamente* shouted in three days, however.

"The question arises, where to look, and what savings are to be expected."

Byron says that the Doge's "his sailing, attended, but, in fact, she was burned by the French days after the downfall of the republic."

Venice has 6 theatres, the largest of which may contain 1,200 spectators. The Venetian drama is, however, in a very low state. The language, the old language, is a mixture of the 17th century, and the new drama, built by Antonio da Ponte in 1680, is much less happy than the poem being an original Dutch drama. The theatre is a model and admirably the various hospitals and barracks, are among the most beautiful edifices. A flourishing academy of the fine arts, 1,000 and a public school for such corporations are among the principal institutions of Venice. Venice has a prominent place in Italy in this institution. There is one house with which 700 poor people are lodged, and one fine building and reserve provisory building establishment. There is an orphan house, children, an infirmary for 20 women, a station for the reception of pregnant women, capable of receiving 1,000 patients, a house for 50 young girls, a lunatic hospital, &c., &c. The yearly revenues, chiefly arising from endowments, amount to about 100,000 ducats. (See *Reverend's Italy*, 6th ed.)

Venice has been represented as a delightful residence, but though it may be, and perhaps is, an equally paradise to the sophisticated spirits here within the canal of the Mark's square, it is very different to a stranger. As yet, no doubt, it surprises and gratifies by its novelty, but it does become dreary from its enormous the human resources to house the narrowness of the streets, the want of fresh the stream of all rural beauty and the constant signs of improvement. It would not, in fact, be habitable were the water fresh, but the saltness of the water and the heat and cold of the air make it tolerably insupportable. The latter phenomenon, however, which are at all times much too visible in the Mediterranean than on the British shores, are in evidence on the Venetian coast. The quality of the water, however, is good, and healthy. The characteristics of the climate are, a con-

stantly better than in England, accompanied with occasional storms of the winds—a winter but of great length, but sharp, particularly during the prevalence of the N.W. wind, which blows across the interior of the Adriatic and the Alps. Rain is frequent, particularly in spring, and there being no springs or wells, the inhabitants, as already stated, supply themselves with water collected in cisterns, from the tops of the houses.

It should, however, be observed, that the Venetians are no longer wholly without trees and flowers—very extensive gardens, with a fine stream leading to them, was constructed by the French, and are a noble monument of their taste and magnificence. These gardens, says Mr. Pennycuik, "derive interest from the mode in which they were formed, more than from their beauty, and that they are deficient in some or variety. They were formed with immense labour by the introduction of artificial earth, brought at an immense expense from Greece, Asia, and as expense was spared in their cultivation. There are several serpentine walks over crochets, many trees and shrubs that are very fine, and all this, with the different views of the lagoon, the many islands, the quays, and Venice, make this promenade both agreeable and interesting. The gardens are nearly 1 mile round, and are enclosed by a handsome bridge. (See *Italy*, 6th ed.)

Port.—The lagoon on which Venice is built is within a line of long, low narrow islands, running N. and S., and enclosing what is termed the lagoon or shallow, that surround the city and separate it from the Gulf of Venice. The principal entrance from the sea to the lagoon is at Malamocco, about 1½ miles S. from the city, but there are other, though less frequented, entrances, such as the S. and the N. of the latter. There is a low artificial Malamocco, on which there are not more than 10 ft. of high water at spring tides, but there is a channel between the western point of the bar and the village of San Pietro, which has 4 ft. water at spring and 10 ft. at ebb. Short-cut canals usually cross the canal of the lagoon, but sometimes they cross the great canal which enters the city and sometimes they cross to the other channel of the lagoon. Venice, coming from the S. for the most part, makes Porto or Giorgio on the bank of the lagoon, where they take on board pilots who carry them to the bay opposite to Malamocco. On arriving at the bay, ships are conducted across it and then past by pilots, whose duty it is to show them outside, or on the bay, and of whose services they must avail themselves.

The state of the narrow islands which border the lagoon on the side near the sea, being in part broken, the opposite construction during last century a double artificial barrier to length, to fill up the gaps in question, and protect the city and port from the storms and swell of the Adriatic. This vast work, formed of blocks of Italian stone, comprising marble, contains various fine islands and towns, and is admirably fitted for its magnitude, utility and safety. It bears the following description—

"I have observed, under a liberal eye, perhaps the most extensive and most complete system of artificial islands ever constructed anywhere. Some estimate, 1811, at 400,000 cubic ft."

Money.—Formerly there were various districts of government here, but now accounts are kept in Austrian (see *Italy*, 6th ed.), or 1811, per cent. The lire is worth about 18.

Weights and Measures.—The commercial weights are here, as at Leghorn, of two sorts, the gross weight and the pure weight. The French Government called the lire *livre*, to show themselves favourable. All the gross pounds are 12½ lb. the pure pounds and 10 lb. the pure ounce are 40 lb. the pure ounce. The measure of capacity for wine is 100 lb. the measure for oil, oil, contains 120 English wine gallons. The best of Venice is 12 lb. English weight.

The first bank of Venice was founded in the year 1521, being the most ancient establishment of the kind in Europe. It was a bank of deposit, and such was the estimation in which it was held, that the paper contained in it was as good as compared with gold coins in 1797, when the bank fell with the government by which it had been governed. As present there are no corporate banking establishments in the city, and no bank seems one to be established. There are however, a bank, which try, and the situation on land and other more to legal regulations of any sort, and the manner of their capital, they continue to flourish. The interest and discount is 5 per cent to allow interest on deposits, usually drawn at 3 months, and 10

Money and Measures.—Much attention is required to represent Venice possible profusion of money. It does whether she is entitled to come to this respect over that of Italy, and the loss of her commerce and of the wealth which the expenditure of government brought

into the city, has reduced alike the means of, and incentives to, corruption. It is now, we believe, pretty generally acknowledged that the impressions made on foreigners during the carnival season were in a great degree exaggerated, and that much of what they took for intrigue and profligacy, was no more than what the license of the period, and the universal use of masks, allowed even the most scrupulous persons to indulge in without any violation of propriety. Undoubtedly, however, the conduct of the government, the nature of her religion, and the vast wealth that formerly centred in Venice, all tended to corrupt the morals of the people and to immerse them in sensual pleasures. We hardly think it was ever, as Addison has stated, a part of the policy of government "to encourage idleness and luxury in the nobility, to cherish ignorance and licentiousness in the clergy, to keep alive a continual faction in the common people, to connive at the viciousness and debauchery of convents, to breed dissensions among the nobles of the terra-firma, and to treat a brave man with scorn and insult." (*Travels*, art. *Venice*.) But, whether intended or not, this, no doubt, was the effect of their jealous despotism, which that was truly great, generous far as possible, all the avenues of literature, and even war, leave licentiousness, to occupy the place of, society in Venice has since the revolution of 1797, the *gentiluomo Veneto*, the noble is all. He is but the shadow: polite and kind. It may sure he is querulous." But, now which they have been subjected to them from haughty lords, but "one degree below kings," to subject subjects, the Venetians are now, as of old, most agreeable companions, and the Paphian Queen still holds her court in the sea-girl city.

"In Venice Tasso's echoes are no more,
And silent rows the wingless gondolier;
Her palaces are crumbling to the shore,
And music means not always now the air:
Those days are gone — but Beauty still is born,
Senses fall — arts fade — but Nature doth not die;
Nor yet forget how Venice once was dear,
The pleasant place of all society,
The soul of the earth, the essence of Italy!"

Foreigners, especially, are extremely well received, and society is on a very easy footing in Venice. Owing to the facility with which the city is supplied with provisions from the interior of Lombardy and elsewhere, and the lowness of rents, living is here unusually cheap; and were it not for its disadvantages in other respects, it would be a very desirable residence.

The Government of Venice was one of the most singular that has ever existed. In her earlier period she appears to have been governed by doges, or princes, who were elected by the popular voice; but who, on being elected, became the absolute rulers of the state. The doge enjoyed, however, only a precarious dignity; for, in the event of any disaster occurring to the arms of the republic, or of his becoming unpopular, he was not unfrequently deposed, and sometimes assassinated. (*Daru*, l. 186, &c.) To obviate the disorders that grew out of this state of things, it was resolved, in the 18th century, that each of the six districts into which the city was then divided should nominate two individuals as electors, and that the twelve electors so chosen should nominate a grand council of 470 individuals which should represent the public, the general assemblies of which were henceforth discontinued. A senate was at the same time created, and six councillors were appointed to assist, or rather control, the proceedings of the doge. (*Daru*, l. 193, &c.) But notwithstanding the influence of the popular voice was greatly lessened by the establishment of the grand council, which included all the most distinguished citizens, it was still very considerable; and on several occasions the people endeavoured by violence to recover the power they had lost. In this, however, they were wholly unsuccessful; and at length, after various struggles, it was resolved, in 1819, that the grand council should no longer be elected, but that the dignity should be hereditary in its members! (*Daru*, l. 518.) The aristocracy was thus established on a solid

foundation; but no sooner had this been done than the dignified families became jealous of each other; and to avert the chance of any individual acquiring a preponderating influence in the state, a carefully devised scheme of indirect election to all the higher offices was established, at the same time that the nobles subjected themselves, the doge, and every one else, to a system of despotism, which not only determined the public and private conduct, but, in some measure, even the very thoughts of individuals! This was accomplished, partly by the institution of the Council of Ten, a committee chosen from the Grand Council, to which all the powers of the state were entrusted, and partly by the institution, in 1454, of three State Inquisitors, selected from the Council of Ten, and invested with all but unlimited authority. The proceedings of this most formidable tribunal were shrouded in the most impenetrable secrecy; but it was believed at the time, and is now certain, that it did not wait for overt acts, but proceeded on suspicion and presumption; that it had secret prisons; and that it made free use of the agency of spies, torture, and even of assassins. An individual disappeared, by what means no one knew; but if it were supposed that he had fallen a victim to the fears or suspicions of the Inquisitors, his relatives prudently abstained from all complaint, and even from making any inquiries respecting him. An unguarded expression, if reported, as was frequently the case, to the Inquisitors, was sure to draw their attention to the offender, so that not merely the freedom of the press, but even of speech, at least on political matters, was completely annihilated. Although, however, this jealous tyranny did not fail to repress, or rather extinguish some of the nobler energies of the mind, it must be admitted, that it preserved for a lengthened period the peace of the republic. It is true, also, that its despotism pressed equally on all classes and all individuals; the doge was as liable, and as likely, if occasion required, to be called to account by the Inquisitors as the humblest gondolier. Nothing, in fact, but implicit obedience to established authority, and a perfect abstinence from every sort of political preference and remark, could enable any individual, however high or low, to sleep soundly in Venice.

poly, of the absolute dominion she had early usurped

over the Adriatic, and of the dependence of her colonies and distant establishments, were amongst the principal objects of the Venetian government; and the measures adopted in that view were at once skilfully devised, and prosecuted with inflexible constancy. With the single exception of Rome, Venice, in the 18th century, was by far the richest and most magnificent of European cities; and her singular situation in the midst of the sea contributed to impress those by whom she was visited with still higher notions of her wealth and grandeur. San-mazarius is not the only one who has preferred Venice to the ancient capital of the world; but some have so beautifully expressed their preference.

Videtur Adriaticæ Venetiarum Neptunus in castris,
Stare urbem, et tota pascitur Jura mari.
Nunc mihi Turpesque quantavivis, Jaspis, onyx
Oblior, et ille tunc monda Meritis, ait:
Et Tharsus pulvis præfusa, urbes opibus maneat,
Illam brevibus diebus, hanc pascitur Dux.

Though justly regarded as one of the principal bulwarks of Christendom against the Turks, Venice had to contend, in the early part of the 16th century, against a combination of the European league of Cambray, of which I real author, was formed for the feeling the entire subjugation of partition of their territories. kings of France and Spain for federacy. But, owing less to the than to dissensions amongst the was speedily dissolved without a power of the republic. From 11 Venice was comparatively peace notwithstanding her efforts to keep the Turks, the latter invaded Cyprus in 1570; and conquered it after a gallant resistance continued for eleven years. The Venetians had the principal share in the decisive victory gained over the Turks at Lepanto in 1571: but owing to the discordant views of the confederates, it was not properly followed up, and could not prevent the fall of Cyprus.

The war with the Turks in Candia commenced in 1644, and continued till 1670. The Venetians exerted all their energies in defence of this valuable island, and its acquisition cost the Turks above 200,000 men. The loss of Candia, and the rapid decline of the commerce of the republic, now almost wholly turned into other channels, reduced Venice, at the close of the 17th century, to a state of great exhaustion. She may be said, indeed, to have owed the last 100 years of her existence more to the forbearance and jealousies of others than to any strength of her own. Nothing, however, could avert that fate she had seen overwhelm so many once powerful states. In 1797, the "maiden city" submitted to the yoke of the conqueror: and the last surviving witness of antiquity—the link that united the ancient to the modern world—stripped of independence and of wealth, now enjoys only a precarious existence, and is slowly sinking into the waves whence she arose.

The foundation of Venice is described by Gibbon, c. 38; and in his 80th chapter he has eloquently depicted her prosperity in the year 1200. Mr Hallam, in his work on the *Middle Ages* (i. 470—487), has given a brief account of the changes of the Venetian government. Her history occupies a considerable space in the voluminous work of M. Sismondi on the *Italian Republics*; but his details as to her trade and commercial policy are singularly meagre and uninteresting. All previous histories of Venice have, however, been thrown into the shade by the admirable work of M. Daru (*Histoire de la République de Venise*, 3d ed. 6 vols. 8vo. Paris, 1821). Having had access to genuine sources of information, inaccessible to all his predecessors, M. Daru's work is as superior to theirs in accuracy, as it is in most other qualities required in history.

Trade, Navigation, and Manufactures of the Venetians in the 16th Century.—The Venetian ships of the largest class were denominated galleasses, and were fitted up for the double purpose of war and commerce. Some of them carried 50 pieces of cannon, and crews of 600 men. These vessels were sometimes, also, called argosiers or argosies. They had early an intercourse with England; and argosies used to be common in our ports. In 1326, Edward II. entered into a commercial treaty with Venice, in which full liberty is given to them, for 10 years, to sell their merchandise in England, and to return home in safety, without being made answerable, as was the practice in those days, for the crimes or debts of other strangers. (*Anderson's Chron. Defection, Anno 1326.*) Sir William Monson mentions, that the last argosie that sailed from Venice for England was lost, with a rich cargo and many passengers, on the coast of the Isle of Wight, in 1547.

In the beginning of the 18th century, the annual value of the goods exported from Venice by sea, exclusive of those exported to the states adjoining her provinces in

Lombardy, was estimated, by contemporary writers, at 10,000,000 ducats; the profits of the out and home voyage, including freight, being estimated at 4,000,000 ducats. At the period in question, the Venetian shipping consisted of 3,000 vessels of from 100 to 300 tons burden, carrying 17,000 sailors; 300 ships with 5,000 sailors; and 45 galleys of various sizes, kept aloft by the republic for the protection of her trade, &c., having 11,000 men on board. In the dock-yard, many labourers were usually employed. The trade to Syria and Egypt seems to have been conducted principally by ready money; for 800,000 ducats are said to have been annually exported to these countries; 100,000 were sent to England. (*Daru, tome ii. p. 128, &c.*) The vessels of Venice visited every port of the Mediterranean, and every coast of Europe; and her mariners, probably, not much inferior to that of all the world. So late as 1618, a Venetian Arkworp, laden with spices, drugs, at that city.

not, however, confine themselves to the commodities of the East; and improvement of navigation, and arts, and prosecuted them with a period when they were entirely remote countries. The glass was the first, and for a long time the only in Europe; and her manufactures of silk, leather, refined sugar, &c. were the best. The jealousy of the government, and of any thing like free discussion, was the production of great literary works, however, aware of the same which Venice by the perfection to which she carried on. The classics that issued from the press were still universally and justly admired for their correctness.

of government, though favourable to the establishment of manufactures, was passive advancement. The importation of domestic commodities into the territories was forbidden, and domestic consumption was forbidden at penalties. The processes to be manufactured of most articles were regulated.

Année 1173, un tribunal avait été créé pour la police des arts et métiers, la qualité et la quantité des matières furent rigoureusement déterminées.

(*Plano 111 122*) *Statute* In this way, little to fear from being tied down to a system of laws to stimulate invention. In the last century the manufacture was remarkable as evincing the which they had early arrived, at improvements. An excellent artist, employed by the French, in the state of the arts of Venice, in the *Vindicta*, comme celle des arts dans toutes les stations.

M. Daru has given the following extract from an article in the *Statute*—of the State legislation, which strikingly character of the Venetian government, of foreigners:—"If any workman or art to a foreign country, to the prejudice he shall be ordered to return; if he do not return relations shall be imprisoned, that he may induce him to come back. If he shall be forgiven, and employment shall him at Venice. If, in despite of the imprisonment, he perseveres in his absence, an emissary shall be employed to apprehend him; and after his death his relations shall be set at liberty!"—(*Tome ii. p. 120.*)

The commercial history of Venice remains to be written; and were it executed by a person of competent attainments, it would be a most valuable acquisition.

Present Trade and Manufactures of Venice.—From the period when Venice came into the possession of Austria, down to 1830, it seems to have been the policy of the government to encourage Trieste in preference to Venice;

* The native population was 15,000; but there can be no doubt that this is a greatly exaggerated statement, and that 1,000 would be much nearer the mark.

Mexico, formed by the Spaniards, has latterly been allowed to fall. This inflicts a great injury on the trade of the port.

Vera Cruz was founded towards the end of the 16th century, on the spot where Cortez first landed: it received the title and privileges of a city from Philip III. in 1615. The castle was taken by a French squadron, after a vigorous bombardment, in 1839; but was soon after restored to the Mexicans. (*Humboldt; Ward; Poinsett; Mod. Trav.*, xxv.; *Blunt's Coast Pilot; Comm. Dict.*)

VERCELLI (an. *Vercelle*), a town of N. Italy, Sardinian dom., div. Novara, cap. prov. on the Sesia, and on the high road between Turin and Milan, 39 m. N.E. by E. Turin. Pop., in 1838, 18,353. It has a large market-place, one of the best cathedrals in Piedmont, several other churches, and good private buildings, a large and well kept hospital, museum, &c., with (in its environs) some fine promenades. Its fortifications were destroyed by the French in 1704. It is the see of an archbishop, and has some silk manufactures; but its chief trade is in rice, raised in the neighbourhood. A canal connects Vercelli with Ivrea. The date of its foundation is uncertain, but it was a town of some note in the time of the Romans. After suffering severely from the northern invaders, it revived under the Lombards, and took the lead of Turin till the latter became the residence of the court. (*Dict. Géog.*, &c.)

VERDUN (an. *Verodunum*), a town of France, dép. Meuse, cap. arrond., on the Meuse, where it begins to be navigable, and by which it is divided into 5 separate parts, 30 m. N.W. by N. Bar-le-Duc. Pop., 1846, inc. comm., 10,843. It has a citadel; and its defences were improved by Vauban. It is tolerably well built; but several of its streets are badly paved and steep. The bishop's palace, new cavalry barracks, military magazines, and theatre, are among the most remarkable buildings. It has 6 churches, including the cathedral; a Protestant church, a synagogue, a communal college, library with 14,000 vols., &c. A planted esplanade separates the town from its citadel. Verdun has manufactures of fine striped serges, flannels, cotton yarn, liqueurs, &c., and several large tanneries. It was a station of importance under the Romans; and in the middle ages, under the Germanic emperors, it enjoyed the privileges of a free imperial city. It was definitively annexed to France in 1648; and is best known in modern times from its having been selected by Napoleon for the residence of the English prisoners detained in France after the rupture of 1803. (*Hugo, art. Meuse, &c.*)

VERMONT, one of the states comprised in the North American republic, in the N.E. section of the Union, making part of what is called New England, between lat. 42° 40' and 45° N. and long. 71° 18' and 72° 55' W.; having E. New Hampshire, from which it is separated in its whole extent by the Connecticut River; S. Massachusetts; W. New York, Lake Champlain forming half the boundary on this side; and N. Lower Canada. Length, N. to S., 157 m. Average breadth about 60 m. Area, 8,000 sq. m. Pop., in 1850, 314,322. The surface is generally hilly: it is traversed from N. to S. by a range of mountains, some summits of which rise to upwards of 4,000 ft. in height. About the centre of the state they divide into two ridges, the principal of which passes in a N.E. direction into Lower Canada. These hills, being covered with fine forests of pine, cedar, spruce, &c., are called the Green Mountains, and their verdant appearance has given its name to the state. The rivers are inconsiderable: most of those flowing E. are merely small tributaries of the Connecticut; those on the W. side are larger and longer, and some of the principal rise on the E. side of the mountain chain, which they break through to fall into Lake Champlain. The climate varies according to differences of level and other circumstances; but the winters are colder than might have been expected either from lat. or elevation. The soil is moderately fertile, the best arable land being between the hills and Lake Champlain; but the greater part of the surface is more suitable for pasturage than for tillage.

According to the official returns, 680,000 bushels of wheat, 3,500,000 do. oats, 2,500,000 do. maize, and 370,000 do. rye were reaped in 1848, in addition to 8,000,000 do. potatoes. Barley, buckwheat, hops, and tobacco are also grown, but in small quantities. Apples succeed better than in Europe; and, in 1840, the value of the produce of fruit of various kinds was estimated at 1,109,000 dollars, being more than in any other state of the Union, New York excepted. In the same year 4,230,000 lbs. maple sugar, and 4,300 lbs. silk cocoons were gathered. The breeding of stock for export to Boston and the adjacent states, the West Indies, &c., is, however, the chief branch of industry; and there are said to be about 1,400,000 sheep, 350,000 head of cattle, 60,000 horses, and nearly 300,000 hogs in Vermont. Iron is very abundant, and copperas to the value of from 70,000 to 80,000 dolls. is made annually from native pyrites.

Marble of good quality is quarried, and lead is also among the mineral products. Linen and woollen fabrics are made in most families, and about 3½ million yards of cotton cloth and 112,000 lbs. of yarn are annually furnished by the various mills and factories. Pearl-shells and lumber are among the other chief exports; but as the foreign trade of the state is principally carried on through the adjacent states, no proper estimate can be given of its amount. The public works are insignificant, comprising only three short canals.

The legislature formerly consisted of a single house of assembly; but, in 1836, two separate houses (a senate of 30 members, and house of representatives composed of 1 member from each town) were established; which, together with its governor, lieutenant-governor, and executive council, are chosen annually by the people. The right of suffrage is vested in every male inhab. twenty-one years of age who has resided in the state for the year previously to the election. The judicial power is in a supreme court of 6 judges, and co. courts, each composed of 1 judge of the supreme court and 2 assistant judges. The supreme court sits once, and the co. courts twice, in each co. Judges are chosen annually by the general assembly, and a court of censors by a popular vote once in seven years. Vermont is divided into 14 co. Montpelier, having, in 1840, a pop. of 8,725, is the cap.; Burlington, where the university of Vermont is situated, though more populous, has only about 4,200 inhab. Schools are widely diffused in this state, and Middlebury College and Norwich University are flourishing institutions. Public revenue and expenditure, each about 110,000 doll. a year. Vermont has no public debt. This state was first explored by the French Canadians; but the earliest settlement was made by the English of Massachusetts, in 1724. Subsequently, New Hampshire and New York disputed the claim to this territory; but it was finally ceded by the British parliament to the latter. But, dissatisfied with this connection, it declared itself independent in 1777. (*Darby's View of the U. S.; Amer. Almanac*, 1850-51; *Amer. Encyc.*, &c.)

VERONA, a celebrated city of Austrian Italy, cap. deleg. of same name, on the Adige, at the point where the last declivities of the Alps sink into the great plain of Lombardy, 64 m. W. Venice; lat 45° 26' 9" N., long. 11° 0' 54" E. Pop., circa 48,500. (*Berghaus.*) It is divided into two unequal parts by the Adige, which sweeps through it in a bold curve, and forms a peninsula, within which the whole of the ancient and the greater part of the modern city is enclosed. The river, which is wide and rapid, is here crossed by four noble stone bridges.

Verona is an extremely well situated, well built, and most interesting city. "You enter it," says Mr. Rose, "by a magnificent approach, and a street probably the widest in Europe. This street is indeed short, and single in its breadth, but the city in general pleases by its picturesque appearance, to which an abundance of marble quarries has not a little contributed, thirty-five varieties of this species of stone being found in its neighbourhood." (*Letters*, i. 41.) The houses frequently present, in their form and ornaments, fine proportions, and beautiful workmanship. The old walls and towers still remain, and the city has five gates, two of which are fine structures, by Sanmichele. Its former military defences were destroyed by the French, after the revolt of the inhabs. in 1797; but extensive fortifications are again in the course of being constructed.

But the great glory of Verona is its amphitheatre, one of the noblest existing monuments of the ancient Romans. Excepting the Colosseum at Rome, it is the largest extant edifice of its class. Like all other structures of the same kind, it is elliptical, the extreme length of its transverse and conjugate diameters to the outside of the outer walls being respectively about 510 and 410 ft.; while those of the arena are 249 and 146 ft. (*Woods*, i. 226.) Its outer wall or cincture, which had 72 arches in every story, has been mostly destroyed, with the exception of one fragment containing three stories of four arches each, rising to the height of about 100 ft. Over this, however, there was a fourth story, so that the entire height of the building, when perfect, must have exceeded 120 ft. Internally it has suffered comparatively little; and its concentric rows of benches or seats, of which 43 still remain, exclusive of 2 sunk below ground, with its corridors, stairs, &c., are wonderfully well preserved. Each row of seats is 1½ ft. in height, and as much in breadth; and allowing 1½ ft. of space to each individual, the Marquis Maffei supposes that the amphitheatre might have accommodated 22,000 spectators! The interior of the amphitheatre having been in parts a good deal dilapidated, it was repaired at different periods in the 16th century, when the broken and wanting seats were replaced by others. But these repairs, though, on the whole, highly creditable to the Veronese, do not appear to have been well executed. The ancient benches were formed of vast blocks of marble, admirably cut and jointed; whereas the modern benches consist, according

to Maffei, of a soft flaky stone, which has, in parts yielded to the weather; and the same distinguishes authority adds, that but little care has been taken in laying the stones, and that in parts the elliptical curvature has not even been observed. These defects, however are not visible on a cursory inspection of the building which astonishes alike by its mass, its antiquity, and its preservation.

Owing to the want of inscriptions, and of all reference to its origin in the classical writers, we are without any authentic information either as to the founders or the era of this great work. Most probably, however, it was built somewhere between the reigns of Titus and Trajan, or in the early part of that of the latter. In the middle ages it was sometimes used for the exhibition of shows and sports, and sometimes as an arena for judicial combats. In more modern times, a bull fight was exhibited here in honour of the Emperor Joseph II., then at Verona, and at a still later period, the Pope, in passing through the city, gave his benediction to a vast multitude collected in the amphitheatre. The French, when masters of Verona, had the bad taste to erect in the arena a wooden theatre, in which plays, farces, equestrian feats, &c., were performed for the amusement of the troops. This barbarous novelty is still kept up. (Full particulars respecting the amphitheatre are given in the *Verona Illustrata* of the learned Marquis Maffei. That part of the work which relates to amphitheatres having been printed separately, was translated into English, and published in 8vo., London, 1730.)

But the amphitheatre is not the only monument of antiquity that distinguishes Verona. In the middle of a street called the *Corse* is an ancient double gateway, which, on the strength of an inscription importing that the adjacent walls were built by Gallienus, has been named after that emperor, but though loaded with supererogatory ornaments, the Veronese antiquaries affirm that its style is too good for his age. Each gateway is ornamented with Corinthian pilasters supporting a light pediment; and above are two stories with six small arched windows in each. The whole is of marble. The remains of another gateway, of a similar but chaster form, probably the entrance to the ancient forum, are to be seen in another street, and near the old Gothic castle, is the arch of the *Gavil*, perhaps part of a sepulchral edifice, but, at any rate, of very remote antiquity. Two arches in the purest style of Roman architecture make a part of one of the bridges; and the remains of another bridge, and the traces of a very large ancient theatre and naumachia, are still extant. Addison and Evelyn speak of a triumphal arch of Flamininus, as one of the noblest remains of antiquity in Europe, and of an arch commemorating the victory of Marius, with various temples and aqueducts; but as few or no remains of these exist at present, it would seem that the antiquities of Verona had suffered greatly since the beginning of last century.

The ecclesiastical buildings comprise interesting specimens of middle-age architecture. The cathedral, an edifice of the 12th century, has nothing particularly remarkable except the Assumption by Titian, and the tomb of Pope Lucius III., who, when driven from Rome in 1168, found a secure asylum in this city. In respect of architectural merit the cathedral is very inferior to the church of St. Anastasia, built by the Dominicans at the beginning of the 13th century. Mr. Woods says that

immense sums on its construction and embellishment. On the E. side, where it faces the place d'armes, it consists of only an irregular succession of buildings, enclosing a few small courts. But on the opposite side, facing the gardens, it presents a noble façade, 645 yards in length, 3 stories in elevation, ornamented with Ionic pilasters, and with 80 statues 16 ft in height, allegorically representing the months, seasons, arts and sciences, &c., and crowned by a balustrade. Its galleries and saloons, enriched with every variety of coloured marbles, and splendidly gilt, are like vast and magnificent. The Salon d'Hercule, and the Salles des Maréchaux, de Venus, Diane, Mercure, Mars, Apollon, l'Abondance, de la Guerre, &c., so named from the paintings on their ceilings, walls, or other appropriate devices, are all noble apartments. The Grande Galerie is 228 ft. in length, by 32 ft. in breadth, and 42 ft. in height: the ceiling, painted by Le Brun, represents some of the most striking events in the early part of the reign of Louis XIV. At one of its extremities is the Salon de la Paix, corresponding with the Salon de la Guerre. Besides its innumerable apartments, the palace has an elegant chapel, in which the unfortunate Marie Antoinette was united to Louis XVI. on the 16th of May, 1770, an opera-house, or theatre, capable of accommodating 3,000 spectators, a magnificent staircase, &c.

The palace has not been occupied by the court since 1789, and was getting into a state of disrepair, when it was entirely renovated and transformed by his present majesty, Louis Philippe, into what may be called a national museum, intended to illustrate the history, and to exhibit the progress of arts, arms, and civilisation in France. In pursuance of this design, many small apartments, formerly appropriated to the lodging of the various functionaries attached to the court, have been converted into noble saloons. Of these, the Salle des Maréchaux, noticed above, containing portraits of all the Marshals of France, the Galerie des Batailles, the Salle de 1830, the Galerie de Sculpture, &c., are amongst the most striking. The palace is, in fact, filled with an immense collection of statues and paintings, exhibiting all the principal personages and events in the history of the monarchy, from the reign of Clovis down to that of Louis Philippe. Of course, many of these statues and pictures must be very inferior; but these will be gradually replaced by others, and the collection is exceedingly interesting. The library is intended to comprise copies of all works having reference to the history and state of France. The fitting up of the apartments is, also, superb; and the whole reflects the highest credit on the taste and liberality of the king.

Immediately adjoining the palace on the W., is the little park, comprising the gardens, numerous reservoirs, fountains, and public walks; the orangery; Bains d'Apollon, and Bassin de Neptune, both having sculptured groups of much merit, &c. In this park are also the Great and Little Trianon, two royal palaces on a minor scale, and the grand water-works, of unrivalled magnitude, which, however, play only on great occasions. They are supplied from the Seine, by the aqueduct of Marly. The great park comprises a large tract of country, including several villages. (Hugo, art. *Versailles*; *Guide du Voyageur en France*, &c.)

Versailles has some manufactures of cotton yarn, and wax lights, but only on a limited scale: it had formerly an extensive factory of fire-arms, but this appears to be given up. It is the see of a bishop, and the seat of tribunals of primary jurisdiction and commerce, and of societies of literature and agriculture, &c. Philip V. of Spain, Louis XV., Louis XVI., Louis XVIII., Charles X., and several other eminent personages, were born at Versailles. It is also intimately connected with the history of the Revolution. The States General met in the great hall of the palace on the 5th of May, 1789. And here, on the 17th of June, the *tiers état*, having been joined by the whole body of inferior clergy, and some of the nobles, constituted themselves the National Assembly, and the sole representatives of the people. On the 20th of the same month the deputies, finding the doors of the hall in which they had been accustomed to meet shut against them, retired to the Tennis Court, and took the famous oath, by which they bound themselves to continue their sittings till the constitution of the kingdom had been fixed on a solid basis! The revolution, thus fairly begun, set in with a violence which all the talent and firmness of purpose of Napoleon would, perhaps, have been unable to control, and which the vacillation of the good-natured imbecile king served only to aggravate. And so rapid was the progress of events, that on the 5th and 6th of October the palace of Versailles was forced by a mob, consisting of the lowest scum of Paris; who, in the end, succeeded in forcing off the king and his family to the capital, to encounter, at the hands of the vilest ruffians, imprisonment, every species of indignity, and an ignominious death!

VERVIERS, a town of Belgium, prov. Liege, cap. arrond., on the Vesdre, by which it is intersected, and

which is here crossed by two stone bridges, 14 m. E. Liege. Pop., in 1846, 21,000. It is divided into the upper and lower town; some of its streets are wide and well built, but many others are quite the contrary. When erected into a town in 1651, it was surrounded with walls, but these were afterwards demolished by the French. A new church, the town-hall, and a little theatre with a front of the Ionic order, are handsome buildings. It has a tribunal and chamber of commerce, a college, hospital, and several asylums, nearly thirty public schools, a philanthropic society, bath establishment, &c. The Vesdre is divided into numerous canals, for the use of the various manufactories, which have increased rapidly since the peace. These comprise above 50 woollen cloth factories, and more than 30 dyeing-houses, with fulling and other mills, soap-works, breweries, iron and lead foundries, &c. It has two markets weekly, and four annual fairs. Great quantities of fullers' earth are dug up in the vicinity. (Vandermaelin, *Dict. de Liège*; &c.)

VESOUL, a town of France, dép. Haute-Saône, of which it is the cap.; in the valley of the Durgeon, at the foot of the Motte de Vesoul, a height covered with vineyards and meadows, 56 m. E.N.E. Dijon. Pop., in 1846, inc. com., 5,941. It is well built and clean; most of its streets are wide and straight, and it has several good public buildings, including cavalry barracks, civil and military, hospital, theatre, prefecture, par. church, public baths, court-house, town-hall, &c. It has, also, a public library, said to comprise 21,000 vols., a museum, and a departmental nursery-ground; with manufactures of calico and gold lace, and some trade in corn, wine, salt, nails, and hardware. Near it are mineral waters, but they are turned to little account. (Hugo, art. *Haute-Saône*, &c.)

VESUVIUS (MOUNT), a celebrated mountain of S. Italy, *Ætnæ ignis imitator*, being the only active volcano, of any consequence, at present existing on the European continent; on the E. shore of the bay of Naples, and 10 m. E. by S. from the city, the crater being in lat. 40° 48' N., long. 14° 27' E. Vesuvius does not belong to the Apennine system, but rises, altogether unconnected with any of its ramifications, out of the great plain of Campania. Including M. Somma on its inland side, it consists of a circular mass, the extreme height of which, about 3,890 ft., is to its diameter, 8 m., nearly as 1 to 11; it is somewhat less elevated than Mount Hecla, and only two fifths the height, with considerably less than one third the circuit of Etna. Mr. Maclaren, by whom it has been carefully examined and elaborately described, gives the following account of its external appearance:—"To gain a distinct conception of the aspect of the hill, shape out for yourself, by a mental effort, the following objects. *First*, a sloping plain, 3 m. long, and 3 m. broad, stretching up, with a pretty rapid ascent, to an elevation of more than 2,000 ft., very rugged in the surface, and covered every where with black burnt stones, like the scoræ of an iron furnace; *second*, at the head of this plain, and towering over it, a cone of the same black burnt stones, with sides remarkably straight and uniform, shooting up in the blue sky to a further elevation of 1,500 ft.; *third*, behind this cone a lofty circular precipice (the front of Monte Somma), 1,400 ft. high, and 3 m. long, standing like a vast wall, and of the same burnt appearance; *fourth*, at the lower side of the plain, between the burnt ground and the sea, a belt of land, 2 m. broad, laid out in vineyards, but intersected every one or two furlongs by terraces of the same black calcined matter, projecting like offshoots from the central mass, and now and then unveiling old currents of lava from beneath them. Very little lava is visible; but the course of the different currents is traced by the long terraces of scoræ which cover and flank them.

"The top of the cone, which is about 2,000 ft. in diameter, presented the aspect of an uneven plane in the end of 1838; but when visited about five weeks after the eruption (of 1839) it had a regularly formed crater, shaped exactly like a tea-cup. I estimated its width at 1,500 ft., and its depth at 500. The rim or crest of loose and solid matter which surrounded it, was of very unequal breadth, 400 or 500 ft. on the W. side, and apparently not 50 at some other parts of the circumference. Snow having fallen some days before, clouds of steam rose from the cavity, which, however, were neither so dense nor so constant as to prevent us from occasionally seeing the bottom of the crater very distinctly. It was nearly level, without crevices or openings, and covered with loose blocks of lava of no great size." (News of France and Italy, 124, 125.)

Geologically considered, Vesuvius is but the representative of a more ancient and much larger volcano, of which Monte Somma is a remnant, and in the centre of which the modern vent has been upheaved. Monte Somma, on the N.E. side of Vesuvius, is a ridge extending 3 m. in length, forming about one third part of a circle, and rather less lofty than the present cone of Vesuvius. The average distance of the escarpment of

Somma from the centre of the cone is about 1 m.; the back of the ridge dips outwards at an angle of 26° , while the front towards Vesuvius is nearly vertical, rising 1,377 ft. (420 metres) above the level space which divides it from Vesuvius, and which is called the *Atrio dei Cavalli*, or "vestibule of horses," because visitors to the crater are obliged to leave their horses, and perform the rest of the journey on foot. The *Atrio dei Cavalli* forms a segment of a circular ring, about $\frac{1}{2}$ m. in breadth, at the base of the cone, dividing it from Somma, and having a continuation, in the shape of a depression, on the other sides, where a slight projection, called the *Pedimentata*, is supposed to indicate the place of the rest of the ancient escarpment, which, when complete, must have formed a ring 6 m. in circ. (Maclaren, p. 140.); being of greater extent than any crater with which we are acquainted. Hence, Mr. Lyell considers it probable that the ancient volcano was higher than Vesuvius, and that the first recorded explosion of the latter blew up a great part of the cone itself, "so that the wall of Somma, and the ridge or terrace of the *Pedamentina* were never the margin of a crater of eruption, but are the relics of a ruined and truncated cone." This species of phenomenon has not been without an example in modern times. During the eruption of Oct., 1822, more than 800 ft. of the cone were carried away by explosions, reducing the height of the mountain from about 4,200 to 3,400 ft. (Forbes's *Account of Mount Vesuvius*; *Lyell's Geology*, ii. 80. 88., &c.)

According to Maclaren, the rocks of Somma and Vesuvius are mineralogically distinct.* Somma, like Vesuvius, is composed of strata of fragmentary and stony matter intermixed; but the stony matter of Vesuvius consists of lava, more or less cellular, scoriaceous on the surface, and forming long narrow bands on the surface of the hill. That of Somma is a lenticite porphyry, containing shells, and continuous with the beds under the tufa which forms the soil of the plain of Naples. Mr. Lyell says, "It is an extraordinary fact, that in an area of 3 sq. m. round Vesuvius, a greater number of simple minerals have been found than in any other spot of the same dimensions on the surface of the globe. Haüy only enumerated 380 species of simple minerals as known to him; and no less than 82 had been found on Vesuvius before the end of the year 1828." Many of these are peculiar to that locality. (ii. 92.) The flora of Vesuvius is also peculiar in Italy, embracing several *Euphorbiaceæ* and other plants not found elsewhere in that peninsula. The greater part of the mountain has, indeed, a bare and rugged aspect; but around its base, as previously stated, is an extremely fertile and picturesque region, teeming with plantations, villages, and white country-houses. The land here is divided into small farms of 5 or 6 acres, supporting each a whole family, and the pop. is estimated at not less than 5,000 persons to a sq. league. The land is cultivated, like a garden, with the spade; and yields three crops a year, without fallows or manure. The proprietor of the soil usually receives two thirds of the gross produce in kind for his rent. The leases are long, and the intercourse between farmer and tenant is generally mild and liberal. It is on the slope of Vesuvius that the *Lacryma Christi* is grown. This, which is a red luscious wine, is better known by name than in reality, very little of it being produced, and that little being principally reserved for the royal cellars. The *vino Greco* and the muscadine wines of Vesuvius, are also deservedly celebrated. (Simond's *Italy*, pp. 421, 422.; *Henderson on Wine*, p. 240.)

Vesuvius, being so near Naples, is usually visited by strangers resorting to that city. M. Simond gives the following notice of his ascent to the mountain in 1818:—"We left Portici, ascending gradually among cultivated fields and vineyards occasionally traversed by streams of old lava, black, rough, and sterile; and in $1\frac{1}{2}$ hour reached the Hermitage, a convent where a few monks keep a sort of inn for the visitors of Vesuvius. Further up, we traversed large fields of lava, extremely rough; and at the base of the cone, prepared for the ascent over a heap of crumbling ashes and cinders, extremely steep, of course, as it formed an angle of nearly 45° . In about one hour, stoppages included, we found ourselves on extremely hot ground, intolerable to the hand, and fatal to the soles of our shoes; it teemed with hot vapours, and was covered with beautiful efflorescences of sulphur. Smoke issued from numerous crevices; at the entrance of which a piece of paper or a stick took fire in a few seconds; and, what seems strange, a stone thrown into one of these openings increased the smoke at all the others. Stooping low, we could hear a noise very like that of a liquid boiling. The hard but thin

crust upon which we stood appeared to have settled down in some places; a woeful indication of its hollow state. After a few steps more we came to the edge of a prodigious hole, on the very summit of the cone, being the crater formed by the last eruption, four months previously. This hole was not by any means the tremendous thing we expected,—a fathomless abyss, fiery and black, with lava boiling at the bottom,—but a slope of grey ashes and cinders, much like that by which we had ascended, or scarcely more precipitous, and ending, at the depth of 400 or 500 ft., in a level place, with grey ashes like the rest." The view from the summit is far inferior in extent and magnificence to that from Etna, but is, notwithstanding, extremely various, rich, and beautiful. The whole ascent and descent to and from Naples may be readily accomplished in seven or eight hours. (Simond's *Trav.*, p. 421—422.; *Eustace, Class. Tour*, iii. 23—25.; *Starke's Guide*, &c.)

From the period of the earliest records down to the reign of Titus Vespasian, the volcano seems to have been inactive; the appearance of its crater and its cavernous structure being the only indications by which Strabo conjectured that it might at some distant period have been on fire! But in the first year of the reign of Titus (A. D. 79) the volcano that had so long been dormant burst forth with renewed and tremendous energy, in one of the most destructive eruptions of which history has preserved any account. The large and flourishing cities of Herculaneum and Pompeii, near the sea, were both overwhelmed by its lavas and ashes! Even the figure of the coast was materially changed; and for the space of more than 1,600 years all trace of the buried cities was completely lost, and they were only accidentally discovered in the course of last century. The elder Pliny lost his life during this dreadful eruption, which has been described by the younger Pliny, by whom it was witnessed (*Epist.*, lib. vi. 16 and 20.), and by Tacitus. *Luctum, says the latter, attulit atrox et continuus tremor terræ, quem secula est horrenda Vesuvii montis conflagratio. Pulcherrima Campania ora miserè sedata: obruta duæ urbes Herculaneum et Pompeii: vasta hominum strages, quos inter periere Agrippa etusque mater Drusilla. At studiorum sanâ mors C. Plinii fuit insignior.* (App. Chron.)

Since the destruction of Herculaneum and Pompeii there have been 45 authenticated eruptions; but, luckily, none of them have been equal to it in destructive power. Of those which happened down to the 12th century, we have few accounts; and from 1138 to 1631 there were but two slight eruptions: during this interval, however, Etna was in a state of great activity, and the formation of Monte Nuovo, &c. in the Phlegrean Fields took place. In 1631 a violent eruption occurred, during which seven streams of lava poured from the crater; and from 1666 to the present time, there has been a series of eruptions, the longest intervals between them having rarely exceeded ten years: the last was in Jan. 1839. The energy of Vesuvius, when in action, is extremely great, and the spectacle highly magnificent and sublime. In the eruption of 1779, Sir W. Hamilton says that jets of liquid lava were thrown up to the height of at least 10,000 ft. having the appearance of a column of fire; and in that of 1793, according to Dr. Clarke, millions of red-hot stones were shot into the air to full half the height of the cone itself, and then bending, fell all round in a fine arch, covering nearly half the cone with fire. The lava, however, does not always issue from the crater at the summit, but, as in Etna, sometimes from small cones raised in various parts of the declivity; and occasionally three or four of these cones are in a line, which generally points towards the great crater. The eruptions of 1760, 1794, and 1834, were of this description. (For further details, we beg to refer the reader to Sir W. Hamilton's *Observations on Vesuvius*, and his *Campi Phlegreæ*, and to the works of Clarke, Scrope, Dufrenoy, &c., with those of Maclaren, Simond, Eustace, Rampoldi, &c.)

VIATKA, a government of European Russia, chiefly between the 56th and 60th degs. of N. lat., and the 46th and 54th of E. long., having N. Vologda, E. Perm, S. Orenburg and Kasan, and W. Nijni-Novgorod, and Kostroma. Area, estimated at about 52,900 sq. m. Pop., in 1846, 1,662,800. The slope of the country is towards the W. and S., in which directions the Viatka, a tributary of the Wolga, flows, traversing the government nearly in its centre. The Kama, which forms part of its E. and S. boundaries, also rises in this gov. Surface generally undulating, and even mountainous towards the E., where it consists of the lower Ouralian ranges. The soil is mostly good, though encumbered in parts with extensive marshes. Climate severe in winter, but not usually unhealthy. Agriculture is the principal occupation of the inhabs., particularly along the banks of the large rivers; and in ordinary years an excess of corn is grown. Rye, barley, and oats, are the principal grains; very little wheat is raised, but pease, lentils, and buckwheat, are grown, with large quantities of hemp and flax. The surplus produce goes chiefly to the N. Russian

* Lyell says:—"The escarpment of Somma exhibits a structure precisely similar to that of the cone of Vesuvius. The principal point of difference consists in the greater abundance in the older cone of fragments of altered sedimentary rocks ejected during eruptions. (*Principles of Geology*, ii. 89.; iii. 343.) But it appears from Mr. Maclaren that later discoveries have been made. (*Note*, &c., p. 139.)

provs. Potatoes are not much cultivated. Fruit is not plentiful; apples scarcely ripen. The forests are very extensive, they consist mostly of firs, intermixed with oak, elm, alder, lime, birch, and other trees. Cattle breeding, though a secondary branch of industry, is still of importance; and a good many small but robust horses are reared. Sheep are few. Furs, tar, iron, and copper, are among the chief products. Manufactures, though not extensive, appear to be on the increase: in 1832, there were 62 factories for woollen cloths, linen and cotton stuffs, paper, soap, potash, copper, and iron wares, &c., employing between 6,000 and 7,000 hands. About 2 million archines of woollen, and perhaps nearly double that quantity of linen cloth, are supposed to be annually made in the houses of the peasantry; and large quantities of spirits are distilled. Near Sarapoul is an extensive manufactory of arms, and at Votka anchors, gun carriages, and iron machinery of various kinds are made on a large scale. The government exports corn, flax, linseed, honey, tallow, leather, furs, silk goods, iron, and copper, to Archangel, and corn and timber to Saratof and Astrakhan. It receives manufactured goods from Moscow and Nijni-Novgorod, tea from Irbit, and salt from Perm. Viatka, the cap., is the great emporium of the trade. It is subdivided into 11 districts; Viatka, Slobodskoi, and Sarapoul, being the chief towns. The inhabitants consist of various races; Russians, Votjaks (of a Finnish stock, and from whom the prov. has its name), Tartars, Baschkirs, Teptiars, &c., professing many different religions. The Mohammedans are estimated at nearly 80,000; and the Shamanists and idolators at 2,500. In 1831, there were only nine public schools, in which, 1,153 pupils were receiving instruction; but the number has since materially increased. This government is united under the same governor-general with Kasan: but the Tartars and Finns are subordinate to the jurisdiction of their own chiefs.

VIATKA, a town of European Russia, cap. of the above gov.; on the Viatka, near the confluence of the Teheptsa, 230 m. W. by N. Perm, and 260 m. N.E. Nijni-Novgorod. Pop. 6,890. (*Possart*.) It has several stone churches, one of which, the cathedral, with a silver altar ornamented with bas-reliefs, cost 130,000 roubles. Here are numerous convents, with an episcopal seminary, gymnasium, and high school, founded in 1829. It was annexed to Russia by Ivan Vasilievitch, about the middle of the 16th century. (*Schnitzler, La Russie; Possart, Das Kaiserthum Russland, &c.*)

VICENZA (an. *Vicentia*, or *Vicetia*), a city of Austrian Italy, cap. deleg. of its own name, on the Bacchiglione, where it receives the Retrone, 26 m. E.N.E. Verona, and 37 m. W. by N. Venice. Pop. in 1843, 33,100. Though surrounded by dry moats and dilapidated walls, it is one of the best built cities of Italy. It has an astonishing number of well-designed houses, many of which are of very fine architecture; and even those which are less deserving of praise would, from their number and the richness of their ornaments, produce a great appearance of magnificence in the city, if they were well kept up; but they appear forlorn, neglected, and half uninhabited. (*Wood's Letters, &c.* i. 238.) Vicenza, says Forsyth, "is full of Palladio," the modern Vitruvius, born here in 1518, who has lavished all his skill on his native place. Besides about 20 palaces, the town-house, or *basilica*, the church of Sta. Maria del Monte, the Rotunda, the Olympic triumphal arch leading to the Campo Marzo, the theatre of the Olympic Academy, &c. are the works of this architect. The most celebrated of these is the Olympic Theatre, a noble edifice, constructed upon the plan of the ancient theatres, and bearing a great resemblance in all essential particulars to those of Herculaneum and Pompeii. It is fully described by Eustace, who states that the palatial edifices of Vicenza, though inferior in materials and size to those of Genoa, are much superior in external appearance. (*Class. Tour*, i. 132-5.) The Vicentine villas, which have been often imitated in England, are as beautiful as the larger buildings within the city. Many of them are on the Monte, a pleasant hill adjacent to the town, the favourite resort of the Vicentine gentry, and whence an extensive and rich view is obtained of the great plain of Lombardy. Vicenza has few Roman antiquities, and not many interesting specimens of middle-age architecture. The cathedral has a front exhibiting a mixture of different styles, and its interior presents a nave only, which is of great width; neither the length nor height being in proportion. The church of St. Corona has a fine "Adoration of the Magi," by Paul Veronese; the church of St. Lorenzo is now converted into a barn. All these buildings are in the pointed style, which prevailed in this part of Italy during the 13th century, and of which the church of St. Anastasia at Verona is one of the finest examples. (*Woods*.) Nine bridges cross the different rivers at Vicenza, one of which, the *Ponte de Sanmichele*, is by Palladio, and, according to Rampoldi, may be compared with the Rialto at Venice.

Vicenza is a bishop's see, the seat of the council, and of the superior courts for the deleg., and has a lyceum, two gymnasiums, an ecclesiastical seminary, and many inferior schools, eleven hospitals and orphan houses, a government pawn-bank, public library, societies of agriculture, &c. The Olympic Academy was founded in 1564, for the encouragement of polite literature, and still, as formerly, includes the most respectable citizens. (*Eustace*.) Some of the palaces have a few fine paintings; but they were mostly carried off by the French.

The Vicentines are said to manifest an aptitude for manufactures; and are, perhaps, inferior in industry only to the inhabs. of Verona. They weave silk and woollen fabrics, and make leather, whalebone articles, earthenware, hats, gold and silver articles, fire-engines, &c., and have a considerable trade in agricultural produce. "As you enter the Vicentine territory," says Mr. Rose, "you may observe a visible improvement in the mode of cultivation. The fields are kept cleaner, and every thing indicates superior industry and exactness. If we except the resemblance of dialect, and some community of trifling customs, Calais and Dover are not more unlike than Padua and Vicenza, long subjected to the same government, and connected by facilities of communication both by land and water. To say nothing of the outward appearances of the two cities, which present a most remarkable contrast, it would seem as if the inhabs. were of different blood,—as if a colony of Venetians, making a knight's move, had leaped over Padua and established themselves at Vicenza." (*Letters from the N. of Italy*, i. 154, 155.)

Vicentia was anciently a Roman *municipium*, but one of little consideration. (*Tact. Hist.*, iii. 8.) It was sacked by Alaric in 401, and successively pillaged by Attila, the Lombards, and the Emperor Frederick II. Early in the 18th century it came into the possession of the Venetians, who held it till the downfall of the republic in 1796.

Napoleon conferred the title of Duke of Vicenza on Caulaincourt. (*Rampoldi; Austr. Nat. Encyc.; Woods; Forsyth; Eustace; &c.*)

VICH (an. *Ausona*), a town of Spain, in Catalonia, prov. Barcelona, in an undulating plain, 26 m. N. Barcelona. Pop. 12,500. (*Milano*.) It is of a very irregular figure; some parts of it are well built, and 2 of its squares are handsome. The cathedral is very mediocra, and is, indeed, inferior in many respects to the other churches. It has numerous convents, a seminary, college, and several hospitals, with manufactures of linen and hempen fabrics, printed cottons, woollen cloths, hats, and leather. (*Milano; Dict. Géog.*)

VIENNA (Germ. *Wien*, Lat. *Vindobona*), a city of Germany, cap. of the Austrian Empire, prov. Lower Austria, on an arm of the Danube, where it is joined by the small rivers Wien and Alster, 190 m. E. Munich, 330 m. S.S.E. Berlin, and 800 m. N.W. Constantinople. Lat. of the observatory, in the centre of the city, 48° 15' 33" N.; long. 16° 22' 45" E. The pop., which in 1815 was about 250,000, had increased, in 1840, inc. the garrison of about 15,000 men, to 387,927, and in 1846 to 410,946; but it has since declined.

The Danube, opposite Vienna, is divided into three or four separate arms, the most southerly of which washes the walls of the city. Between the third and fourth of these arms, however, is the important suburb of Leopoldstadt, with the Prater, the Augarten, and several other favourite promenades. This part of Vienna communicates with the city and the suburbs on the S. side of the Danube by five bridges, of which the Ferdinands Brücke, in the centre, is the chief. Vienna stands in a plain, elevated about 530 feet above the level of the sea; but so little above that of the Danube in this part of its course, that, with the exception of its S. extremity, which is on the gradual ascent to the heights of Kahlenberg, most part of the city is liable to inundations. Vienna is of a nearly circular form, being about 10 m. in circ. The city-proper, in the centre, is, however, scarcely 3 m. round. It is enclosed by ramparts of brickwork, and a beautiful glacis from 2 to 3 furlongs broad, planted with trees, laid out in public walks, forming, like the parks in London, the lungs of the metropolis; these separate the city from its numerous suburbs, which, on the S. side of the Danube, are again enclosed by a line of ramparts, originally thrown up in 1703, where the passports of travellers are demanded.

Vienna, from its size, wealth, population, and activity, deserves to be compared with London and Paris better than any other European capital. Its chief points of external difference from these cities are that it preserves about it more antique grandeur, and that it is the old and not the new parts of the town which form the fashionable quarters. Most part of the principal edifices are within the city, where the houses are usually four or five stories high, and the streets irregular, narrow, and dark; but where the imperial family and most of the nobility reside. Nearly all the best shops, principal hotels, &c., are also in this quarter. In the suburbs, however, are several of the pa-

town and garden-villas of the higher society, including those of Princess Liechtenstein, Esterházy, Schwarzenberg, Anjouberg, Wessersbach &c. the Belvedere Palace built by Prince Eugene and appropriated by Joseph II. to the Imperial picture gallery and other public institutions with numerous baroque magazines and other military establishments, hospitals, &c. The streets in the suburbs are generally broad and straight, but some of them, being exposed, are in our winter dirty and muddy. The thoroughfares to the city proper are on the contrary uniformly clean and well paved; but in part of the capital has as yet the advantage of cleanliness.

The houses, both in the city and suburbs, are in general large edifices, and, as in Paris, are built around courtyards, and surrounded by many different families. Some of these dwellings are of marvellous extent, and quite tower by themselves. Prince Bismarck has one comprising 100 different sets of apartments, and yielding a revenue of 1,000 to 1,500 a year, and one belonging to the King, similarly (supposed to be) inhabited by 1,000 persons, and to produce a rental of 1,000 a year. *Reuss's Tour de Germany.* The Burger Hospital formerly as hospital for the cholera, was converted by Joseph II into a dwelling house. It is 4 stories high, has 10 courts and 30 staircases and several other houses are of equally colossal dimensions. No city in Europe has so large a number of rubbish carts as Vienna. In families of princes, 10 of women, and 10 of boys make it their trade for the greater part of the year. These ladies may perhaps have husbands of from 100,000 to 200,000 florins a year and several as Prince Bismarck. *Lebensweise der Kaiserin.* There are many private gentlemen spend 10,000 florins a year, and, with the exception of those of leading the affairs of Vienna are the richest in the world. Berlin and Vienna may perhaps have more carriages, pillars, and handsome public buildings, and in Munich and Paris there may have a more imposing effect, but in none of these capitals are there so many noble and extensive private edifices. The Harbourside and other streets near the imperial residence are full of palaces of the highest utility. There as in London, frequently extend along narrow thoroughfares, and are not distinguished from humble residences except by their green sops and showing their hearths are occupations.

Nearly all the so-called squares of Vienna are within the city. They are irregular and consequently small open spaces, some being as large as Wootton Place, the artificial ponds in the centre of St. Stephen's park, and the Odeon is an immense thoroughfare, and may be looked upon as the Charing Cross or Madison Street of Vienna. Most of these open spaces are surrounded with one or more monuments or fountains. These however are not always to good taste. In the Joseph Platz is a fine equestrian statue of Joseph II. by Zanner.
The emperor's commissions to which it used to be very striking is attired in the Roman costume, and crowned with laurel; with one hand he curls the tip of his sword, and the other he extends to his people. The statue reposes on an elevated pedestal of granite bearing the inscription Kaiser paterfamilias Austriae et Hungariae, etc., etc., and above with its brilliant pilasters are adorned with medallions representing not the remarkable events of his life, but his virtues. It was erected by the late emperor Francis II. (Francis I. Germany) in 1804. But except this Vienna has no other statue of her great sons or emperors. There is none of Maximilian, Prince Eugene, Mary Louisa, Louis of Baden, or John Sobieski; none of Duke of Saxe-Coburg, Saxony, Mecklenburg, or Hesse. In respect of such statues, Paris, Berlin, and even London, are far before Vienna. In her bridges Vienna is also immeasurably behind London and Paris having quite worthless ones. The Danube is here nowhere much more than 60 yards across, being also a sluggish and muddy, though a navigable stream. The Wien to Graz bridge is a mere thingy dicky. The drainage of the town is effected by four underground sewers.

Antioch Baptists.—The roof of this is the cathedral of St. Stephen, devoted to the service of the city and from which the principal churchwardens disengage. It is an elegant building, ranking in style and richness of architecture with the cathedrals of Saragossa and Seville. Its length is 220 ft. and its greatest breadth 120 ft. Flanking its great doorway are two towers, the remains of the original church, constructed in 1168; and at the angles of this front are two magnificent pinnacles of a similar kind, though only the most southern has been finished. The tower and spire is 220 ft. in height, or barely 14 ft. lower than that of Saragossa. It has a bell weighing 1200 lbs. and four cannon tubes from the Turks and directed towards the W about 5 ft. from the perpendicular. The exterior of the cathedral has a good deal of rich carving. Windows are carved scenes, a few good statues, the entrance of Prince Alexius, the entrance of Frederick III., &c. and

themselves are rarely first-rate specimens. The gallery of Vienna is good alike in intrinsic excellence, in order, and in condition. Of the museums generally, as, indeed, of most of the institutions under the Austrian government, the high and eminent excellence is their admirable adaptation to practical utility. In those of other countries we had seen articles of greater individual rarity; entire assemblages of certain branches, more copious and complete; but in no one were the various objects, to our apprehension, so ably and lucidly arranged, labelled, described, and exhibited, as at Vienna; and this, too, in a city where space and light are so defective. They are fully exhibited to the public, during a convenient number of hours; and the student has ample opportunity of following up his researches therein, in connexion with lectures gratuitously afforded on the principal branches of science." (*Turnbull's Austria*, i. 236—238.)

The Imperial arsenal has one of the richest armouries in Europe. In the upper rooms 180,000 stand of arms are kept; and, besides a large store of weapons and armour of different dates, we have here the buff coat worn by Gustavus Adolphus at the battle of Lutzen, the arms of Marlborough, Eugene, Stahremberg, and Montecuculi, numerous standards, the enormous chain thrown across the Danube by the Turks in 1629, &c. The city arsenal is a fine building, constructed by the citizens at their own expense, and has, with many curiosities similar to the above, arms sufficient for 25,000 civic guards. The Imperial riding-school is also a handsome edifice by Fischer of Erlach, but lost among the buildings of the palace. The Royal Stallung, in the suburbs facing the Burg-thor, is a noble palace appropriated to the Royal Hungarian guard.

Vienna has five theatres; the principal are, the Hof-theatre attached to the palace, and that at the Kärnthner-thor (*Carinthian-gate*). The first is devoted solely to the performance of the regular German drama; and, though not the largest, is by far the finest theatre in Vienna. It is both clean and well lighted, and is said somewhat to resemble Drury Lane. The acting here is at least equal to that at Berlin; and the performers have, after ten years' service, a handsome pension settled on them for life by the government, with an annuity after their death for their widows. (*Strang's Germany*, ii. 253.) The Kärnthner-thor is the opera-house of Vienna, and the singers and orchestra are unsurpassed in Germany. This house is very large, having six complete rows of boxes and a half circle next the pit: but the largest theatre is one on the Wien, appropriated to equestrian pieces. The really national theatre of the Viennese is the *Beym Casperl*, in the Leopoldstadt. This theatre, the *Adelphi* or *Ambigu Comique* of Vienna, is appropriated to farces, and is the arena on which the national character is painted in the most lively colours and broadest manner. Here, says Mr. Strang, one circumstance is noticeable, as indicative of the power of "the million," even in Austria. The police, though exceedingly strict in the regular theatres, are said to *wink hard* at the political jokes that are frequently cracked on this stage; while the pulse of the public is not unfrequently felt here, by somewhat the same means as the old Council of Ten used to adopt at Venice, through the tricks and colloquies of Punchinello. (*Germany in 1831*, ii. 255, 256.)

Vienna has several handsome gates, the chief of which is the Burg-thor, near the palace; but none is comparable for magnificence to the Brandenburg gate, Berlin. Indeed, every object brought under public observation appears externally more splendid, elegant, and attractive in the Prussian capital; "yet it is merely as shadow to substance, for in Vienna, behind dark walls, there is far more sterling value than in the finest palaces of its rival." (*Spencer's Germany*, &c., ii. 138.)

Schools, Libraries, Galleries, &c.—Vienna has a university, founded in 1237, but which was wholly remodelled by Von Swieten in the time of Maria Theresa. It is celebrated on the Continent as a school of medicine, and is probably attended by a greater number of students than any other German university, except that of Berlin: in 1832 it had 1,619 students, of whom 809 studied divinity, 332 law, 519 medicine and surgery, and 449 philosophy, &c. (*Journal of Education*, vol. ix.) There are between 70 and 80 professors, all of whom are paid by government, and are neither permitted to receive fees on their own account, nor to give private lessons. The theological, surgical, and veterinary courses are delivered gratuitously; but the student has to pay a fee of 18 flor. (about 1*l.* 1*s.* 6*d.*) for attendance on the lectures in philosophy, and of 30 flor. (2*l.* 12*s.* 6*d.*) for attending those in medicine and jurisprudence. The whole amount of the moneys thus paid for tuition during the session is expended in stipends to indigent students, and divided among them, without reference to their religious creeds, in allowances varying from 50 to 150 flor. (4*l.* 10*s.* to 12*l.* 10*s.*). Nearly all the lectures are delivered in the German language. The university has a library of above 100,000 vols., and 150*l.*

a year is expended in the purchase of new works, and it receives, gratis, a copy of all works printed in Lower Austria. (*Journal of Education*, 1834; *Statistical Journal*, 1841.) An observatory, and a botanic garden, are attached to this establishment.

The Polytechnic Institute, a handsome structure facing the glacis, was founded by the Emperor Francis in 1814, to afford instruction in the practical sciences, arts, and commerce; and a few years since had about 750 pupils and 35 masters. Besides the ordinary branches of knowledge, the pupils are taught the history of commerce, the knowledge of merchandize, mercantile law, and correspondence, natural history and chemistry as applied to commerce, drawing, mathematics, &c.; for which instruction the pupils pay only 3 fl. a month, and, for a small extra sum, are taught Latin, English, French, and Italian. Among other collections, this school has a museum of the products of arts and manufactures, both Austrian and foreign, and a valuable library. The *Tacvianum*, for the sons of the aristocracy, and the normal school of St. Anne, were both established by Maria Theresa. The former was suppressed by Joseph II., but restored by Francis; and it has now a library of 30,000 printed vols., besides MSS. and pamphlets. Joseph II. established both the Oriental Academy and the *Josephinum*; the latter, an institution for the education of army surgeons, which has attached to it an hospital capable of receiving 1,200 patients, a collection of anatomical figures in wax, by Fontana, &c. Besides these establishments, Vienna has a special seminary for the education of the secular clergy, a Protestant seminary, founded in 1821; 6 military colleges, with nearly 1,000, and 49 minor establishments for military education, with nearly 3,000 pupils; an academy of the fine arts for about 1,200, and a musical academy for 200 students; besides about 60 inferior public schools. (*Journal of Educ.*, &c.) In addition to the libraries already mentioned, the Archduke Charles has one of 25,000 vols., Prince Liechtenstein of 40,000, Prince Metternich of 23,000 do., Prince Esterhazy of 20,000, exclusive of many inferior collections. But with all these appliances for knowledge, Vienna cannot be considered so much a resort of learning as of the fine arts. In paintings she is, perhaps, the richest capital of Europe. The gallery of Prince Liechtenstein consists of 25 splendid apartments, filled with exquisite originals of the Italian, Flemish, French, and Dutch masters, including *chef d'œuvre* of Raphael, Guido, Rubens, Vandyck, Donatello, Guercino, Claude, S. Rosa, Carlo Dolce, &c. The Esterhazy gallery contains upwards of 600 pictures, of which 54 are by Spanish masters, whose works are rarely found out of Spain; with a collection of sculptures, including works by Canova and Thorwaldsen; 50,000 engravings, &c. Counts Czernin, Schönborn, Harrach, Lemberg, and many other noblemen, have collections of choice paintings; and in the palace of the Archduke Charles is a collection of 160,000 engravings. The foregoing galleries are all open to the public at stated times. (*Balbi, Essai sur les Bibliothèques de Vienne*, pp. 84—113.)

In statuary, also (though not in public statues of celebrated men), Vienna is very rich. Canova's group of Theseus killing the Centaur deserves especial mention. It was originally intended by Napoleon to surmount the grand arch at Milan, but is now placed in the Thesæum, a Doric temple, on the Volks-garten, in imitation of the temple of Theseus at Athens. "This group is of Carrara marble. The hero is in the act of grasping with his left hand the throat of the Centaur; while his right arm, raised behind his helmeted head, clenches the club with which he prepares to inflict the fatal blow. The whole character of the group is in Canova's most effective style." (*Turnbull*, i. 242.)

Hospitals and other Charities.—Few capitals are so abundantly furnished with charitable institutions as Vienna. Many of the principal, as the general hospital, house of invalids, deaf and dumb asylum, &c., were founded by Joseph II. The general hospital is a vast building, ranged around 7 quadrangles, having 2,000 beds. It is said to receive annually from 10,000 to 16,000 patients. It partly answers the purpose of a *sanatorium*, there being separate bed-rooms, which, with medical attendance, and every comfort necessary for an invalid, are within the reach of persons of limited income, on the payment of a small sum daily. The hospital of the Charitable Brethren, supported partly by voluntary contributions, is a monastic establishment, but open equally to Jews, Turks, and Christians of all persuasions.* The House of Invalids is similar in its kind to Chelsea Hospital, having been founded for 800 old soldiers. In its great hall are two large pictures of the Battles of Leipzig and Aspern. The Deaf and Dumb Asylum is well conducted; and those among the pupils who evince intelligence are often

* It may be remarked here, that there is an increasing tendency towards religious toleration (in Vienna at least) in the Austrian government. Mr. Strang believes that there is a real inclination on the part of those in power in Austria to tolerate every kind of religious belief, provided it be not accompanied with offensive sectarian zeal.

afterwards employed in state affairs requiring secrecy. There are schools for the blind, &c., and a lunatic asylum, which is, however, said not to be so well conducted as most of the other public establishments. Attached to the General Hospital are the *maison d'accouchement* and foundling hospital. In the former of these "not even the name of the applicant is demanded; she may enter veiled or masked, and remain incog. the whole time she continues in the house; she has merely to deliver a sealed paper to the superintendent, containing her name and real address, that, in the event of death ensuing, her relations may be apprised of her fate." (*Spencer*, 163.) The person who brings a child to the Foundling Hospital receives a ticket, by presenting which, the child may at any time be reclaimed: if it be not taken away, it is, at the proper age, brought up to some employment. It is probable that an institution of this kind may prevent a few cases of infanticide; but the mortality in this, as in all similar institutions, is quite excessive, and there can be no doubt that it acts as a powerful incentive to vice and immorality.

Commerce, Hotels, Shops, &c. — Vienna is the great emporium of the Austrian provs. N. of the Alps, and an important *dépôt* for the interchange of goods between E. and W. Europe. It has extensive establishments for cotton printing, and for the manufacture of silks and velvets, and of cotton fabrics. The porcelain manufacture of Vienna is amongst the most celebrated on the continent, and it has an imperial cannon foundry, and a manufacture of small arms, said to employ 500 workmen. Cutlery, watches, and jewellery, bronze and other metallic goods, meerschaum pipes, musical instruments, paper, chemical products, gloves, leather, hosiery, chocolate, and liqueurs, are among the other principal products: it has several large printers and music engravers. Many of the most wealthy mercantile houses belong to Greeks. The National Bank of Vienna, established during the Seven Years' War, was reconstituted in 1815. Its capital of 69,000,000 florins is divided into 51,520 shares. It has the exclusive privilege of issuing notes in the Austrian Empire, and has, or recently had, 11 branches. During the late disturbances it advanced large sums to government, so that the debt due by the state to the bank is now very heavy. The payment or reduction of this debt will depend on the measures taken to improve the financial condition of the empire.

The hotels are of two classes: living in those of first-rate excellence costs about one third more than in Paris; but those of the second class are very good of their kind. Lodgings are twice as dear in the city as in the suburbs, where a room tolerably furnished may be had for 6 fl. a month. The *cafés* of this city are not decorated with the same splendour as those of Paris, but they are quite as much frequented, being resorted to in the evenings by both sexes of the middle classes, and at other times by gentlemen to play at billiards, or to smoke, which is not permitted in the streets. (*Murray's Handbook*, &c.)

From their number being limited by government, the profits realised in the coffee-houses are great, and they frequently bear a value so high, that Russell mentions one on the Graben, for the privilege belonging to which a purchaser paid upwards of 3,000 fl. in addition to an extravagant price for the house itself. (il. 245.) Vienna is well supplied with provisions of all kinds, which are generally cheap. House rent is said to be lower than in Paris; servants' wages are much less; furniture is still cheaper; and a pair of good Hungarian carriage horses, the keep of which will cost about 30 fl. a year, may be bought for 40 fl. "No town exhibits such an appearance of people living amidst plenty, such an absence of *unhappy classes*, and of anything that can represent poverty. The hackney coaches are as neat, clean, and showy as private carriages; the horses are generally in excellent condition. The shops, though in such narrow streets, are as *dashing* as those of London or Paris; and most of them have signs, with paintings almost worthy of museums. The booksellers' and picture shops are numerous and large; and besides the literature of every state in Germany, you may find many popular books and the principal engravings published in England and France." (*Austria and the Austrians*, i. 49, 50.)

Parks, Amusements, &c. — The principal amusements of the Viennese are music, dancing, the theatres, and frequenting the Prater and other fine promenades which encircle the city. The Prater, the Hyde Park or Champs Elysées of this capital, is handsomer than either, and may in fact be considered the finest public park in Europe. It is nearly 4 m. in length by half as much in breadth, being enclosed between 2 arms of the Danube. Besides the fashionable drives, the Prater contains a great number of coffee and ice houses, pavilions, shows, &c., and is generally filled with a throng of people, particularly on Sundays and holidays. The glacis is studded in a similar manner with places of entertainment, and the Augarten and Brigitten-au, both N. of the Danube, and the Volksgarten, within the city, are promenades in much the same style. The dancing saloons, or public ball rooms, are not in ge-

neral what can be called *fashionable* places of amusement, though the imperial family and higher nobility attend the balls in the *Redoutensaal* at the carnival and other times. They are, however, resorted to by great numbers of the middle and also of the upper classes, and one of the principal, the *Apollon Saal*, can accommodate with ease 10,000 persons. The music here is of a superior order, the celebrated bands of Strauss and Lanner, and others little inferior, being constantly engaged. Mr. Russell says, "The Viennese take to themselves the reputation of being the most musical public in Europe, and this is the only part of their character about which they display much jealousy or anxiety. So long as it is granted that they can produce among their citizens a greater number of decent performers on the violin or piano than any other capital, they have no earthly objection to have it said that they can likewise produce a greater number of blockheads and debauchees." (*Tour*, &c., ii. 271.)

Morals, &c. — Vienna has acquired the character of being the most dissolute capital in Europe. But without stopping to inquire whether it be entitled to this distinction, it is, at all events, a most agreeable place for a stranger. A liveliness and *bonhomie* prevades society; in bustle and activity Vienna rivals London and Paris; and the pursuit of pleasure appears one of the main occupations of the great mass of the inhabs. The peace of the city is preserved with the utmost care. The arrivals, departures, residences, &c. of strangers are carefully noted; passports are strictly examined, and great care is taken that visitors shall show that they have the means of paying their way. With residents, however, the police interfere but little, and never obtrusively. Among the drawbacks on a residence here are, the furious driving in the crowded thoroughfares, through which pedestrians have to wind their way among heaps of fuel, the hewing of which is incessantly carried on before the doors of the houses; the great variability of the climate, and the indifference of the water.

Vienna is an archbishop's see, the residence of the Protestant superintendent for all the S.W. provs. of the empire, the seat of the high judicial tribunals, and central bureaux of the Austrian dom., of the court of appeal for the archduchy of Austria, and the provincial government of the prov. below the Enns. Though not in general famous as a seat of literature, it has, among many other associations, a literary society; of which Von Hammer, the Orientalist, the poet Grillparzer, the historian Mallath, the novelist Caroline Pichler, the mineralogist Mohs, Balbi, &c., are members. Such was the influence of the censorship, that the city produced only two newspapers, and those worth little or nothing, with a few weekly scientific and fashionable papers, a monthly and a quarterly journal. The upper classes speak English, French, and Italian almost as well as their native language.

The *environs* are picturesque, but the roads around are very bad. About 2 m. from the city is Schönbrunn, the favourite summer residence of the emperor. It stands in a large park stocked with deer and game of all kinds. The palace, built by Maria Theresa, is a vast monotonous pile, but richly furnished, and possesses many interesting portraits of the Imperial family. It was twice occupied by Napoleon: the treaty of Schönbrunn was signed in it in 1809, and here the Duke of Reichstadt, son of Napoleon, died in 1832. In the grounds are the *Gloriette*, a large columnar temple, from which a fine view is obtained; a menagerie, a splendid botanic conservatory and gardens, with eating-houses, music and dancing-rooms, &c., for the public. Not far from the Schönbrunn are Laxenburg, Brühl, Baden, &c., frequented by pleasure parties from the metropolis, in much the same way as Richmond, Greenwich, or St. Cloud.

History. — Vindobona was remarkable in antiquity as the place where Marcus Aurelius expired. It was successively taken by the Goths and the Huns, and subsequently by Charlemagne, who placed it under the government of the Margraves of the E. part of his dom., thence called *Oester-reich*, and Austria. The margraves, afterwards dukes, held Vienna till the middle of the 13th century, soon after which it came into the possession of the house of Hapsburg. In 1484, it was taken by the Hungarians, whose king, Mathias, made it the seat of his court. Since the time of Maximilian I., it has been the usual residence of the archdukes of Austria, and emperors of Germany. It was besieged by the Turks in 1529 and 1683: on the first occasion it was relieved by Charles V., and on the second by John Sobieski of Poland, who totally defeated the enemy beneath its walls. In 1619 it was unsuccessfully blockaded by the Bohemian Protestants. In 1797, it was threatened by the French, but its siege was averted by the peace of Leoben. The French took it, however, in 1806 and 1809. The congress which parcelled out Europe into its modern subdivisions sat here from the 3d Nov. 1814 to the 9th June, 1815.

On the 6th Oct. 1848 a formidable insurrection broke

out in Vienna. One of the ministers, Count Latour, having been assassinated, and the others compelled to seek their safety in flight, the town fell into the possession of the insurgents. But the revolutionary spirit did not extend to the other portions of Austria Proper; and the army having continued faithful to its sovereign, the city was reduced to obedience on the 31st Oct., and the insurrection suppressed.

VIENNE, a dep. of France, reg. W., principally between the 46th and 47th degs. of N. lat., and long. 0° and 1° E., having N. Indre-et-Loire, E. Indre, S. E. Haute-Vienne, S. Charente, and W. Deux Sevres. Area, 676,000 heciares. Pop., in 1846, 308,391. It derives its name from the river Vienne, an. *Vigenna*, which rises in the dep. Creuse, and after traversing Haute-Vienne, a part of Charente, Vienne, and Indre-et-Loire, at first in a W., and afterwards in a N. direction, enters the Loire after a lengthened course. Its principal affluents are the Thorison, Issoire, and Creuse from the E., and the Briançe, Vaire, and Clain, from the S. and W. Limoges, Confolens, Chatelherault, Chinon, &c., are on its banks. Nearly all the other rivers of the dep. are tributaries of the Vienne or of its affluents. Surface, mostly level; but in the S. a chain of heights separates the basin of the Loire from that of the Charente. The soil in the level ground is moderately good, but in the S. it is thin and chalky. In 1834, the arable lands were estimated to comprise 413,131 hectares; pastures, 42,732 do.; vineyards, 23,744 do.; woods, 80,372 do., and heaths, wastes, &c., 75,167 do. Wheat and oats are the grains principally cultivated; rye and millet are raised for home consumption; but in years of scarcity, chestnuts are a principal resource of the pop. From 600,000 to 700,000 hectol. wine are annually produced; but, on the whole, its quality is inferior, and large quantities are converted into *cognac*, frequently of great excellence. The white wines are the most extensively produced; the red wines are generally *très-colorés, durs, et âpres; ils se gardent long-temps, et s'améliorent en vieillissant; on en a vu qui conservaient encore leur qualité au bout de 40 ans.* (Jullien, p. 150.) A good many cattle are reared, and the sheep in some of the cantons are said to be of a superior kind: the produce of wool is estimated at 400,000 kilogr. a year. About 45,000 hogs are said to be annually exported from this dep., by way of the Atlantic ports. Bees and poultry are extensively reared. In 1835, of 120,518 properties, subject to the *contrib. foncière*, 72,589 were assessed at less than 5 fr., and 16,675 at from 5 to 10 fr.: the number of those assessed at 1,000 fr., or upwards, was only 46. The vicinity of Chatelherault produces very superior lithographic stone; and marble, whetstone, millstone, &c. are found in other parts of the dep. Some iron mines are wrought, and there are numerous iron forges. Chatelherault has rather extensive manufactures of fire-arms; and cutlery, lace, coarse woollen cloths and woollen yarn, paper, furs and skins, biscuits, beer, and vinegar are among the other goods made in Vienne. This dep. is divided into 5 arronds.; chief towns, Poitiers, the cap., Chatelherault, Civray, Loudon, and Montmorillon. According to the *Dict. Géog.*, "*L'instruction est arriérée dans ce pays. Le caractère dominant des habitants paraît être l'insouciance et l'inertie: ils sont invinciblement attachés aux usages, et aux préjugés de leurs pères.*"

VIENNE (an. *Vigenna*), a town of France, dép. Isère, cap. arrond., on the Rhone, where it is joined by the Gere, the former being here crossed by a suspension bridge, 16 m. S. by E. Lyons. Pop., in 1846, 14,000, or, including its com., 17,076. "Vienne, situated under a high cliff, with the castle upon its summit, is a striking and beautiful object in descending the river; and after passing it, there is a perfect union of the beautiful and the picturesque in its scenery. It is here, also, about 1½ league after passing Vienne, that the vineyards lie so celebrated for their produce of *Cote-rotte*." (*Ingis's Switzerland*, &c. 179.) A handsome quay stretches along the Rhone; and the lower part of the town, on the high road between Lyons and Marseilles, has broad and well-built streets; but the rest of the thoroughfares, along the narrow valley of the Gere, and up steep declivities, are ill laid out, and lined generally with mean houses.

Vienne has several remains of Roman buildings and other antiquities. In the centre of the town is a temple anciently dedicated to Augustus and Livia, having a good deal of resemblance to the *Maison carrée* at Nîmes, though not in such good preservation. It has been used for a church, a club-house, and a tribunal of commerce, and is now appropriated to a museum of antiquities. Outside the town, and in much better preservation, is a pyramidal monument nearly 45 feet in height, and apparently a tomb. The traces of a bridge across the Rhone, an amphitheatre, a naumachia, theatre, &c. also

exist. Here, also, are several middle-age antiquities, among which is the cathedral, considered one of the best Gothic edifices in France. It stands in an elevated position; its grand entrance is ornamented with sculptures, and flanked by two high towers; the roof is supported by 48 lofty columns in the interior; the galleries have Gothic balustrades; and it has a fine monument of one of the archbishops of Vienne. The church of an ancient abbey is also worth notice. The other principal buildings are the cavalry barracks, college, hospital, work-house, corn exchange, abattoir, and public library with 14,000 vols.

Vienne has manufactures of woollen cloths, pasteboard, iron and copper plates, &c.; and near it are some argentiferous lead mines producing about 1,500 quintals a year of metal. It was anciently a city of consequence, having been successively the cap. of the Allobroges; of its prov. in Narbonnese Gaul, under the Romans; and of the first and second kingdoms of Burgundy; and in the early ages of Christianity, it was the see of the archbishop, primate of Gaul. It was united with Dauphiny to the French dom. by Louis XI. The famous council, held in 1311, which abolished the order of the Templars, met in this town. (*Hugo*, art. *Isère*; *Dict. Géog.*, &c.)

VIENNE (HAUTE), a dep. of France, reg. W., between lat. 45° 25' and 46° 25' N., and long. 0° 24' and 1° 45' E., having N.W. and N. Vienne and Indre; E. Creuse; S.E., Corrèze; S.W., Dordogne; and W., Charente. Area, 554,266 hectares. Pop., in 1846, 314,739. The surface is hilly, particularly in the E., and the mean elevation of the dep. is estimated at between 1,800 and 1,900 ft. above the level of the sea. The rivers, the principal of which are the Vienne (*see* previous art.) and the Gartempe, with their tributaries, have generally a W. direction. The soil, being mostly composed of the debris of granite, and other primary rocks, is, in general, of inferior fertility. In 1834, the arable lands were estimated to comprise 213,354 hectares; pastures, 120,899 do.; woods, 38,868 do.; and heaths, wastes, &c., 92,944 do. Wheat is but little grown; its place being supplied by rye, buckwheat, chestnuts, and potatoes. Very little wine is grown. The pasture lands are comparatively good; and, in 1830, the sheep in the dep. were estimated at nearly 610,000 head, and the cattle at 146,000 do. The wool produced in the dep. is, however, of inferior quality. Rural industry of all kinds is very backward. In 1835, of 59,733 properties, subject to the *contrib. foncière*, 25,483 were assessed at less than 5 fr. and only 18 at 1,000 fr., and upwards. The fine potters' clay at St. Yriex is, perhaps, the most valuable of the mineral products; there is a tin mine at Vautry, the only place in France at which that metal is found; and copper, iron, lead, antimony, manganese, coal, &c. are met with in greater or less abundance. The manufacture of earthenware is the most important; and among its other products are iron and copper plates, cutlery, and other steel articles, nails, linen, woollen and cotton yarn, coarse woollen cloths, paper, leather hats, wooden shoes, &c. It is estimated, that 15,000 inhab. of this dep. migrate annually as masons, sawyers, carpenters, &c. into the dep. Seine and Rhone, and the arsenals on the W. coast. Haute Vienne is divided into 4 arronds.; chief towns, Limoges, the cap., Bellac, Rochechouart, and St. Yriex. It sends 5 mems. to the Chamber of Deputies. Registered electors, in 1838-39, 1,608. Total public revenue, in 1831, 5,108,607 fr. (*Hugo*, arts. *Vienne* and *Haute Vienne*; *French Official Tables*, &c.)

VIERZON-VILLE, a town of France, dep. Cher, cap. cant., on the Evre, near its junction with the Cher, in a fertile plain, 19 m. N.W. Bourges. Pop., in 1836, 4,990. It consists principally of one street, which would be among the best in France, if furnished with footways. (*Guide du Voyageur*, &c.) Its houses are mostly slated. It has manufactures of woollen cloths, earthenware, and iron ware. Its castle was destroyed by Richard I. of England in 1192; and in 1366, it was pillaged by the army of the Black Prince. (*Dict. Géog.*; *Hugo* &c.)

VIGAN (LE), a town of France, dep. Gard, cap. arrond., on the Arre, a tributary of the Herault, 40 m. W.N.W. Nîmes. Pop. in 1836, 4,686. The *Dict. Géog.* says that it is old and ill built; but according to the *Guide du Voyageur*, it is the pleasantest and most healthy of all the small towns in the Cevennes, and one to which the opulent inhab. of Nîmes and Montpellier resort during the heats of summer. In one of its squares has been erected a fine bronze statue of the Chevalier d'Assas, a native of the town. It has manufactures of cotton and silk hosiery, cotton yarn, leather, and paper.

VIGEVANO, a town of N. Italy, dom. of Sardinia, div. Novara, prov. Lomellina, cap. mand., on the Mora, near the Ticino, and 14 m. S.S.E. Novara. Pop., in 1838, 15,221. Its site is elevated, and it enjoys a salubrious climate. It is enclosed by walls, has an old castle, a cathedral, which stands in a square surrounded on 3 sides by arcades, one of the best cavalry barracks in Piedmont, numerous convents, an hospital, government

VILLA-REAL

four-week, condensed college, and a certificate, entitled to B.S. There is a large and handsome brick gymnasium. The town is composed of all sorts, but very numerous, &c. The season here is 3 days each and markets twice a week. They were given birth to Francis Brown, 11 Duke of Eden, and to count to, living in the neighborhood of the three family. Under the French is on the day of an ground to the day of Africa. General &c.

U. S. A. 1884. A town of Spain, in Valencia, near Castellon de la Plana, on the Miñerva, have moved to a fine bridge of 16 arches, which about 4 m. of the sea, and 10 m. N. E. Valencia. Pop. according to Williams, about 3,000. It originated as a military station of James I. King of Aragon. It has one regular and one-half daily direct steam railway station, a post, a large dock, and some oil and gasolin refineries. Destruction. It was formerly besieged, and in the War of the French Revolution was governed by the archbishop Charles VII. During both years by the troops of Philip V. In 1709, its defensive works and most of its buildings were destroyed, and great part of its industry and to the coast.

ST. JOHN'S CHURCH, a house of prayer, city & region, was opened on the 24th day of the month of May, 1845. The church is a well built, low profiled, three-storyed edifice, the lower two were built, which I have no-one, either the (unimproved) with stonemasonry. The end entrance church, and the tower, formerly a three-story building, are remarkable specimens of Gothic architecture. The public neighborhood comprises a college, a public library, museum, and other a variety of other things. The church is surrounded by a large and dense forest. It has also a considerable trade in

at New Carron furnish considerable quantities of iron. Gypsum, magnesia, alum, and petroleum, are among the mineral products; and from 1829 to 1840 gold to the value of 578,595 dollars was sent to the mint of the U. States. The region, including Spotsylvania and some other counties, where the gold is found, abounds in quartz, containing cubes of sulphuret of iron, often partly or totally decomposed, the cells of which are sometimes filled with gold. The latter is found also on the surface, especially of slate, and in its fissures. The metal is obtained by filtration, or washing the earth, and by an amalgam of quicksilver. On the whole, however, the search after gold here, as in most other parts of the U. States, has not been very productive, and it is doubtful whether it will ever be of any importance. There are numerous salt, and other mineral, springs; those on the Kenhawah furnishing a very large supply of salt.

The manufactures of Virginia are unimportant; but Richmond and Lynchburg are commercial towns of some eminence. The value of the imports from foreign states during the year ending the 30th June, 1849, amounted to 241,935 doll., and that of the exports during the same year to 3,373,734 do. The board of public works in this state had, in 1835, a fund of 3,223,000 doll., and has effected some valuable internal improvements. The Potomac is connected with the Roanoke by railways through Fredericksburg, Richmond, and Petersburg, forming a line 157 m. in length: a line 13 m. in length extends from Richmond to the Chesterfield coal mines; and another line is intended, and is probably in progress, to connect Lynchburg with the Tennessee line across the Alleghany mountains. Several canals are completed; the principal being the James' river and Kenhawah canal, 175 m. in length.

The present form of government, adopted in 1830, vests the legislative authority in a General Assembly, consisting of a Senate of 32 mems., chosen every 4 years, and a House of Delegates of 134 mems. elected annually. The Governor and Council of State are chosen every 3 years. The right of suffrage is exercised by every white male citizen of full age possessing freehold property to the value of 25 doll., or having a reversionary title to land of the value of 50 doll., and who has been a householder for 12 months previously to the election. The General Assembly meets annually at Richmond in December. The State sends 15 representatives to Congress. Virginia is divided into 119 cos. and 10 judicial districts: Richmond on James' river is the cap. and seat of gov.; Williamsburg, Fredericksburg, Charlottesville, Lynchburg, and Lexington, are the other principal towns. Courts of appeal sit once a year at Lewisburg for W., and at Richmond for E., Virginia, and a circuit Superior Court of Law and Chancery is held twice a year in each co. and corporation. The state militia, in 1850, comprised 124,202 men. The public revenue in 1849 amounted to 1,315,440 doll., and the expenditure to nearly as much; total public debt in the same year 15,909,981 doll.

Virginia has several colleges and other seminaries. The university at Charlottesville, established in 1819, has a library with 16,000 vols., and in 1848-1849 was attended by 212 students. The college of William and Mary, estab. by the Baptists in 1691, is, excepting Harvard college, the oldest institution of the kind in the Union. The Washington college at Lexington, founded in 1812, was at the same period attended by 81 students. There are many other superior schools and academies, and, in 1849, there were in the state 3,394 common schools attended, besides others, by 26,472 poor children. An historical and philosophical society was formed in 1832. Baptists and Methodists are the prevailing religious sects, next to whom Presbyterians are the most numerous; there are but few R. Catholics, Friends, Unitarians, and Jews. Nearly the whole of the Baptist association consists either of coloured persons or slaves. The importance of Virginia has, in consequence of the rapid growth of other states, declined rapidly since the Revolution. The principal towns are Richmond, the capital, with, in 1840, a pop. of 20,143; Petersburg, 11,136; and Norfolk, 10,920. (*Jefferson's Notes on Virginia*; *Darby, View of the U.S.*; *American Almanac for 1850*; *Encyclopædia Americana*, &c.)

Virginia was the seat of the earliest colony planted by the English in the States' territory, a part of it having been settled in 1607. Its name, given in honour of Queen Elizabeth, was originally applied to the whole E. coast of N. America. The first legislature of Virginia met in 1619. Notwithstanding serious disputes with the Stuarts, Virginia supported the royal cause in the civil wars; and Charles II. was proclaimed here before the news of his restoration had arrived from England. Among the distinguished natives of Virginia is the immortal Washington, the father of American independence, born in Westmoreland co., on the 11th of February, 1732. It is also the native country of Jefferson, the author of the "Declaration of Independence," and of the "Notes on Virginia," and president of the Union.

VISTULA (Germ. *Weichsel*), one of the great rivers of central Europe, flowing from S. to N. through Poland. The basin of the Vistula is situated between those of the Elbe to the W., the Niemen and Dniestr to the N.E. and N., and the Dniepr to the S.E. It rises in Moravia, in a branch of the Carpathians, close on the frontier of Galicia, and about 20 m. S.E. Teschen; and at a short distance from its source is precipitated over a fall 180 ft. in height. It proceeds at first N. for about 40 m., and then turns to the E., separating Silesia, the territory of Cracow, and the kingdom of Poland on the N., from Galicia on the S. Shortly after passing Sandomir it again flows northward, which course it retains through the centre of Poland to beyond Warsaw. It now turns W.N.W., and pursues generally the same direction to the influx of the Braa, 20 m. from Thorn; after which its course varies little from N.N.E. to its mouth in the Baltic. Its entire length is estimated at 550 m. It receives a vast number of tributaries, the principal of which are the Nida, Kamienna, Pilica, and Braa, from the W.; and the San, Wieprz, and Bug, with its tributaries, from the E. At Cracow it is only about 150 ft. in width; at Warsaw it is crossed by a bridge of boats 1,600 ft. in length. After receiving the Bug, a stream nearly equal in size to itself, at Modlin, it proceeds generally in a very wide channel past Plock, Thorn, Culm, and Marienwerder, about 15 m. below which last, and about 30 m. from the Baltic, it divides into two great arms, the most easterly of which, called the Nogat, flows past Marienburg and Elbing into the Frische Hafl. The W. arm, or main stream, subdivides again at about 16 m. from the sea, the E. branch falling into the Frische Hafl, and the W. making a long detour round by Dantzic. It is said, however, that during some heavy floods in the autumn of 1840 the eastern arm of the river opened for itself a direct course to the Baltic; a result which it is said the Prussian gov. had contemplated effecting by artificial means. This river is of very considerable commercial importance, being, as it were, the great highway of the extensive countries through which it flows; the channel by which their wheat, timber, and other products are conveyed to Dantzic and Elbing for exportation, and by which they receive supplies of colonial and other foreign produce. As it flows for the most part through a level country, it is navigable throughout the greater part of its extent. "Large flat-bottomed boats convey the produce of the countries through which it passes to the port of Dantzic, and Warsaw is thus placed in direct communication with the Baltic; while, by means of the navigation of the Nogat, the colonial produce imported into Königsberg finds a ready access to Poland, Moravia, and Hungary." (*Granville's Travels*, i. 345.) The Vistula is connected with the Elbe by a canal from the Braa to the Netz, between Bromberg and Nakel; and with the Niemen by means of the canal of Augustowo. (*Dict. Géog.*, &c.)

VITERBO a city of central Italy, Papal States, cap. deleg. of same name, in the Campagna, and on the road between Rome and Sienna, 37½ m. N.N.E. the former. Pop. stated by Rampoldi to be little short of 15,000. It is well built, with volcanic tufa, and well paved, having a large and handsome square, 16 par. churches, and numerous noble residences, and public fountains. Woods says it is a curious looking city, with an abundance of caverns in the perpendicular faces of the rocks, bordering a little valley passing through it. The cathedral has a range of columns on each side, with grotesque capitals supporting semicircular arches. The Trinita is a handsome modern church, in the form of a Latin cross, with a dome in the centre. The church of St. Francis is a large building; the transept has pointed vaulting, and there are 2 fine archways of the pointed style, leading into chapels, and some Gothic tombs. It boasts also a painting by Sebastian del Piombo, from designs by Michael Angelo. (*Letters of an Architect*, i. 323.) The pontifical palace is a fine building. Viterbo is the seat of a cardinal delegate, and a court of primary jurisdiction. It has no manufactures worthy of notice; though alum, vitriol, sulphur, and other volcanic products are obtained in its neighbourhood, which abounds with mineral springs.

Viterbo is supposed to occupy the site of the *Fœnum Volturum*, the place where the general assembly of the Etruscan nations was held on solemn occasions. The modern town was encircled with turreted walls by Desiderius, the last king of the Lombards. It has been the residence of numerous popes, several of whom are buried in its churches. In its vicinity are many villas belonging to some of the more opulent Roman families. (*Rampoldi*; *Woods*; *Cramer's Anc. Italy*.)

VITRE, a town of France, dép. Vilaine, cap. arrond., on the Vilaine, 23 m. W. Rennes. Pop., in 1846, inc. comm. 8,237. It is enclosed by walls of Gothic character and flanked by round towers. Vitre is ill built, dirty,

* This river must not be confounded with the S. Bug (an. *Hypasis*), respecting which see Buvo in this Dict., i. 484.

triste, and destitute of any public promenade; though the environs are agreeable, and in the vicinity are two parks open to the public. About 1½ m. S. from the town is the Chateau des Rochers, the seat of Madame de Sévigné, the most accomplished of letter writers, who sometimes also occupied a house in the town. Near the town are also the ruins of the castle, formerly belonging to the Dukes de la Trimouille. The peasantry of the neighbourhood wear winter cloaks of goat-skins, which, with cotton hosiery, sail cloth, flannels, leather, and barrels are among the principal articles manufactured in Vitry. Wax, honey, and cantharides are here considerable articles of trade, and the town has no fewer than 22 annual fairs. Savary, the traveller, was a native of Vitry, where he first saw the light in 1750. (*Hugo*, art. *Ille-et-Vilaine*.)

VITRY-LE-FRANCOIS, a town of France, dép. Marne, cap. arrond., on the Marne, 20 m. S.S.E. Châlons. Pop., in 1846, inc. comm. 7,412. Is square shaped, and is inclosed by earth ramparts, and bastions, outside which is a deep moat. It is tolerably well laid out; and though most of its houses are old and unprepossessing, it has a good many new buildings erected since the peace. Its church, an edifice in the Corinthian and Composite styles, was the earliest of any consequence built after the restoration of the arts, in the time of Francis I., under whom this town was founded. Vitry has a good public hall and theatre, and agreeable public walks, with some manufactures of cotton yarn and hosiery, hats, leather, &c. (*Hugo*; *Dict. Géog.*; &c.)

VITTORIA (Span. *Vitoria*), a town of Spain in Biscay, cap. prov., on the high road between Burgos and Bayonne, 60 m. N.W. the former. Pop. estimated by Mifflano at 12,000. It consists of an old and a new town, very different in appearance; the latter being clean and handsome, while the former is quite the contrary. The *Plaza Nueva*, a square, which, according to Ingils, is little inferior to the *Place Vendôme* in Paris, has arcades at its sides, under which are very good shops: the S. side is occupied by the town hall, and the area serves for a market place. The hall of the Biscayan Society, orphan asylum, and general hospital are among the principal edifices. Vittoria has a collegiate and four par. churches, six conventual establishments, a school of design, public library, cabinet of coins and Roman antiquities, post-house, &c. Its manufactures comprise chairs and cabinet furniture, copper utensils, earthenware, cutlery, linens, &c., and being one of the principal entrepôts for the trade between Navarre and Old Castile, and the ports of St. Sebastian and Bilbao, it has a considerable traffic in iron, wool, woollen and silk fabrics, articles of clothing, and colonial produce. In modern times, Vittoria is famous for the decisive victory gained in its vicinity, on the 21st of June, 1813, by the Anglo-Spanish army, under the Duke of Wellington, over a French army commanded by King Joseph and Marshal Jourdan. Though the loss of men in the battle was nearly equal, the French were totally defeated, with the loss of all their artillery, baggage, ammunition, and treasure, and obliged to make a rapid retreat across the Pyrenees; this battle having all but annihilated their power in Spain. (*Napier's Peninsular War*, v. 555—560.)

VIZAGAPATAM, a sea-port town of British India, presid. Madras, coast of Coromandel, cap. of a district of same name, in the N. Circars, at the mouth of a small river, lat. 17° 42' 30" N., long. 83° 24' E. It is not a place of any strength, its only defensive works being a thick wall inclosing the Zillah court house, hospital, other European buildings, and a bazar in the centre of the town. The barracks and other public edifices are outside this wall. A good many well-built houses stretch along the shore; but the great insalubrity of the town has driven most of the former European residents to Waltier, a village at some little distance. (*Hamilton's E. I. Gazetteer*.)

VLADIMIR, a government of European Russia, between the 55th and 57th degs. of N. lat., and the 38th and 42d of E. long., having N. Jaroslavl and Kostroma, E. Nijni Novgorod, W. Tver, and S. Moscow, Riasean, and Tambof. Area estimated at 17,600 sq. m. Pop. in 1846, 1,246,500. Surface almost a level plain, watered by numerous rivers, the principal being the Oka in the E., the Wolga in the W., and the Kliasma, a tributary of the Oka, in the centre; all of which have, more or less, a N.E. course. The soil is not generally fertile, and a large part of the government is covered with forests, marshes, pools, and heaths. Rye, barley, oats, summer and winter wheat, millet, pease, hemp, and flax are grown; but the crops of corn are insufficient for the consumption. The gardens and orchards are pretty numerous and well attended to; and Vladimir is famous for its cherries and apples. A good many cucumbers and some hops are raised. Cattle rearing is a secondary business, and is far behind. The forests are of vast extent, those belonging to the crown alone covering about one ninth part of the entire surface. Extensive and valu-

able beds of iron ore have been found in the forest of Mouron; and at Vixa, on the Oka, are some of the most extensive iron-works in Russia. (*Lyell's Russia*, ii. 321—322.) The poverty of the soil, and other concurring circumstances, have turned the attention of the inhab. towards manufactures, which appear to have succeeded better in this than in most other Russian governments. In 1830, the manufacturing establishments in the government employed 48,176 workmen. The cotton manufacture, which is by far the most extensive, is principally carried on at Choula and Ivanova, where it employed, in 1838, 15,612 looms, and 24,257 work-people. It would seem, however, that this and other branches of industry have rapidly increased in the interval; for the official returns show that, in 1839, 315 factories afforded employment to 83,655 work-people, being little short of double the number employed in the government in 1830! The manufacture of woollen and linen is of less importance; but about 4,000 hands are employed in iron foundries; and about 1,300 in glass and crystal works, exclusive of those employed in the production of leather, earthenware, &c. The various products of the government are sent down the Kliasma and Oka, or else to Moscow, by means of land carriage. Corn, cotton-twist, and flax from the neighbouring governments of Kostroma, Jaroslavl, and Nijni Novgorod, are the chief articles of import. Vladimir is divided into 13 districts; chief towns, Vladimir, the cap., Choula, and Mouron. Total public revenue about 4,000,000 roubles.

VLADIMIR, a town of European Russia, cap. of the above government, near the Kliasma, and on one of its small tributaries, 110 m. E. by N. Moscow; lat. 56° 7' 28" N., long. 40° 21' 45" E. Pop. estimated at 7,000. (*Possart*.) Vladimir occupies a site rather more elevated than the rest of its government. It is surrounded by a ditch and earth rampart, and like almost all the ancient towns of Russia is divided into 3 portions. Its principal street is long, wide, and lined with houses, of wood and stone intermixed. The cross streets are mostly mean. The principal structure is the cathedral of the Assumption, a square edifice, surmounted by 5 domes, and richly ornamented inside, though much less magnificent than formerly. There are about a dozen other churches. The former palace of the archbishop now serves for a seminary. The governor's house, court-house, gymnasium, a nunnery, &c., are brick edifices. Vladimir is not considered a wealthy town or a principal emporium, owing partly to its distance from any large navigable river, and partly to the proximity of Moscow. Being, however, on the great road to the fairs of Nijni Novgorod and Irbit, and on the grand line of communication between Russia and Siberia, it often presents a busy and cheerful aspect. Some of its inhabs. are occupied in making linen cloths and leather; and many others in the cultivation of fruit, particularly cherries, which are grown in great quantities in the neighbourhood. The era of its foundation is uncertain; some authors place it in the 10th, and others in the 12th century. Vladimir was, however, the cap. of the Grand Duchy of Russia from 1157 till 1328, when that distinction was transferred to Moscow. (*Lyell's Trav. in Russia*; *Possart*; *Schnitzler*, &c.)

VOGHERA, a town of N. Italy, Sardinian dom., div. Alessandria, cap. prov., on the Staffora, 21 m. E. by N. Alessandria. Pop., in 1838, 10,706. It is well built, is surrounded by walls, has a good market place, a magnificent collegiate church, a Jesuits' college, several monasteries, large barracks, and a good hospital. It is the residence of a governor, and the seat of a provincial court of justice; it has an active trade in corn, wine, and silk. (*Rampoldi*, &c.)

VOLCANO. See LIPARI ISLANDS.

VOLHYNIA, a gov. of European Russia, formerly comprised in the kingd. of Poland; principally between the 50th and 52d degs. of N. lat., and the 24th and 29th of E. long., having N.W. and N. the gov. of Grodno, and Minsk, E. and S.E. Kief, S. Podolia, S.W. Austrian Poland, and W. the palatinate of Lublin. Area estimated at 27,500 sq. m. Pop., in 1846, 1,445,500. It is in general an undulating plain; and the hills, which are the last ramifications of the Carpathians, though they nowhere rise to 300 ft. above the sea, give an agreeable variety to the scenery. The Bug rises in this prov.: the other principal rivers are the Styr, Goryne, &c., tributaries of the Pripets. Along some of these are extensive marshes and beds of turf; but in general the land is very fertile, producing, at an average, a considerable surplus of corn above the consumption. A good deal of flax and hemp is also grown. Agriculture is, however, not more advanced than in the rest of Russian Poland, and the gardens and orchards, particularly the former, are much neglected. The climate, though comparatively mild, is not warm enough for the vine. The forests comprise oak, beech, lindens, fir, pines, &c., and are very extensive, though only about 44,754 deiatines of forest land belong to the crown. The pastures are excellent, and well adapted for the fattening of cattle; a good many sheep,

hogs, and poultry are kept. Volhynia has a breed of horses smaller than the generality of those of Poland. Fishing is an occupation of some importance; bog-iron, small-stones, potter's clay, mica, and flint are among the mineral products. Though agriculture is the chief occupation of the inhabitants, the manufacturing industry of Volhynia is greater than that of most other parts of Russian Poland. The women, almost everywhere spin and weave different fabrics; and leather, glass, and earthenware, paper, potash, tar, charcoal, &c., are generally made. The principal exports are, however, corn, cattle, hides, bees, wax, honey, and other rural produce. In 1885, the value of the exports was estimated at about 12,160,000 roubles, and that of the imports at 15,075,000 do. The trade is principally in the hands of the Jews, of whom there are about 40,000 in the gov. The rest of the pop. consists of Russians, with Poles in the towns, and some Great Russians, gypsies, Tartars, Moldavians, and Germans. The inhabitants are mostly of the Greek, or united church. Volhynia is divided into 15 districts; principal towns, Kyssmir or Jitomir, the cap. A large annual fair is held at Koster at Bardinhof. Public education appears to be less backward in this than in most of the Russian governments; and in 1885, besides the government printing-press, there were 6 others, and a lithographic press. Volhynia, like Podolia, is subordinate to the military governor of Kiev, but is one of the Polish gov-

ernments; a very tolerable inn, a large and fine town-hall, a theatre, a Flarist college, and a seminary. Its inhabitants are principally agriculturists, but a few of them are engaged in the manufacture of earthenware vases and plaster figures.

Even if we had not the express authority of Dion. Haecarnensis, (iii. 84), for assigning to Vulturis a place among the 19 principal cities of ancient Etruria, the extent of its remains, its massive walls, vast sepulchral chambers, and numerous objects of Etruscan art, would alone suffice to show its antique splendour and importance, and claim for it that rank. Its walls were formed, as may yet be seen, of huge massive stones piled on each other without cement; and their circuit, which is still distinctly marked, embraced a circumference of between 3 and 4 m. (*Cronqvist's Ann. Italy*, i. 185.) Two of its

E. 20.

and the gov. of Ekaterinoslav; and W. Kharkoff, Koursk, and Orlov. Area estimated at 90,000 sq. m. Pop., in 1865, 1,267,900. Surface undulating, and soil in general good, this being, in fact, one of the most productive gov. in the empire. Principal rivers, the Don and some of its tributaries. Climate comparatively mild; the rivers being covered with ice for only two or three months of the year, and the gov. producing most of the products of temperate climates. Of 4,378,000 desiatinas (1 desiatina = 27 acres) comprised in the gov., the arable lands have been estimated to include 2,711,808, pasture lands, 2,818,000 do., and forests, 890,755 do. In good years a surplus is raised of about 1,000,000 chetverts of corn beyond the home consumption. Besides wheat, rye, and beans, poppies, tobacco, hemp, and flax are grown; and, in the gardens, melons, cucumbers, cabbages, &c., in large quantities. Water melons, indeed, are cultivated for the markets of Moscow and Petersburg, being planted in open fields covering whole acres of land. In some parts canes and reeds are used for fuel, but in general the forests furnish a sufficient supply of fire-wood. Oaks are numerous and luxuriant; pine woods are few. In 1885, the cattle in the gov. were estimated at 440,000 head; the sheep at nearly a million, and 11,600 horses were kept in 98 studs. Flax is an important product. Iron, limestone, and saltpetre are among the minerals. Manufactures of coarse woollens and other fabrics are rapidly increasing, having more than doubled between 1851 and 1885. The number of distilleries decreased during the same period; but we are not aware whether the production of spirits has undergone any corresponding decrease. The exports from the gov. consist principally of corn, cattle, skins, honey and wax, fruits, &c.

This gov. is divided into 15 districts: chief town, Voroneje, the cap. Except a colony of Germans near Ostrogozhsk and some gypsies, the pop. consists in the S. of Cosacks and White Russians, in the N. of Great Russians. Voroneje is under the same governor-general with Krasnoe, Orlov, Tambov, and Saratov. The total revenue of the crown from this gov. amounts to about 15,000,000 roubles.

Voroneje, a town of Russia, cap. of the above gov., on the river of the same name, near its confluence with the Don, and 280 m. S.E. Moscow. Pop. 18,800. (*Pecquet*.) It stands on a steep height, and might easily be rendered a fortress of some strength, as it is not commanded by any other hill, and is partly surrounded by a marsh for several months of the year. It consists of three portions, the upper town, lower town, and suburbs. "It has some spacious streets, but a great many which are very mean: the suburbs are as black and gloomy as a country village. The principal street has a noble appearance, its sides being lined with masonry and handsome edifices, many of them the property of the crown, as the governor's and vice-governor's houses, the tribunals, post-office, communal academy, &c. The Moscow (Moskovskaya) street is also very fine, and in it are the archbishop's palace, with an adjoining cathedral. The shops, or bazars, are very respectable." (*Lepell's Trav. H. 302*.)

Voroneje has 16 stone churches, 9 convents, an exchange or post-office, for the warehousing, exhibition, and sale of merchandise, an episcopal con-

covered with marshes and forests of pine, birch, oak, &c. Though the climate varies with the situation, it is, speaking generally, very severe: it is far, however, from being unhealthy, and instances of longevity are frequent. The grains principally cultivated are rye and barley; but the produce of corn is insufficient for the consumption. Hemp, flax, and hops succeed, as do beans and peas. Cattle and horses are numerous and good; but a large part of the government being unoccupied and in a state of nature, the chase necessarily occupies much attention. The forests, which are its principal source of wealth, are of great extent, those of the crown only covering 20,400,000 desiatinas of land. Granite, marble, oak, lime, copper, and iron are all obtained in Vologda. In 1834, there were 114 manufacturing establishments, principally for woollen and linen fabrics, soap, leather, potash, glass wares, and paper. Distillation is also very extensively carried on. Furs, tallow, pitch, wooden articles, masts and timber, turpentine, and other raw products are the great articles of export; being sent, for the most part, into the governments of Archangel and Tobolsk. The pop. is principally Russian, but includes some Kyrilans or Surians of Finnish stock; and in the N. are some wandering Samoyede tribes. Public instruction, owing to the thinness of the pop., is necessarily very limited; but it has been materially increased of late years. This territory is divided into 10 districts: the chief towns are Vologda, the cap., and Ustjug-Volki.

Vologda, a town of European Russia, cap. of the above government, near the S.W. extremity, 260 m. E. by S. Petersburg; lat. 60° 13' 30" N., long. 40° 21' 10" E. Pop. in 1884 estimated at 14,000. It is built on both sides the river Vologda, and is supposed to be one of the most ancient towns in Russia. Most part of its houses are still of wood, but the buildings in stone are increasing, and several of its churches are of that material. It has two cathedrals, one of which was rebuilt in 1883. The palace of the archbishop and governor, the prison, gymnasium, hospital, various asylums, and an episcopal seminary, are conspicuous edifices. Near the town is a famous convent, founded in 1571.

Vologda has manufactures of soap, potash, cordage, huls, and tallow candles; for which last it is famous over all the N. of Russia. Its trade is considerable, which is principally with the Baltic, Germany, and England; and also with Siberia, to the boundaries of the Chinese empire. (*Pecquet*; *Schmidt*, &c.)

VOLTEKKA (an *Felsina*), a town of central Italy, in Tuscany, prov. Pisa, on a steep hill near a small tributary of the Cecina, 26 m. S.W. Florence. Pop., including its suburbs, about 6,000. It has a citadel, now used as a state prison; a hospital, a cathedral, and many other

nary, schools for the children of the clergy, military, civil employés, and citizens, a hospital for 310 sick persons, military orphan asylum, &c. It is one of the most flourishing towns in the S. of Russia; and its merchants carry on a lucrative trade with the Black Sea, Crimea, and Turkey, and travel annually to Tobolsk, to buy furs, which they afterwards take to the great German fairs. The town has also some soap, tallow, leather and woollen cloth factories. It is supposed to be among the oldest Russian towns, and is spoken of as existing in the 12th century. Here Peter the Great built a palace, and established a dock-yard, arsenal, &c.; but the latter establishments were afterwards removed successively to Ustea, Tavrof, and Rostof; and nearly all traces of the palace and magazines have been obliterated by the frequent fires which the town has since suffered. (*Schnitzler, La Russie; Possart; Lyall's Trav. in Russia, &c.*)

VOSGES, a dep. of France, reg. N. E., principally between the 48° and 49° of N. lat., and the 5° and 7° of E. long., having N. the deps. Meurthe and Meuse, E. the dep. of the Rhine, S. Haute-Saône, and W. Haute-Marne. Area, 585,963 hectares. Pop., in 1846, 427,894. This dep. derives its name from the Vosges (Germ. *Wasgau*) mountains, a chain which extends parallel with the Rhine, separating the deps. of Haute and Bas-Rhin on the E. from those of Haute-Saône, Vosges, and Meurthe on the W., stretching also into Rhenish Bavaria, and terminating to the N.E. in Mont Tonnerre. These mountains usually rise between 4,000 and 5,000 feet above the sea, and their summits are covered with snow for most part of the year. They send off a remarkable continuation, the Faucilles mountains, E. and W. through this dep., by the ramifications of which nearly its whole surface is covered. The Moselle, Meuse, Meurthe, Madon, Saône, &c., rise in this dep., all of which, except the Saône, have a N. course. Small lakes are numerous. The arable land, which is said to comprise 244,745 hectares, is not generally fertile; the meadows comprise 76,330 hectares; woods, 129,474 hectares; and heaths, wastes, &c., 36,550 hectares. In a portion of the dep. called "the plain," to the W. of Epinal, agriculture is said by Hugo to be pretty well advanced. The land is divided into very small properties; so much so, that in 1835, of 148,699 properties subject to the *contrib. foncière*, 87,600 were assessed at less than 5 francs, and only 43 at 1,000 francs or upwards. In 1835, the produce of corn, principally oats, wheat, and rye, was estimated at less than 2,000,000 hectolitres, and the potatoe crop was about as much. The rearing of stock is the most important branch of husbandry, and a greater number of cattle are kept in this than in any other of the N.E. deps.; in 1830, they were reckoned at about 140,000 head. Sheep are much less numerous, and the annual produce of wool is said by Hugo not to exceed 45,000 kilogr. The annual produce of cheese may be about 20,000 kilogr.; and that of wine (of very indifferent quality) about 150,000 hectolitres; about 120,000 kilogr. of hops are annually sent to Paris. Cherries are grown in large quantities, and the dep. is famous for its *kirschenwasser*. A good many hogs are fattened in the mountains. The forests abound in good fir timber, great quantities of which are floated down the rivers, as deals and rough timber. Iron is the chief mineral product; but it also produces coal, argenterous lead, copper, manganese, granite, marble, porphyry, &c., though many of these resources are much neglected. The manufacture of steel and iron goods hold the first rank. Knives and forks are made at Bruyères; bayonets, &c., at Sionne, and nails at Neufchâteau; plate iron is made in large quantities at various places; and Plombières is famous for its cutlery. Cotton stuffs are made in the arronds. of Remiremont and St. Dié. Lace, musical instruments, barrels, and wooden shoes are considerable articles of manufacture; and there are various glass and marble works, tanneries, breweries, &c. Vosges is divided into 5 arronds.; chief towns, Epinal, the cap.; Mirecourt, Neufchâteau, Remiremont, and St. Dié. It sends 5 mems. to the Ch. of Dep. Number of electors, in 1838-39, 999. Total public revenue, 1831, 7,165,857 francs. (*Hugo, Art. Vosges; French Official Tables, &c.*)

W.

WAAL, a river of the Netherlands, *see* RHINE.

WAGRAM, a village of the archduchy of Austria, country below the Enns, on the left bank of the Rossbach, 11 m. N.E. Vienna. This village is celebrated in military history for the great battle fought in its vicinity, on the 6th of July, 1809, by the grand French army under Napoleon, and the Austrians under the Archduke Charles. The former gained a complete victory; the Austrians lost above 20,000 men taken prisoners, besides a vast number killed and wounded. This great victory led to an armistice followed by the treaty of Schoenbrunn.

WAKEFIELD, a parl. bor., market-town, and par. of England, W. Riding, co. York, lower div. of Agbrigg,

weapont. Agbrigg and Morley, on the Calder, 30 m. S. W. York, and 9 m. S. Leeds. Area of par., comprising the townships of Wakefield, Stanley-cum-Wrenthorpe, Alverthorpe-with-Thornes, and the chapelry of Horbury, 9,390 acres. Pop., in 1831, 24,538; in 1841, 29,992. The parl. bor., however, includes only the township of Wakefield (pop. in 1841, 18,486), with small portions of Alverthorpe and Stanley. The town is situated on the declivity of a hill sloping to the river, which is here crossed by a handsome stone bridge of nine arches. It is well built, the houses being mostly of brick; streets spacious and regular, paved, and lighted with gas; and since 1839, the town has been plentifully supplied with pure water by the W. Waterworks Company. The market-place is small, but is well supplied with butchers' meat, fruit, vegetables, and other articles.

Wakefield is one of the principal country corn markets in England; and the new corn exchange at the head of Westgate is in all respects suitable for the dispatch of the important business of which it is the centre. On the S.W. side of Wakefield township the buildings advance in a continuous street into that of Alverthorpe, now embodied in the parl. bor.; and at the W. end of the town, and in Stanley township, are a great many buildings known by the name of East Moor, which also form part of the bor., which farther comprises the small village of Thornes on the S. The latter, in fact, is connected with the town by an almost continuous line of houses and warehouses. (*Boundary Report.*) The parish church of All Saints is a handsome edifice of English architecture, 156 ft. in length, and 69 ft. in width, founded in the reign of Henry III., but retaining few of its ancient features. It has a square tower, with battlements and pinnacles, surmounted by a spire, 237 ft. in height, said to be the highest in the co. The living, a vicarage in the gift of the crown, is worth 5477. nett. The church of St. John, in the district of the same name, erected in 1795, was, in 1815, rendered parochial jointly with All Saints: the living, a perpetual curacy, in the gift of the vicar of Wakefield, is worth 1187. a year. In 1840, Trinity Church, in George Street, built by subscription, and vested in trustees, under the Church Building Acts, was licensed for public worship. Here is also a Rom. Cath. chapel, 2 places of worship for Independents, 2 for Wesleyans, and others for Friends, Primitive Methodists, Unitarians, and Baptists. In the centre of the bridge, projecting from its E. side, is a richly ornamented Gothic chapel, 30 feet in length by 24 in breadth, believed to have been founded by Edward III.; but rebuilt and decorated by Edward IV. to commemorate the death of his father, Richard, Duke of York, and his partisans at the battle of Wakefield. But (*quantum mutatus!*) this fine old building has latterly been degraded into a counting-house. In the market place is a Doric cross with an open colonnade supporting a dome, and containing a small room in which the street commissioners transact business. The music saloon, subscription library and news room in Wood Street, is a handsome building. Here, also, is a literary and philosophical society, a mechanics' institute, a masonic lodge, a theatre, &c. The new and commodious corn exchange, at the top of Westgate, contains, exclusive of the exchange and several offices and shops, a very large assembly-room, with ante-rooms. The building called the Tammy Hall, for the exhibition and sale of woollens, has long been occupied as a worsted manufactory. The free grammar-school, founded by Queen Elizabeth in 1592, and since enriched by various private benefactions, has a considerable income, and has long enjoyed a high reputation. It is open, free of expense, to the sons of the inhabs. desirous of a classical education, and has at present (1842) upwards of 90 scholars. It has an attached writing school, and 4 exhibitions to Cambridge, and 1 to Oxford. Some very distinguished personages have been educated in this school, among whom may be mentioned Dr. John Potter, Archbishop of Canterbury, author of the popular and excellent work on Grecian Antiquities, a native of the town; Dr. Radcliffe, founder of the library at Oxford which bears his name, also a native of the town; and Dr. Bentley, the eminent critic and scholar, a native of Oulton, in the vicinity. The green-coat school, founded in 1707, with an income of above 5000. a year, clothes and instructs about 75 boys and 50 girls; and among other schools is a charity school for 106 poor boys and 50 girls, 2 national schools established in 1832, a school of industry, a Lancastrian and several Sunday schools, in all affording instruction to nearly 2,000 children. The proprietary school, opened in 1834, is a fine, collegiate-looking building, in which about 200 pupils receive a classical and commercial education. The West Riding Pauper Lunatic Asylum, erected in 1817, 1 m. N.E. of the town, is a noble building capable of accommodating above 400 patients. A dispensary and fever ward was established a few years since; and there are well endowed alms-houses for both sexes. Wakefield had formerly an extensive manufacture of woollens and worsted yarn, but this, owing to the superior facilities for carrying on the manufacture enjoyed by other

place, or their greater attention to the business, has greatly declined still, however, a considerable business is carried on in the manufacture of spinning worsted and in dyeing, and it is an important mart, not merely for corn but also for wool and cattle. Great quantities of wool are sent from all parts of the surrounding country to be dyed, and by the worst factors, the cattle fairs held every fortnight are very extensive. Smuggling is also carried on to a considerable extent, and there is a camp work at Walton, in the vicinity, which produced, in 1830, 1,197,377 lbs. hard soap. The coal mines in the parish employ a great many hands.

Wakefield, though in an inland situation, communicates by the Aire and Calder Navigation and various canals with Leeds, Hull, Manchester, and Liverpool; and several branch railways lead from the town to the different collieries in the vicinity. The W. Riding bank of Leitham, Tew and Co., and the Wakefield and Barnsley Banking Company, have establishments here. The North Midland Railway from Leeds to Derby passes by Oaken-shaw (Wakefield station), 1½ m. S. E. from the town; and the Leeds and Manchester Railway passes the S. end of the town. The station near Kirkgate is within a short distance, on the town side of the bridge over the Calder, but the most important station is at Norman-ton, 3 m. N. E. from the town, at the junction of the North Midland, Manchester and Leeds, and York and North Midland Railway. A very handsome hotel has been erected at this central station for the accommodation of passengers. The town is under the jurisdiction of a constable elected by the inhabitants. Quarter sessions are held in the court-house, a handsome edifice in Ward Street, and petty sessions for the district in the Court House every Monday, by the co. magistrates. A court for petty causes, and the recovery of debts under 40s., is held every 3 weeks by the steward of the manor. Here is also the W. Riding Register Office, the office of the Clerk of the Peace, and the Rolls Office for the extensive manor of Wakefield. The house of correction for the W. Riding of Yorkshire is at Wakefield; it is built on an improved plan, and comprises a treadmill, 307 cells, separate yards, a chapel, &c., and was considerably improved and enlarged in 1843. The prisoners are employed in weaving coarse cloths, calicoes, &c. The Reform Act conferred on Wakefield, for the first time, the privilege of sending a member to the H. of C. Reg. electors in 1832-30, 731.

At the era of Domesday Survey, Wakefield, with its dependencies, was in the hands of the crown. The battle of Wakefield, fought in the vicinity of this town on the 20th of December, 1460, was one of the most important gained by the Lancastrians during the civil wars. The latter under Queen Margaret, having totally defeated the Yorkists under the Duke of York who fell in the battle, and whose son, the Earl of Rutland, was assassinated immediately thereafter. In 1564, Wakefield was united to the Duchy of Lancaster. The manor, which extends far more than 20 m. W. of the town, including above 100 towns, villages, and hamlets, and about one eighth part of the entire pop. of Yorkshire, has belonged to the family of the Duke of Leeds since 1700, and was devised by the late duke to his son-in-law Walter Sackville Lord Fox, Esq., M. P., the present Lord of the Manor. Market days, Fridays, and every alternate Wednesday for cattle and sheep. Fairs, July 4th and 8th, and Nov. 11th and 15th, for horses, cattle, hardware, &c. (*dir. of Yorkshire, Names of Towns and Villages, &c.*)

WALCHEREN, the most W. of the islands of Hel-land, prov. Zealand, between the E. and W. Scheldt, lying on the W. the N. sea, or Atlantic, and on the E. the Narrow Channel, by which it is separated from the island of Beveland. Middleburg, the cap., in the centre of the island, is in lat. 51° 20' 6" N., long. 3° 37' 30" E. It is of a compact circular shape; length, E. and W. about 1½ m.; greatest breadth 10 m. Pop. about 45,000. The surface is quite level, and below high water mark its W. side, or that facing the N. sea, is defended against its overgrowths partly by a line of sand-hills or dunes, and partly (at W. Capelle) by a very strong dyke. Its sides, washed by the E. and W. Scheldt, are also defended by prodigious dykes. This is the most fertile, most populous, and best cultivated of all the Dutch islands; the inhabs are mostly in easy circumstances, and besides Middleburg, the cap., it has the towns of Flushing and Yere, and several flourishing villages. It produces excellent crops of wheat and madder, considerable quantities of the last being sent to England. The climate, though not injurious to natives, is apt to exercise an exceedingly unfavourable influence over strangers. This was strikingly exemplified in the result of the ill-fated expedition of the British troops to Walcheren under the Earl of Chatham in 1809; a great proportion of the force died on the spot from the effects of a malignant marsh-fever; while many of those who survived had their constitutions shattered for ever. (*Géographie de l'Europe*, xlv. 148, Fr. ed.; *Dict. Géog.*, &c.)

WALDECK-PYRMONT, a principality of W. Germany, consisting of two separate portions, the most southerly and principal of which has Prussian Westphalia on the N. and W., while the most Northerly and smaller, including the town of Pyrmont and adjacent territory, is almost surrounded by Lippe-Detmold and Hanover. Aggregate area, 486 sq. m. Pop. in 1838, 56,400; all Lutherans, except about 800 K. Catholics and 800 Jews. Surface hilly, having a mean elevation of 1,000 feet above the sea. Its mean annual temp. is about 45½° Fahr. Both Waldeck and Pyrmont belong to the basin of the Weser, their principal rivers being its tributaries, the Eder, Diemel and Emmer. About 151,300 morgen of land, or nearly 1-3rd part of the surface, is covered with forests, the trees being principally beech and oak. It produces an adequate supply of corn for home consumption, with potatoes, fruit of various kinds, and flax. Cattle breeding is an important branch of industry, and within the last 30 years the cattle have been greatly improved by crossing with the breeds of Switzerland and the Tyrol. Copper, iron, salt, alabaster, marble, slates, &c., are raised, and a large proportion of the prince's revenue is derived from the mineral waters of Pyrmont, which is one of the principal spas of Germany. Manufactures unimportant, those of iron goods, which were formerly considerable, having, of late years, greatly declined. At present the principal are those of linen and woollen stuffs, paper, leather, and cotton hosiery. The chief exports are fine wool, corn, cattle, iron, mineral waters, and a few manufactured articles.

The constitution is a limited monarchy, the diet consisting of 18 members of the nobility, 13 representatives of towns, and 10 deputies from the rural districts. The diet has the voting of the supplies, &c., but most part of the public business is carried on by a committee consisting of three men from each of the three estates composing the diet. The latter and the committee meet once a year. The territ. is divided into 5 districts. Arnsberg, a town of 2,000 inhabs. on the Aar, a tributary of the Diemel, is the cap. and seat of gov.; Pyrmont, on the Emmer, one of the oldest watering-places in Europe, with about 2,000 resident inhabs., is the other principal town. Total public revenue estimated at 200,000 rix dollars a year, public debt 600,000 do. Waldeck-Pyrmont holds the 25th place in the Germ. Confeder., having one vote in the full diet, and one in the committee along with the principalities of Hohenollern, Reuss, Lippe, and Liechtenstein. It contributes 219 men to the confederate army. (*Germany; All. Länder u. Fürstenthümer*, iv. &c.)

WALEY. See ENGLAND AND WALES.
WALES (NEW SOUTH). See AUSTRALIA AND SYDNEY. It appears from the official returns, that the pop.

of which are as follow:—

	Area in sq. m.	Pop. in 1857-58.	Chief Town.
Wales	27,360	1,747,515	Birmingham.
Montevideo	17,700	1,410,100	Jay.
Total	44,900	3,157,615	

The two principalities have each their own peculiar government; but their history is so intimately connected, and the forms of their respective governments, the language, manners, and customs of their inhabs. have always been so much alike, that both may be best noticed together.

Physical Geography and Products.—The Carpathians, where they separate these provs. from Transylvania, usually vary in height between 2,000 and 3,000 feet, though some summits rise to 7,000 or 8,000 feet in elevation. (*Revue Turque*.) From these mountains the surface gradually declines to the S. and E. through regions of a most picturesque character, and hill ranges and valleys of great fertility, till it terminates in a level and marshy plain from 15 to 30 leagues in breadth, which, with parts of Bulgaria and Bessarabia, constitutes what may be considered the second in point of size and importance of the great European plains. The whole country is thoroughly well watered, being intersected by

the Olt, or Aluta, Salomitzza, Argish, Sereth, and other large affluents of the Danube, most of which are navigable for a considerable distance, and which annually inundate the surrounding country. The winter is very severe, particularly in Moldavia, which prov. is open to the full force of the N.E. wind; and the Danube, with its various tributaries, is generally frozen over for 6 weeks, during which period the ice is often strong enough to bear the passage of the heaviest artillery. In the first 3 months of the year, the snow is so very thick, that the communication is every where carried on by means of sledges. A damp spring succeeds; in May the summer bursts in on a sudden, during which season, though the heat during the day be excessive, the nights are cool, or even cold. The pleasantest season is the autumn, from September to the middle of November. The climate, generally speaking, cannot be said to be unhealthy; but in the plains along the Danube endemic fevers occasionally prevail, and in the hill region goitres are extremely common. Earthquakes sometimes occur, but happily they are rarely very violent. Most part of the country towards the Danube consists of a rich alluvial soil; elsewhere, tertiary and calcareous, and in the Carpathians primary formations are prevalent. In the latter, ores of gold, silver, mercury, iron, copper, and

alabaster.) A good deal of wine is made on the hill slopes, particularly in Moldavia. It is mostly of very inferior quality; but Mr. Thornton says that some of the wines are pleasant and wholesome, resembling the light wines of Provence, and that they are largely exported to Russia and Transylvania. The strength and spirit of the wine, he farther states, are increased by a process common among the rich proprietors, and practised also in Russia. "At the first approach of severe cold, the wine butts are exposed to the severity of the weather in the open air: in a few nights the body of wine is encircled with a thick crust of ice; this is perforated by means of a hot iron, and the wine, thus deprived of its aqueous parts, is drawn off clear, strong, and capable of being preserved for a long time." (tl. §20.) Ovid may have had a similar practice in view when he says, of the wine at the place of his banishment,

"Uleque cunctis formam servavit tamen
Vina; nec hausta sunt, sed data frons bibenda."
Dr. Trist. l. III. st. 2. 23, 24.

The rearing of cattle, however, rather than agriculture, has always been the principal employment of the Wallachians; and the Rlyrian word *shech*, signifying a herdsman, appears to have been the original root whence their name, and that of the country they inhabit, has

been derived. In both countries, which are in the number of about 100,000 head, the cattle are sold in the provinces, and into 3 or 4 to 24. There is, however, but one, which is the greater part is sold in the grease. Merinos have not yet been introduced into the country. About 1-6th part of the whole clip is sent to France.

The cattle of Moldavia are larger and better than those of Wallachia, for the simple reason that all branches are more backward in the latter country. Taking their size into account, Moldavia is richer in horned cattle than Wallachia, which, on the contrary, takes the lead in the number of sheep. In both the principalities the cattle and sheep are bought up by the dealers, who pasture them throughout the summer, in the view of selling or slaughtering them in August and September. A pair of good oxen commonly costs from 70 to 85 roubles; a cow is worth from 25 to 35 roubles; a sheep 2 to 4 roubles. Pasturage for a herd of 150 head is hired at a price of 150 to 250 roubles. The number of horned cattle fattened in this manner for sale may amount to 60,000 or 80,000 head. The buyers commonly advance one third or a half of the price for some months. The high price of cattle proceeds from the great consumption in Austria, into which numerous herds are annually sent, particularly from Moldavia. Bessarabia and Wallachia also furnish some, and these are always the largest and finest animals. Many of the inhabitants on the Austrian frontier are engaged in this trade. A part of the cattle, and especially the sheep, traverse the Danube for sale in Bulgaria; and previously to 1833 the number of cattle and sheep thus exported was estimated at 150,000 for Wallachia, and at 100,000 for Moldavia." (Hagemeister, p. 149.) There are several breeds of horses; and the best, which are those of Moldavia, are bought up in large numbers for the Austrian and Prussian cavalry. (Thornton, tl. §22-3.) The buffalo thrives in Wallachia, and poultry and game of all kinds are in great plenty; but the flesh of the latter, as well as beef, pork, and mutton, are said to be insipid and inferior. The honey, wax, and hare-skins are, however, of the best quality; of the last, about 500,000 are annually exported. Timber, yellow berries, butter, cheese, hides, staves, and masts of various sizes and descriptions, are the other chief articles of export: the Moldavian oak timber, which is much finer than the Wallachian, is well calculated for the construction of vessels, and many of the Turkish ships are built of it, and fitted out with masts and ropes of Moldavian growth. The yellow berries are inferior to those of Smyrna, and only in demand when the crop of Asia Minor is deficient: the export is, however, estimated at 600,000 casks a year. (Williams, pp. 75-76, &c.)

Manufactures and Trade.—Coarse woollen cloth, hats, earthenware, common linen fabrics, glass, jewellery, saddlery, vehicles, &c. are made, and there are estimated to be altogether 5,000 factories of different kinds in the two principalities, inclusive of distilleries. (Colson, *Moldavia*, &c.) But, for the most part, manufactured goods are imported from other parts of Europe, in return for the raw produce of the principalities. Galatz is the great centre for the foreign trade of the provs., and the point whence the imported goods are sent to Bucharest and

ready market, it might be very greatly increased. Speaking generally, the wheat of Moldavia, though inferior to that of England or Poland, is from 15 to 20 per cent. superior to that of Wallachia. In the latter prov. the wheat is mostly soft, whereas in Moldavia it is mostly hard. (Hagemeister, 104.)

It is extremely difficult to form any fair estimate of the price at which Moldavian and Wallachian wheat might be shipped from the Danube. The klio, or principal corn measure, differs in the two provinces, and the value of the piastre is also constantly fluctuating, and in addition to these causes of uncertainty, the duties laid on corn when exported are liable to vary, and everybody knows how much the price is affected by variations of demand. On the whole, however, we are inclined to think that the cost of corn at Galatz (which see), the principal port of the principalities, has been materially underrated. In some years it has been as low as 15s. a quarter; but, in 1838, when 171,813 quarters were exported, the price varied from 25s. to 28s. 7d. a quarter. Perhaps, under a fair average demand, it might vary from 20s. to 25s. a quarter.

Immediately after having been gathered in, the corn is trodden out by horses and cattle, and laid up in pits, in consequence of which it acquires an earthy flavour, unfavourable to its sale in foreign markets. (Hagemeister,

Italy. Coffee, sugar, pepper, rums, lemons, oranges, and foreign wines are the principal imports. The local consumption of the first in both provs. is estimated at 800,000 okeas, of the second, 900,000 do., and of the third, 30,000 okeas yearly. Cotton and woollen goods, earthenware, &c. are brought chiefly from Germany and England, and Russia supplies the principalities with large quantities of furs, taking in return spirits, wines, and specie. (*Wilkinson, &c.*)

People and Condition.—Notwithstanding the various irruptions of the Goths, Gepids, Lombards, Hungs, Tartars, and Turks into these provs., their inhabs. at the present day appear to be, with comparatively little intermixture, the descendants of the ancient Dacians, to whom, as represented on Trajan's column at Rome, both in features and costume, Mr. Paget says, the modern Wallachs bear a remarkable resemblance. (*Paget's Hungary, &c.* ii. 189.) They still call themselves *Romani*, or *Romans*, and their country *Zara Roman-Raka*; and it is a curious fact, that in a prov. which was among the last annexed to the Roman empire, and in a situation more exposed than any other to the irruptions of invaders from the E., the common dialect now spoken contains, together with many Slavonic and Greek terms, a very large infusion of purely Latin words; so much so that a stranger speaking in Latin is generally understood

whom belong to the government. Some are employed as domestic servants; the rest are suffered to stroll about the country, breeding cattle or horses, manufacturing wooden and iron utensils, or employing themselves as showmen, musicians, &c. For this liberty they bind themselves not to quit the country, and pay an annual tribute of 20 piastres per man, if belonging to the government; it is said that desertions by gipsies are rare.

The nobility and clergy are in general exempted from taxes for the service of the state, and from the demands of private creditors! They are in consequence overbearing, extravagant, and dissolute. Their education has hitherto been little superior to that of the common people; and though ostentatious in their dress and equipage, their manners present little refinement. In Moldavia, which is the most civilized of these provs., the great landed proprietors bestow considerable attention to the management of their estates, but in Wallachia these are mostly left to the care of agents. The boyars who hold no place under government, spend their leisure in absolute idleness, or in visiting each other, to kill time. "They have," says Thornton, "adopted indiscriminately the vices, without inheriting the vivacity of the Greeks." This statement applies, however, rather to their past than to their present state. Of late years some considerable improvements have been introduced; and though society be still very backward, it is, at all events, much superior to what it was under the Turkish regime.

Government, &c.—For a lengthened period these provs. were governed by *vassal* princes, or princes appointed by the Sultan from among the Greeks of Constantinople, and, during the continuance of this system, the country was a prey to every species of abuse. Since 1830, however, they have been placed under the sole protection of Russia; and whatever may be the defects of Russian policy, there can be no question that they have gained immensely by the change. The prince, or hospodar, both in Wallachia and Moldavia, is elected for life from among the boyars of the first rank, by an assembly composed of those boyars, and of deputies of the inferior boyars, the academic bodies, and merchants; but his election must be approved by Russia, and the investiture is then given by Turkey. A diet of the clergy and boyars (the class which contribute nothing to the state) meets to vote the supplies, and to dis-

their most revolting and odious forms. And hence we need not be surprised, that though not without hospitality, and some other redeeming qualities, the inhabs. are treacherous, revengeful, indolent, basotted, and often cowardly. The women, indeed, on whom most of the labour devolves, do not share in the idleness of the men, but their industry exhibits much want of method and thriftiness, and "to be as busy as a Wallach woman, and do as little," is a proverbial comparison among the German settlers in Transylvania, &c. (*Paget's Hungary, &c.* vi. vii., to which, and the art. *Hungary*, in this vol. p. 5, we beg to refer the reader.)

Mr. Paget says, "I had pitied the Wallachs of Transylvania, till I saw their brethren of the principalities of Wallachia and Moldavia. I never saw two countries of their extent so fruitful in resources. Yet, with all their advantages, I never saw a country so thinly populated, nor a pop. so excessively poor and miserable." (ii. 467.) The peasants' dwellings throughout the country are all built in the same style and of the same size. The walls are of clay, and the roofs thatched with straw, neither of which is calculated to protect the inmates from the inclemency of the weather. In winter the people retire to caves under ground, kept warm by fires made of dried dung and branches of trees; and which, at the same time, serve for cooking their scanty food. Each family, however numerous, sleeps in one of these subterraneous habitations, their beds consisting of a piece of coarse woollen cloth, which serves in the double capacity of mattress and covering. These under-ground dwellings, have, in fact, been the winter residence of the inhabs. of Scythia from the remotest antiquity, and have been admirably described by Virgil:—

"Ipse in defectu specubus recubat sub altis
Ovis agens terrâ, congestaque roboris intusque
Adversus fœda solum, lictaque cadere.
Hic novæ hinc ducunt, et pecoris hinc
Pernantem æque acclivis imitantur videri corbis."
Georg. iii. line 574, &c.

The ordinary food of the peasants consists of the flour of Indian corn, mixed into a dough with milk. For the first few days after Lent some indulge themselves in meat, but the greater part cannot afford this, and content themselves with eggs fried in butter. (*Wilkinson, 157-8.*) In their holidays they spend most of their time in the village wine-houses, where they amuse themselves with dancing, witnessing the vagaries of gipsies, &c. They are no longer *serfs*; and if dissatisfied with their masters, may, on giving due notice, quit their habitations and pass over to the estate of another, with their families and moveables: this, however, is more an apparent than a real advantage, and, as already stated, the peasants are still in a very oppressed condition. The gipsies continue in a state of regular slavery, belonging either to the government or to private individuals. Their entire number in both principalities is estimated at 150,000, about 80,000 of

survivors in other provs.

The public revenues are derived from the capitation tax of 30 piastres (the piastre is about 3½d. sterling) per head on the rural pop.; from 30 to 120 do. a year on the manufacturing classes, and 60 to 240 do. on merchants, &c.; from the government lands and rights of pasturage, fees, fines, customs, salt monopoly, and in Moldavia a tax on the incomes of the clergy. These sources produced in 1839, in Moldavia, 10,467,209 piastres, and in Wallachia, 16,293,299 do. In the latter prov. the expenditure nearly balanced this sum; but in the former there was a surplus of 2,797,800 piastres. Both provs. pay an annual, but not very heavy, tribute to the Porte. (*Colson, Etat présent de Moldavie, &c.*)

History.—Since the conquest of this country by Trajan, it has never ceased to be under foreign dominion. It was alternately in the power of the barbarians and the Greek emperors till the 13th century, when it appears to have been occupied by the Hungarians. Early in the 15th century it was conquered by the Turks, to whose empire it has since been generally tributary, but the last war between Turkey and Russia entirely destroyed the influence of the former, and rendered the latter paramount. (*Colson, Etat présent de Moldavie et de Valachie; Wilkinson's Wallachia and Moldavia; Thornton's Turkey; Boué, La Turquie; Walsh; Paget, &c. passim.*)

WALLINGFORD, a parl. and mun. bor., market town, and par. of England, co. Berks., hund. Moreton, on the Thames, 12½ m. N.W. Reading. The old parl. and mun. bor. were co-extensive with four small pars., having an area of 370 acres, and a pop., in 1841, of 1,100. But the modern parl. bor. includes several additional pars., partly in Berks. and partly in Oxfordshire, having an aggregate area of about 18,000 acres, and a pop., in 1841, of about 6,000. The modern mun. bor. is about twice as extensive as formerly. The town, 3 m. from the main road, between London and Oxford, is pretty well built, paved, and lighted with portable gas, and, for its size, contains a considerable number of neat private dwellings, and a few of a superior character. (*Bound. Rep.*) The river is here crossed by a handsome stone bridge, 300 yds. in length, with 19 arches, and 4 draw bridges, built in 1809, upon the site of a former structure of the same description. St. Mary's church has a fine tower, crowned with pinnacles, which appears to have been erected in 1658: the living, a rectory, worth 148*l.* a year, is in the gift of the crown. St. Peter's church, a handsome edifice, rebuilt about 50 years since, is surmounted by a spire: the living, a rectory in the gift of W. S. Blackstone, Esq., is worth 100*l.* a year. The living of St. Leonard's, worth 103*l.* a year, is in the gift of the crown. There are also places of worship for Friends, Independents, Wesleyans, and Baptists. The market-house and town-hall are respectable buildings. Among numerous charitable institutions are the free grammar-school, founded in 1639, and several almshouses. No manufacture of any consequence is now carried on: the chief business is that of malting; and, in general terms, Wallingford "may be described as a neat country town, respectably inhabited, and a place of no other importance than as the market-town for the surrounding country." (*Bound. Rep.*) It is a bor. by prescription, its earliest existing charter being a copy of one dating from the reign of Hen. I. It has returned 2 mems. to the H. of C. since the 23d. of Edw. I.; the right of voting, previously to the Reform Act, having been vested in individuals paying church and poor rates. Registered electors, in 1849-50, 419; under the Mun. Reform Act, it is governed by a mayor, 4 aldermen, and 12 councillors, and other officers. It has a commission of the peace, court of record, court leet, and a gaol for the confinement of offenders before committal. Corp. rev., 1847-8, 364*l.*

WALSALL, a parl. and munic. bor. and par. of England, co. Stafford, hund. Offlow, on a small tributary of the Tame, in the centre of one of the principal coal and iron districts, 7 m. N.W. Birmingham. Area of par. 7,920 acres, all of which is included in the parl. bor., except an outlying portion called Walsall Wood. Pop., in 1841, 19,654. It is situated on the declivity and summit of a low hill, and is pretty well built, having "the appearance of a compact and flourishing town: several houses of the value of from 20*l.* to 40*l.* a year are now building, and every indication of a thriving community is here exhibited." (*Municipal Bound. Report, 1837*). The main streets are broad, well paved, lighted with gas, and well supplied with water; though there be but little that is prepossessing in their general appearance. In the environs, however, there are many handsome villas, with some picturesque scenery. Bloxwich, about 2 m. N. from the town, but included in the parl. bor., is a populous village, the inhabs. of which, like those of Walsall, are mostly occupied in the hardware manufactures. The parish church occupies a commanding situation on the top of the hill: it is an ancient, spacious, cruciform structure, with a tower surmounted by a lofty spire; and was thoroughly repaired in 1821. The living, a vicarage worth 368*l.* a year, is in the gift of the Earl of Bradford, lord of the manor. St. Paul's

chapel, a handsome Grecian edifice, completed in 1834, is a perpetual curacy worth 50*l.* a year. There are places of worship for Independents, Wesleyans, and Unitarians, and 2 Cath. chapels, one of which is a handsome Greek building. The subscription library, established in 1800, has recently been enlarged: it contains reading and news rooms, and has a Doric colonnade, 30 ft. in height. The grammar school, founded and endowed by Queen Mary, in 1557, open to all the boys of the parish, has an annual income of 780*l.*; and subsidiary schools, dependent on the principal, have been established in different parts of the par. It has also an English school in which 120 boys are instructed; a blue-coat charity; a National and several Sunday schools; and numerous charitable benefactions for the relief of the poor. In the time of Henry VI. an endowment was left for the annual distribution of 1*d.* to every person in the par.; but, in 1825, this useless endowment was judiciously appropriated to the erection and maintenance of 11 almshouses. Walsall is said to have been a bor. by prescription: its earliest existing charter was granted by Henry VI. Under the Municipal Reform Act, it is divided into 3 wards, and is governed by a mayor, 5 other aldermen, and 18 councillors. Corp. rev., 1847-8, 2,812*l.* The Reform Act conferred on it, for the first time, the important privilege of sending 1 mem. to the H. of C. Reg. elec. in 1849-50, 911.

It has a commission of the peace, a weekly court of petty sessions, and a county court, before which 533 plaintiffs were entered in 1846. The jail is of a very indifferent description. Its command of coal and iron has made Walsall a considerable seat of the hardware business: the manufacture of saddlers' ironmongery, that is, the making and plating of bridles, spurs, and stirrups, the mountings for coach and carriage harness, &c., being the staple employment of the town. It has, also, some brass and iron foundries, and a considerable trade in malt. A branch of the old Birmingham canal comes up to the W. end of the town, which is 3½ m. from Willenhall station on the Grand Junction Railway. The Bank of Walsall and S. Staffordshire, established in 1835, has its principal office in this town. Walsall, though not mentioned in Domesday book, is known to be a town of considerable antiquity; but is not connected with any historical event of importance. Market days, Tuesdays, Fairs, 24th Feb., Whit Tuesday, and the Tuesday before Michaelmas; the two latter are mostly for cattle and cheese. (*Parl. Rep. and Priv. Inf.*)

WALSHAM (NORTH) a market-town and par. of England, co. Norfolk, hund. Tunstead, on a level, about 6 m. from the sea, and 13 m. N.N.E. Norwich. Area of par., 4,010 acres. Pop. of do., in 1841, 2,665. The town consists of three streets which meet so as to form an irregular triangle. The par. church is a large venerable old edifice. Its tower fell down in 1724; but it has a fine south porch of flint and stone, and a font with a very rich wooden cover, of tabernacle work. The vicarage is annexed to the rectory of Antingham; the livings being, together, worth 336*l.* a year: patron, the crown. Here are several dissenting chapels, a free grammar-school, with an income of nearly 250*l.* a year, at which Lord Nelson was partly educated; a Sunday-school, with a small endowment, and several minor charities. The market-cross, originally erected in the reign of Edward III., was rebuilt in 1600. Two annual courts-baron are held here, and petty sessions for the hund. by the co. magistrates. Market-day, Tuesday. Fairs, three times a year, chiefly for cattle and the hiring of servants. In 1600, this town was visited by a most destructive fire, which consumed 118 houses, besides barns, stables, &c. On Walsingham heath, near the town, is a stone cross, erected to commemorate a victory of Henry Spencer, bishop of Norwich, over a band of rebels, in 1382. (*Beauties of England and Wales, vol. xi.; Parl. Reports, &c.*)

WALTHAM ABBEY, or HOLY CROSS, a market-town and par. of England, on the W. border of the co. of Essex, hund. Waltham, on the Lea, 11½ m. N.N.E. London. Area of par., 11,870 acres. Pop. of do., in 1841, 4,177. The town, originally founded in the time of Canute, consists chiefly of one spacious and irregular street. The church was formerly the nave of the church of an opulent and famous monastery, founded here by Harold II., of which there are now but few remains. This venerable relic, though much disfigured and mutilated, contains some most interesting specimens of the ornamented columns, semicircular arches, and other characteristics of the Norman style of architecture. It is about 90 ft. in length, by about 48 ft. in breadth. At the W. end is a heavy square embattled tower, 86 ft. in height; but this is comparatively modern, and bears the date of 1558. The inside of the church bears witness to the iconoclastic zeal of the Reformers, and to the bad taste and miserable parsimony of those by whom they have been followed; the ornamental parts having been defaced and whitewashed, and the brasses torn from the gravestones! Harold, and his two brothers slain with him at the battle of Hastings, were interred in this church. The living, a curacy worth 237*l.* a year, is in

[illegible]

In the register of West Waltham, or Waltham Cross, given to W from Waltham Abbey to Herefordshire, is one of the charters granted by Edward I. at the different places where the corpse of his beloved wife Queen Eleanor rested on the way from Hereby into Arundel where she died in Westchester Abbey. Only 8 of them remain now extant. It had originally been a very fine structure, but the ornaments are much decayed. See the History of England vol. vi. and a former History of Waltham Abbey. Page Page 8.

[illegible]

It is a large village and one of the largest in the district, the population being about 10,000. It is situated on the right bank of the River, about 10 miles from the mouth. It is a very important place and is the seat of the District Council. It is also the headquarters of the District. It is a very important place and is the seat of the District Council. It is also the headquarters of the District.

[illegible]

incorporated with the national school, and affords
instruction to about 200 boys and 100 girls, to some
of whom clothing is supplied. It has also a Lib-
rary-room provided by about more than 200 children are
educated. A school of industry attended by 40 girls,
and various other classes, among which some of the
most useful a course of the town who died in 1897 are
the most valuable. The manufactures of Warrington
are more considerable than might have been expected;
that of lace was introduced by the French refugees
towards the end of the 17th century and there are
works for making soap and heavy iron drying im-
mediately to water, which come all over and some lead
other strange works and distilleries. The Birmingham
railway passes through the village. For centuries the
the trade are held yearly and there is a yearly market,
holders who a little before were covered in 1841. For up
the first 3 days of 18th century were the houses, open to pigs,
and to the game of dominoes of London. For the 18th

On Tuesday a market was held for sheep and cattle. There were 1000 sheep and 1000 cattle. The market was held in the morning and the afternoon. The sheep were sold for 10 shillings and the cattle for 10 shillings. The market was held in the morning and the afternoon. The sheep were sold for 10 shillings and the cattle for 10 shillings. The market was held in the morning and the afternoon. The sheep were sold for 10 shillings and the cattle for 10 shillings.

boroughs: petty sessions, for the division, are held weekly, and a court-baron once a year. Market-day, Tuesday. Fairs twice a year for horses and cattle.

Chadwell spring, near the town, assisted by a cut from the Lea, gives rise to the New River, an artificial stream brought from Hertfordshire, for the supply of water to the metropolis. Though the source of the New River, in a direct line, be not more than 20 m. from London, its course, including its windings, is nearly 40 m. This important work was completed in 1613, principally by the exertions of the famous Sir Hugh Middleton. Though very unproductive at first, it has since been a source of vast wealth to its proprietors, as well as of advantage to the city.

WAREHAM, a parl. and munic. bor., market town, river-port, and par. of England, co. Dorset, hund. Winfrith, in Blandford div., on a peninsula between the rivers Frome and Piddle, about 1 m. above their confluence with Wareham harbour, the most westerly arm of Poole harbour, 30 m. S.S.W. Salisbury, and 102 m. S.W. London. The modern bor. includes the whole of the 3 pars., portions only of which were comprised in the ancient bor., together with those of Corfe Castle and Bere-Regis, and parts of two other adjacent parishes; having a total area of 22,890 acres, and a pop., in 1841, of 6,646.

The site of the town shelves gradually towards the S., and it is mostly surrounded by flat marshy land. Having been nearly destroyed by fire on the 25th July, 1762, it has been built on a regular plan, and consists chiefly of 2 wide streets, intersecting each other at right angles. The houses, built of brick, and tiled or slated, are generally in good condition. It is surrounded by a remarkable ancient mound, the space between which and the town is now laid out in market gardens. Each of its rivers is here crossed by a bridge, that over the Frome being a handsome structure, erected in 1779. Down to a late period it was neither watched nor lighted. (*Bound. and Municipal Reports.*) Of 8 churches which formerly existed here, only 1, St. Mary's, is now used for public worship, though 2 more, Trinity and St. Martin's, are made use of for other purposes; the former being converted into a national school, and the latter being merely used for reading the funeral service. St. Mary's, a spacious and ancient edifice, originally attached to a priory, is built in a mixed style, though principally of the decorated character. (*Rickman.*) It has a handsome tower, and contains some ancient monuments. All the livings of Wareham are now united in one rectory. Two more ancient churches that had fallen to decay, were taken down within the last century, and on the site of one of these the present town hall has been erected. The Independents, Wesleyans, and Unitarians have each places of worship. The educational and charitable institutions comprise a national school, held in the old church of the Holy Trinity; a small endowment for the education of 20 poor children; alms-houses for 6 men and 4 women, and some minor charities.

The trade of Wareham consists chiefly in the export of the fine clay found in its neighbourhood to the Staffordshire and other potteries, and in the shipping of vegetables from the market gardens round the town for Poole and Portsmouth. A good many of the inhabs. are also employed in knitting stockings, and in the manufacture of shirt buttons. The port, which was formerly considerable, is now nearly choked up, being only accessible to vessels of from 25 to 30 tons; but vessels of 60 tons ascend to within about 1 m. of the town, and those of 200 tons may anchor at Russell's quay, about 3 m. from the town. "The inhabs. may be said to consist of persons of middling circumstances, and a few retired officers and independent persons, retail tradesmen, and men deriving a subsistence from the small craft. There is no poverty in the place, but its pop. and the number of its houses are probably less now than formerly." (*Parl. Bound. Report.*) We doubt, however, whether there be any good foundation for this surmise. The borough returned 2 mems. to the H. of C. from the 13th of Edward I. down to the Reform Act, the right of voting being exercised, since 1747, by the inhabs. paying scot-and-lot; but under the act now referred to, it returns only 1 mem. along with Corfe-Castle, Bere-Regis, &c. Reg. electors, in 1849-50, 403. The bor. has a commission of the peace, a court leet, held annually; and a court of record, opened monthly, but now of little utility. Market day, Sat. Fairs 9 times a year, mostly for cattle, cheese, and hogs. (*Bound. Rep.; Mun. Corp. Append., &c.*)

WARMINSTER, a market-town and par. of England, co. Wilts, hund. Warminster, on the Willey, at the W. extremity of Salisbury plain, 20 m. N.W. Salisbury, and 15 m. S.E. Bath. Area of par., 5,450 acres. Pop. of ditto, in 1841, 6,211. The town consists chiefly of one spacious, clean, and well-paved thoroughfare, nearly 1 m. in length, the houses being mostly of freestone. The church of St. Denis is a spacious structure, in the perpendicular style, with a square central tower; the living, a vicarage worth £240. a year, is in the gift of the Bishop of Salisbury.

The new church, erected in 1830, partly by subscription and partly by a grant from the parliamentary commissioners, is a perpetual curacy, worth 100*l.* a year, in the gift of the vicar of Warminster. Besides a chapel of ease, there are several dissenting places of worship; a free-endowed grammar-school, affording instruction to 20 boys, with national and Lancastrian schools, supported by subscription. Warminster had formerly the most extensive trade in malt of any town in the W. of England; and this branch of industry, though it has declined, is still largely carried on. The manufacture of broad cloths and kerseymeres has been, in a great measure superseded by that of silk, in which many women and children are employed. The trade in corn is considerable; the market being one of the most extensive in this part of the country. The town is under the jurisdiction of a high constable, deputy constables, and tything-men, chosen at the annual manorial court. The quarter sessions for the co. are held here in July; petty sessions monthly, by the co. magistrates; and a court of requests for the recovery of debts under 5*l.*, is held alternately in this town and Westbury. Warminster is supposed to have been a Roman station, from the discovery of coins, weapons, a tessellated pavement, and other antiquities in the vicinity. Market-day, Saturday; fairs, 3 times a year, for cattle, sheep, hogs, and cheese.

The manor and lordship of Warminster is the property of the Marquis of Bath; and about 4½ m. W. from the town on the confines of Somersetshire, is Longleat House, the truly magnificent seat of that nobleman. The park in which it is situated is of great extent, and is finely laid out. (*Beauties of England and Wales, &c.*)

WARRINGTON, a parl. bor., market town, and par. of England; co. Lancaster, hund. W. Derby; in a low situation on the Mersey, here crossed by a stone bridge, 17 m. E. by S. Liverpool. Area of par. 12,260 acres. Pop. in 1831, 19,155, in 1841, 21,857. The parl. bor., however, comprises only the townships of Warrington and Lachford, with portions of that of Thelwall, and may have at present (1850) a pop. of about 21,000. The town principally consists of four main streets, one or two of which are spacious and contain some handsome buildings; but the other streets are for the most part narrow and badly drained, and very little appears to have been done for the improvement of the town except its being paved and lighted with gas in 1821. (*Bound. Rep. &c.*) The most important public buildings are the sessions-house erected in 1820; the market-hall, over which are the assembly rooms; three cloth halls theatre, &c. The par. church, which is of Saxon origin and existed at the time of the Conquest, is a large massive cruciform structure. The tower, which rises from the intersections of the transept, was rebuilt in 1696; the interior of the church, which is lofty and handsome, contains two chapels, and some fine ancient monuments. Beneath the chancel has lately been discovered an ancient crypt, now converted into a vestry. At the entrance of the churchyard are two handsome gates. The living, a rectory, has under it the perpetual curacies of St. Paul and the Holy Trinity. There are 2 R. Cath. chapels, founded severally in 1823 and 1826, and 10 other places of worship for different sects. The free grammar-school, founded by Sir T. Boteler in 1526, has an annual income of between 700*l.* and 800*l.*; but in 1842, it was attended by only about 28 day scholars and 12 boarders. The blue-coat school, established in 1677, has since received legacies and benefactions amounting to upwards of 2,000*l.* and has an annual income of 450*l.*; 20 boys and 20 girls, children of settled inhabitants of the town, are lodged, maintained, and clothed in the building, and 170 boys and 40 girls admitted as day scholars. A general subscription library was established in 1758. A society was formed here early in the last century for the purpose of affording assistance to widows and orphans of clergymen in the archdeaconry of Chester; and the relief dispensed by it amounts at present to about 1,000*l.* a year. A handsome building, in the Elizabethan style of architecture, is in progress for the education of the orphan daughters of clergymen. A dispensary and branch of the Royal Humane Society are among the other numerous charities, and there is a small but commodious infirmary, to which two wards for cases of fever are attached.

The appearance of Warrington is less bustling and animated than formerly. Until the opening of the railway it was the great thoroughfare between Manchester and Liverpool; 70 public carriages daily passing through it between these great emporiums, whereas at present (1850) there is not one! But its traffic with the above towns is, notwithstanding, very considerable; for, though not strictly speaking a port, it possesses, by means of the Mersey and Irwell Navigation, many of the advantages of a port. At spring-tides the Mersey rises from 10 to 12 ft. at Warrington bridge, and vessels of from 70 to 100 tons burden navigate the river up to this point.

Russian cap., tends, in great measure, to give to the cap. of Poland a more European aspect; but there is something else that contributes to produce that effect. The Poles are uniformly merry; they are loud chatters, fond of amusement, and as partial to living in the open air, doing nothing, as the Parisian *fainéants* and the *Ambigués* of the Palais Royal, the Tuilleries, the Boulevards, or the Luxembourg; to which class of people I should be tempted to compare them in many respects. They also do business differently: their shops and public places of amusement are more like those of any other European city farther S.; and their *wénage* appears to be much nearer to that of the French than of the Russians." (*Granville*, li. 527, 528.)

Warsaw, though a very ancient town, was not the cap. of Poland till 1566, after the union with Lithuania; when the Polish diet was transferred to it from Cracow. The city was occupied by the Swedes in the middle of the 17th century, and surrendered, without opposition, to Charles XII. in 1703. In 1793, the inhabs. expelled the Russian garrison previously in occupation; and the town was successfully defended against the Prussians, in the succeeding year, by Kosciuszko. But the suburb of Praga, being soon after taken and sacked by the Russians under Suwarow, by whom a large proportion of the inhabs. were put to the sword, the city, threatened with a similar fate, submitted to the conquerors. In 1795, Warsaw was assigned to Prussia: in 1806, she was made the cap. of the grand duchy of Poland; and in 1815, she became the cap. of the new kingdom of Poland. She was the principal seat of the ill-fated insurrection of 1831, which has entailed so much mischief on her and the rest of Poland. (*Malle Brun, Tableau de Pologne; Dict. Géog.; Granville, &c.*)

WARWICK, a co. of England, situated nearly in the centre of the kingdom, having N.E. the co. of Leicester, E. Northampton, S. Oxford and Gloucester, W. Worcester, and N.W. Stafford. It contains 574,080 acres; of which above 500,000 are arable, meadow, and pasture. The northern and largest part of Warwickshire was formerly an extensive forest, and still retains something of its former character, being interspersed with heaths and moors, and sprinkled with woods; but the former have greatly diminished within the present century. The S. portion is in general very fertile. Both the dairy and grazing systems are successfully practised, but the former has been gaining on the latter. The long-horned breed of cattle is preferred for the dairies; the average produce of a cow being about 2½ cwt. of cheese. Short-woolled sheep have been almost entirely banished from this co. The standing sheep stock is supposed to amount to about 350,000 head, and the produce of wool to be between 8,000 and 9,000 packs. Arable husbandry is not so well understood as grazing; and in some districts it is far behind. Wheat, barley, oats, and beans, are extensively cultivated. The first is generally drilled; and when such is the case, it is not a little singular that turnips should be almost everywhere sown broadcast, and beans generally dibbled. The system of top-dressing is more commonly followed in this than in any other co. Estates of various sizes; some very large, and others small. Farms vary from 80 to 500 acres; but the smaller class predominate so much, that the average is not supposed to exceed 150 acres. Old enclosures average about 10 acres, new about 15. Leases getting more uncommon, and farms mostly held from year to year. Tenants bound not to exceed three crops to a fallow; but there is no restriction as to the quantity of wheat sown. Average rent of land in 1843, 17.11s. 6½d. an acre. Little can be said in favour of the farm buildings. The old houses and offices were sometimes built of timber; sometimes the walls were of stone, and sometimes of mud or clay, or thatched; they are in general injudiciously placed, ill-planned, and inconvenient. The new farm-houses and offices are of brick, covered with tile, and are very substantial; but conveniency is said not to be much studied. There are no open sheds for wintering cattle, nor feeding-sheds for soiling with turnips, and other green food. (*Sarcey*, p. 30.) Coal is wrought to a considerable extent at various places; but Birmingham is supplied with coal brought by canal from Staffordshire. Warwick ranks high as a manufacturing co. Birmingham is the principal seat of the hardware manufacture; and nowhere, perhaps, has the combined influence of ingenuity, skill, and capital been more astonishingly displayed than in the immense variety, beauty, utility, and cheapness of the articles produced in this great workshop. Coventry has been long distinguished for its proficiency in the silk trade, particularly in the manufacture of ribands. Needles and fish-hooks are made at Alcester; hats at Atherstone; and flax-mills have been erected at Tamworth, and in other places. Principal rivers Avon, Tame, Alne, and Leam. The Birmingham and Fazely Canal runs along the N.W. side of the co.; and it is intersected by the Warwick and Birmingham Canal, the Warwick and Napton Canal, the Oxford Canal, &c.;

the co. is also intersected by the railway from London to Birmingham, and thence to Manchester. It is divided into 4 hundreds, and 4 subsidiary districts, and contains 206 parishes. It sends 10 mems. to the H. of C.; viz. 4 for the co., and 2 each for the city of Coventry and the bors. of Birmingham and Warwick. Registered electors for the co., in 1849-50, 10,706, whereof 6,755 belong to the E., and 3,951 to the W. division. In 1841 Warwick had 81,321 inhabited houses, and 401,713 inhabitants, of whom 195,679 were males, and 206,036 females. Sum expended for the relief of the poor in 1848-49, 131,958*l.* Total annual value of real property in 1843, 2,364,490*l.*

WARWICK, a parl. and mun. bor. and par. of England, near the centre of the co. Warwick, of which it is the cap., hund. Knightlow, on the Avon, 2½ m. W. Leamington, and 82 m. N.W. London. Area of parl. bor., the limits of which were not altered by the Boundary Act, and which is co-extensive with the two parishes of St. Mary and St. Nicholas, 5,360 acres. Pop., in 1811, 9,124. It stands on an abrupt acclivity on the N. bank of the river, which is here crossed by a handsome stone bridge of a single arch; and is regularly laid out, consisting of two principal thoroughfares crossing each other towards the centre of the town, with a number of smaller cross streets. The principal streets are well built, paved, lighted with gas, kept remarkably clean, and ornamented with several handsome public buildings. The most conspicuous of these is St. Mary's church, which, having been nearly burnt down in 1694, was rebuilt in 1704. It exhibits a singular union of various styles: the square tower, which was designed by Sir Christopher Wren, and is finely proportioned, rises to a height of 130 ft.; it is supported on 4 pointed arches, with a thoroughfare underneath, and crowned with pinnacles. Rickman says, that "The whole of this church, except the chancel and its adjuncts, is a composition of the greatest barbarity; but the chancel is an uncommonly beautiful specimen of Perpendicular work, and the east front is remarkably fine, simple in its arrangement, yet rich from the elegance of its parts and the excellent execution of its details. The interior is equally beautiful, and there are, on the N. side, a monumental chapel and vestry of very good character; but the great feature of the church is the Beauchamp Chapel erected in 1464. It is completely enriched both within and without; its details of the most elegant character and excellent execution, and in very good preservation. It consists of a chapel, of several arches, and a small aisle, or rather passages, on the N. side, between the chapel and the church. In the centre of the chapel stands a very rich altar tomb, with the effigies of Richard Beauchamp, Earl of Warwick, whose executors commenced the erection of this chapel, which, however, was not completed until the 3d Edw. IV. There are some other monuments, (including a fine one of Dudley, Earl of Leicester, favourite of Elizabeth), but others are of much later date, and rather disfigure the chapel than add to its beauty." The living of St. Mary's is a vicarage, in the gift of the corporation of Warwick, worth 300*l.* a year. The church of St. Nicholas is small and plain; the living, also in the gift of the corporation, is worth 218*l.* per annum. Other churches formerly existed, of which there are now no remains. The Independents, Friends, Wesleyans, Unitarians, and Baptists, have their respective meeting-houses.

The court-house in the High Street is a respectable stone building erected in 1730. The county hall, a spacious and handsome edifice 94 ft. in length, and 36 ft. in width, has an elegant stone front supported by a range of Corinthian pillars. In this building the courts of justice are held; and attached to it on the N. side is the co. jail, a large and well designed building, surrounded by a strong wall 23 ft. in height, enclosing nearly an acre of ground. The co. bridewell, in which is a corn-mill, (worked by the male prisoners,) &c., and the market-house, are large and substantial modern structures. It has also a public subscription library and news-room, and a small theatre.

But the great glory of Warwick is its castle, the seat of the Earl of Warwick, and the most magnificent of the ancient feudal mansions of the English nobility, still used as a residence. It stands on a rock overhanging the Avon, a little to the S.E. of the town. It retains much of its ancient grandeur of appearance, and, uninjured by Time, presents an interesting memorial of by-gone ages. Its foundation is attributed to Ethelreda, daughter of Alfred, in 915; but no authentic trace now remains of the original building. Caesar's tower, 147 ft. in height, supposed to have been built at least 700 years ago, is in a perfect state of preservation. Guy's Tower, 128 ft. in height, and built in 1394, is, also, nearly perfect; it appears to be of a decorated character; and though very plain, is perhaps the most perfect remain of its kind in existence, and curious alike as to composition and construction. The principal entrance faces the E. side of the town, and the approach to it is a broad winding road cut in the solid

reek. Before the front is a disused moat, a stone arch over which has replaced the ancient drawbridge. On passing the double gateway, the visitor finds himself in the inner court of the castle, surrounded on all sides by lofty embattled walls and ramparts. This castle was formerly a strong fortress; and by means of open flights of stone steps and passages on the tops of the walls there is a line of communication all round the building. The parts of this vast and venerable pile that are occupied by the family are magnificently fitted up, but so as to harmonise, in all respects, with the style and character of the building. The collection of paintings is at once extensive and valuable.

In a greenhouse attached to the castle is the Warwick Vase, one of the noblest remains of ancient art. It is of white marble, and of large dimensions, being capable of holding 136 gallons. Its handles are exquisitely formed of interwoven vine branches. On the body of the vase are the heads of satyrs, bound with wreaths of ivy, the skin of the panther, with the head and claws beautifully sculptured, and other appropriate ornaments. This most splendid relic was found at the bottom of a lake, at Adrian's Villa, at Tivoli (which see), of which, no doubt, it had formed a principal ornament; and having been purchased by Sir William Hamilton, was consigned by him to his relative the Earl of Warwick, at whose expense it was brought to England, and by whose liberality it has been placed in a situation where it may at all times be seen by the public.

The remains of several monastic establishments exist in and near Warwick; and at the E. and W. extremities of the town are gates, each containing some ancient work with modern additions. Leicester's Hospital, an ancient building at the W. extremity of High Street, was originally a hall belonging to two guilds, and was converted to its present use by Robert Dudley, Earl of Leicester, for the reception of 12 poor men, chiefly disabled veterans, and for a professor of divinity as master. In 1811, the clear value of the estates with which it is endowed amounted to 2,000*l.* per annum. In 1813, the master's salary was raised from 50*l.* to 400*l.* a year, and the number of inmates increased to 22. The college school, originally founded by Henry VIII. as a free grammar-school, and endowed out of the revenues of the dissolved monasteries, is open to all the boys of the town. It has two exhibitions of 70*l.* to each of the universities. Of late years it had fallen into a state of decay; but recently the number of youths educated here has increased, and at present (1842) the school is comparatively prosperous. Here is, also, a charity-school founded and endowed for the instruction of 39 boys and 36 girls; a national school; school of industry, &c., and not less than 40 almshouses. Large funds are vested in the hands of the corporation for distribution among the poor.

The manufactures, which are unimportant, comprise a few descriptions of cotton and woollen goods, a worsted mill, with a ropery, and a brass and iron foundry. There are several large malting houses, and lime, timber, and coal-wharfs, on the banks of the Stratford canal, which comes up to the N. part of the town, and by which it communicates with Oxford, Birmingham, and the Severn. It is within about 10 m. of Coventry, and consequently, also, of the London and Birmingham railway. The *Bound. Rep.* says, "The town is thriving, and distinguished by an appearance of respectability and neatness. Trade seems to be rapidly increasing, which may be accounted for in great measure by its proximity to and connection with Leamington, where most of the Warwick tradespeople have shops, and where the chief speculators from this town invest their capital." But circumstances have changed materially in the interval. The great increase of Leamington, and its superior advantages, have taken much of the capital and business from Warwick, which it formerly enjoyed, and proportionally depressed the latter. Very few Warwick tradesmen have also shops in Leamington. Warwick is a bor. by prescription: its earliest charter dates from the 45th of Henry III., but it was not regularly incorporated till 1553. Under the Municipal Reform Act, it is divided into 2 wards, and is governed by a mayor, 5 aldermen, and 18 councillors. Quarterly courts of session are held for all offences not capital; a court-leet annually; and there is occasionally a court of record for the recovery of debts under 40*l.* The bor. has returned 2 mems. to the H. of C. since the reign of Edward I., the franchise having been vested, previously to the Reform Act, in the payers of church and poor-rates. Registered electors, in 1849-50, 744. Corporation revenue, in 1847-8, 2,355*l.* It has a weekly newspaper; and the Warwick and Leamington Banking Company, established in 1834, has its head office in the town. The Leamington Priory Banking Company has also a branch here.

Warwick is conjectured by Dugdale and other writers to have been a Roman station; but there are no proofs of its having existed before the Saxon times. It was in great part destroyed by fire in 1694. Market-day, Saturday. Fairs, twelve times a year; mostly for horses, cattle, and

cheese. (*Hist. of Warwick; Bound. and Munic. Corp. Rep.; Cooke's Warwick Castle; Private Inform.*)

WASHINGTON, (so called in honour of the father of the republic,) a city of the U. States, being the cap. of the Union, and the seat of the general legislature and government, in the federal distr. of Colombia, on the Potomac, here crossed by a wooden bridge, nearly 1 m. in length, at the confluence of the Anacostia, 210 m. S.W. New York; lat. 38° 37' 54" N., long. 77° 1' 48" W. Pop., in 1840, 23,364. "Every body knows," says Capt. Marryatt, "that Washington has a capitol, but the misfortune is, that the capitol wants a city. There it stands, reminding you of a general without an army, only surrounded and followed by a parcel of ragged little dirty boys; for such is the appearance of the dirty, straggling, ill-built houses which lie at the foot of it." (*Diary, &c.* ii. 1, 2.) But the staple of this statement consists, as might perhaps have been expected, of fiction rather than of truth. The plan of the city is laid down upon a magnificent scale, and though it has not increased so rapidly as was expected, it is now of very respectable dimensions. The streets cross each other at right angles; and are intersected diagonally by *avenues*, named after the states of the Union. The smaller streets are from 70 ft. to 110 ft. wide, the avenues and streets leading to public places from 120 ft. to 160 ft. wide. Mr. Stuart says, "The entrance to the city by the Pennsylvania avenue, which reaches from the capitol to the President's house, 160 ft. in width, and planted with rows of poplar trees, is magnificent. The city is placed in so fine a situation, and the capitol is so truly an imposing building, that I have seldom been more pleased than with the first view of the seat of the legislature of the U. States." (*Stuart's America*, i. 388.) The capitol, the noblest structure in the Union, stands on a hill elevated about 75 ft. above the Potomac, which it overlooks. It is built of freestone, and consists of a centre and two wings, the entire front being 350 ft. in length. In the centre of the E. side is a fine portico, supported by 18 Corinthian columns, and approached by a flight of steps: over the centre of the building is a large dome rising to 145 ft. in height: smaller flat domes, reaching to about 70 ft. high, cover the wings. In the interior, under the central dome, is the circular chamber called the Rotunda, ornamented with reliefs, and paintings of national subjects. On the W. of this apartment is the congress library, with 20,000 vols. In the S. wing is the House of Representatives, in the form of a Grecian amphitheatre, 95 ft. in diameter, and 60 ft. in height, surrounded with 24 Corinthian columns of variegated native marble. "The seats for the members are conveniently disposed: each member has his fixed place, a chair, and a small desk. The members, when speaking, generally stand in the space between the desk, which affords sufficient room." (*Stuart*, i. 389.) The senate chamber, in the N. wing, is of the same form, but smaller, being 74 ft. in diameter, and 42 ft. in height. Over the president's chair is a portrait of Washington; and statues of Liberty and History ornament this hall. Underneath is the hall of the supreme court of the U. States; and there are, in the building, 70 rooms for the accommodation of committees, &c. The capitol is surrounded by ornamental grounds, comprising about 22 acres. This magnificent building is said to have cost, in all, the sum of 2,596,500 dolls. Opposite the N. front of the building is a column, erected in honour of the officers who fell at Tripoli. The President's house, of freestone, two stories high, with an Ionic portico, is a handsome building. Beside it are four large edifices for the chief departments of government. In the city are the U. States general post-office, with the patent-office, the arsenal, and navy-yard, a city hall, 250 ft. in length by 50 ft. in breadth, hospital, penitentiary, upwards of 20 churches, 4 market-houses, the Columbian institute, a Rom. Cath. seminary, a city library; with medical, botanical, masonic, and many benevolent societies and other institutions. Washington has a large glass manufactory, but its trade is mostly confined to the supply of goods to the government establishments and members of Congress, Alexandria, lower down the river, being more conveniently situated for carrying on foreign trade, of which it has a considerable share. Exclusive of several large taverns, the city recently had 4 banks, an insurance company, and 10 printing-offices, from which 3 daily and several weekly newspapers were issued. Its suburb, George Town, to the W. of the city, from which it is separated by a narrow creek, across which are numerous bridges, had, in 1840, a pop. of 7,312; most of its houses are of brick, and it is a thriving town with a considerable trade. The Ohio and Chesapeake canal terminates in George Town, and the city is united to Annapolis by a railway. Mount Vernon, the seat of Washington, the founder and father of the republic, on a bank above the Potomac, is situated about 15 m. from the capital. It continues much in the state in which it was left by its illustrious owner. The remains of Washington, who died on the 11th of December, 1800, are deposited in a vault in the grounds.

Washington was made the seat of the U. States government in 1800; it sustained a good deal of injury from the British in 1814, more, perhaps, to the discredit of the latter, than to the loss of the Americans; but not a trace is now visible of these injuries. (*Encyc. Amer. and American Almanac*, 1842; *Encyc. of Geog.*, American edit.; *Stuart*; *Davenport's Gazetteer*, &c.)

WATERFORD, a marit. co. of Ireland, prov. Munster, having S. St. George's Channel; E. Waterford Harbour, by which it is separated from Wexford and Kilkenny; N. Tipperary; and W. Cork. Area 471,281 acres, of which 118,034 are unimproved mountain, with but little bog. Though generally coarse, there is a considerable extent of fine land in this co., particularly in its S.E. quarter, and the mountains afford good pasturage for cattle. Estates, for the most part, very large; the largest, which belongs to the Duke of Devonshire, is managed on the most liberal principles, and greatly improved. Here, indeed, and generally throughout Ireland (and, we believe, that the same thing may be truly affirmed of England), tenants and occupiers on large estates are decidedly better off than those on the smaller class of properties. This is the principal dairy co. of Ireland. When it was visited by Mr. Young, not 1-30th part was under the plough. (*Tour in Ireland*, 4to ed. p. 329.) The proportion in tillage is now, however, much larger. This has principally arisen from the vicious custom of dividing farms. "In this co.," says Mr. Wakefield, "when the eldest daughter of a farmer marries, the father, instead of giving her a portion, divides his farm between himself and his son-in-law; the next daughter gets a half of the remainder; and this division and subdivision is continued as long as there are daughters to be disposed of. The sons are left to shift for themselves the best way they can." (i. 280.) Some of the dairy farmers are in easy circumstances; but the condition of the tillage farmers and cottiers is much the same as in other parts of Munster. Some very material improvements have, however, been introduced since 1820, into this and the contiguous cos. Improved swing-ploughs, made of iron, drawn by two horses driven by the ploughman, are now become very general. Land is kept cleaner; there has been a very great increase in the quantity of lime, used as manure; green crops are more attended to; and the quantity of wheat raised within these few years has been more than doubled; while there has been a decided falling off in the production of oats. There has also been a large increase of the exports of butter and bacon. Average rent of land, 15s. 2d. an acre. The minerals, which comprise copper, iron, &c. are but little wrought, and are unimportant; which, also, is the case with manufactures: a considerable cotton manufacture has, however, been established at Portlaw, and some glass is made in Waterford. Principal rivers, Blackwater, Suir, and Bride. Waterford is divided into 7 baronies, and 74 parishes; and returns 5 mems. to the H. of C.; being 2 for the co., 2 for the bor. of Waterford, and 1 for Dun-garvan. Registered electors for the co., in 1849-50, 321. In 1841, Waterford had 28,345 inhab. houses, 33,878 families, and 196,187 inhabs.; of whom 95,576 were males, and 100,611 females.

WATERFORD, a city, parl. bor., and sea-port of Ireland, prov. Munster, on the æstuary of the river Suir, about 10 m. from the sea, and 82 m. S.S.W. Dublin, lat. 52° 13' N., long. 7° 10' W. It is a co. of itself, comprising 10,059 acres, but is locally situated near the W. extremity of the co. of Waterford, of which it is the cap.

In 1841, the pop. of the co. of the city amounted to 29,286, and that of the city itself to 23,216. The Boundary Act made no change in the limits of the parl. bor., which embrace the whole co. of the city. The city is situated on the S., or S.W. side of the river; but a considerable portion of the co. of the city is situated on its opposite side, the communication between them being maintained by a fine wooden bridge 832 ft. in length by 40 ft. in width, constructed by an American artist. The quay fronting the river, 1,200 yards in length, is one of the finest in Europe, and is bounded on the land side by a range of well built houses. The other principal streets are the Mall, Beresford Street, Broad Street, &c.; but the city is very irregularly laid out; and in the older parts the streets are mostly narrow and dirty, with mean thatched houses, or rather hovels, occupied by a very poor and wretched population. In the more modern parts, however, the streets are comparatively broad, and the houses well built and substantial. The co. of the city is divided into 12 parishes, of which 3 are entirely rural. The cathedral of the see of Waterford (now merged in that of Cashel) is a fine modern building, with an ornamental spire: near it is the bishop's palace, also a handsome modern structure. Here are 3 parish churches, and 4 Rom. Catholic chapels, the largest of which is the cathedral. The Presbyterians, Baptists, Methodists, Independents, and Quakers have, also, their

respective places of worship. Among the public buildings, exclusive of the churches, may be noticed the town hall, chamber of commerce, county and city prisons and court houses, artillery barracks, penitentiary, custom house, St. Reginald's tower, on the quay, an ancient fortress, now a police barrack, &c.

The educational establishments comprise an endowed classical school, under the patronage of the corporation, which provides a residence and salary for the head master; the College of St. John, a plain but spacious building, provides instruction for candidates for the Rom. Catholic ministry, preparatory to their entrance into the College of Maynooth; and there are various other public and private schools. Mr. Inglis states that he visited a Catholic school, at which upwards of 700 children were educated by an association of young men, called the "Brothers of the Christian Schools." Here, also, is the Waterford Institution for the Diffusion of Knowledge, with a library and a small museum, a Literary and Scientific Society in which lectures are delivered, and Agricultural and Horticultural Societies. In 1849 it had 3 weekly newspapers.

The charitable institutions comprise a Blue-coat School for Protestant boys, founded about 1700, and possessing an estate of 1,400 acres; a Blue-coat Hospital for Protestant girls, founded in 1740; Widows' Apartments, erected in 1702, for the maintenance of 10 poor clergymen's widows; the Leper Hospital, founded by King John, and now used as an infirmary, is capable of accommodating 400 patients: the Holy Ghost Hospital, founded in 1240, and now appropriated to the reception of females; the Fever Hospital, the first of the kind in Ireland, opened in 1799, and capable of receiving 150 patients; the Lunatic Asylum for the co. and city, a large modern building, has accommodation for 117 patients. The union workhouse, opened in 1841, has accommodation for 1,780 inmates. There is also a lying-in hospital, a charitable loan fund, and several orphan societies.

The manufactures of Waterford are unimportant, comprising only a glass work, 3 breweries, 4 foundries, and several flour-mills; but it is better situated for trade than any other town of Ireland. The harbour is excellent, vessels of 800 tons burden coming up to the quays. The Suir, which is navigable for barges as far as Clonmel, gives it a considerable command of inland navigation, and it is also the principal entrepot for the produce brought down by the Barrow and its important tributary the Nore, as well as for the produce which is to be conveyed inland by these channels; its trade is in consequence great and increasing. Its exports of raw produce, including corn and flour, butter, beef, pork, and bacon, hides, tallow, &c., exceed those from any other Irish port, and amount, at present, to above 2,000,000l. a year. The opening of a steam communication between Waterford and Bristol, and other towns, has been of peculiar advantage to the first.

Subjoined is a statement of the quantity and value of the principal articles exported from Waterford during the year ending the 30th April, 1835:—

Principal Articles.		Quantity.	Value.		
			£	s.	d.
Beef	- tuns	53 at 180s.	214	10	0
Pork	- "	672 — 90s.	3,024	0	0
Pork	- barrels	2,219 — 46s.	5,103	14	0
Bacon	- stiches	399,138 — 26s.	518,879	8	0
Butter	- cwts.	118,471 — 80s.	473,884	0	0
Lard	- "	18,397 — 80s.	45,992	10	0
Wheat	- barrels	63,775 — 21s.	66,963	15	0
Oats	- "	208,167 — 12s.	121,900	4	0
Barley	- "	57,731 — 14s.	40,411	14	0
Flour	- cwts.	496,836 — 16s.	397,470	8	0
Oatmeal	- "	11,321 — 12s.	6,792	12	0
Bread	- "	1,381 — 12s. 6d.	800	12	6
Cattle	- head	4,410 — 140s.	30,870	0	0
Live Sheep	- "	1,858 — 45s.	4,180	10	0
Do. Pigs	- "	58,313 — 35s.	102,047	15	0
Total		- - -	1,818,535	12	6

There belonged to the port, on the 1st Jan. 1850, 183 sailing vessels of the agg. burden of 21,260 tons, and 15 steamers, burden 3,754 tons. Gross customs' duty, in 1849, 119,269l. The management of the port is vested in 24 harbour commissioners, nominated partly by the Chamber of Commerce, and partly by the corporation. Post-office revenue, in 1849, 2,362l. Branches of the Bank of Ireland, the Provincial Bank, and the National Bank of Ireland, have been opened in the town.

Being the place at which Henry II. landed, in 1172, to take possession of his conquests in Ireland, Waterford was early distinguished by marks of royal favour. It appears, however, that the right to send 2 representatives to the Irish H. of C. was not conferred by charter, but rested only on prescription, the practice having commenced in 1374. At the Union, Waterford was authorised to send 1 mem. to the Imperial H. of C., and under the Reform Act she sends 3 mems. Registered electors, in 1849-50, 1,212. The limits of the municipal

ter. are much less extensive than those of the pari. bor., inc. only 889 acres. Under the act 3 & 4 Victoria, cap. 106., the city is divided into 6 wards, and is governed by a mayor, 8 other aldermen, and 30 councillors. It has a court of record, which decides pleas to any amount; a civil bill court, for debts from £1. to £10.; a court of conscience for debts under £1.; and a mayor's court, for the decision of claims as to wages. Assizes for the co. and city are held here twice a year, and general sessions of the peace 15 times.

It is rather singular, that notwithstanding the increase of its trade, there is a great deal of abject poverty and misery in Waterford. Some improvements have, however, taken place, both in respect of cleanliness and of the dress of the lower orders. When Mr. Iugle was here, whiskey drinking prevailed to a frightful extent; but, thanks to the exertions of Father Mathew, this has been materially diminished (*Part Reports; Thom's Almanac; and Private Information.*)

WATERLOO, a hamlet of Belgium, prov. Brabant, on the verge of the forest of Soignies, and on the road from Brussels to Charleroi, 9 m. S. by E. the former. This village will be for ever memorable in military history for the great battle fought in its vicinity on the 18th of June, 1815, between the allied army under the Duke of Wellington, and the French, under Napoleon. There is some discrepancy in the statements on the subject, but each army probably consisted of about 70,000 men. The French began the attack between 11 and 12 o'clock forenoon. The object of Napoleon was to defeat the British, or force them to retreat, before the Prussians, who he knew were coming up, could arrive on the field; while that of the Duke of Wellington was to maintain his ground till he could be joined by his allies, when it might be in his power to become the assailant. The attacks of the French were repeated with the greatest fury, but they made no serious impression on the British, by whom they were sustained and repelled with invincible courage and resolution. At length, about $\frac{1}{2}$ past 6 o'clock, the Prussians came into the field, with a strong force of from 15,000 to 20,000 men. The English then became the assailants; and though Napoleon brought forward his guard, which had not previously been engaged, it could not stem the torrent, and, having been forced to give way, the whole army got into inextricable confusion, and the rout became universal. The slaughter was enormous. The British lost, besides officers, about 10,000 men killed and wounded. The French loss is not exactly known, but it was not, perhaps, less, in the battle and pursuit, than 20,000 men. All their cannon and baggage also fell into the hands of the conquerors; and it may, indeed, be said that the French army was entirely destroyed.

Such was the battle of Waterloo, in which the star of Napoleon set never to shine again! It is not, however, to be denied that he did all that was possible in the desperate circumstances under which he was placed. He had already defeated and beat back the Prussians; and his only chance of being able to make head against the forces that were marching against him, of awakening the enthusiasm of the French, and paralyzing his enemies, depended on his being able to defeat the army under the Duke of Wellington before it could form a junction with the Prussians. The skill of the British general, and the invincible courage and resolution of his troops, defeated this project; but it was worthy the genius of Napoleon, whose efforts in this "death struggle" were well seconded by his troops, who, though unsuccessful, did all that brave men could do.

WATFORD, a market town and par. of England, co. Herts. bund. Cashio; on the Colne, here crossed by a bridge, 10 m. N W. London. Area of par., including beside Watford 4 adjacent hamlets, 10,960 acres. Pop. of do., in 1841, 8,880; and of the town 2,577. The latter, which is well built, consists principally of a main street, about 1 m. in length, on the high road from London to Birmingham. The church, in the centre of the town, is a large edifice, consisting of a nave, 3 aisles, and a chancel. It has, at the W. end, a massive embattled tower, 80 ft. in height, surmounted by a small spire rising about 30 ft. higher. It has some fine monuments, especially 2 by Nicholas Stone. The living, a valuable vicarage, worth 730*l.* a year, is in the gift of the Earl of Essex. Here, also, are chapels for Baptists and Wesleyans. The educational establishments comprise a free school, founded in 1704, for 40 boys and 14 girls, with an income of about 180*l.* a year, which, in 1832, afforded instruction to 60 scholars; another free school, with a small endowment, established in 1641; a national school supported by subscription, &c.: the funds for the general charities yielded, at the date of last inquiry, an income of nearly 800*l.* a year. Next to agriculture, the chief branches of industry pursued here are the spinning and winding of silk, straw plaiting, and malting. In 1838, there were 3 silk mills at work in the par., which furnished employment for 236 hands. There are some very extensive paper mills on the Colne, in the vicinity of

and Watford is a considerable market for corn, sheep, cattle, and hogs. Its trade in these is facilitated by the Grand Junction Canal, which passes about 1 m. W. of the town, where it is joined by the Colne, which has been rendered navigable to St. Alban's. The London and Birmingham Railway has a station immediately to the E. of Watford, near which the line passes through a tunnel 1,200 yards in length. A council of magistrates, and a court of requests for the recovery of small debts, are held in the town weekly. Markets on Tuesdays, and fairs four times a year for cattle, horses, poultry, and the hiring of servants. Adjoining Watford on the W. is Cassiobury Park, the seat of the Earl of Essex, lord of the manor. The house has a good deal of the appearance of a monastery; it has some good pictures, and a valuable collection of books. (*Private Information.*)

WEARMOUTH. See **SUNDERLAND.**

WEDNESBURY, a market-town and par. of England, co. Stafford, hund. Offlow, near the source of the Tame, in the great coal and iron district of which Birmingham is the centre, 7 m. N. W. Birmingham. Area of par., 2,190 acres. Pop. of do., in 1841, 11,539. The church, which stands on a hill, and is supposed to occupy the site of an ancient castle, repaired within these few years, is a fine structure, with a tower surmounted by a lofty spire. It has an octagonal E. end, and other portions in the perpendicular style, and within are some exquisitely carved prebendal stalls, and a curious moveable reading-desk. (*Richman.*) The living, a vicarage worth 300*l.* a year, is in the gift of the crown. Here are chapels for Independents and Wesleyans; a Lancasterian school, supported by subscription; a small endowed school for poor children, an almshouse, and some minor charities. The inhabitants are mostly employed in various branches of the hardware manufacture, especially in the production of the numerous articles included under the term saddlers' ironmongery, with nails, hinges, edge-tools, and cast-iron works of almost every description. Enamel painting is also extensively carried on; and it has a soap manufactory.

100

(*View of Germany*, 288.) The country had not then, however, fully recovered from the devastation produced by the late war, and it is now a good deal improved. In the vicinity near Walmer the soil is a rich black mould, producing, notwithstanding its defective culture, very superior crops. The villages in this part of the duchy are thickly placed and populous, but, in consequence of the smallness of the farms, there is a great scarcity of cattle. Of late years, however, the rearing of cattle has been a good deal more attended to; and the stock of sheep has been greatly increased in consequence of the ready and advantageous market for wool afforded in England. Game is extremely plentiful; and the woods comprise about one million Prussian morgens of land. Most of the peasants' houses are built of timber.

Coal and salt are both raised, the former in no great quantities, but the production of the latter, at Kreditsburg, may amount to 1,100,000 lbs. a year. Iron and manganese are the chief metallic products. Manufactures are not very important. woollen cloths, carpets, hosiery, linen stuffs, iron, hardware, and tobacco-pipes, are the principal products. There are a good many breweries and distilleries. Manufacturing industry is most active in the circle of Eisenach.

The government is a limited monarchy; and the royal

family of Weimar took the lead in Germany after the peace, in introducing a free representative system into their dom. The constitution dates from 5th May, 1816, and is certainly one of the most liberal in Germany. "The miniature parliament forms only one house, for it consists of only 81 mems.; 10 are chosen by the proprietors of estates-noble, 10 by the citizens of the towns, 10 by the peasantry, and 1 by the university of Jena. The last is elected by the *Senatus Academicus*; and, besides being a professor, must have taken a regular degree in the juridical faculty. At the general election, which occurs every 7th year, not only the representatives themselves are chosen, but likewise a substitute for every member, that the representation may be always full. The 10 mems. for the nobility are chosen directly by all the possessors of patents of nobility, or estates-noble. Even ladies in possession of such estates have a vote; but if unmarried, they must vote by proxy.

"In the representation of the towns and peasantry, the election is indirect. The towns are distributed into 10 districts, each of which sends 1 mem. In these, every resident citizen has a vote, without distinction of religion; even Jews possess the franchise, though they cannot be elected. The whole body of voters in a town choose a certain number of delegates, in the proportion of 1 for every 50 houses the town contains, and these deputies elect the mem. for the district. The mem. for a district of towns must have a certain independent income of about 75*l.* sterling, if he be elected for Weimar or Eisenach, and 45*l.* if chosen to represent the towns of any other district. The election of the 10 representatives of the peasantry proceeds in a similar way. Their representatives must belong to themselves; they are not allowed to take them from the higher classes of landed proprietors, which they certainly would have been easily brought to do, had it not been expressly prohibited. Neither brothers, nor father and son, are capable of sitting in the chamber at the same time. The parliament elects its own president, whose election is confirmed by the grand duke, and who holds office during two parliaments. Regularly the chamber meets only once in three years, and the budget is voted for the whole of that period; but a standing committee of nine mems. continues during the adjournment. During the session the mems. have an allowance of about 10*s.* a day, besides a certain sum per mile for travelling expenses. The powers of the chamber extend to all the branches of legislation, and its consent is indispensable to the validity of all legislative measures. The majority of voices determines every question. The mems. have full privilege of parliament; their persons are inviolable from the commencement till eight days after the close of the session: they are secured in liberty of speech, and legal proceedings cannot be instituted against them without the consent of the chamber." (*Russell*, i. 111—117.)

The ministry is in three departments, those of justice, finance, and public instruction. There are courts of primary jurisdiction in the principal towns, and courts of appeal in Weimar and Eisenach, in which, with Weida and Dermbach, are also criminal courts; all having appeal to the supreme court of Jena, which is also the supreme tribunal for the States of Saxe-Coburg, Meiningen, and Reuss. According to Berghaus, public education is no where in Germany so widely diffused, and so well attended to, as in Saxe-Weimar. In 1830, 35,285 children were receiving public instruction. According to the budget for 1839-41, the revenue of the Grand Duchy amounts to 773,093 *thalers*, and the expenditure to 664,748 *do.*: the public debt amounts to 3,500,000 *thalers*. The contingent to the army of the Confederation consists of 2,100 men, all persons being liable to service from their 20th to 25th year. Saxe-Weimar holds the 15th place in the Confed.; having one vote in the full Diet, and with Saxe-Coburg, Meiningen and Altenburg, one in the Committee.

WEIMAR, a city of Central Germany, cap. of the above Grand Duchy, and the usual residence of the Grand Duke, on the Ilm, an affluent of the Saale, 104 m. W. by S. Dresden, 116 m. S.E. Hanover, and 136 m. S.W. Berlin. Pop. in 1848, 11,212. The city, which is partially surrounded with walls, though irregularly laid out, has several good and clean streets, and handsome houses; and deserves to rank with German towns of the second order. The Ilm, which flows along its E. side, is crossed by 3 bridges; it traverses the centre of the ducal park, the chief promenade of the inhabs.; and has on or near its W. bank, the ducal palace and mews, the riding-house, *rotte schloss* or red castle, public library, and several other public buildings. The ducal residence is a good building, and is tastefully furnished; but comfort rather than magnificence was the object of the late Grand Duke, by whom it was built. The town church has a large organ; an altar-piece of the Crucifixion, by Luke Cranach, in which are introduced portraits of his friends Luther and Melancthon, and of himself; and monuments to Herder, and numerous members of the

ducal family interred here. In the park is a handsome temple containing some beautiful arabesques, and a portrait by Angelica Kauffman. An avenue from this promenade conducts to the Belvidere, a summer palace of the Grand Duke, about 2 m. distant.

If Dresden be the Florence, Weimar was once fairly entitled to be called the Athens of Germany; having been the residence of Wieland, Schiller, Göethe, Herder, &c., invited thither by the late Grand Duke. Göethe and Schiller are buried in the new cemetery, one on each side their patron. During their superintendence, the theatre at Weimar was among the most celebrated in Germany; and its opera is still very well conducted and supported, the inhabs. of the city being great lovers of music. The grand ducal library holds a high rank, and has 96,000 printed vols., besides MSS. (*Statist. Journ.*, 1841.) It is open to the public, who are even allowed the use of the books at their own houses. In this library are some fine busts, and some paintings by A. Durer. One of the principal objects of notice in Weimar is the *Landed-Industrie-Comptoir*, a vast printing and publishing establishment, in which a great number of persons are employed in translating such foreign works as are likely to be read in Germany; "and such is the rapidity with which this office is performed, that frequently the translation of a book published in London at the beginning of one month is in full circulation by the end of the same month throughout Saxony, and the independent states of Germany, from the press of the *Industrie-Comptoir*." (*Granville's Trav.*, i. 232.) From this press issues the *Weimar Almanac*, frequently quoted in this work. Weimar is the seat of nearly all the superior educational institutions of the grand duchy. It has a famous academy attended by young English gentlemen, several hospitals, an orphan asylum, central prison, &c. The manufactures of Weimar are inconsiderable: a few woollen and linen cloths, iron-ware, paper, and beer are the principal products. The town has some trade in corn and wool. Weimar was the birth-place of Kotzebue. (*Berghaus, Allg. Länder, &c.*, iv.; *Stein's Handb.*; *Russell, Jacob, and Granville's Trav.*, &c.)

WELLINGBOROUGH, a market town and par. of England, co. Northampton, hund. Hamsfordshoe, on the slope of a hill, 10 m. E.N.E. Northampton. Area of par. 4,490 acres. Pop. of do., in 1841, 5,061. The town, which was a place of some consequence in the time of the Saxons, consists principally of four streets, meeting in a market-place. The houses are built of red sandstone, and the town having been almost wholly destroyed by a tremendous fire in 1738, has now a comparatively modern appearance. The church, a large edifice, with a tower and spire, is, like most churches in this co., of a mixed style. It is, however, richly decorated with carved work; in its E. window is some stained glass, and on each side of the chancel are three stalls like those in cathedral choirs. The living, a vicarage worth 400*l.* a year, is in the gift of — Vivian, Esq. Here, also, are places of worship for Baptists, Friends, Wesleyans, &c. The free school, founded by Edward VI., has an income of 112*l.* a year, and is open to all boys belonging to the parish. The number varies from 12 to 20, who are taught Latin gratis, but who pay 1*l.* 1*s.* a quarter for English, writing, and arithmetic. The governors are the trustees of the town estate; the right of appointing the master and usher is vested in the inhabs. paying taxes. (*Digest of Charity Reps.*) The town estate, yielding an income of 350*l.* a year, partly supports the free school; and the usher's salary, with a charity school for the primary instruction of 50 children, is partly dependent on Fisher's endowment of 137*l.* 10*s.* a year. There are several charities for supplying bread to the poor, &c. The manufacture of boots and shoes was carried on very extensively in this town during the war, and, though fallen off, still continues to be its staple business. The corn market, on Wednesdays, is considerable.

Wellingborough derived its name from the wells or mineral springs around it, which formerly enjoyed such celebrity that, in 1626, Charles I. and his queen resided here in tents for a considerable period that they might drink the waters pure from their source. The co. magistrates hold petty sessions for the div. weekly in the townhall. Fairs, Easter and Whit Wednesday, and Oct. 29. for live stock and cheese.

WELLINGTON, a market-town and par. of England, co. Salop, head of a div. of Bradford hundred, on the ancient Watling Street, 10 m. E. Shrewsbury. Area of par., which, besides the town, includes 6 townships, 7,900 acres. Pop. of do., in 1841, 11,099. The town consists mostly of narrow streets; but, of late years, these have been lighted with gas, and otherwise much improved, and are mostly lined with well built houses. The par. church is a handsome structure of freestone with cast-iron pillars, the window frames being also of iron. The living, a vicarage conjoined with the rectory of Eyton, worth 842*l.* a year, is in the gift of — Kyton, Esq. (*Eccl. Rev. Rep.*) Here are several dissenting places of worship, free and national schools, and some abbe-

Houses and several minor charities. Near the town are some chalybeate and sulphureous springs, frequented by visitors. Most of the inhabs. of the par. are employed in working coal and iron mines, and limestone quarries; and there are in the par. many smelting furnaces, wrought by machinery, with nail-works, glass-works, &c. Malting and some trade in timber are also carried on. The town is governed by a mayor and 2 constables, appointed annually at a mayorial court, who hold petty sessions weekly, and a court of record for debts under 20*l.* at specified times. Market-day, Thursday. Fairs four times yearly, for cattle and stock.

WELLINGTON, a market town and par. of England, co. Somerset, hund. Kingsbury West, on the high road from Bath to Exeter, 46 m. S.W. the former. Area of par. 4,830 acres. Pop. of do. in 1841, 5,595. The town is regularly laid out, and has been mostly rebuilt during last century: it principally consists of two spacious thoroughfares, crossing each other at right angles, the main street being about $\frac{1}{2}$ m. in length. The church at the N. entrance is a handsome structure of mixed architecture, 110 feet in length, and 50 feet in breadth, comprising a nave, chancel, two aisles, and two small chapels. At its W. end is a fine embattled tower, 100 ft. in height, crowned with a turret and pinnacles. Within are several monuments, including a magnificent tomb in honour of Sir John Popham, chief justice of England in the reign of Elizabeth and a great benefactor of the town, and a new altar-piece ranking among the finest in the W. of England. The living, a very valuable vicarage worth 894*l.* a year, is in the gift of W. P. Thomas, Esq. A very elegant chapel-of-ease, of Grecian architecture, has been erected at the S. extremity of the town by the Rev. N. P. Thomas; and there are chapels for Baptists, Independents, Wesleyans, and Friends, the latter being here a very numerous sect. Several schools are attached to the various meeting-houses, and there are endowed almshouses for both sexes, founded by Sir John Popham, with some minor charities. A new market-house, over which is the town-hall, was erected in the centre of the town in 1832.

Wellington had formerly a flourishing manufacture of woollen goods, but it is now much fallen off. It still, however, produces druggets and serges, and has a small manufacture of earthenware. In 1838 there were in the par. three woollen mills at work, furnishing employment to 298 hands. The corn market on Thursday is large and well attended. The Bath and Exeter railway will, when completed, pass close to the E. of the town. Wellington is governed by a bailiff and subordinate officers chosen at the annual manorial court.

This town enjoys the distinction of having successively conferred on Arthur Wellesley (3d surviving son of the 2d Earl of Mornington), the greatest of English generals, the titles of Viscount, Earl, Marquis, and Duke. An obelisk upwards of 120 feet in height has also been erected, in honour of the illustrious duke, on a lofty hill about 3 m. S.E. from the town. (*Beauties of England and Wales*, art. Somerset; *Priv. Inf.*)

WELLS, a city, and a parl. and mun. bor. of England, co. Somerset, hund. Wells Forum, at the S. foot of the Mendip Hills, 17 m. S.W. Bath. It is situated in the centre of the large par. of St. Cuthbert, which contains numerous hamlets, and has an area of about 14,000 acres, with, in 1841, a pop. of 4,607. The parl. and mun. bor., which are now co-extensive, do not, however, include the whole par. of St. Cuthbert, but comprise only the old city, the liberty of St. Andrew, and some additional portions, having, in 1831, a pop. of 4,608. The city consists mostly of four principal streets, named from the four verderies into which it is divided. They are well paved and lighted, and have many good houses. The market-place, an extensive area, communicating by an ancient gateway with the cathedral-close, has in it the town-hall and a handsome public conduit, by which the city is well supplied with water. The great objects of interest in Wells are its fine ecclesiastical edifices. The cathedral, at the E. extremity of the city, is not only one of the most perfect in its original plan, but is more complete as respects its appendages than any other in the kingdom. It was principally designed in the early part of the reign of Henry III. It is built in the form of a cross, from the intersection of which rises a large quadrangular tower 178 ft. in height. The W. front, 150 ft. in breadth, is flanked by two smaller towers, each 130 ft. in height: the total length of the church, from E. to W., is about 380 ft.; its breadth, 131 ft. "The situation of this edifice and the adjoining palace is beautiful; and though no whole side, except the W. front, is visible in any one view, the cathedral is well displayed from several points, particularly the north-west. As at Peterborough, the palace and several other buildings adjoin the cathedral, and add much to its general appearance. The character of a large portion of the building is early English, with portions of the two later styles, which are very beautifully accommodated in their forms to the older parts. The nave and transepts, and part of the towers,

are early English; the W. front is remarkably rich in niches and statues, and not less so in shafts and other small ornaments appropriate to the style. The lower parts of the sides of the western towers are similarly enriched, but the whole of the remaining exterior of the building is rather plain than otherwise; the upper parts of all the towers are much later than the lower, and much accommodated to the earlier portions as to lines and forms. The eastern part of the cross and the chapter-house are of decorated character, and remarkably elegant. The cloisters are perpendicular: the nave and transepts, and a north porch out of the nave, present an early English arrangement very remarkable for simplicity and elegance. There are various excellent portions of stone screen-work, chapels, and monuments, and some stained glass, the effect of which is peculiarly good. This cathedral is very rich in details of the best as well as the most singular kinds, and, in point of composition, some of its best parts yield to no edifice in the kingdom. The bishop's palace, though it has been altered, and, in some parts, much modernised, contains some fine portions, an early decorated chapel, and some parts of earlier date. Taken altogether, the palace is one of the most valuable remains in the kingdom. The gates and other buildings in the precincts of the cathedral deserve careful examination." (*Rickman*.) Wells was first erected into a bishop's see in 905. In the 12th century it was united to the abbey-church at Bath; but the writ of *congé d'élire* for the election of the bishop is still addressed to the dean and chapter of Wells. The chapter consists of a dean and 6 other canons, 4 priest-vicars, and 42 prebendaries. Wolsey and Laud were bishops of this see. St. Cuthbert's church is a handsome perpendicular edifice; but its principal feature is its tower, one of the finest of the kind. The living, a vicarage in the gift of the dean and chapter of Wells, is worth 564*l.* a year. There are, also, places of worship for Independents, Baptists, and Wesleyans. Here is a collegiate school, under the patronage of the dean and chapter, and a united charity-school, founded in 1654, which affords instruction, clothing, &c. to 34 boys and 20 girls, and has an income of 514*l.* a year. Under the town-hall is an hospital, founded and endowed in the 15th century, for aged men and women, which has now an income of above 350*l.* a year, and 30 inmates. There are numerous other charities, including several well-endowed almshouses. Several manufactures that were formerly carried on in the town have either ceased altogether or have greatly declined; and that of silk has been wholly given up. It is said in the *Parl. Bound. Report*, that "no trade or manufactures are carried on in the town. It probably has been for a great number of years in the same state as it is now. There is no reason to believe that it will increase. Much of the property of the city belongs to the ecclesiastical or the city corporations, which cannot grant long leases, and give no encouragement to building." The corn-market, which used to be very considerable, has materially declined; but the market for cheese is still one of the most considerable in the W. of England. The trade of the place is mostly, however, confined to the retail supply of the inhabs. The West of England and South Wales District Bank has an office in the city. The earliest charter of Wells dates from the 3d of John; but the governing charter, previously to the Mun. Reform Act, was granted by Elizabeth. By the last-mentioned statute, the town is governed by a mayor, 3 other aldermen, and 12 councillors. A court of quarter sessions, the jurisdiction of which is confined to cases of misdemeanour, is held 4 times a year; but it is merely a matter of form, all trials being referred to the co. assize-court, and the court of record has also fallen into disuse. The co. assizes are held alternately here and at Taunton. Corp. rev., in 1847-8, 1,035*l.* Wells has returned 2 mems. to the H. of C. since the reign of Edward I.; the right of voting, down to the Reform Act, having been vested in the mayor, masters, burgesses, and persons admitted to the freedom of the city, which was obtainable by birth, marriage, or apprenticeship. Registered electors, in 1849-50, 381. It is also a polling-place for the E. division of the co. Markets, Wednesday and Saturday; and every fourth Saturday a large market for corn, cattle, and cheese. Fairs five times a year, mostly for cattle, horses, and pedlery. (*Parl. and Mun. Bound. Rcpts.*; *Mun. Corp. Append.*)

WELLS, a sea-port town and par. of England, co. Norfolk, hund. N. Greenhoe, on a small creek, about 1 m. from the sea, 28 m. N.W. Norwich. Area of par., 2,250 acres. Pop. of do., in 1841, 3,504. The town consists principally of two streets, only partially paved. The par. church, a spacious edifice built mostly of flint, with a lofty embattled tower, has some curious sculpture and paintings. The living, a valuable rectory, being worth 785*l.* a year, is in the gift of — Hopper, Esq. Here are several dissenting chapels: a free school for 60 poor children, supported by a part of Ringar's endowment in 1678 of 120*l.* a year, and other endowed charities to the amount of 66*l.* a year for the general relief of the poor. (*New*

Digest of Charity Reps.) It has a neat theatre, a subscription library, &c. The harbour of Wells is indifferent, and apt to be choked up with shifting sands; but it has been considerably improved of late years, through the exertions of the harbour commissioners.

The principal trade consists in the shipment of corn and malt, and in the import of coals, timber, &c. There belonged to the port, in 1841, 38 vessels of less than 50 tons burden, and 27 of more than that amount, the aggregate burden of the latter being 2,213 tons. Gross customs duty received at the port in 1840, only 596*l*. The oyster-fishing gives employment to a considerable number of persons. Petty sessions for the hund. are held once a fortnight, and courts leet and baron once a year. Fair, Shrove Tuesday. The races formerly held at Wells are now discontinued. (*Parl. Rep.*, &c.)

About 3 m. W. from the town is Holkham, the magnificent seat of the Earl of Leicester; and the country in the vicinity affords some of the best specimens of what is called the Norfolk system of farming.

WELSHPOOL, a parl. and mun. bor., market town, and par. of Wales, co. Montgomery, hunds. Pool and Caurse, on a branch of the Ellesmere canal, about 4 m. W. from the Severn, and 16 m. W. Shrewsbury. Pop. of par., in 1841, 4,670. The parl. bor., which was formerly much larger, may now be considered as nearly co-extensive with the par.; but the mun. bor. is of much smaller extent. It is principally in a hollow, but partly also on the acclivity of an eminence leading towards Powys park and castle, a little S. from the town, but included within the parl. bor.; it is well lighted with gas, and consists of one long and wide street, intersected by others of smaller dimensions, all well paved, and well supplied with water. The houses, which are of brick, have an unusual degree of regularity for this part of the country, the town being, on the whole, neat, cheerful, and English looking. The church of St. Mary, rebuilt in 1774, is a spacious edifice, in the pointed style, with a lofty square tower: it is situated at the base of an eminence, on which is the churchyard, which in some parts overtops the church, and commands a fine view of the town and adjacent country. The living, a vicarage in the gift of the bishop of St. Asaph, is worth 272*l*. a year nett. A new and handsome church on the W. side of the town has recently been erected on a site given by Lord Powys. Here, also, are places of worship for Baptists, Independents, Calvinists, and Wesleyans. The co. hall, in the centre of the main street, is a handsome brick building, with a colonnade. The co. hall, on the second floor, is 64 ft. in length by 25 ft. in breadth, and 18 ft. in height. Underneath is a spacious corn market and a court room for the co. assizes. A national school for both sexes, in which 250 children are instructed, was opened in 1821; and it has, also, a free school with a small endowment, almshouses for eight females, a dispensary, and several charitable bequests for the education of children and the distribution of charity among the poor.

From 1782 to 1834 Welshpool was the chief market in North Wales for the sale of Welsh flannels; but in the latter year the greater part of the trade was transferred to Newtown. The flannel manufacture carried on here is not of much importance: in 1838 two woollen mills were at work in the par., employing together about 30 hands. Flannel markets are still held once a fortnight; but the business is mostly conducted by private sales. (*Hand Loom Weavers' Rep.*; *Factory Returns*.) Malt-ing is carried on to a considerable extent, and there are several rather large tanneries. The Severn is navigable to within a short distance of the town; and by means of the Ellesmere canal it communicates with the Birmingham and Chester canal lines. Under the Mun. Reform Act the town is governed by 4 aldermen and 12 councillors; it has a commission of the peace, petty sessions for the hund. of Caurse, a court leet, &c., and is, twice a year, the seat of the co. assizes. Corp. rev., 1847-8, 238*l*.

Welshpool was formerly joined with Montgomery in the exercise of the elective franchise, but was disfranchised in 1728. Under the Reform Act, however, it has been again reinvested with the franchise, and is united with Llanidloes, Llanfyllin, Machynlleth, Montgomery, and Newtown, in returning 1 mem. to the H. of C. Reg. electors, in the united bors., 1,048. About 1 m. to the S. is Powys castle, the magnificent seat of Earl Powys. It stands on an elevated site, in the centre of an extensive and finely-wooded park. In 1823 the entire building underwent a thorough repair under the direction of its present proprietor. The principal entrance is a gateway between two massive round towers. It has in front two immense terraces rising one above another, the ascent to the castle being by a vast flight of steps. It is superbly fitted up, and has many fine pictures and works of art, including several pieces of sculpture from Herculaneum. In the vicinity are the Freiddyn Hills, on the loftiest of which an obelisk has been erected in honour of Lord Rodney. Market day, Monday; fairs, six times a year. (*Parl. Reports*; *Nicholson's Cambrian Guide*; *Panorama of N. Wales*.)

WEM, a market-town, par., and township of England co. Salop, hund. Bradford, on the Roden, a tributary of the Severn, 11 m. N. by E. Shrewsbury. Area of par., 13,330 acres. Pop. of do., in 1841, 4,119. The town consists principally of one spacious street, from which several smaller streets branch off. The par. church, a handsome edifice, has a lofty tower and a fine chancel: the living, a very valuable rectory, with a curacy, worth 1,767*l*. a year, is in the gift of the Duke of Cleveland. The market-house is a neat brick and stone building, and in one of its rooms courts-leet are held, at which the two bailiffs governing the town are chosen. The free school, founded in 1661 by Sir T. Adams, a native of the town, who became lord mayor of London, and who also founded an Arabic professorship in Cambridge, has a total income of about 340*l*. a year, and two of Carewell's exhibitions in Bridgenorth school. There are charities making provisions for the poor, but to no considerable amount. The inhabs. of the town are mostly engaged in tanning and making. Horsley supposes that Wem occupies the site of the ancient *Rufiniana*: it formerly had a castle, but of this edifice nothing remains. The manor of Wem having come into possession of the crown by the attainder of Philip, Earl of Arundel, in the reign of Elizabeth, it was conferred by James II. on his fitting tool, chancellor Jeffries of bloody memory, who had the estate, and who was also created Baron Wem. Wycherley, the dramatist, was born near this town in 1641. Fairs six times a year, for cattle and stock, linen, and flax seed. (*Parl. Reps.*, &c.)

WENDOVER, a market-town and par. of England, co. Buckingham, hund. Aylesbury, in the vale of that name; 32 m. N.E. London. Area of par., 5,230 acres. Pop. of do., in 1841, 1,877. The town is inconsiderable, and meanly built; and would not, indeed, have been worth noticing in a work like this, but for the circumstance of its having enjoyed, from the 21 James I. down to the passing of the Reform Act, by which it was disfranchised, the privilege of sending 2 mems. to the H. of C. The right of election was nominally in the housekeepers not receiving alms, but really in the lord of the manor. The famous John Hampden (to whose family the manor belonged) represented Wendover in 5 successive parliaments. The living, a vicarage worth 300*l*. a year, is in the gift of the crown. Petty sessions are held once a fortnight; and courts leet and baron are also held in the town.

WENER and WETTER LAKES, two large lakes of Sweden, which see (*ante*, 739.).

WENLOCK (MUCH or GREAT), a parl. and munic. bor., market-town, and par. of England, co. Salop, hund. Wenlock, on a small tributary of the Severn, 11 m. S.E. Shrewsbury. Area of par. 8,420 acres. Pop. of do., in 1841, 2,487. The parl. bor. is, however, co-extensive with the large district called "Wenlock Franchise," consisting of 16 parishes, in addition to that of Much Wenlock, the whole having, in 1841, a pop. of 19,774. The limits of the old municipal bor. were formerly identical with those of the parl. bor.; but the modern municipal bor. is of much less extent, comprising only the 3 pars. of Dawley, Madely, and Broseley; the town of Wenlock itself being altogether excluded. The latter, though an inconsiderable place, and indifferently built, has some handsome residences. It consists chiefly of 3 streets, the houses being mostly of brick. The church, a spacious edifice in the Norman and early English style, has a tower surmounted by a spire at its W. extremity. The living, a vicarage worth 180*l*. a year, is in the gift of Sir W. W. Wynn. It has also a Wesleyan chapel, a free endowed school for 12 boys, alms-houses for 4 women, and several minor charities. There are extensive limestone quarries in the vicinity, and copper mines, now abandoned, were formerly wrought to a considerable extent. The munic. bor. is divided into 3 wards, and is governed by 6 aldermen and 12 councillors. It has a commission of the peace, which is opened twice a year; petty sessions once a fortnight, or oftener, if required; and a court of record, also once a fortnight: the last, however, has latterly fallen nearly into disuse. Corp. rev., in 1847-8, 1,452*l*.

Wenlock received its first charter from Edward IV., under which it sent, in 1478, 1 mem. to the H. of C., but Broseley and Little Wenlock being afterwards added to the bor., it was empowered to return 2 mems., a privilege it has since continued to enjoy. Previously to the Reform Act, the franchise was vested in the freemen of the bor., such freedom being acquired by birth or election. Reg. electors, in 1849-50, 889. Wenlock probably owed its origin to the foundation of a famous abbey, of which the ruins still exist, a little S. from the town. This edifice, founded towards the end of the 7th century, was mostly rebuilt, soon after the Conquest, in the Norman and early English styles. The entrance from Wenlock was by a strong gateway, one massive tower of which is still standing. Of the church, which dates from 1080, a large portion of the S. side of the nave, the whole S. wing of the transept, several arches on the N., and the founda-

tions of the choir and Lady Chapel remain. The ruins sufficiently attest the former magnificence and splendour of the structure, the precincts of which included an area of 30 acres. Its revenues amounted, at the dissolution, to 40*l.* a year. Markets, on Mondays; fairs, 3 times a year, principally for horses, cattle, and sheep. (*Parl. and Munic. Bound. Rep.*; *Munic. Corp. Append.*)

WEOBLY, a market-town and par. of England, co. Hereford, hund. Stracford, 10 m. N.W. Hereford. Area of par., 3,160 acres. Pop. of do., in 1841, 907. The town consists principally of one street, having several modern and well-built houses. The church is a spacious edifice, to which are attached 2 or 3 ancient burial-chapels. The living, a vicarage worth 238*l.* a year, is in the gift of the Bishop of Hereford. A free grammar-school, founded in 1635, affords instruction to 15 boys. Here is also a national school for both sexes, supported by subscription. No particular branch of industry is carried on in the town, which, indeed, would not have been worth notice in a work of this kind, but for the circumstance of its having sent 2 mems. to the H. of C., from the reign of Edward III down to the passing of the Reform Act, by which it was disfranchised. It has a market on Thursdays, but this is little more than nominal.

WESSEL (Germ. *Niederwessel*), a frontier and strongly fortified town of Rhenish Prussia, reg. Düsseldorf, circ. Raes, of which it is the cap., on the Rhine, where it receives the Lippe, 30 m. S.E. Clevea. Pop., in 1838, 10,634. (*Bergkous.*) It is of high antiquity, and was formerly one of the Hanse Towns. It has some manufactures of cotton and woollen stuffs, leather, and tobacco, with distilleries, &c.; its port is convenient, and packets ply regularly between it and Amsterdam. Its defences have been a good deal strengthened by the erection of Fort Blücher on the opposite or W. bank of the Rhine. (*Schreiber, Guide du Rhin, &c.*)

WESER (an. *Visurgis*), a river of N.W. Germany, its embouchure being in the North Sea, and its basin having that of the Elbe to the E., the Ems to the W., and the Rhine and Mayn to the S.W. and S. It is formed by the union of the Fulda and Werra. The former of these rivers has its source in the Rhöngebirge, about lat. 50° 27' N., and long. 10° E.; and traversing the electorate of Hesse-Cassel, it passes the cities of Fulda and Cassel. The Werra rises in the Thuringian Forest, in about the same lat., and long. 11°; and intersects several of the smaller Saxon territories, with parts of Prussian Saxony, Hesse-Cassel, and Hanover. Both have a general northerly direction, and unite at Minden, near the southern extremity of the Hanoverian dom. The combined river, or Weser, flows in a N. course, though with numerous windings, through the territories of Hesse-Cassel, Prussian Westphalia, Brunswick, Lippe-Deimold, Hanover, Bremen, and Oldenburg; falling into the North Sea by a wide estuary, about lat. 53° 30' N., and long. 8° 30' E. Its entire length is estimated at nearly 300 m. Its chief effluents are the Aller and Wumme. The Weser is of considerable commercial importance, Bremen being on its banks. Vessels drawing 7 ft. water navigate it up to that city; and it is navigable for boats nearly to its commencement. Vessels drawing from 13 to 14 ft. water ascend the river to Vegesack, 13 m. below Bremen. Ships of large size stop at Bremerhafen, where a new harbour has been formed. Besides the foregoing towns, Minden, Nienburg, Bielefeld, Hameln, &c. are on the Weser; and Hanover, Brunswick, Oldenburg, &c. are on its tributaries. (*Bergkous; Von Roden; Diet. Géog., &c.*)

WEST BROMWICH, a market town and par. of England, co. Stafford, hund. Offlow, on the high road from Birmingham to Liverpool, 8 m. N.N.W. Birmingham. Area of par., 5,260 acres. Pop., in 1831, 15,377; in 1841, 35,131. This, which was formerly an inconsiderable village, has increased rapidly in size and pop., in consequence of its situation in the centre of one of the principal coal and iron districts of the empire, and of the grand seat of the hardware manufacture. The main street, nearly 1 m. in length, contains some good houses, but the town is, for the most part, very irregularly laid out, and its proximity to coal-pits, gas, and iron-works, &c. gives it a black and very unprepossessing appearance. The old church of All Saints, on an eminence, in the N.E. part of the town, is in a mixed style of architecture, and surmounted by a tower. The living, a perpetual curacy, worth 568*l.* a year, is in the gift of the Earl of Dartmouth. Christchurch, a handsome Gothic edifice, erected in 1833, is a curacy worth 330*l.* a year. Besides a very fine Rom. Cath. chapel, there are various places of worship for Protestant Dissenters, and a national, and some other schools. The gas-works in this town, belonging to the Staffordshire and Birmingham Gas Company, are probably the most extensive of any in existence. They supply Birmingham, Bilston, Wednesbury, and a vast number of other towns and villages within a radius of 16 m. Here are also some extensive crown-glass works, which, with the gas manufacture, and the extensive collieries in the vicinity, furnish the

C.; viz. 2 for the co. and 3 for the bor. of Kendal and some adjoining districts. Reg. electors for co., 1849-50, 4,089. In 1841, Westmoreland had 10,848 inhab. houses, and 56,454 inhab., of whom 28,213 were males and 28,241 females. Sum expended on the relief of the poor, in 1848-49, 16,269*l*. Total annual value of real property in 1843, 234,502*l*.

WESTPHALIA, prov. containing all the N. portion of the Prussian dominions to the W. of the Weser, having N., Hanover; E., the latter, and some of the smaller German States; S., the latter, and the Prussian prov. of the Rhine; and W., Holland. Area, 7,801 m. Pop., in 1846, 1,445,719; of whom 808,824 are Catholics, 632,036 Protestants, and 14,771 Jews. Principal towns, Munster, Minden, Paderborn, Arnsberg, Hamm, &c. It is divided into 3 regencies, and these again into 37 circles. Principal rivers, Ems, Weser, Lippe, &c. Surface in the E., N. E., and S., hilly or mountainous; but it is level in the middle of the prov., and in the N. W. adjoining Holland. In some places the soil is very fertile, but there are some pretty extensive marshes and heaths. Most part of this, as well as of the adjoining prov. of the Rhine, is divided into small farms, the occupiers of which live together in villages. The rent is paid sometimes in money, but frequently in produce or services, or both. The occupiers are a kind of copyholders, their lands descending from father to son. (*Jacob's Tour in Germany*, p. 103.) The Rhine prov. being in possession of the French, when the famous edict of 1811 was published, making copyholders freeholders in the old states of the Prussian monarchy, it did not apply to them. (*See PRUSSIA*.) Principal products, corn, flax, and potatoes. It is also productive of horses, cattle, sheep, and hogs. The latter furnish the Westphalian hams, so abundant in our markets, and so excellent. There is also great plenty of game and honey. There are vast beds of coal, with mines of iron, lead, copper, rock-salt, &c. with salt springs. Manufactures, principally linen, in the production of which 32,231 looms were wholly and occasionally employed in 1837: cottons, hardware, and cutlery, the latter being largely produced at Iserlohn, Dortmund, Hagen, and other places; with paper, spirits, tobacco, and various other articles.

WESTPORT, a sea-port town of Ireland, co. Mayo, prov. Galway, on a small river near the S. W. angle of Clew Bay, 42 m. N. by W. Galway, and 135 m. W. N. W. Dublin. Pop., in 1841, 4,365. This is a modern, neat, and rather nice-looking town. It occupies a narrow valley, and on each side and parallel to the stream by which it is intersected is a street planted with trees: the other streets branch from these on either side, and are for the most part inconveniently steep. The par. church is situated within Lord Sligo's park, immediately adjoining the town, and it has also a large Rom. Cath. chapel, with places of worship for Presbyterians and Methodists, several schools, a barrack, a market-house, a linen-hall, and court-house. A manor court, with jurisdiction to the amount of 10*l*. sterling, is held once a month; general sessions in April and October, and petty sessions on Thursdays. It is also a constabulary and coast-guard station. The linen trade was, at no very distant period, carried on extensively in this town and its vicinity. Later, however, this branch of industry has greatly declined, and the inhab. are now principally dependent on the fishery, and on the export of corn, provisions, &c. The gross value of the exports of these, in 1855, was estimated at 87,806*l*.; of which corn, meal, and flour made no less than 83,547*l*., and linen only 560*l*.! Several large flour-mills have been opened in the neighbourhood; and there are also distilleries and breweries. Branches of the Bank of Ireland and of the National Bank have been opened here.

The port and corn warehouses are situated a little below the town, on the bay, vessels drawing 18 ft. water coming close to the quays. Clew Bay has at its mouth Clare Island, on the most northerly point of which is a lighthouse: there are many small islands within the bay, which, in many places, affords convenient and secure anchorage. Gross amount of customs' duty collected here in 1849, 14,246*l*. The shipping belonging to the port is quite inconsiderable.

Croagh Patrick, or the Reek, rising 2,499 ft. above the sea, is situated immediately on the S. side of the bay, 4 or 5 m. S. W. from the town. This is not only one of the highest, but also one of the most celebrated, mountains in Ireland, being the spot where St. Patrick is said to have collected the snakes and other venomous reptiles from all parts of the island, and from which he precipitated them headlong into the sea! An altar or cairn is erected on the summit of the mountain in memory of this grand achievement, and it continues to be a frequent place of pilgrimage and devotion. The view from the summit is very magnificent. The land in the vicinity of the town is divided into very small portions, and the occupiers are, for the most part, miserably poor. Lord Sligo's park or demesne, to which strangers have access, is very fine; but the rest of his immense

estate is but little removed from a state of nature. (*Official Returns; Inglis*, ii. 96., &c.)

WEXFORD, a marit. co. of Ireland, prov. Leinster, having on the S. and E., St. George's Channel; on the N., the co. of Wicklow; and on the W., Carlow, Kilkenny, and Waterford Harbour, by which it is separated from Waterford. Area, 564,479 acres, of which 18,389 are unimproved mountain and bog. Surface, pleasantly diversified; climate mild. Soils either light or stiff clays. Property in pretty considerable estates: farms, of various sizes; but there is less of the extreme subdivision of land in this, than in most other Irish cos. Dairies numerous, but badly managed; some districts have been long noted for their great crops of barley. Average rent of land 14*s*. an acre; but, in general, it is too high, and the competition for small patches is carried beyond all reasonable bounds. The barony of Forth, occupying the S. W. angle of Wexford, differs widely from the rest of the co., and, indeed, from every other district of Ireland. It was settled at a distant period by a colony from South Wales; and, till very recently, the Welsh language was spoken by every one, and is still understood by the older inhab. The people are industrious, provident, peaceable, and cleanly. The farms are small, running from 10 up to 50 or 60 acres, but those from 30 to 40 are most common. Mr. Inglis says, that the land is clean, and well cultivated; that the crops of wheat and beans, both of which are extensively grown, are excellent; and that the improved Scotch plough with two horses is in universal use. The farm-houses are substantial, and the cottages clean and comfortable, forming, in this respect, a striking contrast with those in most other parts of the co. Persons of different religious creeds live in this barony harmoniously together. Land here, as in the rest of the co., very high-rented. (i. 49.) Wexford has neither minerals nor manufactures of any importance. Principal rivers, Slaney and Barrow. Wexford is divided into 8 baronies, and 142 parishes; and returns 4 mems. to the H. of C., viz. 2 for the co., and 1 each for the bors. of Wexford and New Ross. Registered electors for the co., in 1849-50, 813. In 1841, Wexford had 33,507 inhab. houses, 36,594 families, and 202,933 inhab., of whom 97,918 were males, and 104,115 females.

WEXFORD, a parl. bor. and sea-port town of Ireland, prov. Leinster, co. Wexford, of which it is the cap., at the mouth of the estuary of the Slaney, on the W. or inner side of Wexford Haven, 67 m. S. by W. Dublin; lat. 52° 20' N., long. 6° 28' W. Area of modern parl. bor. 762 acres; pop. of ditto, in 1841, 11,262. It is built wholly on the S. side of the river, and consists of a row of houses along the quay fronting the harbour, of a street parallel to the latter, and of numerous cross streets; but, excepting the quay, they are mostly narrow, irregular, ill-paved, and dirty. A long and poor suburb, principally occupied by fishermen, extends to a considerable distance S. from the town. Of 1,783 houses in the parl. bor. in 1831, 1,113 were slated and 670 thatched. The communication with the country on the opposite side of the harbour is maintained by means of a wooden bridge, which, with its embankments, is nearly 1,700 ft. in length (measured on the plan in the Bound. Report), having a drawbridge in the centre, and the river being navigable to Enniscorthy. The expense of keeping it up is defrayed by a toll. The public buildings and establishments comprise two Protestant churches, several R. Cath. chapels, two Methodist meeting-houses, the county court house, a large and handsome gaol, a fever hospital, dispensary, lunatic asylum, a diocesan school for the see of Ferns, and various other schools; a R. Cath. college, supported by private endowment, a priory, a nunnery, a public library, chamber of commerce, assembly rooms, club-house, barracks, &c. The old walls, by which the town was formerly surrounded, were repaired in 1804, but they have since been allowed to go to ruin, and the suburbs extend considerably beyond them. Malting is carried on to a very considerable extent. The union workhouse, opened in 1842, has accommodation for 1,050 inmates.

Wexford Haven is of great extent, and has a fine appearance on a map; but it is shallow, and owing to a bar at its mouth between the two low, long, sandy peninsulas which form its external boundary, it cannot be entered by vessels drawing more than 9 or 10 ft. water, and even these should, with neap tides, have four hours flood to enter. But notwithstanding these drawbacks, Wexford, from her situation in a fertile county, and on a river navigable to a considerable distance by barges, and other circumstances, has a considerable trade, and is, in fact, one of the principal secondary ports of Ireland for the exportation of corn, meal, and flour, butter of superior quality, provisions, and cattle. The value of the exports amounted, in 1855, to 312,136*l*.; and is now (1856) estimated at from 450,000*l*. to 500,000*l*.

Steamers ply once a week between Liverpool and Wexford. Excellent oysters are found in the bay, and the fishing business is carried on to a considerable extent. There belonged to the port, in 1850, 109 vessels of the agg. burden of 8,739 tons, ex. 1 steamer.

about 16 years ago, instead of an old drawbridge, 42 m. N.N.E. York. Lat. of lighthouse, $54^{\circ} 30' N.$; long. $0^{\circ} 37' W.$ Pop. of par. bor., which includes the townships of Whitby, Ruswarp, Hawkser-cum-Stainsacre, in 1831, 10,399, in 1841, 9,862. It is built along both banks of the Esk, the direction of which, from S. to N., determines that of the town; but, as the level ground by the river is of very limited dimensions, the buildings on both sides are carried up its banks, which, on the E. side, are especially precipitous. The houses, partly of stone and partly of brick, in the lower part of the town, are closely packed together, and the streets are for the most part narrow, while those on the banks are inconveniently steep; they are, however, well paved and lighted with gas, and some new streets on the W. side of the town are comparatively handsome; and since the new bridge was erected, the streets leading to it and to the pier have been widened, and the lower parts of the town much improved. The more opulent inhabs. have residences in the environs, which are beautiful and romantic. The church is inconveniently situated on the top of a cliff nearly 200 ft. above the sea, on the E. side of the town, the ascent to it being by a flight of 190 stone steps; but a spacious proprietary chapel was, about 60 years ago, constructed in the lower part of the town. The living, a curacy in the gift of the Archbishop of York, is worth 206*l.* a year nett. It has also places of worship for Methodists, Quakers, Presbyterians, Independents, Rom. Catholics, &c. Among the educational and charitable institutions may be mentioned, Lancastrian schools for children of both sexes; two infant schools; a seaman's hospital, for 42 widows and their children; a dispensary, established in 1786; a large workhouse, and several minor charities. The public buildings include the town-hall, erected in 1788; a building with public baths and apartments for the subscription library, and the literary and philosophical society, erected in 1826; a handsome news room, custom-house, &c. The Union Mill, for supplying the members with flour at a reduced price, on the W. side of the town, is a conspicuous object. On the whole, "the appearance of the town is that of a substantial and wealthy sea-port." (*Bound. Report.*)

The harbour is formed by two piers; that on the W. side, 640 yards in length, terminates in a circular head, on which a lighthouse, having the lantern elevated 82 ft. above the sea, has been constructed. A noble quay, extending from the bridge to the west pier, is now being built, and, when completed, will form one of the finest promenades in the kingdom. The opposite pier extends about 215 yards from the cliff on the E. side of the river. The channel between the piers forms the harbour, which, however, labours under the drawback of nearly drying at low water; and in rough weather, when the wind is from the N. or N.E., a heavy sea is thrown in. To obviate the latter inconvenience, an internal pier has been built, and the inner harbour, or that above the drawbridge, is but little affected by the weather. There are dry docks and slips for the construction and repair of ships, the building of which, though less now than formerly, is carried on to a considerable extent: ships of the burden of 3,913 tons having been built here in 1841. The manufacture of sail-cloth, cordage, &c., is also carried on.

Whitby is principally indebted for its rise to the alum works in its vicinity, commenced in 1595: the exports of the alum, and the import of the coal required in its manufacture, giving birth to a considerable trade. This, however, is by no means so extensive as formerly. There are no alum works now very near to Whitby. Sandsard and Kittleness works, belonging to the Marquis of Normanby, are from 3 to 5, and the Peak works 8 m. off. The shipments of alum amounted, in 1841, to 3,237 tons; and in 1840, to 2,747 do. There belonged to the port in 1850, 386 ships of the aggregate burden of 60,456 tons. Several of these ships were formerly employed in the N. whale fishery; but this having declined, the shipping belonging to the port is now principally employed in the Baltic, American, and E. Indian trades. Most part of the large ships sail from London, Bristol, Liverpool, and Hull. Gross customs' duty received at the port in 1849, 7,332*l.* It increased considerably after the establishment of bonding warehouses.

The town is under the superintendence of the magistrates of the N. riding; and a county court is established in it, before which 303 plaints were entered in 1848.

The Reform Act conferred on Whitby, for the first time, the privilege of sending 1 mem. to the H. of C. Registered electors, in 1849-50, 448.

Whitby abbey, which, having been destroyed by the Danes, was rebuilt after the Conquest, appears to have been a magnificent edifice. The ruins, in a commanding situation on the cliff near the church, are of considerable extent, and exhibit different styles of architecture. The neighbourhood of Whitby abounds with natural curiosities. In the alum rocks are found an immense variety of petrified shells, trunks of trees, pieces of wood, bones of fishes, &c., and several highly interesting specimens of the large marine animals called *ichthyosaurus*

and *plesiosaurus*, with fossil crocodiles, of which the finest hitherto discovered adorns the Whitby museum, which is particularly rich in specimens of the various organic remains found in the vicinity.

The country about Whitby is highly picturesque, and the beautiful valley of the Esk is also rich in ironstone of superior quality, with an admixture of lime. This has become of late an article of export to the iron works on the Tyne to the extent of from 20,000 to 30,000 tons a year. Freestone of several varieties, for building and engineering purposes, is also extensively exported to the London and other markets on the E. coast, as is also the whinstone, (found in the same vicinity,) for the repairing of roads when broken, and paving of streets, when shaped into blocks, for which purposes it is considered superior to granite. It is only since the formation of a railway from Whitby to Pickering, opened in 1836, that these mineral stores have been developed and made available. This railway passes for 24 m. through a succession of varied and highly picturesque scenery, affording, perhaps, the most beautiful ride of the kind in the kingdom; and through its medium there is a daily communication (except on Sundays) with York. There are also daily coaches to and from Scarborough and the North. Since the opening of the railway, the fishery at Whitby has very materially increased. There are several mineral springs in the neighbourhood. Good lodgings may be had in the summer and autumn, rendering Whitby a desirable place of resort, where gaiety is not the only object. Market-day, Saturday. Fairs, August 25. and Martlemas-day. (*Private Inform.*)

WHITCHURCH, a market town and par. of England, co. Hants., hund. Evingar, in div. Kingsclere, on the road from London to Salisbury, 12 m. N. Winchester. Area of par., 7,630 acres. Pop. of do. in 1841, 1,741. The town is quite insignificant, and would be wholly unworthy of notice in a work of this kind, were it not for the fact of its having sent 2 mems. to the H. of C., from the 27th year of Elizabeth down to the passing of the Reform Act, by which it was disfranchised. The living is a vicarage, worth 140*l.* a year, in the gift of the Bishop of Winchester. An endowment to the amount of 102*l.* a year is applied to the purchase of bedding and clothing for the poor.

A little to the E. of the church, near the London road, are the paper mills, at which the paper for the notes of the Bank of England has been manufactured since the reign of George I. down to the present time.

WHITCHURCH, or BLANCMINSTER, a market town and par. of England, co. Salop, hund. N. Bradford, on the borders of Wales and Cheshire, 18 m. N. by W. Shrewsbury. Area of par., 15,380 acres. Pop. of do., in 1841, 6,373. The town is built on an acclivity, the summit of which is crowned by the church, a freestone edifice, erected in 1722 in the Tuscan order, with an embattled square tower 108 feet in height. The interior is handsome, and it has a good altar-piece, and 2 recumbent stone figures brought from the ruins of the old church, one of which represents Talbot, Earl of Shrewsbury, celebrated for his exploits in the wars with France under Henry V., and immortalised by Shakspeare in the 1st part of Henry VI. The living, a rectory, united with the rectory of Marbury, in Cheshire, is in the gift of the Countess of Bridgwater, and is one of the most valuable in the co., being worth 1,458*l.* a year nett. Here also are chapels for Unitarians, Baptists, Independents, Wesleyans, &c., and public schools and charities having an aggregate income of above 900*l.* a year. The grammar school, which has an income of above 450*l.* a year, instructs a certain number of boys, free of expense, in classics and mathematics, writing and accounts being paid for separately. The master and usher are allowed 312*l.* 12*s.* a year. (*Digest, &c. of Charity Reps.*) Courts leet and baron are held in the town hall by a high steward appointed by the lord of the manor. The inhabs. of Whitchurch are principally engaged in the malt and hop trade, in the manufacture of shoes, and lime and brick making. The Ellesmere canal comes up to the town. Markets on Fridays; fairs, 4 times a year, for farming stock, linen, and hempen and some woollen cloths. (*Parl. Rep. &c.*)

WHITEHAVEN, a par. bor. and sea-port town of England, co. Cumberland, about 3 m. N.E. from St. Bees head, and 35 m. S.W. Carlisle; lat. $54^{\circ} 32' 50'' N.$, long. $3^{\circ} 34' 56'' W.$ Pop. of the par. bor., which includes the village of Preston, to the S. of the town, and a small rural district, in 1841, 15,841. The creek, on which the town is situated, is surrounded on the land-side by heights which approach close to the buildings. It is regularly laid out; the streets, which are of considerable width, cross each other at right angles, but they are, at the same time, ill-paved and dirty; and though there are many good houses and shops, a considerable proportion of the labouring pop. live in cellars. Among the public buildings are the three churches or chapels of St. Nicholas, St. James, and Trinity; the first erected in 1693, the second in 1752, and the third in 1715; the livings, which are perpetual curacies, worth

still well remembered. The associations which the mention of this locality calls up are all "redolent of joy and youth," and are too soothing and pleasing to be instantly dismissed.

WICK, a royal and parl. bor., and sea-port town of Scotland, E. coast of the co. of Caithness, of which it is the cap., on the river Wick, at the bottom of a deep bay, 15 m. S. by W. Duncansby Head. Pop. of parl. bor., which includes Wick, Pulteney-town, and Louisburg, in 1841, 5,522. Wick, properly so called, or the old town, is on the N. side of the river, and is irregularly and meanly built, and dirty; it has to the N. the suburb of Louisburg, and is connected by a bridge with Pulteney-town, on the S. side of the river. The latter, built on rising ground, feued from Lord Duffus by the British Fishery Society, is laid out on a uniform plan, and is one of the handsomest fishing villages that is anywhere to be met with. Both towns are lighted with gas, supplied by a company recently established. The par. church, at the W. end of the town, with 1,835 sittings, was erected, in 1830, at a cost of 4,781*l*. There are, also, Free churches in Wick and in Pulteney-town; and the United Associate Seceders, Independents, Reformed Presbyterians, Rom. Caths., &c., have their respective places of worship. The educational and literary establishments comprise a parochial school, an excellent academy, several unendowed schools, two Sunday-schools, a subscription library, two reading-rooms, and a weekly newspaper. Exclusive of the churches, the town-hall, county buildings and prison, and commercial hall, are the principal public edifices.

Wick has been for upwards of half a century the principal seat of the herring fishery of Scotland; and, besides its own boats, its harbour is frequented, in the fishing season, by great numbers of boats from other parts of Scotland, and from Holland. Its port at the mouth of the Wick being small, inconvenient, and unsafe, a new harbour was commenced, in 1810, by the British Fishery Society, which they completed at a cost of 14,000*l*., of which 8,500*l*. were defrayed by government. But the accommodation being still insufficient, a new or outer harbour, of larger dimensions, and having deeper water, was completed, in 1831, at an expense of not less than 40,000*l*. In 1840, the town had 765 boats at the fishery, of which 428 belonged to the town, and 337 to other places. The crews of these boats amounted to 3,823 individuals; and they are supposed to have given employment to about 4,000 other individuals, as gutters, coopers, sailors in coasters for carrying away the fish, &c. There were cured, at Wick, during the year ending the 5th of Jan., 1850, 149,500 barrels of herrings, being about one seventh part of the total quantity taken and cured in Scotland during the same year, including Sunderland and Whitby. Unluckily, however, the fishery is subject to great fluctuations; for, in some years, not more than from 30,000 to 50,000 barrels are taken. In consequence, the business partakes considerably of the nature of a gambling pursuit, and has not the beneficial influence that might otherwise have been expected.

The building of ships and boats, especially the latter, is carried on to a considerable extent; and the town has, besides, four rope-walks, a brewery and a distillery, an iron foundry, &c. The principal, or rather sole occupation of the females in and round the town consists in the spinning of yarn for, and in the making and mending of herring nets. The trade of the port is limited to the export of herrings, and of corn, wool, cattle, and other farm products, and to the importation of coals, timber, groceries, &c. It has an intercourse by steam with Leith, Aberdeen, Kirkwall, and Lerwick. There belonged to the port, in 1850, 39 vessels, of the aggregate burden of 2,168 tons. Gross customs' revenue collected at the port, in 1849, 737*l*. The Commercial Bank, and the Aberdeen Town and Country Bank, have each branches in the town.

Wick was made a royal bor. by James VI. in 1589. It unites with Kirkwall, Dornoch, Cromarty, and Dingwall, in sending 1 mem. to the H. of C. Registered electors in Wick in 1849-50, 364. It is governed by a provost, 2 bailies, and 9 councillors. Corp. rev., in 1848-9, 140*l*.

The country in the vicinity of Wick has been very greatly improved within the last half century: even so late as in 1790, there was not a cart in the county, nor potatoes, turnips, nor rye-grass; and such a thing as a rotation of crops had not then been heard of. The land was split into minute portions, and held under a system subversive of all industry and improvement. The advance in the interval has been astonishingly great; and though there is still an excess of small occupiers, their numbers are gradually decreasing; and all sorts of improvements have been introduced, and are extending themselves on all sides. To show the increase in the value of land, it may suffice to mention that the estate of Hemprigs, in the parish of Wick, let in 1753 for 642*l*., was let in 1830 (exclusive of Pulteney-town) for 5,608*l*.! (*New Statistical Account of Scotland*, art. Wick; *Official Returns*, &c.)

WICKLOW, a marit. co. of Ireland, prov. Leinster, having N. the co. of Dublin, E. St. George's Channel, S. Wexford, and W. Carlow and Kildare. Area, 494,764 acres, of which 94,000 are unimproved mountains and bog. This is a very mountainous co. In some places it is well wooded, and extremely picturesque and beautiful. Estates mostly large; the most extensive, valuable, and best cultivated belongs to Earl Fitzwilliam. Farms of various sizes; many small. Average rent of land, 12*s*. an acre. Speaking generally, rents are much too high; the labouring pop. not half employed; and their condition, and that of the small farmers, as bad as possible. But little wheat is raised, and that principally in the E. parts of the co. Wicklow has to boast of considerable mineral treasures; and some gold has been found in stream-works in different parts of the co. These, however, have been wholly abandoned, the produce of metal being insufficient to repay the expenses. From 600 to 900 persons may be employed in the copper mines of Cronebane, Ballymurtagh, Concorree, &c. The ores are shipped at Wicklow, and are smelted in Wales. Blomuth, manganese, zinc, &c. have also been met with, but in inconsiderable quantities. Marl is very abundant in parts of the co., and is said to have wonderfully increased the fertility of some districts. Principal rivers, Slaney, Fustia, and Ovoca. Wicklow contains 6 baronies, and 58 para.; and returns 2 mems. to the H. of C., both being for the co. Registered electors for the latter, in 1849-50, 1,077. In 1841, Wicklow had 19,210 inhabited houses, 21,182 families, and 126,143 inhabs., of whom 63,489 were males, and 62,654 females.

WICKLOW, a marit. town of Ireland, prov. Leinster, co. Wicklow, of which it is the cap., at the mouth of the Vartry, 28 m. S. by E. Dublin, and 2½ m. W. by N. Wicklow Head, on which there are 2 lighthouses with fixed lights. Pop. in 1841, 2,794. This, the poorest of assize towns, is irregularly built, and principally derives its means of support from the concourse of persons on co. business, and for bathing during the summer months. Its public buildings comprise the par. church, a Rom. Catholic chapel, meeting-houses for Methodists and Quakers, the court-house and prison for the co., diocesan school, market-house, co. infirmary, fever hospital, &c. Races are held annually on the Morrough, a flat sandy tract, extending several miles along the shore. The corporation, under a charter of James I. in 1613, consisted of a portreeve, 12 burgesses, and a commonalty, which returned 2 mems. to the Irish H. of C. till the Union, when the bor. was disfranchised. The assizes for the co., general sessions and petty sessions, and a weekly court for the adjudication of small debts, are held here. The town is a constabulary and coast-guard station. Markets on Saturdays; fairs Mar. 28., May 24., Aug. 12., and Nov. 25. The harbour is fit only for small craft, having a bar at its entrance which has only 9 feet at high water springs, and 6 feet at neaps. It has, however, some trade in the shipping of copper ore, corn, &c.; the value of its exports, in 1835, being 86,566*l*. Post-office revenue, in 1830, 342*l*., in 1836, 356*l*.

WIDIN, or VIDIN, a fortified town of Bulgaria, cap. Sanjack, on the Danube, 130 m. S. E. Belgrade. Pop. estimated at from 30,000 to 35,000, being the most populous town in this part of Turkey. It presents an imposing appearance from a distance, having numerous mosques and minarets; and its streets, though equally dirty, are said to be broader than in most other Turkish towns. It is the residence of a pacha of 3 tails, and a Greek archbishop; its trade is principally in rock salt, corn, wine, and other products of the surrounding territory. Its fortifications are in a pretty good state of repair, and it is one of the strongest towns in Turkey.

The revenue of Bulgaria is raised in the worst possible manner, consisting principally of a tithe charged on all sorts of raw produce, and sold to the highest bidder. In the pachalik of Widin the tithe on the fish taken in the Danube produces about 3,000*l*. a year; and the leech fishery, also, yields a considerable sum. (*Bowd.* ii. 316., and *Private Information*.)

WIESBADEN, a town of W. Germany, cap. of the Duchy of Nassau, and one of the most frequented watering-places of the Confederation; on an affluent of the Rhine, 4 m. N. from the latter, and 6 m. N. N. W. Ments. Its resident pop. was, in 1845, about 12,300; but, during the height of the season, the total number of its inhabs. has sometimes exceeded 25,000. The interior of Wiesbaden is badly laid out; but in its outskirts are many good streets and terraces. Being the seat of the government, superior courts, &c. of the duchy, it has some showy public edifices, including the ducal residence, the infantry and new artillery barracks, mint, Rom. Catholic church, theatre, &c. But most of its buildings consist of hotels, and lodging houses for the accommodation of visitors; its chief prosperity and consequence being derived from its baths and mineral waters. These, the *Aque Mattiaci* of Pliny, are hot saline springs, containing muriate and sulphate of soda, muriate and carbonate of lime, muriate of magnesia and potassa, with

some efflu, sides of trees, and free carbonic acid. There are often different springs, the principal of which is the "Kiddemore, or boiling spring," though its temperature is not boiling but only about 100° Fahr. The other springs are not so hot, but all have the same general character and are efficacious in cases of gout, rheumatism, paralysis, &c. The best time for drinking the waters, and taking baths is from the middle of June to the end of August, during which all the usual attractions of a watering place are to be met with. The chief source of gaiety is the "Kiddemore," a large edifice with a central hall, where, during the season, with its two wings, these stims of a spacious lawn and comprises many magnificent apartments, including a noble saloon about 100 ft. in length and 10 ft. in height. A band of music attends here every day during the season, and the table d'hôte is well and respectably attended. Besides this establishment, Wigan has a public library with 45,000 vols. a museum of antiquities, and paintings, a well-managed hospital, &c. with manufacturing of ribbons, cutting-wool and glass. The climate is very hot and oppressive in the height of the summer, and there is a deficiency of good ordinary drinking water, but the neighbourhood is very pleasant, and abounds with fine views and scenery. Numerous Roman antiquities have been discovered in and about the town. (*Greenwich's Map of Great Britain, Subscribers Guide to Wigan, Cheshire, Lancashire, &c.*)

WIGAN, a par. and town, bar., market town, and par. of England, on the Lancashire bar. W. Dorby, on the Douglas, in the centre of an extensive coal field, 17 m. N. E. by E. Liverpool, and 17 m. N. W. Manchester. The limits of the old parliamentary and municipal bor. were not affected by the Boundary and Municipal Reform Act, and are co-extensive with the township of Wigan, which has an area of 2,170 acres, and had, in 1861, a pop. of 33,774, and in 1861 of 33,167. The town situated on a hill, is spread over a large extent of ground and though irregular is pretty well built, its appearance however is not prepossessing, as the employment carried on in it and the abundance of coal, give it a dirty unwholesome look. Of late years its manufacturing buildings, and pop. have rapidly increased, several new streets, containing many good houses, have been erected, the approaches have been improved, and the whole town, which has been widely extended, especially towards the E. has every indication of increasing wealth and prosperity. The charge for lighting, watching, and police is defrayed by private subscription, and an ample supply of water is furnished by an incorporated company. The par. church is a stately old edifice in the perpendicular style with a handsome square tower. Its interior is spacious and lofty, and it has several fine ancient monuments. Except on the S. W. it is chiefly surrounded by buildings. The living, one of the most valuable rectories in the county being worth £200 a year is in the gift of the Earl of Bradford. Besides a chapel-of-ease and 8 places of worship for Protestant Dissenters, there are 3 large and handsome R. Catholic chapels. The town hall is a small market place, nearly in the centre of the town, a large brick edifice was rebuilt in 1790 and has a colonnade added in 1808, the most magnificent hall was rebuilt in 1808. Here also is a large commercial hall, for the sale of woolen and cotton goods and hardware, erected in 1810, a small bar, post, a subscription library, established in 1780, a dispensary, founded in 1790, with a merchant institute, springs built, &c. Towards the N. extremity of the town is a pillar erected in 1875 in memory of Sir T. Blount, killed in the engagement at Wigan on the 25th of Aug. 1656, between the royalists under the Earl of Derby and the parliamentary troops under Colonel Lilburne. The par. church, which is in the gift of the Earl of Derby, has three valuable ancient endowments, and is one in the possession of a considerable income. It is considered under an act passed in 1818, and affords instruction in various articles in classical learning, mathematics, the modern languages, &c. There also is a blue coat school, established in 1773, a school of industry, established in 1808, for the education of girls for domestic service and laundresses, and numerous Sunday schools. The income arising from private legacies for the education and apprenticing of children and general relief of the poor, amounts to between £100 and £150 a year.

The principal branches of industry carried on in the town comprise the working and spinning of cotton, the working of woollen, cotton, and flannel, &c. by power and hand-looms, the manufacture of coarse woollen, and more recently of silk. There are, also, in the parish bleach-works, large and power mill and machine manufactories, &c. In 1861, there were in the town only 15 cotton factories, which employed 4,300 hands, and in 1861, there were in the town 27 cotton factories, which employed 6,107 hands, and 3 flax-mills employing 60 hands. (*British Manufacturer, Rep. on Mills and Factories.*)

So early as 1798, an act of parliament was obtained for making the Douglas navigable from Wigan to the Mersey, at the point where the latter empties itself into the sea. This navigation was subsequently purchased by the Leeds and Liverpool Canal Company and now forms an important branch of their works, conveying vast quantities of coal from Wigan to Liverpool and the N. of Lancashire. The North Union Railway, a branch of the Liverpool and Manchester line, passes through the town to Preston and Lancaster.

Wigan is a bur. by prescription, its earliest extant charter dates from the 16th of Henry III., but numerous others have been granted by subsequent sovereigns. It was 3 times in the 11th of E. in the 11th of Edward I., and made another return 19 years afterwards, but from that epoch till the 18th century, a period of more than 300 years, the privilege remained dormant. At the revival the right of election was vested in the free burgesses by agreement, of whom, previously to the Reform Act, there were generally about 100. Registered electors in 1849-50, 600.

Under the 18th Reform Act, the bur. is divided into 5 wards, and is governed by 10 aldermen, and 10 councillors. It has a corporation of the bur., 3 courts held annually, petty sessions 3 times a week, and a county court, before which 1,001 suits were entered in 1861. Corp. rec. to 1847 on 2,500. A newspaper, called the Wigan Gazette, was first issued in 1846.

Wigan is situated on the Mersey, though not mentioned in Domesday, and is originally of a considerable antiquity. A grant for paving the town, and covering a bridge over the Douglas, was granted to the 7th Edw. III. During the civil wars it was continually attached to the royalists. Dr. Leland, author of a "View of Dissertations" and of several other publications, was a native of this town, having been born here in 1584. Market days, Monday and Friday, have 3 times a year, chiefly for cattle, poultry and eggs. (*Parish Rep., &c.*)

WIGTON, ISLE OF, the Firth of the Romans, an island off the E. coast of England, opposite to, and included in the co. of Devon, being separated from it by the river of Lymington on the E. and by the Solent, or W. Channel, on the W. The E. Channel from below Southampton runs to Wym, is about 3 m. in width, but from Hurst Castle across to the island, the W. Channel is little of the island to the opposite in W. angle the to the E. about 10 m. in 1841, of districts in the 11th, date, weeks, a range of chalk is, affording every extraordinary land production, and bounded into chains, the result of various causes of nature. The cliffs, called the Needles, on the W. angle, are lofty almost perpendicular and strikingly picturesque. One of the tallest of these cliffs, being penetrated by the action of the waves, was overthrown in 1793, and totally submerged. Climate extremely mild and, perhaps, the most salubrious of any in England. Soil dry heavy and mostly very fertile, being well adapted for all sorts of agriculture purposes. The husbandry is similar to that followed in the good soils of the mainland, i.e. husbandry, and the island has large quantities of agricultural produce to dispose of after supplying its own wants. It is divided into two nearly equal parts by the river Medina. Large quantities of bee and are shipped from Freshwater Bay for the glass and china manufacturers in different parts of the country, but it has no other minerals of any importance. Since the opening of the railway from Lymington to Southampton, the Isle of Wight has been a great city of attraction, and is visited by crowds of tourists from the metropolis. A constant intercourse is kept up by steamers between Southampton and Wym, and individuals proceed for time may now leave London in the morning and, after seeing a grand view of the island, return to town in the evening. Under the Reform Act, the Isle of Wight sends 1 member to the H. of C. Registered electors, in 1849-50, 1,000.

WIGTON, a market town and par. of England, on Cumberland, on the Wm, 10 m. W. S. W. Carlisle. Area of par. 11,000 acres. Pop. of par. in 1861, 6,639. The town, which is commercial and well built, contains principally of a wool and transverse street, and has several superior houses and dwelling-houses. The par. church, a handsome building was erected instead of an older church, which had become ruinous, in 1790. It has attached to it a spacious Sunday school built by voluntary subscription in 1800. The living, a vicarage worth £100 a year is in the gift of the bishop of Carlisle. The grammar school, established by subscription in 1714, but afterwards endowed, has now an income of above £100 a year. At the time of the late clergy inquiry 10 children were taught

on the foundation. An hospital for six widows of Protestant clergymen, founded in 1723, has an income of 58*l.* a year; and there are some minor charities. The Wesleyans, R. Catholics, and Friends, have meeting houses at Wigton, and the Friends have, near the town, a school for 60 boys, founded in 1826. Wigton is a place of some manufacturing activity; checks, gingham, mullins, fustians, &c. being made in the town and par., in which about 420 persons were employed as weavers in 1839. The gross average weekly earnings of the weavers at the same period was stated to be 5*s.* 10*d.*, or nett 4*s.* 3*d.* per loom. (*Hand-loom Rep.*, part v.) Several breweries and tanneries are established here: iron and coal are brought to the town from within a distance of 5 m. Petty sessions are held monthly, and an annual court leet and baron in Sept. Markets, Tuesd. and Frid.; the former a considerable corn mart. Large fairs for horses, cattle, Yorkshire cloth, and hardware, Feb. 20. and April 5.; and one on Dec. 31. for butchers' meat, apples, and honey. About 1 m. S. Wigton is Old Carlisle, probably a Roman station, of the ruins of which Wigton old church was built. Ewan Clarke, the Cumberland poet, and Sir R. Smirke, were natives of Wigton. (*Parl. Rep.*, &c.)

WIGTOWN, a marit. co. of Scotland, occupying the S.W. extremity of that kingdom, and forming the W. half of the district known by the name of Galloway, has on the S. and W. the Irish Sea, N. Ayrshire, and E. the Stewartry of Kirkcudbright or E. division of Galloway. It contains 293,760 acres, of which about a third part may be arable. Surface hilly, but the hills do not rise to any considerable height. It is divided into three districts, viz. the *Machars*, extending from Wigton and Portwilliam to the Burrow Head; the *Rhynns*, comprising the peninsula formed by Loch Ryan and the Bay of Luce, terminating in the Mull of Galloway on the S., and Corsewall Point on the N.; and the *Moors*, or upper district. The soil of the first two districts is, for the most part, a hazely loam, dry, and well adapted for the turnip husbandry; but near the town of Wigton there is a considerable extent of rich alluvial land. The moors, which are bleak and barren, comprise more than a third part of the co. Climate mild, but rather moist. Property has, for a long series of years, been gradually accumulating in fewer hands, and is now, for the most part, distributed in large estates, held generally under entail: farms middle-sized, and uniformly almost let on leases for 19 years. Agriculture in this, as in most other Scotch cos., was formerly in the most barbarous and wretched state imaginable. There was no rotation of crops; the process and implements were alike execrable; the pasture land was overstocked; and the occupiers steeped in poverty. Marl, of which Galloway contained immense quantities, began to be discovered and applied to the land about 1730; and for a while it caused an astonishing improvement in the corn crops. But their unceasing repetition reduced the soil to its former sterility, and convinced the landlords that marling, which promised so much, and by which so much had been realised, could be of no permanent utility to their estates, unless the tenants were restrained from overcropping. In consequence, principally of this feeling, but partly also of the diffusion of intelligence as to such subjects, it was the usual practice, previously to the American war, to prohibit tenants from taking more than three white crops in succession; and it was also usual to prohibit them from breaking up pasture land until it had been at least six or nine years in grass. This practice, barbarous as it is, was a vast improvement on that by which it had been preceded; and it prevailed generally throughout Galloway and Dumfriesshire till the beginning of the present century; and in some backward parts lingers even to this day. But in all the best parts of the district two white crops are now rarely seen in succession; and every department of husbandry has been signally improved. Generally, however, the co. is more suitable for pasture than for tillage; and it, as well as Kirkcudbright, suffered a good deal from overcropping between 1809 and 1815. Oats and barley principal crops; wheat, however, is now raised in considerable quantities. Potatoes largely cultivated. Turnips have been long introduced; but it is only since 1825 that their culture has become an object of general and profitable attention; it is now rapidly extending, and large quantities of bone-dust are imported as manure for the turnip lands. Farm houses and offices mostly new, substantial, and commodious. Roads new, and for the most part excellent. Breed of cattle polled, and one of the best in the empire. Breed of sheep in the low grounds, various; in the moors, principally the black faced, or Linton, variety. Average rent of land in 1843, 8*s.* 7*d.* an acre. Minerals and manufactures, quite unimportant. The condition and habits of the people have been materially improved since the commencement of the late war with France. "They are now more cleanly, more comfortably lodged, and both their diet and their dress are of a better description. They are gene-

rally, also, intelligent and well informed. Their morality has also kept pace with the progress of society, and the more extensive diffusion of knowledge." (*New Statistical Account of Scotland*, art. *Wigtown*.) Principal rivers, Cree, Bladnoch, and Luce. It is divided into 17 par., and returns 2 mems. to the H. of C., viz. 1 for the co., and 1 for the bors. of Wigtown, Whithorn, and Stranraer, in this co., with which the inconsiderable bor. of New Galloway, in Kirkcudbright, is associated. Reg. electors for the co., in 1849-50, 1,151. In 1841, Wigtown had 7,440 inhab. houses, and 39,195 inhab., of whom 18,290 were males, and 20,905 females.

WIGTOWN, a royal and parl. bor. and sea-port of Scotland, cap. of the above co., on rising ground near the mouth of the Bladnoch in Wigtown Bay, 13 m. N.N.W. the Burrow Head, and 37 m. W.S.W. Dumfries. The parl. bor., which includes a small village at the bridge of Bladnoch, about 1 m. S. from the town, had, in 1841, a pop. of 1,860. This, which is a well-situated and well-built country town, has been much improved of late years. It consists principally of a main street of great width, the centre of which has been enclosed, and is now occupied with a shrubbery, bowling-green, &c. A new and handsome granite cross has, also, been erected within the last few years. The town-house has a low spire at one end. The old prison, inc. under the same roof with the town-house, being insecure, a new and commodious prison has been recently built in a fine situation in the immediate vicinity of the town. The church, which is old and mean-looking, is situated in a retired churchyard, in which are some interesting monuments to various individuals put to death during the persecutions under Charles II., for their adherence to the Covenant. Here, also, is a Free church; and the members of the United Associate Synod and the Relief have meeting-houses. A considerable number of the Irish settlers in the town and parish are Rom. Catholics. Recently a very handsome school-house has been built for the par. school; and another school is supported by subscriptions. A library, founded in 1794, has a good collection of books. If we except a distillery established at Bladnoch bridge, no manufacture of any kind is carried on in the bor. The harbour, on the Bladnoch, about $\frac{1}{2}$ m. from the town, nearly dries at low water, and the navigation is rather difficult. The only trade is in the shipping of corn, cattle, and other farm produce, coastwise for Liverpool and other ports, and in the importation of coal, timber, freestone, &c. The port is visited about once a fortnight by a steamer from Liverpool. In January, 1850, 68 vessels of the aggregate burden of 3,645 tons belonged to the port and its dependent creeks of Garlieston, Isle of Whithorn, &c., ex. a steamer. Branches of the British Linen Co. and of the Edinburgh and Glasgow bank are established in the town.

Wigtown was made a royal bor. by James III. It unites with Stranraer, Whithorn, and New Galloway, in sending 1 mem. to the H. of C. Registered electors, in 1849-50, 100. Under the Municipal Reform Act, it has a provost, 2 bailies, and 15 councillors. Corporation revenue, in 1848-9, 474*l.*, principally arising from the rent of land. (*Private Information*.)

WILMINGTON, a town or city, and port of entry of the U. States, in Delaware, co. Newcastle, between the Brandy-wine and Christiana creeks, immediately above their junction, and 30 m. S.W. Philadelphia. Pop., in 1841, 8,367. It is built on gently-rising ground, in a pleasant and healthy situation, is regularly laid out, and its houses are mostly constructed of brick. It has a town-hall, a large almshouse, about 15 churches, 2 market-houses, an arsenal, public library, and many superior private (though no public) schools. It is supplied with water from works on Brandy-wine, on which also is one of the largest collections of flour mills in the U. States. Cotton and woollen goods, paper, gunpowder, iron wares, &c. are made in Wilmington and its vicinity. The trade, both wholesale and retail, is extensive: there were owned in the town, in 1849, 9,700 tons shipping. The Christiana is navigable up to the town for vessels drawing 14 ft. water: a railroad, 27 m. in length, connects Wilmington with Philadelphia; and others to connect it with different parts of Delaware and Maryland have been projected. (*Encyc. Amer.*; *Encyc. of Geog.*, Amer. edit.)

WILNA, or VILNA, a government of European Russia, comprising a large proportion of the ancient Lithuania and Samogitia; principally between the 54th and 56th degrees of N. lat., and the 21st and 27th of E. long.; having N. Courland, E. Minak, S. Grodno, and S.W. Poland and Prussia. Area, estimated at 16,320 sq. m. Pop., in 1846, 863,710. It is a vast plain; there being only, in different parts, a few sandhills, reaching sometimes to the height of 200 ft., and abounding with fossil shells, &c. Principal rivers, the Wilna, a tributary of the Niemen, and the Niemen, which forms its S.W. boundary. Lakes are numerous, particularly in the E. and N.E. The soil is partly sandy, and partly marshy; but in many places is

consists of a fertile alluvial deposit. The climate, though severe, is not so cold as in some of the adjacent governments: the mean temp. of the year is about 45° Fahr. Agriculture is almost the sole occupation of the inhabs.; and rather more corn is grown than is required for home consumption. Rye is the grain principally cultivated. Hemp and flax are rarely grown; and hops and pulse are raised in gardens: fruits are neglected. The forests are very extensive, the crown possessing above 400,000 dectines of forest land; and there is a considerable trade in deals, timber, tar, potash, and other woodland products. Lime trees are very abundant; and to this cause is attributed the excellence of the honey, for which this government is famous.

The breeding of stock is neglected; the horses are, however, strong and active, though of small size. Game is very plentiful: elks, wild boars, bears, wolves, &c. are numerous; occasionally the urus is met with; and fox, martin, and squirrel skins are articles of trade. Mineral products unimportant. Manufactures have increased a little of late; but they are still quite inconsiderable. Dr. Granville says of Shavel, a town of 2,000 inhabs. in this gov. "It consists of a long street of low gable-roofed huts of wood plastered over, and presenting a general appearance of the most squalid misery. This may be considered as a fair specimen of the second-rate towns in the gov. of Wilna, and indeed all over Russian Poland." (*Travels*, ii. 516.) The trade, which is almost entirely in the hands of the Jews, is principally in timber and agricultural produce, sent down the Dwina to Riga, or by land into Prussia. Wilna is divided into 11 districts: chief towns Wilna, the cap., and Kovno. It is not subject to the government monopoly of ardent spirits; and preserves several of its old forms of administration. As respects education it is, though far behind, in advance of many of the governments.

WILNA, a town of the Russian empire, cap. of the above gov., and formerly the cap. of Lithuania, at the confluence of the Wilenka and Wilna, 90 m. N.E. Grodno. Pop., in 1834, 35,697, of whom 20,000 were Jews, they being more numerous here than in any other town of Polish Russia. It is surrounded by undulating hills, and enclosed by a wall. Its streets are narrow and crooked, and its houses mostly of timber, though it has several hundred dwellings built of brick or stone. Formerly a royal castle of the Jagellons existed here, but nothing is left of it except its ruins. The cathedral, founded in 1387, has some good paintings, and many chapels, one of which, appropriated to St. Casimir, and built wholly of marble, is very handsome. The body of the saint is preserved here in a silver coffin, made by order of Sigismund III., and weighing, it is said, 30 cwt. The church of St. John is surrounded by the buildings of the university, founded in 1578, and suppressed in 1832. Here are in all about 40 churches, numerous convents, a mosque, and 4 synagogues, a magnificent town-hall, an arsenal, exchange, theatre, 2 hospitals, barracks, magazines, &c. The governor's palace and some residences of the nobility are fine buildings. Previously to its dissolution, the university of Wilna was in a flourishing state, and possessed an observatory, collections in mineralogy and anatomy, and a library of 52,000 vols. A medico-chirurgical school, to which are attached the botanic garden and some of the univ. collections, an ecclesiastical seminary, and 2 gymnasia, are the principal public schools: most part of the university establishment has been removed to Kief. Wilna has deaf and dumb and foundling asylums, various other charitable institutions, a few manufactures, and a considerable trade. It was founded in 1322, and is reported to have had, in the middle of the 16th century, 100,000 inhabs., though this, no doubt, is a gross exaggeration. It has often suffered severely from fire. (*Schmitaler; Possart; Kaiserth, Russland.*)

WILTON, a parl. and munic. bor., and par. of England, co. Wilts, hund. Branch-and-Dole; on the Willy, a tributary stream of the Avon, 4 m. W. by N. Salisbury. The old bor. comprised only the greater portion of the town; but the modern bor. includes, besides the whole par. of Wilton, 11 adjacent parishes and parts of 5 others, with an extra-parochial district; it has a total area of about 38,000 acres, and had, in 1841, a pop. of 8,057.

It is a neat country town; the main street is partially paved and lighted, and is crossed by a smaller street nearly in its centre. The public buildings, the principal of which are the church and town-hall, are not remarkable, nor do either these or the private houses appear to be increasing. (*Bound. Rep. &c.*)

An extremely handsome church, in the Italian style, with a separate *campanile*, or bell-tower, has recently been erected here at the expense of the Right Hon. Sydney Herbert. The living is in the gift of the E. of Pembroke. It has, also, chapels for Independents and Wesleyans, an endowed free-school, established early in the 18th century, for the education and apprenticeship of 20 boys; a bequest of 1,000*l.*, the interest of which is annually distributed in marriage portions to 4 young women belonging to the town, and several minor charities.

The hospital of St. John is the only one remaining of the numerous monastic establishments formerly existing here. The hospital itself is an old priory building, consisting of four distinct apartments under one roof, with a garden for the use of the inmates, who consist of 2 brethren and 2 sisters, presided over by a prior nominated by the dean of Salisbury cathedral. The rents reserved for the maintenance of the inmates amount to about 30*l.* a year. (*Charity Commissioners' Rep.*)

Wilton had, for a lengthened period, a flourishing manufacture of woollen goods, especially of carpets, and it was here, indeed, that the first carpet made in England was manufactured. This business, however, gradually declined; and though it has somewhat revived of late years, it is still but inconsiderable.

The earliest existing charter of the bor. dates from the 1st of Henry I., but from a very early period it has been governed by a mayor and an unlimited number of burgesses, including a recorder and five aldermen. This bor. sent two mems. to the H. of C. from the 23d of Edward I. down to the passing of the Reform Act, which deprived it of one of its mems. Previously to the last-mentioned Act the franchise was vested "in the mayor and burgesses, who are to do all corporate acts and receive the sacraments." In point of fact, however, it was a nomination bor. belonging to the E. of Pembroke. Reg. electors, in 1840-1850, 200. The only court that ever appears to have been held in the bor., except the court leet, is a court of record, which has not been opened since 1781. There is a small prison, now used only as a lock-up house.

Wilton is very ancient. It had a famous abbey, originally founded in 773, and greatly improved and enlarged after the Conquest. Wilton House, the magnificent seat of the Earls of Pembroke, occupies the site of this abbey. It is built in a fine park, watered by the Willy; its garden front was rebuilt from designs by Inigo Jones, and more recently it was enlarged and considerably altered by Wyatt, especially with a view to the better display of its superb collection of ancient statues and other works of art, paintings, &c. Wilton was most probably the birth-place of the dramatic poet Massinger; and archdeacon Coxe, author of "Travels in Switzerland and the North of Europe," and of various valuable historical works, was, for a lengthened period, rector of Bemerton, in its immediate vicinity. The town has no market, but four annual fairs, that on the 12th of Sept. being one of the largest sheep fairs in the W. of England. (*Bound. and Munic. Reps.; Beauties of Wiltshire, &c.*)

WILTSHIRE, an inland co. of England, in the S. part of the kingdom, having N. the co. Gloucester, E. Berks and Hants, S. the latter and Dorset, and W. Somerset and Gloucester. Area, 874,880 acres, of which about 800,000 are arable, meadow, and pasture. It is divided by the rivers Kennet and Avon, and the canal by which they are united, into two grand divisions, popularly termed, from their situation, North and South Wiltshire. The latter consists, in great part, of Salisbury Plain, extending from Westbury and Warminster, on the W., across the co. to Hampshire, and from Lavington, on the N., to near the city of Salisbury on the S. It consists principally of chalky downs, intermixed however with some fertile, well watered, and beautiful valleys. Though called a plain, the surface, as in all chalk land, is undulating: the most level part lies round Stonehenge. There is a good deal of rich land in the S. division, between Trowbridge and Pewsey, and between the Willy and the Dorsetshire border, E. to Wilton and Salisbury. Marlborough Downs, which bear in most respects a close resemblance to Salisbury Plain, lie in the N. division of the co., between Marlborough and Swindon; but, with this exception, this division consists principally of rich vale land, considerably exceeding in extent and importance the cultivated grounds of the S. division. There are some large estates; but property is, notwithstanding, a good deal subdivided. Farms of all sizes; and generally let on lease, for 7, 14, and 21 years, with unobjectionable conditions as to entry. Farm-houses, in the S. division, were formerly built together for the convenience of water, but the more modern ones are generally detached. Agriculture in Wiltshire is in an advanced state, and reflects great credit on the skill and enterprise of the farmers. The land under the plough is remarkably clean and in good order. It is believed, however, that tillage on the down lands has been too much extended. When once broken up, it is extremely difficult to get them again into good condition as pasture; while, unless corn fetches a pretty high price, they are most productive in the latter. Principal corn crops, wheat and barley; the latter being, however, confined, in a great measure, to the light chalky soils. Turnips, rape or cole seed, and potatoes, largely cultivated. Much of the rich land in the N. division is appropriated to the dairy husbandry and the fattening of cattle. The cheese, which, excepting inferior butter made from the whey, is the only product of the dairies, was formerly sold as Gloucestershire cheese; but is now well known

and much valued in London and elsewhere by its own proper name of North Wiltshire cheese. Breed of cattle various: they are partly slaughtered in Bath, Salisbury, &c., but the greater number are sold to the London butchers. In despite, however, of the encroachments made by the plough on the downs, sheep continue to be regarded, in the greater part of the co., as the principal support of the farmer. They afford the chief article of manure used on the land; while the sale of lambs and wool furnishes the principal means of paying the rent. In consequence, as it would seem, of this dependence, and of the high price of wool during the last 10 or 12 years, there have been fewer complaints among the Wiltshire farmers than amongst those of most southern cos. The sheep stock, consisting partly of the native horned breed, but in a far greater degree of South Downs, and crosses between the two, is estimated at about 700,000; of which about 565,000 are depastured on the downs, and the rest on the cultivated land; the fleeces of the former are supposed to weigh at an average 2½ lbs., and those of the latter 4 lbs.; producing together about 8,650 packs of wool. The irrigation of water meadows is to be seen in the greatest perfection in S. Wiltshire, and is practised on a large scale. Many hogs are kept; and Wiltshire bacon is highly esteemed.

In the vicinity of some of the towns of S. Wiltshire, a good deal of garden husbandry is carried on. Average rent of land, in 1843, 23s. 4d. an acre. Stonehenge stands, in rude magnificence, in the middle of Salisbury Plain. (See *STONEHENGE*.) The manufactures of Wiltshire are considerable; they consist principally of various descriptions of superfine woollen goods, made at Bradford, Trowbridge, Westbury, &c.; thicksets, and other sorts of cotton goods, are also prepared, though in small quantities. Wilton was long celebrated for a carpet manufactory, established by one of the Earls of Pembroke; but this, though it has latterly increased, is not nearly so considerable as formerly. Speaking generally, manufactures of all sorts are here, as in other southern counties, on the decline. Principal rivers, Thames, Upper and Lower Avon, and Kennet. Exclusive of some local jurisdiction, Wilts contains 28 hundreds, and 300 parishes. It returns 18 mems. to the H. of C., viz. 4 for the co.; 2 for the city of Salisbury; 2 each for the bors. of Chippenham, Cricklade, Devizes, and Marlborough; and 1 each for Calne, Malmesbury, Westbury, and Wilton. Registered electors for the co., in 1849-50, 7,533, whereof 4,994 were for the N., and 2,539 for the S. division of the co. In 1841, Wilts had 50,879 inhab. houses, and 258,733 inhab., of whom 128,240 were males, 130,493 females. Sum paid for the relief of the poor in 1848-49, 145,893*l*. Annual value of real property, in 1840-41, 1,175,616*l*.; do. in 1843, 1,424,558*l*.

WIMBORNE MINSTER, a market town and par. of England, co. Dorset, hund. Badbury; in a valley between the rivers Stour and Allen, each of which is here crossed by a bridge, 2½ m. S.S.W. Salisbury. Area of par. 11,480 acres: pop. of ditto, in 1841, 4,336. The town is pleasantly situated; but the streets, though clean, are irregular, and the houses have but little uniformity: it is well supplied with water, and has been considerably improved of late years. It is principally remarkable for its magnificent minster or church, which was formerly collegiate. The date of its original foundation is uncertain; but it has been usually referred to the 8th century, when a monastery was established here by a sister of Ina, king of the W. Saxons. Dr. Stukely, however, and some other antiquaries are of opinion, that the E. tower, and most part of the church, are posterior to, but soon after the Conquest. It is a large cruciform structure, 180 ft. in length from E. to W., with two towers: one, a short, massive, Norman tower, rising from the middle of the roof, formerly surmounted by a lofty spire destroyed by lightning early in the 17th century: the other tower, in the Perpendicular style, at the W. end of the building, has a fine window, which has, however, been closed up. The interior is divided after the manner of a cathedral; and till within the last few years the cathedral service was performed here. In the chancel are 16 stalls, with canopies of carved oak. It has some monuments of distinguished personages; but time, and the hand of violence appear to have destroyed a great many more. This edifice underwent extensive repairs and improvements from 1836 to 1840, at the joint expense of Mr. Banks, the Earl of Devon, and the Duke of Beaufort. (*Rickman's Gothic Architecture*.) The living is a rectory in the patronage of the Earl of Shaftesbury. Here also are chapels for Independents, Wesleyans, and Baptists. The free grammar-school, originally founded in 1497, and re-established by Queen Elizabeth, has an income of about 100*l*. a year. Its freedom is unlimited, but in 1826 there were only 25 pupils on the foundation. Another free school, founded by the endowment of a private individual in 1695, has an income of 20*l*. a year, and in 1836 was attended by 16 pupils. St. Margaret's almshouse, which is of very ancient foundation, has an income of about 120*l*. a year, and the aggregate produce of the

funds for charitable and religious uses in the parish amounted, at the period of the late inquiry by the Charity Commissioners, to nearly 1,000*l*. a year. The trade of Wimborne is limited to that arising from a small manufacture of woollen goods, and stocking-knitting. Petty sessions are held here for the Wimborne division of the hundred, and an annual court at Michaelmas is a tything of the town, at which 2 bailiffs are appointed by 12 jurymen; but these have no authority over other parts of the town. Wimborne is supposed, from the various coins and antiquities found there, to have been a Roman station. Market day, Friday; fairs frequently, for cattle and cheese. (*Beauties of England and Wales*, art. *Dorset*, &c.)

WINCANTON, a market town and par. of England, co. Somerset, hund. Norton Ferris; on a declivity beside the small river Cale, here crossed by a stone bridge, 23 m. S. Bath. Area of par. 3,860 acres. Pop. of do., 1841, 2,296. Wincanton, having been destroyed by fire in 1747, has been since regularly laid out in four principal streets. The church, a spacious edifice, partially rebuilt in 1748, has a square embattled tower. The living, a perpetual curacy worth 123*l*. a year, is in the gift of U. and G. Messiter, Esqrs. It has, also, a chapel for Independents, a neat market-house, and several small charitable institutions. The manufacture of serges, bed-ticking, and dowlas, though much fallen off, is still carried on, and the silk manufacture has been introduced on a small scale. Wincanton is an important mart for the cheese made in the surrounding country. The town, divided into a borough and tything, is under the jurisdiction of separate officers; two constables for the former, and a tything-man for the latter, being chosen annually at the manorial court; besides which last, an annual court-leet is held here. Market-day, Wednesday; fairs, twice a year. Wincanton is a place of remote antiquity, and is mentioned in *Domesday Book*.

WINCHCOMBE, a market-town and par. of England, co. Gloucester, hund. Kiftgate, amidst the Cotswold Hills, 6 m. N.E. Cheltenham. Area of par., 5,700 acres. Pop. of do., in 1841, 2,613. The town consists mostly of three streets: the houses are in general of stone. The church, the erection of which commenced in the reign of Hen. VI., is a noble Gothic structure, with a lofty square tower embattled and pinnacled; the nave is separated from the aisle by octagonal pillars and compressed arches, and from the chancel by a screen of carved oak. The living, a vicarage, worth 134*l*. a year, is in the gift of — Tracy, Esq. The free-school, founded in the 19th James I., has a yearly income of 43*l*. 4*s*., but has long declined from the condition of a grammar-school; and at the last inquiry, it afforded only rudimentary instruction to 34 boys. An endowment of 20*l*. a year supplies clothing to the poor. (*Charity Reps.*) The inhabs. are principally occupied in the manufacture of silk goods, paper, leather, cotton stockings, &c.: in 1833, one silk mill in the par. employed 76 hands. (*Mills and Factories' Rep.*) Winchcombe is of great antiquity, and before the time of Canute formed a co. of itself, being then surrounded with walls, and having a famous abbey, founded during the Heptarchy, but of which, as of its ancient castle, there are now few or no traces. The town was made a bor. in the time of Edward the Confessor, but its charter has long been obsolete. About 1½ m. distant are the remains of Sudeley Castle, now the property of the Duke of Buckingham. (*Parl. Reps.*, &c.)

WINCHELSEA, a bor., cinque port, and market-town of England, co. Sussex, E. div. hund. Staple, on the small river Bread, about 1½ m. from the English Channel, 2 m. S. by W. Rye. Area of par. 1,120 acres. Pop. in 1831, 772. Old Winchelsea, a town of importance under the Romans, situated on the coast at the mouth of the Rother, was destroyed by the encroachments of the sea, between 1260 and 1287. Before its destruction was completed, the inhabs. removed to New Winchelsea, as it was called, on a slight eminence about 2 m. S.W. from the ruined town. The new town, which was surrounded with walls by Edward I., covered a space of about 2 m. in circ., had 3 churches, was regularly laid out, and enjoyed a considerable share of the trade with France, especially of that with Bordeaux. But, by a singular fatality, it was ruined by a cause precisely the opposite of that which had destroyed the old borough. Instead of encroaching, the sea began in the 16th century to recede from this part of the coast, leaving, in the end, the town without a harbour, 1½ m. from the sea, and in part surrounded with a salt marsh! Since this change was effected, it has progressively declined, and would most probably have been wholly deserted, but for the circumstance of its having enjoyed, from the 42d of Edw. III. down to the passing of the Reform Act, by which it was disfranchised, the important privilege of sending 2 m. to the H. of C. It is now included in the bor. of Rye. Of its three churches, only a portion of that of St. Thomas now remains. It has several old monuments, one of which is said by Rickman to be hardly exceeded by any in the kingdom for beauty of composition. The living, a

chamber in private patronage, is worth 18fr a year. The court-house and gate underneath are of Saxon architecture. About a mile N E. of the town are the ruins of Wincoburn Castle, built in the reign of Henry VIII. An considerable market is held on Saturday and a fair on the 1st of May, for cattle and poultry. (Boswell and Adam Smith)

WIMBORNE, a city, port and man. bor of England, co. Dorset, of which it is the cap. Durdle-
gate, on the Litchin, here crossed by a modern stone
bridge, 12 m. N by R Southampton, and 46 m. S W
London; lat 51° 2' 00" N, long 1° 10' 30" W. The
ancient port bor was of very limited extent, and did not
even include the whole city, but it is now wholly com-
prized in the modern port bor (identical with the medi-
eval bor) with the adjacent hamlets of Winton and St.
Cross. Pop. in 1861, 5,270.

The town, standing on the declivity of a hill gently rising from the river is regularly laid out, clean, well paved, and lighted with gas. In the centre is the High Street, a narrow thoroughfare, running from E to W, with parallel streets on either side, crossed by others of nearly an equal length. Most of the E E part of the town, but without the limits of the city proper is occupied by the cathedral and some other ecclesiastical edifices and their prospects. The houses are mostly substantial, and well built, many of them being in an antique style, and having a venerable appearance. It was formerly surrounded with walls; but these no longer exist, and of four ancient gates only the W one remains.

Of the public esteem the cathedral is by far the most interesting, partly from its vast size and antiquity, partly from the variety of its architecture, and partly from its artistic importance. It was founded in 1070 by Bishop Walsheya, a relative of William the Conqueror, who constructed the crypt, transepts, and tower; the work was continued under succeeding prelates and was nearly completed by the famous Willielm de Wykeham, between 1370 and 1400. It is of a cruciform shape, with a low tower rising from the west, and, though rather heavy, has a grand and imposing appearance. Its extreme length, from E. to W. is 345 feet, length of the nave from the W. porch to the iron doors at the entrance of the choir, 201 ft.; length of the choir, 130 ft.; breadth of the cathedral, 57 ft. and of the choir, 66 ft.; length of the transept, 145 ft.; height of the central tower, 130 ft. (Holtzer.) The character of the building was originally pure Norman, and the transepts and entire tower built by Bishop Walsheya, are admirable specimens of that style. The W. front, in the decorated Gothic built by William de Wykeham, is singularly beautiful. It has a large and two smaller doorways, and a magnificent window, with two slender lancet towers. The Norman parts of the building are bold, simple, and well executed; the tower massive and stoutly ornamented. The grouping is varied in different parts of the church, and that of the nave is remarkable for its intricacy and richness. In its smaller structures, arcades, monumental chapels, and stall-work, this cathedral is very rich. The choir given is of late Perpendicular, and gives it a painting by West, of the destruction of "Laurus." (Reedman, 174.)

The group of, on entering the cathedral by the W door is grand and imposing. The east side of the building, the loftiness and long line of its vaulted roof, the latest painted windows gleaming on the different objects a "dim religious light," the lines of clustered pillars and branching aisles; the numerous chapels and a paved with a of the people led in to this a great and W whom of this place about there in the church, on the entering or women, or wealth Wykeham was also the wealthiest founder. Wykeham, who was Bishop of Winchester from 1407 to 1418, founded Magdalen College, Oxford, one of the wealthiest foundations in that university. Here also are monuments in honour of the celebrated Bishop Beaufort, and of John Wotton, the prince of anglers.

The bishopric of Winchester has long been one of the most valuable in the kingdom, its total revenue having amounted, at an average of the three years ending with 1811, to £11,614 a year but, in pursuance of the recommendations of the Commissioners of Ecclesiastical Inquiry, its revenue will be reduced on the demise of the present incumbent.

YOU

The diocese includes 304 par., comprising, together with Haute, the greater part of Surrey and the Channel Islands. The cathedral establishment consists of a dean, 19 canons, and 8 minor canons, who enjoy amongst them a gross annual income of about £10,000 a year. Winchester is said to have had at one time no fewer than 50 churches and chapels, but of these many were awarded to monasteries and other religious establishments destroyed at the Reformation. There are still, however, as many as 9 churches in the city and suburbs. Of these the small church of St. Lawrence, scarcely visible for the buildings by which it is surrounded, is supposed to be the mother church of the city, and the bishop takes possession of the diocese by making a solemn entry into it. St. Martin, the principal parish church, was pulled down in 1840, and an elegant and commodious structure has been erected on the site of the ancient edifice, which had become inconvenient and ruinous, the expense of its construction was defrayed by subscription. Among the other churches are St. Swithin's, built over a pond; St. Michael's, a handsome modern edifice in the Pointed style; St. The Kings, except St. Bartholomew Hydes, a village; and St. John's, a superb edifice of all countries, and are to the patronage either of the Crown or the Bishop of Winchester. But notwithstanding the number of its established churches, dissent is here pretty prevalent, and the Independents, Baptists, Wesleyans, and Rom. Caths., have all places of worship. The chapel of the latest a handsome edifice in the Pointed style of architecture, was constructed in 1790.

The college or school, founded, as already stated, by William of Wykeham, and completed in 1382, stands upon the site of a more ancient aristocratic establishment. Its buildings enclose two large quadrangular courts, entered by spacious gateways, and besides apartments for the accommodation of the warden, scholars, &c., it has a noble hall and chapel. The whole structure is richly ornamented with pinnacles, buttresses, statues, &c. It is particularly in the Perpendicular style. Over the door of the school, a noble hall constructed in 1607 at the expense of gentleman educated to the college, is a fine bronze statue of the founder by Cibber, the sculptor, father of the hero of the "Dunciad." A building contiguous to the college is appropriated to the residence of the boys attending the school but set on the foundation, where they are placed under the special inspection of the head master. The building formerly used for this purpose being found to be inconvenient was pulled down, as well as the house of the head-master, in 1820, and a new and spacious edifice has since been erected in their stead, at an expense of about 20,000*l.*, (suffered by subscription.

This magnificent institution is the most ancient of the existing public schools of England, and formed the model for those of Eton, Westminster, &c. The establishment consists of a warden, a schoolmaster and other 10 fellows, 3 chaplains, 3 clerks, 16 choristers, and 70 scholars, but there are in general above 300 boys in the school, including those not on the foundation. Boys on the foundation are provided with board and lodging within the walls of the college, the only payments to which they are subject, exclusive of travelling expenses, amounting to about £11 a year. Boys not on the foundation lodge as already stated in an adjoining pile of buildings, under the superintendence of the head master, and subject to college discipline. Scholars are sent, as vacation curers, from this school to New College, Oxford. (See OXFORD.) Among the distinguished individuals educated in this school may be quoted Bishop Leath, Sir Thomas Brown, Sir Henry Watson, Oates, the traitor, and John Thomas, Collins.

In the High Street is St. Geo. formerly the property of a family. The great room is and finely proportioned, at style, by Geo. Brydges, the family, and a liberal he was long a parliament- whole length portrait of rear of the building are a widow, who, exclusively allowance of 10s., and important addition was other of a building, in the 10s., with a spacious qu- a napkin for 12 and St- t's Hospital, founded in a, and a woman. An almu- wing to 1678 supports 10 lae, are charity-schools for a few children of both sexes,

Among the public buildings may be specified the tower in the High Street, a fine structure of the age of Henry VI. in the later Perpendicular style, above 90 ft. in height. The guild-hall, rebuilt in 1713, has an interior of

Queen Anne. The original Winchester bushel of King Edgar, and other ancient standards of length and capacity, formerly preserved in this building, have been removed to an apartment over the W. gate of the city. A bridewell and house of correction has been erected on the site of a magnificent monastery, in which the remains of the great Alfred are said to have been interred. On the N. side of the city is the co. gaol. The co. hospital, in Parchment-street, is a fine structure, which has recently been considerably enlarged; a new corn-exchange was erected in 1838. Beyond the W. gate is an obelisk, erected in 1759, to commemorate a dreadful visitation of the plague to which the city was subjected in 1669. The places of amusement include a theatre, assembly-rooms, &c.; races take place in July, about 4 m. from the city. It has also a public-library and reading-rooms, and a savings bank.

Winchester has no manufactures, but a very considerable retail trade, and all the public business for the co. is transacted within its limits. "It may be considered, without hesitation, as gradually increasing in houses, population, and wealth. A large extent of the surrounding district belongs to ecclesiastical and other corporate bodies, which, not being empowered to grant long leases, give no encouragement to building; but wherever land held in fee-simple, or freehold land, can be procured, it was obvious, from our own inspection, that houses calculated for the habitations of the industrious classes were augmenting." (*Parl. Bound. Rep.*) The assize courts for the co. are held and other public business transacted in what was once the chapel of the castle, built by the Conqueror. (See *post.*) At the E. end of the hall is suspended a large round wooden table, 18 feet in diameter, popularly called "Arthur's Round Table," but which is, no doubt, of a much less remote antiquity. It was painted in the time of Henry VIII.

The circumstance of its being the cap. of the co. makes Winchester the residence of a great number of gentlemen connected with the law; and being also the residence of a number of superior clergymen, and of gentlemen attracted to the city by the beauty of the situation, and the facilities for education and amusement, the society is very superior. There are, indeed, but few places in England that seem so well fitted for the residence of people of slender fortune. Being within a very short distance of the Southampton railway, the access to London on the one hand, and to the S. coast on the other, is as easy and expeditious as can possibly be desired.

Winchester was first incorporated in the reign of Henry II. Under the Mun. Reform Act, it is divided into 3 wards, and is governed by a mayor, 5 other aldermen, and 18 councillors. It has a recorder, who holds courts and a commission of the peace, and a county court, before which 352 plaints were entered in 1848. Corp. rev., in 1847-8, 2,399*l.* Winchester has sent 2 mems. to the H. of C. since the 23d of Edward I. Previously to the Reform Act, the right of election was vested in the members of the corporation, who had power to augment their number. Registered electors, in 1849-50, 720.

This is certainly one of the most ancient of the English towns. Under the Romans it was a place of considerable importance, and it subsequently became the capital of the West Saxons. William the Conqueror erected a castle here, under the pretence of protecting the city, which had suffered much from the incursions of the Danes, but really, perhaps, in the view of overawing the inhabs. From this period, however, London became the capital of the kingdom, and Winchester gradually declined in importance. But its castle was repeatedly occupied by the Norman monarchs; Henry III., hence called Henry of Winchester, was born here in 1207, and various parliaments were held in the city in the 14th and 15th centuries. Here, also, in 1552, Henry VIII. entertained his illustrious guest, the emperor Charles V.: and here the marriage of Mary, daughter of Henry, with Philip II., eldest son of Charles, was solemnised, July 25. 1554. In the reign of Charles II. it again became, though for a short period only, a royal residence. Charles, indeed, was so much attached to Winchester, that, in 1683 he employed the famous architect, Sir Christopher Wren, to erect a new and magnificent palace on the site of the old castle. The death of the king put a stop to the progress of the building, before it was finished; and, after various mutations, it is now used as barracks.

About 1 m. S. from the city is the ancient hospital of St. Cross, founded in 1132 by Henry of Blois, bishop of Winchester, and brother to King Stephen. The present establishment, which approaches nearer to a monastery than any other in England, consists of a master, a chaplain, a steward, and 12 resident brethren. The buildings once composed two courts; but they have been partly pulled down. The chapel, in the interior court, is built in the cathedral form, with a nave and transepts, and a low, massive tower, at their intersection, and affords a fine specimen of the transition of the Norman into the Early English style of architecture. The entrance gateway has a handsome tower, with a statue of the founder, Cardinal Beaufort.

No traces now remain of the monastery previously referred to as containing the remains of the great Alfred, rebuilt in the reign of Henry II., the revenues of which amounted at the dissolution to 866*l.* a year. Neither are there any remains of a university founded in the reign of Alfred, and other similar establishments.

About 4 m. E. by N. from Winchester is Avington, a fine seat belonging to the Duke of Buckingham. (*Parl. Reports; Camden's Britannia, Gibbon's ed., l. 132, &c.; Guide to the City of Winchester; and Private Information.*)

WINDSOR, a town, parl. and mun. bor., par. and royal residence of England, co. Berks, hund. Ripplesmere on the Thames, 20 m. W. by S. London. Previously to the Reform Act, the parl. bor. was nearly co-extensive with the par.; the modern parl. and mun. bor. comprises about half the par., with the lower ward of the castle, and a small portion of the adjacent par. of Clewer; having an area of about 4,500 acres, with, in 1841, a pop. of 9,662.* The town, partly situated on low ground, along the river, and partly on the declivity of the ridge occupied by the castle, the W. end of which is surrounded by its buildings, consists of six principal and several smaller streets, and is well paved, and lighted with gas. It communicates with Eton, on the opposite bank of the Thames, by a handsome iron bridge of 3 arches, raised on granite piers. Of late years, many buildings of a superior kind have been erected in the W. part of the town, in that portion of Clewer par. included in the modern parl. bor. The par. church is a handsome new Gothic structure: the living, a vicarage worth 400*l.* a year, is in the gift of the crown. The guildhall, a neat edifice supported on columns and arches of Portland stone, occupies a conspicuous site in the High Street. On its N. side is a statue of Queen Anne, and on its S. one of Prince George of Denmark: in the interior are numerous portraits of royal and other distinguished persons. The cavalry and infantry barracks, the new royal stables, a neat theatre built in 1815, and several dissenting chapels, are among the other principal buildings. The charity school, founded in 1705, had at the date of the late enquiry an income of 167*l.* a year, and was attended by 55 children; it has, also, a ladies' charity school for girls, national and Sunday schools, &c. George III. established an hospital for invalid soldiers in 1784; a lying-in charity was founded in 1801, and the royal general dispensary in 1818, and there are numerous minor charities having an aggregate income of about 800*l.* a year. Windsor was first chartered in 1276, by Edward I., in the 30th of whose reign it began to send mems. to the H. of C., though returns have been regularly made only since the 25th Henry VI. The right of voting was formerly in householders paying scot and lot, who had resided for 6 months within the bor. Under the Boundary Act the alterations previously alluded to were made in the limits of the bor. Reg. electors, in 1849-50, 679. Under the Mun. Reform Act the bor. is divided into 2 wards, and is governed by a mayor, 5 other aldermen, and 18 councillors. It has a commission of the peace, and a county court, before which 737 plaints were entered in 1848. Corp. revenue, in 1847-8, 1,622*l.* Windsor has no manufacture of importance; and being out of any principal line of road, its trade is merely one of retail, being confined to the supply of goods to the inhabs. and visitors. It has numerous inns and lodging houses, though, considering the resort of company to the town, the former are certainly of a very inferior description to what might have been expected. The ale of Windsor enjoys a considerable reputation, and is sent to London and other places. The town supports 2 weekly newspapers. Markets, Wednesday and Saturday, the latter principally for corn. Fairs, Easter Tuesday, July 5. and October 4. for horses, cattle, sheep, and wool. (*Bound. and Mun. Corp. Reports; Private Information.*)

WINDSOR CASTLE is the principal country seat of the sovereigns of England, and one of the most magnificent royal residences in Europe. It appears to have been founded by William I. soon after the Conquest, and it has been enlarged or embellished by the greater number of his successors, particularly by Edward III., George III., and George IV. Under the latter it was, indeed, in great part rebuilt, and throughout renovated by Sir Jeffrey Wyatville, and has been fitted up in the most splendid style. Being placed on the summit of a lofty eminence rising abruptly on the S. side of the river, it commands very extensive views, and is, at the same time, a most conspicuous and interesting object from all the surrounding country. It

* Eton and Windsor being so closely connected as to form in effect one town, it is not easy to see any good grounds for excluding the former from the parl. bor. This exclusion will appear the more remarkable, when it is borne in mind that the limits of the parl. bor. were made to embrace the Lower Ward of the Castle, occupied by the poor Knights of Windsor, the Dean and Canons of St. George's Chapel, and other dependants on the court. Had the object been to create an independent constituency Eton would have been included in the parl. bor., and every part of the Castle included.

is of an Chinese form and is situated at the
WINDSOR CASTLE.

WINDSOR CASTLE.

৫২১

APPENDIX

■

prises about 3,400 acres on the S. side of the castle, being well wooded, and exhibiting a great variety of ground. Here is the long walk, a noble avenue, nearly 3 m. in length, extending in a straight line from the grand entrance to the Castle to the top of a hill, on which a colossal bronze equestrian statue of Geo. III., by Westmacott, has been erected. On the S. side of this hill is Virginia Water, an artificial lake, with a fishing temple in the Chinese style. Windsor forest, the theme of Pope's fine poem, is a tract 56 m. in circ., laid out by William the Conqueror for the purposes of hunting, and kept up by the succeeding sovereigns. Latterly, however, it has been mostly enclosed. Its limits embrace one market town, Wokingham, and numerous villages. Old Windsor, where the Saxon monarchs are said to have had a residence, is on the Thames, about 1 m. S.E. Windsor. (For the history of the Castle the reader may refer to *Jyson's Magna Britannia*, i. pp. 415-432.)

WIRKSWORTH, a market town and par. of England, hund. of same name, co. Derby, at the S. extremity of the lead mining district, 12 m. N.N.W. Derby. Area of par., 14,640 acres. Pop. of do. in 1841, 7,891. The town, in a valley nearly encircled by hills, consists principally of 2 streets formed by the intersection of 2 turnpike roads at right angles. The church of St. Mary, a spacious edifice in a mixed style of architecture, consists of a nave and side aisles, a N. and a S. transept, a chancel, and a square tower supported on 4 massive pillars. The living, a vicarage worth 164*l.* a year, is in the gift of the Dean of Lincoln. There are chapels for Baptists, Independents, and Wesleyans. A free grammar school, founded and endowed in 1570 by Anthony Gell, Esq., for an unlimited number of scholars, has an income of above 200*l.* a year. There are several almshouses, and the funds for general charities yield an income of above 130*l.* a year. The moot and sessions hall, erected in 1773, is a handsome stone building with shambles underneath. The lead mines in the vicinity, though now comparatively neglected, still furnish employment for a considerable number of the inhabs. In 1838, there were 3 cotton mills at work in the par., employing 612 hands. The other branches of industry consist of silk weaving, wool combing, and the making of hats, tapes, and hosiery. The Cromford canal passes about 1½ m. to the N. of the town, crossing the Derwent by an aqueduct of one arch 80 feet in span; and the High Peak railway has also its terminus a little to the N. of Wirksworth. The town is under the jurisdiction of a constable and headborough. Petty sessions for the hund. are held weekly, and 4 manorial courts every year in the moot hall, in which all business relating to the mines is decided. The manor of Wirksworth forms a part of the duchy of Lancaster. It was acquired by Sir Richard Arkwright, the great founder of the cotton manufacture, who died at his house at Cromford in this par. in 1792, and is now held by his son, Richard Arkwright, Esq. Market day, Tuesday; fairs 4 times a year for horned cattle. (*Beauties of England and Wales*, art. Derby; *Rep. on Mills and Factories*; *Charity Reps.*, &c.)

WIRTEMBERG (Germ. *Wurtemberg*) KINGDOM OF, one of the secondary states of the German Confederation, in the S. part of which it is situated, between lat. 47° 8' and 49° 35' N., and long 8° 15' and 10° 30' E., having N., W., and S.W. the territory of Baden; E. and S.E., Bavaria; and S., the Lake of Constance, and the Hohenzollern principalities, which last it nearly encloses. Its area, pop., subdivisions, &c. are given as follows, in the *Almanach de Gotha*, for 1842.

Circles.	Area in Engl. sq. m.	Pop. in 1838.	Pop. to sq. m.	Ch. Towns.
Neckar	1,506	458,143	351	STUTTGARD
Black Forest	1,861	443,187	258	Reutlingen
Danube	2,549	380,090	149	Ulm
Jaxt	2,124	368,419	173	Eilwangen
Total	7,840	1,649,839	216	

Physical Geography, &c.—The surface is in great part mountainous, being covered by ranges of the Black Forest (*Schwarzwalde*), Suabian, and Raube mountains. The Oberhohenberg, near Dellingen, rises to about 3,278, and the Kniebis to 3,100 ft. above the sea; but, in general, the various ranges are less than 3,000 ft. in height. Wirtemberg belongs partly to the basin of the Danube, and partly to that of the Rhine; besides which the principal rivers are the Neckar, with its tributaries, and the Iller, a tributary of the Danube. Except that of Constance, it has no lake of any importance.

The climate is mild in the sheltered valleys: at Stuttgart the mean temperature of the year is about 51° Fahr. The quantity of rain that falls varies, in different places, from 20 to 46 inches a year; but at Stuttgart is about 23.9 inches. As respects its productions, the country may be divided into 3 zones: the region of the vine, which extends to about 1,000 ft. above the sea; that of

fruit and corn, to 2,000 ft.; and that of corn and forests, comprising all above the latter elevation.

Agriculture is the principal occupation of the mass of the pop. The arable lands have been estimated to comprise about 2,440,000 morgen; vineyards, 84,773 do.; gardens and orchards, 180,650 do.; pasture lands, 738,000 do.; and forests nearly 2,000,000 do. Spelt, oats, barley, rye, and wheat are the grains principally cultivated; and a large quantity of corn is usually produced than is required for home consumption: in 1834, a surplus of 140,000 *schefels* was exported. Potatoes are raised in large quantities; and Berghaus has estimated the annual crop at 3,000,000 *schefels*. Pease, beans, turnips, hops, and tobacco, are only partially cultivated. The wines grown on the Neckar are tolerably good; and altogether Wirtemberg produces annually about 155,000 cimers of wine, of the estimated value of 3,100,000 *fl.*; but a great deal of the is grown at a considerable elevation on the banks of the Lake of Constance, and elsewhere, and is of a thin and indifferent quality. Apples, pears, apricots, and other fruits of temperate climates, including even figs and melons, come to perfection, and small quantities of cider and perry are made. The forests are an important source of wealth. Pine, fir, and cedar are the principal kinds of trees; but oaks, beeches, &c. are also numerous. The timber cut in the Black Forest is estimated to produce upwards of 400,000 *fl.* a year. According to Berghaus, there are upwards of 800,000 head of cattle, 93,000 horses, 586,000 sheep, and 122,000 hogs in the kingdom; and the value of the wool produced annually may be about 1,713,000 *fl.* (*Allg. Länder, &c.*, iv. 24.) There are numerous associations for improving the different branches of rural industry; and government spends considerable sums in the encouragement of agriculture.

Salt is one of the principal mineral products, and between 400,000 and 500,000 centners a year are obtained from salt springs; of which quantity, about 230,000 centners are consumed in the country, the rest being exported, principally to Switzerland. Coal and lignite are found, but in no great quantities; iron ore, slate, building and mill stone, alabaster, gypsum, nitre, and potter's clay are, however, more or less abundant; and in the Black Forest are several mineral springs frequented by visitors.

Manufactures of linen and linsey-woolsey fabrics, hosiery, and woollen cloths are carried on in most of the peasants' houses; and in some places to such an extent, that, in the little village of Laichingen, there are 400 hand-looms, which annually produce 400,000 ells of linen. The manufacture of wooden clocks, toys, &c., exported to all parts of Europe and America, is extensively carried on in the Black Forest and other parts. Cotton yarn is spun, and cotton cloth woven by machinery, at Stuttgart and Obendorf; and woollen yarn, stockings, leather, paper, glass, and tobacco, and tobacco-pipes are manufactured in the principal towns; and there are also a good many dyeing-houses, glue factories, breweries, distilleries, &c. The principal exports consist, however, of cattle, wool, corn, timber, fruit, wine, seeds, hemp, iron, salt, pitch, tar, oil, and other raw products, which are sent down the Neckar, Rhine, and Danube. The total value of the exports and imports may be respectively estimated at from 15,000,000 to 18,000,000 *fl.* a year. Wirtemberg, at one period, proposed with Bavaria to join Austria in a commercial union, for the S. of Germany, in opposition to that established by Prussia in the N.; but the proposal being rejected, Wirtemberg, like Bavaria and Baden, is now a member of the Prussian Commercial League.

Accounts are kept in gulden or florins, worth about 1*s.* 8*d.*, divided into 15 *bakken*, or 60 *arentars* of 6 *hellers* each. The ell, about 2 ft. English; the *morgen* = nearly 2-3*ds* acre; the *schefel* = 7,538 cub. in.

The Government is an hereditary monarchy, limited by the constitution of 1819. The parliament consists of 2 chambers, called together every 3 years, or oftener, if necessary. The first chamber is composed of the subordinate members of the royal family, the mediatised princes, and the heads of the principal noble families: the second chamber, or House of Representatives, consists of 94 mems., including 13 of the inferior nobility, 6 Protestant-superintendents, the Rom. Cath. bishop, and other dignitaries, the university-chancellor, deputies from the towns of Stuttgart, Tübingen, Ludwigsburg, Eilwangen, Ulm, Heilbronn, and Reutlingen; and a representative from each rural district, chosen every 6 years. Members of the second chamber must be 30 years of age. The administration is conducted by 5 ministers of state, who, with a president, form the privy council. The supreme judicial court in Stuttgart is divided into civil, criminal, educational, and matrimonial tribunals; and in each of the circles, districts, and communes there are courts of justice. The reigning house, which had been previously Protestant, became Rom. Cath. in 1772, without, however, the change having any material influence on the religious persuasion of the people. Of the pop., is

1838, 1,194,929 were Lutherans; 418,290 Rom. Caths.; and 11,366 Jews. In respect of education, Wirtemberg ranks very high. In 1830, it was estimated that 1 in 7 of the pop. was receiving public instruction; and, according to Berghaus, every individual in the kingdom is able to read and write, except a few in that part of the country called the Suabian Terrace, where the Neckar rises. It has a university (at Tübingen), a lyceum, and gymnasiums, in all the principal towns, with ecclesiastical, citizens', and other schools; and a primary school in every village. The total armed force consists of 19,500 men, including 8 regiments of infantry, 4 of cavalry, and 3 companies of artillery, with train, &c. The public revenue, at an average of the 4 years ending with 1841, amounted to 9,667,835 Rhenish florins a year: the public debt, in 1839, was 24,024,179 fl.

Mr. Loudon, who travelled over most part of Wirtemberg, in 1828, says, "From what I have seen of this country (Wirtemberg) I am inclined to regard it as one of the most highly civilised in Europe. I am convinced that the great object of government is more perfectly attained here, than even in Great Britain; because, with an almost equal degree of individual liberty, there are incomparably fewer crimes, as well as far less poverty and misery. Every individual in Wirtemberg reads and thinks, and to satisfy oneself that such is the case, he has only to enter into conversation with the first peasant he meets: and observe the number and style of the journals that are everywhere circulated; and the multitude of libraries in the towns and villages. I did not meet with a single beggar in Wirtemberg, and with only one or two in Bavaria and Baden. The dress of the inhabs. of Wirtemberg, as well as those of a great part of Bavaria and Baden, appeared to me to indicate a greater degree of comfort than I had ever observed in any other country, with the exception, perhaps, of Sweden and of the Lowlands of Scotland." (*London's Letter to Count Las- teyrie.*)

History.—Wirtemberg derives its name from a castle near Stuttgart, the principal seat of the reigning family. It was formerly a dukedom. The French overran the country in 1796; but the sovereign having made his peace with the conquerors, important additions were made to his territories in 1800; and soon after the battle of Austerlitz, Napoleon raised the duke to the rank of king. Under the congress of Vienna, Wirtemberg holds the sixth rank in the German Confederation, with 4 votes in the full diet and 1 in committee; and contributes 13,955 men to the confederated army. (*Berghaus; Allg. Länder, &c.; Stein's Handbuk der Geog.; Dict. Geog.; Memminger; Besch. von Württemberg.*)

WISBEACH, a mun. bor., market-town, river-port, and par. of England, co. Cambridge, hund. Wisbeach, in the Isle of Ely, close to the border of Norfolk, on the Nene, here crossed by a fine stone bridge of one arch, 11 m. S. from the mouth of the Nene, in the Wash, and 32 m. N. Cambridge. The old bor., of very irregular shape, was co-extensive with the par. of St. Peter's: the modern bor. is much more compact, and of less extent, but comprises a suburb of Wisbeach called New Walsoken, on the E. side of the river, excluded from the old bor., and has an area of about 1,200 acres, with a pop., in 1831, of 8,100. The central and main portion of the town lies in an angle between the Nene and Wisbeach canal: other streets extend for some distance N. and S. along both banks of the river, and along the canal, by which the town communicates with the Ouse in a S. E. direction. Most part of the houses on the E. side of the canal belong to the par. of Walsoken, in the co. of Norfolk: this suburb has been built within the last thirty years, and appears to be still extending. The inhabs. consist chiefly of the labouring classes employed in or connected with the interests of Wisbeach. (*Mun. Corp. and Bound. Reps.*) The town is irregularly laid out, but has, of late, been much improved: in its centre is a handsome crescent, erected in 1816 on ground formerly occupied by a castle founded soon after the Conquest. Most parts of the thoroughfares are well paved and lighted with gas. The par. church of St. Peter is a spacious but singular edifice, having two naves and two aisles. It exhibits a mixture of the Norman, Decorated, and Perpendicular styles. It has a fine tower, and has within several monuments of distinguished families, but is at the same time much encumbered with modern galleries. The living, a vicarage, to which the curacy of St. Mary's is attached, is one of the most valuable in this part of the country, being worth 1,779*l.* a year: it is in the gift of the Bishop of Ely. A chapel-of-ease has an endowment yielding 200*l.* a year; and the Baptists, Friends, Unitarians, Independents, and Wesleyans have their respective places of worship. The other principal buildings include a town-hall and custom-house, comprised in one building erected in 1804; a corn-exchange, assembly-rooms, and a theatre. Here, also, are some good libraries, and literary and other societies. The free grammar school, of ancient foundation, affords instruction to 20 boys, and has two exhibitions of about 70*l.* a year to

Magdalen College, Cambridge. Among the other educational establishments are two charity-schools, partly supported by voluntary contributions, but chiefly by bequests; one for boys having an income of above 250*l.* a year, and one for girls, of above 230*l.* a year. There are 18 well-endowed almshouses, and the funds in the hands of the corporation for the support of schools, almshouses, apprenticing of children, loans, and the general relief of the poor, are said by the Commissioners of Charity Inquiry to have amounted to above 1,130*l.* a year.

Wisbeach has no staple manufacture; but it has an iron foundery, yards for building and repairing vessels and boats, rope-walks, an extensive brewery, and several large malting establishments. The trade of the town is considerable, from its being the emporium of an extensive tract of country. The exports principally consist of corn, wool, rape-seed, and other products of the fens; and the imports of coal, timber, groceries, &c.

The trade of the port has been largely benefited by the great improvements that have been made, under acts passed in 1827 and 1829, in the course of the Nene from Wisbeach to its outfall in the Wash. These consisted principally in deepening and straightening the bed of the river, and in the drainage and embankment of the adjacent fens. This important work cost about 200,000*l.*, of which 30,000*l.* was contributed by the corporation of Wisbeach, who were at the same time authorised to levy increased port-dues (now 3*d.* per ton) on vessels frequenting the port. The latter may now be reached by a comparatively safe and speedy navigation, at spring tides, by vessels of 150 tons burden, and, at other times, by vessels of 80 tons. There belonged to the port, in 1849, 75 vessels of 50 tons and upwards, having an aggregate burden of 9,351 tons. The gross customs' duty collected in the same year amounted to 11,288*l.* The increase in the amount of shipping belonging to the port, which has nearly trebled since 1835, when the Nene Outfall was finished, and of the customs' duties, shows the substantial advantages it has derived from that improvement.

"The town is apparently prosperous; its trade is extending, the value of property in the neighbourhood has increased, local taxation is stationary, and labour well paid. The inhabs. are said to be characterised by industry and prudence. Education among them is general, and few serious crimes are committed." (*Appendix to Munic. Corp. Report*)

Wisbeach received its first charter of incorporation from Edw. VI., others being granted to it by James I. and Charles II. Under the Mun. Reform Act, it is divided into two wards, and governed by 6 aldermen and 18 councillors. The corp. revenue, which principally arises from harbour dues, was, in 1847-48, 3,191*l.* Wisbeach has a commission of the peace, petty sessions, and a county court, before which 967 plaints were entered in 1848. The assizes are held here annually. The ancient castle of Wisbeach was long the episcopal palace of the bishops of Ely, but no traces of it now exist. A cattle-market was established in 1810. Wisbeach has frequently suffered from inundations. Market-day, Saturday. Fairs five times yearly, chiefly for cattle, horses, hemp, and flax. (*Parl. Reps.*, art. BEDFORD LEVEL, in this work, and *Private Information.*)

WISBY, a town of the island of Gottland, which see.

WISCONSIN, one of the recently formed states of the American Union, comprised between the 42nd and 47th degrees of N. lat., and the 87th and 93rd of W. long.; having N. Lake Superior; N. E. and E. the State and Lake of Michigan; S. Illinois; and W., Iowa and Minnesota, from which it is partly separated by the Mississippi. Its area may be estimated at about 54,000 sq. m. Pop., according to the census of 1850, 305,596. It is in part broken by various billowy ridges, which, however, nowhere rise much above the general level. The N. part abounds with lakes, giving rise to streams flowing E. to the great lakes of the St. Lawrence Basin, but mostly W. and S. to the Mississippi. The Wisconsin river, which falls into the latter, after a southerly course, divides the state into two nearly equal portions. By far the greater part of this state was till lately inhabited only by wandering tribes of Indians. The country S. of the 44th deg. of lat. is that over which the settlers are principally dispersed. The S. W. cos. include a portion of the rich lead district of the Upper Mississippi. In winter the climate, especially in the N. parts of the state, is severe; but speaking generally, the country is very healthy.

There are some bogs, wild rice swamps, and cranberry marshes in the S. cos., and there are also some sandy tracts; but a great proportion of the land is of good quality, fertile, and easy of cultivation. Between Rock River and Lake Michigan the surface is well wooded; but W. of the former the land is chiefly prairie, and there is a deficiency of timber. Green Bay, an arm of Lake Michigan, and nearly parallel to the latter, has several good harbours. Milwaukee, on Lake Michigan, is the best harbour between Green Bay and Chicago, in Illinois,

at the bottom of the lake. In no part of the U. States have pop. and improvement advanced more rapidly than in the S. part of this state: And in proof of this it is only necessary to mention that no fewer than 630,000 acres of public lands were sold in Wisconsin in 1847, being a greater quantity than was sold, during the same year, in any other state of the Union; and that Milwaukee, already referred to, which was only founded in 1837 or 1838, had, in 1849, about 17,000 inhabs., while the exports of wheat and flour from it, in that year, amounted respectively to 1,136,428 bush. and 136,657 bar. (See MILWAUKIE, in SUPP.) The congress of the U. States have given a grant of about 500,000 acres of land for the construction of a canal through the centre of the state, uniting Green Bay and Lake Michigan with Wisconsin river and the Mississippi; and a railway is, also, being made from Milwaukee to the Mississippi. The crops of Wisconsin, in 1848, were estimated at, wheat, 1,600,000 bush.; oats, 2,500,000 do.; maize, 1,500,000 do., with buckwheat, rye, &c. The legislature consists of a house of 54 representatives annually elected, and of 18 senators biennially elected. The governor has 1,250 doll. a-year of salary; and the judges of the supreme and circuit courts, who are elected for 6 years, have each 1,500 doll. a-year. Ample provision has been made for education; and in 1849 the public schools were attended by 32,174 pupils. An institution for the instruction of the blind has been opened at Janesville. Madison is the seat of government, but Milwaukee is by far the largest town of the state. The enrolled militia amounted, in 1850, to 32,203 men. Wisconsin, after having been formed into a territory, was admitted as a state into the Union, 29th May, 1848. (*American Almanac for 1851*, and *Official Returns*.)

WISMAR, a town and sea-port of N. Germany, in Mecklenburg-Schwerin, cap. lordship of its own name, at the bottom of a deep bay at the confluence of the Stör with the sea, 18 m. N. by E. Schwerin; lat. 53° 49' 25" N., long. 11° 36' 15" E. Pop. 11,500. The harbour, which is very extensive, is commodious and safe, being nearly land-locked by the islands of Poel and Wallfisch. Close to the town there is from 8 to 8½ ft. water; in the inner roads there are from 12 to 13 ft., and in the outer from 16 to 20 ft. water. The town is fortified, and has 6 churches, 3 hospitals, several schools, &c.; with manufactures of tobacco, playing cards, sail-cloth, and other fabrics, breweries, and distilleries. Ship-building is also carried on to some extent; and Wismar is second in commercial importance to no town in the Grand Duchy but Rostock. The articles of import and export are the same as at Rostock (which see), but the trade of the town is more limited. It appears to have been founded in 1229, and afterwards became one of the Hanse towns.

WISSEMBOURG, a town of France, dep. Bas-Rhin, cap. arrond., on the Lauter, on the Bavarian frontier, 33 m. N. by E. Strasbourg. Pop. in 1846, 6,273. It is a fortified town, and of some importance, as it commands a defile leading from the plain of the Rhine into the Vosges mountains, and is connected with a system of military works stretching along the course of the Lauter for some distance, called the lines of Wissembourg. It has an old collegiate church, built in 1288; a Protestant church, in which is a bust of Luther; barracks, &c.; and manufactures of hosiery, straw hats, soap and earthenware. It originated in an abbey founded here in the 7th century, and was annexed to France by the treaty of Ryswick.

WITNEY, a market town and par. of England, co. Oxford, hund. Bampton; on the Windrush, a tributary of the Thames, 10 m. W. by N. Oxford. Area of par. 7,450 acres: pop. of ditto, in 1841, 5,707. It is well-built and cheerful; the main street being on the high road between Burford and Woodstock. The town-hall, a stone building, has beneath it an area used for a market-place. Near it is the market cross, erected in 1683, and repaired by subscription in 1811; and in the High Street is the staple or blanket hall, a handsome stone edifice, built in 1721. The church, at the S. extremity of the principal street, is one of the handsomest in the co., being a large cruciform structure in the early English, Decorated, and Perpendicular styles, with a tower and lofty spire, ornamented with minarets. In the N. transept is a fine window; and within the building are several ancient monuments, and a handsomely carved and gilded burial chapel. The living, a very valuable rectory, being worth 1,290l. a year, is in the gift of the bishop of Winchester. Here, also, are places of worship for Wesleyans and Independents. The free grammar school, founded in 1660, for 30 boys, comprises a spacious school-room, library, and apartments for the master. Another free school, with a small endowment, was established in 1693. A school for the education, clothing, and apprenticeship of weavers' sons, was founded in 1782, and it has besides a national school and several almshouses.

Witney was long celebrated as a principal seat of the blanket manufacture; and, in the reign of Queen Anne,

the weavers of the town and adjacent district were incorporated into a company. But the trade has long been of very inferior importance, and the weavers' corporation has fallen into disuse. Since the peace especially, and the introduction of machinery into the business, blanket weaving has rapidly declined at Witney, and most part of the fabrics now sold as Witney blankets are, in fact, made in Glamorganshire, and elsewhere. Some rough coatings, tiltings for barges and waggons, and lining for paper-makers, are, however, made here; and, in 1838, there were in the parish 5 woollen mills, employing 238 hands. (*Mills and Factories' Report*, &c.) The glove manufacture also employs a few hands; and stapling is carried on to some extent, and the town is a considerable trade in malt.

Witney was made a parl. bor. in the time of Edward II., but its privilege was withdrawn on the petition of the inhabs. in the succeeding reign. It is governed by 2 bailiffs and 2 constables, chosen at the annual court leet; and a court baron, presided over by the Duke of Marlborough, is opened twice a year. Witney is of considerable antiquity, and its manor is stated to have been one of those given to the monastery of St. Swithin, Winchester, in the reign of Edward the Confessor. Market day, Thursday; fairs 5 times a year, for cattle and cheese. (*Remains of England*, art. Oxford; *Lewis's Topog. Dict.*, &c.)

WITEPSK, or VITEBSK, a governm. of European Russia, principally between the 55th and 57th degs of N. lat., and the 26th and 29d of E. long.; having N.E. the gov. of Pskof, S.E. Smolensko and Moghilef, S.W. Minsk and Courland, and N.W. Riga. Area, 16,500 sq. m. Pop. in 1846, 789,500. Surface generally level, though on the banks of the rivers there are occasionally some low hills. Rivers and small lakes are numerous: of the former, which all flow towards the Baltic, the Dwina is the principal. Notwithstanding the soil is but of medium fertility, and agriculture is in a very backward state, more corn is produced than is required to supply the wants of the inhabs. Hemp and flax are grown on a large scale, pease, beans, hops, fruit, &c., in the smaller inclosures. The forests are very extensive, 121,600 dectines of forest land belonging to the crown. The grass lands are also extensive, and a good many horses and cattle are reared, though of inferior breeds. The sheep yield only coarse wool; and honey is, also, of inferior quality. The mineral products and manufactures are insignificant; the last being, with the exception of a few cloth factories, almost wholly restricted to distilleries and tanneries. The trade of the government is facilitated by the Dwina and the canal of Berezina: it is principally in the hands of the merchants of the principal towns, many of whom are Jews. This gov. is divided into 12 circles; ch. towns, Witepsk, the cap., Wieliz, Dunaburg, and Polotsk. In 1832 it had 24 public schools, attended by about 1,100 pupils, besides three lyceums, and seven private schools.

WITEPSK, a town of Russia, cap. of the above gov., on both banks of the Dwina, where it receives the Viteba, 330 m. S. by W. Petersburg. Pop. about 14,400. It is irregularly built, and is surrounded by old walls: it has numerous Greek and some R. Cath. churches, convents, and synagogues. Though by far the greater number of its houses be of wood, it has some dwellings of stone, a high school, a bazaar, an old castle, several hospitals, &c.; with manufactures of woollen cloths and tanneries. The Grand Duke Constantine, brother of the late and present emperor of Russia, died at Witepsk on the 27th June, 1832. (*Schnitzler; Possart; &c.*)

WITTENBERG, a town of Prussian Saxony, formerly the cap. of the Electorate Saxony, now the cap. of a circ. of the reg. of Merseburg, on the Elbe, here crossed by a long wooden bridge, and on the road between Potsdam and Leipzig, 39 m. S.W. the former. Pop. 8,700. (*Berghaus*.) Though metamorphosed from the quiet seat of a university into a garrison and fortified town, Wittenberg has a peculiarly dull and melancholy aspect. It is, however, highly interesting, as the cradle of the Reformation; Luther and Melancthon having been professors in its university, and their remains being deposited in its cathedral. A statue of the great reformer in bronze, by Schadow, of Berlin, was erected in the market-place, in 1821. "It represents, in colossal proportions, the full length figure of Luther, supporting on his left hand the Bible, kept open by the right, pointing to a passage in the inspired volume. The pedestal on which the statue stands is formed of a solid block of red polished granite, 20 ft. in height, 10 ft. in width, and 8 ft. in depth. On each of its sides is a central tablet, bearing a poetical inscription, the import of the principal being that 'if the Reformation be God's work, it is imperishable; if the work of man, it will fall.' Over the figure is a very handsome light Gothic canopy, supported by 4 corner pillars, and surmounted by 8 filigree-pointed pinnacles. This canopy is beautifully cast in iron. Taken altogether, the monument is a most creditable piece of workmanship, and does honour to the present state of the arts in Prussia." (*Granville's Trav.*, i. 247-8.)

The graves of Luther and Melancthon in the cathedral are marked by two plain tablets. The altar-piece is by Lucas Cranach, a burgomaster of Wittenberg, the town-hall of which he has embellished with pictures of Luther and of the subjects of the Ten Commandments. It was against the walls of this church that Luther suspended his 95 theses against papal indulgences; and outside the E. gate of the town he publicly burned the bull for his excommunication. Luther's apartment in the old Augustine convent remains in much the same state as in his time; and the autograph of Peter the Great on the wall is preserved by a glass covering. Wittenberg, having ceased to be a capital, was found inadequate to the support of its university, which was accordingly removed to Halle. It still has, however, a gymnasium, an ecclesiastical seminary, &c., and is the seat of a board of taxation and of the usual circle courts. From its situation on the Elbe, in a fertile country, with both iron and coal in its neighbourhood, it possesses great commercial advantages; but its trade is insignificant, and it has only a few manufactures of linen and woollen goods.

It has frequently suffered from sieges, particularly in 1766; and in 1814, when it was taken by storm from the French. (*Dict. Géog., Holskiste, Trav. in the N. of Germany; Strass, &c.*)

WOBURN, a market town and par. of England, co. Bedford, hund. Manshead, on the great N. road, 28 m. N.N.W. London. Area of par., 3,300 acres. Pop., in 1841, 1,914. The town consists of a main street, about 1-2d m. in length, with the market-cross nearly in its centre; and having been nearly burnt down in 1724, it is comparatively well laid out and well built. The market-house, a handsome edifice, originally erected by the Bedford family, was rebuilt at their expense, by Blore, in 1830. The same artist has, also, restored the church, an edifice in the perpendicular style, built by the last abbot of Woburn, having a tower detached from its main body. In the chancel is, among others, a curious monument to Sir F. Staunton and his family. The living, a curacy, in the gift of the duke of Bedford, is worth 251*l.* a year. The free-school, founded by the Earl of Bedford in 1682, has an income of 50*l.* a year, and furnishes instruction to 120 boys on the Lancastrian plan. Almshouses, founded in 1672 for 24 widows, have an income of 30*l.* a year, and there are several minor charities. Petty sessions monthly, and manorial courts occasionally, are held in Woburn. The inhabs. are either occupied in lace-making and straw-plaiting or are employed by the Bedford family. Markets on Fridays; fairs four times yearly for farm stock.

Immediately E. of the town is Woburn Park, with Woburn Abbey, the principal seat of the Duke of Bedford. It derives its name from its occupying the site of a Clisterian abbey, founded here in 1145, and granted to the Russell family in the time of Edw. VI. The present mansion, which was built about 1746, has since been greatly improved and enlarged. It is a quadrangular edifice, its principal or W. front being of the Ionic order, with a rustic basement. The interior of this noble pile is splendidly fitted up, and many of the apartments are enriched with valuable paintings, both by the old masters and British artists. The drawing room, thence called Venetian, has a fine series of 24 views in Venice, by Canaletti. In the hall is an anc. Mosaic pavement, brought from Rome. A sculpture gallery, 135 ft. in length by 25 ft. in breadth, with a flat dome in its centre supported by 8 antique marble columns, has a fine collection of antique marbles, including the famous Lanti Vase, of Parian marble, 6 ft. 3 in. in diameter, and 4 ft. in height, exclusive of the plinth on which it stands. It is of the lotus form, has two magnificent handles, and is beautifully sculptured. This admirable specimen of ancient art was found among the ruins of Hadrian's Villa at Tivoli, of which it had no doubt formed a principal ornament. Here, also, is a fine cast of the Apollo Belvidere, Westmacott's statue of Psyche, &c. In the W. wing of the edifice is the Temple of the Graces, erected in 1818, to receive Canova's magnificent group of the Graces, placed on a circular pedestal in the centre. The library is both extensive and valuable; and at one of its extremities is a room appropriated to Etruscan antiquities. The stables, riding-house, tennis-court, &c., are in a detached building, connected with the mansion by a colonnade, $\frac{1}{2}$ m. in length. The greenhouse, designed by Sir J. Wyattville, is a handsome building 140 ft. in length, and in which, with a great variety of valuable plants, are some fine statues. The park, 12 m. in circuit, surrounded by a wall 8 ft. in height, is beautifully diversified, abounding in wood and water, and well stocked with deer. (*Parl. Rep.; Railway Handbook, &c.*)

WOKINGHAM or OAKINGHAM, a market-town and par. of England, co. Berks, hund. Boving, on the confines of Windsor Forest, $\frac{1}{2}$ m. S.E. Reading. Area of par., 8,450 acres. Pop., in 1841, 2,342. The town consists of several streets, meeting in a central market-place, in which is the market-house and town-hall. The

N.E., to about lat. 60° 20', but afterwards in general S. or S.W. through the govs. of Perm and Kasan, and between those of Viatka and Orenburg. After a course of nearly 1,000 m. it joins the Wolga, bringing with it a volume of water nearly equal to that of the latter. Its basin is supposed to comprise about one-third part of that of the Wolga. Perm is among the towns on its banks.

The Oka rises in at. 52° 10' N., long. 36° E., in the gov. of Orel; through which, and the govs. of Tula, Kaluga, Moscow, Riazan, Tambov, Vladimir, and Nijni Novgorod, it flows in a very tortuous, but mostly N.E. direction, joining the Wolga at Nijni Novgorod after a course of nearly 700 m. Its basin is supposed to comprise 127,000 sq. m. (Müller.) It has several important affluents. Though rapid, it is navigable to Orel not far from its source. The waters of the Kama and Oka are, like those of the Wolga, remarkable for their purity; and all of them are famous for their fish. The Wolga is, in fact, believed to be more prolific of fish than any other European river; and its fisheries are an abundant source of employment and of food. The fish usually taken comprise sturgeon, the roes of which furnish the caviar, of which vast quantities are sent from Astrakhan to all parts of Russia, with salmon, sterlet, tench, pike, perch, beluga, &c. The sterlet (*actipenser stellatus*?), a small kind of sturgeon, supposed to be peculiar to the Russian and Siberian rivers, is much prized by the Russian epicures. Exclusive of caviar, the exports from Astrakhan include large quantities of cured fish. (Müller, p. 627.; *Mod. Trav.* xvii.)

From its abounding with islands, particularly in the lower part of its course, the breadth of the Wolga is very variable. At Tver, however, it is nearly 600 feet in breadth; at Nijni Novgorod, after it has received the Oka, about a verst, or 1,200 ft.; and at Astrakhan it is usually 1½ m. across. But this is not the case during the entire year, for, on the melting of the ice and snow in spring, it is subject to great risings, and inundates large tracts of the surrounding country. The rise begins in April; its height varies greatly in different places, but is greatest in the middle portion of the river's course. At Tver the total rise is about 12 ft. above its summer level; at Jaroslavl and Nijni Novgorod 18 or 20; at Kasan 25 or 30; and at Saratof from 30 to 40 ft. But downwards beyond this point, after which the Wolga receives no affluent of any consequence, and its bed becomes more capacious; the height of its rise gradually diminishes, being at Tzaritsyn from 25 to 30 ft., and at Astrakhan only from 6 to 8, or seldom so high as 12 ft. The time of subsidence also varies considerably in different parts: at Nijni Novgorod the river is commonly confined again within its bed by the beginning of June; at Kasan not till the middle of the same month; and at Astrakhan it does not diminish to its ordinary height till after the summer solstice. According to recent discoveries, the surface of the Caspian is 101 ft. below the level of the Black Sea, which would give to the Wolga (estimating its course at 2,000 m.) an average descent of about 5·4 inches per mile: from the junction of the Kasan with the Wolga, the fall of the latter, Humboldt says, is greater than that of either the Amazon or the Nile, and almost as great as that of the Oder. (See *Geog. Journ.*, viii. 135.) Though rather a rapid river (*Pallas*, i. 25.), yet, as it runs through a flat country, with an immense volume of water, in a bed unbroken by cataracts, though not free from sand-banks, it is navigable for flat-bottomed boats nearly to its source. Not far below this point it is connected by a canal with the S. Dwina, establishing a direct water communication between the Caspian and the Baltic. The Ivanofska Canal, in the gov. of Tula (which unites the Upa, a tributary of the Oka, with the Don), opens a communication between the Caspian and the Black Sea; and, by means of the Vlschnej Volotchok Canal, between the Msta and Tvertza rivers, and the canal between the Sestra and Istra, in the gov. of Moscow, Petersburg and Moscow are directly connected. Other canals connect the basin of the Wolga with that of the N. Dwina, the Lake Onega, &c.; and nowhere else has so extensive a system of inland navigation been effected by artificial means, with so little labour. This navigation is, however, suspended by the frost for at least 160 days each year.

Though the situation of the Wolga, remote from the great marts of Europe, Asia, and Africa, with its embouchure in the Caspian, renders it of much less commercial importance than it would be under other circumstances, it is still the main artery of Russia, and the grand route of the internal traffic of that empire. It has been estimated that in the first thirty years of the present century, from 600 to 700 vessels a year came down the Wolga to Astrakhan, while from 300 to 460 sailed from that port to others on the upper course of the river. Unfortunately, it would seem as if the Wolga had been for some considerable period decreasing in depth; and it is said that of late years sand-banks have accumulated

so much, particularly between Nijni-Novgorod and Kasan, that the vessels laden with salt from Perm, which in the early part of last century used to bring cargoes of from 130,000 to 150,000 pounds, can now only carry cargoes of about 90,000 pounds; and in the portion of its course now referred to, it is navigated with difficulty even by the two-masted vessels of Astrakhan. (Müller, *Das Stromsystem der Wolga*; *Berghaus*; *Stein's Hand-book der Geog.*; *Dict. Géog.*, &c.)

WOLSHINGHAM, or WALSHINGHAM, a market town and par. of England, co. Durham. Darlington ward, on the Wear, 12½ m. W.S.W. Durham. Area of par., 24,780 acres. Pop., in 1841, 2,086. The town is pleasantly situated, but irregularly built. The church is an ancient structure, with beautiful font of Weardale marble. The living, a valuable rectory worth 791l. a year nett, is in the gift of the Bishop of Durham. The remains of an old manor-house, belonging to the former bishops, and enclosed by a moat, are near the church. The grammar-school, founded in 1612, with an income of above 65l. a year, besides 30 pay scholars, supplies gratis instruction to 26 boys, in reading, writing, arithmetic, and the classics. Here, also, are several other schools, and endowments for the poor not receiving parochial relief. The inhabs. are principally employed in the manufacture of linen and woollen cloths, tools and agricultural implements; or in the coal, lead, and limestone works in the vicinity. Petty sessions are held weekly; and a court-leet twice a year, at which debts of 40s. are recoverable. Markets on Tuesdays: fairs, May 12 and Oct. 2.

WOLVERHAMPTON, a parl. bor., market-town, and par. of England, co. Stafford, hund. Seisdon, in one of the principal iron manufacturing districts, and at the junction of six principal roads, 13 m. N.W. Birmingham. The par., which is of great extent, comprises 3 townships, 4 of which, including the towns of Bilston and Willenhall, with the adjoining par. of Sedgeley, are included in the parl. bor.; the area of which amounts to 16,630 acres. Pop. of do., in 1841, 92,943, of whom 36,382 belonged to Wolverhampton township. Wolverhampton stands on an eminence commanding fine views of the surrounding country, and though irregularly laid out, is not ill-built; but, from the many furnaces and forges in the town and neighbourhood it has a blackened appearance. There are some good modern residences in the suburbs. Four of the principal streets diverge from the market-place. The town is well lighted, partially paved, and supplied with water from wells sunk in the rock on which it is built. The collegiate church of St. Peter, on the most elevated position in the town, is a large cruciform structure, chiefly in the perpendicular, but partly, also, in the decorated and early English styles. It has a tower, the upper part of which is late perpendicular, and a much finer composition than the other portions of the church. The chancel is modern; the nave has a rich stone pulpit, and in the churchyard is a rudely sculptured cross, much defaced by time. (*Richman.*) This church was formerly considered one of the king's free chapels, and was attached by Edward IV. to the deanery of Windsor. The living, a vicarage worth 192l. a year, is in the gift of the Dean of Windsor. St. John's church, a handsome stone edifice, on the S. side of the town, erected by subscription, in 1761, is a curacy worth 200l. a year, in the gift of the Earl of Stamford. St. George's, a building of Grecian architecture, St. Paul's, a Gothic structure, and various other churches, have been erected of late years. Besides a Rom. Cath. chapel, there are several Dissenting meeting-houses, to all of which, as well as to the churches, well-attended Sunday-schools are attached. The free grammar-school, founded by Sir Stephen Jennings, a native of the town, who was lord mayor of London, in 1668, has an endowment yielding about 1,900l. a year. It is managed by 40 trustees, who allow the head master 500l. a year. It is open to all boys of the par., and was, in 1842, attended by about 140 pupils. Sir W. Congreve and Abernethy, the surgeon, were educated at this school. Besides a blue-coat charity for 36 boys and 30 girls, of very ancient foundation, with an income of 240l. a year, there are national and British schools; and considerable funds exist for distribution among the poor. A dispensary was established in 1821, for which an eligible building was erected in 1826, and, in 1813, a union-mill, for grinding corn for the poor at a cheap rate, was built by shares at a cost of 14,000l. Wolverhampton has also a public news-room with an extensive library, assembly and concert-rooms and mechanics' institute. W. of the town is a fine race-course, with a grand stand, where races take place annually in August. Two weekly newspapers are published in the town.

Most departments of the hardware manufacture, excepting cutlery, are carried on here and in the adjacent town of Bilston and the district. Wolverhampton has been long celebrated for her locks, of which she almost exclusively engrossed the manufacture down to a comparatively late period. At present, however, the

most expensive and best locks are made in the metropolis, and the lock trade is also carried on in Birmingham; but this town still enjoys the largest share of the business. Probably, however, the manufacture of japanned ware and tinned plates may be regarded as her staple business; and in addition she furnishes carpenters' tools, files, screws, hinges, steel mills, machinery, &c. Immense quantities of nails are made in the surrounding villages.

Wolverhampton, Bilston, and the other places within the limits of the parl. bor., are wholly indebted for their rapid rise and large pop. to the facilities they enjoy for carrying on the iron trade. In the vicinity are all but inexhaustible mines of coal and ironstone, the main bed of coal being 30 ft. thick, with strata of ironstone above and below! The district has also the farther advantage of being connected by numerous canals, with all the great shipping ports of the empire. Under such circumstances, we need not be surprised at the rapid progress it has made since 1772, when there was only one blast furnace at Bilston! whereas, in 1842, there were in the parl. bor. no fewer than 55 blast furnaces, capable of producing more than 4,000 tons of iron a week! Indeed, the whole country to the S. and E. of the town is covered with furnaces, forges, rolling mills, foundries, ironstone and coal-pits; and though the trade be occasionally much depressed, the advantages enjoyed by the district for the production and manufacture of iron are such as can hardly fail to insure its prosperity.

The Great N.W. Railway has a station 1 m. E. of the town, and here the line attains its greatest elevation of 440 ft. above the sea level. The Birmingham, Staffordshire and Worcestershire, and Birmingham and Liverpool canals, unite about 1 m. N. from the town, affording, as already stated, a ready communication with all parts of the kingdom. The Wolverhampton and Staffordshire Banking Company, established in 1831, has its office in this town.

The town is under the jurisdiction of the co. magistrates, but is locally governed by two constables and other officers, chosen at an annual manorial court. Petty sessions for the hundred are held here, and there is a county court, before which 3,265 plaints were entered in 1848.

The Reform Act conferred on Wolverhampton, Bilston, and the district included within the parl. bor., the important privilege of sending 2 mems. to the H. of C. Reg. electors, in 1849-50, 3,295.

The new poor-law was introduced here in 1836, when the townships of W. Hampton, Bilston, Willenhall, and Wednesfield were formed into the "W. Hampton Union." The pop. of these townships amounted, in 1831, to 46,931; and in 1841, to 68,185. A superior and spacious "Union house" has been erected.

Though of great antiquity, the earliest records of Wolverhampton date only from the end of the 10th century, when Wulftruna, duchess of Northampton, founded a monastery here, of which, however, there are now no remains. A fire, which continued for five days, destroyed the greater part of the town in 1590.

Market days, Wednesday and Saturday; fairs, July 10th, 11th, and 12th, for cattle and various merchandise. (*Parl. Rep. ; Priv. Inf.*)

WOODBRIDGE, a market town, par., and river-port of England, co. Suffolk, on the Deben, 8 m. from the sea, and 7½ m. E.N.E. Ipswich. Area of par. 1,650 acres. Pop. of do., in 1841, 4,954. The town is on the slope of a hill, and consists of two principal streets, an open space called Market Hill, and some narrow thoroughfares: it has many good houses, and is tolerably well paved and lighted. In the centre of the Market Hill is the sessions house, a brick edifice, in the lower part of which the corn market is held. The church, a noble edifice, said to date from the time of Edw. III., consists of a nave, chancel, and two side aisles, the roofs of which are supported by 14 fine slender pillars; its outer walls are constructed of black flints, and it has a square tower 108 ft. in height. On its S. side was anciently an Augustinian priory, founded by one of the Rous family in the 12th century. The living, a perpetual curacy, worth 489*l.* a year, is in the gift of the Rev. T. Salmon. Here, also, is a free grammar school for 10 boys, sons of the poorer inhabs. of the town, who are to be instructed in Latin and Greek, and fitted for the university; with national, Lancastrian, and Sunday schools. Almshouses, for 12 poor men and 3 women, founded and endowed in 1587, had, in 1825, an income of 570*l.* a year; but as this income was derived from a lease of property in Clerkenwell, in the city of London, entered into about 60 years previously, and then about to expire, it is now probably much greater. The income of the town lands is chiefly applied to parochial repairs, &c. A small theatre was erected in 1813.

Woodbridge is a member of the port of Yarmouth, and the Deben being navigable thus far, for vessels of 120 tons, it has a considerable trade with London, Hull, Newcastle, &c., exporting corn, flour, and malt, and im-

porting coal, timber, wines, spirits, groceries, &c. It has several docks for the building of vessels, with convenient wharfs and quays. Woodbridge is governed by a visitor and two guardians, chosen by the parishioners. Quarter sessions for the liberty of St. Ethelred and for six adjacent hundreds are held here; and petty sessions weekly. Market day, Wednesday; fairs, April 5. and Oct. 31. for cattle.

WOODSTOCK (NEW), a parl. and munic. bor., and market town of England, co. Oxford, hundred Wootton, par. of Bladon; on the small river Glyme, which supplies the magnificent piece of water in Blenheim Park, 8 m. N.N.W. Oxford. The old parl. bor. included only a portion of the town; but the modern parl. bor. includes the whole of the latter, with a district extending about 4 m. on every side, comprising several adjacent villages and hamlets, and having an area of 21,640 acres, and a pop., in 1841, of 7,404. This is a clean, well built, country town; the streets are well paved, and well kept, and many of the houses, which are mostly of stone, are of a superior class; but it has, notwithstanding, a dull and inanimated appearance, and is not prosperous. The church is a handsome structure, partly rebuilt in 1785, when a tower was added to its W. extremity. The living is a curacy annexed to the rectory of Bladon, worth 329*l.* a year, and in the gift of the Duke of Marlborough. Here, also, are places of worship for Baptists and Wesleyans. The town hall, erected in 1766, at the expense of the then Duke of Marlborough, has under it the market place. A free grammar school, founded in 1585, affords instruction to about 20 boys; but the endowment for its support is small, and the master's salary of 30*l.* a year is partly made up by the corporation; it has, besides, an endowed school, with an income of 75*l.* a year, in which 24 children are educated, partially clothed, and apprenticed, with alms-houses for widows, and several minor charities.

Woodstock had formerly a considerable manufacture of polished steel articles, much esteemed for their delicate workmanship; but this business is now nearly or wholly extinct. The manufacture of doe-skin gloves, which was introduced at a later date, is now almost the only branch of industry carried on in the town. In 1835, upwards of 1,200 hands, mostly women and girls, were employed in this manufacture in Woodstock and its vicinity, who were supposed to produce about 500 pairs of gloves per week. But this branch has, also, declined in the interval, principally, as is understood, in consequence of the substitution of thread and cotton for leather gloves; and in consequence of this decline, and of the embarrassed situation of the Marlborough family, the prosperity and population of the town have both fallen off.

The bor. received its present charter of incorporation from Henry VI.; but that by which it has been latterly governed dates from the 16th of Charles II., the corporate body consisting of a mayor, 4 other aldermen, a high steward, recorder, and other officers. The annual court leet or sessions, granted to the bor. by charter, has been discontinued since 1829; but petty sessions, and a court of record are opened monthly. The bor. has no jail, but a small lock-up house.

Woodstock was a bor. by prescription previously to its incorporation, and returned 2 mems. to the H. of C. from the 18th of Elizabeth down to the passing of the Reform Act, which deprived it of 1 mem., at the same time that the boundary of the parl. bor. was altered, as already stated. Previously to the Reform Act the franchise was vested in the mayor, aldermen, and freemen of the bor.; but substantially, and in fact, it was a nomination bor., belonging to the Duke of Marlborough. Reg. electors, in 1849-50, 362. Market day, Tuesday; fairs, seven times a year, chiefly for cattle, horses, cheese, and hardware.

Old Woodstock stood in a low situation a little N. of the town, on the Glyme, and has now only a few houses and one ancient mansion. Woodstock was long a royal residence. A palace, or manor-house, on the N. bank of the Glyme, was the residence of Henry II., and the scene of some of the adventures of the fair Rosamond; but all traces of this building have long since disappeared. Edward I. held, in 1275, a parliament at Woodstock; and it also was the birth-place of his second son Edmund, and of the eldest son of Edward III., the illustrious Black Prince. It was subsequently inhabited by several of our monarchs; and Elizabeth was for a while imprisoned here. But every part of this more recent palace has also been pulled down.

Chaucer, the great improver of the English language and versification, is supposed by many to have been a native of Woodstock; where, it is alleged, he first saw the light in 1328. At all events he frequently resided in the town; and some traces still exist of the house which he occupied.

At present Woodstock derives its whole importance from its being in the immediate vicinity of Blenheim

Palace and Park, the seat of the Duke of Marlborough. In previously noticing this noble seat (see *BLENNHIM PARK*, Vol. I.) we omitted to notice the library, originally intended for a picture gallery, and one of the finest apartments in England. It extends along the whole of the W. front, being 183 ft. in length, and beautifully proportioned. It contains the Sunderland collection of books, comprising 17,000 vols.; and a fine statue of Queen Anne by Rysbrack. In the chapel is a splendid monument, by the same sculptor, in honour of the great Duke of Marlborough and his Duchess. (*Bound. Rep.*; *Munic. Corp. Append.*; *Private Information.*)

WOOLER, a market-town and par. of England, co. Northumberland, Glendale ward, on the E. declivity of the Cheviot hills, 42 m. N.N.W. Newcastle. Area of par. 4,620 acres. Pop. in 1831, 1,926. The town is of high antiquity, and at one period was a good deal resorted to by invalids. It consists of several streets branching from the market-place, and has a public library, mechanics' institute, dispensary, and many dissenting places of worship. The church is a neat but plain building, erected about the middle of last century: the living, a vicarage, worth 478*l.* a year, is in the gift of the Bishop of Durham. A free school, with a small endowment, is the only charity mentioned as existing here. Courts leet and baron are held annually by the lord of the manor. In the neighbourhood are the vestiges of ancient encampments. At Homildon, about 2 m. from the town, is a pillar, erected to commemorate the total defeat, in 1402, of an army of 12,000 Scotchmen, under Earl Douglas, by the forces of the Earls Percy and March. Markets on Thursdays; fairs, May 4th, Oct. 27th, and Whit Tuesday.

WOOLWICH, a parl. bor., market, and sea-port town of England, co. Kent, on the S. bank of the Thames, 7 m. E. London, and 2½ m. E. Greenwich. Pop., in 1841, 25,785. Though latterly a good deal improved, the older parts of the town, near the river, have narrow streets, and are comparatively mean, dirty, and badly built; but in the more modern portions, and especially between the old town and the barracks, the streets and houses are of an improved and far more respectable description. Woolwich, however, derives its entire importance from its dock-yard, arsenal, and other great naval and military establishments; and is principally inhabited by individuals dependent upon or connected with them. The par. church, in a conspicuous situation, with a tower at the W. end, was rebuilt towards the middle of the last century. The living, a valuable rectory, worth 740*l.* a year nett, is in the gift of the Bishop of Rochester. Besides the par. church, Woolwich has 2 district churches, St. John's and St. Thomas's, an Ordnance chapel on the road to Plumstead, a chapel in the barracks, a proprietary episcopal church, near the arsenal, a Scotch church, and various meeting-houses for different classes of dissenters. The charitable institutions comprise an alms-house for 5 poor widows, endowed, in 1560, by Sir Martin Bowes, lord mayor of London, and 2 charity schools, one for 80 girls, and one for educating, clothing, and apprenticing poor orphan boys, sons of such shipwrights as have served their apprenticeship in the dock-yard; and national and other public schools have been established, in which about 900 children are daily instructed, exclusive of the Sunday schools attached to the parish church and the dissenting chapels, where upwards of 2,000 children are taught. Among the places of amusement is a small theatre. A mineral spring on the N. of the common possesses valuable medicinal properties. The S. Eastern railway has 2 stations in the town, one near the dock-yard and the other close to the arsenal. Here, also, are public baths, and a mechanics' institute.

Dock-yard.—This, though not the most extensive, is the most ancient royal dock-yard in the kingdom. Some uncertainty exists as to the precise date, but it is believed to have been established as early as 1512; and it is certain that it was placed upon a permanent footing in the latter part of the reign of Henry VIII. It presents a frontage to the river of nearly 4,000 ft., but is of irregular breadth. It has been, of late years, greatly improved and extended, and contains at present about 55 acres; but it is in contemplation to increase it to about 62 acres. It has 6 building slips: 2 for first-rates, 2 for line-of-battle ships of inferior size, and 2 for smaller ships.

Although some very large ships have been built in this dock-yard at different periods, such as the Royal George (lost at Spithead), the Nelson in 1814, and the Trafalgar in 1841, yet considerable disadvantages are felt in the constructing of such ships from the shallowness of the water and the accumulation of mud in the river; and it has, in consequence, been determined to

build the largest class of men-of-war in the other dock-yards, and to make this the principal yard for steam-ships belonging to the royal navy. With this intention a factory was built in 1839, consisting of 2 ranges of handsome and substantial buildings, each 440 feet in length by 26 in breadth, for the manufacture of steam-engines and boilers. The factory contains a foundry and forges, with fan-blowing machines for the furnaces, and a variety of machines for punching, shearing, plate-bending, drilling, boring, planing, turning, shaping, bolt-screwing, &c. &c. The machinery has been made by the most eminent manufacturers in the kingdom, and embodies the results of all the improvements of the last twenty years; its skilful selection and adaptation reflecting infinite credit on the chief engineer.

The moving power of the factory is a steam-engine of 20 horse-power. Another building is erected, 232 ft. in length by 66 ft. in breadth, with a chimney 190 ft. in height, into which all the flues of the factory are led. These additions give the means of doubling the work performed, and enable the Admiralty to furnish the whole of the steam-ships with the necessary machinery.

There is at present an outer basin, comprising an area of 120,000 sq. ft., in which ten or a dozen steam-ships of different sizes may conveniently lie. An inner basin of 160,000 sq. ft. area, on the site of the Mast Pond, allows two first-class steam-ships to lie alongside the factory and be simultaneously fitted with their engines, boilers, and other machinery. A magnificent dock, entirely composed of massive blocks of granite, has lately been built, capable of receiving a 120-gun-ship; a second is nearly completed, and it is proposed to construct two similar docks for steam-ships, making four in all.

The smithery, constructed by the late Mr. Rennie, is on a very grand scale, and is suitable for the forging of the largest anchors, and other heavy articles. It contains 37 forges, with 2 lift hammers weighing 4½ tons each, and 3 tilt hammers of 18 cwt. each; there are also 3 air and 2 blast furnaces, with a blasting apparatus of a very scientific description. There are two steam-engines in the smithery, one of 20 and another of 14 horse-power. The anchors are tested by a powerful hydraulic machine, made by Bramah, capable of applying a pressure of 100 tons. The pitch and tar vault is constructed so as to admit of its easy inundation in case of fire. Large saw mills have also been constructed, similar to those in the carriage department in the arsenal, for cutting the timber for service. The ships now (1851) building are, the Royal Albert, 120; Agamemnon, 80; Edgar, 80; San Fiorenzo, 50; with various smaller craft.

The number of workmen of all kinds employed amounts at present (1851) to 1,539, exclusive of about 450 convicts, landed daily from the Warrior hulk, moored off the yard, who are generally employed in the most laborious occupations.

The mast houses, mast slip, mast ponds, warehouses, &c., are all on a very extensive scale, and the whole is thoroughly organised and in the most efficient state. A large ropery was formerly attached to the dock-yard, but, its situation not admitting of the introduction of machinery, it has been abandoned, the buildings removed, and the site built upon. The workmen have been enrolled in a dockyard brigade, and are commissioned by the clerks and civil officers of the various departments, the superintendent acting as commandant. Instruction is given during the summer season in the infantry and artillery drill.

Arsenal.—Woolwich is the head quarters of the Ordnance military corps, viz., the Royal horse and Foot Artillery, the Royal Sappers and Miners, &c.; and it is also the principal establishment in the kingdom for the provision of warlike materiel for the navy and army. The Royal Arsenal, formerly called the Warren, admirably situated on the E. side of the town, appears to have been used as a gun-wharf and powder magazine from about the middle of the 17th century; but it was not until the removal of the foundry from Moorfields, in 1720, that it began to assume the importance it has since attained. It comprises within its boundaries about 110 acres, or, including a part of the Plumstead marshes, used as a review and practising ground, from which it is separated by a canal communicating with the Thames, it may extend over nearly 300 acres. The following are the principal departments into which it is divided:—1st. The *Royal Brass Foundry*, erected by Sir John Vanburgh in 1719, on a site chosen by a young Swiss named Schalch, under whose direction the foundry had been placed on its removal from London. In it are now cast all the brass ordnance used in the service. It contains 3 furnaces, the largest capable of melting 16 tons of metal, sufficient for about twelve 24-pounders; with accommodation for making moulds, boring, turning, and polishing the guns. This department has the inspection and proving of all ordnance, not only for the army and navy, but also for the East India Company, and the affixing of the sights, tangents, &c. to them. The iron ordnance is all cast by

contract according to the plan of ordnance are moulded and cast. They are afterwards bored, &c. by machinery; and properly engraved sometimes cast, as the statues of Lord Hopetoun, at Edinburgh capital of the Nelson Column, gun metal articles required for monuments, comprising pivots, circles, &c.

2nd. The *Royal Laboratory* manufactures, viz. ball and blank cartridges; Congreve and other rockets; manufactured; shells and spherical shells, filled, &c. A machine for making musket and pistol balls has been lately introduced, which works with great rapidity, and seems to be far superior to casting. Percussion caps &c. within the last two years, by the laboratory; the portion of the filling and finishing the caps and performs its work with one man and four boys being, &c. fill and complete 150,000 caps a week are attached to this department every firework used in war, as objects.

3rd. The *Royal carriage* &c. kind of ship and land gun carriage with traversing platforms, &c. &c. Copper-lined powder-cans sheets of copper are tinned in process displaying much ingenuity of the foremen employed heretofore and unwholesome operation by a considerable annual saving variety of the most efficient in a scrap forge for the remanufacture steam hammer, and two smitheries; a rolling mill, &c. saw mills.

4th. The guns, which are arranged complete field and battery pieces, carronades, &c., with the of the ships of war out of the whole, about 1,700 pieces of iron ordnance, of 200 different calibres, and shells, arranged in pyramids, 1,255,000 in number. These, description of store required for the present, are kept in constant readiness of the *storekeeper's department* brick buildings containing 11 buildings to the departments best constructed on the grandest scale efficient as can well be imagined one within the arsenal and the the practice and proof of ordnance frequently cross the river, the and serious interruptions from new practice range upwards of 1000, as also one in the marshes fore in course of formation, the inconveniences now experienced of the practice, at long guns (42 to 84 pounders), on the principles.

The number of artificers, labourers in the various departments of the arsenal, exclusive of the United and Hibernia hulks, stationed to the arsenal, amounting to 20,000.

The *Royal Military Academy* considerably raised the professional corps of Royal Engineers and Artillery was founded in 1719 ranged until 1741. The establishment at different periods, has at present gentlemen cadets. It is under the General and Board of Ordnance has a lieutenant-governor, inspector. For the literary department, &c. mathematics, and 38 other professional subjects, fortification, planimetry, landscape-drawing, Geography, &c. The academy professors several eminent men specified Mr. Thomas Simpson the *Mathematical Dictionary* &c. Mr. Bonnycastle, Dr. Olynthus Bhakmet formerly cost the premium, for half the number of for several years past it has been supporting principle; and will more efficient establishment, itself. The scale of payments of cadets is as follows:—

provisions of the Municipal Reform Act. (*Mun. Corp. Appendix ; Private Information.*)

WOTTON-UNDER-EDGE, a market-town and par. of England, co. Gloucester, hund. Berkeley, on the declivity of a hill, as its name implies, 17 m. S. by W. Gloucester. Area of par., 4,390 acres. Pop. of do., in 1841, 4,702. The town, traversed by a small stream, on which are several cloth-mills, consists principally of 2 well-built parallel streets. The church, which is large and handsome, has some curious old monuments. The living, a vicarage, worth 112*l.* a year, is in the gift of the dean and chapter of Oxford. The grammar-school, founded in the 8th of Richard II., and revived in the time of James I., had, at the date of the last inquiry, an income of 376*l.* 12*s.* a year: it supports 10 foundation scholars and is free to all other boys born in, or inhabiting Wotton and North Nibley. The boys are instructed in writing and accounts, and are "to use no language in the school but Latin." The Blue-coat school, established in 1693, has an income of 94*l.* a year; the general hospital, for 12 almspeople, has a clear income of 346*l.* a year; and Perry's hospital, also for 12 persons, an income of nearly 170*l.* a year. The aggregate amount of the public endowments in the par. reached, at the period referred to above, 1,130*l.* a year. (*Digest of Charity Reps.*) Wotton-under-Edge is a bor. by prescription, but has no extant charter: its corporation, consisting of a mayor, and 12 aldermen, elected at an annual court-leet, has no municipal functions, revenues, or emoluments. The inhabs. of the town and surrounding district are chiefly occupied in the weaving of woollen cloth. In 1838, there were in the par. 5 woollen mills, wrought principally by steam, employing, in all, 182 hands (*Mills and Factories' Report*); besides which, there were many looms wrought by the weavers in their own houses. Petty sessions for the hund. are held in Wotton. Markets on Fridays; fairs, Sept. 25th, for cattle and cheese. (*Parl. Reps., &c.*)

WORCESTER, an inland co. of England, having a very irregular outline and several detached portions, is bounded on the N. by the cos. of Salop and Stafford, W. by Hereford, S. by Gloucester, and E. by Warwick. Area, 462,720 acres, of which about 400,000 are supposed to be arable, meadow, and pasture. This is an extremely beautiful and well-watered co. It is traversed from N. to S. by the Severn, and in part, also, by its important tributaries the Avon from the E., and the Teme from the W. Surface finely diversified: the Malvern hills divide the S.W. part of the co. from Herefordshire; the Bredon hills, to the S. of Pershore, have an elevation of nearly 900 ft.; and there are some considerable hills on its N. frontier between Hales-Owen and Bromsgrove. The vales of Worcester and Evesham, or rather of the Severn and Avon, are alike beautiful and fertile; but the soil in other parts, especially on the E. side of the country, is cold and poor. Besides corn, cattle, and dairy produce, Worcester produces large quantities of fine wool, apples, hops, and excellent cyder. We are sorry, however, to have to state that agriculture is by no means in an advanced state. "The system followed is, in itself, a bad one, and is carelessly and negligently conducted. There is no rotation as to cropping; nor are any pains taken to relieve the ground from water, though it be in many places very wet. Ploughing is badly performed, and the whole management of a slovenly description." (*Kennedy and Grainger, on the Tenancy of Land*, i. 358.) In 1838 there were in this co. 1,832 acres under hops. Estates of all sizes; farms for the most part small. Average rent of land, in 1843, 30*s.* 11*d.* an acre. Coal is found in the N. parts of the co., and the brine springs of Droitwich furnish immense quantities of salt.

The city of Worcester is the principal seat of the leather glove manufacture; the iron, hardware, and glass manufactures are carried on with spirit and success at Dudley; Kidderminster is famous for its carpets; and needles and fish-hooks are made to a greater extent at Redditch and Feckenham, in this co., than any where else in England or, indeed, in the world.

Worcestershire is divided into 5 hundreds, and 171 parishes. It sends 12 mems. to the H. of C., viz. 4 for the co., 2 each for the city of Worcester and the bor. of Evesham, and 1 each for the bors. of Kidderminster, Bewdley, Droitwich, and Dudley. Registered electors for the co., in 1849-50, 10,004, whereof 5,573 were for the E., and 4,131 for the W. division of the co. In 1841, Worcester had 46,919 inhab. houses, and 233,336 inhabs., of whom 114,664 were males, and 118,672 females. Sum expended on the relief of the poor, in 1848-49, 78,135*l.* Total annual value of real property in the co. in 1843, 1,332,538*l.*

WORCESTER, a city, parl. and mun. bor. of England, locally situated in the co. of Worcester, of which it is the cap., but forming a co. of itself; hund. Oswaldslow, on the Severn, crossed here by a handsome stone bridge of 5 arches, 25 m. S.W. Birmingham, and 100 m. W.N.W. London; lat. 52° 9' 30" N., long. 2° 0' 15" W.

The city and old mun. bor., comprising 220 acres, constitute about 1-4th part of the modern parl. and mun. bor., which had, in 1831, a pop. of 26,805; the pop. of the modern parl. bor., in 1841, was 26,306.

Worcester is finely situated on the E. bank of the river, in a fertile and beautiful country; and is one of the best built, handsomest towns in the kingdom, having every appearance of wealth and respectability. "The main streets are wide, well paved, and lighted with gas: the central street, which traverses the city from N. to S., is of considerable length, and kept particularly clean and neat. A considerable extent of ground comprised in the suburbs is unoccupied by houses, and consists principally of gardens and meadows. It is probable, however, that a great portion of it will, in process of time, form the site of new buildings. On the E. side of the canal the number of houses is rapidly increasing; and it appears probable, that the area included within the new boundary to the N. will be gradually filled up by villa residences. To the N., both within and beyond the boundary of the tything, the building of streets, and rows of dwelling-houses, as well as of detached residences of a very superior class, is going on rapidly." (*Parliamentary Boundary Report*.) Of the public buildings, the principal is the cathedral, originally founded in 1084, but not completed till 1374. It stands towards the S. extremity of the town, and its appearance has recently been greatly improved by taking down the ancient church of St. Michael, a most ungainly edifice, which stood close to the N.E. extremity of the cathedral, and greatly marred the prospect. Its exterior is extremely plain, and its attractions consist principally in its size and the lightness of its architecture. The central tower, though the stone be much decayed, is extremely fine. It is built in the form of a double cross; its external length, including buttresses, is 426 ft., and the internal 294 ft.; the nave, from the front to the W. transept, is 180 ft. in length: the tower, which is about 200 ft. in height, is ornamented with light and elegant pinnacles. The general character of the building is early English; there are, however, some earlier parts. A crypt, part of the nave, the chapter-house, &c. are Norman; parts of the nave and aisles are decorated; the cloisters, and a fine S. porch are perpendicular. The interior is very spacious, mostly in the early English style, with elegant details, and good groining. Across the S.E. transept is the monumental chapel of Prince Arthur, son of Henry VII., and in the middle of the choir is the tomb of King John, the top stage of which, with the effigy, is evidently of a date soon after his decease. (*Rickman*, 260.) There are several fine ancient monuments in different parts of the church, including that of the celebrated Judge Littleton, one of the founders of the English law, a justice of the Common Pleas under Edward IV., who died in 1481. Among the more modern monuments is that of the celebrated scholar Stillingfleet, author of the *Origines Sacre*, and other valuable works, bishop of the see from 1689 till his death in 1699, with an extravagantly eulogistic inscription written by the famous Dr. Bentley. Adjoining the S. side of the cloister is the ancient refectory of the monastery attached to the cathedral, a lofty and spacious hall, 120 ft. in length, by 38 ft. in width, now occupied as the King's School. On the E. side of the cloisters is the chapter-house, the library belonging to which comprises a valuable collection of books and manuscripts, chiefly relating to theology and common law. The nett revenue of the bishopric amounted, at an average of the three years ending with 1831, to 6,569*l.* a year. The chapter, previously to 1836, consisted of a dean, 10 prebendaries, and 8 minor canons. The canons or prebendaries were then reduced to 8, including the dean, and their emoluments were also considerably reduced. The income of the establishment averages about 12,000*l.* a year. The bishop's palace, on the bank of the river, is an incongruous but commodious edifice, formerly surrounded with walls. It has lately been arranged that the episcopal palace shall in future be the deanery; and the bishop is to reside at his house at Hartlebury, 10 m. distant. An ancient gateway, called Edgar's Tower, leads into the precincts of the cathedral. There are remains of several monastic establishments, including a commandery of the Hospital of St. John, in different parts of the city; and it had formerly a castle, every trace of which has been obliterated, excepting the mound on which the keep stood. Several of the par. churches deserve notice: that of St. Andrews has a square tower, 90 ft. in height, surmounted by an octagonal spire 155 ft. 6 in. in height, making the total elevation of the latter 245 ft. 6 in. The church and town are very ancient; but the spire is comparatively modern, having been added in 1751. All the livings in the city, except that of St. Peter, are rectories; and, except All Saints (which is in the gift of the crown), they are all in the patronage of the dean and chapter. The most valuable are St. Martin's, worth 378*l.*; St. Nicholas, worth 260*l.*; and St. Peter's, worth 233*l.* a year.

fishery on the Derwent, the property of the Earl of Lonsdale; but it derives its principal importance from the extensive collieries in its vicinity, which furnish considerable quantities for shipment to Ireland, the Isle of Man, &c.

Workington harbour is protected by a breakwater, and has good quays; but it nearly dries at low water. It is a creek of the port of Whitehaven; but it has about 7,000 tons shipping. Ship-building has been long carried on; and a fine Indiaman was launched in the course of the present year (1851). Markets, Wed. and Sat.; fairs, May 18. and Oct. 18. Races are held annually in August.

WORKSOP, a market-town and par. of England, co. Nottingham, wapent. Bassellaw, on the Ryton, a tributary of the Idle, 23 m. N. Nottingham. Area of par., 18,220 acres. Pop., in 1841, 6,197. The town, consisting chiefly of one street, crossed by two others, is well built, paved, and lighted. Its church, which formerly belonged to an Augustine priory, is a fine old edifice, with two lofty towers, and has within several ancient monuments. The living, a vicarage worth 388*l.* a year clear, is in the gift of the Duke of Norfolk. Here, also, are places of worship for various sects, a national school, and some small endowments for parochial and charitable purposes. The town is celebrated for its malt, and was formerly, also, celebrated for its liquorice, of which large quantities were raised in the adjoining district; latterly, however, its culture has been wholly abandoned.

Worksop may be regarded as the cap. of the district popularly called the "dukery," from its containing Worksop-manoor, formerly a seat of the Duke of Norfolk, Clumber Park, the seat of the Duke of Newcastle, and Welbeck Abbey, the seat of the Duke of Portland. These are all magnificent residences in fine parks. But the Duke of Newcastle having purchased Worksop-manoor, the house, which had been rebuilt in 1763, has been pulled down. Clumber Park, now about 11 m. in circ., and finely laid out and wooded, was, so late as the era of the American war, little better than a black heath, interspersed with bogs and marshes! In this district, also, is Thoresby, the seat of Earl Manvers. Markets on Wednesday.

WORMS (an. *Borbetomagus*), a city of W. Germany, grand duchy of Hesse Darmstadt, prov. Lower Hesse, cap. cant. on the W. bank of the Rhine, near the border of Rhenish Bavaria, and 26 m. S.S.E. Mentz. Pop., in 1850, about 9,500. It was formerly an important free city of the empire, but is now much decayed, and is surrounded by dismantled and ruined walls. "Its interior," says Mr. Chambers, "consists of a single good street, lined with tall mansions, inhabited by persons of an inferior order, and a number of back lanes and detached buildings, many of them vacant and desolate. In a piece of open ground behind the main street stands the cathedral, a building of red sandstone, its foundation dating as far back as the beginning of the 11th century (*Schreiber, Guide des Rhén.*, says the 8th). The original part of this edifice is Gothic, but the larger portion is in the Byzantine style; the interior arches being all rounded, and the pinnacles and dome fretted in the Moorish taste. The building contains a number of excellent pieces of sculpture, and the high altar at the E. end is environed with ancient carvings, in oak." (*Tour on the Rhine*, 60.) This cathedral has 2 choirs, each surmounted by a cupola, one of which rises 137 ft. (*Schreiber*) above the pavement. The W. choir is a good specimen of the architecture of the 12th century, and has a magnificent rose-window of that period. The Lutheran church in the market-place, in which is a painting of Luther before the Diet of Worms, in 1521, occupies the site of the council-hall, in which that event took place. This hall was destroyed when the city was bombarded by the French, in 1689; at which time, also, a vast number of houses were destroyed. From this period, in fact, the decay of Worms may be dated; many of the inhabs. having afterwards settled in other German towns, and in Holland. Some of the other churches deserve notice; and there are 2 synagogues. Charlemagne was married at Worms; and it was frequently inhabited, both before and after his time, by the Frankish sovereigns; but no remains of the imperial palace exist, except a few fragments of a wall, forming part of the *Bürgerhop*, a prison, and police-office. Worms is the seat of a consistory, about half its inhabs. being Protestants; and it has several convents and hospitals, a gymnasium, and elementary schools, supported by different religious sects. It has manufactures of tobacco, sealing-wax, hats, &c.; but its principal trade is in wine, and other agricultural produce. The vicinity of Worms, celebrated by the ancient Minnesingers as the *Wonnegau*, or "land of joy," is in great measure covered with vineyards, producing some of the best growths of the Rhine. The famous *Lichtramsweid* is grown around the church of Notre Dame, close to the city. Worms is supposed to owe its origin to a fort erected here by Drusus: many Roman antiquities have been discovered in and near it. Among the councils held at Worms, that in 1122 was the most famous. Diets

were, also, held here in 1492, 1517, and 1521. The latter is famous from the fact of Luther having, as already stated, appeared before it, to explain and answer for his opinions. On appearing before the Diet, he displayed equal firmness and moderation. An edict was, however, issued against him on the 26th of April, by which he was excommunicated as an obstinate heretic. But previously to this, in consequence of the determination of the emperor and the other princes who had given him a safe conduct, not to forfeit their word, he was allowed to withdraw from the city in safety. (*Schreiber; Berghaus; Robertson's Charles V.*, book ii.)

WORTHING, a maritime town and fashionable watering-place of England, on the English channel, co. Sussex, rape Bramber, hund. Brightford, in the par. of Broadwater, a village about a mile to the N., 49 m. S. by W. London, and 10 m. W. Brighton. Area of par., 2,240 acres. Pop. of do. in 1841, 5,345, of whom 4,703 were supposed to belong to the town. Until within the last 50 or 60 years, Worthing was only an inconsiderable fishing village; and is much indebted for its increase and celebrity to the visits of the royal family during the latter part of last century. The buildings of the town extend along the coast for about $\frac{1}{2}$ m., and the main street runs for somewhat more than $\frac{1}{2}$ m. in a N. direction. Excepting in its centre, the houses are mostly arranged in regular terraces, though many are isolated and interspersed with fields and gardens. The ranges of building fronting the sea are generally faced with cream-coloured brick made from a peculiar clay found in the vicinity, and the town is well paved, lighted, and has an ample supply of water. The chapel-of-ease, erected in 1812, at a cost of 12,000*l.*, is a very neat edifice, with a Doric portico. The living, a curacy worth 150*l.* a year, is in the gift of the rector of Broadwater. Here, also, are chapels for Independents and Wesleyans, to which Sunday schools are attached; with well attended national schools for both sexes, supported by subscription; a savings' bank, and a small, but elegant theatre, opened in 1807. The market-place consists of ranges of covered stalls built around a square area. The Esplanade, a raised causeway, extends along the shore for the whole length of the town: near its W. extremity are the Royal Baths, comprising two complete suites of apartments. The New Parisian Baths, recently built, adjoin the Sea House Hotel. It is almost superfluous to add, that it has numerous hotels, with assembly-rooms; libraries, reading and news-rooms, convenient bathing-machines; and the other accommodations incident to a well-attended watering-place. Fine sands extend along the coast for 7 m. to the W., and 3 m. to the E. of the town. These, with the gradually increasing depth of the water, which gives the opportunity of bathing at any time of the tide, added to the mildness of the climate, in consequence of the shelter afforded on the N. and E. by the South Downs, render Worthing especially suitable as a place of resort for invalids. No manufacture of any kind is carried on; but the mackerel and herring fisheries are usually very productive, and contribute largely to the supply of the London markets. An annual fair is held on July 20.; market-day, Sat. and every alternate Wed. for corn. (*Guide to Watering-places of England; Priv. Inf.*)

WREXHAM, a parl. bor., market-town, and par. of Wales, co. Denbigh, hund. Bromfield, on the high road between Shrewsbury and Chester, 11 m. S. by W. the latter. The par. of Wrexham includes no fewer than 12 townships, 2 only of which and a small detached portion of a third are included in the parl. bor., which has an area of about 1,145 acres, and had, in 1841, a pop. of 5,831.

Wrexham is a handsome and lively town, with spacious streets crossing each other at right angles, and neatly and substantially built houses; it is, also, well paved, lighted with gas, and plentifully supplied with water. The church, dedicated to St. Giles, a large and venerable structure, is deservedly regarded as one of the principal ecclesiastical edifices in the principality. It was erected about 1472 on the site of a more ancient structure: it is in the Perpendicular style, and is covered with grotesque sculpture; but in correctness of design and proportion it is surpassed by few buildings of the same date. It consists of a nave, with side aisles and a chancel, the whole length being 178 ft., and the breadth 72 ft.; the aisles are separated from the nave by clustered columns supporting pointed arches; and the ceiling is of oak, in imitation of groined stone. The tower, which was not completed till about 1506, is 135 ft. in height: it consists of several successive stages panelled throughout, and decorated with numerous statues of saints placed in niches of the buttresses; which latter are surmounted by 4 light open-work turrets rising 24 ft. above the balustrade that surrounds the summit of the tower. It has a fine altar-piece, and some interesting monuments; among which are two to members of the Middleton family, admirably sculptured by Roubilliac. The living, a valuable rectory, worth 746*l.* a year, is in the gift of the bishop of St. Asaph. It has, also, a Rom. Cath. chapel, and four

period amounted to only about 7s. a week per horse, many of the owners having only half-work, and few mangers of the owners' families were brought up to assist, but might rather be agricultural or other employment. (*London News* *Wentworth's Reports* to H.B. 1855.) A court is held monthly and a consistorial court occasionally. A mile to the N. of this town is Kilmorley Hall, the seat of Lord Wodehouse, in an extensive and finely wooded park. The Wyndham family, one of the most illustrious in the N. of North, which derived its name from this town, has produced, among other eminent individuals, the distinguished parliamentary leaders, Sir William Wyndham of the reign of George I. and II., and Sir Wyndham, of that of George III. Markets at Wyndham, on Fridays, when the cattle, &c., Feb. 13th, May 13th, and Sept. 13th. (*Parl. Reps.*, &c.)

X.

XALAPA, or JALAPA, a town of Mexico, state Vera Cruz, on the high road from Vera Cruz to Mexico, 50 m. N.W. the former. Pop. estimated at 12,000. It stands on a plateau about 4,500 ft. above the level of the sea, surrounded by low mountainous country and some volcanic culms to heavy fogs. Its climate is generally mild and salubrious, though it is said to be neither so strong nor so well built as Vera Cruz, but it has numerous houses of 3 stories built after the old Spanish manner. In a square containing a court planted with trees and flowers, with a fountain in the centre. The cathedral and other churches, though in an indifferent style of architecture are very gorgeous. This was formerly a great entrepôt for the European trade with Mexico, and large fairs were held here, but its trade has greatly diminished, and its shops and warehouses do not now make much show at present, indeed, Xalapa is chiefly celebrated for its washing, and many of the houses of Vera Cruz send their clothes thither to have them cleaned. (*Barbier*). The more wealthy habits of Vera Cruz and indeed, of all the adjacent coast district, or *sierras volcánicas*, resort to Xalapa in the summer to avoid the heat, insects, and fumes of the low country, from all which it is free. The well known medicinal herb *jalap* grows abundantly in the vicinity of this town, to which it is indebted for its name. (*Barbier's Mexico*, B. II. 33. *Pennant's Mexico* 35-37.)

REYES DE RADAJOA, or DE LOS CABALLEROS, a town of Spain, in Estremadura, prov. Badajoz, near the Ardila, a tributary of the Guadiana, 40 m. S. Badajoz. Pop. estimated at about 2,000. It is walled, and like most Spanish towns, had numerous *torreñas* bastions, but from its being out of any great route, it is rarely visited by travellers. It has manufactures of linen, paper, leather, soap, &c., and a large trade in cattle, which are extensively reared in its neighbourhood.

REYES DE LA FRONTERA a city of Spain, in Andalusia, prov. Cadix, on the road from Cadix to Seville, near the Guadiana, 17 m. N.W. Cadix. Pop. amounting to 11,000, which though perhaps somewhat underrated, is we suspect much more than the *Capitán* Smith's estimate of 60,000. Xeres is situated in the lap of two rounded hills, which shelter it to the E. and W. and it covers a considerable amount of ground. The city properly so called, is enclosed by an old octagonal Moorish wall, enclosing a labyrinth of narrow st. built and worn drained streets, but this wall is of no great extent, and is so interwoven with the houses of the suburbs as to be visible only here and there. The limits of the ancient town are however well defined by the numerous gateways still standing. Some of the old buildings and narrow streets are striking in appearance, and the number of public and chimney cannot fail to strike one who has been long accustomed to the flat roofed cities of Andalusia. (*Smith's Andalus*, &c. B. II. 74.) It has eight parishes, among which is one that is contiguous with a library and a collection of books, a town hall numerous convents, a hospital for orphans, and other hospitals, several schools, a college, a public granary, tobacco warehouses, and an old fortress, are the principal public edifices. The streets even in the best parts of the city, are disgusting dirty, and the want of cleanliness is no doubt the main source of the destructive epidemics to which the town is frequently visited.

Xeres derives its principal or rather its sole importance from its being the great mart of the well known wine, called cherry grown in its vicinity. The principal wine merchants reside mostly in the suburbs, where are, also, the largest warehouses. There are all above ground, and are numerous buildings, with lofty roofs supported on arches, springing from rows of slender columns, having their walls pierced with numerous windows to admit of the thorough circulation of air. (*Smith*, B. II. 74, 75.)

The vineyards, mostly situated on slopes, are raised at considerable distances, so 1000 they were estimated to comprise an area of about 2,000 acres; and as from perhaps, they may amount over 12,000 acres. It is too late to form any very accurate estimate of the produce of the cherry vineyards, partly because there is no accurate account of the exports and of the stocks on hand, and partly because a considerable quantity of the light wine called *magnum*, grown on the right bank of the *Granddagh* is mixed up with the inferior cherries. Probably, however, the average annual export of cherries may amount to about 20,000 barrels (the last contains about 100 wine gallons). Worth from 15 to 20 s. a barrel. It is a valuable export, and good cherry is a cheap wine. "It is," says *Ingis* "he told down as a fact, that genuine cherry one year old, cannot be imported under 25s. a dozen, and if to this be added the profit of the merchant, and the transportation of interest, it is obvious that genuine cherry 3 years old cannot be purchased in England under 40s. a dozen." (*Ingis's Space* in 1830, B. III.) When therefore, any one sees fine old cherry advertised at 10s. or 15s. a dozen, he may be pretty well satisfied that it is a hoax, and that Merlot or Cape Madeira, and not cherry, is the staple of the wine.

The best cherries are all made from the *Laven* grape, with the addition of only about 1 portion of *brandy* to a barrel, and sometimes of a little *Panama*, or sweet cherry and of *Amurats*. The wine are mostly all kept in very large casks, approaching in some degree to the *Mahoning* ton and when any wine is drawn off from one of these casks, it is replaced by an equal quantity taken from the next oldest butt, so that it is idle to talk of the age of the wine, as it is liable to any particular vintage. The cherries are complete of pale cherry to me (the readiness with which the substitution of the wine of cherries, is made when they are gone on, and will bear as long as

potting) market for the introduction and is only of late years, and especially since the decline in the taste for Madeira, that they have come into all but universal use among all classes as a dinner wine. It is not easy indeed, to account for their extraordinary popularity, for though cherry of good quality, and kept to a proper age, be a very superior wine, the true variation from its preparation to those that are inferior, and it is, indeed, too powerful to be used with any degree of freedom.

To show its popularity it is sufficient to mention that, in 1845, of 2,500,000 gallons were entered for consumption in the United Kingdom, no fewer than 2,000,000 were cherry. The duties of port during the same year amounted to 2,045,345 port, making together 4,545,345 gallons, leaving only 1,154,655 gallons for all the other sorts of wine. (*Smith's Andalus* and *Granada*, B. II. 74, 75, &c.; *Ingis*, B. II. 74, 75, &c.; *Memories* in *Spain* 184, 185.)

Of late years *Port St. Mary*, on the N. side of the Bay of Cadix, 10 m. N.W. Xeres, has absorbed a considerable part of the trade of the latter, the wine-merchants who have settled there having the additional advantage of being able to export without the shipping of their wine, Xeres has a few manufactures of soap, leather, soap, &c. but only for the consumption of its own trade. On the plain outside the walls was fought, in 1714, the battle which finally overturned the *Visigothic* monarchy of Spain and gave a great part of that country to the Moors. On the *Castellano*, near the centre of this battle, is a *Carthian* monastery, founded in 1371, since the time celebrated in Spain, but now in decay.

Y.

YAKUTSK, a town of R. Siberia, cap. of the *Amur* prov. of its own name, on the Lena, about 1,100 m. N.E. Irkutsk, lat. 61° 15' N., long. 105° 45' E. Pop. about 4,000. According to *Wroughton*, Yakutsk has all the character of the cold and gloomy north. It is situated on a barren flat, near the river. The streets are wide, but the houses and cottages are poor in appearance, and are surrounded by tall wooden fences. There are five churches, a convent, a stone building for commercial purposes, and an old wooden fortress with its ruined tower, built in 1607 by the *Comanch* conquerors of Siberia. The town has, however, undergone great improvements in the last thirty years. The Yakut have been replaced by substantial houses, the windows of the old town, have given way to glass in the better class of houses, and the more wealthy inhabitants begin to have higher rooms, large windows, double doors, &c.

"Yakutat is the centre of the interior trade of B. Elberia. All the most costly furs, as well as the more common kinds, various teeth, and small mammals, are brought here for sale or barter during the ten weeks of summer from Anadyr and Bering's Straits, the coast of the Polar Sea, and even from Okhotsk and Kamogishima. It is not easy to imagine the mountain-like piles of furs of all kinds seen here, their value often exceeds 1,000,000 roubles. Almost all the Russian settlers in Yakutat employ their idle capital in purchasing furs from the Yakuts during the winter, on which they realize a good profit at the time of the fair, when they sell them to the French merchants.

—As early as the Long is clear of ice, the merchants begin to arrive from Irtutsk, bringing with them for furter, even, mail, the pungent Circassian tobacco, tea, sugar, brandy rum, Chinese cotton and silk stuffs, yards, glass of inferior quality, hardware, glass, &c. But of the annual fair there is not the appearance of animation and bustle, which might naturally be expected. The goods are not exposed for sale, and most of the purchases are effected in the houses or warehouses of the *Atlaque*. (*Franget's Siberia*, 11-12.) Dobson says, that the Indians are hospitable and gay. Several balls were given during his stay and the dance, mancevres and sports of the people far surpassed what he expected to be remote a stranger. (Page 112.) The variations of climate are extraordinary, for though, on the whole, mild predominates to a very great extent, the thermometer is often falling to—40° F., or 40° below the zero of Fah! The heat in summer is sometimes well inferior to that of the torrid zone.

The vast province of Yakutsk comprises, at least, three fifths of N. Siberia, and is watered by the great rivers Lena, Yana, Indigirka, and Kolyma, which carry vast quantities of the iron, coal, and excellent timber the chief mineral products game, of many kinds, abounds. Large herds of cattle, &c. are reared near Yakutsk, and notwithstanding the severity of the winters, rye, barley and even wheat, are said to succeed well throughout the province, except in those parts which are so far N. as to render the summer too short for ripening grain. (See Duboff's Travels in Siberia, N. W. &c. H. Cramér's Siberia and the Polar Sea, &c.)

YANINA (improperly JOANHINA (probably the an. *Yanina*); a city of European Turkey prov. *Alaşehir*, of which it is the cap., on the W. bank of the lake of its own name, 60 m. W. by N. *Larissa*. Lat. 39° 47' N., long. 31° 1' E. Pop. said to be at present about 15,000. It occupies a small peninsula, extending into the lake, and a part of the adjacent shore. Its site being t. -levelly (level). Twenty five years ago Yanina was a town of 20,000 inhabitants, with numerous mosques, many large and well-built houses, and several palaces. It had then a considerable trade with the rest of *Asiatic Minor Asia*, *Western Asia*, &c., and a large annual fair, to which a good deal of Italian produce, with French and German manufactures, &c., were brought. It was, however, set on fire by order of its barbarian and inhuman tyrant, *Ali Pasha*, in 1820, and was almost wholly ruined. The streets are narrow and crooked, and the houses are now mostly of mud. Numerous vacant spaces, especially about the church, are covered with ruins, and all its animation is confined to the bazaar. (*Burgess's Greece*, i. 61.—*Ed.*)

The lake of Yantou is about 6 m. in length, and nearly 8 in its greatest breadth. It is narrowest at the N., and gradually expands towards the S. Mr. Burgess says that the scenery around it would be fine if its banks were wooded; but as it is, the lake is far inferior in respect of beauty to those of Italy, or Switzerland, and is rivalled by none of the Scottish lochs. An island opposite the peninsula has a church and monastery. The description given by modern travellers of the lake of Yantou and its lake, answers perfectly in that of the river and lake of Euxine by Ptolemy. Justinian built a fortress at Euxine, apparently on the identical site now occupied by the citadel of Yantou. (Cramer's *Asiatic Greece* I. 161, 162. Burgess's *Greece*, &c.; *Halbherr*, *Asiatic*; *Cramer's Greece*, &c.)

YARKAND the chief city of Chinese Turkestan, is a little place, on the river of the same name, lat 38° 30' N long 76° 17' 00" E. Its pop. has been variously estimated, but may probably amount to 30,000, exclusive of the Chinese garrison. (Barrow's *Sketches*, &c., 10 vol.) It is enclosed by an earth rampart, pierced with five gateways, outside which are extensive suburbs. There are two citadels, one in the suburbs, and the other in the town. The houses, built of stone and clay, are mostly only one story in height, the streets are intersected by numerous canals and aqueducts which bring water from the river for the use of the inhabitants. Yarkand has two large bazars, numerous mosques, and 10 or 12 Mohammedan colleges, most of the native inhabitants being Musulmans, though much more lax in their religious prejudices than their neighbours to the W. About 300 Chinese merchants reside in the place, and some Cath-

Mothers and Fathers, but only a few Hindus, and neither Jews nor Negro Tartars. When Marco Polo visited this city, he found some Nestorian Christians among the Indians. (Ritter, *Eastward on a Donkey*, p. 300.)

"The productions of China," says Sir A. Burney, "are transmitted to this port, and sold to the natives of Bokhara and Tashkent, who are permitted to frequent certain fixed markets. No Chinese remain the least; the trade to Bokhara being carried on by Mohammedans, who visit Yarkand for that purpose. The same regulations to prevent the ingress of foreigners is here exhibited to upon the same point." "Hence are a great article of trade, and it is chiefly to open a trade in these animals, that Blumenthal desired to reach Yarkand, to which attempt, however, he was frustrated by the jealousy of the Chinese authorities." "Yarkand, with the adjacent province of Cashgar, formed the principality of a Mohammedan Khan. Chasmanloo arose in the reigning family about sixty years since (in the time of Kien-long), and they called on the Chinese government as a mediator, which, as frequently happens, acted the part of a conqueror. The period when has elapsed since the capture of Yarkand has in no way diminished the pretensions of the Chinese government. Yarkand is still considered but an outpost, and the communication between it and Peking is maintained in a most characteristic manner" (See Burney, 2d ed. 128-129.) The Mohammedan natives, indeed, fill the subordinate offices of state, but under the

SECRET

town, is built up, in the gap of Charlottown, on the S. side of the river, had an area of 2,110 acres, with, in 1831, a pop. of 22,133, but the western part has included the whole par. at Charlottown comprising the village of that name, and has an area of 2,265 acres, with, in 1831 a pop. of 22,444, and in 1841 of 27,246. The part of the town on the E. side of the Yarn, or Vermouth property is small, excepting a narrow peninsula between the sea on the one hand, and the river on the other. It consists of four principal lines of streets running nearly parallel with the river, and of an immense number of narrow lanes, or rows, that form the lateral communications between these streets. Very few of the rows exceed from 5 to 6 ft. and only two of them at the opposite ends of the town were possible for common wheel-carriages until the widening of some others in the centre of the town, and long streets formed the street called Regent Street. The principal streets are well built, and wide, opening in some places into a spacious quay market place, and squares, and the town presents on the whole, a thriving appearance. The best dwelling houses are situated along the quay: many of these are substantial and handsome, as are also, many of those in the other principal streets. Most of the shops are situated in the market place, King Street, Broad Row and Market Row, and the warehouses, groceries, meat houses, and fish-offices, together with the inferior dwelling houses, are in the different rows. On the N. W. and S., the town is enclosed by old walls, beyond which is an intermixture of every description of buildings, but principally of extensive warehousing premises, and residences of an inferior class. This part is not paved, and only partially lighted, and principally with oil lamps; but the whole of the town within the walls is well paved, and lighted with gas. A considerable extension beyond the old walls has taken place on the E. side, and long lines of streets, building many detached dwellings and extensive fish-offices, and other premises connected with the trade of the place, now occupy a great part of the space between the town and the sea shore, particularly towards the new jetty. New houses are in progress also on the N. side of the town, along the road leading toward Castor, and along the road toward Nelson's monument. S. of the town, the whole of which neighbourhood, and more especially the line fronting the sea, is to be encroached on with a new town.

Yarmouth is connected by a bridge over the Yare with South town or Little Yarmouth. This suburb, forming the W part of Christchurch par., consists principally of neat and substantial private residences, with docks, timber wharfs, building yards, &c. on the river, and in which much of the business of this port is carried on.

The other distinct group of buildings in Gorleston, which forms the village or town of that name, lies considerably more to the S., nearer to the entrance of the harbour. South town is very imperfectly lighted; and Gorleston is neither paved nor lighted." (*Mun. Corp. Rep.*)

Yarmouth quay is one of the most extensive and finest in England: it is upwards of 1 m. in length, and in some places 150 yards in breadth, having in its centre a planted promenade. Here is the town-hall, a handsome edifice with a Tuscan portico; the council chamber, which is highly decorated, has a full-length portrait of George II. The Star inn, near the town-hall, was once the residence of Bradshaw, president of the High Court of Justice which condemned Charles I.; and some of its apartments still remain apparently as he left them, or even as they were at an earlier period, for the house is of the Elizabethan age. Yarmouth parish church is one of the largest ecclesiastical edifices in the kingdom. It was originally founded in the time of William I.; but the most ancient parts of the present edifice date no further back than about 1,250; and, according to Rickman, only a portion of the building is early English; other parts, particularly the windows, being of the Decorated and Perpendicular styles. (*Rickman's Gothic Architecture*, p. 208.) It is 230 ft. in its greatest length, by 108 ft. in breadth. At the W. end are 4 octangular towers, the outermost of which are surmounted with plain pinnacles, as are the octangular towers at each angle of the S. transept. The tower, at the intersection of the transepts with the nave, formerly decorated with pinnacles, is now embattled, and supports a tall tinned spire erected in 1807, a conspicuous mark from the sea. The part of the interior W. of the tower forms a spacious choir, the ceiling of which is panelled in compartments, having coats of arms of different branches of the royal family of England, and of the Fastolfs, Gournays, Bardolfs, and other proprietors of the neighbouring castle of Calster. The organ in this church is one of the finest in England; and it has many interesting monuments. The churchyard, comprising about 6 acres, is entered by handsome iron gates: on its W. side was standing, till the present summer, the Leaf Gate, a curious brick archway of the time of Charles I. The living, a perpetual curacy, worth 243*l.* a year, is in the gift of the dean and chapter of Norwich. A chapel-of-ease was built in 1716; and the living, a curacy worth 100*l.* a year, is in the gift of the corporation of Yarmouth, the minister's salary being derived from a local duty on coal. The living of St. Peter's church, an edifice in the Tudor style, built under a recent act, is a perpetual curacy, worth 160*l.* a year, in the gift of the incumbent of St. Nicholas' (the par.) church. Attached to the living of Gorleston and Southtown is a curacy, with a separate church, a modern erection, called St. Mary's Chapel, worth 200*l.* a year, lately in the gift of trustees. (*Ecclesiast. Rev. Rep.*) Here, also, are chapels for R. Catholics, Independents, Unitarians, Baptists, Friends, a Jews' synagogue, &c.; and some remains exist of various convents suppressed at the Reformation. A free grammar-school was formerly supported by the corporation, but it ceased to exist about the end of last century. The Children's hospital, founded in the reign of Edward I., is under the government of the corporation, and has an income of 857*l.* a year: it serves as a workhouse, and, also, maintains and clothes 30 boys and 20 girls, and 100 children are taught as day scholars. All children of parents belonging to the town are eligible to be admitted as day scholars, and, as vacancies occur, to become boarders by rotation, according to seniority. The charity school, founded in 1713, clothes and educates a considerable number of children; here, also, is a Lancastrian school, which educates about 150 boys; a girls' school, founded in 1810, for educating and clothing 80 poor girls; and a proprietary grammar school, founded in Southtown in 1833. The Fishermen's hospital, established and built in 1703, was chiefly supported by an annual government grant of 160*l.* a year, deducted from the beer duties, till 1832, when it was discontinued, in consequence of the repeal of the beer duty. The hospital is, however, otherwise endowed, and, at the date of the late inquiry, had an income of 56*l.* 10*s.* a year. Warren's charity, established in 1694 for the general relief of the poor, sick, orphans, widows, &c., has an income of about 375*l.* a year; and there are several other endowments for schools and other charitable purposes. (*Charities' Rep. XXVI.*; and *Digest*, &c.)

There is in the town a very extensive silk factory for the winding and throwing of silk, and the weaving of crapes and other silk goods. The Municipal Corporation Report of 1836 states that "Ship-building, and the various trades with it, are also carried on to some extent in Yarmouth; nevertheless, it cannot be considered as a manufacturing town, but derives its importance and prosperity from the trade and commerce which it owes to its situation and port. The rivers Yare, Waveney, and Bure, which unite in Braydon water, adjoining the town, are navigable; the

first to Norwich, the second to Bungay, and the Bure to Aylsham; and they secure to Yarmouth an extensive trade in the exportation of the agricultural produce of the districts traversed by these rivers, and in supplying them with coals and other heavy goods. The export of grain and malt from this port is considerable, of barley greater than from any other part in England; but the principal business of Yarmouth is the herring and mackerel fisheries, and the curing and exportation of the herrings to foreign countries, particularly the states bordering on the Mediterranean. An extensive timber trade with the Baltic is also carried on; and a considerable number of square-rigged vessels belong to the port. Yarmouth roads have long been the principal rendezvous of the vessels in the collier trade; and the town derives some advantages from the supply of fresh provisions to them.

"The harbour of Yarmouth is formed by the river Yare: it has an awkward entrance obstructed by a bar. Great attention, however, appears to be bestowed on remedying this defect, and on the improvement of the port generally. Vessels drawing about 12 ft. water, or of about 200 tons' burden, can cross the bar, and proceed up to the town at spring tides." The chief improvements of the harbour were effected by a Dutchman named Johnson, employed for the purpose, who first erected piers at the mouth of the river.

Yarmouth Roads, between the town and a line of outer sand banks, though so much frequented, are by no means free from danger. They are marked by buoys and floating lights. There belonged to the port, in 1849, 338 boats of under 50 tons each, and 345 vessels of above 50 tons each, the aggregate burden of the latter being 37,481 tons.

Yarmouth is the principal seat of the English herring-fishery. The herrings usually make their appearance in the roads about the middle of September, when the fishery begins, and continues till towards the end of November. They are partly cured, and partly sent fresh to the metropolis. The fishery of cod, mackerel, skate, soles, red-mullet, whitinga, &c., is also extensively carried on. In 1849 the gross customs' duties received at Yarmouth amounted to 45,535*l.*

Yarmouth has been, for a long time, more or less frequented as a bathing-place, for which, indeed, it is well fitted by its salubrity and its firm, shelving sea-beach. It has, also, a pier, projecting 450 feet into the sea, with public baths, assembly rooms, a neat theatre, a public library, public gardens, and all the establishments usual at a watering place. To the N. and S. of the town, facing the sea, are open and level pieces of ground covered with verdure, called the Denes; and on the most southerly of these is a beautiful fluted column designed by Wilkins, erected in 1817 in honour of Nelson: it is 144 ft. in height, and is surmounted by a statue of Britannia. On other parts of the Denes are various batteries, the barracks, a fine edifice, formerly a naval hospital, built in 1809, at an expense of 190,000*l.*; a new workhouse, erected in 1839, at an expense of 8,000*l.*; numerous windmills, a race-course, &c. On other sides, the environs of Yarmouth have no particular beauty; but the country is well cultivated, and the markets of the town are well supplied. Within a few miles, on the Suffolk side, are extensive remains of the Roman station *Gariannonum*, so called from its situation at the mouth of the *Gariensis* or Yare; and within a similar distance, on the Norfolk side, are the ruins of Calster castle, formerly a sumptuous mansion erected by Sir J. Fastolfe soon after the battle of Agincourt.

The first charter of incorporation possessed by Yarmouth appears to have been granted by John in 1208; but the governing charter previously to the late acts was that granted by Queen Anne, in 1702. Under the Municipal Reform Act the borough is divided into 6 wards, and is governed by a mayor, 11 other aldermen, and 36 councillors. Corporation revenue, 1847-8, 6,230*l.* a year.

Yarmouth has sent 2 mems. to the H. of C., with little intermission, since the time of Edward I., the right of voting, down to the Reform Act, having been in the sons of freemen, and in apprentices serving a seven years' apprenticeship to freemen within the bor. Reg. electors, in 1849-50, 1,222. It has two banks. The bor. has a commission of the peace, and a gaol, an admiralty court, and a county court, before which 1,620 plaintiffs were entered in 1848. The maritime jurisdiction of the corporation extends for 10 miles up the rivers Bure, Yare, and Waveney. Two markets are held weekly, on Saturday and on Wednesday. A fair is held on Friday and Saturday in Easter week: a regatta annually, &c.

Yarmouth communicates with Norwich, Ely, London, Ipswich, &c., by railway; and with London and Hull by steam packets; the Leith, Dundee, Aberdeen, and other steamers, frequently call here in fine weather. (*Bownd. Mun. Corp., and other Parl. Reps., and Local Inform.*)

YARMOUTH, a market town and par. of England, on the N.W. shore of the Isle of Wight, at the mouth of the little river Yar, immediately opposite Lymington, and 9 m. W. Newport. Area of par. 50 acres. Pop. of ditto, in 1831, 586. This town, which has long been in a stationary state, would have been wholly unworthy of notice in a work of this kind but for the circumstance of its having enjoyed the important privilege of sending 2 mems. to the H. of C., from the era of Edward I. down to the passing of the Reform Act, by which it was most properly disfranchised. It was, in fact, one of the most perfect specimens of a proprietary bor. (*Parl. Rep., &c.*)

YECLA, a town of Spain, prov. Murcia, at the foot and on the declivity of a hill, 43 m. N. by E. Murcia. Pop., according to Mifano, 11,600. It was formerly walled and had a fortress, but of these there are now no remains. Its principal buildings comprise 2 par. churches, some convents, an hospital, an ecclesiastical tribunal, and a prison. Its neighbourhood is very fertile; and its inhabs. are mostly occupied in the production of corn, flour, wine, brandy, and leather. Near Yecla are the traces of a more ancient town, where various Roman antiquities have been discovered. (*Mifano; Dict. Géog.*)

YEDDO, or **JEDDO**, the chief city of Japan, and the residence of the *shōgun* or military emperor; on the S.E. shore of the island of Nippon, prov. Monsasa, at the bottom of the Bay of Yeddo; lat. $36^{\circ} 39' N.$, long. $140^{\circ} E.$ Its pop. has been variously estimated at from 700,000 to 1,500,000; but the probability is, that the first of these numbers is beyond the mark. Yeddo is said to be surrounded by a ditch, and intersected by numerous canals and branches of the river Tonak, which are navigable for vessels of moderate burden. It has 2 large suburbs. Its internal plan would appear to be less regular than that of most other Japanese cities; but its streets and squares are clean, and some of the former are of prodigious length. Each street is appropriated to persons of one trade only, lined with covered arcades, and closed at night by gates at each extremity. The houses are mostly 2 stories in height; but being built and almost wholly of wood, destructive fires are very frequent. Yeddo has many temples, Buddhist convents, and other large public buildings: the emperor's palace occupies a large extent of ground. This city has a considerable trade; but there are no materials for forming any estimate of its amount. For farther information as to Yeddo, we must refer the reader to the works of Kämpfer, Thunberg, Siebold, &c.

YEMEN, a district of Arabia, which see.

YENISEI, a great river of N. Asia, in Siberia, through the central part of which it flows, its basin lying between those of the Lena to the E., and the Obi to the W., is supposed to comprise an area of near 1,000,000 sq. m., being about the same size as the prov. of Yeniseisk. The Yenisei rises within the Chinese Empire, not far from lat. $51^{\circ} N.$, long. $98^{\circ} E.$, and proceeds at first W. for about 50° of long., to near the point where it leaves the Chinese frontier. It then turns northward, and pursues generally a northerly course to the Arctic Ocean, which it enters by a wide estuary called the bay of the 72 islands, the mouth of which is in about lat. $72^{\circ} N.$, long. $85^{\circ} E.$, about 200 m. E. of the gulph of Obi. The entire course of the Yenisei has been estimated at 2,600 m. Its chief affluents join it from the E., its tributaries from the W. being of much less importance. Various towns in the upper, with Krasnojarsk, Yeniseisk, &c. in the middle and lower part of its course, are on its banks; Irkutsk is on its great tributary the Verchnie-Tungoska, which flows out of Lake Baikal. As far as Krasnojarsk it runs through a mountainous country, and thenceforward to Yeniseisk, where its width, when highest, is about 1 m.; its banks are elevated and precipitous. A survey of the river was completed in the last century by the Russian government, up to this town; and from this it appears that its channel varies from 2 to 8 fathoms in depth. This noble stream, however, like the other large rivers of Siberia, is but of little use, inasmuch as it flows, for the most part, through desolate wastes; its embouchure being also in a frozen sea, and the river itself being frozen over for the greater part of the year. The Russian surveyors were stopped in their progress upwards, by the ice at Turnshansk on the 1st of October, and by the 10th the river was completely frozen over; and it was not till the succeeding 4th of June that they were enabled to proceed with their survey. (*See Wrangell's Siberia, &c. Introd.; Dict. Géog.*)

YEOVIL, a market-town and par. of England, co. Somerset, hund. Stone, on the border of Dorset, on the Yeo or Ivel, a tributary of the Parrott, here crossed by a stone bridge, 18 m. S. Wells. Area of par., 3,890 acres. Pop. of do., in 1841, 7,043, of whom 6,302 inhabited the town. Yeovil comprises about twenty streets and lanes, some of which are wide and open thoroughfares, the houses being generally good and built of freestone. The par. church, a light Gothic structure, with a large

plain tower at the W. end, is supposed to date from the time of Henry VI. An ancient crypt, an adjoining chapel, and the handsome altar in the church, are worthy of notice. The living, a vicarage, with the curacy of Preston, of the clear annual value of 391*l.*, is in the gift of — Phillips, Esq. Here, also, are places of worship for Unitarians, Baptists, Wesleyans, Independents, &c. The free-school, endowed in 1707 and subsequently, had recently an income of 114*l.* a year, and at the date of the last inquiry, 30 boys were taught reading, writing, and arithmetic, 14 of whom were clothed and apprenticed, and 1 taught Latin. An almshouse for a master, 2 wardens, and 12 poor men and women, had an income of 291*l.* a year; and exclusive of these, there is an almshouse for 4 poor women, and several minor charities. (*Digest of Charity Reports.*)

Yeovil was at one period celebrated for its woollen manufactures. But these appear to have been early superseded by the glove trade, the latter having attained to considerable importance in the town so far back as the middle of the 16th century. Hull, in his History of the Glove Trade, published in 1834, says, "At present the manufacturers are employed in making men and women's fine gloves; which pass in the retail shops as kid gloves, but are, in reality, made from lamb-skins imported from Italy, Spain, and Germany. These skins are mostly dressed into leather in Yeovil, in which place the manufacturers are leather dressers and large dealers in wool, as well as glovers. The quantity of gloves made in Yeovil, of all sorts, may be estimated at 300,000 dozens annually; and the number of men, women, and children employed in the place and the adjoining districts (spreading over 20 m.) amounts, perhaps, to 20,000." (pp. 70, 71.)

The use of cotton and woollen gloves, and the importations of French and other foreign leather gloves, had in some late years seriously depressed the trade of Yeovil; but latterly it has been in a comparatively flourishing state, and the imports of lamb-skins have been greater than at any former period. From 80,000*l.* to 90,000*l.* are said to be, at present (1850), annually paid as wages to persons engaged in the glove trade of the town and its vicinity. Yeovil claims to be a bor. by prescription, its government having been till lately vested in a portreeve and 11 burgesses; but their authority was very circumscribed. A county court has been established here, before which 566 plaints were entered in 1848. Market day Friday, when a good deal of butter, cheese, corn, &c., is sent into the town; and large quantities of the butter made in the surrounding district are purchased, and sent to London, to be sold as Dorset butter. Fairs, June 28. and Nov. 17., chiefly for farm stock. (*Parl. Reports; Hull's History of the Glove Trade, &c.*)

YEZD, a considerable city of Persia, in the E. part of which it is situated, about 250 m. E. by S. Ispahan. Its pop. has been variously estimated; but if the statement of Kinneir, who assigns to it 24,000 houses, be near the mark, it must certainly be one of the most populous cities in the empire. It is situated in a sandy desert, near a range of high mountains, and has a fort, but no other defensive works. Being at the point of union of the principal roads connecting Ispahan, Kirman, Meshed, and Herat, it is consequently a considerable emporium. Its bazaar is said to be well supplied with provisions; though, from the sterility of the adjacent country, its supplies of corn have, for the most part, to be brought from Ispahan, and cattle are both scarce and dear.

The manufacture of silk stuffs in this city was, some years ago, superior to any other in Persia, and the village of Tuft, about 8 m. S. W., was equally famous for its *sums*. Here, also, are some fabrics of arms and sugar refineries. Formerly a good many Hindoos were settled in the town, but these were driven away by the exactions of a late Persian governor; it has still, however, numerous families of Parsees (Guebres, or fire-worshippers) among the pop., this being almost the only town in the Persian dominions where they are now met with. Though an oppressed, they are an exceedingly industrious people. (*Kinneir's Pers. Emp., 113, 114.; Dict. Géog., &c.*)

YONNE, a dep. of France, reg. centre, formerly comprised, for the most part, in Champagne and Burgundy, principally between lat. $47^{\circ} 30'$ and $48^{\circ} 30' N.$, and the 3d and 4th degrees of E. long., having N.W. the dep. Seine-et-Marne, N.E. Aube, E. Cote d'Or, S. Nièvre, and W. Loiret. Area, 728,747 hectares. Pop., in 1846, 374,803. Surface undulating; the hills scarcely any where rising to more than 690 ft. in height: the most elevated are in the S.W., separating the basin of the Seine from that of the Loire. The Yonne, whence the dep. takes its name, rises in Nièvre, near Château-Chinon, and runs generally northward to the Seine, which it enters at Montereau, in the dep. Seine-et-Marne, after a course of about 177 m.; for 70 of which, or as high as Auxerre, it is navigable. It traverses the dep. of Yonne nearly in its centre, receiving within its limits the Oure, Serein, and Armançon from the E.; its tributaries from the opposite side being inconsiderable.

It communicates with the Loire by the canal of Nivernais; and with the Saone by that of Burgundy. A great part of the soil is calcareous, or gravelly, but about 300,000 hectares are said, in the *Official Tables*, to consist of rich land; and more corn is grown than is required for home consumption. In 1841, the arable lands were estimated to comprise 453,100 hectares; meadows, 31,265 do.; vineyards, 37,543 do.; and woods, 146,570 do. Hugo estimates the annual produce of corn, mostly wheat and oats, at 2,060,000 hectolitres, and that of wine at 1,110,000 do. The growths of this dep. are known as those of Lower Burgundy; the red wines of Tonnerre and Auxerre are especially esteemed; and the secondary growths of Epineuil, Irancy, &c., are also in high estimation. Chablis, the best of the white wines, is served up by the French epicures with oysters. Wines of this class *sont spiritueux sans être trop fumeux, ont du corps, de la finesse, et un parfum très agréable*. The consumption of the dep. does not exceed 250,000 hectolitres, the rest being mostly sent to Paris, the N. of France, and foreign countries, little brandy being made. The orchards, which comprise nearly 6,000 hectares, are of importance; and Yonne, along with Loiret, supplies Paris with all the *raisins* consumed by its inhabs. Fewer cattle and sheep are reared in this than in any other part of the central deps. The forests abound with game, and produce great quantities of charcoal, the trade in which is extensive. Iron, marble, lithographic and many other kinds of stone, gun flints at Cerilly, lime, and clay, are the principal minerals. Bricks and tiles are made in large quantities, and glass, earthenware, &c., in various places. The manufactured products include woollen stuffs and yarn, blankets, serges, &c.; beetroot sugar, paper, glue, &c.; hydraulic clocks made at Sens, barrels at Avallon, &c. The chief trade of the dep. consists in the export of its wines, corn, timber, and other agricultural produce. In 1835, of 190,786 properties subject to the *contrib. foncière*, 108,342 were assessed at less than 5 fr., and 28,578 at from 5 to 10 fr.; the number of those assessed at 1,000 fr. and upwards, amounted to only 161. Yonne is divided into 5 arronds.; ch. towns, Auxerre the cap., Avallon, Joigny, Sens, and Tonnerre. It sends 5 mems. to the Ch. of Dep. Number of electors, in 1838-39, 1,839. Total pop. rev., in 1831, 11,344,924 fr. (*Hugo, art. Yonne; Dict. Géog.; French Offic. Tables.*)

YORK, a marit. co. of England, being by far the largest and most important in that part of the U. Kingdom, is bounded on the N. by the co. Durham, E. by the North Sea, S. by the cos. of Lincoln (from which it is separated by the Humber), Nottingham, and Derby, and W. by Lancaster and Westmoreland, and a small part of Chester. Area, 3,669,510 acres, of which about 2,500,000 are supposed to be arable, meadow, and pasture. It is divided into the districts of the North, East, and West Ridings, being respectively as large as cos., and each of them having its particular lord lieutenant: there is besides a separate smaller district called the city of York and Ainsty; but the latter, except in so far as the city is concerned, has been united to the W. Riding. The extent, population, &c., of these different divisions are as follows:—

	Area, Acres.	Inhab. Houses, in 1841.	Population in 1841.
North Riding - -	1,275,820	42,509	201,662
East Riding - -	711,360	38,390	193,676
West Riding - -	1,629,890	226,473	1,154,924
City and Ainsty - -	52,440	7,710	38,322
Totals - -	3,669,510	315,082	1,591,584

Owing to its extent and various capacities, Yorkshire presents an epitome of the whole kingdom with respect to surface, soil, products, and industry. Some of the mountains on its W. border, are among the highest in the great central ridge extending from Scotland S. to the middle of Derbyshire; and both there and in its N. division are very extensive tracts of high, sterile, moor ground. In the E. Riding a large tract of wolds extends from Flamborough Head to Fliley Head, on the coast, to Pocklington and Market Wighton: but, notwithstanding these deductions, Yorkshire contains a great extent of the most excellent land. The vale of York, the district of Cleveland in the N. and that of Holderness in the S.E., besides various other extensive tracts in different parts of the co., are exceedingly fertile, possessing soils suitable for every purpose, either of arable or stock husbandry. The climate is as various as the soil and elevation; but, except on the high grounds, it is mild and early, and is everywhere salubrious, except on the low, marshy grounds along the Humber. Agriculture in a medium state of improvement; not so far advanced as in Northumberland or Lincoln, but not so backward as in several other cos. There is in this respect, however, a great difference in the different ridings, agriculture being in a much more advanced state in the W. riding than in either of the others. The general rotation is there—1st, turnips or fallow; 2d, barley; 3d, seeds; 4th, wheat. Bone manure is much

used, but not to so great an extent as rape-dust; the latter, however, is principally used for wheat, the bone manure being decidedly superior for turnips. Drainage is too much neglected in the N. and E. ridings. In the latter no system is acted upon, except in the Wolds, where the rotation is—1st, turnips; 2d, barley; 3d, seeds; 4th, wheat. In other parts of this riding, and in the N. riding, two corn crops not unfrequently follow in succession, and but few operations are performed as they ought to be. (*Kennedy and Grainger, l. 367.*) York is more of a grazing than of an agricultural co. Vast numbers of horses are bred in most parts. Those in the highest estimation are called Cleveland bays, partly from the district in which they were originally found in the greatest perfection, and partly from their colour; but they are now very widely diffused. They are in extensive demand as carriage-horses. Cattle very various: they consist mostly of the long-horned breed; but there are considerable numbers of short horns, with endless varieties produced by crosses between these and other breeds. At present, the Teeswater and Holderness breeds are the greatest favourites with the graziers; but the long horns, or a cross between them and the short horns, are preferred by the dairy farmers. Yorkshire supplies most of the cows used in the London dairies. Their average yield of milk may be estimated at from 22 to 24 quarts a day, but it does not yield a proportional quantity of butter. Sheep of all varieties, and stock very large, supposed to amount to about 1,200,000 head, producing annually about 28,000 packs of wool. Many hogs are kept, and Yorkshire hams are celebrated in all parts of the country. Property in the W. and N. ridings very much subdivided; but in the E. riding it is less subdivided than in most parts of England, and many families in this riding have held their estates for centuries. Farms of all sizes; but the majority seem to be unusually small. Most part of these farms are held from year to year, or by tenants at will; and, notwithstanding the statements that have been made to the contrary, we have no doubt that this species of tenure, by diminishing the security of the farmer, has operated in no ordinary degree to retard the progress of improvement. Farm houses and buildings for the most part rather indifferent. Average rent of land, in 1842, 21s. 4d. an acre.

The W. riding of this co. stands in the very first rank as a manufacturing district. Leeds, Bradford, Huddersfield, Halifax, and Wakefield are the great seats of the woollen manufacture; flax-spinning is extensively carried on at Leeds; and the hardware manufactures of Sheffield rival, and, in some departments, as that of cutlery, far surpass, those of Birmingham. There are extensive iron-works at Rotherham; and latterly the iron-works of Yorkshire have made considerable progress. Their total produce in 1848 has been estimated at 66,560 tons, which is probably within the mark. Cotton manufactures have been established at Easingwold, and in some other parts of the W. Riding. The manufactures in the other ridings are but of trivial importance. The valuable beds of coal found in the vicinity of Leeds, Sheffield, Bradford, Wakefield, &c. have, no doubt, been the principal source of their prosperity. Besides coal and iron, Yorkshire has mines of lead, and veins of copper; alum works were established near Whitby in the reign of Elizabeth, and are still worked (*see WHITBY*); and there are in various places excellent limestone and freestone quarries. Principal rivers Ouse, Swale, Ure, Wharfe, Aire, Calder, Don, Derwent, Hull, and Esk; the waters of all these, except the last, being poured into the great estuary of the Humber. The canals, particularly in the W. Riding, are numerous, being some of them of great importance; and the principal towns are now, also, connected with railways. The co. is divided into wapentakes and liberties, and contains 613 parishes. It sends 39 mems. to the H. of C., viz. 6 for the co., being 2 for each riding; 2 each for the city of York, and the bors. of Leeds, Sheffield, Hull, Beverley, Bradford, Halifax, Doncaster, Pontefract, Ripon, Knaresborough, Malton, Richmond, and Scarborough; and 1 each for the bors. of Huddersfield, Whitby, Wakefield, Northallerton, and Thirsk. Registered electors for the N. Riding, in 1849-50, 11,391; for the E. Riding, 7,341; and for the W. Riding, 36,780. Sum expended for the relief of the poor, in 1849, N. Riding, 56,484l., E. Riding, 78,374l., W. Riding, 329,766l. Total value of real property assessed to the poor, in 1840-41, N. Riding, 1,011,885l., E. Riding, 1,111,807l., and W. Riding, 3,394,802l. Total amount of money levied for poor-rates for the co. during the year ended Lady-day, 1814, 468,947l.

YORK (an. *Eboracum*), an ancient and celebrated city of England, being, under the Romans, the cap. of Britain, and at present the second city of the kingdom in respect of rank, though not of importance. It is a county of itself, and a parl. and mun. bor., locally situated near the centre of the co. York, of which it is the cap., at the junction of the N., E., and W. Ridings; on the Ouse, at the confluence of the Foss,

22 m. N.E. Leeds, 33 m. N.W. Hull, 170 m. N.N.W. London, and 160 m. S.S.E. Edinburgh. Lat. $53^{\circ} 57' 45''$ N., long. $1^{\circ} 4' 34''$ W. The area of the old par. bor. and city comprised 2,720 acres, and had in 1831 a pop. of 26,260. But by the late act, some additions were made of parts of the townships of Clifton and Heworth on the N., and of Fulford on the S.E., to the par. bor., which is nearly co-extensive with the mun. bor., comprising, in part or wholly, 36 parishes, with some extra-parochial districts.

The city is inclosed by its ancient walls, supposed to have been erected by Edw. I., about 1280: they are flanked with numerous towers, and having been repaired and renovated in 1831, form a most delightful promenade, extending round the greater part of the city. They are pierced by 5 principal gates, termed bars, and by 5 smaller gates, or posterns; some of the former being remarkable structures. The Ouse and the Foss traverse the interior of the city, uniting at its S. extremity. The Foss is crossed by 4 bridges, and the Ouse by a single bridge, a handsome structure of 3 arches, constructed between 1810 and 1820, at a cost of 80,000*l*. The span of the central arch is 75 ft., that of the other arches 65 ft. each; the total width of the bridge within the parapet is 40 ft. Handsome flights of steps at each end conduct to spacious quays on both sides the river, called the King's and Queen's staiths, to which vessels of 90 tons may be moored.

York consists of several parallel lines of thoroughfare, running N. and S., crossed by others, which are generally shorter and more irregular, in an opposite direction. The principal of the former, nearly 2 m. in length, consists of Bootham, Petergate, Colliergate, Walmgate, &c., with their continuations. The line crossing it, and composed of Micklegate, Ousegate, Pavement, St. Saviour's-gate, &c., is almost as long. In the centre of the city is a fine broad open space called Parliament Street, terminating at one end in Sampson Square; and at the other end in the Pavement, the site of the corn, poultry, and other markets; and wool and leather fairs are held in Peaseholme Green, an open space in the E. part of the city. There are a few other open spaces in the heart of the city, as St. Helen's Square, &c.; but none of them deserves any particular notice. York has been much improved and modernized of late years, but it still preserves an air of antiquity in its narrow streets and old-fashioned houses. Many of the latter formerly overhung the streets, the upper stories projecting beyond the lower; but a good many of these have been taken down, and buildings in a modern style have been erected in their stead. Some of the streets also have been widened, and the city generally is well paved, and lighted with gas. In consequence of the rise of Liverpool, Manchester, &c., the increasing importance of many of the large towns of Yorkshire, and the greater facilities of communication between the different parts of the kingdom, York no longer enjoys that pre-eminence in the N. she possessed in the earlier part of last century. Still, however, she is not declining in any respect; but is, on the contrary, increasing in size. In the outskirts many substantial and even superior buildings have been recently erected; and the city is extending itself nearly in an equal degree in almost all directions. To the N.E. of the town was formerly an open space known by the name of Heworth Moor. In 1817 this was enclosed; and in this neighbourhood a great number of substantial and excellent houses have been built since the period of the enclosure. Here also many market gardens are cultivated; and altogether the district is thriving and populous, and presents undoubted testimony of progressive and prosperous industry. (*Bound. Report*.) On the W. of the Ouse along the road from Leeds to the "Micklegate" are several good houses, many of which have been recently built, and are occupied chiefly by persons who have either retired from business, or are engaged in business in the older part of the town; the number of these houses is constantly increasing. The parishes beyond the Foss, through which the road to Hull passes, contain for the most part a pop. of a poor description." (*Mun. Corp. Rep.*)

York minster, or cathedral, is the finest edifice of its kind in the kingdom. It stands in the N. part of the city, and, except on its N. side, where a considerable space of ground has been cleared, is closely hemmed in by mean-looking buildings. The present edifice, said to have been raised on the site of a church originally founded by Edwin king of Northumberland, in the 7th century, was principally erected during the 13th and 14th centuries. It is without cloisters, and built in the form of a cross; consisting internally of a nave with two aisles; a transept, with aisles and a lantern in the centre; a choir, with aisles, and vestries or chapels on the S. side; and a chapter-house, with a vestibule, on the N. side. Its principal measurements are as follow:—length, internally, 524 ft. (being greater than that of any other cathedral in England, except Winchester); internal length of transept, 223 ft.; length of nave, 264 ft.; do. of choir, 131 ft.; height of both, 99 ft.; breadth of nave, 109 ft.; height of

great tower, 234 ft.; height of W. towers, each 196 ft. (*Stranger's Guide to York*, p. 103.)

This magnificent structure has a portion of all the styles of English architecture; but the Norman only appears in a fine crypt, under a part of the choir, which reduces the general appearance to the three later styles; of these, the transepts are early English; the nave and arches supporting the great tower are decorated; and the choir and upper part of the great tower are perpendicular. (*Rickman's Gothic Architecture*.) The W. front has been compared to that of the cathedral of Rheims for richness, sublimity, and beauty of architectural design. It is divided into 3 compartments, by 2 massive graduated buttresses enriched on every face with tabernacle-work, and the elevated battlemented gable is covered with ornamental tracery of the most florid kind. There are 3 entrances in this front; over the central of which is the unrivalled W. window, divided into 5 portions by upright mullions, which in the upper part beautifully diverge into the leafy tracery peculiar to the 14th century. The magnificent towers which flank this side exactly correspond; they are supported by buttresses, and have at their summits 8 crocketed pinnacles connected by a battlement. Almost the whole of the W. front is filled with niches, but these, with few exceptions, are empty. The S. side, though finished less elaborately than the W. front, is very imposing. The porch in the S. transept is the most usual entrance to the church, and is deeply recessed by numerous mouldings; over it is a beautiful marygold window, and the gable is surmounted by an enriched pinnacle. The N. side is in a similar style to the S., though finished in a plainer manner; and in its transept is the remarkable stained glass window termed the "five sisters." The E., like the W. front, is in three grand divisions, separated by buttresses, the central of which is wholly occupied by a magnificent window. Like the W. front also, it is covered with niches, though only a very few of the statues formerly occupying them now exist. On this front the influence of time is very perceptible. The central tower, 234 ft. in height, is probably unfinished. It has two large windows, with two tiers of mullions, in each of its four sides. But it wants a spire; and, when contrasted with the W. towers, has a heavy appearance.

The interior of the minster corresponds in beauty and grandeur with the exterior. A careful restoration of the cathedral in most of its parts had been completed, when, on 2d February, 1829, it was set on fire by a lunatic; the conflagration thence ensuing destroyed the fine organ, and all the woodwork and roof of the choir. Another destructive fire broke out on the 20th of May, 1840, in the S.W. tower, by which its fine ring of 10 bells and the clock, with part of the roof of the nave, were burnt. These injuries are now (1842) in the course of being completely repaired: the choir was renovated after the fire of 1829, under the superintendence of Sir R. Smirke. The new roof is wholly constructed of teak, presented by government; and is covered with lead procured from the mines of the Greenwich hospital estates. The remarkable stone screen, which separates the choir from the nave, stands in its original position, and is of a most gorgeous and florid style, ornamented with 15 statues of the kings of England, from William I. to Henry VI., all of which, except the last, are of ancient sculpture. The new organ placed above this screen, and presented by the late Earl of Scarborough, is of the most superb description, and has some pipes 32 ft. in length. A great deal of fine stained glass, many sculptured coats of arms, and the tombs of many of the archbishops of York, attract the visiter's notice in the interior; though, on the whole, this cathedral is less rich in monuments than many others in the kingdom. From the N. transept, a vestibule leads to the chapter-house; this is an octagonal building, 63 ft. in diameter, and 67 ft. 10 in. in height, supported on the outside by eight massive buttresses. "The more minutely," says Rickman, "this magnificent edifice is examined, the more will its great value appear. The simplicity and boldness, and at the same time the great richness of the nave, and the very great chastity of design and harmony of composition of the choir and great tower, render the building more completely one whole than any of our mixed cathedrals; while the exquisite beauty of the early character of the chapter-house, and its approach, forms a valuable link to unite the early English transepts and the decorated nave. This chapter-house is by far the finest polygonal room without a central pier in the kingdom, and the delicacy and variety of its details are nearly unequalled. Too much praise cannot be given to the dean and chapter for their careful restoration of every decayed portion. By this restoration the whole of the W. front may be considered in as good a state as when first erected; a considerable portion of the S. side is also restored." (*Gothic Architect* p. 265.) The vestries on the S. side of the church contain, among many other antiquities, a chair in which several of the Saxon kings were crowned,

and which is said to be older than the cathedral itself; and the drinking horn of Ulphus, a Saxon prince of Deira, presented to the cathedral in 1036, with a large extent of country to the E. of York, still in the possession of the see. The library is at a short distance from the cathedral on the N. side. (*Winkie's Cathedrals; Guid. to York; &c.*)

The gross annual income of the see of York amounted, at an average of the three years ending with 1831, to about 13,800*l.*, and the nett income to 12,629*l.* The chapter consists of a dean and four canons residentiary, sharing an income of 1,352*l.* a year, and 26 prebendaries having separate revenues. (*Eccl. Rev. Report.*) The archbp. of York has the title of primate of England, with the privilege of crowning the queen-consort, and ecclesiastical authority over the province of York, comprising the sees of York, Durham, Carlisle, Chester, Ripon, and Sodor and Man.

Previously to the dissolution of the religious houses by Henry VIII., besides 17 chapels, 16 hospitals, and 9 religious houses, there were in this city 41 par. churches, but of these last only 23 now remain. Many of these would be worthy of notice elsewhere; but they sink into insignificance after the cathedral. St. Michael-le-Belfrey, in the minster-yard, is the largest and most elegant, and with St. Martin's in Coney St. is in the late perpendicular style. All Saints, North Street, and St. Mary's, Castle-gate, have towers and lofty spires, and are mostly perpendicular with some earlier portions; St. Denis, St. Lawrence, and St. Margaret, have good Norman doors, with portions of later date; and St. Mary Bishop-hill, the Elder, has portions of good early English and decorated work, amidst various alterations and insertions. In many of the churches are considerable quantities of old stained glass. (*Rickman, p. 266.*) All Saints in the Pavement is of very ancient foundation; and Drake says that its N. side is almost wholly built out of the ruins of *Eboracum*, though other parts of the edifice are quite modern. A large lamp still preserved here used to be hung at the summit of this building, as a beacon for travellers at night through the forest of Galtres, which extended from Bootham-bar a considerable distance N. of the city. Most of the livings of these churches are rectories or vicarages in the gift of the crown or the dean and chapter of York; the most valuable are those of St. Cuthbert, worth 233*l.* a year nett, and St. Mary Bishophill, the Elder, worth 226*l.* a year, both in the gift of the crown: St. Martin's, Micklegate, worth 243*l.* a year, is in the gift of a private family. (*Eccl. Rev. Rep., &c.*)

The remains of St. Mary's Abbey, originally founded by William Rufus in 1088, and refounded in 1270 for black monks of the Benedictine order, are very interesting. The abbot was mitred, and had a seat in parliament; and at the time of the dissolution the revenues of the abbey amounted to 2,085*l.* 1*s.* 3*d.* a year. The buildings were for the most part destroyed, between 1701 and 1717, and their materials used for rebuilding the castle of York and St. Olave's church, and repairing Beverley minster. Almost the only parts remaining are a gateway, and the N. wall of the abbey church, 371 ft. in length, having fine light Gothic window-arches, with highly finished carved capitals. Mr. Rickman says that the remaining part of the church furnishes the richest and most beautiful specimens of transitions from early English to decorated that remain for examination; but being entirely exposed, it is fast decaying. The abbey had an extensive and strongly fortified precinct without the ancient walls of the city; and some of its walls and towers, forming an extraneous portion of the old city defences, may still be seen between Bootham-bar and the Ouse. The remains of St. William's College, founded by Henry VI., exist in a street near the cathedral. St. William's chapel stood on the old bridge over the Ouse, and was consequently taken down with that structure. The cloisters of St. Leonard's and St. Peter's hospitals, curious remains of the architecture of the time of Will. I. & II., are now used as wine vaults.

The dissenters, who form a numerous and respectable body in York, have at least a dozen places of worship; the oldest of which is the Presbyterian (Unitarian) chapel, in St. Saviour-gate. The Wesleyans have an elegant new chapel in the same street, with a massive Ionic portico, &c., besides three other chapels. The Independents have 2 chapels, one of which (Salem Chapel), erected at the end of St. Saviour Gate, is a large and handsome edifice. There are also meeting houses for Primitive and other Methodists, and Friends; a fine R. Cath. chapel, a nunnery, and chapel outside Micklegate-bar, &c.

York Castle, towards the S. extremity of the city, between the Ouse and Foss, near their confluence, occupies a space of nearly 4 acres. It was originally built by William the Conqueror, who also erected another fortress, at York, on the other side of the Ouse. But only a small portion of the original structure of the castle remains, except Clifford's Tower, a keep added

by the Conqueror to the rest of the edifice, and erected upon an artificial mound, which had probably served for the site of a Roman fortress. York Castle, which was long garrisoned for the king in the civil wars, is not now a defensive military post, but has been converted into the co. prison and hall. The basilica, or co. hall, on the W. side of the great area, is entered by a portico, supported by Ionic columns, and internally divided into civil and criminal courts, with handsome rooms, for the use of the grand and petit juries, counsel, &c. The building, on the E. side of the area, which is uniform in design with the court-house, is chiefly appropriated to female prisoners. Between 1821 and 1836, a new prison was built here, at an expense of 203,530*l.*, on the panopticon principle, with 8 airing courts, the whole being surrounded by a lofty stone wall, 35 ft. high. This building is said to be most excellent of its kind. In 1828-29, the committals to York Castle amounted to 632. (*Genl Returns, 1840.*) The city gaol and house of correction is on the W. side of the Ouse; its outer wall encloses an area of nearly three fourths of a mile in circuit: it is appropriated partly to prisoners before trial. Near it is the *vetus ballium*, or old baile, a mound corresponding with that on which Clifford's Tower is built, having probably had the same origin and purpose.

Most of the other edifices, of public interest, are in the N. part of the city. The mansion-house, a large and handsome edifice, erected in 1725, has in front a rustic basement supporting an Ionic colonnade, with a pediment on which are the arms of the city. The state-room, 49½ ft. in length by 27½ ft. in breadth, has paintings of Will. III., Geo. II. and IV., and of several noblemen and gentlemen. The guildhall, behind this edifice, built in 1446, comprises one of the finest Gothic halls in the kingdom, 96 ft. in length, 43 ft. in width, and 29½ ft. in height, the roof being supported by 10 octagon pillars on stone bases. In the windows are some fine specimens of stained glass, and over the entrance is a full-length statue of Geo. II. In this hall, the Lords-president of the North formerly held their court; and here also the Scotch received the 200,000*l.* paid them by Parliament for the assistance they afforded against Charles I. At the end of the hall is the city assize and sessions court; and adjoining, are the council chambers of the corporation. The assembly-rooms were erected, by subscription, in 1730, and are entered under a portico, resting upon light stone columns, supporting a ballustrade. The walls are supported by 44 light and elegant Corinthian columns, with a beautiful cornice, the upper part of the building being of the Composite order, and richly adorned. The rooms are lighted by 44 windows. The grand assembly-room is constructed from a design by Palladio, and measures 112 ft. by 48 ft., and 40 ft. in height. It was used for concerts till about 1825, when, being found too small, a magnificent concert-hall adjoining was built, 95 ft. in length, 60 ft. in breadth, and 45 ft. in height, capable of containing 1,700 persons, 400 being accommodated in a gallery supported by cast-iron pillars. It is lighted with gas, and fitted up in a style of much elegance: its cost, including the purchase of the ground, amounted to 9,400*l.* The theatre, built by Tate Wilkinson, in 1765, and recently altered externally in the Elizabethan style, is extremely commodious. The Yorkshire Philosophical Society, founded in 1822, obtained, in 1826, a grant of 3 acres of land, part of the site of St. Mary's Abbey, from government, for a suitable building, botanic garden, &c. The Museum, built between 1827 and 1830, is an elegant edifice, with a front towards the Ouse, 200 ft. in length, and has a spacious hall, a library, a theatre for lectures, with large collections in geology, mineralogy, zoology, comparative anatomy, a chemical laboratory, &c. The affairs of the society are conducted by a council of 12 members, and officers elected once a year. Annual subscription of members 2*l.* (ladies, 1*l.*), with 5*l.* entrance. The York Subscription Library, with 17,000 vols., occupies a spacious suite of rooms in St. Leonard's Place: it is supported by about 400 members, who pay 10 guineas each on entrance, and 2*s.* a year afterwards. There are other subscription, and several good private circulating libraries, with 3 news-rooms, at which the London, Edinburgh, and many provincial newspapers are taken in. Four weekly newspapers are published in York.

Outside Monk-bar is the county hospital, founded in 1749 by Lady Hastings, with (in 1842) an income of about 1,400*l.* a year. The building has a front of 75 ft., by a depth of 90 ft., and encloses a court measuring 26 ft. by 35 ft. It is remarkably well kept, and capable of accommodating 100 patients. Without Bootham-bar is a lunatic asylum, built by subscription in 1777, 3 stories in height, having a front 132 ft. in length, with extensive grounds, &c.; and about 1 m. from the city is the Retreat, an establishment of a similar nature under the careful management of the society of Quakers. Here, also, is a dispensary, founded in 1788; an eye infirmary, established in 1831, and various medical and other charities for the benefit of the poor. The educational establish-

amounts are on a very extensive scale, at least in an effort to demonstrate that the more ordinary transaction of introducing are common. A number of men are in connection with the York (Chicago) factory, occupying the extensive premises in Washington, formerly used as the Government building. This was the chief factory of the Government in England, was removed from Washington to York in 1911, but has lately been again removed to Washington. Here are also various schools maintained in order to which about 700 children of both sexes are admitted. British schools for about 300 boys and 200 girls; the same number boys and girls are also admitted by the United States to maintain at about 1000 boys. Elphinstone's charity school for the education of 100 poor children of the poor of the city; the orphaning school, established by two ladies in 1793, where about 20 girls are instructed in reading, writing, and sewing, and practically connected with Sunday schools for

The scenery traversed in the Fallowood road, the station, houses on different slopes, a large pond and canal, and Hatherlythorpe station, the end of the excursion, about 6 am. & 8. Down the city are the numerous villas which continue to be visited. The grounds of the last are frequently reported to be destroyed by the insects which injure the public grounds in the city is the New Walk, a gravelled air-acc. planted with trees, &c. extending from the cathedral, end of the square for nearly 1 m. along the (New Walk) the New Walk is a walk built, and has, walls, and various trees are attributed to Lane. For the preservation of the public in large. Some-thing better have also been recently created.

The city of York claims to be a corporation by prescription. Its earliest charters date to the reign of Henry II. William I., but the governing charters before the Municipal Reform Act were of the 13th, 14th, 15th and the 16th Cent. By the terms the corporation claimed were the mayor, 16 aldermen, the 6 vestry and the common council, the corporation city council took place, consisting 75 members, comprising 40 who sat, as in London, to the separate wards, 40 the corporation officers were freemen, the franchise of the city being restricted by birth or apprenticeship to a freeman within the city limits, and by gift or purchase from the mayor, from the price of purchase varying from 50s. to 1000. Under the Municipal Reform Act, the town is divided into six wards, and is governed by a mayor, recorder, 16 aldermen, and 40 councillors, 40 each elect one. The chief magistrate has the title of Lord Mayor conferred by Richard II. in 1381, which title he subsequently enjoyed before the chief magistrates of the corporation. York was a borough in the 11th Cent. in the 13th of Hen. III. and has continued to be so regularly from the time of Edw. I. the right of electing freemen has been partly vested in the corporation and freemen. The greatest number of voters within the 10 years previously to the Reform Act, was 6,717 polled in 1832. The charter to Edw. III. 1350. The authority for the 16 vestry of the city of York is said to be 100 years of date for the 16th and the city are also said to have 100 years' franchise rights consisting a court of pieps, and petty sessions, a court of wards, and three courts of law, and other courts, one alderman, 16 vestry, 16 aldermen, 40 councillors, 40 each elect one. The corp. of York had an elective jurisdiction over the town a large district comprising about 10 villages and villages, from the time of Hen. I. but a late act converted the authority to the 10 aldermen of the corp.

[illegible]

ships on the improvement of the river navigation, and steamers were put in and from that at all times of the tide. Cattle are brought to the town by water and by railway. A devoted carriage of trade has been established during the completion of the railways by which York communicates with Newcastle, Durham, Carlisle, the northwest, and with London. Had the Liverpool line, and other parts to the S. The York station of some suburbs is an elegant building, immediately within the walls near Wharfedale. Large sales of horses and harness take place at this town have once a fortnight. Festivals which there are monthly fairs for leather; many others to the poor for Gas, coal, &c. Wharfedale Town, and has the largest study for iron. A new opera-house was opened in 1856, situated at Wharfedale. Rooms which are extremely well attended, are held from time to time at Wharfedale. A large plate about 100 ft from the city where is a spacious grand stand. Four thousand banking companies and two private banks are established in the city.

The variety of York is superior to that of most provincial towns. From its being the capital of the largest province in the kingdom, it is the residence of a great number of gentlemen connected with the law and the administration of public affairs. It is consequently, also, the residence of a number of gentlemen connected with its agriculture and different occupations manufacturing. And in addition to its great wealth, it is the winter residence of many of the Protestant clergy educated better by its superior society than elsewhere, its situation for education, &c.

Antiquities and History — York, though nominatively the residence of the Duke of Devonshire, Gales and Cornwall, the Countess of Lincoln, Countess of the Gwent, &c., has few worthy Roman antiquities. Such as do exist comprise a remarkable underground tower, a long wall with many other small remains, and the foundations of several buildings. The position of the Roman camp is supposed to be shown by a ditch to have occupied several acres near the cathedral extending from the Church Church through to the square between the cathedral and St. Andrew's to the north. But the fact that in the cathedral's cemetery, where Roman antiquities remain have been found, (notably the remains of a Roman wall, with a perfect altar-stone, was opened in 1801) and a wonderful pavement was discovered under the same bed in 1814. Several died at York, in 1155 and the funeral obsequies would appear to have been performed on walls built in a line W. of the city and called the seven hills. Countess of the Duke of York is traditionally said to have been buried in the par church of St. Helen's. Under the name York was successively the cap of the kingdom of Northumbria and then of Mercia, and its neighbourhood defended by William the Conqueror in 1066. Several parliaments have been held in York, the last being that summoned by Henry II. in 1155. In 1644 Henry VIII. contributed to this city an office called the Lord Treasurer of the North and a charter with several other powers which increased all the civil power which York was formerly a principal market and residence of the Duke. It is now superseded in the parliaments in 1801. Several Manuscripts and other Parts. **Notes** — See also a Guide to York, Beckman's Guide to England. **Foreign Information** —

[illegible]

Vol. 124411 a part has and one part tests of iron and pure hydrogen on each, on the W side of the memory of the three same transfiguring system by means. W m & by W Cook. A copy of another part has the given Prop. in 1811. It is a trust done to the Order & also along the best of a pretty cheap bill and certain principle of a well done, extending the above 1 m. parallel to the north end of certain other similar streets and lanes. It was formerly an account by walls and close to west streets and then

and luxuriant weeds." (*Ingils*, l. 178.) It has, also, a chapel of ease, several Roman Catholic chapels, and meeting-houses for various classes of dissenters, an infirmary, a dispensary, a barrack for infantry, numerous public schools, a convent, the college, now in a neglected state, the property of the Duke of Devonshire, a court-house, custom-house, fever and lying-in hospitals, &c. The house occupied by Sir Walter Raleigh is still preserved in good repair, and with but little change.

Youghall sent 2 mems. to the Irish H. of C.; and it has sent 1 mem. to the Imperial H. of C. from the era of the Union downwards. Registered electors for 1849-50, 408. Under the Irish Municipal Reform Act, 3 & 4 Victoria, cap. 108., the corporation is extinct, and the corporate property has been vested in commissioners.

The manufactures of the town are inconsiderable, consisting only of 2 small potteries and brick-works. It is too near Cork to have much foreign trade; but owing to its situation on a fine navigable river, it is the emporium of a considerable tract of country. The great articles of export consist of grain and meal, provisions, cattle, and pigs, their aggregate value having amounted, in 1836, to 215,316*l*. The principal articles of import are timber and coal. The bar at the river's mouth has only 4 feet water at ebb tide, and it is inaccessible for vessels drawing more than 12 or 13 feet water, except at high springs. Youghall is included in the port of Cork, but its shipping is inconsiderable. Postage, in 1842, 518*l*.; ditto, in 1849, 632*l*. Branches of the Bank of Ireland and the Provincial bank are established in the town. The beach is fine, and the town is well fitted for sea-bathing; though, in this respect, but little advantage has been taken of its capabilities.

It is believed, apparently on good grounds, that the introduction of the potato cultivation into Ireland dates from 1610, when Sir Walter Raleigh sent a few to be planted on his estate in the vicinity of this town! But such has been the progress of this exotic, that it now furnishes, and has for a lengthened period furnished more than three fourths of the food of the people of Ireland; and its astonishing increase has been at once a cause and a consequence of the equally astonishing increase of population in the island. (See *Boundary Report*; *Railway Report*; *Commercial Dict.*, art. *Potatoes*, &c.)

YPRES (Flem. *Ypern*), a fortified town of Belgium, prov. W. Flanders, cap. arrond. and two cants., on the Yperlee, 29 m. S.W. Bruges, and 16 m. N.N.E. Lille; lat. 50° 51' 10" N., long. 2° 53' 4" E. In the 14th century it is said to have been nearly equal in pop. and importance to Bruges; whereas in 1836 it had only 15,064 inhabs. (*Heuschling*.) It is well built, and, like most towns in Flanders, it has extensive water communications, being connected by canals with Nieuport, Bruges, &c.

The court-house and cloth-hall occupy a vast Gothic building of the 14th century, surmounted by a fine tower. The cathedral, a Gothic edifice, has a painting attributed to Van Eyck; the tomb of Jansen, bishop of Ypres, and founder of the sect of Jansenists in the 17th century, &c. There are several other churches and chapels, 4 hospitals, an exchange, a royal college, &c. Ypres was formerly famous for its manufactures of woollen and linen cloths, and the fabric called *diaper* (originally *d'Ypres*) derives its name from having been originally made in this town. Linen yarn and lace are now the principal articles manufactured; but there are still some woollen and linen cloth factories at Ypres, with tanneries, bleaching and dyeing-houses, one or more salt-refineries, &c. Ypres experienced many reverses in the wars of the 17th and 18th centuries. Under the French it was the cap. dep. Lys. (*Vundermaelen*, *Dict. de Fland. Occident.*; *De Cloet*, &c.)

YRIEX (ST.), a town of France, dép. Haute-Vienne, cap. arrond., on the Loue, a tributary of the Isle, 21 m. S.S.W. Limoges. Pop., in 1816, incl. comm., 7,470. It owes its origin to a monastery founded here in the 6th century; and is old and ill built. It has a collegiate church, a curious Gothic edifice of the 12th century, 4 other par. churches, an hospital, a court of primary jurisdiction, a society of agriculture, &c., with manufactures of woollen stuffs, linen yarn, and porcelain, and 12 annual fairs. Here are some iron works, and works for the preparation of antimony: all the porcelain clay used in the china-manufactory of Sèvres comes from St. Yriex. (*Hugo*; *Guide du Voyageur*, &c.)

YSENGBAUX, a town of France, dép. Haute-Loire, cap. arrond., on a rocky and elevated site, 14 m. N.E. Le Puy. Pop., incl. comm., 7,590. Though irregularly built, and *assez triste*, it has a good modern church, and is improving. It has no manufactures worthy of notice, its inhabs. being principally engaged in agriculture and cattle-dealing. (*Hugo*, &c.)

YUCATAN, the most E. state of the Mexican Con-

federation, consisting of a peninsula, projecting northwards, between the Caribbean Sea on the E., and the Gulph of Mexico on the W., and between the 18th and 21st degs. of N. lat., and the 87th and 91st of W. long., having S. the states of Tabasco, Chiapa, Vera Paz, and the British territ. of Honduras; length, N. and S., about 250 m.; average breadth, 200 m. Area about 50,000 sq. m. The pop. has been estimated at about 500,000. The most striking accounts of the productiveness of this region have been frequently put forth in geographical works. But, according to Mr. Ward, "Yucatan is one of the poorest states in the Federation. On parts of it, maize, cotton, rice, tobacco, pepper, and the sugar-cane, are produced; with dye-woods, hides, soap, &c. But the scarcity of water in the central parts of the peninsula, where not a stream of any kind is known to exist, and the uncertainty of the rainy season, render the crops very variable; and years frequently occur in which the poorer classes are driven to seek a subsistence by collecting roots in the woods, when a great mortality ensues, in consequence of their exposure to a very deleterious climate. Yucatan has no mines. An active intercourse was formerly carried on with the Havannah, which Yucatan supplied with Campechy wood, salt, hides, deer skins, salted meat, and the *jacagua*, a plant from which a sort of coarse thread was made, and wrought up into sacking, cordage, and hammocks. This trade was cut short by the war; and as few foreigners have been induced to settle in Yucatan, the inhabs. have derived but little advantage from the late change of institutions. The receipts of the state in 1826 amounted to 213,127 dolls., the expenditure was 207,199 do.; so that a small surplus revenue remained." (*Ward's Mexico*, ii. 390, 391.)

This state is divided into 15 depts.; its chief towns are Merida, the cap., Valladolid, Bacalar, Campechy, and Vittoria; but none is of much importance. In 1829, it separated itself for a time from Mexico; and we incline to think that at present (1842) it is but little, if in any degree, dependent on the central government.

YVERDUN (Germ. *Iseren*, an. *Ebrodunum*); a town of Switzerland, cant. Vaud, cap. distr., on the Thiele, at its mouth in the S. extremity of the lake of Neufchatel, 17 m. N. by W. Lausanne. Pop. between 3,000 and 4,000. It is well-built, consisting of three principal streets, with a handsome square, a new church, and town-hall, several bridges across the Thiele, &c. Its principal edifice is a castle, built in the 12th century, and which, from 1805 to 1825, served for Pestalozzi's central school, conducted by himself. Yverdun has a college, a public library, with a museum of antiquities, and a tolerable harbour on the Thiele. Its trade is brisk, it being the great depôt for the wine of the cant. exported northward. (*Ebel*; *Dict. Geog.*, &c.)

YVETOT, a town of France, dep. Seine-Inférieure, cap. arrond., on the road between Havre and Rouen, 20 m. N.W. the latter. Pop., in 1846, inc. comm., 8,863. It is situated on a bare and arid hill, destitute of any running water, the inhabs. being supplied from wells. It consists chiefly of one long street; but this has few good houses, and the rest of the town is very meanly built. It has, however, a planted promenade; and the surrounding country is fertile and populous. Yvetot is the seat of courts of primary jurisdiction and commerce, a chamber of manufactures, &c., and has manufactures of linen and cotton cloths, cotton velvet, handkerchiefs, hosiery, cutlery, and hardware. It has also a considerable trade in corn and sheep. Towards the end of the 13th century, the Spanish, Italian, and other merchants used to proceed from Harfleur to Yvetot, where they conducted their chief mercantile transactions with the French; and, perhaps in the view of encouraging commerce, the fief of Yvetot was declared, in 1370, free of all feudal service to the French crown. Its lords soon afterwards coined their own money, and assumed the title of *king*. The exploits of one of these petty monarchs form the subject of one of Beranger's national songs. (*Hugo*, art. *Seine Inférieure*; *Dict. Géog.*, &c.)

YUTHIA, the an. cap. of the kingdom of Siam, on the Menam, 40 m. N. Bangkok: it appears to have been formerly a place of much magnificence, but it has now fallen into decay.

Z.

ZAANDAM, improperly SAARDAM, a town of N. Holland, on the Zaan, a tributary of the Y, by which it is divided into E. and W. Zaandam, 4½ m. N.W. Amsterdam. Pop. about 11,000. Mr. M'Gregor says, "We have only visited one place (Broek), so trim, quiet, and minutely clean. The streets are paved with clinkers, and daily washed; the houses are built of wood and painted white and green, and their principal door, that of ceremony, is only opened at baptisms, marriages, and funerals."

The dockyard, in which 300 vessels were built and repaired annually, have disappeared; its herring and whale fisheries have also vanished; but its vast number of windmills employed in sawing timber, &c., appear, with their dependent operations, to give full occupation to the inhabs." (*Note Book*, i. 197, 198.)

At one period, Zaandam ranked among the greatest naval arsenals in Europe; but the principal celebrity of the arsenal, and, indeed, of the town, is derived from the circumstance of Peter the Great having wrought in it as an ordinary ship carpenter during his visit to Holland in 1697. The hut which he occupied is still kept up, and has been visited by numerous distinguished personages, including Napoleon, Alexander, Emperor of Russia, &c. (*De Cloet; Voltaire, Hist. de Russie*, partie i. cap. 9.)

ZACATECAS, a city of Mexico, cap. of the state of its own name; in a narrow valley, 290 m. N.W. Mexico. Ward estimates its pop. at 22,000, and that of its suburb, Veta Grande, at 6,000. (*Mexico*, ii. 342.) At a distance, its numerous churches and convents give it a fine appearance, and it has many excellent houses; but its streets are narrow and filthy. Its markets appear to be abundantly supplied with fish, fruits, vegetables, &c. Gunpowder and some cotton fabrics are manufactured here; and Zacatecas is next to Guanajuato, the principal mining city, and one of the chief mints in Mexico. In the latter establishment, some years ago, 300 people were constantly employed. The machinery, of brass, and made in the town, was ponderous, and a great deal of labour was wasted; still, however, the coinage from Jan. 1821 to June 1826 amounted to upwards of 17,570,000 dollars.

The state of Zacatecas, with an area of about 20,000 sq. m., and a pop. of 280,000, is one of the richest mining provinces in America. "As a mining district, it differs materially from Guanajuato, for in lieu of one great mother vein, it has 3 lodes nearly equal in importance, with many inferior lodes; upon all which nearly 3,000 pits or shafts have been opened." (*Ward's Mexico*, ii. 333.) N. and E. of Zacatecas, the country is divided into vast breeding estates, and is very thinly peopled. The state has no manufactures, except those of the cap. and a few in Aguas Calientes; the pop. living by mining and rural industry. After the cap., the principal towns are Sombureti, Fresnillo, Jerez, Pinos, &c., which, according to Mr. Ward, have a pop. of from 14,000 to 18,000 each.

ZAFRA (an. *Srgeda*), a town of Spain, in Estremadura, prov. Badajoz, 40 m. S.E. Badajoz, on the road between it and Seville. Pop. 7,500. (*Milano*.) It is regularly built, and has 2 squares surrounded with arcades, and many houses of a superior class. Among the latter is the magnificent residence of the Dukes of Medina Cell. (See *Milano*, x. 58.) The collegiate church is also a fine edifice, and several other churches are richly adorned. This town had formerly manufactures of gloves and jewellery; but these have decayed, and earthenware and leather are now the principal articles made at Zafra. It was taken from the Moors by Ferdinand III. in 1240. (*Dict. Géog.*, &c.)

ZAMORA, a city of Spain, in Leon, cap. prov. of its own name, near the confines of Portugal on the Douro, here crossed, according to Twiss, by an ancient and clumsy stone bridge, with 16 unequal arches; 34 m. N.N.W. Salamanca. Pop., about 10,000. (*Milano*.) Its fortifications are of considerable extent, and some years ago enclosed upwards of 20 churches, 16 convents, 3 hospitals, infantry and cavalry barracks, a court-house, public granary, bishop's palace, &c. The cathedral was much admired by Townsend (ii. 71.), for its variety of marbles and the beauty of its hangings. Without the walls are the remains of an ancient castle. The inhabitants manufacture hats, serges, leather, liqueurs, and gunpowder, and have several dyeing-houses. The city, which is supposed to have been the ancient *Scutica*, derives its modern name from the turquoises found in its vicinity, for which *Zamora* is the Moorish term. Alphonso, the Catholic, took it from the Moors in 748, but it was retaken by the latter in 985. Ferdinand the Great finally annexed it to Castile in 1093, and it was the seat of the Cortes in 1297 and 1302. (*Milano; Townsend; Twiss; Dict. Géog.*, &c.)

ZANESVILLE, a town of the U. States, in Ohio, cap. co. Muskingum, on the Muskingum river, 48 m. E. Columbus. Pop. in 1840, 4,766. The falls in the river here have made Zanesville the seat of many flour, paper, and saw-mills, some iron-foundries, cotton-factories, &c. It has an athenæum, and several other schools. Two bridges connect the town with the village of Putnam opposite; and it has water communication with both New York and New Orleans; from either of which steam-boats ascend to Zanesville. (*Encyc. of Geog.*, Amer. edit., &c.)

ZANTE (an. *Zacynthus*), one of the Ionian Islands, (which see), of which it is the third in point of magnitude and importance, about 10 m. off the W. coast of the Morea, its cap. being in lat. 37° 47' 17" N.,

long. 20° 54' 32" E. It is of a somewhat oblong shape; greatest length N.W. to S.E. about 20 m.; greatest breadth 10 m. Area estimated at 156 sq. m. Pop., in 1836, 35,348. It is mostly mountainous, particularly its W. portion, where several summits rise to the height of 1,300 ft.; but on the E. side, behind the town of Zante, is an extensive and fertile vale, so covered with currant bushes (*Vitis Corinthiaca*), olive trees, cypresses, &c., as to entitle the island now, as of old, to the epithet of "woody."

Jam medio apparuit fructu numerosa Zacynthus.

Æneid, iii. 270.

"About 9,000,000 lb. currants are annually produced in this fertile vale. They are accounted better than those of Cephalonia, but inferior to those of the Morea. They are gathered in Aug., and spread out to dry for three weeks; and for this purpose a plot of ground is levelled and kept dry before every house in the valley. Much depends upon the process of drying: a shower of rain will sometimes diminish the value of the article by one third, and a second entirely ruin the crop." (*Burgess's Greece*, &c., i. 120.) The learned traveller, Dr. Chandler, has given the following details with respect to the treatment of currants, which, perhaps, may be worth quoting:—"When dried by the sun and air, they are transported to the city on horses and mules, guarded by armed peasants; and poured down a hole into magazines, where they cake together. When about to be shipped, the fruit is dug up with iron crows, and stamped into casks by men with bare legs and feet. In the ships it sweats, and, as we experienced, often fills the vessel with a stench scarcely tolerable. The islanders believe it is purchased to be used in dyeing, and in general are ignorant of the many dishes of which currants are an ingredient." (*Travels in Greece*, cap. 79.) The honey, oil, and wine of the island are much esteemed; of the latter no fewer than 40 different sorts are said to be made. Oranges, lemons, and citrons are also exported, and about 40,000 barrels of salt are annually produced from the salt works of the island. The pitch wells, visited and described by Herodotus (iv. 195.), are situated towards the S. extremity of the island, in a small plain, open on one side to the sea, but elsewhere circumscribed by hill ranges. It is, partly at least, of volcanic formation, and occasionally suffers from earthquakes, one of which, in 1840 (Oct. 30.), committed the most extensive ravages. In the wells, a dark substance is continually forcing itself from the bottom through the water, boiling up in large globules, which burst when they come to the surface. The pitch is collected with large spoon-like implements: the average annual produce is about 100 barrels, used for smearing ships' bottoms, &c.

The town of Zante, on the E. shore of the island, is the largest in the Ionian Islands, having about 20,000 inhabs. (*Burgess*.) It stands partly on the level shore, and partly on some acclivities, one of which is crowned by its citadel, anciently called *Psaphis*, founded by the Arcadian Zacynthus. The town, which is well kept and clean, is supplied with water by an aqueduct constructed by the British. The reflection of the sun renders it extremely hot in summer, though the heat be a good deal moderated by the action of the sea-breeze, which blows during the day. The harbour is capacious, and protected from N.E. winds by a mole, at the extremity of which a lighthouse is erected. Ships anchor opposite the town, at from 500 to 1,000 yards distance, in from 12 to 15 fathoms water. Zante is the see of a Greek protopapas, and of a Rom. Cath. bishop, and has numerous churches, two synagogues, a lazaretto, a lyceum, &c.; with some manufactures of linen, cotton, and woollen stuffs, liqueurs, soap, jewellery, &c. This town suffered severely from the earthquake already alluded to.

At the time of the Peloponnesian war, Zacynthus belonged to Athens: it was at an after period alternately a possession of the Macedonians and the Romans. Several curious antiquities have been discovered in the island, and it has been supposed that the remains of Cicero were deposited in a tomb discovered here in 1544. (See *Hughes' Travels*, i. 155, 156. &c.; *Burgess; Chandler's Greece; Græmer's Ancient Greece; Commerce. Dict.*, &c.)

ZARA (an. *Jadera*), the cap. of Dalmatia, circ. of same name on the Adriatic, opposite the island Ugliano, 150 m. S.E. Venice. Lat. 44° 2' 25" N., lon. 15° 9' 32" E. Pop. about 6,500; principally of Italian descent. It stands on a small peninsula, and is fortified with bastioned walls and several outworks. It has many good private dwellings, but its streets are narrow and ill-drained, and it suffers from a deficiency of water. It has a cathedral and several other churches, 10 convents, a naval and military arsenal, and a theatre; with a lyceum, gymnasium, episcopal seminary, many inferior schools, a museum of antiquities, &c. Its harbour is spacious, but exposed to N. winds, which sometimes blow with tre-

tracts are the most fertile; and the swampy tracts, especially, if they be covered with flax, are also, when drained extremely productive. The dry upland grounds, if they be well covered with luxuriant fern and scrub, are said to be, in most localities, of a fair average fertility; but where the fern is short and stunted, the soil is decidedly inferior. Where the sides of the mountains are well wooded, the soil is generally good; but, except where the slopes are formed into terraces, it is apt to be washed down on the trees being felled and their roots rotted. The soil of the purely volcanic districts depends on the extent to which the surface matter is decomposed; in some parts it is very fertile.

Grain of all kinds, fruits, and vegetables, grow luxuriantly. Potatoes, originally introduced by Captain Cook, now form the principal food of the natives. Two crops are annually obtained from the same ground. "To an English farmer, about to emigrate to N. Zealand, it will be praise sufficient to say that turnips—the mainstay of British husbandry—grow with a vigour unsurpassed anywhere; and that beans, peas, and other leguminous plants are equally successful. On arriving he will have nothing to unlearn. His old familiar crops will be the crops of his new country; his husbandry maxims will scarcely require any variations, except in the transposal of his seed-time and harvest; and the gooseberries and currants of his garden, the apples and cherries of his orchard, and the hum of his bees, will all serve to remind him of his native country." (*Emigrant's Guide to New Zealand*.)

The expense of clearing the land constitutes, however, a very serious abatement from this rather flattering picture. This expense varies of course according to the difficulties to be overcome. It has been estimated at from 10*l.* to 15*l.* per acre for the timbered land; at from 5*l.* to 10*l.* per acre for that which is covered with brush and scrub; and at from 1*l.* 10*s.* to 4*l.* for that which is covered with fern, the roots of the latter being strong and difficult to remove. In some situations the cost of clearing the land is greater, and in some, less than the above; but, on the whole, it may be regarded as a fair average. This heavy outlay required to make the land available, is the great discouragement to settlers in N. Zealand; and it also is the cause of the cleared land bringing a pretty high rent. Though the heavier timbered land is almost uniformly richer and finer than that covered with brush, scrub, and fern; yet, owing to the cost of its clearance being so much greater, it is doubtful whether it be not more advantageous for a settler, unless, indeed, he have a very considerable capital, to commence, in preference, clearing the inferior land. A large proportion of the fern roots are usually left to rot in the ground.

The following table, showing the extent of land under different crops, with the stock, &c., in the principal settlements in the southern prov., during each of the five years ending with 1847, has been compiled by Mr. Grimstone, the Colonial Secretary:—

District.	Years.	Number of Acres under Crop.							Live Stock.				Agri- cultural Popula- tion.
		Wheat.	Oats.	Barley.	Maize.	Potatoes.	Other Products.	Total.	Horses.	Horned Cattle.	Sheep.	Goats.

catch them by means of dogs. It is remarkable that when New Zealand was first discovered, it had no indigenous mammalia whatever; indeed its only quadrupeds were a few species of lizards, which the inhabs. held in veneration or terror. Horses, cattle, sheep, and other useful animals, have all been imported; even the dog and the rat have been introduced by Europeans; and the latter is at present, or was very recently, the principal species of game! A good many parrots, paroquets, wild ducks, pigeons of large size and fine savour, &c., inhabit the forests; and poultry are found to thrive very well, though not yet reared to any great extent. Indeed, if we except their prisoners of war, almost the only animal food used by the New Zealanders, previously to the settlement of the English, was the fish, which abounded round the coasts.

It is seen by the preceding table that the soil and climate are well suited to the growth of cattle, sheep, and other useful animals. The wool of New Zealand is of a very good quality; and the exports of it are progressively increasing, though the want of down lands and of open spaces for their pasture makes the increase of sheep less rapid than in Australia. As might have

and full of vivacity; the teeth, which are white, even, and regular, last to old age; the features, though prominent, are regular; their physiognomy bears no sign of ferocity, but is easy, open, and pleasing. They make excellent seamen, in which capacity they are extensively known. If we except occasional cannibalism and infanticide (both of which have greatly decreased of late years), they manifest fewer of the vices of savages than almost any other savage people. Their manufactures, when first discovered, were but few, and mostly confined to the furniture of their huts, articles of dress, weapons, and other necessities. But they prepared mats and other articles in flax of great beauty, and evinced much ingenuity in carving and building canoes. They have an abundance of poetry of a lyrical kind, in a metre which appears to be regulated by a regard to quantity; and are passionately fond of music. They have also a kind of astronomy; and, according to Baron Hügel, there is not a tree or even a weed, a fish or a bird, in the N. island, for which the natives have not a name universally known. Unlike most other savages, they have evinced the greatest aptitude for acquiring the arts, and the greatest desire to participate in the advantages of civilised life. A considerable proportion of the natives are slaves to others, who are themselves dependent, to some extent, on certain *arekees* or head chiefs; but the holders of slaves appear, notwithstanding, to have independent control over their own lands, and to dispose of them at will, without the consent of the *arekee*. Polygamy is practised by such of the New Zealanders as continue attached to their ancient superstition; but the missionaries, who have establishments in many parts of the islands, have, according to their own account, been eminently successful in converting them to Christianity. Schools, also, have been established in which the natives are instructed in the English language; so that the fair presumption is, that at no very distant period polygamy, with cannibalism and the other savage vices by which they were lately distinguished, will be wholly unknown. (*Prichard's Researches*, v. pp. 122—134., and the authorities there referred to.)

In a dispatch, dated March, 1846, the governor gives, among others, the following details respecting the natives:—

"Upon the state of the native population generally, I would report that they are making rapid and remarkable progress in the arts of civilised life.

"The attention they now pay to the cultivation of wheat, to improved modes of agriculture, and to the rearing of horses and cattle, is very remarkable. They readily, in the parts of the colony which are distant from towns, dispose of their wheat at 2s. per bushel, taking payment in manufactured goods which are valued by the European trader; so that, virtually, the price given for the wheat is much less than 2s. per bushel.

"To give particular illustrations of the kind of property they own, I may mention that the natives near Nelson, about 600 in number, had upwards of 340 acres under wheat, 300 acres of potatoes, 80 of maize, and 50 of other crops, beside several small vessels, and 11 horses, in addition to their pigs, poultry, &c. Whilst the Ngamotu natives near Taranaki, consisting of only 118 males and 86 females, are not only large growers of wheat and other produce, but are possessed of 23 head of horned cattle, 7 horses, 2 drays, and 1 plough. These are particular instances which happen to have been lately reported to me, but I have no doubt that other much more striking ones exist in other portions of the island.

"If such advances as these have been made so immediately after the recent disturbances, there can, I think, be no doubt that a few years of peace will produce still more striking and rapid changes.

"The measures which have been recently carried out for advancement of the natives are:—prohibiting the sale of arms and gunpowder, and the repair of arms; prohibiting the sale of spirituous liquors; the enactment of an ordinance which provides the means of educating a large and constantly increasing number of native children; the providing a tolerably efficient means of medical attendance in the most populous native districts; the employment of a native constabulary force, thus acquainting them with our laws; the enactment of laws for the adjustment of all disputes between natives and Europeans; the employment of natives upon public works, where they are trained in various kinds of skilled labour, and in the use of European tools and implements; and the providing employment generally for from 1,200 to 1,400 natives on the various public works.

"These measures have all tended to incorporate the natives with the Europeans, to blend the interests of the two races, to render them mutually necessary to each other, and to induce the natives largely to contribute to

that revenue which will provide the means for their own more perfect control and government.

"I have strong hopes that, under the continuance of such a system, the value which the labour of the natives will give to the land will produce a rapidly increasing land fund, which will again afford the means of more extensively employing them upon roads and public works, and thus provide the means of still further promoting their civilisation, and of opening up the country by roads."

But favourable as this picture undoubtedly is, we should not presume too much upon the forbearance or friendliness of the natives. Like all savages, they are both suspicious and treacherous; and causes of dissatisfaction between them and the colonists will never cease to arise, especially when the numbers of the latter are considerably increased. Hence the expediency of always having a considerable military force in the islands; and of preventing, in as far as practicable, the natives from acquiring fire-arms.

New Zealand was discovered by Tasman in 1642, but its extent and character were not ascertained till the voyages of Cook in 1769 and 1774. From that period, the coasts were occasionally visited by whalers, and some communication was held with the natives; but no permanent settlement appears to have been made by any people till about 1815, when a missionary station was established in the Bay of Islands, towards the N. extremity of the N. island. Though the right of Great Britain to these islands was recognised at the general peace, no constituted authority was placed over New Zealand till 1833, when a resident, subordinate to the government of New South Wales, was sent hither, but with very limited powers. Meantime the shores had become infested by marauding traders, run-away convicts, and other unscrupulous characters, who introduced a taste for ardent spirits, various diseases, and much demoralisation. These persons also swindled, or attempted to swindle, the natives out of large tracts of land, by getting them to subscribe contracts, of the real import of which they certainly knew little or nothing, by which entire districts were conveyed away for the merest trifle. Under these circumstances, it became necessary to establish a government sufficiently strong to protect the aborigines and the real interests of the colonists. Accordingly, in Jan. 1840, New Zealand was constituted a colony dependent on New South Wales; and a lieut.-governor appointed, who immediately proclaimed, among other announcements, that *all purchases of land would, in future, be void unless conducted through the British local government*. But shortly before the formal occupation of these islands, the mania for speculating in land attained to an enormous extent; and vast tracts, equal, in fact, to provinces, were acquired by a few individuals, belonging to the islands, to Sydney, and other parts. It was not, therefore, enough to prevent such wholesale acquisitions in future. Justice to the natives, on the one hand, and the best interests of the colony on the other, made it imperatively necessary that the grounds on which the claims to land were made should be carefully inquired into; that in all cases in which the natives had been swindled the grants should be cancelled; and that, when confirmed, their extent should be limited. And, in consequence of these considerations, a commission was appointed to inquire into the validity of all claims to land; and the commissioners were instructed to recognise those only which were founded on fair and equitable considerations, with the important proviso, that no claim for land, when affirmed, should be allowed to a greater extent than 2,560 acres.

The N. Zealand Company, established in 1841, for the promotion of colonisation in the islands, acquired in this view a right to extensive tracts of land. It had not, however, been long established till disputes began to arise between its directors and the government; and great difficulties were also experienced in adjusting the rival land claims of the crown, the natives, the colonists, and others. Hence the affairs of the islands were for a considerable period in the greatest confusion. The natives and the colonists came to blows, and the real or alleged grievances of the N. Z. Company engrossed a large share of the attention of parliament. Happily, however, these differences have been adjusted. All lands not actually cultivated or occupied by the natives have been vested in the crown, which has also the exclusive right of purchasing land from tribes, though individuals, as distinct from tribes, may dispose of their property at pleasure. All lands, whether belonging to colonists or natives, are to be registered. The crown is not to alienate or dispose gratuitously of any land, except what may be required for public works. The rest is to be sold by auction; and we may add that here, as in Australia, its *minimum* price has been fixed at the extravagant rate of 20s. an acre. Government has further agreed to give up for a term of (three) years to the N. Z. Company the crown's right to the pre-emption of

land from the natives to the U. S. government, and has engaged to give allot to each grants, loans, and mortgages as the company may desire them. In consequence of these arrangements, and of the tranquillity that has been observed in the islands it is probable that emigration to them will remove a new impetus, and that their progress will be comparatively rapid. The government of the colony is to be established on a liberal basis, with representative corporations in the towns, and a representative colonial assembly. Legislation, however, as the regulations to be introduced into the constitution will probably be much modified before they are carried into full effect. It would be useless to make them to detail

The European pop. in the islands has been estimated to amount in 1924 to about 14,000. The estimates of the native pop. differ very widely, but it may, perhaps, be taken as about 100,000.

The principal British settlements consist of Auckland, the cap. with a pop. in 1848 of about 8,000, on the E. side of the N. island, on the E. side of Waitemata Harbour, lat $36^{\circ} 41' 37''$ N., long $174^{\circ} 45' 30''$ E.; Wel- lington the cap. of the S. prov. on the E. side of Port Nicholson near the N. extremity of the N. island in Cook's Straits; New Plymouth, or Taranaki, on the E. coast of do.; Moerua at the head of Tasman's Gulf, N. shore of the middle island; Akaroa, near the ex- tremity of Banks's Peninsula, on the E. coast of do. A few settlements are now being established at Otago, on the E. coast of the middle island, which is patronized by the Scotch Free Church, and a settlement, entitled New Canterbury of which the site is not yet selected, is to be founded, under the patronage of the leaders of the established church.

It now only be doubted whether much judgment has been displayed in the selection of the locality of these sites. At Archland there is no good landing-place even for small vessels, and the water in shore being shallow, ships land and unload with difficulty. It is stated by Mr. Anthony Fremont on *Colorado Water* p. 146 that a ship laden with coal, of which the Indians were at the time in want, was obliged to leave the port from there having no chance of her being able to discharge her cargo within anything like a reasonable time. The town is also indirectly supplied with fresh water and the country is bare of wood, and comparatively unproductive. Wellington is hemmed in by ranges of mountains which in great measure shut it out from all communication with the interior though this disadvantage has been in part overcome by the carrying of good roads through the ranges in question. It is also frequently exposed to heavy gales of wind; and the water in shore is so shallow as to hinder vessels of above 40 or 100 tons from visiting its wharfe. But despite these serious drawbacks, the town is said to be in a comparatively thriving state. Governor Gray, in his dispatch already referred to, says.—

"I regard this settlement as being now in a most thriving state. The whole of the disputes which existed between Europeans and natives regarding claims to lands have now adjusted. Grants have been issued to the New Zealand Company for the lands they claim in the vicinity of Wellington. The two ranges of mountains which, upon the east and west, divided the port and town from the fertile and extensive districts lying upon the other side of the ranges, have been broken through by careful roads, which will now in a few months be completed. The Customs revenue of the single port already averages near £16,000 a-year, and is steadily increasing. The flocks and herds of the settlers are rapidly spreading over the fine pastoral country which the new roads have opened up. The most friendly relations exist between the Europeans and natives. The town has been made the capital of a separate province, so that it will no longer feel the evils of a distant seat of Government. The soil and climate of the surrounding country are most favourable to Europeans, and the settlers, under circumstances of great difficulty, have shown themselves to be energetic and enterprising in an ordinary degree. There they appear every reason to think that Wellington and the district in its neighbourhood will continue to advance steadily in that course of prosperity upon which it appears to have fairly entered."

The situation of No. 40 is also objectionable, being built on the head of a deep bay, having a narrow and dangerous entrance. According to Governor Geop, the harbor of Akodon is one of the best in the colony, and he further says that its soil and climate are excellent.

Although therefore, if London be justly rebuked for the number and excellence of its bays and harbours, but little sagacity would appear to have been evinced by the early settlers in profiting by them; and it is probable that the great emporia of the islands will be founded hereafter in situations more accessible and better suited to shipping and navigation.

In 1996, the value of the benefits was \$400,000.

submitted to 31 JAN., and that of the exports to 28 JAN. The customs revenue of the same settlement amounted in 1847 to 17,571L., that of the settlements in the 8 group, in the same year being nearly identical or 17,700L. An extensive trade is carried on with Sydney, Boyd Town, and other places in Australia, the imports into W Zealand consisting principally of cattle, sheep, horses, and other live stock, and the exports of timber, flax, &c. The London Board of Australia has branches at Auckland and Wellington. Newspapers, also, are published at Auckland, Wellington, and other towns. We subjoin a list of the retail prices of various articles, and of the rates of wages at Wellington and Nelson, in February, 1848:—

[illegible]

Nothing is generally to be had at conventional prices; but there are very few.

	Men		Women	
Blackwater, per day	1	0	7	0
Admission	1	0	4	0
Room, combined or single, per day	1	0	2	0

W. 1999 - 2000, 1997, 9

[illegible]

Such is a brief and imperfect notice of this interesting country, destined, no doubt, at some future period to be occupied by a great and powerful nation of Englishmen. We agree with Mr. Terry in thinking that "the class of emigrants to which New Zealand at present offers the most certain advantages and success are those who have been accustomed to husbandry. If such persons, having facilities, would be content with small farms of from 20 to 50 acres, according to their means for settling in stock and buildings, and then, by their own personal industry and labour cultivate the land, and raise cattle, poultry, &c., with moderate views and expectations, looking to frugality, perseverance and time, to acquire competence and independence, instead of resorting to land-jobbing and speculation for sudden wealth, they would be certain of success in their undertakings, and of realizing property in a few years."

But it is monstrous that government should obstruct and discourage the industry of each person, by imposing a tax for such it really is, of no less than \$15 on each acre of land that they recover from the forest or the swamp. The statisticians whom we are disposing of their ancient inheritance never did any thing more irrational and absurd than this. It tends to hinder that settlement of the lands which it should be our object to encourage; and makes nineteen out of twenty of the sturdiest class of capitalists that are now leaving our shores, revert to the U. States rather than to this or any one else of our colonies.

When it becomes reasonably well-populated, or has a pop. of one or two millions, she will probably be distinguished by her manufactures. Her geographical position, temperate climate, and the command of vast water power, of unlimited supplies of coal, iron, and the useful metals, and of timber, wool, flax, and other raw materials, give her almost unequalled advantages for the successful prosecution of manufacturing industry. But it would be unwise either in government or in individuals to attempt to anticipate what can only grow up slowly as the enterprise of the country and the population are more and more developed. Agriculture, including therein the clearing of the land, mines, and fisheries, but especially the first, will for a lengthened

* The rates of wages for workmen were a little higher than those already given. Men's and women's usually work by piece work.

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

period be the most advantageous business in which the colonists can engage.

In 1840 the government of N. Zealand, as previously stated, was separated from that of N. S. Wales, being then placed under a governor of its own, with a legislative council composed in the usual manner. A subordinate government has more recently been established at Wellington, the cap. of the S. prov. It is probable, however, that the latter will be subdivided, and that a lieutenant-governor will be appointed to reside in some of the settlements towards the S. extremity of the middle island.

N. Zealand has been erected into a bishopric; and it has a numerous body of clergymen of various denominations, and of missionaries. Governor Grey speaks of the services of the latter in high terms of commendation.

New Zealand forms the subject of numerous publications and Parl. Reports; a list of most of which is given in the *Handbook for Australia*, published in 1848, one of the best of the class of publications to which it belongs.

ZEITZ, a town of Prussian Saxony, reg. Merseburg, cap. circ., on the White Elster, here crossed by a stone bridge, 22 m. W.S.W. Leipsic. Pop. 10,000. (*Berghaus*.) It is walled, is divided into an upper and lower town, and has a cathedral, and several other churches, various hospitals, two castles, one of which was formerly the residence of its princes, but now serves for a house of correction, a gymnasium, with a public library of 14,000 vols., and manufactures of cotton goods, earthenware, leather, shoes, &c.; with cotton-printing establishments, breweries, and distilleries. It is the seat of the ordinary circle courts, of an ecclesiastical board, and of a Calvinist college. The gardens and grounds in its vicinity are celebrated for their neatness, and the attention bestowed on them. (*Berghaus; Dict. Géog., &c.*)

ZELL, or CELLE, a town of the Hanoverian dom., distr. Lüneburg, on the Aller, where it receives the Fulse, and on the road between Hanover and Lüneburg, 22 m. N.E. the former. Pop. 11,300. It is well built and paved, and has Lutheran, Calvinist, and R. Catholic churches, an old castle once the residence of the Dukes of Lüneburg, a large penitentiary, a medical college, Latin school, society of agriculture, and a famous royal breeding stud. Its inhabs. manufacture linen cloths, hosiery, flannel, hats, tobacco, &c., and have a brisk transit trade both by the Aller and by land. Celle is the seat of the high court of appeal for the kingdom of Hanover, the decisions of which were final, till recently they were interfered with by the government. (*See HANOVER*, i. 963.)

It was the residence, during the latter years of her life, of the unfortunate Matilda, Queen of Denmark, and sister of George I. of England; and a monument to her memory stands in the palace garden.

Zell has also been for a lengthened period the favourite abode of such of the nobility of Lüneburg as do not live in Hanover. (*Hodgskin, Travels in the N. of Germany*, i. 155—163.)

ZERBST, a town of N. Germany, territory of Anhalt-Dessau, on a small tributary of the Elbe, 17½ m. S.E. Magdeburg. Pop. 9,200. It is walled, and entered by 6 gates; has an old castle, several churches, one of which is among the finest structures of its class in Germany, two well-endowed charitable institutions, an orphan asylum, a house of correction, and a large school termed the *Franciscum*. It is the seat of the high court of appeal for the Anhalt and Schwartzburg principalities; and till near the end of last century it was the residence of the ducal family of Anhalt. It has manufactures of jewellery and earthenware. The empress Catherine II. of Russia was a princess of Zerbst; but she was not born here, as is stated in the *Dict. Géographique*, but at Stettin (in 1729), of which her father was governor. (*Berghaus; Dict. Géog., &c.*)

ZITTAU, a town of the kingdom of Saxony, circ. Bautzen, on the Mandau, a tributary of the Neisse, 50 m. E.S.E. Dresden. Pop., in 1838, 8,674. It is tolerably well built, and has numerous churches, a gymnasium, public library of 13,000 vols., house of correction, and various charitable institutions. It is the centre of the linen manufactures of Lusatia; and most of its inhabs. are occupied in the weaving of damasks, ticks, and other linen fabrics, or of cotton and woollen cloths; and in bleaching, printing, carding, and other auxiliary occupations. Zittau has also porcelain factories, paper-mills, and breweries, and a large trade in flax. It was the birthplace of the great orientalist, B. Michaelis. (*B. Ritter; Berghaus, &c.*)

ZOMBOR, a royal free town of Hungary, co. Bacs, of which it is the cap., in an extensive plain near the Francis Canal, uniting the Danube and the Theiss, 118 m. S. by E. Pesth. Pop. about 21,000, mostly of the Greek church. It has several fine buildings, including a co. hall, town-house, several churches, barracks, and the government offices. Here, also, is a Greek ecclesiastical seminary, and a Rom. Cath. high school, with some silk

manufactures, and a considerable trade in corn, wine, and cattle. (*Oester., Nat. Encyc.*)

ZUG or ZONG, a canton, lake, and town of Switzerland, in the central part of the Confederation. The canton, which is the smallest in Switzerland, is enclosed between the territory of Zurich on the N., Schwytz on the E. and S., and a small part of Lucerne and Aargau on the W.; from which last it is separated by the Reuss Area, about 86 sq. m.; a considerable part of which is occupied by the Lakes of Zug and Egeri. Pop., in 1837, 15,322. Except a small plain to the N. of Zug, the surface is wholly mountainous, but the mountains do not rise to any great elevation, the highest, the Rosenberg, on the S. border, being little more than 5,000 ft. above the sea. Principal rivers, Reuss, Sihl, which forms the N.E. boundary, and Lortz, which brings the waters of the Egeri lake into that of Zug, and forms also the outlet of the latter towards the Reuss. The Lake of Zug, principally comprised in this canton, but partly in that of Schwytz, and intermediate in situation, is in character, between the Lakes of Zurich and Lucerne, is about 8½ m. in length, N. to S., by 3 m. in its greatest breadth. Its area has been estimated at about 10 sq. m., and the height of its surface above the level of the sea, at 1,385 Eng. ft. Its waters are of a very dark blue colour; and though near the town of Zug, its depth appears to be only about 200 ft.; at its S. extremity it is said to exceed 1,200 ft. (*Ebel; Picot, &c.*)

The banks of the Lake of Zug are cultivated, richly wooded, and in general gradually sloping, except on the S. and S.W. sides, where the Righi and Rosenberg rise abruptly from the water's edge. The lake abounds with fish, the taking of which forms an important occupation of the inhabs. of its vicinity. Some indifferent wine, with elder, kirschwasser, &c., are made, and considerable quantities of apples and other fruits are grown for exportation; but the principal employment of the pop. is cattle breeding. A few silk and cotton fabrics are woven, cotton yarn is spun, and at Zug, Cham, and Baar are some tanneries and paper-mills; but the manufactures of the canton are comparatively insignificant. The government is strictly democratic. The cantonal council is composed of 54 deputies, elected for two years by all the male citizens of the canton above the age of 19 years, who are not bankrupt, pauper, or under penal condemnation. This council exercises all the ordinary administrative functions. The legislative power is exercised by the *triple council*, composed of the cantonal council and two additional mems. for each deputy, chosen like the deputies, triennially by the communes. The general assembly meets annually in May: its *landammann* or president being taken alternately from the two circles into which the canton is divided. The deputies are paid for their services, at such rates as can be afforded by the communes which send them. The sum paid by the town of Zug to its representatives is about 4l. each per annum! and, besides this, every councillor entering Zug to attend a council, which takes place perhaps once a month, receives about 9d. English. And some of the communes are so poor as not to be able to pay even this pittance to their representatives. (*Inglis*.) The chief criminal tribunal consists of 25 mems., and the ordinary civil tribunal of 6 assessors and the *statshalt*: the latter becomes a final court of appeal by the addition of 6 mems. chosen annually by the cantonal council. Civil causes below the amount of 12 francs, misdemeanours, and other matters of minor importance, are decided by the communal assemblies and tribunals. There is no tax of any kind in the canton. The whole state expenses, amounting to about 160l. a year, are defrayed from the general Swiss fund, drawn from the entry of foreign merchandise, and from a monopoly of salt, which is farmed by the government, and brings in about 80l. a year. Zug furnishes a contingent of 260 men to the army, and 2497 francs a year to the treasury of the Swiss Confed.

Zug, the cap., on the N.E. side of the lake of the same name, 15 m. S. Zurich, with about 2,500 inhabs., is the only town worth notice. It is pleasantly situated, and has several good churches, to one of which is attached a curious *golgotha*, containing many hundreds of skulls, each labelled with the name of its original possessor. Provisions are cheap at Zug; and though without the pretension to rank with Zurich in importance, a residence here would seem to be the more agreeable of the two from the greater cordiality and gaiety of the people.

The people of this canton are of a German stock, and for the most part similar to those of Schwytz, though less ignorant and superstitious. They are all R. Catholics; and, small as is the extent of the canton, Ebel says—*Le pays de Zug fournit des prêtres d'une grande partie de la Suisse Catholique*. (*Picot, Statistique de la Suisse; Ebel's Manuel, &c.; Inglis's Switzerland; Dict. Géog. &c.*)

ZURICH (CANTON OF), a canton of Switzerland, ranking first in the Confederation, and being superior

of which Lavater was the minister; the town hall, a square edifice, in which the diet meets; the old arsenal; the town library, a spacious edifice, containing about 60,000 volumes, with portraits of Zwinglius and many of the burgomasters of Zürich, a bust of Lavater by Dann-ecker, a bas-relief model of a great part of Switzerland, a collection of fossils, &c.; and, in the middle of the Lim-mat, the tower of Wellenberg, formerly a state prison.

The principal manufactures are those of silk and cotton goods; and numerous factories and country houses stud the banks of the lake in the environs. "In Zürich," says Inglis, "it is all work and no play; there are no amusements of any kind, nor probably do the inhabs. feel the want of them. There is no theatre; there are no public concerts; balls, in a canton where leave to dance must be asked, are out of the question. The great object of the Zürickers is to get money: distinction in wealth is the chief distinction of rank known in Zürich. Literature, however, has kept its place here; and no where, perhaps, in Europe is the study of the classics more general than in this city. Here are an academy for theology and various other branches of philosophy; another academy preparatory to the former; an institution for medicine and surgery; another for the education of merchants; an institution for the instruction of the deaf and dumb, and for the blind, the model of which was considered so excellent, that upon it Napoleon formed that of Paris; academies of artists and music; a society of public utility; and many schools for instruction in languages and for the education of the poor. Two newspapers are published in Zürich, one appearing weekly, the other twice a week; and there is also a monthly literary journal. If house-rent were out of the question, one might live cheaply enough at Zürich, or in its neighbourhood. Beef usually sells at about 3d. per lb., mutton at 2½d., and veal 1d. higher; fowls average 1s. 6d. a pair, butter 7d. per lb., and eggs 2 doz. for 10d. But the reasonable price at which most necessities may be obtained in Zürich is more than neutralized by the high rent of houses, for which indeed at least three times the sum is asked that would command the same accommodation in England! and to those desirous of selecting a constantly agreeable residence, I dare not recommend Zürich. A winter's residence could not be otherwise than *triste* in a city where amusement is confounded with crime, and where men and women do not meet each other in society." (*Inglis's Switzerland*.) There is, however, a museum club, with a good reading-room. Where the leading English newspapers and periodical publications are taken in, a perpetual communication is kept up by diligences with Basle, Bern, Constance, and the other chief Swiss towns; and by steam-boats twice a day with places on the bank of its lake. Zürich was one of the earliest cities that joined the Swiss Confederation; and here the Reformation in Switzerland commenced, under Zuinglius, in 1519. Among its distinguished natives have been the two Gessners, Zimmermann, Fuseli, Lavater, Bodmer, and Pestalozzi. (*Ebel; Inglis; Dict. Géog., &c.*)

ZÜRICH (LAKE OF), one of the principal lakes of Switzerland, in the E. part of which it is situated, being bounded by the cantons of Zürich, Schwytz, and St. Gall. It curves in a semicircular manner, from S.E. round to N.W. Length, about 24 m.; breadth, varying to about 3 m.; but at Rapperschwyl it is contracted to less than ½ m., and is crossed there by a wooden bridge. Area, estimated at about 23 sq. m.; height above the sea, 1,362 Eng. ft. Its depth in some places exceeds 600 ft.; but for several hundred yards from its banks it is (near Zürich at least) seldom more than from 6 to 12 ft. in depth. At its S.E. extremity it receives the Linth canal, which brings to it the superfluous waters of the Lake Wallenstadt; at its N.W. extremity it discharges itself by the Limmat. Zürich, Meilen, Rapperschwyl and Richtenschwyl, are on its banks. This lake has none of that savage sublimity which characterises most of the Swiss lakes: its scenery is, in fact, comparatively tame. Inglis calls it "the Winan-

overbearing pride, which, while it violently condemns the opinions of others, assumes infallibility with respect to its own. In a word, it was his opinion, that, provided Christians agree in the most essential articles, they ought to bear with any difference on subjects less uncontrollable, and which do not influence morals." (*Coar's Switzerland*, L. 62, 8vo. ed.)

dermere of Switzerland." The hills around it scarcely rise to 3,000 ft. above the sea, and they descend in gentle and cultivated slopes to the water's edge; where the banks, from one end of the lake to the other, are studded with villages, country houses, and other habitations. Good carriage roads run along both sides of this lake; and it is daily traversed by steamers between Zurich and Rapperschwyl. (*Ebel; Picot; Inglis's Switzerland; Stein's Handb.; Mayer, Das Canton Zurich; Murray's Handb. for Switzerland; &c.*)

ZUTPHEN, a fortified town of the Netherlands, prov. Guelderland, cap. arrond., on the Yssel, crossed here by a stone bridge, where it is joined by the Birkel, 15 m. N.E. Arnhem. Pop., according to Strin, about 11,000. It is strong by its situation, and, though in the midst of fens, is not considered unhealthy. It is divided by the Birkel into an old and a new town. The principal church is an old and stately edifice: the town-hall, the college of deputies, and the palace of the former counts of Zutphen, are the other most conspicuous buildings. Here, also, is a Latin school, a society of physical science, a court of primary jurisdiction, manufactures of cotton fabrics, with tanneries, paper and glue factories, oil and flour mills, &c.

Zutphen was one of the Hanse towns. It was taken and pillaged by the Spaniards in 1572 and 1583, but was retaken by the troops under Prince Maurice in 1591. In this siege the famous Sir Philip Sidney, the flower of the chivalry of Elizabeth's reign, received a wound of which he died on the 17th of Oct., at the early age of 32. (*De Cloet; Stein; Dict. Géog.*)

ZVORNIK or ISVORNIK, a fortified town of Bosnia, cap. sandjak, on the Drin, 72 m. W. S.W. Belgrade. It is situated on a rocky height, and has two castles, and a large collection of mud houses, with several mosques, and Greek and R. Catholic churches. Its pop. has been estimated at 15,000. It is said to have a considerable trade in timber and fuel with Belgrade, Semlin, &c.; but from its lying out of any great road, it is very seldom visited by travellers from W. Europe; and our information respecting it (as, indeed, of the whole of Bosnia) is very imperfect.

ZWICKAU, a town of the kingdom of Saxony, cap. circ. of its own name, on the Mulda, 56 m. S.W. Dresden. Pop., in 1846, 8,837. It was formerly strongly fortified, and suffered repeatedly in the wars of last century between Austria and Prussia. Its principal buildings are St. Mary's Church, with some fine paintings by Wohlgemuth, and a lofty tower, which was often ascended by Luther; and an old castle, now used for a house of correction. The gymnasium has a library of 18,000 volumes (*B. Ritter*); and there are also some military storehouses, an hospital, &c. Zwickau has manufactures of woollen cloths, hosiery, cotton goods, and hardware; which she owes to the coal fields on both sides the Mulda, in her vicinity.

ZWOLLE, a fortified town of the Netherlands, prov. Overijssel, of which it is the cap.; on the Zwarts-water, about 10 m. from the Zuyder-see, and 50 m. E.N.E. Amsterdam. Pop. between 17,000 and 18,000. It is well built, in the style of most other Dutch towns; and has several suburbs, 8 churches, including a fine old cathedral, a house of correction, tribunals of primary jurisdiction and commerce, and some agreeable promenades in the vicinity. It was formerly one of the Hanse towns, and its trade is still considerable in cattle and other live stock, dried fish, corn, wool, hides, honey, leather, &c. It has some salt and sugar refineries, tanneries, &c. It was taken by the Dutch in 1580. The famous Thomas à Kempis was, for 64 years, a monk of an Augustine priory in this town, where he died in 1471. (*De Cloet; Dict. Géog.; Murray's Handbook, &c.*)

ZYTOMIERS, or *Jitomir*, a town of Russian Poland, government Volhynia, of which it is the capital; on a tributary of the Dniepr, 75 m. W. S.W. Kief. Pop., in 1846, 26,000. It has 3 Russo-Greek, a Lutheran, and 2 R. Cath. churches, various government buildings, a gymnasium, seminary, public library, &c. It has increased greatly in importance since it came into the possession of the Russians: it has manufactures of hats, leather, &c., and a considerable trade in woollen, silk and linen fabrics, honey, wax, salt, and wines, chiefly with Galicia, Hungary, and Wallachia. (*Schmidler; Pusart; Berghaus, &c.*)

SUPPLEMENT.

ADELAIDE, a city of South Australia, cap. of the British colony of that name, about 7 m. S.E. from its port, an inlet on the E. side of St. Vincent's Gulph. Lat. $34^{\circ} 57' S.$, long. $138^{\circ} 38' E.$ Pop. in 1846, 7,143, and in 1850 probably 10,000. The munic. boundary comprises rather more than 1,000 acres. It is divided into N. and S. Adelaide, by the river Torrens, here crossed by two bridges. Both portions of the town stand on gentle elevations, and are regularly laid out: the streets, which vary from 70 to 130 ft. in width, mostly cross or meet each other at right angles, and there are several good squares. The S. is a good deal larger than the N. division of the city: it includes the government house, hospital, &c., with some handsome terraces and villas, having from $\frac{1}{4}$ to $\frac{1}{2}$ acre of shrubbery and garden ground attached. Along King William Street (its central thoroughfare) are sundry large buildings, including the government offices and commissariat stores, with many good private houses and shops of all descriptions. Hindley Street is the principal place of business, and here is to be observed all the bustle of a flourishing town. It is lined on both sides with good stone, brick, or wooden houses, some of which are of superior build, and do credit to Australian street architecture. Many of the stores or merchants' warehouses are massive brick or stone buildings. (*Wilkinson, S. Australia*, pp. 47, 48.) The government house, near the river, is a neat building surrounded by about 10 acres laid out in ornamental gardens. Among the other principal edifices are Trinity and St. John's churches, the legislative council house, court house (formerly the theatre), the office of the S. Australian bank, an auction mart, the offices of the S. Australian Company, and an immense jail, upon which no less a sum than 24,000*l.* has been expended, or rather thrown away! In the centre of Light Square is a handsome Gothic cross, 45 feet high, erected to the memory of Colonel Light, the founder of the city. Adelaide has chapels for Presbyterians, Roman Catholics, Baptists, Independents, Methodists, German Lutherans, and others, a Friends' meeting house, a Jews' synagogue, numerous schools, the S. Australian bank, and a branch of the Australasian do., S. Australian Assurance Company, a philanthropic institution, a mechanics' institute, a botanic garden, a public cemetery, &c. Several newspapers are published in the city. It manufactures woollen goods, starch, soap, snuff, and machinery, and it has a variety of steam and other mills, with breweries, tanneries, malt-houses, &c. Its trade in ores, wool, &c., is already very extensive, and it will necessarily increase with the increase of the trade of the colony, of which it is the grand emporium. Around the city on the E. and S. is a semicircle of hills, some rising to upwards of 2,000 ft. above the sea; and within a few miles are some of the principal copper and lead mines, to which, especially the former, the colony owes the greater part of its prosperity. So much is this the case, that of the total exports from the colony, amounting in the year ending October 10th, 1849, to 436,216*l.*, those of copper and copper ores amounted to 287,481*l.* (See post.)

The river Torrens, on which Adelaide is built, loses itself in a marsh before reaching the sea, so that the city is from 6 to 7 m. distant from its port, an inlet of St. Vincent's Gulph. This inland situation is a serious drawback on the trade of the city; and it would seem that a mistake was committed in not building it on, or much nearer to, the coast. This, we are aware, has been denied, though, as we think, upon very unsatisfactory grounds. There appears, indeed, to be but little doubt that in no very lengthened period most part of the commerce of the town will be transferred to the port; and that the latter will be preferred as a residence by commercial people. In the rainy season the Torrens is much flooded, though it seldom overflows its banks, which are steep and lofty; but in the dry season it has no current, its bed being then formed into a series of pools or tanks.

VOL. II.

Port Adelaide, 7 m. N.W. from the city, in a low and marshy situation, consists of a number of dwelling-houses, and warehouses, many of which are of stone, with wharves, partly belonging to government, and partly to the South Australian Company. Pop. in 1850 about 2,500. The inlet of the sea forming the harbour, opposite the entrance to which a light vessel is moored, stretches from the gulph, from which it is separated by a narrow neck of land, for about 8 m. southward surrounding Torrens Island. At its mouth is a sandy bar with 8 ft. water at ebb and 16 ft. at flood tide; this depth being considerably increased during S. and S.W. winds. Ships of 400 or 500 tons may, consequently, pass the bar in safety, and once over, there is depth enough for the largest ships to the head of the harbour. (*Dutton, S. Australia*, p. 112.) Large vessels are, however, obliged to lie in mid channel; but projects were recently on foot, and are now, probably, being realised, for improving the harbour, either by carrying out piers into the deep water, or by establishing a new port about 2 m. nearer to the harbour's mouth, where the water in-shore is deeper, and the situation affords greater facilities for the accommodation of shipping. Port Adelaide has a custom house; but vessels are exempted from all port charges in this and in the other ports of the colony. A railway planned to unite the city with the port, will, most likely, be completed at an early date. We subjoin the following statements with respect to the trade, &c., of Port Adelaide (or S. Australia) in the following years:—

Imports and Exports at Port Adelaide.

Years.	Total Imports.		Total Exports.	
	£	s. d.	£	s. d.
1843 - - -	109,013	0 9	80,855	12 2
1844 - - -	118,915	6 11	95,272	14 6
1845 - - -	184,819	14 8	148,459	4 7
1846 - - -	329,099	12 9	312,837	16 6
1847 - - -	410,825	9 6	250,348	12 2
1848 - - -	381,338	19 0	604,068	7 0
1849 - - -	599,518	10 6	403,167	0 6

Exports the Produce of South Australia.

	£	s.	d.
1844 - - -	82,268	13 8	
1845 - - -	151,800	6 0	
1846 - - -	287,058	13 0	
1847 - - -	275,115	12 0	
1848 - - -	465,878	10 0	
1849 - - -	374,155	10 0	

Ships entered inwards at Port Adelaide in the under-mentioned Years.

	1844.	1845.	1846.	1847.	1848.	1849.
From Great Britain	8	12	20	28	35	95
B. Colonies	60	97	111	115	170	163
Foreign States	2	5	11	7	10	17
Total -	70	114	142	150	215	277

Immigration and Emigration.—The arrivals and departures at Port Adelaide, by sea, during the last few years have been as follows:—

	Arrived.	Departed.
1844 - - -	1,114	847
1845 - - -	2,336	445
1846 - - -	4,458	865
1847 - - -	5,646	885
1848 - - -	7,664	1,012
1849 - - -	16,166	2,694

During 1849 the arrivals and departures were from and to the places following:—

	Great Britain.		British Colonies.		Foreign States.	
	Males.	Females.	Males.	Females.	Males.	Females.
Arrivals -	6,854	5,647	1,465	585	981	646
Departures -	76	55	1,611	782	144	26

The excess of departures for the neighbouring colonies is caused by many of the English passenger-ships being bound for Adelaide, Melbourne, and Sydney, where many proceed, and are entered accordingly.

Under Foreign States, the numbers denote nearly the arrivals from Germany, and the departures for California.

Account of the Quantities and Values of the principal Articles, the Produce of S. Australia, exported from Port Adelaide in the Year ending the 10th October, 1849.

Articles.	Quantities.	Values.
Bacon and hams	12½ cwt.	41 0
Beef	6 cwt.	12 0
Beer	11,200 gals.	1,100 0
Bread	391 cwt.	254 0
Butter	7 cwt.	35 0
Cattle—		
Horses	3	100 0
Cows	17	85 0
Sheep	379	125 0
Cheese	60 cwt.	120 0
Corn—		
Barley	218 qrs.	127 0
Wheat	11,401 qrs.	17,329 15
Flour	1,184 tons 10 cwt.	13,216 0
Glue, pieces	1 ton	12 0
Gum	557 cwt. 24 lb.	586 0
Hides	1,626	530 0
Hoofs and bones	116 cwt.	90 0
Horns	3,611	145 0

Tallow	5,872 cwt. 3 qrs. 9 lbs.	9,076 0
Wool	10,504 bales. 2,338,040 lbs.	99,137 5
Whalebone	56 cwt. 1 qr. 21 lb.	250 0
Wine	5 gals.	1 0
Miscellaneous		295 0
		436,216 0

Adelaide was founded in 1834. In 1842, it was incorporated by an act of the colonial legislature as a city under a mayor, aldermen, and common council; but the corporation was subsequently broken up, and we have not learned whether it has been re-established. (*Wilkinson, Dutton, Bennett, S. Australia; South Australian Almanac for 1850.*)

AUSTRIA. The dismemberment of the Austrian monarchy, which appeared, when the article "Austria" in the Dictionary was written, to be not at all improbable, has, for a while at least, been averted. The revolutionary excesses of which Vienna was the theatre did not extend to any other portion of the German provinces of the empire; and the vigorous efforts made by the Magyars of Hungary to throw off the Austrian yoke were weakened by the opposition of the Slavonians of Croatia, and other provinces. Perhaps, however, the Magyars might have succeeded in establishing their independence, and, at all events, the struggle with them would have been much more severe, but for the powerful assistance given by Russia to the Austrians. In Italy the latter had comparatively little difficulty in re-establishing their authority. The Italians can do everything but fight. They can produce, at sight, the draught of a free constitution, with representative bodies, and providing for the freedom of the press, of religious worship, and so forth. But when it becomes necessary to maintain by the sword what they have so well expressed by the pen, their courage rapidly evaporates. Indeed, the presumption is, that, though the whole population were in arms from the Alps to the extremity of Calabria, 100,000 Austrian, French, or Russian troops would suffice to reduce them to obedience, and make them crouch, like slaves, under the lash. They have not yet learned to prefer death to dishonour.

*Sanctum crede nefas, animam præferre pudori,
Et propter vitam, vivendi perdere causas.*

But the difficulties with which the Austrian

government has to contend are still extremely formidable. The different provinces of the empire, occupied by different races of people, speaking different languages, are not held together by any common tie of interest or affection. On the contrary, they entertain the greatest jealousy of, and aversion from, each other; and no attempt has been made to obviate this state of things, or to reconcile the apparently conflicting, but really identical interests of the various countries and races under the imperial sceptre. On the 4th March, 1849, the present emperor promulgated a constitution for all the states of the empire, establishing two representative chambers, an upper and a lower, the latter chosen by universal suffrage, and guaranteeing the freedom of the press, &c. But the urgency of the crisis which led to the promulgation of this important document having passed away, we hear no more of the constitution, or of the fulfilment of the promises made in it. On the contrary, all the most offensive parts of the old regime have again been made as prominent as ever. The sword, in fact, is at present the only instrument of government recognised in Austria, and courts-martial are the only tribunals for the trial of political offences. But though a system of this sort may answer perfectly well in Italy, we hardly think it will succeed in Germany. We believe, indeed, that if it be not very materially modified, it will, at no very distant period, be wholly overthrown. Dissatisfaction is everywhere prevalent. The finances are, also, in a state of the greatest disorder; and the attempt to impose new taxes, without the sanction either of provincial states or of a general diet or parliament, has excited deep feelings of disgust in some of the provinces most attached to the reigning family.

It may even be doubted whether the praiseworthy efforts of the government to modify or repeal the existing shackles on the freedom of commerce will not add to its unpopularity. They have provoked the hostility of the manufacturers; and it is by no means clear that they will be favourably received even by those classes to whom they will be of the greatest advantage. Whatever may be its political consequences, the attempt that is now being made by the Austrian government to have its territories, and those of the Southern Germanic states, included in the Zollverein, or German Customs League, would certainly add greatly to the industry and well-being of the German people.

On the 1st of May next (1851), unless, like the constitution of 1849, it should be indefinitely postponed, a new uniform customs tariff for the whole of the Austrian dominions is to come into operation, and the export and import laws published in 1829 and 1838 are to be annulled. In the new tariff, the articles liable to duty are classed under 32 principal heads, and these into inferior ones. With the exception of salt, gunpowder, tobacco, and preparations liable to explode, all goods may be exported and imported without requiring any special permit. On most articles the duties are considerably reduced; and some at present prohibited will for the first time be admissible. All customs must be paid in imperial coins of "three pieces of twenty to the florin." The duration of the tariff is fixed at 5½ years; and no change can be made in it except by decree of the Imperial Diet, or in case of a customs-union with Germany and Italy.

BOYD TOWN. A sea-port town, co. Auckland, N. S. Wales, on the S. shore of Twofold Bay, lat. 37° 72' S., long. 149° 54' E. Pop., in 1848, probably 2,000. It has a jetty 300 feet in length with other accommodations for shipping; and E. Boyd is the seat of a large whaling establishment. Boyd Town was founded by Mr. Benjamin Boyd, who connected it by a road 45 m. in length with the extensive squatting district called the Maneroo Plains. A lighthouse, 76 feet in height, has been erected on the headland, forming the S. boundary of Twofold Bay, adjoining E. Boyd.

CHICAGO.

CHICAGO, a town of the U. States, Illinois, at the embouchure of the Chicago river, in the S. W. corner of Lake Michigan, lat. 42° N., long. 87° 37' W. The river, which is formed of two branches that unite about $\frac{1}{2}$ m. from the lake, divides the town into three portions, the principal seat of business being on the S. side of the main stream. The growth of Chicago has been quite extraordinary, its pop., which in 1840 amounted to only 4,853, having increased, in 1848, to about 17,000! and there is every probability that it will continue rapidly to increase for many years to come. It is indebted for this wonderful development to its situation and the enterprise of its inhabitants. It is the natural entrepôt for the trade between the flourishing state of Illinois and the vast regions watered by the great lakes; its importance in this respect having been very greatly increased by its having been united by a canal, of the largest class, with the navigable waters of the Illinois river, an affluent of the Mississippi; so that it communicates, on the one hand, with New Orleans and the Mexican Gulph, and, on the other, with Quebec and the St. Lawrence. Hence the value of its exports and imports, which, in 1840, were respectively 228,636 and 562,106 dollars, had risen, in 1847, to 2,296,299 and 2,641,853 do. l. Among other articles, the exports, in 1847, comprised 1,974,303 bush. wheat, 32,538 bar. flour, 48,920 bar. beef and pork, and 411,488 lb. wool. The harbour, which is partly artificial, is formed by means of piers, at the extremity of one of which is a lighthouse, projecting from the river into the lake. The trade of the port employs a great number of steamers and sailing vessels, a good many of which belong to the town. The situation, though low, is above the level of the inundations, and is said to be healthy. The streets cross each other at right angles, and the wooden buildings of the first settlers are now rapidly giving way to substantial brick edifices. It has some handsome churches, a medical college, various elementary and superior schools, a merchant's academy, banks, insurance offices, and so forth; and, in 1847, no fewer than 7 weekly and 4 daily newspapers! Fort Dearborn, which acquired some celebrity in the last war between this country and the U. States, is in its immediate vicinity. Such is the present state and prospects of a town founded on what was, 20 years since, a hunting-ground occupied by the Indians. (See an excellent art. on *Chicago* in *Hunt's Commercial Magazine* for February, 1848.)

COLUMBUS, a city of the U. States, cap. Ohio, of which it is nearly in the centre, on the banks of the Scioto, immediately above the point where it is joined by the Whetstone river, 100 m. N.E. Cincinnati, lat. 39° 47' N., long. 83° 3' W. It was founded so late as 1812, the land on which it stands having previously been a wilderness. Pop., in 1840, 6,048; in 1848, about 14,000! It is well situated on land rising gradually from the river; the streets, which are broad and straight, cross each other at right angles, being for the most part lined with substantial houses. It has a square which comprises 10 acres; and a convenient wharf extends along the margin of the river. But the navigation of the latter (an affluent of the Ohio) being liable to interruption, the city is united by a canal to the Ohio canal, which opens an easy communication with the lakes on the one hand, and the Mississippi on the other; and its trade is farther promoted by its being on the line of the great national road from Indianapolis to Zanesville, &c. A bridge across the river unites the city with the suburb of Franklinton. The public buildings comprise a state house, commanding a fine view of the surrounding country; an edifice for the accommodation of the officers of the state; a state penitentiary; a lunatic asylum, and asylums for the blind, and for deaf and dumb persons; a Lutheran theological seminary; numerous churches; several bank offices, one of which has a handsome Doric portico, &c. Here, as in the other towns of the U. States, there is ample provision for the education of the young in elementary and superior schools, academies, &c. It has factories of various sorts, with tanneries, breweries, distilleries, and printing-offices, which, in addition to other publications, furnish sundry monthly and daily newspapers. (*Haskell's Gazetteer*, &c.)

DENMARK. Since the art. Denmark, in the body of this work, was printed, we have received from Copenhagen, from a source on which every reliance may be placed, the following statements.

The prohibitory regulations obstructing the commerce of the country and encouraging sloth and smuggling, have been materially modified by ordinances passed in 1838, 1841, 1844, 1846, and 1847. The duties on foreign imports vary at present from 3 to 20 per cent. *ad valorem*. All prohibitions of importation and exportation have been abolished. The facility of trade is promoted by

DENMARK.

great liberality in regard to the warehousing and bonding of merchandise. A few articles continue subject to duties on being exported, and of these cattle, hides, and skins are of greatest consequence. The education of mechanics has of late years been improved by the formation of mechanics' institutes, drawing-schools, &c.

Account of the Quantities and Values of the principal Articles, the Produce of Denmark and her Dependencies, exported from that Kingdom and the Duchies of Sleswick and Holstein, in 1847.

The approximate value of the mentioned articles is official.

In 1847 Denmark possessed, exclusive of 28 steam-boats and of vessels under 20 tons, 2,033 ships of the burden of 144,064 tons; of which about 71, of the burden of 14,232 tons, were employed in the Transatlantic trade.

In 1848 slavery was abolished in the Danish W. Indies. In 1849 the produce of St. Croix amounted to only

17,711,723 lbs. sugar, and 634,804 gall. rum, owing, it is said, to the dryness of the season.

The settlements of Tranquebar and Serampore, in the East Indies, were sold, in 1845, to the East India Company.

In the years 1835-40 the average increase of the population in Denmark Proper was '88 per cent., and in the duchies '97 per cent. per annum.

In 1845 Copenhagen had 126,787 inhabs.; Altona, 22,300 do; Flensburg, 16,537 do; Kiel, 13,573 do.

A few days after his accession to the throne, in January, 1848, his present Majesty, Frederic VII., issued an ordinance, declaring his willingness to give a free constitution to all the states subject to his sceptre. But a great party in the duchies was dissatisfied with this offer, and as the king, in March, 1848, declined to comply with their request to have Sleswick embodied in the Germanic Confederation, the insurrection broke out in the duchies.

The new constitutional law of Denmark was passed the 5th of June, 1849. The legislative power is vested in the king and the diet; the executive power belongs to the king. The diet consists of an upper chamber, called *Landsthing*, and a lower chamber, called *Folkething*. The electors of the former comprise all Danes, not con-

victed of any crime, 30 years of age, excepting domestic servants, persons who have received any provision from the poor rates without repaying the same, bankrupts, and those who have not resided a whole year in the district previously to the election. Under the same limitations all Danes, 26 years of age, are electors of members of the Folkething. The elections for the Landsthing are indirect: its members must be 40 years of age, and pay a direct tax of 300 rbd., or have a net annual income of 1,200 rbd. The sittings of both chambers are public. The members of the diet receive 3 rbd. a day each, and this is not to be refused. Every man in good health is obliged personally to contribute to the defence of the country. All prerogatives of nobility and rank are abolished.

The schools were attended, in 1847, by 334,000 pupils.

The Danish army amounts to upwards of 25,000 men; but in time of peace it is much less considerable, not exceeding 6,000 or 8,000.

The navy consisted, in 1850, of 6 ships of the line, of which 3 carried 84 guns, 8 frigates, 5 corvettes, 4 brigs, 6 war steamers, 82 gunboats, &c.

Finances—The revenue and expenditure of Denmark and the Duchies, in 1846, were as under:

Revenues.	Amount of each of the several Branches.	Expenditure.	Amount of each of the several Branches.
<i>Ordinary.</i>		<i>Public Expend.</i>	
1. Woods and forests and other property of the crown	140,832	1. Establishment of the king	28,676
2. Land and house tax	608,150	2. Ditto of the royal family	57,796
3. Customs and excise	749,565	3. Public departments, exclusive of the customs	177,000

about expediting and attestation until they shall have been approved by a law.

Art. 90. Any disagreement as to jurisdiction between the administrative and the judicial authority shall be settled by a special tribunal composed of members of the Court of Cassation and of Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 91. Appeals on the cases of competency and errors of process against the decisions of the Court of Cassation shall be carried before the *Parliament de Cassation*.

Art. 92. A High Court of Justice shall, without appeal or recourse in cassation, the accusations brought by the National Assembly against the President of the Republic or against the Ministers. It shall try all persons accused of crimes, attempts, or conspiracies against the safety of the State either at home or abroad, when the National Assembly shall vote before it. Except in the cases provided for by Art. 93, it cannot take cognizance but in virtue of the charges of the National Assembly, which points out the laws in which the cases shall hold its sessions.

Art. 93. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 94. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 95. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 96. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 97. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 98. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 99. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 100. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 101. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 102. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 103. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 104. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 105. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 106. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 107. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 108. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 109. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 110. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 111. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 112. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 113. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 114. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 115. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 116. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 117. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 118. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 119. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 120. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 121. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 122. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 123. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 124. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 125. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 126. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 127. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 128. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 129. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 130. The High Court of Justice shall be composed of members of the Court of Cassation and of the Chambers of Peace, selected every three years, in equal numbers, by (three) respective bodies. This tribunal shall be presided over by the Minister of Justice.

Art. 131. After the vote of the Constitution, the National Assembly shall proceed to draw up the organic laws, the execution of which shall be determined by a special law.

Art. 132. The first session of the President of the Republic shall be presided over by the President of the National Assembly on Oct. 25, 1848.

GALAXIDI a sea-port of Greece, on the W side of the bay of Salona (on Crissurus Strait), an arm of the Gulf of Lepanto (on Corinthus Bay), 13 m S. by W Salona, and 20 m E. by N Patras. Pop. perhaps 4,000 or 7,000. This town, which is supposed to occupy the site of the ancient *Glaucis* is now one of the principal shipping ports of Greece, and is distinguished by the maritime skill and enterprise of its inhabitants. It is built on a rocky peninsula, on each side of which it has a secure port; but unfortunately it has no fresh water, except such as may be supplied by the rains, within a distance of 2 m. Under the Turkish government Galaxidi formerly enjoyed a large share of the trade of N Greece, and of the opposite shore of the M. sea. The wealth that was consequently brought into the town was manifested in the improved houses, the increased numbers, and the more luxurious accommodations of the inhabitants. But in the first year of the revolutionary war, (1821) Galaxidi was burned by the Captain Pacha, and most part of her ships fell into his hands. We are, however, glad to have to state, that she has recovered from this disaster, and is now more flourishing than ever. In 1848 she had 100 registered vessels, of the aggregate tonnage of 14,000 tons, engaged in foreign trade, exclusive of a large number of coasting vessels and of open-decked boats. And during the last 3 years her navigation and commercial importance have considerably increased. The exports, which are not very material, consist principally of olive oil and olives, yellow berries, cereals, and cotton. The vessels belonging to the port are, like those in most other parts of Greece, generally divided into small shares, which are usually distributed among the crews. This gives them a strong interest in the success of their voyage, and makes them display at once alacrity and enterprise, skill and economy. The ships of Galaxidi are to be found in all parts of the Levant, and sometimes in the ports of W Europe (*Underhill's Greece*, 1831; *Hopkins's Greece and Athens*, 1830, 2nd ed., and other articles.)

GREECE. We have borrowed the following details from an able and excellent paper by Mr. Green, British Consul at the Piræus, printed in 1847. It gives by far the best account of the commerce and agriculture of this interesting country that has ever been published; and is eminently deserving of the reader's attention.

Commerce and Shipping.—The principal ship-building places are Galaxidi, Syra, Hydra, Spetzai, Skiathos, Coroni, and various points on the coast. Two building-yards have also been established at the Piræus within the last year (1846), and several merchant-vessels of considerable burthen have been launched and are on the stocks. The register measurement is by the ton, consisting of forty kilos.* In the absence of official returns that can be depended upon, the number, tonnage, and crews of vessels and boats belonging to the Greek kingdom, may be stated approximately in round numbers at 4,000 vessels, measuring 120,000 tons, and employing 20,000 seamen.

Although a vast number of vessels and boats are built yearly, their rapid decay prevents the increase being as considerable as might be expected. There are Greek vessels of between 600 and 700 tons register, and a considerable number between 300 and 400 tons; but the great majority consists of boats of 6 or 7 tons, having a large hatch in midships.

The principal shipping port is Syra, where 600 vessels are registered. At Galaxidi, also, a great many vessels are registered as engaged in foreign trade; while at Patras, the most important commercial place of Greece, there are but 3 vessels registered. The Piræus possesses 200 vessels. Freight both for short and long voyages are usually higher on board Greek vessels than those paid to English shipping, either in the coasting or foreign trade. It is customary for the ship-owners to agree with the captain and crew, taking up a certain sum as interest usually secured on bottomry bond, with which a cargo is purchased on ship's account, and the profit divided between the vessel and crew, the latter partitioning among themselves accord-

* A killo of ore = 9 Winchester bushels.

ing to their special agreements. This is the system on which the Black Sea corn trade has for years been carried on by the Hydriots and Spezzioti, and under which the shipping interests of those islands have rapidly advanced. It may, however, fairly be doubted whether their prosperity, owing in the first instance to fortuitous circumstances, and subsequently aided by their activity and economical habits, may not rather have been impeded than advanced by this system. There is no branch of trade to which the Greeks particularly confine their energies and views; nevertheless Greek commerce may be divided into the following principal great branches:—

1st. The Corn Trade of the Black Sea and Alexandria, including the transport in their own vessels, either under Greek or Russian colours, to the ports of Turkey, Italy, Spain, and France, and speculations on the most extensive scale whenever bad harvests or other circumstances open markets to them. Some idea may be formed of the importance of this carrying trade to the Greeks, from the fact that in Galatz 270 Greek vessels loaded in 1844, besides 104 under Turkish colours, and 98 under Russian, of which the great majority were Greek. At Ibraila, during the same year, 225 Greek, 143 Turkish, and 53 Russian vessels loaded. Yet these ports are insignificant as compared to Odessa and Taganrog; and I only mention them and the particular year 1844, from having the returns before me.

2dly. The exportation of the produce of Turkey, Greece, Egypt, Persia, and Southern Russia, to England, Italy, and France, principally to London, Trieste, and Marseilles. The great advantage the Greeks possess over foreigners in the purchase of produce in Turkey and Greece, is that having relatives and connections on whom they can depend for the collection of small parcels in the interior of the country, and at the places of growth, so that they are not imposed upon by their agents, and avoid the profits of middlemen. The Greek trader considers nothing beneath his notice, and will gather together a few bags of rags, or a ton or two of bones and horns, while he is chartering perhaps fifty vessels to load corn and tallow.

3dly. The supply of Turkey, Persia, and Greece, with the cotton and woollen manufactures of England and Germany. The extensive operations of the Greeks at Manchester, where they have their own establishments for purchasing, examining, and packing their goods, attest the importance of this branch of their commerce. In supplying Persia and Constantinople with the cotton manufactures of England, these parties have almost driven the English out of the market, and defied their competition. This has been occasioned by their thorough knowledge of these countries, and by their readiness to execute the smallest as well as the largest commissions of the shopkeepers of Turkey and Greece; while their correspondents open and retail the largest parcels of manufactures in the exact proportions required by the purchasers.

4thly. Banking and exchange operations. This perhaps is the most wonderful part of the Greek system of commerce, and is largely and successfully carried on.

Agriculture and internal Trade.—The land measure of Greece is the *strema*, equal to about one-fourth part of an English acre.

No proper survey and register of lands having been made by the Greek government, it is impossible to state correctly what may be the actual extent of the soil cultivated, or available for cultivation. But from private and general information, I am inclined to calculate that considerably less than half the superficial contents of continental Greece and the Morea is susceptible of cultivation, and that not one-sixth of this in Roumelia, and less than a fourth in the Morea, are now brought into cultivation; the preference being given to such as are susceptible of irrigation from the proximity of springs or streams.

Notwithstanding the continual plunder and illegal appropriation of the national lands, at least two-thirds of the cultivated, and four-fifths of the uncultivated, soil belong to the state. The national lands were, previously to the revolution, the property of the Turkish inhabitants, to whom the government has succeeded; and though, as now stated, large portions of them have been embezzled in the interim, they still stand toward private property in the proportion I have mentioned.

The rent levied on the national land is nominally 10 to 15 per cent. of the gross produce, but by the connivance and venality of public functionaries this rent is no doubt reduced in many instances to an almost nominal amount—a circumstance tending to deprive private landowners of remunerating rents, unless they themselves are the immediate cultivators of their property, or that from position, or some other adventitious circumstance, it forms an exception to the surrounding lands. Money rent, with some trifling exceptions, is unknown in Greece, the system acted on being that worst of all systems, the *Metayer*, the landlord receiving

as rent a certain proportion—usually a third—of the net produce, or for good lands one-half. The landlord has frequently to furnish, besides the land, the seed, and sometimes the oxen for tillage, the expense of which, together with enormous interest, has to be deducted before the division of the profits. The metayer, without the slightest interest in the soil beyond the season, will neither expend time nor capital on its improvement, while the landlord, it is evident, will never expend capital on ameliorations, two-thirds of the benefit of which he would be deprived of by his metayer. From these causes (the abundance of national lands and the metayer system) it is hopeless at present to look for any improvement of the very wretched state of agriculture as regards the arable land, the inclosure and drainage of which is never thought of, and its improvement by manure unpractised, except for the growth of barley for the green food of horses in the neighbourhood of large towns. The stones never having been removed from the soil are so thickly collected together, that in many spots it is incredible that they can have accumulated naturally, and far more so that man should expect grain to grow from amongst them.

In spite of such adverse circumstances, the cost of land—for I will not call it its value—continues unaccountably high, and the eagerness of some to purchase seems equalled only by the anxiety of others to retain its possession. Instances continually occur of persons borrowing money at enormous interest to purchase land, which it is notorious will not give them a return equal to half the interest they have to pay; while others, whose circumstances are embarrassed, and who might extricate themselves by the sale of a portion of their lands, continue borrowing from year to year, increasing their difficulties, rather than part with an inch of soil.

The present price of arable land in Attica is from 10 to 20 drachmas the *strema*, or 28s. to about 3*l.* per acre for notoriously the worst land in Greece. In the plain of Argos, 100 to 120 drachmas the *strema*, or 14*l.* to 18*l.* per acre, is given. Vineyards in full bearing in Attica sell for from 400 to 500 drachmas per *strema*, or about 60*l.* per acre. Currant plantations in the Morea, in full bearing, are valued at 1,000 to 1,200 drachmas per *strema*, or about 150*l.* to 160*l.* per acre.

M. Thiersch writes in 1833, "The Regency will find in Greece about 120,000 landed proprietors." Calculating each family to consist of five individuals, this gives an agricultural population of 600,000 souls, or about two-thirds of the population, which is probably the correct proportion: almost without an exception, exclusive of the strangers in Athens, the shopkeepers are landed proprietors, and also engaged in agriculture.

The dwellings of the peasants more resemble barns or stables, both in their interior arrangements and external appearance, than human residences. They cast an appearance of poverty and misery over the face of the country, in reality not existing among the agriculturists in any further degree than is derived from their ignorance of the comforts of civilised life. The walls are built of materials of every form and size, from the enormous corner-stone of an ancient temple, or the fragments of a marble column or statue, to the pebble of the brook and the minute pieces of tiles and pottery with which the sites of all ancient cities abound. These are held together by mud, which having a continual tendency to return to its native earth, either in a liquid or pulverised state, generally leaves the harder formations to stand in bold relief on the surface. The walls are about seven or eight feet in height, and extend in a long straight line, in which a low door way, four feet high, is rendered less convenient by an elevated sill the whole width of the wall. The window or windows are proportionally diminutive, and are closed by shutters seldom opened, as glass casements do not exist even in the generality of provincial towns. The light of day is thus most frequently obtained from the doorway alone. The absence of all paint from the woodwork adds to the miserable appearance of the whole. The roofs are either slightly sloping and covered with tiles, or (which is not so usual) are flat and terraced. The farm-houses and villages are still frequently built with some attention to military defence, in elevated positions, presenting a blank wall to the exterior, pierced with loop-holes for musketry, and the doors and windows turned towards a closed yard, into which the flocks are driven at night. Property and life, indeed, is more insecure in Greece than in any other country in Europe; so that isolated cottages are seldom to be seen, the peasants uniting for mutual protection in villages frequently of considerable size, and preferring the daily loss of several hours in proceeding to and returning from their labour, to residing on their lands at the imminent risk of being attacked by Klephti.

The interior of the dwellings are even less inviting than their exteriors. In the immediate vicinity of the hearth, the family eats and sleeps on the bare ground, or in some instances elevated from it by a few planks,

on which they lay their mats and extend themselves in their clothes at night. A few painted boxes contain all their riches; a small picture of the Virgin or some saint hangs in a corner, and the only light, a miserable lamp, is kept burning before it. At night the oxen are driven in to take their rest by the side of the family, and beyond them the winter's stock of grain and straw is carefully piled up. The wind whistles through the crevices of the ill-covered roof, and the fowls roost on the smoke-blackened beams. Pack-saddles, agricultural instruments, and some scanty household stores fill up the picture. The houses of some of the small landed proprietors are, however, superior to this, and some even consist of two stories, when the staircase or steps are invariably on the outside of the house.

The close resemblance many of the agricultural processes of the modern Greeks bear to those described by Hesiod, has not failed to attract the notice of successive writers. The simplicity of the construction of the plough, formed of a single shaft and handle, and without wheels, is peculiarly calculated to fix attention.

When, grasping first the handle of the plough,
O'er thy broad oxen's backs thy quickening hand
With gentle stroke lets fall the goading wand;
A boy should tread thy steps; with rake o'erlay
The buried seed, and scare the birds away.

These are the instructions of Hesiod, and they are still usually attended to. Frequently three oxen belong to one plough, so that by allowing one to rest and ruminate, the labour can be continued more advantageously. Each ploughman has also an ass, on whose back he carries the plough to and from labour, and which animal is so indispensable as to be free from the cattle-tax. In consequence of the periodical rest it is necessary to allow the oxen for their food and rumination during the day, it is not an unfrequent case that a favourable state of the soil will be taken advantage of by the agriculturists to continue their labour at times during moonlight nights. The cost of a yoke of oxen is from 12*l.* to 15*l.* The usual period of ploughing and sowing is during October and November for barley, and December and January for wheat.

In Attica the corn harvest is almost a month earlier than in other parts of Greece, and is generally over by the commencement of June. The corn is cut with sickles, laden in small sheaves on the backs of donkeys, mules, and horses, and carried to the alonia, or threshing-floors. These are usually in the outskirts of towns or villages, a good hard piece of ground being selected, while others, where the soil is light, are regularly paved in a circular form. They are generally in an exposed situation for the advantage of winnowing. Around the alonia, the corn of the whole district is piled up, each individual remaining to guard his own, night and day, during several weeks, and may be months, as September has frequently arrived before the corn has all been threshed. The corn is threshed by beating it out with the hoofs of horses rapidly driven over it. The owners of the horses are entitled to 4 per cent. of the produce for their trouble. Oxen are also employed, but not so frequently as horses. When the corn is sufficiently trodden out, the whole is gathered up in large heaps near the threshing-floor, and on windy days the winnowing takes place by throwing up the amalgamated corn and straw (which is frequently cut by drags drawn by the horses), with wooden shovels, the straw being carried to leeward by the breeze. The straw thus cut into pieces, and containing a great proportion of dust, forms the principal food for horses; hay being seldom used, and always considered unwholesome from the coarse nature of the grass and other causes.

The quality of the corn grown in Greece varies much in different districts. The wheat of the plain of Thebes is considered to be the best produced in the country, and the barley of Attica is preferred to that of other provinces.

In Athens the average price of wheat during the nine years (ending with 1846) has been 27 leptas per oke (34*s.* per quarter), the highest price paid having been 36 leptas per oke (45*s.* 3*d.* per quarter) in February 1839, and the lowest price 20 leptas per oke (25*s.* per quarter) in August 1842. The average price of barley during the same period was 18 leptas per oke (22*s.* 6*d.* per quarter), the highest price having been 30 leptas per oke (37*s.* per quarter) in May 1840, and the lowest price 12 leptas per oke (15*s.* per quarter), which is the usual price of barley in the middle of June each year, when the new crop is brought to market, unless the harvest should have proved a bad one.

The islands of the Archipelago grow about one-third of their consumption, and the rest of Greece produces generally more than the consumption, with the exception of such as is required for the finer kind of bread generally baked by the town bakers, and that used in the manufacture of pastes, such as maccaroni, &c., of which much use is made. The majority of families make their own bread, so that the bakers only supply

the floating population, bachelors, and small families. A certain quantity of Black Sea wheat is used to mix with and improve the quality of the Greek wheat. Except in the event of an unfavourable harvest, the peasants of the Roumelia and the Morea produce more than sufficient grain for their own maintenance and for that of the poorer classes in the towns. The Greek wheat is generally, owing to quality, 3 leptas per oke (4*s.* per quarter) cheaper than that of the Black Sea. A considerable quantity of wheat grown in Greece is also consumed in the Ionian Islands, the agriculturists of which cultivate the Greek soil opposite their respective islands, and carry the remuneration of their labour to the islands in corn. Foreign barley, especially that of Egypt, is considered inferior to that grown in Greece.

Maize, or Indian corn, called in Greece *kallam-bókkia*, is extensively cultivated in the Morea and in Western Continental Greece. It is generally sown where the fields can be irrigated, a process almost necessary for this crop, except where the rains continue late in the season, as is the case in the Upper Mountain districts. Maize may also be seen growing in all parts of Greece in small quantities in the vineyards and gardens. The return is generally calculated at about thirty or forty to one. It is reduced to flour, and formed into cakes or loaves, the principal food of the peasantry in many districts.

The grinding of corn in Greece is effected by four powers—wind, water, horse, and women. In each case the least possible ingenuity or knowledge seems to guide the various processes. Windmills are most numerous in the islands of the Archipelago. Water-mills are numerous, or almost innumerable, in both the Morea and Roumelia; and the former existence of several thousands can be traced by the remains of aqueducts in favourable situations. Many of these mills now in repair grind but sufficient corn for a few families, and some are not capable of producing more than a couple of bushels of flour in a day. In the larger towns mills turned by horses are prevalent; and in the villages hand-mills consisting of two stones about two feet in diameter, turned by a simple handle, by two women.

The scarcity of water, the natural aridity of the soil, and the deficiency of rain in summer, have tended in all times and ages to make the property of water in Greece be considered of the greatest possible importance. The quantity of water falling in the year cannot be estimated at less than forty inches, especially on the southern and western coasts. A part of this enormous mass of water flows directly to the sea by the beds of the torrents and the abrupt cliffs or slopes, with a rapidity which tends greatly to increase the nudity of the mountains. The right of irrigation by means of the rivers, streams, and springs, is regulated by laws and customs of ancient date; and the tenure of water is secured by titles as binding as those of land. This may be easily understood in regard to property in the vicinity of large bodies of water; but when it relates to a certain proportion of a small source, to be brought a considerable distance for a fixed number of hours; and when it is added that this right may be disposed of together or separate from the land to which it is at the time attached, and that it is transferable by sale or mortgage, the subject becomes one of which the extreme complication is only equalled by its vital importance to landowners. In this manner the Cephissus is now, as in the time of Sophocles, employed in the irrigation of the gardens and vineyards of the plain of Athens. It is made to branch off in hundreds of directions, and its wanderings are directed by functionaries under the title of Potomarchs and Nerokratis.

The right of individuals to the waters of the Cephissus for irrigation ceases on the 26th of October, the Feast of St. Demetrius, after which it is government property for six months. The government then farms it to persons, who sell it by the hour to those who require it. In April the water again becomes private property, according to the various title-deeds. Even in winter as much as 20 drachmas (14*s.* 6*d.*) per hour is sometimes paid for the stream, which consists of a body of water two or three feet wide by a foot or eighteen inches in depth.

In certain situations a small building is erected, like a miniature chapel, and called a *douboulistra*. In it the channels of some streams are regulated, and being thus arranged (that is to say, some opened and others closed, or partly open and closed), the door of the building is made fast, and the water can only be cut off by unfair means in the fields, which can be guarded against by watching. In some places the watercourses are built up and covered; in others they are open.

In towns the measurement of the water is by the dram; which means that the stream of water supplied is equal to the diameter of a leaden ball weighing a dram, or a specified number of drams.

The irrigated lands are divided into squares and

channels by banks and ridges formed by the earth; and the water is admitted and regulated by the cultivators, who open and close the trenches with mattocks and their feet. Such grounds, gardens, and vineyards as require irrigation, and are not entitled to the supply of a natural stream, are watered by means of the machines for raising water common to most countries in the East: it is called a *dolapt*, and is the usual wheel for raising buckets attached to double ropes turned by means of horse-labour.

The growth of the vine and currant plant forms a separate feature in the agriculture of Greece, for the owners of vineyards and currant plantations usually attend to their cultivation themselves, hiring day-labourers for each process. The vine is cultivated extensively throughout the whole kingdom. The growth of the currant is mostly confined to the northern shore of the Morea, bordering on the Gulf of Lepanto; though of late years extensive plantations have been made near Nauplia, Pyrgos, and Missolonghi.

The great disadvantage of the Metayer system becomes doubly evident in Greece, in the contrast afforded by the cultivation of the vineyards as compared to that of the arable lands. While the latter are neglected, the former present evidence of the care bestowed upon them. They are frequently inclosed with walls, fences, or hedges; they are drained, well dug, freed from stones, weeded, and manured.

Among the means of inclosing vineyards may be mentioned the mud fences, especially used in Attica. These fences are formed of the soil, trodden down in its natural state, within a wooden frame-work, which is afterwards removed, leaving the earth standing alone, formed by this means into a species of unburnt brick, about a foot and a half in thickness by four feet in length and height. Some brushwood is placed at the top (kept in its place by a few basketfuls of earth), which, spreading out on each side, prevents the rain from reaching the sides of the fence, which will last for ten or fifteen years. This economical method of inclosing lands, the cost of which is only 20 leptas, or less than 2d., for each four feet piece, is an excellent substitute for a wall, and more easily obtained in most situations than a hedge.

The vineyards are principally cultivated during January and February, and the grapes are gathered in September. A small tank is usually built on the spot, where the grapes are trodden out by men standing on a plank over this simple wine-press. The juice is drawn off at once, put into skins, and sold to the dealers, or filled into casks by the proprietors, when it is allowed to ferment. A larger or smaller quantity of liquid rosin is put into the cask, which gives the wine so strong a flavour as to take away the breath of a person unaccustomed to it; such, however, is the force of habit, that the generality of Greeks prefer this taste imparted to their own wine to that of the most expensive growths of France and Spain—indeed, I have even known foreigners become very soon accustomed to it, and declare their partiality to it. We may thus account for the Thyrsus of Bacchus, which represents the apple of the fir-tree, from whence the rosin is extracted, and which was amalgamated by the ancient Greeks with the wine, as it is by the moderns. The islanders of the Archipelago, however, are not in the habit of mixing rosin with their wine, the quality of which is superior to that produced on the continent.

It may be stated that the art of expressing and fermenting the juice of the grape is completely in its infancy in Greece, and that no attention whatever is paid either to the quality of the grape, or the method of attending to its fermentation. The cost of the *Musto*, the name given to the juice of the grape as just extracted from the fruit, is about 25 to 30 leptas the botza in Attica, which is equal to about 4d. per imperial gallon—a price owing to the proximity of the Athens market; for at Arakova on Parnassus, wine is sold at 10 leptas the oke, or about 2½d. per gallon; and in the districts of Tzakona and Tripolitza the prices are even lower. It is seldom that any wine remains over from one year to another.

The vineyards and currant plantations are cultivated with the hoe or mattock. A vineyard having to be dug up, a dozen or sixteen men are hired. One, generally the best workman, commences digging a ridge; when he has advanced a few feet, the next labourer commences the next ridge, and so on, each in his own ridge, and at regular distances from each other, proceeding across the vineyard, under the immediate eye of the proprietor or superintendent.

The yearly expenses of cultivating a strema of currants is about 55 drachmas, or 2l. The average produce may be calculated at about 3,500 lbs. English for five stremas, though some land produces even more than 1000 lbs. per strema. At the average production, the cost of producing 1000 lbs. of currants will thus be 78 drachmas, or 6s. 3d. the cwt.

The selling price of currants in the Morea averaged, for the crop of 1844, 42 Spanish dollars per 1000 lbs., or 20s. per cwt., free of all tax and duty, as both these items are paid by the merchant on exportation. In 1843, the price was as low as 22 dollars per 1000 lbs., or 14s. the cwt., but even this afforded a handsome profit to the growers; while in 1846, the average price may be said to have been 52 dollars, or 26s. 3d. per cwt. A strema of currants in full bearing, I have said, is worth 1200 drachmas; but the price varies very much with the prospect of high or low prices for the produce. A new plantation does not produce sufficient fruit to pay the cultivation until the sixth year, nor is it in full bearing until several years later.

The cultivation and drying of currants are subject to so many adverse circumstances from the state of the weather, that the production of this fruit in the state in which it is exported is at all times of a precarious nature; and the total quantity likely to be warehoused in the Morea and Ionian Islands can never be calculated with any certainty. Frost, or cold weather, or a high wind, in the spring, may cause the blossoms to decay; locusts and blights may destroy the fruit in summer; rain and great heat may cause it to fall from the plant, when nearly ripe. But the greatest danger to which it is exposed is from the rain, after it has been cut and laid on the ground to dry. For this operation ten days of fine weather are required during the month of August; and unfortunately for the proprietor, this is the season of thunder-storms all over Greece, and especially in the neighbourhood of the Gulf of Lepanto. It is, therefore, seldom that the entire crop is housed without injury; and though generally the rain-damaged fruit is mixed with the sound, and passed as such, if the damage has been very considerable or general, the fact cannot be disguised. A trifling rain does not affect the fruit much; but if several showers or very heavy rain descends upon it after it is cut, it gives it an appearance and flavour which cannot be mistaken. The fruit, after being dried, is winnowed from the stalks and dirt, loosely shovelled into sacks, and carried to the warehouses, which are principally at Patras and Vostizza. The early shipments are frequently not housed at all, the currants being received and packed by the merchant from the mules' backs, as they arrive from the country, a great disadvantage to the fruit, which undergoes a fermentation in the warehouse during the first twenty or thirty days, after which only it obtains the bloom which is so much admired. The first shipments of new fruit are generally made towards the end of August.

The total produce of currants in Greece and the Ionian Islands in 1845, and the countries to which they were shipped, will be seen by the following statement.

	Morea Crop.	Islands.	Total.
	Tons.	Tons.	Tons.
To Great Britain	7,845	7,606	15,451
Holland and ports of North Germany	206	2,037	2,243
Belgium	-	293	293
France	-	216	216
Trieste and Venice	522	65	587
New York	-	136	136
	8,573	10,353	18,926

In consequence of the cheapness of labour and the superiority of the soil in the Morea, the cost of production there is considerably less than in the Ionian Islands, and it will consequently be in those Islands that the over-production, if it take place, will be soonest felt. In the Morea alone, above 40,000 stremas, or 10,000 acres, of this plant are now under cultivation.

Figs are cultivated in every part of Greece with great success, but it is in the neighbourhood of Kalamata, in the districts of Androuss and Nial on the Pamisus, that they are produced in large quantities, dried, and exported. Of late years more attention has been paid than formerly to the preparation of this fruit for foreign markets, and a very considerable quantity has found its way to England, packed in cases, whereas formerly these figs were all strung on reeds and formed into chaplets weighing about 2½ lbs. each, as is still the case with such as are required for home consumption, and for other markets. The Kalamata figs are sent to Patras for shipment to England or to Smyrna, from whence they are shipped as the superior produce of that place.

The nomade and quasi-nomade tribes which wander about Greece mostly belong to the Blakh or Wlakh (Wallach) nation, which has for seven or eight centuries inhabited the central range of Mounts Pindus and Olympus. There are, however, numerous other pastoral inhabitants of the Morea, who may easily be confounded with the Blakhs, but who are neither perfectly nomads,

having their fixed summer residences on the mountains, built of stone, nor do they speak the Blakh language.

I can conceive nothing more picturesque than a community of Blakhs in its progress of migration. The numerous flocks of sheep, goats, and horned cattle, grazing on their way, the boys acting as whippers-in on the outskirts, and now and then throwing their crooks at stragglers; all the bipeds of the party mounted on asses; the women spinning, and the smaller children stowed away in huge coppers used for boiling the milk, or in the wooden troughs for making bread; a shrill pipe blown by one of the party; and the fierce dogs ready, as usual, for an attack. Their tents are made of a coarse dark-coloured tissue of goat's hair, and are usually pitched under some evergreen oaks, on the branches of which hang the bags of fresh cheese and butter. Near the tents the milk will be seen boiling for the manufacture of these articles; and close to the encampment, the fold, constructed of rough stones or brushwood. On some elevated rock, watching the cattle and sheep, will be perceived, standing as unmoved as a statue, a Blakh, leaning on his strange-looking musket, his silver-hilted pistols peeping from beneath his grey capote. The nomade women emulate or rather surpass the men in every act of labour requiring strength or exertion, a quality belonging to the whole female portion of the Blakh nation, as does also the reputation they enjoy with that of undoubted chastity and honour, of unmitigated ugliness. Their costume bears some resemblance to that of the Albanians, but is far more wild and singular in its appearance. Though innumerable laws have been promulgated to regulate the movement of these hordes, and though the rights of private property are more or less enforced and respected, the proceedings of the shepherds, a body of men estimated by the government to amount to about 27,366, are based upon lawlessness and encouraged by impunity. To obtain pasturage for their flocks, they habitually set fire in the summer and autumn to the brushwood and even forests; the conflagrations of the latter having in 1844 surpassed those of all previous years, and having been carried to an extent which, if not checked, in a few years will leave every mountain in Greece as bare of vegetation and even soil, as Hymettus and many others.

The object of the shepherds, though temporarily successful (the ashes of the branches and leaves washed into the soil by the heavy rains forming a manure which causes a tender and abundant crop of grass during the ensuing summer), by continual repetition destroys the germ of all vegetation, and the soil, no longer held together by the roots of the trees and bushes, is washed by the torrents into the plains below.

The sheep and goats are frequently, if not usually, herded pell-mell. The flocks of the Blakhs are watched by themselves; those of the Morea are mostly the property of the agriculturists, who confide them to the care of shepherds. Messenia and Arcadia are the two truly pastoral provinces of the Peloponnesus. The flocks seldom consist of more than 600 or 700, and are usually much less. Four rams are sufficient for 100 ewes; they are put together in the latter end of July, and the lambs are dropped in December and January. A ewe gives about a pound of milk twice a-day until June, then once a-day till July, when they are only milked occasionally. All the preparations from the milk made in Greece are entirely different in appearance to anything of the same nature seen in England. The butter is white and is similar to lard, and is packed in skins. The cheese is also white, and generally very much salted, and extremely hard. There are several other preparations from milk, such as *misithra* and *yaourt*; the latter, which is said to have been a Tartar invention, brought into Greece by the Turks, is made by introducing a piece of leaven of bread prepared with lemon juice into boiling milk; and on future occasions a cup of the old *yaourt* forms the best leaven. *Yaourt* is very extensively consumed in Greece during the spring and summer.

The sheep-shearing takes place from April to May, and the animals are not previously washed. The flocks occasionally suffer greatly from a disease called the plague, or *euloghia*.

The production of olive-oil is one of the many sources of wealth of the Greek agriculturists and landowners. The numbers of olive trees in bearing may be calculated at about a million; and being indigenous in Greece, they are to be met with in a wild state in every direction. The wild olives are grafted; but the expenses attending the process of clearing the soil, and the length of time elapsing before any return can be obtained for the requisite outlay of capital, prevent any rapid increase of this branch of agriculture. In Greece, as in Spain and in Southern Italy, the olive tree produces but in alternate years, it is said, owing either to the olives being allowed to fall from the trees, or to the gathering being put off too long, generally to December, while at Aix, where the olive harvest takes place in November, it is

annual. The fact of the uncertainty that always exists as to the next year's crop may perhaps thus be accounted for. The trees are in many places well dug up and irrigated, but are still generally much neglected. It is calculated that there are eight or nine varieties of the olive in Greece. The oil is extracted in the rudest manner, after which it is either run into cisterns or jars; and as these are far from sufficient to contain the produce of an extensive crop, the olives are salted to prevent their spoiling, until a quantity of oil has been got rid of by exportation. The quality of the Salona and Kalamata oil is considered superior to that of the Ionian Islands. A great consumption of olive oil takes place in Greece, none other being burnt for lighting, besides which it is generally used in food and cookery. The principal oil districts are Kalamata, Mistra, Lenidi, Marathonisi, Coron, Salona, Corinth, Megara, and Athens. The price of oil, as paid to the peasants, generally averages about 90 leptas per oke. There are 48 okes to a Venetian barrel, equal to about 15 to 16 gallons.

Silk is produced in most parts of Greece, and the climate affords facilities for an unlimited extension of this branch of industry. The neighbourhood of Kalamata, and the south of the Morea generally, is particularly adapted to this art. The house of almost every peasant is partly given up to the rearing of the worm. The eggs or spawn are nestled in the breasts of the women within their clothes; and the worms hatched in the spring are plentifully supplied with the young mulberry leaves then shooting.

The cocoons are placed in the sun, and the worms become killed by the heat. The operation of winding off the silk from the cocoon was, and is still generally, carried on in the manner practised at Brussa and in other parts of Turkey, the silk being less evenly spun in Greece than at Brussa. In 1836, however, some Greek merchants, among whom were some who had long resided in the silk-producing districts of Italy, obtained a species of monopoly from the government, and established Italian workmen and their families in the south of the Morea and at Andros, for the purpose of improving the mode of production. These at once pronounced that the quality of the silk was quite equal, if not superior, to that of their own country, and the produce of their labour proved the correctness of their assertions. The improved system of working, which secured to those who chose to adopt it double and treble the prices to which they had been accustomed, spread rapidly among the Greek peasantry, who broke down the barriers of former ignorance and prejudices, and laughed at the monopolising edicts of their governors. A few years' experience has firmly established this new source of industry on an extensive and firm basis, which promises to open to Greece a lucrative and increasing trade. The average price of Greek silk spun in the Italian fashion, is about 15 per cent. under that of good Italian silk. An establishment for winding silk on the improved principle exists at the Piræus, and I understand that in Turkey also the example shown in Greece has been followed.

Cotton is cultivated in Greece to a considerable extent, although not forming an important item in the exports of the country, owing to its extensive consumption by the peasantry in the manufacture of their own clothes. The best land is chosen for this purpose. The seed is soaked in water for several days before sowing, which process takes place at about the same season, and in the same manner, as maize.

The cultivation of madder, which, previous to the revolution was carried on to some extent in the plain of Athens and other parts of Greece, has within a few years attracted the attention of the Greek agriculturists, and will no doubt soon form a most important branch of the export trade of Greece. The neighbourhood of Chalcis and the north of Eubœa seem likely to become the districts for this cultivation. The roots are allowed to remain in the soil four or five years, and both in size and colour those of the Greek plant are considered of first-rate quality.

Tobacco is principally cultivated in the plain of Argos, where the quantity produced generally amounts to about 12,000 cwt. Léveda and Kalamata also produce this plant to some extent. The quality of that produced at Lykureo, between Nauplia and Epidaurus, is much esteemed in Turkey, and was formerly sent to the seraglio of Constantinople. Besides what is consumed in Greece, a considerable quantity is exported mostly to Tunis and Egypt, and of late to France on French government account. The price paid to the farmer varies from 80 leptas to 2 drachmas per oke. The cultivation is free and unrestricted by government enactments.

Besides these principal articles of agricultural produce, may be mentioned some of less consideration, but which are, nevertheless, produced to a considerable extent, either for home consumption or for exportation.

Among these may be noted hemp, flax, and linseed, frequently very extensively grown in the plains of Archaia and Ellis; opium, the cultivation of which has been lately introduced near Nauplia; kidney-beans *Phaseolus*, which are much eaten during the long Lents by the lower orders; almonds, oranges, lemons, citrons, quinces, and melons; the latter cultivated in fields.

First among the natural productions requiring from the hand of man but the trouble of collecting, may be classed Valonea, the cup of the acorn of the *Quercus Ægilops*, used as a powerful astringent in tanning and dyeing. These oaks grow in considerable forests in the neighbourhood of Marathonisi, Cape Papa, Dragomestri, and also in Attica, the Island of Zea, and other parts of Greece. It is now principally exported from Dragomestri and Patras for England, and from the other places to Italy. It is divided into three qualities, *camada*, *mezzo-camada*, and *grossa*. The *camada*, which is the most esteemed, is the acorn gathered before it opens to allow of the growth of the nut. The *mezzo-camada* is the younger and better cups of the acorns, and the *grossa* is the inferior. That shipped to England is generally formed of the three together, and of later years the quality of the Greek valonea has been approved of. It is generally shipped from January to March. The quantity produced is very considerable.

Another species of oak, the *Quercus coccifera*, a kind of holly, grows in large quantities on Mount Taygetus, and on all the mountains of the eastern coast of the Peloponnesus. This plant produces the insect known as Kermes. The insect in the process of drying assumes the appearance of a small brittle berry partly filled with powder, and various incorrect notions on the subject have been held from time immemorial; some considering it to be caused by the puncture of a particular kind of fly, while others have supposed it to be the berry of the plant. It is now entirely used in dyeing the red Tunis caps worn by the Greeks as well as Turks. It is exported from Nauplia direct to Tunis, and sometimes also to Constantinople and Alexandria, where of late years the manufacture of caps has also been carried on. The quantity gathered by the peasantry sometimes amounts to 15,000 oke.

The dried leaves of the lentisk, under the appellation of *skind philo*, are used in Greece and the Levant by the tanners. The leaves are reduced to powder in a mill, then sifted, and mixed in about equal proportions with valonea. In consequence of some of this powder having been sent to Trieste, where it was sold and purchased as shumack, a cargo of it was prepared and sent to London, where it was pronounced to be of such inferior quality as to be almost useless. It was sold at a price which did not pay the freight and other expenses, the first costs and charges being also a total loss.

The fustic which is exported from Patras and Vostizza, and forms the dunnage of the currant cargoes, known in commerce as Zante or young fustic, is a species of shumack quite distinct from old fustic, which is a large American tree.

Turpentine is obtained in large quantities from the extensive pine forests of Mount Cithæron and other districts. At the bottom of each tree a kind of step is cut with an adze, the bottom of which is scooped out as a cup, the bark of the tree above this step is wounded afresh each year, and the turpentine flows down freely. The cups are emptied from time to time by the peasants. Owing to the rough way in which this process is performed, many trees are destroyed, and most of them injured, as frequently the whole circle of the bark is chipped off. The rosin obtained from these trees is that mixed with the wine.

Among the minor articles of natural produce may be mentioned gum tragacanth, chestnuts (forming almost the sole food of the inhabitants of some districts), and timber, both oak and fir, still amply sufficient, in spite of waste, destruction, and mal-administration, for the extensive ship-building of the Greeks.

The principal places of trade in the kingdom of Greece are Syra, Patras, Kalamata, and Nauplia; while Hydra, Spezzia, and Galaxidi come more properly under the denomination of ship-owning ports. The trade of the island of Syra is apparently on the decrease, while that of Patras is making the most rapid progress. The trade of the Piræus consists of the importation of articles of necessity and luxury for the capital and immediate neighbourhood, and an increasing exportation of silk, sponge, and a few other articles.

The exchange operations of Greece are ruled principally by the transactions at Athens, where bills on London, Paris, Marseilles, Trieste, &c., are negotiated with facility. Besides this, Athens derives advantage from the banks and banking establishments with which it abounds, and which constitute it the centre of the monetary arrangements of the commerce and agriculture of the state.

Nauplia has declined in importance since the removal of the seat of government, but it is still the *débouché* of a proportion of the exports of the Morea.

In the vicinity of Nauplia is the town of Cranidi, the inhabitants of which are the principal sponge-fishers of the Archipelago and Levant. This fishery is carried on by two means, — spearing with grains and diving; the latter securing the sponge free from injury, which is not the case with the former. The Cranidiots are most expert divers, and anecdotes approaching to the marvellous are told of their feats. It is usual after the sponge is fished up, when it is perfectly free from all sand, and when dry, so light that the slightest breath of air will move a large piece of it, to impregnate it with fine sand. This process is performed by stringing the sponges together, and laying them on the sand to allow the ripple of the sea to slush the fine sand into them, after which they are placed in a heap under a large pile of stones to press them together as tightly as possible. When dry they are hard flat substances, and are beaten and sifted, but however well this process may be performed, even after washing and further sifting, the sponge, though apparently clean, will weigh three or four times its original weight. It is hardly necessary to add that they are always sold by weight.

The staple articles of Greek export are currants, valonea, oil, emery-stone, and silk. The other articles of export are dried figs, raisins, corn, tobacco, madder, kermes, lentisk leaf, honey, wax, fustic, cheese, cotton, wheat, barley, maize, fresh fish (from Missolonghi to Zante), galls, wine, hemp, linseed, silk gauze, tanned skins, lamb and sheep-skins, hare-skins, ox-hides, wool, sulphur, coarse woollen manufactures for capotes, gum tragacanth, marble, santorin cement, sponge, turpentine, timber, liquorice, liquorice juice, botargo, cream of tartar, sesame seed, citrons, and some minor articles said to amount in all to nearly sixty separate articles.

The importations of Greece consist of cotton and woollen manufactures, silk manufactures and articles of luxury in dress, coffee, sugar and spices, indigo and other dyes, iron and other metals, hardware, earthenware, glass, rum, paper, corn, and a vast number of coarse iron and wooden manufactures from Trieste.

The rate of interest of money varies from 8 per cent. to 12 per cent. per annum, the latter being the most usual rate paid, though many, especially in the provincial towns, pay much higher rates than these; and it is hardly necessary to add, that as long as money continues at its present value, the profits of the capitalists must necessarily absorb all others.

The manufactures of Greece may be dismissed in a few lines, yet the peasantry are entirely clothed in the woollen and cotton clothes of their own manufacture. The peculiar woollen manufacture of the Blakhs forms not only the capotes of the Greeks, but of the maritime population of the Mediterranean. Kalamata is famous for the production of a silk gauze, highly prized in the East for shirts and bed-curtains; and at Tripolitza the common ironware of the country is manufactured in abundance. In the generality of the manufactures, however, the value of the raw material is but slightly enhanced by the labour.

Handicraft in general is not in an advanced state of perfection, embroidery in gold, silver, silk, and cotton forming an exception, however, to this rule, as does also marble-cutting and sculpturing, in which rapid progress has been made. Turning, shoe and boot-making, tailoring, dyeing, distilling, plastering, and the decoration of houses are among the crafts that have made the most progress. Carpentering and smith's work, those that are the least advanced.

GREAT GRIMSBY. We have been obligingly furnished with the following statements in regard to the great works now in progress at this port, by Adam Smith, Esq., the resident engineer.

Grimsby is a bor. of considerable antiquity and was formerly a port of such importance that in the reign of Edward III. it sent 11 ships to the siege of Calais. But, owing to the gradual filling up of its harbour, it latterly sunk into comparative insignificance. In 1802 a new harbour was constructed; but being accessible only at high water, it was not productive of all the advantage that was expected. But, in 1846, a new harbour, on a grand scale, accessible at all times of the tide, was commenced; and in anticipation of its being finished, Grimsby has been made the terminus of two important railways.

Grimsby is situated on the S. side of the sea-

tuary of the Humber, which, at this point, is about 7 m. across, being 7 m. W. from the lighthouse on Spurn Head, which is in lat. $53^{\circ} 34' 44''$ N., long. $0^{\circ} 7' 9''$ E. The long, low, narrow, hooked tongue of land, which terminates in the Head, protects a capacious roadstead, with good holding ground, extending to within a mile of the new works at Grimsby, and well known as a harbour of refuge to those who navigate the North Sea. The entrance to the river is marked by the lighthouse on the Spurn Head, and by two light-ships in the Channel. Grimsby has, in consequence, the double advantage of a secure road and of proximity to the open sea. The great utility of the new works at the latter is made additionally evident by the scarcity of ports along this portion of the coast of England; for, if we except Hull, which also lies on the Humber, but 20 m. further inland, there is no other port with docks, but that of Grimsby, between Hartlepool in Durham and King's-Lynn in Norfolk, a distance of fully 150 m.

The old dock or floating basin, referred to above, measures about 17 acres; but being placed at the high water margin of a flat shore, and being consequently accessible only towards high water, it is of very limited utility.

To secure a proper depth of water at the entrance of the new works was an object of the first importance: and to attain it they have been projected $\frac{1}{4}$ of a m. into the estuary in advance of the old dock, reclaiming at the same time and enclosing 190 acres of land.

The new works comprise a wet dock of upwards of 20 acres in extent, with two entrance locks, having in front a tidal basin of 13 acres. The latter, formed by two timber piers, which are together about 2,000 ft. in length, is provided with landing slips. The facility of ingress and egress afforded by this basin will be especially useful to steamers, which, as they usually convey passengers or light merchandise, do not require to enter a dock. Here they will be able to lie afloat alongside the piers at all times of the tide.

The chambers of the two entrance locks connecting the tidal basin and the dock, are respectively 45 ft. in width by 200 ft. in length, and 70 ft. in width by 300 ft. in length. The latter are of sufficient magnitude to permit the docking of the largest frigate in the steam navy. The average depths of water at the dock entrances are about 9 ft. at ebb and 26 ft. at high tide; the latter depth being permanently maintained in the dock itself.

The quays surrounding the dock are intended to provide means both for the easy storage of merchandise and for its rapid conveyance to its destination. Bonding sheds and warehouses fronting the quays will answer the first purpose; and the second will be attained by the formation of railways on each side the dock throughout its length, so laid that trains may be loaded at once from vessels lying along the quay, and straightway proceed on their journey. The railways likewise communicate with the sheds and warehouses. On one side the dock, and close to the steamboat pier previously mentioned, is a railway passenger station.

A graving dock, for the repair of ships, is also to be provided in connexion with the wet dock; and it is further intended to open a channel of communication between the old and the new dock, which will add greatly to the utility and value of the former. These works were, as stated above, commenced in 1846. In 1849 the first stone was laid by Prince Albert. The

works are now in a very advanced state, and are to open for public traffic in the spring of 1852. J. M. Rendel, Esq., is engineer in chief.

But, after all, the value of Grimsby as a commercial port must mainly depend on its facilities of communication with the interior. And these will be of the most extensive description. A direct branch of the Great Northern Railway, from Peterborough, passing through Boston and the E. parts of Lincoln, and thus opening a rich agricultural country, brings Grimsby within 154 m. distance, or 4 or 5 hours' travelling, of London. The line of the Manchester, Sheffield, and Lincolnshire Railway Company, who are the proprietors of the works at Grimsby, unites it with Manchester (dist. 117 m.). It passes through Sheffield, and intersects in its course two trunk lines to the North, viz. the Midland and the Great Northern.

The agricultural districts of Lincolnshire and the Midland counties, the manufacturing and mineral districts of Lancashire and Yorkshire, and the metropolis, are thus brought into direct and easy communication with a port that offers especial advantages for the trade with Holland, the Elbe, and the Baltic; and which is, indeed, extremely well situated for traffic, whether East, North, or South.

Even with its present limited means of accommodation for shipping, certain articles, such as timber, linseed and rapeseed, bones, &c., are largely imported at Grimsby. Recently wheat flour, from France, for the manufacturing districts, has, also, been extensively imported. A large traffic in fish is anticipated when the means for its reception and speedy conveyance to the towns in the interior have been completed.

The export trade of Grimsby has hitherto been, and will continue to be very limited, till the new docks and warehouses have been opened, when, no doubt, it will rapidly develop itself. There will, probably, be a large exportation of Yorkshire coal; and to facilitate this business branch lines are being laid from the Manchester, Sheffield, and Lincolnshire Railway to some of the principal coal-mines in the district through which it passes. The dock will have every facility for loading coal-ships.

IOWA. One of the U. States of N. America, between lat. $40^{\circ} 30'$ and $43^{\circ} 30'$ N., and long. 90° and 97° W., having N. the Minnesota territory, E. the states of Wisconsin and Illinois, from which it is separated by the Mississippi, S. the state of Missouri and W. the Missouri and Sioux rivers. It is shaped like a parallelogram, and is estimated to contain about 51,000 sq. m. Pop. in 1840 (ex. Indians), 43,111, and at present (1850) about 192,000. Surface undulating, without any high hills or mountains; but a tract of considerably elevated table land occupies the greater part of its centre, dividing the streams that fall into the Mississippi from those that fall into the Missouri. The margins of the creeks and rivers are covered for a considerable way back with large timber trees, the rest of the country being mostly open prairies. The latter, which extend over two thirds of the surface, are generally covered with luxuriant herbage, occasionally intermixed with hazel thickets and sassafras shrubs, which, in the flowering season, have a rich and beautiful appearance. Soil various, but generally good; consisting in the bottoms of a deep black mould, mixed in the prairies with sandy loam, red clay, and gravel. Iron is abundant; and one of the richest portions of the lead region of the Union is found in the S.W. quarter of the state; zinc is met with, and limestone is a prevalent formation. Except in some of the lowest bottoms, the country is salubrious. The cold in winter, though frequently severe, is not injurious; and the heats in summer are said not to be oppressive. Iowa bids fair to become one of the principal agricultural states of the Union. It is well suited to the growth of wheat, Indian corn, and all sorts of grain, and a great variety of fruits and culinary vegetables have been already introduced; it is also extremely well fitted for grazing and dairy purposes. In-

deed, such has been its progress that, though till 1833, when it received its first white settlers, it had been exclusively occupied as a hunting-ground by the Indians, it produced in 1848, 1,300,000 bush. wheat, 1,500,000 do. oats, 3,500,000 do. Indian corn, with considerable quantities of barley, potatoes, &c. The situation of the state, between two great navigable rivers, affords every facility for the exportation of its various products. The town of Iowa, on the river of that name, in the E. part of the state, is the seat of government; and Burlington, Dubuque in the lead district, Davenport, and various other places, are fast rising into importance. The government is vested in a governor, chosen every four, a senate every four, and a house of representatives every two years, by the suffrages of the white male inhabs. of twenty-one years of age. The members of both houses are paid for their attendance, their numbers depending on the amount of the population. The judges of the supreme court receive each 1,000 doll. a year of salary. The constitution prohibits the creation of any corporation with banking privileges. A university has already been established; and ample provision is made for the support of public schools. Slavery is not permitted. Iowa was acquired from the Indians in 1832: in 1833, it began to be settled; in 1838, it was erected into a territorial government; and in 1846 it was admitted into the Union. (*Haskell's Gazetteer; American Almanac for 1851, &c.*)

KEY-WEST. A small island from 5 to 6 m. in length, by 1 in width; 56 m. S. W. from Cape Sable, in Florida. It is one of the Florida keys, or of that extensive circular range of low islands, banks, and reefs, which fences the coast of Florida, and forms the northern boundary of the Gulph Stream, from the Tortugas islands on the W. round to Cape Florida on the N. A lighthouse erected on the S.W. point of the island, lat. $24^{\circ} 29' N.$, long. $81^{\circ} 55' W.$, has a fixed light elevated 83 ft. 6 in. above the sea. The town of Key-West, near the N.W. part of the island, has about 1,600 inhabs., and has an excellent harbour, with about 25 ft. water. A safe passage, about 6 m. in length, leads by Key-West from the Gulph Stream to the Gulph of Mexico. It has 12 ft. water at ebb tide, and vessels from the N. bound for New Orleans, Mobile, &c., or from the latter for the former, by passing through it, avoid the delay and danger of the more westerly passage round the Tortugas.

Owing to the frequent accidents to shipping from coming in contact with the banks and reefs in this dangerous vicinity, the American government have organised an establishment at Key-West for the assistance of ships in distress, and made it the seat of an admiralty court for the adjudication of claims for salvage. The former consists of 15 licensed vessels with crews of about 10 men each. These are kept constantly cruising about on the look-out for ships in distress or wanting pilots; and as their emolument principally depends on the fees they obtain for their assistance, it may be fairly presumed that it will be rendered with the greatest alacrity. But the desirable thing is to hinder vessels from getting on shore, the assisting them when in that predicament being, though an important, a secondary consideration. The latter, however, and not the former, is the main object which the licensed cruisers of Key-West have in view; and it would be preferable, could means be devised for making their remuneration depend rather on their success in preventing disasters, than, as at present, in mitigating their influence. This, however, is by no means easily done. Shipwrecks will, perhaps, be more effectually prevented by increasing the number of light-houses, light-vessels, and sea-marks, along the edges of the islands and reefs, than in any other way. We subjoin an account of the sums awarded as salvages by the court of Key-West in each of the 18 years ending with 1848.

(*Blunt's American Coasting Pilot*, p. 256.; *Hunt's Commercial Magazine*.)

LABUAN, a small island off the N.W. coast of Borneo, a dependency of the British crown, about 6 m. distant from the nearest point of the mainland, and 30 m. N. from the city of Borneo or Bruni, lat. $5^{\circ} 12' N.$, long. $115^{\circ} 19' 36'' E.$ It is from 25 to 30 m. in circ., flat and covered with wood. The anchorage, on the E. side of the island, is protected by the greater and three smaller islands; and the town of Victoria has been commenced at the embouchure of a rivulet in a small bay, at the head of the anchorage. Coal of good quality is found on the island, and it is well supplied with fresh water. It was ceded by the Sultan of

Borneo to Great Britain in 1844; and Sir James Brooke, who negotiated its cession, has since been appointed its governor. When it came into our possession it was uninhabited; but its situation is such that, provided it be moderately healthy, it can hardly fail to become an important emporium. It lies near the best route for shipping from the Straits of Singapore to China, and, while it is extremely well situated for carrying on trade with the W. and N. coasts of Borneo and the Philippine islands, it will serve as a harbour of refuge and as a convenient station for the steamers and other ships of war required for the suppression of the piracy that is now, to the great injury of commerce, carried on to so great an extent from the ports and rivers of Borneo, and of some of the adjacent islands. In this respect its abundant supply of coal will be of the greatest service. In war the possession of Labuan will give us the entire command of the Chinese sea. (See *Brooke's Journal*, and an excellent paper by Mr. Craufurd in *Keppel's Borneo*, li. p. 144. and p. 209.)

Borneo, or Bruni, on the adjacent shore of the mainland, the residence of the Sultan of Borneo Proper, has been termed the Venice of the East. It contains from 30,000 to 40,000 inhabitants, mostly Malays, and it really seems as if it floated on the waves. It is situated on an estuary, and though built with little regard to regularity, it is intersected crosswise by two main streets, which divide it into four portions, one only of which stands on dry land. The houses in the other three parts are of wood built on piles, which support them above the water, with streets, if so they may be called, to admit the passage of canoes. The steamer which conveyed Sir James Brooke to Borneo, when Labuan was ceded, anchored in the main street in the centre of the town! "The greatest novelty at Bruni," says Mr. Marryat, from whom we have borrowed these details, "is the floating bazaar. There are no shops in the city, and the market is held every day in canoes. These come in at sunrise every morning from every part of the river, laden with fresh fruit, tobacco, pepper, and every other article which is produced in the vicinity; a few European productions, such as handkerchiefs, check-cotton prints, &c., also make their appearance. Congregated in the main streets, the canoes are tacked together, forming lanes through which the purchasers in their own canoes paddle, selecting and bargaining for goods with as much convenience as if the whole were transacted on *terre firma*. Iron is here so valuable that it is used as money. One hundred flat pieces an inch square are valued at a dollar, and among the lower classes these iron pieces form the sole coin. They are unstamped, so that any person appears to be at liberty to cut his own iron into money; but whether such is really the case, I cannot vouch." (*Marryat's Borneo*, &c., p. 113.)

But though deficient in iron, the gold mines of Borneo are amongst the richest in the world. Sir Stamford Raffles estimated that in his time about 32,000 Chinese labourers were employed in these mines on the W. coast of Borneo; and it is not easy to say how productive they might become, were the miners in a condition to prosecute their undertakings in safety, and to bring the resources of science and of capital to their aid. Antimony is also found in abundance in Borneo, especially in the district of Sarawak, of which Sir James Brooke is now rajah; and the diamonds of Borneo rival those of India and Brazil. But independently of its coal, and of its precious and other metals, its vegetable products might alone furnish the materials of an extensive commerce. The sago palm grows in great perfection in many parts of the island, and sago is largely exported in a rough state to Singapore. The areca nut, rattans, gutta percha, gum-benjamin, camphor, birds' nests, &c., are also considerable articles of export; and sugar, pepper, and all the products of tropical regions, might, with a little care, be raised to any extent in most parts of this vast island. The numbers and ferocity of the savages by whom it is occupied present, indeed, formidable obstacles to its improvement. But civilisation is beginning to make its way amongst them; and, though probably slow, its progress cannot well be arrested. (For farther particulars in regard to Borneo, see the article on it in the *Geographical Dictionary*, the work of Captain Keppel referred to above, and Mr. Low's valuable work on Sarawak and its inhabs.)

LIBERIA. We borrow from the *Times* the following details with respect to the condition of this state in 1848. (See art. **LIBERIA** in this work.) Probably, however, they give too flattering a view of its progress and prospects. At all events its trade has not latterly increased.

"The colony of Liberia has just been recognised as an independent republic by Great Britain and France, and a treaty of trade and commerce has upon our part

been concluded with that State. So little, however, is known of its situation, prospects, and resources, that it will be desirable to furnish some general information on these points.

"The colony of Liberia lies midway between Sierra Leone and Cape Palmas, and was established by the American Colonisation Society in 1820 by an immigration of free or liberated people of colour from the United States. Since that period its population, including the aborigines who have incorporated themselves with the immigrants, has increased to upwards of 80,000, while the land they occupy extends along 320 miles of coast, and reaches at an average about 80 miles into the interior. The proportion of the population born in America, or of American descent, is estimated at about 10,000, and such has been the effect of their example and influence, that out of the remaining 70,000, consisting of aborigines, or of captives released from slavers, at least 50,000 can speak the English language, so that any one would perfectly understand them, while their habits are rapidly becoming those of civilised and steady agriculturists. The desire for education is also manifested by the surrounding tribes, and instances are not uncommon of natives sending their children four or five hundred miles from the interior to be instructed in the primary schools established in the republic. Of these there are 36 in operation, with an average attendance in each of about 40 aboriginal pupils.

"The whole of the territory of Liberia has been purchased from time to time from the aboriginal owners; and in this way at least twenty petty sovereignties have been extinguished. In its former condition the coast was the constant resort of slavers, but the traffic is now effectually suppressed as far as the jurisdiction of the republic extends, and its entire abandonment is an invariable stipulation in every treaty of trade and protection into which the republic may consent to enter with neighbouring states. The disposition to avail themselves of treaties of this description is plainly on the increase on the part of the surrounding natives, and it is estimated that not less than 2,000,000 persons in the interior now obtain their supply of European goods from the republic and from the kindred colony of Cape Palmas. Last year 42 foreign vessels visited Liberia, and exchanged merchandise for articles of African production to the amount of 600,000 dolls.

"The natural resources of Liberia are immense, and are steadily in process of development. The principal articles of export are ivory, palm oil (of which 150,000 dolls. worth was shipped in 1847), camwood, gold dust, &c. Coffee is indigenous, and of excellent quality, and is now being cultivated extensively. It yields more than in the West Indies, and the belief is entertained that it may be produced so as to come into competition with that produced by slave-labour. Sugar also thrives well, but enough only is grown for home consumption, and there is no present hope of competing with Cuba or Brazil. Cocoa has just been introduced, and promises well. Cotton, it is expected, will soon become an article of export. Indigo, ginger, arrowroot, and various other articles of commerce, likewise grow luxuriantly. Rich metallic mines exist in the country, and only require capital to lay them open.

"The population is upon the whole well disposed to work, and the rate of wages per day is about 1s. sterling. It is an extraordinary feature of this part of the coast that horses and other draught animals will not live, and hence every kind of transport, except that upon the rivers, is performed by manual labour. Much of the camwood which is exported from Liberia is brought a distance of 200 m. on men's backs. It is seen, however, that this difficulty, which appears a great one at first, may have the effect, not only of inuring the people to labour, but of stimulating them to every kind of mechanical contrivance by which it may be overcome. The climate of Liberia, although more healthy than Sierra Leone, is still deadly to the European; but the improvement it has undergone during the last ten years, the effect of clearing, drainage, &c., is stated to be most remarkable. The coloured immigrants from America, who used invariably to suffer from fever on their arrival, are now able to go to work at once.

"At Monrovia, the port and capital, the population amounts to about 9,000. A large portion of the territory has been accurately surveyed, and is sold in sections by the government, at from 50c. to 1 doll. per acre. The government of the country is precisely on the American model, consisting of a president, a vice-president, a senate, and a house of representatives, the number of members in the former being 6, and in the latter 28. The possession of real estate to the value of 30 dolls. is the electoral qualification. The revenue, which was last year about 20,000 dolls., is derived entirely from an *ad valorem* duty of 6 per cent. on imports, and the produce of land sales. Ardent spirits, the use of which it is sought to discourage, form an exception, and are taxed 25 cents per gallon. The principal trade is carried on

by barter, but there is a small paper circulation of about 6,000 dolls. redeemable on demand.

"The organisation of the Republic as an independent state took place in July last, when Mr. Roberts, who had formerly acted as governor under the Colonisation Society, was elected President. Speaking of his qualifications, Commodore Perry, of the United States navy, says in a report to the American Government, dated in 1844 —

"Governor Roberts, of Liberia, and Russworm, of Cape Palmas, are intelligent and estimable men executing their responsible functions with wisdom and dignity; and we have in the example of these two gentlemen irrefragable proof of the capability of coloured people to govern themselves."

"While with regard to the advantages of the colony he adds —

"So far as the influence of the colonists has extended, it has been exerted to suppress the slave trade. Their endeavours have been eminently successful, and it is by planting these settlements (whether American or European) along the whole extent of coast from Cape Verd to Benguela, that the exportation of slaves will be most effectually prevented."

MELBOURNE, the cap. of the British colonial territory of Victoria, or Port Phillip, in Australia, occupying the S.E. portion of the continent, stretching through 9 degs. of long., from Cape Howe on the E. to Glenelg river on the W. The town is situated on the N. bank of the Yarra-yarra river, about 9 m. (following its windings) from its mouth in the basin of Port Phillip, lat. 37° 49' 25" S., long. 144° 57' E. Pop., according to the statement in a petition of the inhabs., 20,000 in 1850; but this is perhaps exaggerated. It was founded in 1837, and now extends for 2 m. in length by 1 do. in breadth, along the banks of the river. But its site is unfortunate; for the river, being obstructed by a bar and shallows, is not generally navigable for vessels of more than 60 tons burden; and it has the farther disadvantage of being low, and liable to be flooded by the overflowing of the river during the wet season. It has been proposed to facilitate the trade of the town by removing the bar at the mouth of the river, and deepening its channel; but this would be a very expensive undertaking, and one of which the success would be not a little doubtful. The excavation of a ship canal from the deep water in the bay to Melbourne has also been proposed; and it, probably, would be the preferable plan. It seems, however, most likely that the trade of the town, and even the greater part of its population, will ultimately centre at Williamstown, a village a few miles distant, on a headland extending into the bay opposite to which all large vessels coming to Melbourne are obliged to anchor. The principal objection to Williamstown is the scarcity and bad quality of the fresh water; but this serious defect might, we are assured, be obviated by sinking wells, or by conveying hither a supply of water from some of the adjacent streams. Melbourne has the appearance of an English country town. Streets regular, and mostly 100 ft. in width; houses chiefly of brick, some of them being stuccoed. Of late, several buildings have been constructed of granite, whinstone, or sandstone quarried in the vicinity, and a handsome freestone bridge of one arch across the river has been constructed. Melbourne has Episcopalian, Presbyterian, R. Cath., Independent, Methodist, and Baptist churches, Port Phillip college, a mechanics' institute, a court ho., jail, and good edifices appropriated to the government offices, two banks, a theatre, steam flour-mills, iron foundries, horse bazaars, extensive wool-stores, a "squatters' club," a botanic garden, race-course, &c., and in its vicinity are many thriving farms, and country-residences of its more opulent inhabs. It forms a bor., divided into 4 wards, and is governed by a mayor, alderman, and councillors. It is the see of a bishop, and the seat of a court of justice, whence appeal lies to the supreme court at Sydney, &c. Several newspapers are published in the town. It communicates by steam-boats daily with Geelong, and at stated periods with Sydney, Launceston, and Hobart Town.

Geelong, the town next in importance in the Victoria territory, stands at the W. extremity of the W. arm of Port Phillip, about 40 miles S.W. Melbourne. Total pop. (1846) 2,065. It has an increasing trade; though, like Melbourne, shoals prevent its being reached by large vessels. But, notwithstanding, it appears to be preferable as a port to the cap. On the E. side of the bay are the marit. villages, St. Kilda and Brighton, respectively 3 and 6 m. S. Melbourne, and occasionally resorted to by its inhabitants.

In 1849 the agg. value of the exports of native produce from the prov. of Victoria, and mostly from Melbourne, amounted to 737,067l. Wool is by far the most important article, the quantity exported being no less than 14,567,805 lbs., worth, when shipped, 574,594l. The next most important article was tallow, 69,649 cwt., worth 100,261l., with horned cattle, ship-beef, &c. The imports

into Victoria during the same year amounted to 479,831/. They comprised cottons, linens, woollens, and other manufactured goods; iron and hardware; apparel and slops; ale and beer; spirits and wine; sugar and tea; tobacco, &c. Were it not for the absurd regulations in regard to the disposal of land, Victoria and South Australia would be, perhaps, the most desirable of our colonies to which to emigrate. (*Australia and Prison Discipline; Griffith's Present State of Port Phillip; Wells' Australian Gazetteer.*)

MILWAUKIE, a town and harbour of the U. States, state Wisconsin, cap. co. same name, at the mouth of the Milwaukee river, on the W. shore of Lake Michigan, 80 m. N. Chicago. This place is rapidly rising in importance; and being the only good harbour on the W. side of the lake, between Chicago and Green Bay, it will most likely become the principal emporium of the extensive territory in which it is situated. In 1840, it had only 1,702 inhab., whereas, in 1849, it had not fewer than 17,000. It has already a very extensive trade; and steamers ply between it and Buffalo, at the E. extremity of Lake Erie. It is well-built, has a court-house, jail, and land office for the U. States, with numerous churches, schools, academies, newspapers, &c.

We subjoin an Account of the Exports of Wheat and Flour from Milwaukee during each of the 4 Years ending with 1849.

		1846.	1847.	1848.	1849.

Flour	- bbls.	15,776	34,840	92,732	136,657

MINNESOTA, a territory of the U. States, having N. the British possessions, from which it is separated in part by the parallel of 49° N. lat., E. Lake Superior and the State of Wisconsin, S. Iowa, and W. the unappropriated Indian territories. Its area is estimated at about 150,000 sq. m.; and, in June, 1849, it had only about 4,500 free white inhab., but the pop. is rapidly increasing. Its central table land, though only about 1,700 ft. above the level of the Gulf of Mexico, contains the sources of the "King of floods," the Mississippi, flowing S., and of the Red River, flowing N. to Lake Winnipeg. It is extremely well watered, and has a greater number of lakes than any other state or territory of the Union. It has every variety of soil; and while in parts it is covered by extensive forests, in others it has large tracts of prairies and open lands, with swamps and morasses. It is said to be peculiarly well fitted for the raising of corn and of cattle, and we already hear of its agricultural societies and its cattle shows. (*Johnston's Notes*, l. 236.) Almost nothing is known of its mineral products, except that it has lead mines. Capital, St. Paul, immediately below the falls of St. Anthony, on the Upper Mississippi, and 219 m. within the territory. The climate in winter is severe; but, though followed by a hot summer, it is anything but unhealthy. Its government is vested, like that of the other states and territories of the Union, in a governor, senate, and house of representatives, all chosen by universal suffrage.

NATAL, the name given to a district on the S.E. coast of Africa, a dependency of the British crown, being a portion of the great country occupied by the Caffres or Kaffirs, between 7½ and 31 degs. S. lat., and 28½ and 31 degs. E. long. It has on the N. the country of the Zoolah Kaffirs, from which it is separated by the Buffalo and Trikelo rivers, on the E. the Indian Ocean, S. the Umzinkala river, and W. a chain of lofty mountains called the Drakenberg or Kathlamba, running N.N.E. and S. S.W., from 80 to 100 m. from the coast. Its area has been differently estimated, but it may probably amount to 15,000 or 16,000 sq. m. The country shelves rapidly downwards from the mountains into the sea, having the appearance of a hilly declivity intersected by deep ravines, but along the shore and the rivers it is most flat and swampy. The declivities of the hills are in part covered with forest trees and bushes, and in part bare and red, owing to the prevalence of the iron ore which they contain. The lower grounds are everywhere covered with vegetation, consisting either of the most luxuriant grass, or of bush or scrub. It is everywhere well watered, being traversed by numerous rivers and streams which, rising in the mountains, pursue their winding courses to the sea. In the rainy seasons these are much swollen, and rush forward with great violence. They have generally but a short course; are frequently interrupted by cataracts: and owing to the quantity of sand and earth which they carry down, they have uniformly bars at their mouths, so that they are in great measure useless for navigation. According to the statement of the Surveyor General, "the soil is well adapted for cultivation; on the alluvial land, along the banks of the rivers, it is particularly so, producing much larger crops than are ever grown in the colony of the Cape of Good Hope." (*Correspondence regarding Natal*, 1848, p. 79.) The principal rocks are granite, basalt, slate,

sandstone, shale, &c. Iron ore is extremely abundant; coal, also, is found in different localities; and might, it is said, be obtained in any quantity. The climate is not too hot; but in the summer months the grass is generally brown and dry, and towards the S. frontier droughts are frequent. The district is said to be remarkably healthy, and free from the epidemics by which most parts of Africa are visited.

Tigers, hyenas, wolves, and a few lions, lurk in the deeper ravines, and in the forests on the mountains along the frontier of the colony, whence they occasionally descend to prey on the flocks; but they are less feared, and their ravages are of less consequence, than might be supposed. The hippopotamus is found in the pools in the rivers in the interior; elephants and rhinoceroses are also met with, though they are less common now than formerly. Game is abundant, comprising antelopes, hares, pheasants, partridges, &c. Baboons, monkeys, with sundry varieties of serpents and other reptiles, are among the native animals. The district is in most parts well suited for the rearing and feeding of cattle. The greatest obstruction in the way of the successful prosecution of this branch of industry will most probably be found, not in the depredations of wild animals, but in the thievish propensities of the native population. Most part, indeed, of the contests in which we have been engaged along the frontiers of our possessions in S. Africa, have originated in this source, or in the predatory incursions of the Kaffirs and other contiguous tribes in quest of cattle. But were the country divided into suitable districts, a police establishment organised, and measures adopted for the prevention and prompt punishment of crime, the natives might, perhaps, be induced to renounce these practices, and become alive to the superior advantages of security and industry.

Wheat, barley, millet, maize, and beans, are already cultivated to some extent, and might be raised in any quantity; and sugar, coffee, cotton, indigo, and other tropical productions, are well suited to the soil and climate. The cotton is of very good quality, as is evinced by the price which the small quantity of it that has been exported has brought in Liverpool. Vines, figs, oranges, and lemons, have also been introduced, with every reasonable success.

The principal, or rather the only, harbour on this coast, is that of Port Natal, lat. 29° 55' S., long. 30° 41' E. It opens to the N., and outside its mouth, which is narrow, is a bar of sand, on which there are in ordinary tides about 6 ft. water at ebb, and about 12 ft. at flood; but at springs the rise of the tide is greater. Within the bar there are from 12 to 15 and 16 ft. water at ebb. On the whole the harbour is not suited for vessels drawing more than 10 or at most 12 ft. water. But ships of any burden may anchor outside the bar with the wind at S. W. by W., round by W. to N. N. E. When, however, the wind veers round to any point not within these limits, the anchorage becomes unsafe, and ships must immediately stand out to the sea. Within the harbour forms a large basin, which, at flood, exhibits a wide expanse of water, but it mostly dries at low ebb. Durban, the town, an inconsiderable place, is on the N. side of the basin, and has the disadvantage of being about 1½ m. from the nearest point where ships can anchor. Good fresh water for shipping is obtained within the bay. (*Private Information.*) The seat of government is not, however, here, but at Pietermaritzburg, a considerable way inland. The exports comprise ivory, hides, horns, gum, bees-wax, Indian corn, &c.; and among the imports are fire-arms and ammunition, coarse cotton stuff, iron and hardware, &c.

This district rose into importance some years ago from its having become the resort of the Dutch boers who emigrated from the Cape Colony, partly from their dissatisfaction with our regulations in regard to land, but more, perhaps, from the restraints under which they were properly laid by our governor. And it is a curious fact, that since our occupation of Natal in 1842, it also has been deserted by the boers, so that it is at present all but wholly denuded of its white inhabitants. It has latterly been erected into a separate dependency, under a lieut.-governor, subordinate to the governor of the Cape colony.

Under these circumstances there can be no question that it would be greatly for the advantage of the district, could a small portion of that vast stream of emigration that is now flowing from this country to Canada and the United States be diverted thither. But the most advantageous class of immigrants for Natal would undoubtedly be practical farmers, with from 200l. to 300l. or 500l. of capital. Such persons are much wanted to form the nucleus of an English population, and to introduce the husbandry for which the colony is suited. The colonial authorities are aware of this; and to encourage the immigration of such parties they have proposed that "they should receive an equivalent in land to the amount they have necessarily expended in the

outfit and passage of themselves, families, and servants. An arrangement of this nature would enable a man possessing capital to the extent we have mentioned, to commence farming with advantage the moment of his arrival in the district, while without it the means of a most valuable class of colonists would be swallowed up in expenses, and upon their landing here emigrants with limited capital would find themselves very little better off than before they left their native land." (*Report of the Surveyor-General, &c., of the Colony, 29 Dec. 1847.*)

No doubt this is a highly judicious recommendation, and does credit to those from whom it emanated. But there is no chance of its being acted upon, for unluckily it happens to be opposed to the grand nostrum (it would be an abuse of terms to call it principle), that no land, how worthless soever, shall be granted to any immigrant; but that he shall be compelled to buy it in considerable lots at a high price. And such being the case, immigrants who can afford to buy land will most probably continue to think, as they do at present, that it is a safer and a better speculation to pay 6s. or 7s. an acre for the rich wheat lands in the valley of the Mississippi, than 20s. an acre for the sheep-walks of Australia, or 2s. an acre for the declivities, swamps, and jungles of S. Africa.

PETRA, a once famous but now deserted city of Arabia Petrea, the metropolis of the Nabatheans, nearly half way between the head of the Gulph of Akabah (an. *Ælaniticus Sinus*) and the Dead Sea, in about lat. 30° 15' N., long. 35° 35' E. It is situated on a small stream, at the foot of Mount Hor, in a fissure or chasm, about 1½ m. in length by ½ m. in breadth, surrounded on all sides by precipitous and mostly inaccessible rocks, except on the E., where the rivulet escapes, and where it is entered by a gorge which hardly affords room enough for two horsemen to ride abreast. The statement of Pliny is as correct as it is brief:—*Nabataei oppidum incolunt Petram nomine in convalle, paulo minus II. mill. passuum amplitudinis, circumdatum montibus inaccessis, amne interfluente.* (*Hist. Nat.*, lib. vi. cap. 28.) Its name of Πτρα, a Rock, which afterwards became that of the surrounding country, has been obviously derived from its situation.* It has been long deserted, and its very site had become a matter of doubt and conjecture. But in 1812 it was visited by Burckhardt; and it has since been visited by Captains Irby and Mangles, M. de Laborde, Lord Lindsay, Mr. Robinson, and other travellers. Altogether its position and ruins are most extraordinary; and show, not less conclusively than those of Palmyra, the wealth and civilisation of which the commerce of the ancient world was the prolific source. The city, of which there are some magnificent relics, appears to have occupied the entire extent of the chasm. The rocks, also, with which it is surrounded, with those along the gorge by which it is entered, are almost all hollowed out and cut into tombs, temples, and other public and private structures, of extraordinary magnificence, including a large theatre. And, thanks to the climate, their embellishments are as sharp and perfect as if they had only come from the chisel of the workmen. The rock is of different colours; and Messrs. Irby and Mangles say, "We must despair of giving the reader any idea of the singular effect of rocks tinted with the most extraordinary hues, whose summits present to us nature in her most savage and romantic form, while their bases are worked out in all the symmetry and regularity of art, with colonnades and pediments, and ranges of corridors adhering to the perpendicular surface." Nowhere, perhaps, have the habitations of men and their final resting-places been brought into such immediate contact as at Petra. Even the approaches to

the theatre are lined with tombs! The ruins, though many of them are doubtless of great antiquity, appear principally to belong to the Roman period; and the only inscription found among them is in Latin of the age of Adrian or Antoninus Pius. (*Laborde's Sinai, &c.*, Eng. trans. p. 179.)

Petra, from its great natural strength and its position, was peculiarly well fitted to serve as a safe and convenient *entrepôt* for the extensive caravan trade carried on between Phœnicia and Arabia and the Persian Gulph. The products native to Arabia Felix, and those brought to its ports from India and Africa, were conveyed to Petra, partly by caravans which performed the entire journey by land, and partly by caravans from Ælana, at the head of the Ælanitic Gulph, to which they were sometimes conveyed by sea. There was, also, at a very remote epoch, a caravan route from the important emporium of Gerrha, on the W. side of the Persian Gulph, to Petra. (*Vincent's Commerce of the Ancients*, and the authorities referred to in it, ii. 361.) When brought to the latter the products of the E. world were forwarded to Tyre by way of Gaza and Rhinoculura (*Strabo*, lib. xvi. cap. 3.), to be exchanged for the products of Phœnicia and of the countries round the Mediterranean; or, which is most probable, quantities of the latter would be always in store in Petra, and the exchange would be effected in it. That this trade was carried on in the way now stated from a very remote antiquity, is evident from the fact that reference is made in the sacred writings to the Edomites, or Idumæans, the original founders and occupiers of Petra, as being managers or agents for the Tyrians, and bartering one sort of produce with them for another. (*Heeren's Asiatic Nations*, i. 353.) In the age of Alexander the Great a fair on a large scale was held in the vicinity of Petra, which, no doubt, had been established at a much more remote epoch. (*Heeren, ubi supra.*) At a later period, Strabo mentions that a good many Romans and other strangers were established in the town; and he, also, indicates some points in the route of the caravans from Southern Arabia. (Lib. xvi. cap. 3.) According to Pliny, it had a direct communication with Palmyra. (*Hist. Nat.*, *ubi supra.*) It was the wealth resulting from this extensive trade that filled the rocky girdle of the city with a rich, a refined, and an enterprising population, and gave them abundance, though in the middle of vast deserts.

The history of Petra is involved in much obscurity. There appears to be little doubt that it is identical with the Selah and Joktheel of the Bible. (2 Kings, chap. xiv. v. 7.) The reports of its riches having excited the cupidity of Antigonus, general of Alexander the Great, and king of Syria, he made two efforts to effect its subjugation. But, in both instances, he was defeated, though his forces in the second expedition were commanded by his son Demetrius, celebrated for his skill in the besieging of cities. (*Diodorus*, lib. xix. §§ 95, 97, and 98.) Petra appears to have preserved its independence down to the reign of Trajan, when it submitted to his victorious arms. (*Dion Cassius*, lib. lxxviii. cap. 14.) It would seem, from inscriptions on coins still extant, that Adrian, the successor of Trajan, had conferred his name on Petra. But from that epoch it is no more heard of in history. The commerce, to which it owed its existence, was gradually diverted into other channels; and it has now nothing to interest save its wonderful ruins.

* Mr. Foster has given, in his learned and valuable work on the "Historical Geography of Arabia" (i. 237.), a different, but, as we think, fanciful, derivation of the term Petra.

PRUSSIA.

Prussian revised Constitution, as promulgated on the 1st of February, 1850, and sworn to by the King, at Berlin, on the 6th of the same Month.

We, Frederick William, by the grace of God, king, &c., hereby make known and proclaim that we, after that the constitution of the 5th of December, 1848, reserved for revision by ordinary legislative means, has been submitted to the required revision by both chambers of our kingdom, have, in accord with both chambers, determined the same to be definitively valid (*end-giltig*).

CHAPTER I. — OF THE STATE TERRITORY.

Art. 1. All portions of the monarchy, within their present boundaries, form the territory of the Prussian State.*

Art. 2. The frontiers of this State territory can only be altered by a law.

CHAPTER II. — OF THE RIGHTS OF PRUSSIA.

by
ok
on
sh
ar
rk
ak
di
ar
ma
rk
an
to
on
an
bo

Art. 23. DEATH OF KING OR QUEEN IN WAR. The necessary disposition, in case of criminal prosecution and war, shall be determined by law.

Art. 24. All Prussians are bound to serve (as soldiers). The extent and mode of this obligation is defined by law.

* Including Neuchâtel-Vallingen and the Hohenzollern principalities.

† Is this in contradiction to the establishment of an hereditary peerage?

‡ How is this to be reconciled with the formation of special jury courts?

§ It has hitherto been the practice for operative journeymen wishing to migrate from one town or territory to another, to pay a certain tax or fine for their permit.

|| This admits all men to the same privileges; but excludes none from obligations, such as military service, &c.

¶ A safeguard against the Jesuits.

The ministry will conduct the regency until the regent shall assume his functions.

Art. 56. The regent exercises the kingly power vested in him in the king's name. Upon the constitution of the regency he takes oath before both chambers, to observe firmly and inviolably the constitution of the monarchy, and to govern in accordance with it and the laws. Until this oath be taken ministers remain responsible, under every circumstance, for all acts of government.

Art. 59. The revenues of the crown (civil list) continue to be derived from the rent of the forests and domains, according to the law of the 17th January, 1850, regulating the Royal Budget Funds.

CHAPTER IV. — OF THE MINISTERS.

Art. 60. Ministers, as well as the state functionaries appointed as

they substitute, are entitled to appear in both chambers, and must be heard at all times on their demand. Each chamber has a right to require the presence of a minister. Ministers can only vote in one or other chamber if they be members of the same.

Art. 61. Ministers can, through a resolution of either chamber, be impeached for the crime of violating the constitution, for corruption, or treason. The highest court of justice of the monarchy, assembled in senatus, takes cognizance of the accusation. So long as two supreme courts of justice exist, they will unite for this purpose. More immediate dispositions respecting the cases of responsibility, the proceedings and punishments, are reserved for special law.

CHAPTER V.—OF THE CHAMBERS.

Art. 62. The legislative power is exercised in common by the king and two chambers. The assent of the king and both chambers is requisite for all laws. Financial projects and estimates (budgets) must first be submitted to the Second Chamber. The latter must be accepted or rejected globally by the First Chamber.

Art. 63. In cases only when the maintenance of public security or the suppression of any extraordinary necessity urgently demands, and in case the chambers are not assembled, and under the responsibility of the whole ministry, can ordinances be issued having force of law, always providing they be not contrary to the constitution. The same must, however, be submitted forthwith to the approbation of the chambers at their next meeting.

Art. 64. The right of proposing laws is vested in the king and in both chambers.

is to the ministers, and demand explanations relative to complaints contained therein.

Art. 65. Each chamber has the faculty to appoint commissions of investigation of facts for their own information.

Art. 66. Members of both chambers are representatives of the whole population. They vote according to their free conviction, and are not bound by prescriptions or instructions.

Art. 67. They cannot be called to account, either for their votes, or for opinions uttered by them in the chambers. No member of the chamber can, without his assent, be submitted to examination or arrest for any proceeding entailing penalties, unless seized in the act, or within 24 hours of the same. Similar proceedings are necessary in case of arrest for debt. All criminal proceedings against members of the chamber, and all examination or civil arrest, must be suspended during the session, should the chamber whom it may concern so demand.

Art. 68. Members of the Second Chamber receive travelling expenses and diet money from the state, according to a scale fixed by law (three dollars or nine shillings per day). Refusal of the same is not admissible.

CHAPTER VI.—OF THE JUDICIAL POWER.

Art. 69. The judicial power is exercised in the king's name by independent courts, subject to no other authority than that of the law. Sentences are promulgated and carried into effect in the king's name.

Art. 70. Judges are nominated by the king, or in his name, for life. They can only be removed, or suspended from office temporarily, for motives provided for by law. Temporary suspensions from office, which do not take place according to law, involuntary removal to other posts, or to the retired list, can only be referred for causes and in the mode prescribed by law, and in consequence of judicial sentence.

Art. 71. Judges cannot henceforth occupy other paid official functions. Exceptions are only admissible in virtue of a law.

Art. 72. The organization of judicial courts shall be determined by law.

Art. 73. Those only can be appointed judges who are qualified therefor by the prescriptions of the law.

Art. 74. Courts for special classes of affairs, especially courts of commerce and industry, shall be established in such places as may be required through legislative means. The mode of procedure in the same, the nomination of members, the special attributions of the latter, and the duties of their office, shall be determined by law.

Art. 75. There shall be only one supreme court of justice in Prussia.

Art. 76. Proceedings before competent courts in civil and criminal cases shall be public. This publicity can, however, be suspended by a judgment openly pronounced, should it endanger order or morality. In other cases, publicity can only be restricted by law.

Art. 77. In cases of crimes entailing heavy penalties, in all political crimes and offences of the press, which the law does not explicitly except, the decree as to the guilt of the accused must be pronounced by a jury. The organization of jury courts will be regulated by law.

Art. 78. A special jury court can be established by a law to be enacted with the previous assent of the chambers, the province of which will be to take cognizance of crimes of high treason, and such other serious offences against internal or external security of the state, as may be referred to it by law. The constitution of the jurists of this court shall be regulated by law.

Art. 79. The competency of courts of justice and of administrative authorities shall be determined by law. Conflicts between administrative and judicial authorities shall be decided by a court of justice appointed by law.

Art. 80. The conditions under which public functionaries, civil and military, can be prosecuted for violations of their law by overstepping their official attributions shall be determined by law. The previous permission of their superiors in office is not required.

CHAPTER VII.—OF STATE FUNCTIONARIES NOT BELONGING TO THE BRANCH OF JUDICE.

Art. 81. The special legal relations of such state functionaries as do not belong to the branch of judges, including the attorney-general, shall be regulated by a law which, without unnecessarily restricting the government in the selection of its officiating organs, shall afford sufficient security to state functionaries against arbitrary deprivation of place and income.

CHAPTER VIII.—OF THE FINANCES.

Art. 82. The estimate of the state must be calculated in the estimate. The law of the public treasury can only estimate or in virtue of a law is not permitted. The revision, and all payments can only levy taxes in the public service in virtue of laws imposing charges on the country.

Art. 104. All sur-expenditure requires the subsequent assent of the chambers. The financial accounts shall be audited and fixed by the supreme chamber of accounts. A general report on the financial estimate, including a summary of the national debt, shall every year be made, with remarks, by the chamber of accounts, to the chamber, for the examination of ministers. A special law will determine the establishment and attributions of the supreme chamber of accounts.

CHAPTER IX.

This chapter relates to the parochial, circle, district, and provincial unions.

GENERAL PROVISIONS.

Art. 105. When promulgated, the validity of laws, decrees, and ordinances, shall be determined by the ordinary absolute majority in the chambers. The army and navy shall continue to be individual laws and regulations, without enacting laws, remain or laws as may affect them.

OF THE PRUSSIAN.

Art. 74. Every Prussian is eligible to be a member of the Second Chamber who has accomplished his 30th year, who has not forfeited the enjoyment of full civic rights through judicial sentence, and who has belonged during three years to the Prussian state.

Art. 75. The chambers are to be re-elected at the expiration of their legislative period. The same occurs when they are dissolved. In either case former members are re-eligible.

Art. 76. The chambers are to be regularly convoked by the king during the month of November, and besides that, as often as circumstances may require.

Art. 77. The opening and closing of the chambers takes place by the king in person, or by a minister appointed by him, in presence of both chambers. Both chambers are to be convoked, opened, adjourned, and prorogued simultaneously.

Art. 78. Each chamber proves the qualification of its members and decides thereon. They regulate their order of business and discipline by business regulations, and elect their own presidents, vice-presidents, and secretaries. Functionaries do not require leave of absence to sit in the chamber. When a member accepts paid functions, or a higher office connected with increased salary, he vacates his seat and vote in the chamber and can only recover the same by new election. No one can be member of both chambers.

Art. 79. The sittings of both chambers are public. Each chamber, at the proposition of the president or of ten members, may proceed to secret deliberation, whenever a decision must be come to on this proposition (clearing the galleries).

Art. 80. Neither chamber can adopt a resolution when the legal majority of its members is not present. Each chamber adopts its resolutions by absolute majority, unless in such cases as the rules of the house for election (for president, &c.) may establish exceptions.

Art. 81. Each chamber has a right to present addresses to the king. No one can deliver a petition or address to the chambers, or to either of them, in person. Each chamber can refer documents addressed to

Nowhere in the world is there as great a disparity between the sexes as in San Francisco; there being at least from 5 to 6 men for one woman. But this disparity is gradually lessening, and with it some of the worst features in the present condition of the pop.

The population of the city differs widely at different periods, being crowded in the wet, and comparatively deserted in the dry season. Though by far the largest and most important town in the State, it is not its capital. That distinction has been conferred on San José, because of its more central situation.

SHANG-HAE, a city and river port of China, prov. Kiang-su, on the Wusung river, 40 m. by water from the sea, and 100 m. E. S. E. Nankin; lat. $31^{\circ} 18' N.$, long. $120^{\circ} 20' E.$ Pop. estimated at from 115,000 to 125,000. It stands in a level and well-cultivated plain, producing good crops of cotton, rice, and wheat. Immediately outside the wall by which it is enclosed are several populous suburbs. Streets narrow and filthy. Foundling hospitals, tea-gardens, and vast tea-houses, are the objects most worthy of notice in the city. It has a mint, with manufactures of silk, vegetable oils and oil cake (of which vast quantities are annually sent into the interior), iron ware, glass, paper, ivory ware, &c.

This is the most southerly of the five Chinese ports opened to foreigners by the treaty of 1842, and, excepting Canton, it is, also, the most important. The river, which may be navigated by ships of 400 or 500 tons for a considerable distance above the town, crosses the Grand Canal in that Shanghai is an emporium for all the vast and fertile countries traversed by the canal, and by the great rivers, viz. the Yang-tze-Kiang and the Hoang-Ho, with which it is connected. Hence the present importance of

to be worth 500 dollars, will represent an aggregate sum of 10,000,000 dollars, or 2,500,000 sterling, for which payment is almost invariably made in the precious metals. Sugar is extensively imported from Formosa, Canton, the Philippines, &c., cotton stuffs, woollens from the East, from England, with sandal wood, birds' nests, &c. &c. In 1847, 76 British vessels, of the burden of 19,361 tons, entered the port, the value of their imports (as appears, which is overestimated) being 484,224, of which cottons made near 700,000. During the same year we exported, in gold and silver, 12,512,500 lbs. tea, and 17,000 boxes of silk, the estimated value of the latter being 1,000,000.

The inhale. of Shanghai are much more hospitable

and better disposed towards foreigners than those of Canton, and strangers may travel for miles into the interior all round the city, with perfect security. Within the last 4 or 5 years, some very fine brick houses have been built by the British and other foreign merchants in the suburbs. (*For Reports, and Information obtained from residents in Shanghai*.)

U T A H, a central region of the U. States, newly erected into a territory, having N. Oregon, E. the crest of the Rocky mountains, S. the parallel of the 37th deg. of N. lat., and W. California. It is for the most part mountainous, but it also contains a considerable extent of forest and cultivable land, especially along the banks of the Colorado and its affluents. In many parts, however, it is still wholly unexplored. It includes the Great Salt Lake, on the E. side of which is a settlement of Mormons, or "Latter Day Saints," comprising almost the whole white inhale. of the territory. The absurdity of their tenets occasioned their expulsion from the other parts of the Union, and the violent death, or, as it is called, martyrdom of their prophet, Jon Smith. Here, however, they seem to have found a secure asylum, and so rapidly are their numbers increasing, that the territory will speedily be erected into a state. Mr Johnston mentions that down to the present year (1841) no fewer than 12,500 avowed Mormons had sailed from Liverpool for this newly acquired land of promise. The sect has, in fact, almost everything required to ensure its progress. Its doctrines have as much of mysticism, blasphemy, and folly as is required to recommend them to the ignorant; and being followed by the blood of the prophet, their dissemination may be expected, as a matter of course, till they are superseded by some greater folly.

VANCOUVER'S ISLAND, a large island belonging to Great Britain, on the N. W. coast of N. America, being the most southerly of our possessions in that quarter. It stretches in a N. N. W. and S. S. E. direction, between the 49th and 51st degs. N. lat., and the 123rd and 125th degs. W. long., being about 300 m. in length, by from 40 to 50 m. in breadth. It is separated from the continent by what is in most parts a narrow channel, called on the S. the Straits of Fuca, in the middle, where it is widest, the Gulph of Georgia, and on the N. Queen Charlotte's Sound. The Hudson's Bay Company have built a fort at the S. end of the island, lat. $49^{\circ} 25' N.$, long. $123^{\circ} 9' W.$ Around the shores are many excellent harbours, the best, perhaps, and, at all events, the most celebrated of which, Nootka Sound, on its W. coast, was discovered by Cook in 1778.

The island is intersected by high mountain ranges, but it has notwithstanding a considerable extent of level and undulating land susceptible of cultivation. Soils very various, being principally, however, of a friable description. The best is a black vegetable mould, producing a most luxuriant vegetation. Climate peculiarly mild, but in winter the rains, accompanied with violent thunder-storms, are heavy, and almost incessant, the smallest brooks being then swollen to impassable torrents; and, in summer, though there is but little rain, dews are heavy, and fogs frequent and dense. Hence, it is doubtful, notwithstanding the aptitude of the soil, whether the country be suitable for the production of wheat and barley, which have hitherto being tried only on a very small scale. Probably, however, it may not be too moist for oats; and the potato, which is extensively raised by the natives, is said to thrive remarkably well. The growth of timber is most luxuriant. Pine, spruce, red and white oak, ash, cedar, maple, &c., are found in the utmost profusion, the cedar and pine attaining to an immense size. The land animals comprise bears, foxes, deer, ermines, squirrels, &c., with a great variety of game. It has been said that the humidity of the climate will hinder this island from ever becoming a wool-growing country; but though it may not produce fine, it may produce coarse wool, and there can be no doubt of its being well suited, from the luxuriance of its pastures, for the growth of cattle. The bays,

rivers, and adjacent seas, swarm with a variety of fish, including salmon, sturgeon, herrings, &c., with seals, sea otters, tortoises, &c., and they are also resorted to by whales. The harbours of the island are consequently well situated for carrying on an extensive and profitable fishery; and they are further said to be better fitted than any others, on the W. coast of N. America, for ship-building.

The mineral riches of the island have been very imperfectly explored. Enough, however, is known to establish the important fact, that extensive beds of coal are to be met with in its N.E. parts. In various localities the beds have been found cropping out at the surface, and large supplies have been obtained with but little difficulty and little expense. Some of the coal has been brought to England, and is said to have answered very well in forges. It is probable, however, inasmuch as the surface of one or two beds has hitherto been merely scratched, that we have not yet had any proper specimen of the best coal.

The native inhabs. subsist principally by hunting and fishing, especially the latter, and by cultivating the potato. They are remarkable for indolence and filth; their heads are flattened when young by artificial means; and their legs are ill-formed, those of the women being frequently swollen.

A settlement established by this country at Nootka Sound in 1788, was suppressed in the following year by the Spaniards, an outrage which nearly occasioned a war with Spain. Since then it has been almost wholly neglected, till within these few years that some establishments have been formed upon it by the Hudson's Bay Company. Latterly it has been proposed to make it the site of a colony that should prosecute the seal and whale fishery, for which, as already stated, it is supposed to be peculiarly well situated. And with a view to the realising of this project, it has been made over to the Hudson's Bay Company, on condition of their establishing a colony within its limits in the course of the five years following 1848. This proceeding has, however, been much censured, principally because of the alleged anti-colonising character of the Company. But we doubt whether this character be deserved; and we are inclined to think that the inhospitable nature of the countries included in their charter has been the great, or rather the sole, cause of their not being colonised. We further take leave to doubt, whether, considering the number and situation of our other dependencies, the colonisation of this island be desirable. But whether it be so or not, its great distance from England, the humidity of the climate, and the infinitely greater facilities afforded by Canada and our other colonies in N. America for the reception of emigrants from this country, are obstacles to its settlement, which, we apprehend, it will be difficult to overcome.

The following is a synopsis of the basis of the constitution of the colony:—

"The Governor is appointed by the Crown, with a council of seven members, likewise so appointed.

"The Governor is authorised to call Assemblies, to be elected by the inhabitants holding twenty acres of freehold land.

"For this purpose, it is left to the discretion of the Governor to fix the number of representatives; and to divide the island into electoral districts, if he shall think such division necessary.

"The Governor has the usual powers of proroguing or dissolving such Assembly.

"Laws will be passed by the Governor, Council, and Assembly.

"The legislature, thus constituted, will have full power to impose taxes, and regulate the affairs of the island, and to modify its institutions, subject to the usual control of the Crown."

There is little to object to in the above regulations. And it might have been supposed, considering the remote situation of the colony, and the difficulties under which it labours from its proximity to Oregon and California, that every encouragement would have been given to intended settlers. But no! The foundation of a colony is a trifling matter compared with the maintenance of the "grand principle" (1) of imposing a high price on the land; and hence the following rules:—

"1. That no grant of land shall contain less than twenty acres.

"2. That purchasers of land shall pay to the Hudson's Bay Company, at their house in London, the sum of 1l.

per acre for the land sold to them, to be held in free and common socage.

"3. That purchasers of land shall provide a passage to Vancouver's Island for themselves and their families, if they have any; or be provided with a passage (if they prefer it) on paying for the same at a reasonable rate.

"4. That purchasers of larger quantities of land shall pay the same price per acre, namely, 1l., and shall take out with them five single men, or three married couples, for every hundred acres.

"5. That all minerals, wherever found, shall belong to the Company, who shall have the right of digging for the same, compensation being made to the owner of the soil for any injury done to the surface; but that the said owner shall have the privilege of working for his own benefit any coal mine that may be on his land, on payment of a royalty of 2s. 6d. per ton."

And these rules have been laid down for emigrants to Vancouver's Island, when it could hardly fail to be known to their framers that Oregon, in its immediate vicinity, has a better soil, a better climate, and is in every respect preferable as a place of settling; and further, that land may be had in unlimited quantities in Oregon for 6s. or 6s. 6d. an acre! And such being the case, to say that the regulations laid down for the sale of land in Vancouver's Island are impolitic, is to say nothing. They are at once absurd and suicidal. And the only thing to be said in their favour is, that they are so palpably mischievous, that few indeed will be such fools as to subject themselves to their operation.

This island, which is sometimes called "Quadra and Vancouver's Island," received the former of these names from Quadra, a Spanish officer, by whom it was partly surveyed; and the latter from Vancouver, an ~~eldest~~ son of Cook, who carefully surveyed most part of its shores, with a large extent of the N. W. coast of the American continent. (*Dan's Hist. of the Oregon Territory; Martin's Account of the Hudson's Bay Territories; and Official Papers.*)

ZANZIBAR, a small island on the E. coast of Africa, opposite to Zanguebar, from which it is distant only about 20 m. the town of the same name, on its W. side, being in lat. 6° 3' 15" S., long. 39° 10' E. It is about 45 m. in length from N. to S. by about 15 m. in breadth. The W. coast is low, and in parts marshy; but the E. coast is bold and well wooded. There are numerous harbours between the island and the mainland, formed by smaller islands and reefs, which are safe and not difficult of access. The anchorage opposite to the town is at once secure and capacious. The island is well watered, producing considerable quantities of excellent sugar, with rice and other grains; and provisions and fruits of all sorts are abundant and cheap. Though the hills in the interior are not sufficiently high to interrupt the course of the sea breeze, the island is but indifferently healthy, at least to Europeans. The inhabs. are mostly of Arab extraction, and profess the Mohammedan religion. The island belongs to the Imam of Muscat, who occasionally resides upon it. The town is built in the Arabian style, and is defended by a castle, which, however, is of little strength.

Zanzibar is the centre of a considerable commerce with the opposite coast of the continent, Madagascar, India, Arabia, &c. Among other things, the exports comprise gums, ivory, antimony, blue vitriol, cocoa nut oil, hides, horns, sugar, &c. Formerly slaves were a principal article of export. Fancy shells are also exported, and the shell known in commerce by the name of the *bull month*, having been used in the manufacture of imitation cameos, was extensively imported into this country while these articles were in fashion; but since the demand for them has fallen off, the value of the shell and the quantity imported have proportionally declined. The imports comprise arms, gunpowder, cutlery, coarse cotton stuffs, beads, wire, iron, &c. Small vessels of about 200 tons burden, called dows, are built on the island. We have not seen any statement of the pop. of Zanzibar on which any reliance could be placed, but it may, perhaps, amount to from 20,000 to 25,000.
